Pair 2 is correct: Gandhiji started the Civil Disobedience Movement in 1930. During that time, Lord Irwin was the Viceroy of India. Gandhi formally launched the Civil Disobedience Movement on April 6, 1930 by picking a handful of salt after the completion of historic 'Dandi March' from Sabarmati Ashram to Dandi, thus breaking the salt law imposed by the Government. He was the major force behind the movement and inspired grass-root participation in the freedom struggle.

Pair 3 is incorrect: Lord Linlithgow (1936 – 1944) was the viceroy of India during Quit India Movement in 1942. Lord Wavell was the viceroy of India during the period of 1944 to 1947. Quit India movement was an all-out campaign organized by the Mahatma Gandhi to compel British withdrawal from India, after the failure of the Cripps Mission to reach a compromise.

Q.7) With reference to the response of Muslim leaders to the Nehru Report, consider the following statements:

- The Muslim League demanded representation of Muslims in all elected bodies in every province.
- The Muslim leaders adopted 'Delhi Proposals' to protest against the recommendations of Nehru Report.
- The Muslim League demanded federal system of government with residuary powers to the provinces.

Which of the statements given above is/are correct?

- 1 and 2 only
- 3 only
- 1 and 3 only
- 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct. Jinnah came up with the **fourteen points** in response to Nehru report. These 14 points became the basis of future propaganda of the Muslim League. One of the points of demand was that **all legislatures and elected bodies to have adequate representation of Muslims** in every province without reducing a majority of Muslims in a province to a minority or equality.

Statement 2 is incorrect. The Muslim leaders adopted ‘Delhi Proposals’ before the setting up of Nehru Committee and framing of Nehru Report. In December 1927, a large number of Muslim leaders had met at Delhi at the Muslim League session and evolved four proposals for their demands to be incorporated into the draft constitution. These proposals came to be known as the ‘Delhi Proposals’

Statement 3 is correct. An **All-India Muslim Conference** that was held in Delhi on 1 January 1929 passed a resolution emphasizing that since India is a vast country, with a lot of diversity it required a **federal system of government** in which the states would have complete autonomy and residuary powers. Though, this proposed demand was not accommodated in the Nehru report.

Q.8) Which of the following statements is/are **incorrect** about the Lahore Session (1929) of the Indian National Congress?

1. It was presided over by Jawaharlal Nehru.
2. It was the first time when the Congress spelt out what swaraj would mean for the masses.
3. The Congress accepted the British offer to join the Round Table Conferences.

Select the correct answer using the code given below.

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 3 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct. The Lahore Session of Indian National Congress in December 1929 was presided by **Pandit Jawahar Lal Nehru.**

Statement 2 is incorrect. The Indian National Congress, on 19 December 1929, passed the historic ‘**Purna Swaraj**’ (**total independence**) **resolution at its Lahore session** and a public declaration was made on 26 January 1930 to celebrate as ‘Independence Day’. **But it was during the Karachi session of INC in 1931** where the Congress for the first time mentioned what swaraj means for the masses.

Statement 3 is incorrect. The INC in Lahore Session decided to Boycott the Round Table conference. Hence during **first Round Table Conference between November 1930 and January 1931** the congress leaders refused to attend it.

Source: SPECTRUM(CH-CDM)

Q.9) With reference to Salt Satyagraha, consider the following statements:

Assertion(A): Women had to fight for their right to participate in the Salt Satyagraha.

Reason(R): Gandhi initially did not favour the participation of women.

Which of the options given below is/are correct?

- a) Both (A) and (R) are true and (R) is the correct explanation of (A)
- b) Both (A) and (R) are true and (R) is not the correct explanation of (A)
- c) (A) is true, but (R) is false

d) (A) is false, but (R) is true

Ans) a

Exp) Option a is the correct answer.

Assertion (A) is correct, and Reason (R) is the correct explanation of Assertion (A)

The participation of women in the national struggle gave an immense force to the struggle. But, during the Salt Satyagraha the Women had to fight for their right to participate in the movement as initially Mahatma Gandhi also opposed women's participation. He refused on the ground that Britishers would call Indian's cowards for hiding behind the women. However later after the persuasion by Sarojini Naidu, he allowed women to join the movement and even urged women of each of the 24 villages where he stopped during the Dandi march to step out of their homes and make salt.

This women participation in national movements even gave them a place in the professions, in the governance of India, and it could pave the way for equality with men.

Q.10) With reference to the advantages of the technique of direct seeding of rice over that of transplantation method, consider the following statements:

1. It helps with weed suppression
2. It results in lower methane emission
3. It leads to water conservation
4. It results in improved physical characteristics of soil

Which of the statements given above is/ are correct?

- a) 1, 2 and 3 only
- b) 2, 3 and 4 only
- c) 1, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) b

Exp) Option b is the correct answer.

Transplanting after repeated puddling is the conventional method of rice (*Oryza sativa*) growing which is not only intensive water use but also cumbersome and laborious. It involves growing rice saplings in a nursery and then shifting them to a field with standing water for the remainder of its life cycle. Different problems like lowering water table, scarcity of labour during peak periods, deteriorating soil health demands some alternative establishment method to sustain productivity of rice as well as natural resources. Direct seeded rice (DSR), probably the oldest method of crop establishment, is gaining popularity because of its low-input demand. It involves the immediate sowing of seeds on a dry levelled field using a tractor.

It was recently in news as a switch to this system failed to fight the dangerous rate of groundwater depletion in Punjab.

Statement 1 is incorrect: Increased weed growth is in fact one of the few disadvantages of the DSR method. Since the standing water is absent, many weeds that weren't able to stand the anoxic conditions, now get the opportunity to grow and compete with the crop for space and nutrients. Hence this statement is incorrect.

Statement 2 is correct: The high methane emissions from rice crops are due to the fermentation by bacteria thriving in standing waters. Since the DSR method eliminates this standing water, the bacteria

and along with them, the **methane emissions are also lowered**. This helps in **lowering the threat of climate change**, as methane is a greenhouse gas.

Statement 3 is correct: The **crop duration to maturity** is very **less in DSR**, and also there is **no standing water to be maintained** around the seedlings. This **improves water use efficiency**, and **reduces overall requirement of water as an input**. Hence this leads to **water conservation**.

Statement 4 is correct: The soil is not disturbed much during this technique of rice cultivation. Also, it does not remain perpetually waterlogged, leading to reduced capillary action and saving the soil from becoming unnecessarily saline and infertile. No tilled soils tend to be cooler than others, partly because a surface layer of plant residues is present. Carbon is sequestered in the soil enhancing its quality. Thus this technique of rice cultivation leads to improved physical characteristics of soil.

Knowledge Base:

Other Advantages

it saves labour

Saves drudgery

Early crop maturity

Low Production cost

Better synergy with other crops, allows more opportunities of intercropping

Disadvantages:

Lower yield

Increased seed demand

Requires laser land levelling which is costly

Herbicide resistance

Higher nitrous oxide emissions

Nutrient issues

Q.11) Which of the following parties were established by Dr. B. R. Ambedkar?

1. The Peasants and Workers Party of India

2. All India Scheduled Castes Federation

3. The Independent Labour Party

Select the correct answer using the codes given below:

a) 1 and 2 only

b) 2 and 3 only

c) 1 and 3 only

d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Option 1 is incorrect. The Peasants and Workers Party of India was founded in 1948 by Marxist leaders such as Keshav Rao Jedhe, Nana Patil and others. Thus, it was not established by Dr. B. R. Ambedkar.

Option 2 is correct. The second political party established by Ambedkar was the All India Scheduled Castes Federation. **Founded in 1942, it was first all India political party exclusively for Scheduled Castes.**

Option 3 is correct. In 1936, **Babasaheb Ambedkar founded the Independent Labour Party**, which contested the 1937 Bombay election to the Central Legislative Assembly for the 13 reserved and 4 general seats, securing 11 and 3 seats respectively.

Source: UPSC 2012

Q.12) Why did Gandhi choose Salt as a symbol for protest during the Civil Disobedience Movement?

1. The salt is psychologically related to the people of all classes.
2. There was state monopoly over salt manufacturing and selling.
3. The price of salt was high.
4. It is an important ingredient in Indian foods.

Select the correct answer using the code given below.

- a) 1, 2 and 3 only
- b) 1, 3 and 4 only
- c) 2 and 4 only
- d) 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct answer.

Salt March also called Dandi March or Salt Satyagraha is a major nonviolent protest action in India led by Mahatma Gandhi in March–April 1930.

Statement 1 is correct. Salt is a commodity of millions of people in India that could easily be linked with the most concrete and universal grievance of the poor. Though salt holds fewer monetary benefits it has **physiologically important income** like Khadi that is related to the poor and all other classes through self-help. Hence it easily symbolizes the masses.

Statement 2 is correct. The Britisher exercised the **monopoly over salt trade and manufacturing by Britain's Salt Act of 1882** that prohibited Indians from collecting or selling salt, a staple in their diet. Indian citizens were forced to buy the vital mineral from their British rulers, who, in addition to exercising a monopoly over the manufacture and sale of salt, also charged a heavy salt tax.

Statement 3 is correct. The British levied high taxes on the salt. According to the salt law, people have to pay an 8.2% tax to the British government for the salt, which was badly affecting the lower-class Indians the most. The British officials **forced the people to buy it at expensive rates**. Hence both the high taxes and the high prices led the prices of salt reach heights making Gandhi realise the aggressive policies of Britishers against Indians and made it as a symbol of Satyagraha.

Statement 4 is correct. Salt is an essential item of our Indian food that is used by the rich or the poor person in the same quantity. Being an **inevitable item for Indian food, the large taxes** on it can starve millions of people, make them sick, and hurt them leaving them helpless in the most inhuman way. That is why Gandhi choose it as a symbol through which it can convey its message to millions.

<https://www.indiatoday.in/education-today/gk-current-affairs/story/dandi-march-why-mahatma-gandhi-broke-the-salt-law-to-commence-the-civil-disobedience-movement-1187528-2018-03-12>

<https://www.history.com/topics/india/salt-march>

Q.13) Consider the following statements with reference to the comparison between Civil Disobedience Movement and Non-Cooperation Movement:

1. The objective of the Civil Disobedience Movement was complete independence while Non-cooperation aimed at remedying Punjab and Khilafat wrongs.
2. Unlike Non-cooperation movement, in civil disobedience movement the methods of protest involved violation of law from the beginning.

3. The participation of Muslim's in Civil Disobedience Movement was more than Non-Cooperation Movement.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: The **objective of the civil disobedience movement** was **complete independence** (poorna swarajya) and **not just remedying two specific wrongs** and a vaguely-worded swaraj while the **Non-cooperation movement aimed at the removal of Punjab and Khilafat wrongs**. The Khilafat Movement was an Islamist political protest campaign launched to restore the caliph of the Ottoman Caliphate and to promote Muslim interests and to bring the Muslim in national struggle. Mahatma Gandhi and the Khilafat leaders promised to work and fight together for the causes of Khilafat and Swaraj.

Statement 2 is correct: **Unlike Non-cooperation movement, civil disobedience movement involved the violation of law from the very beginning and not just non-cooperation with foreign rule**. There was a decline in forms of protests involving the intelligentsia during the civil disobedience movement. Large number of protests by the Lawyers giving up practice, students giving up government schools to join national schools and colleges experienced during the non-cooperation movement.

Statement 3 is incorrect: **The Muslim participation during civil disobedience movement was nowhere near during the non-cooperation movement**. Muslim leaders stayed away from the civil disobedience movement because there was an active government encouragement to communal dissension. Still, some areas such as the North West Frontier Province saw an overwhelming participation.

Source: A brief history of modern India spectrum.

Q.14) With reference to the Indian National Movement, consider the following statements:

- 1. The Congress-Khilafat Swarajya Party was founded by C.R. Das and Motilal Nehru.
- 2. The Congress Socialists party was founded by Jawaharlal Nehru and Subhash Chandra Bose.
- 3. Abhinav Bharat, a secret society of revolutionary nationalist, was established by V. D. Savarkar.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 3 only
- c) 2 only
- d) 2 and 3 only

Ans) b

Exp) Option b is the correct answer.

Statement 1 is correct: After Gandhi's arrest at the end of the Non-cooperation movement in 1922 a debate started among Congressmen on what to do during the transition period, i.e., the passive phase of the Non-Cooperation Movement. One section led by C.R. Das, Motilal Nehru and Ajmal Khan, known as swarajists, wanted an end to the boycott of legislative councils. While the other school of thought led by C. Rajagopalachari, Vallabhbhai Patel, Rajendra Prasad and M.A. Ansari came to be known as the 'No changers', opposed council entry. **Due to this schism Motilal Nehru and C R Das left the congress and formed Congress-Khilafat Swarajya Party or simply Swarajist Party, with C.R. Das as the president and Motilal Nehru as one of the secretaries.**

Statement 2 is incorrect: The decision to form the congress socialist party was made in the jails during 1930-31 by a group of young congressmen who were disenchanted with Gandhian strategy and attracted by sociologist ideology. **Congress socialist party was founded by Jayaprakash Narayanan, Acharya Narendra Dev and Minoo Masani in Bombay in 1934.**

Statement 3 is correct: **Abhinav Bharat Society** (Young India Society) was a secret society of revolutionary nationalist **founded by Vinayak Damodar Savarkar (V.D.Savarkar) and his brother Ganesh Damodar Savarkar in 1904.**

Source: Spectrum the brief history of modern India: Chapter 17- Emergence of Swarajists, Socialist Ideas, Revolutionary Activities and Other New Forces

Q.15) With reference to the cultivation of Opium in India, consider the following statements:

1. Cultivation of opium is legally allowed under regulated circumstances in India.
2. The cultivation of opium is allowed only in the states of Rajasthan, Madhya Pradesh & Uttar Pradesh.
3. Private sector is not allowed to cultivate or sell opium in India.

Which of the statements given above is/ are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Opium is a natural substance obtained from poppy seeds and its derivatives are mainly used for pain management. "The extracts from opium poppy such as morphine are potent painkillers and are mainly prescribed to cancer patients,". The opium product codeine is helpful in cough suppression. It is used illicitly for smoking, drinking, or even eating as pills. The addictive properties of opium are the reason that the cultivation of poppy is highly regulated around the world. Recently the government opened up the highly regulated sector of opium cultivation to the private sector.

Statement 1 is correct: India is one of the few (12) countries in the world where **Opium is legally cultivated.**

India is **signatory** to the **United Nations Single Convention on Narcotic Drugs, 1961** and as a licit producer of opium, India is required to adhere to the regulations under the said convention. In India opium poppy cultivation is **prohibited** under **Section 8 of NDPS Act, 1985, except** under a **licence** issued by the **Central Bureau of Narcotics under Rule 8 of NDPS Rules, 1985.** So, growing of opium is legal but heavily regulated.

Statement 2 is correct: At present, the licit opium poppy cultivation is **permitted by the Govt.** of India in **selected tracts** in **three traditionally opium growing States** namely **Madhya Pradesh, Uttar Pradesh and Rajasthan.**

Statement 3 is incorrect: Up **until recently**, the **cultivation and sale** of opium was very heavily regulated and the **private sector was not allowed** to participate on a large scale. However, the NDPS Act empowers the Central Government to permit and regulate cultivation of opium poppy for **medical and scientific purposes.** Using this very power, the government in **July 2022 opened** the **cultivation and sale to the private sector for medicinal purposes.** Bajaj Healthcare has become the first company to win tenders for producing concentrated poppy straw that is used to derive alkaloids that are the active pharmaceutical ingredient in pain medication and cough syrups.

Knowledge Base:

History of Opium trade in India:

India has been growing poppy at least since the 15th century, as per Ain-i-Akbari

The British East India Company assumed monopoly on the cultivation of poppy when the Mughal Empire was on the decline, and the entire trade was brought under government control by 1873.

After India gained independence, the cultivation and trade of opium passed on to the Indian government, with the activity being controlled by The Opium Act, 1857, The Opium Act, 1878, and The Dangerous Drugs Act, 1930. At present, the cultivation and processing of poppy and opium is controlled by the provisions of The Narcotic Drugs and Psychotropic Substances (NDPS) Act and Rules.

India's Opium Policies:

The government announces the licensing policy for opium cultivation every year, providing details on minimum qualifying yield, the maximum area that can be cultivated by a single cultivator, and the maximum benefit that is allowed to cultivators for damage to the crop due to natural causes.

The cultivation of opium poppy is strictly monitored and the government uses satellite images to check for illicit cultivation. Once the crop is ready, they have a formula on how much the yield should be.

This entire quantity is then bought by the government and processed in its own factories. The opium produced in the country is currently processed entirely at the Government Opium and Alkaloid Factories in Uttar Pradesh's Ghazipur and Madhya Pradesh's Neemuch. Products such as morphine, codeine, thebaine, and oxycodone are produced.

Source: <https://dor.gov.in/narcoticdrugspsychotropic/licensed-cultivation-opium#:~:text=Opium%20cultivation%20is%20permitted%20in,license%20in%20the%20succeeding%20year.>

<http://cbn.nic.in/html/operations.html>

Q.16) With reference to the Indian freedom struggle, why the Gandhi-Irwin pact was criticized by radical nationalists?

- Gandhi failed to obtain the right of making salt even for personal consumption.
- Gandhi failed to obtain a commitment from viceroy regarding political independence for Indians.
- Gandhi failed to obtain the right to peaceful and non-aggressive picketing
- Gandhi failed to convince Irwin to withdraw emergency ordinances.

Ans) b

Exp) Option b is the correct answer.

Round Table Conferences were convened by the British government in London. The first meeting regarding the round table conference was held without the pre-eminent political leader in India in November 1930. On January 25, 1931, Gandhi and all other members of the Congress Working Committee (CWC) were released unconditionally. The Congress Working Committee authorized Gandhi to initiate discussions with the viceroy. As a result of these discussions a Gandhi-Irwin pact was signed between the viceroy, representing the British Indian Government, and Gandhi, representing the Indian people.

The Gandhi-Irwin Pact placed the Congress on an equal footing with the government. Irwin on behalf of the government agreed on–

- immediate release of all political prisoners not convicted of violence.
- Remission of all fines not yet collected
- Return of all lands not yet sold to third parties
- Lenient treatment to those government servants who had resigned
- Right to make salt in coastal villages for personal consumption (not for sale). **Hence, Option a is incorrect**
- Right to peaceful and non-aggressive picketing. **Hence, Option c is incorrect**
- Withdrawal of emergency ordinances. Hence, **Option d is incorrect**

Option b is correct. The Gandhi Irwin pact was criticized by radical nationalists because Gandhi was not able to obtain a commitment from viceroy regarding political independence for Indians.

Source: Themes in Indian history. Part III NCERT. Chapter name- MAHATMA GANDHI AND THE NATIONALIST MOVEMENT. Page no-360

Q.17) Which of the following is/are the recommendations of the Nehru Report?

1. Formation of linguistic provinces
2. Separate electorates for Muslims
3. Complete disassociation of state from religion
4. Complete Independence for India.

Select the correct answer using the code given below.

- a) 3 and 4 only
- b) 1 and 3 only
- c) 1 and 2 only
- d) 1, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

The Nehru Report that came in 1928 contained no federal features but was important due to its organised opinion of most of the Indian leadership on the communal problem.

Statement 1 is correct. The Nehru report which was formed by the committee under chairmanship of Motilal Nehru recommended **formation of linguistic provinces**. It even recommended joint electorates with seats reserved for the minorities on population basis except in Bengal and Punjab.

Statement 2 is incorrect. The report rejected the demand of separate electorates which had been the basis of constitutional reforms so far; instead, a demand for joint electorates with reservation of seats for Muslims at the Centre and in provinces where they were in minority (and not in those where Muslims were in majority, such as Punjab and Bengal) in proportion to the Muslim population there with right to contest additional seats.

Statement 3 is correct. The Nehru Report proposed that the Constitution should provide for liberty of conscience and religion and demanded **complete dissociation of State from religion**.

Statement 4 is incorrect. It called for **Dominion Status not complete Independence**.

Q.18) To carry forward the mandate given by the Lahore Congress Session of 1929, Gandhi presented eleven demands to the government. Which of the following represent these demands?

1. Abolish salt tax and government's salt monopoly
2. Reduce rupee-sterling exchange ratio
3. Reduction of land revenue by 50 per cent.
4. Allow popular control of issue of firearms licenses.

Select the correct answer using the codes given below:

- a) 1, 2 and 3 only
- b) 2, 3 and 4 only
- c) 1, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct answer.

SFG 2023 | LEVEL 1 | Test #20 – Solutions | ForumIAS

To carry forward the mandate given by the Lahore Congress, **Mahatma Gandhi presented eleven demands to the government** and gave an ultimatum of January 31, 1930 to accept or reject these demands. The demands were as follows.

- Reduce expenditure on Army and civil services by 50 per cent.
- Introduce total prohibition.
- Carry out reforms in Criminal Investigation Department (CID).
- **Change Arms Act allowing popular control of issue of firearms licenses.**
- Release political prisoners.
- Accept Postal Reservation Bill.
- Specific Bourgeois Demands
- **Reduce rupee-sterling exchange ratio to 1s 4d**
- Introduce textile protection.
- Reserve coastal shipping for Indians.
- Specific Peasant Demands
- **Reduce land revenue by 50 per cent.**
- **Abolish salt tax and government's salt monopoly.**

There was no positive response from the government on these demands and the Congress Working Committee invested Gandhi with full powers to launch the Civil Disobedience Movement at a time and place of his choice. By February-end, Gandhi had decided to make salt the central formula for the movement.

Source: The brief history of modern India. Chapter name- CDM and Round Table Conferences. Page no- 370,371.

Q.19) Consider the following statements with reference to the Salt Satyagraha during the Indian freedom movement:

1. C. Rajagopalachari organized a salt march from Tiruchirappalli to Vedaranniyam in Tamil Nādu.
2. Military style camps were set up to serve as the headquarters of the Salt Satyagraha in the Punjab region.
3. Kamaladevi Chattopadhyaya broke the salt law at Wadala.

Which of the statements given above are correct?

- a) 2 and 3 only
- b) 1 and 2 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: C. Rajagopalachari organized a salt march from Tiruchirappalli to Vedaranniyam on the Tanjore coast of Tamil Nadu to break the salt law. The salt march event was followed by widespread picketing of foreign cloth shops. The anti-liquor campaign gathered forceful support in interior regions of Coimbatore, Madura, Virdhanagar, etc. C. Rajagopalachari tried to keep the movement non-violent however violent eruptions of masses and the violent repressions of the police began.

Statement 2 is incorrect: A number of **Sibirams (military style camps)** were set up to serve as the **headquarters of the Salt Satyagraha in the Andhra region (and not in Punjab region)**. District salt marches were also organized in east and west Godavari, Krishna and Guntur. The merchants contributed to Congress funds, and the dominant caste Kamma and Raju cultivators defied repressive measures. But the mass support during the non-cooperation movement was missing during the civil disobedience movement.

Statement 3 is correct: On 16 April about 500 Satyagrahis left the Congress House and proceeded to Wadala. They processed salt for sale and violated the provision of Section 3 of Bombay Salt Act. This

satyagraha was led by Mrs. Kamaladevi Chattopadhyaya, D.R. Charpure, S.K. Patil, C.K. Narayanswami, Gajendranath Sharma and Canpatishankar N. Desai.

Q.20) Recently, Government of India has decided to promote the cultivation of dragon fruit. In this context, which one of the statements is correct regarding 'Dragon Fruit'?

- It is grown only in South Asian and South East Asian countries.
- China is the world's largest producer and exporter of dragon fruit.
- It can be grown in almost all kinds of soil without much water requirement.
- Mountainous and cold areas in India are most suitable for dragon fruit cultivation.

Ans) c

Exp) Option c is the correct answer.

The **Government of India** has decided to promote the cultivation of **dragon fruit**, known as a "**super fruit**" for its health benefits. At present, Dragon fruit is cultivated in 3,000 hectares. The plan is to increase cultivation to 50,000 hectares in five years.

Option a is incorrect: **Dragon Fruit** is the fruit of a species of **wild cactus indigenous to South and Central America**, where it is called pitaya or pitahaya. Dragon fruit is cultivated in many regions around the world including Peru, Mexico, South Asia, Southeast Asia, East Asia, the United States, the Caribbean, and Australia.

Option b is incorrect: The **world's largest producer and exporter** of dragon fruit is **Vietnam**. The Vietnamese call it "Thanh long" which translates to "dragon's eyes". In India, Mizoram tops among the States that cultivate Dragon Fruit.

Option c is correct: Dragon Fruit grows in **all kinds of soil, and does not require much water**. The plant doesn't need productive land as it can give maximum production from non-productive, less fertile areas also.

Option d is incorrect: All the **States in India except cold areas are suitable for dragon fruit** cultivation. Dragon fruit is considered to be one of the tropical superfoods due to its nutrient richness. It is rich in nutrients and low in calories. It is believed to help in the control of chronic illnesses, improve the health of the alimentary canal and boost the body's immunity.

The Gujarat Government recently renamed dragon fruit as **Kamalam (lotus)** and announced an incentive for farmers who cultivate it.

Source: Dragon Fruit: Centre to promote dragon fruit cultivation in 50,000 hectares -ForumIAS Blog

Q.21) With reference to Congress Socialist Party, consider the following statements:

- It advocated the boycott of British goods and evasion of taxes.
- It wanted to establish the dictatorship of proletariat.

3. It advocated separate electorate for minorities and oppressed classes.

Which of the statements given above is / are correct?

- a) 1 and 2 only
- b) 3 only
- c) 1, 2 and 3
- d) None

Ans) d

Exp) Option d is the correct answer.

Within Congress, 'Congress Socialist Party' in 1934 was founded J P Narayan, Acharya Narendra Dev and Minoo Masani. Its members were critical of tactics and strategy of Gandhi as well as of Communists. **They wanted to give Congress a socialist direction by working from within the congress and organising peasants and workers outside the congress.** The party mainly consisted of three ideologies – Maxian Socialism, Fabianism and Gandhian Socialism. They stood for abolition of Capitalism, Zamindari and princely states. They did not advocate separate electorates for minorities and oppressed classes.

Source) UPSC 2015

Q.22) Gandhi had planned a raid on the Dharasana Salt Works during the Civil Disobedience Movement, but was arrested before he could put that into action. Thereafter, who among the following leaders led the Dharasana Salt Satyagraha?

- 1. Sarojini Naidu
- 2. Imam Sahib
- 3. Manilal
- 4. Jawaharlal Nehru
- 5. Abbas Tyabji

Select the correct answer using the codes given below:

- a) 1, 2, 3 and 4 only
- b) 2, 3, 4 and 5 only
- c) 1, 2, 3 and 5 only
- d) 1, 2, 3, 4 and 5

Ans) c

Exp) Option c is the correct answer.

Dharasana Satyagraha was a protest against the **British salt tax in colonial India in May, 1930**. Following the conclusion of the Salt March to Dandi, Mahatma Gandhi chose a non-violent raid of the Dharasana Salt Works in Gujarat as the next protest against British rule. But before he could begin the salt march at dharasana, he was arrested. Later the **Dharasana Satyagraha** was organized by the **Sarojini Naidu, Imam Sahib and Manilal (Gandhi's son) and Abbas Tyabji (Jawaharlal Nehru was not a part of Dharasana Satyagraha)**. The unarmed and peaceful crowd was met with a brutal lathi charge which left 2 dead and 320 injured. This new form of salt satyagraha was eagerly adopted by people in Wadala (Bombay), Karnataka (Sani Katta Salt Works), Andhra, Midnapore, Bala sore, Puri and Cuttack.

<https://www.thehindu.com/children/marching-to-freedom/article26661034.ece>

Q.23) Consider the following statements with reference to the extent of mass participation during Civil Disobedience Movement:

1. Merchants and Petty Traders were not much enthusiastic in implementing the boycott during civil disobedience movement.
2. Major labour upsurges coincided with the Civil Disobedience Movement.
3. Tribals kept themselves away from the movement.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 3 only
- c) 2 and 3 only
- d) None of the above

Ans) d

Exp) Option d is the correct answer.

The Civil Disobedience Movement began on March 12 when Gandhi broke the salt law by picking up a lump of salt at Dandi on April 6. The violation of the law was seen as a symbol of the Indian people's resolve not to live under British-made laws and therefore under British rule.

Statement 1 is incorrect: Merchants and Petty Traders were very enthusiastic during the civil disobedience movement. In Tamil Nadu and Punjab areas the traders' associations and commercial bodies were active in implementing the boycott (and not inactive) during the civil disobedience Movement.

Statement 2 is incorrect: No major labour upsurges coincided with the civil disobedience movement. However, the massive participation of peasants and business groups compensated for decline of other features during the civil disobedience movement.

Statement 3 is incorrect: One of the features of the movement was that tribals also actively participated in the disobedience movements. Tribals were active participants in Central Provinces, Maharashtra and Karnataka.

Q.24) Consider the following statements with reference to the Second-Round Table Conference:

1. Congress was represented by Gandhi and Tej Bahadur Sapru.
2. Gandhi demanded for the establishment of a responsible government at the Centre as well as in the provinces.
3. At the conference, Separate electorates were demanded by Muslims and depressed classes.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

As the recommendations of the Simon Commission report were clearly inadequate. The Viceroy of India, Lord Irwin, and the Prime Minister of Britain, Ramsay MacDonald, agreed that a round table conference should be held.

Statement 1 is incorrect: The Indian National Congress nominated Gandhi as its sole representative. There were a large number of Indian participants, besides the Congress. **Tej Bahadur Sapru**, represented the **Liberals** at the conference.

Statement 2 is correct: Gandhi was of the opinion that there was a need of a partnership between Britain and India on the basis of equality. Gandhi put forward the demand for the immediate establishment of a

responsible government at the center as well as in the provinces. Gandhi discarded the idea of separate electorates for the minorities. He also reiterated that the Congress alone represented political India.

Statement 3 is correct: The session of second round table conference got deadlocked on the question of **separate electorates demanded by the Muslims, depressed classes**, Christians and Anglo-Indians. All these came together in a 'Minorities' Pact'. Gandhi fought desperately against this concerted move to make all constitutional progress conditional on the solving of this issue.

Source: The brief history of modern India spectrum. Chapter name- CDM and Round Table Conferences. Page no-386.

Q.25) With reference to the contributions of Prafulla Chandra Ray, consider the following statements:

1. He successfully discovered the stable compound of Mercurous Nitrite.
2. One of his famous books is Life and Experience of a Bengali Chemist.
3. He invented the crescograph which is a device for measuring the growth of plants.
4. Bengal Chemical & Pharmaceutical Works was founded by him.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 1, 2 and 4 only
- c) 2 and 4 only
- d) 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

Recently, **Ministry of Culture** organised a curtain raiser for two days International Conference on the "**Contributions of Acharya Prafulla Chandra Ray as a Chemist and Freedom Fighter**" at the **Department of Chemistry, Delhi**. Prafulla Chandra Ray (1861-1944) was a well-known Indian scientist and teacher and one of the first "modern" Indian chemical researchers. He is known as "**Father of Indian Chemistry**".

Statement 1 is correct: Prafulla Chandra Ray discovered the stable compound **Mercurous Nitrite** ($\text{Hg}_2(\text{NO}_3)_2$) **in 1895**. It is relevant to mention here that **stable mercury(I) complexes are sparse** in literature, even today, owing to the instability of mercury(I) towards disproportionation to mercury (II) and metallic mercury in solution. Moreover, the **nitrite ion is not very stable and can undergo facile decomposition**. The compound, $\text{Hg}_2(\text{NO}_3)_2$ is thus a fascinating example of a stable substance composed of two relatively unstable ions.

Statement 2 is correct: Prafulla Chandra Ray contributed articles in Bengali to many monthly magazines, particularly on scientific topics. He published the first volume of his **autobiography Life and Experience of a Bengali Chemist in 1932**, and dedicated it to the youth of India.

Statement 3 is incorrect: Jagadish Chandra Bose is considered the **father of Bengali science fiction, and also invented the crescograph, a device for measuring the growth of plants**. A crater on the moon has been named in his honour.

Statement 4 is correct: Prafulla Chandra Ray was the founder of **Bengal Chemicals & Pharmaceuticals**, India's first pharmaceutical company. It manufactures industrial chemicals, pharmaceuticals like antibiotic injectables, tablets and capsules; and household products. It is **India's first government owned-pharmaceutical enterprise**.

Q.26) Which of the following demands were accepted by British under Gandhi- Irwin pact?

1. Right to make salt in coastal villages for personal consumption
2. Remission and return of all fines that was collected during the Civil Disobedience Movement.
3. Return of all lands confiscated during the Civil Disobedience Movement
4. Demand for public inquiry into police excesses

Select the correct answer using the codes given below:

- a) 1 and 2 only
- b) 1 only
- c) 2, 3 and 4 only
- d) 1, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

The Gandhi-Irwin Pact was signed between the viceroy, representing the British Indian Government, and Gandhi, representing the Indian people on February 14, 1931. Gandhi and all other members of the Congress Working Committee (CWC) were released unconditionally after the signing of Gandhi-Irwin pact.

Irwin on behalf of the government agreed on:

- (a) To immediately release all political prisoners not convicted of violence
- (b) Remission of all fines not yet collected. Hence Option 2 is incorrect.**
- (c) Return of all lands not yet sold to third parties (not all lands but only those land which was not sold to third party). Hence Option 3 is incorrect.**
- (d) Lenient treatment to those government servants who had resigned
- (e) Right to make salt in coastal villages for personal consumption but not for sale. Hence Option 1 is correct.**
- (f) Right to peaceful and non-aggressive picketing
- (g) Withdrawal of emergency ordinances.
- (h) Suspension of the civil disobedience movement.

The viceroy under the Gandhi Irwin pact turned down two of Gandhi's demands:

- 1) **Viceroy turned down the demand for public inquiry into police excesses. (Hence Option 4 is incorrect)**
- 2) Commutation of Bhagat Singh and his comrades' death sentence to life sentence.

Source: The brief history of modern India spectrum. Chapter name- CDM and Round Table Conferences. Page no-379.

Q.27) With reference to the role of Mahatma Gandhi as a Social reformer, consider the following statements:

1. He never allowed religious issues to mix with political issues.
2. He wanted the 'Caste- Hindus' to work for the betterment of untouchables.
3. He was against the practise of both polygamy and Purdah system.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: Gandhiji hoped that by coupling non-cooperation with Khilafat, India's two major religious communities, Hindus and Muslims, could collectively bring an end to colonial rule. For Swaraj,

Hindus, Muslims, Parsis and Sikhs will have to unite. Hence Gandhi **allowed the intermixing of religion with politics** to defeat the British.

Statement 2 is correct: While marching for Salt Satyagraha, in one village Wasna, Gandhiji **told the upper castes** that “if you are out for Swaraj, you must serve untouchables. You won’t get Swaraj merely by the repeal of the salt taxes or other taxes. For Swaraj you must make amends for the wrongs which you did to the untouchables.

Statement 3 is correct: He was against both Polygamy and Child marriage. He was of the view that **chastity can’t be protected by the surrounding wall of the purdah.** It must grow from **within**, why do we think always chastity in relation to women but not in connection with men. **He also emphasized on monogamy.** Women should not consider them as an object of man’s lust. Women are a companion of man gifted with equal mental capabilities

Source: 12th NCERT Volume 3

Q.28) Mahatma Gandhi laid a great emphasis on the use of Charkha (Spinning Wheel). In this context, consider the following statements:

1. He believed that Charkha would help in promoting the large-scale industrialisation of villages.
2. He believed that Charkha would help in propagating his vision of gram swaraj.
3. He believed that Charkha would help in breaking the traditional boundaries of caste system.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: By Spinning and weaving, Gandhi thought that **individuals and villages would become more self-sufficient.** He never intended the large-scale industrialisation of villages through spinning of Charkha.

Statement 2 is correct: According to Gandhi, the development of handicrafts through Charkha would add to the total resources of the individual and the village and thus enable both to be self-sufficient and self-regulating. For him **handicrafts** were an integral and vital part of his **programme to revive villages, to make them self-sufficient and to give back to individuals the dignity to regulate their lives and ultimately to fulfil his vision of Gram-Swaraj.**

Statement 3 is correct: He requested all nationalist leaders to spend some time each day working on the charkha. He told them that the act of spinning charkha together would help them to **break the boundaries that prevailed within the traditional caste system.**

Source: NCERT CRAFT TRADITIONS OF INDIA: PAST, PRESENT AND FUTURE - Chapter 3

Q.29) With reference to the history of modern India, consider the following statements

1. Responsivists and non responsivists split occurred within the swarajist group.
2. Responsivists favoured a non-constitutional protest against the British government after the end of the Non-Cooperation movement.
3. Lala Lajpat Rai and Madan Mohan Malaviya are some of the prominent responsivists.
4. The responsivists vacated their seat in legislative councils after the launch of civil disobedience movement.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 2 and 4 only
- c) 1, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: A split among Swarajists occurred on communal and Responsivist-Non-responsivist lines. The government strategy of dividing the Swarajists—the more militant from the moderate, the Hindus from the Muslims—was successful. The death of C.R. Das in 1925 weakened it further.

Statement 2 is incorrect: The Responsivists among Swarajists advocated cooperation with the government and holding office wherever possible. Besides, they also wanted to protect the so-called Hindu interests. So, the Responsivists were **not in favour of a non-constitutional protest against the British government** after the end of the Non-Cooperation movement and preferred holding the office. Hence statement 2 is incorrect.

Statement 3 is correct: Some of the Responsivists among Swarajists were Lala Lajpat Rai, Madan Mohan Malaviya and N.C. Kelkar.

Statement 4 is correct: While the Non responsivist such as Motila Nehru reiterated faith in mass civil disobedience and withdrew from legislatures in March 1926, the Responsivists went to the 1926 elections as a party in disarray, and did not fare well on the whole. In 1930, they finally walked out as a result of the Lahore Congress resolution on purna swaraj and the beginning of the Civil Disobedience Movement.

Q.30) Recently launched "ISRO System for Safe & Sustainable Operation" (IS4OM) to

- a) Study celestial sources in X-ray, optical and UV spectral bands.
- b) Carry out round-the-clock imaging of the Sun to track solar storms which are likely to hit our planet.
- c) Provide a comprehensive and timely information of the Space environment to users.
- d) Demonstrate indigenous capability to undertake human space flight mission.

Ans) c

Exp) Option c is the correct answer.

Recently, Union Minister of State, Atomic Energy and Space, Dr Jitendra Singh inaugurated **ISRO System for Safe & Sustainable Operation" (IS4OM)** at ISRO Control Centre, in Bengaluru

- 1) **IS4OM** is part of the space situational awareness (SSA) programme to identify space debris and monitor them. It will identify the potential collision of India's active satellites with other space objects and avoid collisions with proper maneuvering to save India's space assets.
- 2) **IS4OM facility** will aid India in achieving its **SSA (Space Situational Awareness) goals** by providing a **comprehensive and timely information of the Space environment to users**. This **multi-domain awareness platform** will bring a prompt, accurate and efficient information on on-orbit collision, fragmentation, atmospheric re-entry risk, space based strategic information, hazardous asteroids and space weather forecast.
- 3) It will **safeguard Indian space assets, mitigate collision threats from space objects**, to provide information for strategic purposes and research activities in Space Debris and Space Situational Awareness

Option a is incorrect: AstroSat is the first dedicated Indian astronomy mission aimed at studying **celestial sources in X-ray, optical and UV spectral bands** simultaneously. It was launched on a PSLV-XL on 28 September 2015.

Option b is incorrect: ISRO is preparing for its first scientific expedition to study the Sun, **Aditya-L1**. It will study the Sun's corona (Visible and Near infrared rays), Sun's photosphere (soft and hard X-ray), chromosphere (Ultra Violet), solar emissions, solar winds and flares, and Coronal Mass Ejections (CMEs), and will **carry out round-the-clock imaging of the Sun**.

Option d is incorrect: The objective of **Gaganyaan programme** is to demonstrate indigenous capability to undertake human space flight mission to LEO. As part of this programme, two unmanned missions and one manned mission are approved by Government of India (GoI).

Source: Union Minister inaugurates IS4OM to safeguard Indian space assets; says about 60 startups have registered with ISRO | The Financial Express

Q.31) Consider the following pairs:

Movement/ Organization	Leader
1. All India Anti-Untouchability League	Mahatma Gandhi
2. All India Kisan Sabha	Swami Sahajanand Saraswati
3. Self-Respect Movement Naicker	E.V. Ramaswami

Which of the pairs given above is/are correctly matched?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Pair 1 is correctly matched. The All-India Anti-Untouchability League was established in 1932 by M.K. Gandhi for elevating the social status of the lower and backward classes. It was born out of the historic Poona Pact between Mahatma Gandhi and Babasaheb Ambedkar.

It was set up as part of his efforts to eradicate the concept of 'untouchability' from India's caste system. It was later came to be known as the Harijan Sewak Sangh. He also started the weekly Harijan in January 1933.

Pair 2 is correctly matched. Between 1920 and 1940 peasant organisations arose. The first organisation to be founded was the Bihar Provincial Kisan Sabha (1929) and in 1936 the All India Kisan Sabha.

All India Kisan Sabha was founded in Lucknow in April 1936 with Swami Sahjanand Saraswati as the president and N.G. Ranga as the general secretary. A kisan manifesto was issued and a periodical under Indulal Yagnik started. The AIKS and the Congress held their sessions in Faizpur in 1936. The Congress manifesto (especially the agrarian policy) for the 1937 provincial elections was strongly influenced by the AIKS agenda.

Pair 3 is correctly matched. E.V. Ramasami Naicker, Known as Periyar (the respected), was a strong supporter of atheism; famous for his anticaste struggle and rediscovery of Dravidian identity. Initially a

worker of the Congress party, he **started the self-respect movement (1925)** and led the anti-Brahmin movement. He also worked for the Justice party and later founded Dravidar Kazhagam; opposed to Hindi and domination of north India.

The Self-Respect Movement was aimed at nothing short of a rejection of the Brahminical religion and culture which Naicker felt was the prime instrument of exploitation of the lower castes. He sought to undermine the position of brahmin priests by formalising weddings without brahmin priests.

Source) UPSC 2019

Q.32) With reference to the ‘No Changers’ during the Indian National movement, consider the following statements:

1. The national schools set up by them were highly successful in spreading education to the poor peasants.
2. They played a significant role in popularising Khadi and charkha among the tribals.
3. C. Rajagopalachari and Rajendra Prasad were among the leaders of the ‘No- Changers’.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: The National schools and colleges were set up by the No changers which trained students in a non-colonial ideological framework. **However, the National education benefited the urban lower middle classes and the rich peasants only and not the poor peasants and masses in particular.**

Statement 2 is correct: The No-Changers devoted themselves to constructive work that connected them to the different sections of the masses. Ashrams sprang up where young men and women worked among **tribals and lower castes especially in Kheda and Bardoli areas of Gujarat and popularised the use of charkha and khadi.**

Statement 3 is correct: C. Rajagopalachari, Vallabhbhai Patel, Rajendra Prasad and M.A. Ansari came to be known as the ‘No-Changers’. The ‘No-changers’ opposed council entry, advocated concentration on constructive work, and continuation of boycott and non-cooperation, and quiet preparation for resumption of the suspended civil disobedience programme.

Source: Spectrum the brief history of modern India: Chapter 17- Emergence of Swarajists, Socialist Ideas, Revolutionary Activities and Other New Forces

Q.33) The following items consist of two statements one labelled as ‘Assertion(A)’ and the other labelled as ‘Reason(R):

Assertion(A): Almost all the revolutionary nationalists refrained from participating in the Non-Cooperation movement.

Reason(R): They believed that only a violent mass revolution throughout the country would free India.

Which of the options given below is correct?

- a) Both Assertion (A) and Reason (R) are true and Reason (R) is a correct explanation of Assertion (A).
- b) Both Assertion (A) and Reason (R) are true but Reason (R) is not a correct explanation of Assertion (A).
- c) Assertion (A) is true and Reason (R) is false.
- d) Both Assertion (A) and Reason (R) are false.

Ans) d

Exp) Option d is the correct answer.

Assertion(A) is incorrect: Nearly all major leaders of revolutionary policies had been enthusiastic participants in the Non-Cooperation Movement and included Jogesh Chandra Chatterjee, Surya Sen, Bhagat Singh, Sukhdev, Chandrasekhar Azad, Shiv Verma, Bhagwati Charan Vohra, Jaidev Kapur and Jatin Das.

Reason(R) is incorrect: The revolutionaries during the first and second decade of the 20th century **did not find it practical to implement the options of creating a violent mass revolution** throughout the country. Instead, they opted to follow in the footsteps of Russian nihilists or the Irish nationalists. This methodology **involved individual heroic actions**, such as organising assassinations of unpopular officials and of traitors and informers among the revolutionaries themselves; conducting swadeshi dacoities to raise funds for revolutionary activities; and organising military conspiracies with expectation of help from the enemies of Britain.

The idea was to strike terror in the hearts of the rulers, arouse people and remove the fear of authority from their minds. The revolutionaries intended to inspire the people by appealing to their patriotism, especially the **idealistic youth who would finally drive the British out**.

Source: Spectrum the brief history of modern India: Chapter 17- Emergence of Swarajists, Socialist Ideas, Revolutionary Activities and Other New Forces.

Q.34) With reference to the communist movement in India, consider the following statements:

1. The Communist Party of India was formed in Tashkent.
2. The 1925 Kanpur Conference of the Communist Party of India was presided over by M.N. Roy.
3. Immediately after its formation, the Communist Party of India banned its members to become a member of Indian National Congress.
4. Gandhiji showed his solidarity with communists who were arrested in relation to the Meerut conspiracy case.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 2 and 4 only
- c) 1 and 4 only
- d) 1, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: M. N. Roy along with Lenin helped evolve the communist international policy towards the colonies. The Communist Party of India (CPI) was formed in 1920 in Tashkent (now, the capital of Uzbekistan) by M.N. Roy

Statement 2 is incorrect: The Kanpur communist conference held in 1925, was the first meeting on Indian soil, where almost all the communist groups and elements had joined. **Singaravelu Chettiar was the president of this conference, Azad Sobhani** as the vice-president, SV Ghate and Janaki Prasad Bagerhatta as general secretaries.

Statement 3 is incorrect: The communist party of India after its formation **called all its members to enrol themselves as members of the Indian National congress** and form a left wing in all its organs. It also asked its members to cooperate with all other radical nationalists and try to transform the congress into a more radical mass-based organisation.

Statement 4 is correct: In 1929 British arrested 32 radical political and trade union activists and they were put up for trial at **the Meerut conspiracy case, 1929**. The defence of the prisoners was to be taken up by including **Jawaharlal Nehru, M.A. Ansari and M.C. Chagala. Gandhiji visited the Meerut prisoners in jail to show his solidarity with them and to seek their cooperation in the coming struggle.**

Source: India's struggle for Independence Chapter- The Rise of the left wing

Q.35) With reference to ‘Revamped Distribution Sector Scheme’, consider the following statements:

1. The Scheme aims to reduce the Aggregate Technical & Commercial losses in power sector.
2. All Private and State-owned Electricity Distribution companies will be eligible for financial assistance under the revamped scheme.
3. Under the scheme, Smart Prepaid electric meters will be provided to consumers all over the country.
4. Power Grid Corporation of India has been nominated as the nodal agency for the implementation of the scheme.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 1 and 4 only
- c) 1, 3 and 4 only
- d) 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

The question is based on the article “**PM launches Power Sector’s Revamped Distribution Sector Scheme**” published in **PIB** on **31st July 2022**. Prime Minister launched the **Revamped Distribution Sector Scheme** and National Solar rooftop portal. He also laid the foundation stone of various green energy projects of NTPC.

Statement 1 is correct: The Revamped Distribution Sector Scheme aims to improve the operational efficiencies and financial sustainability of DISCOMs/ Power Departments excluding Private Sector DISCOMs by providing conditional financial assistance for strengthening of supply infrastructure. The Objectives of the Scheme:

- 1) **Reduction of AT&C losses to pan-India levels** of 12–15% by 2024–25.
- 2) Reduction of ACS-ARR gap to zero by 2024–25.
- 3) Developing Institutional Capabilities for Modern DISCOMs
- 4) Improvement in the quality, reliability, and affordability of power supply to consumers through a financially sustainable and operationally efficient Distribution Sector.

Statement 2 is incorrect: All State-owned Electricity Distribution companies and State /UT Power Departments (referred to as DISCOMs collectively) excluding private Sector power companies will be eligible for financial assistance under the revamped scheme. The scheme would be optional to DISCOMs and will be implemented in urban and rural areas of all States/UTs except private DISCOMs. The Scheme would be available till the year 2025–26.

Statement 3 is correct: The scheme enables consumer empowerment by way of prepaid Smart metering to be implemented in Public-Private-Partnership (PPP) mode. With an outlay of Rs.3,03,758 crore over a period of five years from FY 2021–22 to FY 2025–26, the scheme aims to provide **25 crore Smart Prepaid meters to consumers all over the country**. Prepaid system of metering **minimises inefficiencies in collection**, while the **smart feature in the prepaid smart metering allows a near real time identification of loss pockets**, while also giving consumer the freedom to plan their electricity usage as per their own needs and resources.

Statement 4 is incorrect: Power Finance Corporation (PFC) and Rural Electrification Corporation (REC) have been nominated as the nodal agencies for the implementation of the scheme.

Q.36) With reference to the Kanpur Bolshevik Case, consider the following statements:

1. Under this case, the British convicted communist members for organising an Indian Railway Strike.
2. Muzaffar Ahmed and Shaukat Usmani were arrested by the British in this case.
3. It was the first conspiracy case that the British launched against communists in India.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 3 only

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: In the **Kanpur Bolshevik case 1924**, the accused were charged that they as communists were seeking "**to deprive the King Emperor of his sovereignty of British India, by complete separation of India from imperialistic Britain by a violent revolution**".

Statement 2 is correct: The **accused** in the cases included, among others, important communist organisers who worked in India, such as **S.A. Dange, Muzaffar Ahmad, Nalini Gupta and Shaukat Usmani**. **All four were sentenced to four years of imprisonment.**

Statement 3 is incorrect: Kanpur Bolshevik case 1924 is not a first conspiracy case against communists members in India. Already in early 1920s, communists trying to enter India from the Soviet Union had been tried in a series of conspiracy cases at Peshawar and sentenced to long periods of imprisonment. **The Peshawar Conspiracy Cases** were a set of five legal cases which took place between **1922 and 1927** in British India.

Source: India's struggle for Independence: Chapter - The rise of the left wing

Q.37) With reference to the All-India Trade Union Congress (AITUC), consider the following statements:

1. Lokmanya Tilak played an instrumental role in its formation.
2. Lala Lajpat Rai was the first President of AITUC.
3. At the Gaya session, Indian National Congress objected to the formation of AITUC.
4. To pacify AITUC, British introduced the Trade Disputes Act, 1929.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 1 only
- c) 3 and 4 only
- d) 1, 2 and 4 only

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: The All-India Trade Union Congress (AITUC) **was formed in 1920**. **Lokmanya Tilak** who had developed a close association with **Bombay workers** and played an **instrumental role** in the formation of the AITUC.

Statement 2 is correct: Lala Lajpat Rai the famous radical leader from Punjab was the **first president of the AITUC and Dewan Chaman Lal was its general secretary**. In his first presidential address, Lajpat Rai asked workers to organise, agitate and educate. He was **among the first in India to link capitalism with imperialism** and emphasised the crucial role of the working class in fighting this combination.

Statement 3 is incorrect: INC in the Gaya session, 1922 welcomed the formation of AITUC and formed a committee consisting of prominent congressmen to assist them. **C.R.Das** in his **presidential address to the**

Gaya Congress said that the congress must take up the causes of peasants and workers and see it from the point of view of their own interest and larger goal of achieving swaraj.

Statement 4 is incorrect: British introduced Trade disputes act **not to pacify but to suppress the AITUC. Trade Disputes Act, 1929 is one of the repressive laws** enacted by the British to suppress the trade union movement in India. It made **illegal the strikes in public utility services** like posts, railways, water and electricity, unless each individual worker planning to go on strike gave an advance notice of one month to the administration. It **forbade trade union activity of coercive or purely political nature and even sympathetic strikes.**

Q.38) With reference to the Justice party, Consider the following statements

1. It played a significant role in organising the boycott of Simon commission in the Madras Presidency region.
2. It boycotted the 1920 legislative elections in response to the launch of the Non-cooperation movement.
3. It supported the cause of Indian National Army Prisoners.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 3 only

Ans) d

Exp) Option d is the correct answer.

Justice Party officially known as South Indian Liberal Federation founded by Dr T.M. Nair, P. Tyagaraja Chetti and C.N. Mudaliar on behalf of intermediate castes. It was started in **response against domination of brahmins** in government service, education and political field.

Statement 1 is incorrect: Those who decided to support the **Congress call of boycott of the Simon Commission** included the liberals of the **Hindu Mahasabha and the majority faction of the Muslim League under Jinnah**. Some others, such as the **Unionists in Punjab and the Justice Party in the south, decided not to boycott the commission.**

Statement 2 is incorrect: Unsatisfied with the Montagu–Chelmsford Reforms and the March 1919 Rowlatt Act, Mahatma Gandhi launched his non-cooperation movement in 1919. **The Justice Party did not support the cause of the Non-Cooperation Movement.** In the 1920 elections the Justice party won 63 of the 98 seats.

Statement 3 is correct: Apart from the Congress, the Muslim League, Communist Party, Unionists, Akalis, **Justice Party**, Ahrars in Rawalpindi, Rashtriya Swayamsevak Sangh, Hindu Mahasabha and the Sikh League showed their solidarity with the INA prisoners.

The Indian National Army trials (also known as the **INA trials and the Red Fort trials**) was the British Indian trial by court-martial of a number of officers of the Indian National Army (INA) between **1945 to 1946**, on various charges of treason, torture, etc during the Second World War. **Colonel Prem Sahgal, Colonel Gurbaksh Singh Dhillon, and Major-General Shah Nawaz Khan** were taken prisoners.

Source: Spectrum: Chapter - Simon commission and the Nehru report, Post war National Scenario

Q.39) Which of the following can be considered as reasons for increase in revolutionary activities after the Non-Cooperation movement?

1. Sudden suspension of the Non-Cooperation movement.
2. Arrest of major national leaders during the non-cooperation movement.

3. Emergence of new social classes such as industrial workers after the end of first world war.

Select the correct answer using the code given below:

- a) 1, 2 and 3
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1 only

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: The sudden suspension of NCM shattered the high hopes raised earlier. Many young people began to question the very basic strategy of the national leaders and its emphasis on nonviolence. But since younger nationalists were not attracted to the parliamentary work of the Swarajists or to the patient, undramatic, constructive work of the No-changers, they were drawn to the idea that violent methods alone would free India. Thus, revolutionary activity was revived.

Statement 2 is correct: Prominent freedom leaders including Gandhiji were **arrested** during the NCM which left the young freedom fighters to look for alternatives.

Statement 3 is correct: With the **upsurge of the working class, trade unionism after the first world war**, the revolutionary nationalist could see the **revolutionary potential of the new class** and desire to harness it to the nationalist revolution.

Source: India's Struggle for Independence: Chapter – Bhagat Singh, Surya Sen and the Revolutionary nationalists.

Q.40) With reference to the election of Vice President in India, consider the following statements:

1. The weightage of total votes from Lok Sabha is more than that from Rajya Sabha.
2. Only elected members of state Legislative Assemblies are part of the electoral college.
3. Both nominated as well as elected members of Parliament are a part of the electoral college.
4. The Supreme Court is the final authority in all disputes regarding his election.

Which of the statements given above are correct?

- a) 1 only
- b) 3 and 4 only
- c) 1, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

The Vice President is the Ex-Officio chairman of the Rajya Sabha, who is next in precedence to the President. He too, like the President, is elected indirectly on the basis of proportional representation with single transferable vote. So, for the purpose of electing the Vice President in this indirect fashion, an electoral college is constituted, which has the following features.

Statement 1 is correct: Just as in the case of the election of the President, the **weightage of each vote** is kept **equal**, **whether** it be **from the Lok Sabha or the Rajya Sabha**. However, since the **number of members in Lok Sabha** is far **greater** than that of the Rajya Sabha, the weightage of total votes from Lok Sabha is more than that from Rajya Sabha.

Statement 2 is incorrect: Neither elected nor nominated members of State Legislative Assemblies are a **part of the electoral college** that elects the Vice President.

This is **unlike the President's election**, wherein the **elected members of state Legislative Assemblies** are a part of their electoral college.

Statement 3 is correct: In the election of the Vice President, both elected as well as nominated members in both the Houses of the Parliament (Rajya Sabha + Lok Sabha) take part in the electoral college.

By contrast, in the election of the President, only elected members of both the Houses (as well as state legislative assemblies) are a part of the electoral college.

Statement 4 is correct: In case of any disputes regarding the election of Vice President (as well as that of the President), the Supreme Court is the only and final authority to be deciding this matter.

This is not to be confused with the disputes relating to the election of the members of Parliament, that are decided by the President (or the Governor, in case of MLAs) along with consultation from the Election Commission.

Q.41) Mahatma Gandhi undertook fast unto death in 1932, mainly because

- Round Table Conference failed to satisfy Indian political aspirations
- Congress and Muslim League had differences of opinion
- Ramsay Macdonald announced the Communal Award
- None of the statements (a), (b) and (c) given above is correct in this context

Ans) c

Exp) Option c is the correct answer.

The British Premier Ramsay MacDonald, announced the **Communal Award which provided for separate electorates for the 'Depressed Classes'**. Gandhi was in Yervada Jail, protesting against the separate electorate, he commenced his fast unto death. A solution was found to the communal problem in form of Poona Pact.

Source) UPSC 2012

Q.42) With reference to the Hindustan Republican Association/Army (HRA), consider the following statements:

- It was founded by Bhagat Singh and Sukhdev in Lahore.
- It wanted to establish a Federal Republic of United States of India based on the Universal adult franchise.
- Its leaders were hanged by the British under the Kakori Robbery Case.
- It played a major role in the passage of the Public Safety Bill.

Which of the statements given above is/are correct?

- 1 and 2 only
- 2 only
- 2 and 3 only
- 1, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: The Hindustan Republican Association/Army or HRA (later renamed Hindustan Socialist Republican Association or HSRA) was **founded in October 1924 in Kanpur by Ramprasad Bismil, Jogesh Chandra Chatterjee and Sachin Sanyal.**

Statement 2 is correct: It proposed the overthrow of British colonial rule and its replacement with what it termed a **Federal Republic of the United States of India.** In addition, it sought **universal suffrage** and the socialist-oriented aim of the abolition of all systems which make any kind of **exploitation of man by man possible.**

Statement 3 is correct: The Kakori Train robbery was a train robbery that took place at Kakori, a village near Lucknow in 1925. It was organised by **Hindustan Republican Association (HRA)**. **Ram Prasad Bismil, Roshan Singh and Rajendra Nath Lahiri were hanged**. Chandrashekar Azad remained at large. He reorganised the HRA in 1928 and operated it till his death in 1931.

Statement 4 is incorrect: Bhagat Singh and B.K.Dutt were asked by HSRA to throw a **bomb** in the central legislative assembly on **1929** against the passage of the **Public Safety Bill** and Trade Disputes bill which would reduce the civil liberties of citizens in general and workers in particular.

Source: Bipin Chandra: Chapter- Bhagat Singh, Surya Sen and the Revolutionary Nationalists

Q.43) What is the correct chronological order of the following events?

1. Chittagong Armory raid
2. First Round Table conference
3. Bombing of Central legislative Council by Bhagat Singh
4. Arrival of Simon Commission in India

Select the correct answer using the code given below:

- a) 1-2-3-4
- b) 4-3-2-1
- c) 3-4-1-2
- d) 4-3-1-2

Ans) d

Exp) Option d is the correct answer.

4-3-1-2 is the correct chronological order of the given events.

Event 4: The Indian Statutory Commission also known as **Simon Commission**, is an all-white commission under the **chairmanship of Sir John Simon**. The commission arrived in **India in 1928**. to study constitutional reform in India. Its members included **Clement Attlee**, who became committed to **self-government for India**.

Event 3: Bhagat Singh and Batukeshwar Dutt had thrown two bombs in the Central Legislative Assembly in New Delhi on **8 April 1929**. After they were arrested, **he and Singh initiated a historic hunger strike** protesting against the **abusive treatment of Indian political prisoners**, and eventually secured some rights for them.

Event 1: Chittagong armoury raid was an **attempt in April 1930 to raid the armoury of police** and auxiliary forces from the Chittagong armoury in the Bengal Presidency of British India (now in Bangladesh) **by armed Indian independence fighters led by Surya Sen**.

Event 2: First Round Table Conference was held between **November 1930 – January 1931**. The three Round Table Conferences of 1930–1932 were a series of peace conferences organised by the British Government and Indian political personalities to **discuss constitutional reforms in India**. These started in November 1930 and ended in December 1932.

Source: Spectrum: The brief history of India

Q.44) Consider the following pairs:

Conspiracy case Activist convicted

1. Lahore Batukeshwar Dutt

Conspiracy case

2. Meerut S.A. Dange

Conspiracy case

3. Alipore Bhikhaji Cama

Conspiracy case

Which of the pairs given above is/are correctly matched?

- a) 1 and 2 only
- b) 2 only
- c) 3 only
- d) 1 and 3 only

Ans) b

Exp) Option b is the correct answer.

Pair 1 is incorrect: Bhagat Singh, Sukhdev and Rajguru were tried in the **Lahore conspiracy case** for killing the British police J.P. Saunders to take revenge for the death of Lala Lajpat Rai. Dutt was tried in the Central Assembly Bomb Case.

Pair 2 is correct: In March 1929, the Government arrested 31 labour leaders, and the three-and-a-half-year trial resulted in the **conviction of Muzaffar Ahmed, S.A. Dange, Joglekar, Philip Spratt, Ben Bradley, Shaukat Usmani** and others. This is known as the **Meerut conspiracy case**.

Pair 3 is incorrect: In 1908, Prafulla Chaki and Khudiram Bose threw a bomb at a carriage supposed to be carrying a particularly sadistic white judge, **Kingsford, in Muzaffarpur**. Kingsford was not in the carriage. Unfortunately, two British ladies, instead, got killed. Prafulla Chaki shot himself dead while Khudiram Bose was tried and hanged. British arrested many including **the Ghosh brothers, Aurobindo and Barindra**, who were tried in the **Alipore conspiracy case**, variously called Manick Tolla bomb conspiracy or Muraripukur conspiracy.

Source: Spectrum: The brief history of Modern India

Q.45) With reference to *Zero Coupon Zero Principal* instruments, consider the following statements:

1. It is a financial instrument that can be issued only by the Government of India.
2. It is a security that will be listed on stock exchanges.
3. It will be used to raise funds as donations, with no obligation of repayment.

Which of the statements given above is/ are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

The government on July 16, 2022 declared the so-called zero-coupon, zero-principal instruments as securities that can be listed on particular exchanges. These are financial instruments to facilitate donations to non-profits in a more transparent and organised manner.

Statement 1 is incorrect: Zero Coupon Zero Principal (ZCZP) is a **financial instrument** resembling a debt raising bond that will be **issued** by a **not-for-profit charity, not the Government of India**. Hence this statement is **incorrect**.

Statement 2 is correct: Like other marketable securities, the **SEBI** has rolled out **rules** relating to these financial instruments. One of them is that **these instruments will be listed like securities** on stock exchanges. They will be listed on a **special sub category of stock exchanges**, called the **Social Stock Exchanges**, which was announced by the SEBI in 2021.

The **concept of Social Stock Exchanges** was announced in the **Budget Speech of 2019-20**. They were **first cleared by Sebi in September 2021**. They are meant to be **exchanges-like the NSE and BSE**—except they **will list only securities that raise money for non-profit or for-profit social enterprises**. These exchanges are still in the works.

Statement 3 is correct: Normally when people **issue bonds**, they have to **repay the principal** as well as the **interest (known as Coupon)** after a fixed period of time. However, with these financial instruments, the **issuer pays neither the interest nor the principal**, as this **payment is a donation, not a loan**. Hence the name **Zero Coupon Zero Principal instruments**. This is a **new way to raise funds for donation** to charities for social upliftment, that has been formulated by the government.

Knowledge Base:

Benefits of using these instruments:

This new tool gives more insight into how donations will be used.

There have been concerns around lack of transparency in the way donations are used by these (non-profit or for-profit social) enterprises. The organisations listed on the exchange will need to do regular audits of social impact and these will be disclosed to all stakeholders (much like it is done by for-profit entities on regular stock exchanges)".

Also, if an organisation issues these instruments and has few takers, it can be a red flag for other donors.

<https://economictimes.indiatimes.com/markets/stocks/news/govt-declares-zero-coupon-zero-principal-instruments-as-securities/articleshow/92959209.cms?from=mdr>

Q.46) With reference to the revolutionary nationalist Gopinath Saha, consider the following statements:

1. He was one of the prominent leaders of the Chittagong Armoury Raid of 1930.
2. He made an assassination attempt on the Calcutta Police Commissioner, Charles Tegart.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: He was **hanged by the British in 1924** while the **Chittagong armoury raid started only in 1930**.

Statement 2 is correct: **Assassination attempt on the notorious Calcutta Police Commissioner, Charles Tegart was made by Gopinath Saha in 1924**. However, another man named Day got killed. The government, armed with a new ordinance, came down heavily on revolutionaries. **Gopinath Saha was hanged** despite massive popular protest.

Source: Bipin Chandra: Chapter- Bhagat Singh, Surya Sen and the Revolutionary Nationalists

Q.47) Which of the following pairs are correctly matched?

Journal/Paper/ Book	Published by
--------------------------------	---------------------

- | | |
|-------------|---------------|
| 1. Yugantar | Khudiram Bose |
|-------------|---------------|

- | | |
|------------------------------|--------------------------|
| 2. Indian Sociologists | Shyamji
Krishna Varma |
| 3. Bandi Jivan | Sachindra
Nath Sanyal |
| 4. Philosophy of the
bomb | Batukeshwar
Dutt |

Select the correct answer using the code given below:

- a) 1, 2 and 3 only
- b) 2 and 4 only
- c) 2 and 3 only
- d) 1, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Option 1 is incorrect: Yugantar Patrika was a Bengali revolutionary newspaper founded in 1906 in Calcutta by Barindra Kumar Ghosh, Abhinash Bhattacharya and Bhupendra Nath Dutt (not by Aurobindo Ghosh). A political weekly, it was founded in March 1906 and served as the propaganda organ for the nascent revolutionary organisation Anushilan Samiti that was taking shape in Bengal at the time.

Option 2 is correct: Shyamji Krishna Varma (1857 – 1930) was an Indian revolutionary fighter, an Indian patriot, lawyer and journalist who founded the Indian Home Rule Society, India House and The Indian Sociologist in London.

Option 3 is correct: Sachindra Nath Sanyal (1890 – 1942) was an Indian revolutionary and co-founder of the Hindustan Republican Army. He authored Bandi Jivan.

Option 4 is incorrect: Bhagwati Charan Vohra planned and executed in 1929, the bomb blast under the train of Viceroy Lord Irwin on the Delhi-Agra railway line. The viceroy escaped unhurt and Mahatma Gandhi condemned the revolutionary act through his article The Cult of Bomb.

In response to Gandhi's article, Vohra (not Batukeshwar Dutt), in consultation with Azad, wrote an article entitled The Philosophy of the Bomb.

Source: Spectrum: Appendix 8

Q.48) With respect to the role of Women in Indian National movement, Pritilata Waddedar and Kalpana Dutt were remembered as:

- a) leaders of the Quit India movement
- b) members of the All-India Women's conference
- c) members of the movement led by Surya Sen
- d) members of the Ghadar party

Ans) c

Exp) Option c is the correct answer.

Pritilata Waddedar joined a revolutionary group headed by Surya Sen. She is known for leading fifteen revolutionaries in the 1932-armed attack during which one person was killed and eleven injured. The revolutionaries torched the club and were later caught by the colonial police. **To escape arrest, Pritilata committed suicide by cyanide.**

Kalpana Dutt was a member of the armed independence movement led by Surya Sen, which carried out the Chittagong armoury raid in 1930. She was arrested and tried along with Surya Sen and given a life sentence.

Source: India's Struggle for Independence: Chapter- Bhagat Singh, Surya Sen and the Revolutionary Nationalists

Q.49) Which of the following were said to be the drawbacks of the militant nationalist movement in India?

1. Despite active participation and support from the peasants and masses, they were repressed by the government.
2. Some Extremist leaders did not have a common and consistent ideology regarding their functioning and goals.
3. There was a general lack of Muslim participation due to conservative practices by militant leaders.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: The first half of the statement is wrong as the Revolutionary movement's social base was mostly limited to urban middle class rather than from peasants and common masses. The **second half is correct as the active repression** by the Government actually led to the decline of revolutionary movements due to their narrow social base.

Statement 2 is correct: The Extremist ideology and its functioning lacked consistency. Its advocates ranged from open members and secret sympathisers to those opposed to any kind of political violence. Its leaders—Aurobindo, Tilak, B.C. Pal and Lala Lajpat Rai—had different perceptions of their goal. For Tilak, swaraj meant some sort of self-government, while for Aurobindo it meant complete independence from foreign rule.

Statement 3 is correct: Certain aspects and **rituals such as taking oath before kali, dips in Ganges River followed by the conservative revolutionary leaders led to restricted participation by Muslims.** This does not mean that they were anti Muslim or wholly communal in fact most of them wanted Hindu Muslim unity and Bharat Mata was in a way linked with religion.

Source: 12th Old NCERT- Modern India Chapter - Nationalist movement 1905-18

Q.50) Which of the following statements regarding the historical site of Sannati is correct?

- a) It was built entirely during the Mauryan period.
- b) It has monuments relating to Jainism, Buddhism as well as Hinduism.
- c) It is situated on the banks of river Tungabhadra near Hampi.
- d) It has a Major Rock Edict with only surviving image of Asoka.

Ans) d

Exp) Option d is the correct answer.

Left almost unattended for 20 years after it came to light through the excavation by the Archaeological Survey of India (ASI) between 1994 and 2001, the ancient Buddhist site near Kanaganahalli (forming part of Sannati site) has finally got some attention. The ASI has now come up with a plan for the conservation of the site at a cost of 3.5 crore and work has just begun.

Statement a is incorrect: It was **built in multiple periods of history**, from **Mauryan times to Satavahana and post Satavahana period** as well. The site has a **Maha Adhaloka Chaitya/ Stupa** that was built in **stages** from **3rd century BCE to 3rd century CE**. Hence this statement is **incorrect**.

Statement b is incorrect: It has **monuments relating to Buddhism** and is **mainly a Buddhist site**. It has a **Stupa, a Chaitya**, as well as **Viharas**. Other than these, it has **some secular monuments** of the **Asokan period** as well.

But it **doesn't have any Jain or Hindu monuments** of note belonging to that period. Hence this statement is **incorrect**.

Statement c is incorrect: It is **situated** on the **banks** of the **river Bhima (not river Tungabhadra)**, in **Gulbarga** district in **northern Karnataka**. Also, it is **not** in the **near vicinity of Hampi**. It is **close** to the **Buddhist/ Asokan site of Kanaganahalli**. Hence this statement is **incorrect**.

Statement d is correct: It is also **famous for Ashokan Rock Edicts (Major)**. **Especially** because at this site there is a **slab with flat relief** showing a **portrait of emperor Ashoka, the only known surviving one**. Hence this statement is **correct**.

Knowledge Base:

The monuments at this site have been built by sourcing the locally available limestone.

There is a Kali temple in Chandralamba, but from much later period located nearby.

The inscribed sculpture of Asoka also features his queens, attendants, and an inscription in Brahmi which says 'Rayo Asoka'.

Source: <https://www.thehindu.com/news/national/karnataka/sannati-ancient-buddhist-site-finally-in-focus-after-20-years/article65619746.ece>

Q.1) The Congress ministries resigned in the seven provinces in 1939, because:

- the Congress could not form ministries in the other four provinces
- emergence of a 'left wing' in the Congress made the working of the ministries impossible
- there were widespread communal disturbances in their provinces
- None of the statements (a), (b) and (c) given above is correct.

Ans) d

Exp) Option d is the correct answer.

Option d is correct: The Congress ministries **resigned in October and November 1939, in protest against Viceroy Lord Linlithgow's action of declaring India to be at war with Germany in the Second World War without consulting the Indian people.**

Source: UPSC 2012

Q.2) With reference to Mahatma Gandhi and Subhash Chandra Bose, consider the following statements:

- Unlike Gandhi, Subhash Chandra Bose was against the English system of education.
- While Gandhi was in favor of a decentralized economy with no state control, Bose wanted industrialization under state ownership.
- Both Gandhi and Bose believed in eradicating untouchability and maintaining the varna distinctions of the caste system.

Which of the above statements is/are correct?

- 1 and 2 only
- 2 only
- 2 and 3 only
- 1 and 3 only

Ans) b

Exp) Option b is the correct answer.

It is a proven fact that Bose and Gandhi were not supportive of each other regarding ideologies. However, both had mutual respect. Mahatma Gandhi called him a "patriot among patriots" for his adamant ways to gain India's freedom. On the other hand, Bose called him 'Father of The Nation', a term that is still used for Mahatma Gandhi even today.

Statement 1 is incorrect: Gandhi opposed the English educational system and the use of English as a medium of instruction. Gandhiji wanted a local schooling system all away from a western one. Whereas, for an industrial India, Subhash Bose advocated better education, particularly in science and technology. Netaji propagated military education, technical education, and administrative education. Thus, Subhash Chandra Bose supported the English system of education.

Statement 2 is correct: Mahatma Gandhi's concept of Swaraj was imbibed in a **decentralised economy without state control**. Gandhi dismissed both capitalism and Western socialism—the former for its exploitative excesses and the latter for its connection to industrialisation. He was against largescale industrialisation. He had strong objections to labour saving machinery. In contrast, Subhas Chandra Bose considered economic freedom to be the essence of social and political freedom. He was all in **favour of modernisation to be brought about by industrialisation**. At the 1938 Hariपुरa Congress session, Bose expressed his opinion that, for India to progress, a comprehensive scheme of industrial development under state ownership and state-control would be indispensable.

Statement 3 is incorrect: Gandhi's goals for society were mainly eradicating untouchability, **maintaining the varna distinctions of the caste system**, and strengthening tolerance, modesty, and religiosity in India. Whereas Bose looked forward to an India changed by a socialist revolution that would bring to an end the

traditional social hierarchy with its caste system; in its place would come an **egalitarian, casteless, and classless society**. Subhas Bose **completely rejected** social inequality and the **caste system**.

Source: <https://ncert.nic.in/textbook/pdf/lehs304.pdf>

<https://www.deccanherald.com/national/differences-between-gandhi-bose-highly-exaggerated-754950.html>

Q.3) Scorched Earth Policy is a military strategy which seeks to destroy anything that could be of use to the enemy, including energy supplies, bridges, provision stores, agricultural fields, road and railway links, etc. In this context, which of the following option is true about Scorched Earth Policy?

- Indian states of pre-independence era never used any such scorched earth policy.
- Harming the civilians by the use of this policy has been banned under the 1977 Geneva Convention.
- British Government in India never used the Scorched Earth Policy.
- Scorched earth policy was first introduced in warfare during World War I.

Ans) b

Exp) Option b is the correct answer.

Scorched earth tactics form part of a military strategy which seeks to destroy anything that could be of use to the enemy, including energy supplies, bridges, provision stores, agricultural fields, road and railway links, etc. **The destruction could be carried out by the enemy, or by the retreating army of a country which does not want invaders to use its resources.**

Option b is correct: The strategy seeks to deplete the enemy's resources to sustain warfare and break their morale by inflicting heavy hardships on combatants and non-combatants alike. **Harming civilians as part of this strategy has been banned under the 1977 Geneva Convention.**

Option c is Incorrect: During the Second World War India was facing with food shortages. India imported rice from Myanmar and Thailand, but when the Japanese occupied Burma in 1942, India couldn't get rice anymore. When the Japanese army arrived at the Indian border, **the British initiated the scorched earth policy in Bengal**. Under the policy, any territory that surrendered was destroyed and in Bengal it meant removing rice from the traders' storehouses. Also, under the policy boat was denied to the fishermen.

Option a and d are Incorrect: Scorched earth policy has been part of warfare since ancient times, with the nomad Scythians using the tactics in their war against the Persian Achaemenid Empire. **In India, the armies of Maratha leader Chhatrapati Shivaji were known for their scorched earth tactics.** While the Maratha leaders looted and burnt enemy towns, they were under orders to not harm civilians or desecrate religious site.

Source: German Chancellor says Russia using 'scorched-earth tactics': What is this strategy | Explained News, The Indian Express

'Churchill's policies led to Bengal famine' (news18.com)

Q.4) Consider the following statements regarding the Underground Movement carried during the Quit India Movement:

- The Socialist groups called 'Azad Dastas' were formed in Nepal to fight the tyranny of British Government.
- All India Radio (AIR) was started by Congress for secret communication with the public.
- The underground movement leaders included Biju Patnaik, Chhotu Bhai Puranik and R.P. Goenka.

Which of the statements given above are correct?

- 1 and 2 only
- 1 and 3 only
- 2 and 3 only
- 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is correct: The underground movement grew very strong in Bihar and proved to be a major law and order problem for the British during 1942-44. Despite severe repression, several organizations and dacoit gangs were formed in different parts of Bihar by 1943. Many of these groups had links with the Congress Socialist Party. **The Socialist groups called ‘Azad Dastas’ carried out activities in the name of Congress. Jayprakash Narayan organized and trained an “Azad Dasta” (Freedom Brigade) in Nepal to paralyse the machinery of the British Government and for fighting the tyranny of British rule.**

Statement 2 is incorrect: After examining its past campaigns, the Congress realized during the Quit India Movement that the communication with the public was central to its success. Thus, the idea of an underground radio station was conceived, and Usha Mehta became its voice. **Though it was known by many names – the Freedom Radio, the Ghost Radio, the Congress Radio – it was, very simply, the secret anti-imperialist voice of the Indian National Congress and almost no one, apart from those involved, knew anything certain about its inner workings. In fact, The Congress Radio, which began operations in August 1942, was set up to counter the British-controlled All India Radio (AIR), often tagged as ‘anti-India Radio’.**

Statement 3 is correct: The main personalities taking up the underground activity were Rammanohar Lohia, Jayprakash Narayan, Aruna Asaf Ali, Usha Mehta, **Biju Patnaik, Chhotu Bhai Puranik, Achyut Patwardhan, Sucheta Kripalani and R.P. Goenka.**

Knowledge Base: Pg 450, ch 23, Spectrum

Unit-21.pdf (egyankosh.ac.in)

Q.5) Recently, Central Government has released a Comic book about the stories of Tribal Freedom Fighters. In this context, consider the following pairs:

Tribal freedom fighter – Associated with

1. Budhu Bhagat – Larka rebellion
2. Kanhu Murmu – Santhal rebellion
3. Chakra Bisoi – Khond uprising
4. Tirot Sing – Khasi uprising

How many of the above pair(s) is/are correctly matched?

- a) Only one pair
- b) Only two pairs
- c) Only three pairs
- d) All the four pairs

Ans) d

Exp) Option d is the correct answer.

Recently, The Ministry of Culture has released the third Comic book on stories of 20 Tribal Freedom Fighters at Tiranga Utsav celebration in New Delhi.

The important tribal freedom fighters mentioned in the book are:

Tribal Freedom Fighter	Contribution
Budhu Bhagat	He had led guerrilla warfare against the British. He was a leader of the Larka rebellion in 1832. (Hence pair 1 is correctly matched.)
Sidhu and Kanhu Murmu	They were the leaders of the Santhal rebellion (1855–1856) , the rebellion in present-day Jharkhand and Bengal in eastern India against both the British

SFG 2023 | LEVEL 1 | Test #21 - Solutions | 

	colonial authority and the corrupt zamindari system. (Hence pair 2 is correctly matched)
Tantiya Bhil	He was known as the Robin Hood of the Central Provinces . He robbed trains carrying British wealth and distributed it among his tribe, the Bhils.
Major Paona Brajabasi	He fought to defend the kingdom of Manipur. He was the hero of the Anglo-Manipur war .
Malati Mem	She was inspired to join Mahatma Gandhi's satyagraha movement. She fought against the British monopoly over opium and educated her people about the dangers of opium addiction.
Helen Lepcha	She was an ardent follower of Mahatma Gandhi. Her influence over her people made the British restless. In 1941, she helped Netaji Subhas Chandra Bose escape from house arrest and travel to Germany. She was awarded the Tamra Patra for her invaluable contribution to the freedom struggle.
Pulimaya Devi Podar	She heard Gandhi when she was in school and wanted to join the freedom struggle immediately. Despite stiff opposition from her family, she joined the movement. She was imprisoned for her participation in protests. After independence, she continued to serve her people and was awarded the title of 'Swatantra Sainani' .
Tirot Singh	Leader of a Khasi uprising: He realized the duplicity of the British and waged war against them. He was captured, tortured, and imprisoned. He died in prison. (Hence pair 4 is correctly matched.)
Manjhi and Chakra Bisoi	They were leaders of Khond tribe and objected to the British interfering in their customs. (Hence pair 3 is correctly matched.) Rendo was caught and hanged while Chakra Bisoi became a fugitive and died in hiding.

Q.6) With reference to the offers made by British under Wavell Plan (1945), consider the following statements:

1. According to the plan, Caste Hindus and Muslims were to have equal representation in Governor General's executive council.
2. It proposed that all members of the Governor General's executive council will be Indians except the Viceroy.
3. The plan proposed that veto power of Governor General to bypass the ministerial decisions would be discontinued.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 2 only

Ans) a

Exp) Option a is the correct Answer.

Lord Wavell invited 21 political leaders in Shimla to discuss the Wavell Plan, the conference is popularly known as the "Shimla Conference". The plan was to restructure the Governor General's Executive Council.

Statement 1 is correct: It was proposed that the Viceroy's Executive Council would be immediately reconstituted, and the number of its members would be increased. The Plan proposed that **both Caste Hindus and Muslims would have equal representation in governor general's executive council**. The League wanted all Muslim members to be League nominees because it feared that since the aims of other minorities—depressed classes, Sikhs, Christians, etc.—were the same as those of the Congress, this arrangement would reduce the League to a one-third minority.

Statement 2 and 3 are incorrect: As per Wavell Plan, all the members of the executive council were to be Indians **except the Viceroy and the Commander-in-chief (not only the Viceroy)**.

Other proposals of the Wavell Plan were:

- (1) The reconstructed Council was to function as an interim Government within the framework of the GOI Act, of 1935.
- (2) Governor General **could exercise a veto** to bypass the advice of ministers.
- (3) The possibilities for negotiations on a new constitution were to be kept open once after the final war was finally won by the Allies.

Source: <https://ncert.nic.in/ncerts/l/lehs304.pdf>

Q.7) The Defense of India Act was enforced during the Second World War due to which of the following reasons?

- a) To enforce restrictions on civil liberties of the common people.
- b) To ensure the public safety and the defense of British India.
- c) To provide compensation for the land acquired for defense purpose.
- d) All of the above

Ans) d

Exp) Option d is the correct Answer.

The Defense of India Act, 1939 was an Act passed by the Central Legislature in 1939 which effectively declared martial law in India. Although it was enacted on 29 September 1939 it was deemed to come into force on 3 September 1939, the day when the Second World War began.

Option a is correct: Even before the declaration of the War, emergency powers had been acquired by the Centre in respect of provincial subjects by amending the 1935 Act. Defense of India Act had been enforced the day the War was declared, thus **restricting civil liberties of the common people**.

Option b is correct: The act empowered the Viceroy to make rules for the public **safety and the defense of British India**. It also provided for punishments in case of any contraventions which included death or transportation for life. The grounds for the punishment were the intent to assist any State at war with His Majesty or that of waging war against His Majesty.

Option c is correct: The act also provided for **acquisition of land for defense purposes and provided compensation for the land acquired**. It expired six months after the termination of the war and was repealed by the Repealing and Amending Act, of 1947

<https://ncert.nic.in/textbook/pdf/hess209.pdf>

Q.8) Which of the following is/are the reasons for Mahatma Gandhi to launch Individual Satyagraha during World War II?

1. To show the discontent towards rising prices of commodities in India.
2. To assert the right of speech of Indians against the war efforts.
3. Mass movement at that time was not conducive as it might turned aggressive.

Select the correct answer using the code given below:

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct Answer.

In reaction to the August Offer, Gandhiji called for a limited 'Individual Satyagraha'. It was a protest against the British government and its inability to accommodate the demands of Indians. Also, Indians wanted to demonstrate that though they are taking part in the war, the participation was not voluntary.

Statement 1 is incorrect: Individual Satyagraha was the **result of the August offer's failure** in providing a sound solution for India's future political status. The main aims for launching the satyagraha were:

- 1) To show that nationalist patience towards the political situation of the India at that time was not due to weakness of Indians;
- 2) To express people's feeling that they were not interested in the war and that they made no distinction between Nazism and the double autocracy that ruled India; and
- 3) To give another opportunity to the Government to accept Congress' demands peacefully.

The issue of rising prices of commodities because of war was not the reason behind the Individual Satyagraha. Hence the statement 1 is incorrect.

Statement 2 is correct: The Individual Satyagraha was to **affirm the right of speech against the war efforts.**

Statement 3 is correct: The radicals and leftists wanted to launch a mass Civil Disobedience Movement, but **Gandhiji** insisted on individual satyagraha, as he **thought that mass movement might turn aggressive.**

Source: <https://ncert.nic.in/ncerts/1/lehs304.pdf>

Q.9) With reference to the various sessions of Indian National Congress, consider the following statements:

- 1. At the Bombay Session in 1934, wearing of Khadi was made a necessary criterion for elective membership of the congress.
- 2. The Faizpur session in 1936 was the first Congress Session conducted in a rural area.
- 3. Congress got its first woman President at the Kanpur Session in 1925.

Which of the statements given above are correct?

- a) 1 and 3 only
- b) 2 and 3 only
- c) 1 and 2 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

statement 1 is correct. A number of changes in the Congress constitution were affected **at the Bombay Session in 1934 under the Presidentship of Rajendra Pasad. Wearing of Khadi was made a necessary criterion for elective membership.** A. I. C. C. was reduced to half its strength, etc.

Statement 2 is correct. Held at Faizpur in 1936 near Jalgaon, this was the first Congress Session in a rural area. Pandit Nehru was the President of the Congress during this session. Goaded by the left-wing and the peasant movements, the Congress accepted at Faizpur in 1936 a programme of substantial reduction in rent and revenue, abolition of feudal dues and forced labour, fixity of tenure and a living wage for agricultural labourers.

Statement 3 is incorrect. The Congress got its first woman President at the Calcutta Session in 1917- Annie Besant. Sarojini Naidu became the second woman to preside over the Congress after Annie Besant at the Kanpur session 1925.

Page, 343, PDF, Bipin Chandra, Freedom Struggle

Q.10) With reference to the phenomenon of Arctic Amplification, consider the following statements:

1. It states that the surface temperature of Arctic region is increasing at a faster rate than the rest of the planet.
2. It results in an increase in concentration of greenhouse gases in the atmosphere.

Which of the statements given above is/ are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Recently a report was released by an institute in Finland regarding the effects of climate change and global warming over the Arctic region. This report found that near surface temperatures are rising at a faster than global average rate over the Arctic region. This phenomenon has been termed by scientists as 'Arctic Amplification'.

Statement 1 is correct: Arctic Amplification refers to the **increased divergence** between the **average global temperature rise** due to climate change and the **temperature increase witnessed at Arctic Circle due to climate change**. **The phenomenon states that** the Arctic is warming twice to three times as fast as the rest of the planet due to climate change.

Statement 2 is correct: An increased temperature at the Arctic results in **loss of sea ice**, as well as **melting of permafrost**. This increase in temperatures and melting of permafrost causes the **methane stored as clathrates** in both these places to **escape**. **Methane is also a greenhouse gas** which **traps 30 times more heat** compared to equivalent amounts of **CO₂**. This also **leads to an increase in global warming**.

Hence one of the consequences of this phenomenon is an increase in the greenhouse gases in the atmosphere (which ultimately contributes to an increased climate change). **Hence this statement is correct.**

Knowledge Base:

- 1) According to recent studies as well as the Arctic Monitoring and Assessment Programme (AMAP), the Arctic is warming 3 times faster than the rest of the world. While the global average for the increase in temperature since pre-industrial times is about 1.1 degrees Celsius, for the Arctic the temperature increase in the same time frame has been around 3 degrees Celsius.
- 2) This phenomenon is observed at both the Poles (called Polar Amplification collectively). However, between the two it is more pronounced at higher latitudes in the Northern Hemisphere, hence the name Arctic Amplification.
- 3) At certain points of time, this divergence even increased to four times compared to the global average.
- 4) Even within the Arctic region, this warming is more pronounced in the Eurasian side, compared to the North American side. The Arctic region near the Barents Sea (near Norway, Finland, Russia, etc) is warming at a rate of 7 times more than average global rate.

5) **Causes:**

- a. Negative Albedo Feedback: Rising temperatures are causing increasing ice loss, leading to reduced reflection and increased absorption of solar radiation, further accelerating heating and temperature increase. Studies show that the ice-albedo feedback and the lapse rate feedback are responsible for 40% and 15% of polar amplification respectively.
- b. Increasing temperatures are slowing the global conveyor belt of heat distribution through ocean currents. Since Arctic waters are not as cold as before, they are not moving toward the Equator at previous rates, and collecting in the region, further causing melting of sea ice and ice shelves.
- c. Lapse rate feedback and water vapour feedback have also been proposed as causal factors by various scientists.

6) Consequences:

- a. Loss of sea ice, increased global warming
- b. Change in patterns of ocean currents
- c. Increase in sea level, flooding of low-lying areas like islands and coastal settlements
- d. Loss of Polar biodiversity
- e. Possible increase in extreme rainfall events during monsoons.

Source: <https://www.thehindu.com/specials/text-and-context/explained-what-is-causing-arctic-warming-should-india-be-worried/article65778586.ece>

Q.11) Mahatma Gandhi undertook fast unto death in 1932, mainly because

- a) Round Table Conference failed to satisfy Indian political aspirations
- b) Congress and Muslim League had differences of opinion
- c) Ramsay Macdonald announced the Communal Award
- d) None of the statements (a), (b) and (c) given above is correct in this context

Ans) c

Exp) Option c is the correct answer.

Option c is correct: Mahatma Gandhi undertook fast unto death in 1932, against Ramsay Macdonald's Announcement of the Communal Award. Ramsay MacDonald, announced the Communal Award which provided for separate electorates for the 'Depressed Classes', the Europeans, the Sikhs, the Anglo-Indians and the Indian-based Christians.

Source: UPSC 2012

Q.12) Which of the following statements are correct with reference to the Muslim League?

1. During its initial phase, the League was designed to prepare the students for service to the British Raj.
2. The Muslim League observed 'Day of Deliverance' in 1939 as a mark of relief that the Congress regime ended in the provinces.
3. One of League's Prime objectives was to prevent the spread of prejudice against other Indian communities among Muslims.

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

The All-India Muslim League (popularized as the Muslim League) was a political party established in 1906 in British India. It was found as an alternative political group to the Indian National Congress. It was created with the aim of representing the interests of Indian Muslims.

Statement 1 is correct: Initially, the League was designed to prepare students for service to the British Raj; however, it later indulged into political activity.

Statement 2 is correct: The Muslim League observed 'Day of Deliverance' on 22 December 1939 when the Congress Party members who were part of the Central and provincial governments resigned. The reason was to protest against the Viceroy's decision to make India a party to the Second World War without duly consulting Indians.

Statement 3 is correct: All India Muslim League – Objectives

- 1) To protect Muslims' political rights and bring them to the attention of the government and to prevent the spread of prejudice against other Indian communities among Muslims.
- 2) To foster feelings of loyalty to the British government among Indian Muslims, and to dispel any misconceptions about the government's intentions regarding any of its measures.
- 3) Profiting from and advancing the political rights and interests of India's Muslims, as well as respectfully representing their needs and aspirations to the government.
- 4) To prevent any feelings of hostility toward other communities among Indian Muslims, without prejudice to the League's objectives.

Pg 439

Q.13) With reference to events related to the Individual Satyagraha, consider the following statements:

1. The Delhi Chalo Movement was one of the outcomes of the Individual satyagraha movement.
2. The movement became violent when British refused to accept the demand of satyagrahis.
3. Vinobha Bhave was the first Individual Satyagrahi.

Which of the above statements are correct?

- a) 1 only
- b) 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct Answer.

After the British failed to respond to the Indian demands during WW-2. Individual Satyagraha arose directly because of the August Offer. The British made the August offer during a critical period of the war in 1940. The August Offer was rejected by both Congress and the Muslim League. MK Gandhi focused on Individual Satyagraha as the time was not suitable for a mass movement.

Statement 1 is correct: The demand of the satyagraha would be the freedom of speech against the war through an anti-war declaration. If the government did not arrest the satyagrahi, he or she would not only repeat it but move into villages and start a march towards Delhi, thus precipitating a movement that came to be known as the 'Delhi Chalo Movement'.

Statement 2 is incorrect: The centerpiece of Individual Satyagraha was non-violence which could only be achieved by selecting the Satyagrahis. Selected Satyagrahi were chosen having non-violent background like Acharya Vinoba Bhave, Pt. Jawaharlal Nehru and Brahma Dutt. This movement never became violent.

Statement 3 is correct: Nonviolence is set as the centerpiece of Individual Satyagraha. This was done by carefully selecting the Satyagrahis. The first Satyagrahi selected was Acharya Vinoba Bhave, who was sent

to jail when he spoke against the war. The second Satyagrahi was Jawahar Lal Nehru. The third was Brahma Datt, one of the inmates of Gandhi's Ashram.

Knowledge Base: The very reason for confining the movement to individual participation was that neither Gandhiji nor the Congress wished to hamper the War effort, and this could not have been the case in a mass movement. As a result, even the aim of the Satyagraha was a limited one i.e., to disapprove the British claim that India supported the War effort wholeheartedly.

The aims of launching individual satyagraha were:

- 1) to show that nationalist patience was not due to weakness
- 2) to express people's feeling that they were not interested in the war and that they made no distinction between Nazism and the double autocracy that ruled India; and
- 3) to give another opportunity to the government to accept Congress' demands peacefully

Source: Spectrum – ch 22, Pg 439.440

Q.14) Consider the following statements regarding the Parallel Government formed in Satara during the Indian Freedom struggle:

1. Under the Parallel Government, an armed militia called Vidyut Vahini was organized in Satara.
2. In Satara, the volunteer corps and village units were formed to run the people's court.
3. The Parallel Government in Satara was dominated by the kunbi peasants and supported by the Dalits.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer

The Parallel governments were established at Ballia, Tamluk in Midnapore and Satara in Maharashtra.

Statement 1 is Incorrect: Vidyut Vahinis were organised in the city of Tamluk in the Midnapore District of West Bengal. Parallel Government also known as Jatiya Sarkar, was established in Tamluk from December 1942 to September 1944. The Jatiya Sarkar undertook cyclone relief work, sanctioned grants to schools, supplied paddy from the rich to the poor.

Statement 2 is correct: The volunteer corps (seba dals) and the village units (tufan dals) were formed under the Parallel Government in Satara. The Seba dals and tufan dals organized the people's court and also set up village libraries. The Parallel Government in satara was formed from mid-1943 to 1945. The parallel Government was known as "Prati Sarkar". It was organised under leaders like Y.B. Chavan, Nana Patil, etc. The Prati Sarkar undertook prohibition campaigns and Gandhi marriages. prohibition campaigns and Gandhi marriages.

Statement 3 is correct: The Parallel Government in satara was dominated by the kunbi peasants and supported by the Dalits. The Satara Prati Sarkar functioned till the elections of 1946, despite government repression.

<https://ncert.nic.in/ncerts/1/lehs304.pdf>

Q.15) Which of the following statements regarding the SMILE-75 initiative is correct?

- a) It aims to empower women of minority groups through educational, financial & digital literacy.
- b) It aims to provide micro-credit to street vendors.
- c) It aims to provide residential education to talented Schedule Caste students in private schools.
- d) It aims to provide alternate livelihood and rehabilitation to people involved in beggary.

Ans) d

Exp) Option d is the correct answer.

Statement a is incorrect: Naya Roshni (not SMILE-75) is a scheme of the **Ministry of Minority Affairs** for **Leadership Development** among **women of minority groups**. Hence this statement is **incorrect**. This scheme plans to do so by providing such women with **education** (including adult education), as well as **training in digital skills** (using computers, internet, etc) as well as **financial literacy** (concepts like savings, insurance, investment, etc), so that they **feel more confidence** and are **empowered to take care of themselves** and improve their lives.

Statement b is incorrect: The PM SVANidhi (Street Vendor's Atmanirbhar Nidhi) (not SMILE-75) is a scheme for providing **micro-credit loans to street vendors**. Hence this statement is **incorrect**. It is a scheme of the **Ministry of Housing and Urban Affairs (MoHUA)** to provide **working capital loans (of up to Rs 10,000 for a 1-year term)** to street vendors registered with municipal bodies so that they may **resume their livelihood after the easing of lockdown** in later months of 2020.

Statement c is incorrect: The SRESTHA Yojana (Scheme for Residential Education for Students in High Schools in Targeted Areas) (not SMILE-75) is a scheme of **Ministry of Social Justice & Empowerment** to help in **socio-economic upliftment** of **meritorious students from Scheduled Caste**. Hence this statement is **incorrect**. This scheme aims to provide **residential education** to meritorious SC students in **reputed private schools, on government expense** (which they may have been otherwise unable to afford) in order to provide them with the best education and opportunities to do better in life.

Statement d is correct: SMILE-75 (Support for Marginalised Individuals for Livelihood & Enterprise) is a scheme that aims to **remove the issue of beggary** from Indian cities. It provides **comprehensive rehabilitation** including **alternate livelihood for vulnerable and marginalised** people who have been **forced by life circumstances to resort to beggary**. This scheme has interventions like **housing, education, free medical facilities & skill development** to ensure that people do not have to beg in order to survive.

Knowledge Base:

- 1) It is a Central Sector Scheme (100% Union funding) implemented by the Union Ministry of Social Justice & Empowerment.
- 2) It was launched earlier in 2022 along with a scheme for upliftment and rehabilitation of Transgender people. However, it was relaunched in August this year as a part of "Azadi ka Amrit Mahotsav", to celebrate 75 years of India's independence, hence the name SMILE-75.
- 3) It will be launched in jurisdiction of 75 selected Municipal Corporations
- 4) It will be a joint effort by Local Urban Bodies, Civil Society Organisations/Non-Government Organisations and experts on the phenomenon of beggary
- 5) Housing facilities will be provided in the form of 'Garima Grah' to ensure basic necessities like food, clothing, recreational facilities, etc are met.
- 6) The SMILE-75 scheme dovetails and converges many existing schemes of the government for the vulnerable and marginalised communities. To ensure rehabilitation, beneficiaries will be provided scholarships to attain meaningful education, skill development training in order to earn livelihood from alternate means, subsidised/ free medical facilities so that their healthcare expenses are taken care of, etc.
- 7) The SMILE-75 project has been provided with a budget of about 100 crores for a multi-year (not 1 year) period until 2025-26.

Q.16) Consider the following statements regarding the features of Quit India Movement:

1. The movement endorsed the defiance of government authority.
2. The Quit India Movement was accommodative of violence directed against the state.
3. Anybody who believed in the complete independence of the country could join it.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

The Quit India Movement, 1942 was less ambiguous in its declared objectives. It was launched to ensure the complete withdrawal of British power from India. The projected struggle had four main features:

Statement 1 is correct: The movement was to be marked by total defiance of government authority.

Statement 2 is correct: It was accommodative of violence directed against the state.

Statement 3 is correct: It aimed at destroying British rule in India. Unlike earlier movements when Gandhi had asked trained satyagrahis to join the movements, anybody who believed in the complete independence of the country could join it now.

- 1) Students were urged to play a prominent part and to lead the movement.

Source: <https://egyankosh.ac.in/bitstream/123456789/44327/3/Unit-21.pdf>

Q.17) Consider the following statements regarding the Deoli Plan:

1. Under Deoli plan, the disruption of war machinery of British was conceptualized.
2. Jayaprakash Narayan was the important personality associated with the Deoli plan.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Jayaprakash Narayan was arrested for speaking against Indian participation in the Second World War in February 1940 and sent to Deoli detention camp in Rajasthan. Jayaprakash was appalled at the conditions in Deoli. He organized a hunger strike to protest the conditions in 1941. The Government immediately released him. The **jail at Deoli, was set up to house hardened political prisoners**. The prisoners were largely communists, Congress socialists, revolutionaries from Bhagat Singh's Hindustan Socialist Republican Association, Royists, Labour Party comrades, members of the Forward Bloc, the Revolutionary Socialist Party.

Statement 1 is correct. In 1941, Jayaprakash saw Deoli as a great opportunity for mobilizing support for the armed struggle. **Under Deoli plan, the disruption of war machinery of British was conceptualized in 1941.**

Statement 2 is correct. The plan of action came to be known as the Deoli Plan of Jayaprakash Narayan.

According to Jayaprakash Narayan, the nationalist unity could be revived if Gandhi were to plan a radical course of action rather than a Satyagraha.

Source: <https://egyankosh.ac.in/bitstream/123456789/44327/3/Unit-21.pdf>

Jayaprakash Narayan: The Making of a Socialist - Open The Magazine

Q.18) With reference to the nationalist's response to Second World War, consider the following statements:

1. The Congress decided to support the British government in the war if a responsible government was established in India.
2. Mahatma Gandhi advocated unconditional support to the British government.
3. Jawaharlal Nehru proposed the launch of civil disobedience movement to take advantage of British government.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

On September 1, 1939, Germany attacked Poland – the action that led to the Second World War. On September 3, 1939, Britain declared war against Germany and the British Government of India **declared India's support for the war without consulting Indian opinion.**

Statement 1 is correct: Though the **Congress** did not like the unilateral action of the British of drawing India into the war without consulting the Indians, it **decided to support the war effort conditionally.** The Indian offer to cooperate in the war effort had two basic conditions:

After the war, a constituent assembly should be convened to determine political structure of a free India.

Immediately, some form of a genuinely responsible government should be established at the Centre.

The offer was rejected by the viceroy Linlithgow. The Congress argued that these conditions were necessary to win public opinion for war.

Statement 2 is correct: Mahatma Gandhi had all sympathy for Britain in this war because of his total dislike of the fascist ideology. He **advocated an unconditional support to the Allied powers.** He made a clear distinction between the democratic nations of Western Europe and the totalitarian Nazis and fascists. He said that he was not willing to embarrass the British government during the war.

Statement 3 is incorrect: Subhas Bose and other socialists, such as Acharya Narendra Dev and Jayaprakash Narayan, had no sympathy for either side in the war. In their opinion, the war was being fought by imperialists on both sides; each side wanted to protect its colonial possessions and gain more territories to colonise, so neither side should be supported by the nationalists. In fact, they thought it was the **ideal time to launch a civil disobedience movement**, to thus take advantage of the situation and snatch freedom from Britain. **Jawaharlal Nehru was not ready to accept the opinion of either Gandhi or of the socialists.** He was clear in his mind about the difference between democratic values and fascism. He, therefore, **advocated no Indian participation till India itself was free.** However, at the same time, **no advantage was to be taken of Britain's difficulty** by starting an immediate civil disobedience movement.

Source: History by Bipin Chandra page 296-305

Modern History, Spectrum, Chapter-22, Nationalist Response in the Wake of World War II, Pg. 434-436

Q.19) Consider the following statements regarding the British response to Quit India Movement:

1. The martial law was enforced all over India.
2. All the major leaders were arrested, except for Mahatma Gandhi.
3. Government reduced the taxes and fines to appease the rebellious villagers.

Which of the statements given above is/are **incorrect**?

- a) 2 only
- b) 3 only

- c) 1 and 3 only
d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Statement 1 is incorrect: The martial law was not applied anywhere, but the repression was severe. Agitating crowds were lathi-charged, tear-gassed and fired upon.

Statement 2 is Incorrect: On 8 August 1942 at the All-India Congress Committee session in Bombay, Mohandas Karamchand Gandhi launched the 'Quit India' movement. The next day, **Gandhi, Nehru and many other leaders of the Indian National Congress were arrested by the British Government.** Upon his release in 1944, Gandhi continued his resistance and went on a 21-day fast.

Statement 3 is Incorrect: The government resorted to violence in order to stop the agitation. **Rebellious villages were fined heavily**, and in many villages mass flogging was done. The military took over many cities.

Q.20) Consider the following pairs of Military exercises in which India have participated with other country or group of countries:

Military Exercises	Associated Countries
1. AL Najah	India and Qatar
2. Blue Flag	Israel, India and other countries
3. Khanjar	Kazakhstan
4. Pitch black	Australia, India and other countries

Which of the pairs given above is/are correctly matched?

- a) 1 and 2 only
b) 2 and 4 only
c) 1 and 3 only
d) 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

Pair 1 is incorrectly matched: Joint Military Exercise 'AL NAJAH-IV' is conducted between contingents of **Indian Army and the Royal Army of Oman.** The joint exercise would focus on Counter Terrorism Operations, Regional Security Operations and Peace Keeping Operations under United Nations charter apart from organizing joint physical training schedules, tactical drills. Other military exercises with Oman are 'NASEEM-AL-BAHR' and 'EASTERN BRIDGE'. The 4th Edition of India Oman Joint Military Exercise 'AL NAJAH-IV' is scheduled to take place at the Foreign Training Node of Mahajan Field Firing Ranges (Rajasthan).

Pair 2 is correctly matched: The Blue Flag drill is a **bi-annual exercise** designed to strengthen **Israel's military cooperation internationally and held between India, Israel with some other countries**, to share knowledge and combat experience to improve operational capabilities. The other countries that have participated in the exercise include the US, UK, Germany, France, Italy, Greece, and Israel.

Pair 3 is incorrectly matched: ‘Khanjar’ exercise is **9th Edition of the India-Kyrgyzstan Joint Special Forces Exercise** was held in March-April, 2022 at Special Forces Training School, Bakloh (HP). It is held annually between India and Kyrgyzstan since 2011. Special Forces contingents from India and Kyrgyzstan have shared their experience and best practices in terms of tactics, techniques, and procedures for countering present and emerging threats throughout the conflict spectrum.

Pair 4 is correctly matched: **Pitch black** is a **biennial exercise** to enhance interoperability and strengthen relationships among participants. It is taking place in the Southern hemisphere which is hosted by the **Royal Australian Air Force (RAAF)**. In 2018, India participated in the exercise for the first time. Other exercises conducted with Australia are ‘AUSTRA HIND’ and ‘AUSINDEX’.

Q.21) The distribution of powers between the Centre and the States in the Indian Constitution is based on the scheme provided in the

- Morley-Minto Reforms, 1909
- Montagu-Chelmsford Act, 1919
- Government of India Act, 1935
- Indian Independence Act, 1947

Ans) c

Exp) Option c is the correct answer.

The Government of India Act of 1935 divided powers between the centre and the provinces. The Viceroy was vested with residual powers.

There were three lists which gave the subjects under each government.

- Federal List (Centre)
- Provincial List (Provinces)
- Concurrent List (Both)

Source: UPSC 2012

Q.22) Consider the following pairs regarding the opinions of national leaders towards the participation in elections after withdrawal of Civil Disobedience Movement (CDM):

National Leaders	Opinion
1. Jawahar Lal Nehru	Rather than participating in elections, he favored resumption of constructive work.
2. Bhulabhai Desai	He opposed participation in elections
3. M K Gandhi	He initially opposed but ultimately agreed for Congress to participate in elections.

How many of the pairs given above is/are correctly matched?

- Only one pair

- b) Only two pairs
- c) All three pairs
- d) None of the above

Ans) d

Exp) Option d is the correct answer.

Following the withdrawal of the Civil Disobedience Movement, there was a two-stage debate on the future strategy of the nationalists. The first stage was on what course the national movement should take in the immediate future, i.e., during the phase of non-mass struggle (1934-35). The second stage, in 1937, considered the question of office acceptance in the context of provincial elections held under the autonomy provisions of the Government of India Act, 1935.

Pair 1 is incorrect: Nehru was **critical of both constructive work and council entry** in place of the suspended civil disobedience movement as that would side-track political mass action and divert attention from the main issue of the struggle against colonialism. **Nehru favoured resumption and continuation of non-constitutional mass struggle as the situation was still revolutionary owing to continued economic crisis and the readiness of the masses to fight.**

Pair 2 is incorrect: Some section of congress leaders favoured the idea that there should be a **constitutional struggle and participation in elections to the Central Legislature** (due in 1934). This school of thought was advocated by M.A. Ansari, Asaf Ali, **Bhulabhai Desai**, S. Sathyamurthy and B.C. Roy among others.

Pair 3 is incorrect: Gandhi said that the withdrawal of the Civil Disobedience Movement did not mean bowing down before opportunists or compromising with imperialism. The All-India Congress Committee (AICC) decided to fight elections under the aegis of the Congress itself. **Gandhi was in fundamental disagreement with the idea of congress participation in elections.** He was aware that he was out of tune with powerful trends in the Congress as a large section of the intelligentsia favoured parliamentary politics over mass struggle. **As a result, in October 1934, Gandhi announced his resignation from the Congress. So, he did not agree to the congress's participation in election. Hence the pair is incorrect.**

The statement is true regarding the Swarajist Movement where Gandhi initially opposed but ultimately agreed for Swarajist's demand of council entry.

Source: Spectrum Modern India 2019-20 Edition

Q.23) The Quit India Movement has been described as the most massive anti-imperialist struggle on the eve of Partition and Independence. In this context, which of the following statement is the immediate reason for the start of Quit India Movement?

- a) Announcement of dominion status under August offer by Linlithgow.
- b) The failure of the Cripps Mission to solve the constitutional deadlock.
- c) Announcement of Individual Satyagraha by Mahatma Gandhi.
- d) The Failure of Wavell Plan to negotiate on future of princely states with the Congress.

Ans) b

Exp) Option b is the correct answer.

The Quit India Movement has rightly been described as the most massive anti-imperialist struggle on the eve of Partition and Independence

Option a is Incorrect: Linlithgow announced the August Offer in 1940, which proposed for the dominion status as the objective for India; however, this was not the immediate reason for launch of Quit India movement.

Option b is correct: The main reason for the launch of Quit India mission was the failure of the Cripps Mission to solve the constitutional deadlock. It exposed the Britain's unchanged attitude on constitutional advance and made it clear that any more silence would be tantamount to accepting the British right to decide the fate of Indians without consulting them.

Option c is Incorrect: Towards the end of 1940, Mahatma Gandhi decided to initiate a limited satyagraha on an individual basis by a few selected individuals in every locality. The aims of launching individual satyagraha were to show that nationalist patience was not due to weakness. However, this was not the immediate reason for launch of Quit India movement.

Option d is Incorrect: Wavell plan was introduced to have a 'balanced representation' of all Indians in council including 'caste-Hindus', Muslims, Depressed Classes, Sikhs, etc. **The conference was convened by the viceroy, Lord Wavell, at Shimla in June 1945.** The Wavell plan failed, as it gave virtual veto to the Muslim League and failed to negotiate with the congress. Also, this was not the immediate reason for launch of Quit India movement.

Unit-21.pdf (egyankosh.ac.in)

Q.24) Consider the following statements regarding the Parallel Governments formed during the Quit India Movement:

1. Jayaprakash Narayan, with the assistance of Rammanohar Lohia, formed a parallel government on the Nepal border.
 2. In Tamluk (Midnapore) 'national government' was formed under the leadership of Chittu Pandey.
- Which of the statements given above is/are correct?

- a) 1 Only
- b) 2 Only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: Jayaprakash Narayan, one of the founder members of Congress Socialist Party, escaped from the prison in Nepal in November in 1942, and with the assistance of another socialist leader, Rammanohar Lohia, formed a parallel government on the Nepal border which lasted till 1944.

Statement 2 is incorrect: In the neighbouring regions of Eastern UP, namely the Ballia district (August 1942 for a week), police stations were captured and a 'national government' was declared under the leadership of Chittu Pandey. He got many Congress leaders released. In Tamluk (Midnapore, from December 1942 to September 1944): Jatiya Sarkar undertook cyclone relief work, sanctioned grants to schools, supplied paddy from the rich to the poor, organised Vidyut Vahinis, etc.

Q.25) With reference to 'Mineral Security Partnership', consider the following statements:

1. It is US-led partnership to secure supply chains of critical minerals by reducing dependency on China.
2. The partnership exclusively focuses on transport and usage of radioactive minerals like Uranium and Thorium.
3. India has opposed the Partnership on the grounds of creating the distinction of the 'haves and have-nots' in the global order.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only

- c) 1 and 3 only
d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: Mineral Security Partnership (MSP) is a US-led partnership to secure supply chains of critical minerals, aimed at **reducing dependency on China**. It aims to **catalyse investment from governments and the private sector** to develop strategic opportunities.

Statement 2 is incorrect: The Mineral Security Partnership will focus on the supply chains of minerals such as Cobalt, Nickel, Lithium, and also the **17 'rare earth' minerals (not exclusive to radioactive minerals)**. The alliance is also seen as primarily focused on evolving as an alternative to China, which has created processing infrastructure in rare earth minerals and has acquired mines in Africa for elements such as Cobalt.

Statement 3 is incorrect: India is **exploring the possibilities of joining** the Minerals Security Partnership. It is working through its diplomatic channels to fetch an entry into the Mineral Security Partnership. According to experts, the **reason India would not have found a place in the MSP** grouping is because India does not bring any expertise to the table. In the group, countries like Australia and Canada have reserves and also the technology to extract them, and countries like Japan have the technology to process REEs (Rare Earth Elements).

Source: Explained: What are rare earth elements, and why is India keen to join a global alliance to ensure their supply? -ForumIAS Blog

Concern in Delhi over not being part of US-led Minerals Security Partnership -ForumIAS Blog

Q.26) Which of the following considerations dominated the British policy towards the Congress, following the failure of the Second Round Table Conference?

1. Gandhi must not be permitted to build up the tempo for a massive mass movement.
2. The goodwill of the Congress towards British should be protected.
3. Radical elements from within the Congress must be isolated.
4. The nationalist movement must not be permitted to consolidate itself in rural areas.

Select the correct answer using the code given below

- a) 1 and 4 only
b) 2 and 3 only
c) 1, 3 and 4 only
d) 1, 2, 3 and 4

Ans) a

Exp) Option a is the correct answer.

In the second round table conference, the British Government refused to concede the basic Indian demand for freedom. Gandhi came back at the end of December 1931 to a changed political situation.

The British policy was now dominated by **three major considerations**.

Statement 1 is correct: Gandhiji must not be permitted to build up the tempo for a massive and protracted mass movement, as he had done in 1919, 1920-21 and 1930. Hence, statement 1 is correct.

Statement 2 is incorrect: According to the British, the goodwill of the Congress was not required for them, but the confidence of those who supported the British against the Congress like the government functionaries, loyalists, etc. was more essential for the British. Hence, statement 2 is incorrect.

Statement 3 is incorrect: Being an internal matter of working of Congress, it was not under consideration for British.

Statement 4 is correct: The British firmly believed that **the nationalist movement must not be permitted to gather force and consolidate itself in rural areas. Hence, statement 4 is correct.**

Q.27) Which of the following statements best describes the reason for Gandhi's opposition to separate electorates for the Depressed Classes?

- a) They will help Britishers to win the confidence of depressed classes on their side.
- b) They will ensure the untouchables remained untouchables in perpetuity.
- c) They will lead to incitement of riots across the nation.
- d) They will weaken the cause of civil disobedience movement.

Ans) b

Exp) Option b is the correct answer.

Option a is incorrect: There may have been a chance that the Separate electorates might be able to win Depressed Classes on British side. But this statement does not best describe the reason for Gandhi's opposition to separate electorates for the Depressed Classes.

Option b is correct: At the Second Round Table Conference Mahatma Gandhi stated his arguments against separate electorates for the Depressed Classes. **He strongly believed that Separate electorates to the "Untouchables" will ensure their bondage in perpetuity.**

He argued that once the depressed classes were treated as a separate political entity, the question of abolishing untouchability would get undermined, while separate electorates would ensure that the untouchables remained untouchables in perpetuity. **He said that what was required was not protection of the so-called interests of the depressed classes but eradication of untouchability.**

Option c is incorrect: The issue of separate electorates for depressed classes did not raise any fear of riots throughout British India. Hence, this statement does not best describe the reason for Gandhi's opposition to separate electorates for the Depressed Classes.

Option d is incorrect: From December 1931 - April 1934 was the Second phase of Civil Disobedience Movement. The impact of separate electorates was unclear on CDM as the Separate electorates may or may not have an impact on CDM. So, this statement does not best describe the reason for Gandhi's opposition to separate electorates for the Depressed Classes.

Source: Spectrum Modern India 2019-20 Edition

Q.28) In context of Modern History of India, Muslim League's Resolution of March 1940 included which of the following demands?

1. Muslim majority areas in North-West and East India under British rule should be declared as independent states.
2. Muslim minority areas in British India should be provided autonomy.
3. British India should be divided into two dominions of India and Pakistan.

Select the correct answer using the code given below:

- a) 1 only
- b) 1 and 2 only
- c) 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Muslim League's Resolution of March 1940 is also known as Pakistan Resolution or Lahore Resolution. It was basically a demand for separate state for Muslims. The Muslim League passed this resolution with the following demands:

Statement 1 is correct: It called for grouping of geographically contiguous areas where Muslims are in majority (North-West, East) into independent states in which constituent units shall be autonomous and sovereign.

Statement 2 is incorrect: The resolution also demanded adequate safeguards to Muslims where they are in minority. The resolution did not have provision relating to autonomy provided to Muslim minority areas.

Statement 3 is incorrect: Division of British India into the dominions of India and Pakistan was not the demand of the Muslim League Resolution of March 1940. Instead of the Muslim League's resolution, the Viceroy Linlithgow announced in the August Offer (August 1940) that dominion status was the objective for India along with the expansion of viceroy's executive council. It also declared that no future constitution to be adopted without the consent of minorities.

Source: Spectrum Modern India 2019-20 Edition

Q.29) Consider the following statements with respect to the Poona Pact of 1932:

1. It abandoned the idea of separate electorates for depressed classes.
2. It led to increase in the seats reserved for depressed classes, both in provincial as well as the central legislature.
3. It was accepted as an amendment to the Communal Award.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

At the second Round Table Conference, BR Ambedkar demanded separate electorates for Dalits. When the British government conceded Ambedkar's demand, Gandhiji began a fast unto death. He believed that separate electorates for Dalits would slow down the process of their integration into society. Ambedkar ultimately accepted Gandhiji's position and the result was the Poona Pact of September 1932.

Statement 1 is correct: It gave the Depressed Classes (later to be known as the Schedule Castes) reserved seats in provincial and central legislative councils, but they were to be voted in by the general electorate.

The Pact abandoned the idea of separate electorates for the depressed classes.

Statement 2 is correct: According to the Pact, the seats reserved for the depressed classes were increased from 71 to 147 in provincial legislatures and to 18 per cent of the total in the Central Legislature.

Statement 3 is correct: The Poona Pact was accepted by the British government as an amendment to the Communal Award. Even after signing the Poona Pact, Dr B.R. Ambedkar continued to denounce the Poona Pact till 1947.

Knowledge Base:

Poona Pact was Signed by B.R. Ambedkar on behalf of the depressed classes on September 24, 1932. It was signed between MK Gandhi and Ambedkar. The Poona Pact abandoned the idea of separate electorates for the depressed classes.

Spectrum Modern India 2019-20 Edition

Q.30) Which one of the following statements is correct regarding “India Out Campaign”?

- It is a campaign by an informal "coffee club" to oppose India's entry to UN Security Council as a Permanent Member.
- It is a China led acronym developed to oppose the membership of India into APEC Organization.
- It is a campaign led by Maldivian government critics accusing of alleged increasing military presence of India in Maldives.
- It is a Pakistan organized conference to oppose the membership of India into Organisation of Islamic Cooperation.

Ans) c

Exp) Option c is the correct answer.

On March 23, the **Maldivian Parliament disallowed a planned opposition rally in the capital Male**. It had been called by former president Abdulla Yameen and his Progressive Party, and its ally, the People's National Congress. The theme of the rally was “**India Out**”, a slogan coined two years ago by protesters who claimed that the MDP government led by President Ibrahim Solih had “sold out” the Maldives to India. The 'India Out' campaign started in 2021 as on-ground protests in the Maldives, and later widely spread across social media platforms using the phrase with a related hashtag.

The allegations made by ‘India Out’ protestors are

- They have alleged that New Delhi has sent a **large military contingent** to the Maldives. Allegations are focused particularly on the co-operation between the two sides to develop a **harbour on the Uthuru Thilafalhu (UTF) atoll** for the Maldivian coast Guard.
- Protestors claim the UTF to be a **foreign military base** of India in the Maldives.
- The Maldives Defence ministry has issued a statement saying that there were no foreign military personnel on UTF, which is being developed as a dockyard for the Maldivian coast guard.

Source: Explained: What's behind the new anti-India campaign in the Maldives? - ForumIAS Blog
 "Coffee Club" holding back UNSC reforms | Latest News India - Hindustan Times

Q.31) The plan of Sir Stafford Cripps envisaged that after the Second World War

- India should be granted complete independence
- India should be partitioned into two before granting independence
- India should be made a republic with the condition that she will join the Commonwealth
- India should be given Dominion status

Ans) d

Exp) Option d is the correct answer.

Option d is correct: Cripps Mission was sent to India under the president ship of Stafford Cripps in march 1942. It proposed an Indian Dominion that will be free to decide its relations with the commonwealth and United Nations. The intention was to get Indian support for Britishers in the ongoing World War II.

Source: UPSC 2016

Q.32) PEN-PLUS strategy, recently seen in news, is related to?

- Encouraging adult education in rural areas of India.
- Containing non-communicable diseases in Africa.
- Reducing infant mortality rate in Africa.
- Addressing the problem of Left-Wing Extremism in central India.

Ans) b

Exp) Option b is the correct answer.

Africa has adopted a new **strategy to boost access to the diagnosis, treatment and care of severe non-communicable diseases (NCD)** Called 'PEN-PLUS, A Regional Strategy to Address Severe Non-Communicable Diseases at First-Level Referral Health Facilities'. **The strategy is aimed at bridging the access gap in treatment and care of patients with chronic and severe NCDs.**

Health ministers of African countries endorsed the plan at the 72nd session of the World Health Organization (WHO) Regional Committee for Africa in Lomé, Togo to reduce premature mortality from NCDs.

NCDs include heart diseases, cancers, diabetes, asthma among others. Globally, NCDs are the main cause of morbidity and mortality. They account for 71 per cent of global mortality, according to WHO. In the African Region, the proportion of mortality due to NCDs ranges from 27-88 per cent.

Severe non-communicable diseases are those chronic conditions that lead to high levels of disability and death among children, adolescents and young adults if left undiagnosed or untreated.

In Africa, the most prevalent, severe non-communicable diseases include sickle-cell disease, type 1 and insulin-dependent type 2 diabetes, rheumatic heart disease, severe hypertension and moderate to severe and persistent asthma.

Source: <https://www.downtoearth.org.in/news/africa/african-health-ministers-adopt-pen-plus-strategy-against-non-communicable-diseases-84500>.

Q.33) Which of the following actions was adopted in the All-India Congress Committee (AICC) meeting organized at Patna in 1934?

- a) It adopted a resolution in support of the Poona Pact.
- b) It gave a call for the boycott of provincial elections.
- c) It agreed to the participation in provincial elections.
- d) It agreed not to accept the Communal Award.

Ans) c

Exp) Option c is the correct answer.

Following the withdrawal of the Civil Disobedience Movement, there was a two-stage debate on the future strategy of the nationalists. The first stage was on what course the national movement should take in the immediate future i.e., the phase of non-mass struggle (1934-35). The second stage (1937), considered the question of office acceptance in the context of provincial elections held under the autonomy provisions of the Government of India Act, 1935.

Option a is incorrect: There was no mention of Poona Pact (1932) in AICC Working Committee meeting in Patna, 1934.

Option b is incorrect: The AICC Working Committee meeting in Patna, 1934 did not give a call for the boycott of provincial elections.

Option c is correct: In May 1934, the All-India Congress Committee (AICC) met at Patna to set up a **Parliamentary Board to fight elections under the aegis of the Congress itself.** Gandhi was in fundamental disagreement with the idea of congress participation in elections.

Option d is incorrect: There was no mention of Communal Award (1932) in AICC Working Committee meeting in Patna, 1934.

Source: Spectrum Modern India 2019-20 Edition <https://ncert.nic.in/ncerts/l/jess303.pdf>

Q.34) Which of the following led to the resignation of Gandhiji from the Congress in October 1934?

1. A large section of the Congress favoured parliamentary politics with which Gandhi was in fundamental disagreement.

2. A section of the intelligentsia in Congress felt estranged from some items of his constructive programmes.

3. He had fundamental differences with the socialist group led by Jawaharlal Nehru.

Select the correct answer using the code given below.

- a) 3 only
- b) 2 and 3 only
- c) 1 and 2 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

In October 1934, Gandhiji announced his resignation from the Congress. He was at the same time convinced that he was out of tune with powerful trends in the Congress.

Statement 1 is correct: He felt that a large section of the intelligentsia favoured parliamentary politics with which he was in fundamental disagreement. It was one of the reasons for him to resign.

Statement 2 is correct: Another section of the intelligentsia felt disconnected from the Congress because of Gandhi's emphasis on the spinning wheel (Charkha) as 'the second lung of the nation.' Also, some were unhappy because of emphasis on Harijan work based on a moral and religious approach, **and on other items of the constructive programme.** So, Gandhi felt that he was not in tune with trends in congress and so he resigned.

Statement 3 is correct: Similarly, the socialist group, led by Jawaharlal Nehru, was growing in influence and importance but Gandhi had fundamental differences with it. Gandhi by the weight of his personality could have influenced them but he did not want to suppress the spread of the ideas propounded by them. Because of fundamental ideological differences with the sociologist, he considered to resign and better serve the congress in thought, word and deed.

Source: Pages 333-334, PDF, Bipin Chandra, India's Freedom Struggle

Q.35) With reference to the NAMASTE Scheme, consider the following statements:

- 1. It envisages the safety and dignity of sanitation workers in India.
- 2. It is a Centrally Sponsored Scheme run by Ministry of Social Justice and Empowerment.
- 3. National Safai Karamchari Financial Development Corporation (NSKFDC) would be the implementing agency for NAMASTE.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

The Government recently launched the National Action for Mechanised Sanitation Ecosystem (NAMASTE) scheme to ensure occupational safety and alternate livelihood for people involved in manual scavenging and sewer maintenance work in India's urban areas.

Statement 1 is correct: – It envisages the **safety and dignity** of sanitation workers in urban India. It provides for creating an enabling ecosystem that recognises sanitation workers as one of the key contributors to operations and maintenance of sanitation infrastructure. In doing so, it provides **sustainable livelihood** and enhances their occupational safety. It focuses on **capacity building** and improved **access to safety gear** and machines.

Statement 2 is incorrect: Namaste is a **Central Sector Scheme (not centrally sponsored scheme)** of the Ministry of Social Justice and Empowerment (MoSJE) as a joint initiative of the MoSJE and the Ministry of Housing and Urban Affairs (MoHUA).

Statement 3 is correct: National Safai Karamchari Financial Development Corporation (NSKFDC) would be implementing agency for NAMASTE. Skill Development and trainings of Safai Mitras is being taken up with the support of the MoSJE through the National Safai Karamchari Finance Development Corporation (NSKFDC).

Q.36) With reference to the powers of the Governors vis-a-vis the elected governments in the provinces under the Government of India Act of 1935, consider the following statements:

1. The Governors had the right to veto legislative and administrative measures taken by provincial governments.
2. The Governor had the power to enact Governor's Acts.
3. The Governor was required to act with the advice of ministers who were responsible to the provincial legislature.

Which of the statements given above are correct?

- a) 1 and 3 only
- b) 2 and 3 only
- c) 1 and 2 only
- d) 1, 2 and 3

Ans) d

Exp) Option is the correct answer.

In August 1935, the British Parliament passed the Government of India Act of 1935. The Act provided for the establishment of an All-India Federation to be based on the union of the British Indian provinces and Princely States. The provinces were to be governed under a new system **based on provincial autonomy** under which elected ministers controlled all provincial departments. But once again, the Governors, appointed by the British Government, retained special powers.

Statement 1 is correct: **The Governors could veto legislative and administrative measures taken by the provincial governments**, especially those concerning minorities, the rights of civil servants, law and order and British business interests.

Statement 2 is correct: **The Governor also had the power to take over and indefinitely run the administration of a province.** Thus, both political and economic power remained concentrated in British hands. **The Governor could** (a) refuse assent to a bill, (b) promulgate ordinances

Statement 3 is correct: The Act introduced responsible Governments in provinces, that is, **the Governor was required to act with the advice of ministers responsible to the provincial legislature.** This came into effect in 1937 and was discontinued in 1939.

Q.37) With reference to the Tripuri session (1939) of the Congress, consider the following statements:

1. Subhash Chandra Bose defeated Pattabi Sitaramayya for the post of Congress Presidentship.
2. At this session, Bose favored a mass civil disobedience movement in case the demand of India's independence was not fulfilled by British.

3. Maulana Azad was elected as the President of the Congress after the resignation of Subhash Chandra Bose.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 3 only
- c) 1 and 2 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

Subhash Chandra Bose had been a unanimous choice as the President of the Congress in 1938 at its Haripura session. In 1939, he decided to stand again for the Tripuri session of the Congress, this time as the spokesperson of militant politics and radical groups.

Statement 1 is correct: With the blessings of Gandhiji, other leaders put up Patabhi Sitaramayya as a candidate for the post. But Subhas Bose was elected on 29 January by defeating Patabhi Sitaramayya.

Statement 2 is correct: Bose at the Tripuri session prophesized that an imperialist war was about to take place in Europe. He was in favour of giving a six-month ultimatum to Britain to grant the national demand of independence and wanted to launch a mass civil disobedience movement in case Britain refuses to grant it.

Statement 3 is incorrect: Subhas Bose believed that the Congress was strong enough to launch an immediate struggle and that the masses were ready for such struggle. However, Gandhiji was convinced that corruption and indiscipline had vitiated Congress' capacity to fight and we should wait for the right moment to initiate a mass movement. Bose could see no other way out but to resign from the presidentship. This led to the election of Rajendra Prasad in his place. Subsequently, in May, Subhas Bose and his followers formed the Forward Bloc as a new party within the Congress.

Page 450, Spectrum PDF

Q.38) Consider the following facts with reference to political parties emerged from Indian National Congress before India's Independence:

1. In 1923 elections, Swaraj Party became single largest party in the Central Legislature.
2. Congress Socialist Party was a political party working within the Indian National Congress.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

In pre independence era many political factions emerged from the Indian National Congress. Few examples include Swaraj Party, Congress socialist party and All India Forward bloc etc.

In 1923 Swaraj Party, established as the Congress-Khilafat Swaraj Party, was a political party formed in India. It aimed at establishing self-government and political freedom for the Indian people from the British Raj. On the other hand, congress socialist party was formed in 1934. **It aimed at giving the Indian national movement a socialist direction.**

Statement 1 is correct: General elections were held in British India in November 1923 for both the Central Legislative Assembly and Provincial Assemblies. The Central Legislative Assembly had 145 seats, of which 105 were elected by the public. **Out of these 105 elected seats, the Swaraj Party won 38 seats in Central Assembly and emerged as the single largest party.**

Statement 2 is correct: Congress Socialist party was established in 1934 within the congress under the leadership of Jayaprakash Narayan, Acharya Narendra Dev and Minoo Masani. The four basic proposition of congress socialist party was:

- 1) Working within the congress.
- 2) It would be fatal to part ways from the national movement that the Congress represents.
- 3) They must give the Congress and the national movement a socialist direction.
- 4) They must organize the workers and peasants in their class organizations.

Q.39) With reference to election manifesto of Congress for 1937 provincial elections, consider the following statements:

1. Purpose of sending Congressmen to the Provincial legislatures was to cooperate with British Government to get desired results for Indians.
2. Manifesto ensured the right to form unions and right to strike for Indian workers.
3. It promised that congress governments will work towards removal of untouchability.
4. It ensured to regularise the working hours of industrial workers.

Which of the statements given above are correct?

- a) 1 and 4 only
- b) 1, 3 and 4 only
- c) 2, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

The congress manifesto for 1937 election aimed at explaining the political and economic policy and programme of the Congress. It was drafted by All India Congress Committee in 1936.

Statement 1 is incorrect: The Manifesto clearly mentioned the primary **goal of sending Congressmen to the legislatures was not to cooperate with the British Government.**

Statement 2 is correct: The manifesto ensured the workers right to form union and to strike.

Statement 3 is correct: Congress manifesto promised to **remove untouchability.** It also promised to provide:

- 1) Equal status to women
- 2) Encourage khadi and village industries.
- 3) Satisfactory solution to communal problem.

Statement 4 is correct: The manifesto promised to industrial workers that:

- 1) **There will be regularisation of working hours.**
- 2) Decent standard of living would be provided.
- 3) Conditions of labour would be improved.

Source: <https://egyankosh.ac.in/bitstream/123456789/20073/1/Unit-30.pdf>

Q.40) Which of the following statements about the National Automated Fingerprint Identification System (NAFIS) is/are correct?

1. It is India's first Fingerprint Identification System that establishes centralised fingerprint database of criminals.

2. It is developed by the Unique Identification Authority of India (UIDAI).
 3. It creates a unique National Fingerprint Number (NFN) for each person arrested for committing a crime.
- Select the correct answer from the code given below:
- a) 1 and 2 only
 - b) 3 only
 - c) 1 and 3 only
 - d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Recently, the union home minister inaugurated the National Automated Fingerprint Identification System (NAFIS). Conceptualized and managed by the NCRB at the Central Fingerprint Bureau (CFPB) in New Delhi, the National Automated Fingerprints Identification System (NAFIS) project is a country-wide searchable database of crime- and criminal-related fingerprints. The web-based application functions as a central information repository by consolidating fingerprint data from all states and Union Territories.

Statement 1 incorrect: Upon the recommendations of the National Police Commission in 1986, the Central Fingerprint Bureau first began to automate the fingerprint database. It has begun with digitizing the existing manual records through **India's first Automated Fingerprint Identification System (AFI) in 1992**, called Fingerprint Analysis & Criminal Tracing System (FACTS 1.0).

Statement 2 is incorrect: NAFIS is developed by the National Crime Records Bureau (NCRB) (not the UIDAI) at the Central Fingerprint Bureau (CFPB) in New Delhi. It establishes a country-wide searchable database of crime- and criminal-related fingerprints. The web-based application functions as a central information repository by consolidating fingerprint data from all states and Union Territories.

Statement 3 is correct: NAFIS assigns a unique 10-digit National Fingerprint Number (NFN) to each person arrested for a crime.

This unique ID will be used for the person's lifetime, and different crimes registered under different FIRs will be linked to the same NFN.

Source: <https://indianexpress.com/article/explained/explained-what-is-nafis-and-the-story-of-how-fingerprinting-began-in-india-8102544/>.

Q.41) With reference to Indian freedom struggle, consider the following events:

1. Mutiny in Royal Indian Navy
2. Quit India Movement launched
3. Second Round Table Conference

What is the correct chronological sequence of the above events?

- a) 1-2-3
- b) 2-1-3
- c) 3-2-1
- d) 3-1-2

Ans) c

Exp) Option c is the correct answer.

Second Round Conference happened in 1931,

Quit India Movement in 1942 and

Mutiny in Royal Indian Navy in 1946.

Source: UPSC 2017

Q.42) With reference to results of elections held for provincial assemblies in 1937, consider the following statements:

1. Unionist party won majority of the seats in Punjab.
2. Justice Party outperformed the Congress in Madras presidency.
3. Muslim league emerged as a single largest party in Bengal.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 2 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Provincial elections were held in eleven provinces of British India in 1936-37. The Indian National Congress got majority in many of the province's exceptions being in Bengal, Assam, North West Frontier Province (NWFP), Punjab and Sindh. In many of these provinces regional parties emerged as winner.

Statement 1 is correct: Unionist party won majority of the seats in Punjab. Unionist party won 98 out of 175 seats and formed government in Punjab. Congress was able to win only 18 seats out of 175.

Statement 2 is incorrect: Congress won maximum seats in madras and formed the government. As a result, Congress out voted the Justice party which had been in power for past 17 years.

Statement 3 is incorrect: Congress although emerged as single largest party but could not win the election. **Here, Praja Krishak party was popular.** It formed coalition government with Muslim League under Fazlul Haq.

Source: <https://egyankosh.ac.in/bitstream/123456789/20073/1/Unit-30.pdf>

Q.43) With reference to office acceptance after 1937 provincial elections, consider the following statements:

1. Congress decided to accept the office because the Governor of the provinces assured that they will not intervene in the working of Congress Governments.
2. Jayprakash Narain moved an amendment for total rejection of office acceptance during All India Congress Committee meeting of 1937.
3. Most of the Indian Capitalists were not in the favour of office acceptance by the Congress.

Which of the statements given above are **incorrect**?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Post 1937 election The Congress managed to win 716 out of 1,161 seats it contested. But the decision of office acceptance had been left pending due to differences within the Congress.

Statement 1 is incorrect: Governors in the province refused to give assurances on the conditions put forward by the Congress. The condition attached was that the Governors would not use their special powers to intervene with the functioning of congress ministries. **So, statement 1 is incorrect.**

Statement 2 is correct: During AICC meeting in 1937 Jayprakash Narain moved an amendment for total rejection of office. However, this was defeated when put to vote i.e., 78 in favour and 135 against.

Statement 3 is incorrect: Most of the Indian capitalists were in favour of office acceptance by the Congress. G.D. Birla constantly made efforts in this direction. Birla even informed Lord Zetland, the Secretary of State, about Gandhi's statement that 'office acceptance was an attempt to avoid bloody revolution on the one hand and mass Civil Disobedience on the other.'

Knowledge Base: According to Raini Dhawan Shanker Das the Congress had gained by the delay in office acceptance was:

- 1) The delay had disproved the election time propaganda against the Congress that they were eager to occupy power in the provinces.
- 2) The Congress unity had been maintained and demonstrated.
- 3) It had become clear to Governors and the ministers that the word of the Congress High Command was supreme.
- 4) Governors would think several times before intervening in the working of Ministeries.

Source: <https://egyankosh.ac.in/bitstream/123456789/44320/3/Unit-17.pdf>

Q.44) Consider the following statement regarding Gandhiji's specific instructions for different sections of the people during the 'Quit India Movement of 1942'?

1. Government servants should openly declare their allegiance to the Congress.
2. Soldiers were asked to refuse to fire on our own people.
3. The Princes were asked to 'accept the sovereignty of their own people.
4. Peasants should refuse to pay the land revenue to any of the Zamindars.

Which of the statements given above are correct?

- a) 1 and 3 only
- b) 2 and 4 only
- c) 1, 2 and 3 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

Mahatma Gandhi planned an all-out campaign (Quit India Movement in 1942) to compel British withdrawal from India, after the failure of the Cripps Mission to reach a compromise. At the historic August meeting at Gowalia Tank in Bombay, Gandhi proclaimed his *mantra*—'do or die'.

Gandhiji's speech also contained specific instructions for different sections of the people.

- 1) Government **servants would not yet be asked to resign, but they should openly declare their allegiance to the Congress. (Hence Statement 1 is correct)**
- 2) Soldiers were also not to leave their posts, but **they were to 'refuse to fire on our own people. (Hence Statement 2 is correct)**
- 3) The Princes were asked to 'accept the sovereignty of your own people, instead of paying homage to a foreign power.' **(Hence Statement 3 is correct)**
- 4) The people of the Princely States were asked to declare that they were part of the Indian nation and that they would accept the leadership of the princes, if the latter cast their lot with the People, but not otherwise.'
- 5) Students were to give up studies if they were sure they could continue to remain firm independence was achieved.
- 6) Peasants 'who have the courage, and are prepared to risk their all' should refuse to pay the land revenue.
- 7) Tenants were told that 'the Congress holds that the land belongs to those who work on it and to no one else.'

8) If a *zamindar* does not exploit the ryots to help the Britishers, **his portion of the revenue, which may be settled by mutual agreement, should be given to him.** But if a *zamindar* wants to side with the Government, no tax should be paid to him.' (Hence Statement 4 is incorrect)

These instructions were not actually issued because of the preventive arrests, but they do make Gandhiji's intentions clear.

Q.45) With reference to Bharat Bill Payment System (BBPS), consider the following statements:

1. It is a payment system owned and operated by Reserve Bank of India.
2. It helps in the payment of utility bills such as electricity or telecom bills.
3. At present, it is available only to the residents of India.

Which of the statements given above is/are correct?

- a) 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Statement 1 is incorrect: BBPS is an RBI conceptualized system but is **owned and operated by National Payments Corporation of India (NPCI) (not the Reserve Bank of India)**. It was launched in August 2016 under the recommendation of G. Padmanabhan committee.

It offers interoperable and accessible bill payment services to consumers via digital channels along with a network of agents & bank branches.

BBPS also provides a standardized bill payment experience, centralized customer grievance redress mechanism and uniform customer convenience fee, etc.

Statement 2 is correct: These bills can be for electricity, telecom, DTH, gas, water bills, insurance, loan repayments, education fees, FASTag Recharge, municipal taxes, subscription fees, etc. in one single window.

Statement 3 is incorrect: RBI recently allowed the Bharat Bill Payment System (BBPS) **to accept cross-border inward payments with an aim to ease the transaction process for non-resident Indians (NRIs)**. This system was till now available to only residents in India. Due to this, NRIs have been facing challenges in paying utility bills for their family and friends in India.

Source: New bill payment facility for NRIs: No need to send money to Indian accounts, pay directly through BBPS | The Financial Express

RBI move to allow NRIs to pay bills through BBPS welcomed - Times of India (indiatimes.com)

Q.46) With reference to Labour Reforms by Congress ministries in provinces during 1937-1939, Consider the following statements:

1. In Bombay, Industrial Dispute Act introduced by Congress Ministry aimed at curbing strikes and lockouts by workers.
2. In United Province, Labour Enquiry Committee formed under Rajendra Prasad recommended providing maternity benefits to women workers.
3. In Bihar, a Textile Enquiry Committee was appointed to enquire into the wages and working conditions in the mill industry.

Which of the statements given above are correct?

- a) 1 and 3 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

The Congress had promised better working conditions to the working class in its election manifesto. Their basic approach was to advance workers' interests while promoting industrial peace.

Statement 1 is correct: Bombay was the only province where congress ministry formed had undertaken the Labour Legislation. Bombay Industrial dispute act was passed in 1938.

Bombay Industrial dispute act 1938, aimed at checking at best the strikes and lockouts by workers. The emphasis in the Act was on conciliation, arbitration, and negotiation instead of strike. The Act was strongly opposed by Left Congressmen, including Communists as well as Congress Socialists. They believed the act was directed at restricting the freedom to strike and introduced new complicated procedure for registration of trade union. Hence, would encourage unions promoted by employers.

Statement 2 is correct: The Congress Government in United Province set up a Labour Enquiry Committee under Rajendra Prasad. The Committee's recommendations **included an increase in workers' wages with a minimum wage of Rs. 15 per month, formation of an arbitration board, recruitment of labour through an independent board, maternity benefits to women workers,** and recognition of the Left- dominated Mazdur Sabha by the employers.

Statement 3 is incorrect: As the wages were very low, a **Textile Enquiry Committee was appointed by the Government of Bombay (not in Bihar) in 1937** to enquire into the wages and working conditions in the mill industry and make recommendations. In their report in 1938, the Committee recommended a 121 /2 per cent increase in the wages of all the mill operatives. This recommendation was accepted by all the mills and the wage increase was affected from February 1938.

Source: India's struggle for independence, chapter on Twenty-eight months of congress rule.

Q.47) With reference to Schemes formulated at All India National Education Conference of Wardha in 1937, Consider the following statements:

1. Three-year residential training courses for teachers should be established.
2. Free and compulsory education for first seven years should be implemented in schools.
3. Moral education should be imparted to students.
4. Handicraft to be included in the school curriculum.

Which of the statements given above are correct?

- a) 1 and 3 only
- b) 2, 3 and 4 only
- c) 1, 2 and 4 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

The Congress organised an all-India Education Conference in October 1937 in Wardha. The main principle behind this scheme was 'learning through activity'. It was based on Gandhi's ideas published in a series of articles in the weekly Harijan.

Statement 1 is correct: The Report stated the **need for a three-year residential course for training teachers should be conducted,**

Statement 2 is correct: The conference outlined **the free and compulsory education be provided for seven years** of schooling. It also included that teaching to be done in mother tongue. Hindi to be taught in areas where it was not the mother tongue.

Statement 3 is incorrect: As per the Wardha scheme, **no religious and moral education should be included in the syllabus**. The idea of basic education was also completely secular in its form and content.

Statement 4 is correct: Under the scheme, educating the child to be done through **the medium of productive activity of a suitable craft. Therefore, handicraft was included in the curriculum**. Such crafts include spinning and weaving, carpentry, agriculture, pottery, leather work, home science for girls, etc. Also, a system of assessment focusing on the progress of skill in the students' craft of choice should be formulated.

Source: <https://egyankosh.ac.in/bitstream/123456789/8523/1/Unit-2.pdf>

Q.48) Which of the following were the issues associated with Agrarian reforms brought by Congress Governments in Provinces during their 1937-1939 reign?

1. Inadequate financial resources with Congress Ministry proved to be a hurdle in undertaking agrarian reforms.
2. Second chambers of provincial assemblies in the Congress run provinces were reactionary towards the reforms brought by Congress governments.

Select the correct answer using the code given below:

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

For the purpose of agrarian reforms, the Congress ministries legislated many laws relating to land reforms, debt relief, forest grazing fee, arrears of rent, land tenures, etc. These benefits went to statutory and occupancy tenants while sub-tenants did not gain much. Agricultural labourers did not benefit as they had not been mobilised. Issues were associated due to complex agrarian structure.

Statement 1 is correct: Congress manifesto had outlined the agrarian reforms to be undertaken by its ministries. But **there was constraint of inadequate powers as well as financial resources with the government**. The maximum share of revenue was appropriated by the Government of India. Hence Congress was left with inadequate monetary resources to carry out agrarian reforms.

Statement 2 is correct: The second chamber or Legislative Councils were dominated by landlords, moneylenders, and capitalists in United Provinces, Bihar, Bombay, Madras, and Assam. **They were reactionary in nature**. As a majority in the lower house was not enough, in order to get any legislation passed through the second chamber, the Congress had to simultaneously pressure their upper-class elements and conciliate them. And since congress leadership worked under time constraint, the second chamber further delayed the agrarian reforms.

Source: spectrum, chapter national movement 1919-1939

Q.49) With reference to congress rule in provinces during 1937-1939, Consider the following statements:

1. The formation of Congress Governments in provinces encouraged the formation of Praja mandals in many princely states.
2. The Congress governments repealed all the emergency powers acquired by the earlier provincial governments through Public Safety Acts.
3. Police powers were reduced under the congress ruled provinces.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 and 3 only
- c) 1 and 2 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

The Congress governments in provinces functioned both as a government in the provinces and as the opposition against the Central Government. It brought social reforms through the leg in the provinces and at the same time carry on the struggle for independence. Thus, the Congress had to implement its strategy of Struggle-Truce-Struggle (S-T-S).

Statement 1 is correct: The formation of congress ministries in **8 provinces (U.P., C.P., Madras, Bombay, Bihar, Orissa, Assam and N.W.F.P) in 1937** created a new sense of confidence and expectation in the people of the Indian princely states. It acted as a spur to greater political activity. The years 1938-39 witnessed a large number of movements demanding responsible government and other reforms. **Praja mandals** mushroomed in many States that had earlier no such organizations. Major struggles broke out in Jaipur, Kashmir, Rajkot, Patiala, Hyderabad, Mysore, Travancore, and the Orissa States.

Statement 2 is correct: All emergency powers acquired by provincial governments through Public Safety Acts (like the **Bengal Public Security Act, 1932, the Bihar and Orissa Public Safety Act, 1933, the Bombay Special (Emergency) Powers Act, 1932, the United Provinces Special Powers Act, 1932, and the Punjab Criminal Law (Amendment) Act, 1932**) and other means during 1932 were repealed. For example, the bans were lifted from political organisations like the Hindustan Seva Dal and Youth Leagues, as well as the ban on some political books and journals.

Statement 3 is correct: In the Congress provinces, police powers were reduced and the shadowing of political workers by CID (Central Investigation Department) agents stopped. Of all the British functionaries, the ones the people were most afraid of and hated, were the police. And according to Gandhiji, the best and the only effective way to constitution if Congress can rule without the aid of military and with the least possible assistance of the police.

Q.50) Which of the following are included as essential commodities under the Essential Commodities Act, 1955?

- 1. Fertilizers
- 2. Foodstuffs including edible oils
- 3. Petroleum and petroleum products
- 4. Medical equipment

Select the correct answer from the code given below:

- a) 1, 2 and 3 only
- b) 2 and 3 only
- c) 2, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) a

Exp) Option a is the correct answer.

With tur dal prices rising since the last few months and reports of some traders creating artificial supply squeeze by restricting sales, the Centre has invoked the Essential Commodities Act, 1955 recently.

The Essential Commodities Act (ECA), 1955 was enacted at a time when India was facing food scarcity due to low levels of food grains production. ECA was enacted, to stop hoarding and black marketing of food and gives consumers protection against irrational spikes in prices of essential commodities.

Essential Commodity

According to the Essential Commodities Act, essential commodities mean any commodity specified in the schedule. Thus, there are 7 following commodities that are specified in the schedule:

- 1) Drugs (**medical equipment are not specified under essential commodities**). (Statement 4 is incorrect)
- 2) **Fertilizers**, whether organic, inorganic, or mixed. (Statement 1 is correct)
- 3) **Foodstuffs, including edible oils and its seeds**. (Statement 2 is correct)
- 4) Hank yarn, made wholly with cotton
- 5) **Petroleum and its products**. (Statement 3 is correct)
- 6) Jute, whether in the form of raw or textiles
- 7) Seed, whether of fruits and vegetables, of cattle fodder, or of jute.

Source: <https://blog.ipleaders.in/overview-of-the-essential-commodities-act-1955/>.

Essential Commodities Act invoked to rein in tur dal price - The Hindu

https://upload.indiacode.nic.in/schedulefile?aid=AC_CEN_21_28_00003_195510_1517807320439&rid=696

Q.1) Which of the following led to the introduction of English Education in India?

1. Charter Act of 1813
2. General Committee of Public Instruction, 1823
3. Orientalist and Anglicist Controversy

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Option 1 is correct: The Charter Act of 1813 required the company to spend rupees 1 lakh annually for encouraging learned Indians and promoting the knowledge of modern sciences in India.

Option 2 is correct: In 1823, the Governor -General -in Council appointed a “General Committee of Public Instruction”, which had the responsibility to grant the one lakh of rupees for education.

Option 3 is correct: Orientalist -Anglicists Controversy: Within the General Committee on Public Instruction, the Anglicists argued that the government spending on education should be exclusively for modern studies. The Orientalists said while western sciences and literature should be taught to prepare students to take up jobs, emphasis should be placed on expansion of traditional Indian learning.

Source: UPSC CSE Pre 2018

Q.2) Consider the following statements with respect to the Indian National Army (INA) trials:

1. Congress adopted a resolution in the Bombay session in support of the Indian National Army's cause.
2. Prem Kumar Sehgal, Shah Nawaz Khan and Gurbaksh Singh Dhillon were the first INA prisoners to face the trial.
3. Following the public protest, British reduced the death sentence of INA prisoners to deportation for life.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

The Indian National Army trials also known as the INA trials and the Red Fort trials was the British Indian trial of a number of officers of the Indian National Army (INA) between 1945 and 1946, on various **charges of treason, torture, murder and abetment to murder**. The INA prisoners were the ones who fought with Japanese troops during World War II in Burma.

Statement 1 is correct: At the first post-War Congress session in September 1945 at **Bombay**, a strong resolution was adopted declaring **Congress support for the INA cause**. Those who supported the INA cause in varying degrees, apart from the Congress, included the Muslim League, Communist Party, Unionists, Akalis, Justice Party, Ahrars in Rawalpindi, Rashtriya Swayamsevak Sangh, Hindu Mahasabha and the Sikh League.

Statement 2 is correct: British held the first trial at the Red Fort in Delhi in November 1945 and putting on dock together a Hindu, Prem Kumar Sehgal, a Muslim, Shah Nawaz Khan, and a Sikh, Gurbaksh Singh Dhillon. These three prisoners were the **first to face the trials**.

Statement 3 is incorrect: The British never sentenced any prisoners to death. The actual punishment for Shah Nawaz Khan, Gurubaksh Singh Dhillon and Prem Sahgal were to be **dismissed from service and handed transportation for life**. However, this punishment too was remitted later.

Source: <https://theprint.in/india/governance/remembering-the-red-fort-trials-that-tipped-india-towards-complete-freedom/145260/>

Q.3) With reference to the Royal Indian Navy (RIN) revolt, consider the following statements:

1. Only the members of the armed forces participated in the revolt.
2. It demanded withdrawal of Indian troops from Indonesia.
3. Congress gave its official support to the revolt.
4. Communists and socialist played a major role in guiding the mutiny.

Which of the statements given above are correct?

- a) 1 and 4 only
- b) 2 and 3 only
- c) 2 and 4 only
- d) 2, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: Royal Indian Navy revolt is not limited to armed forces alone. Students had boycotted classes, strikes and processions were organised to express sympathy with the students and the ratings and to condemn official repression.

Statement 2 is correct: The demands of RIN revolt included the release of INA (Indian National Army) personnel and other political prisoners; **withdrawal of Indian troops from Indonesia**; and the acceptance of Indian officers only as superiors.

Statement 3 is incorrect: While the **congress** lauded the spirit of the people it **did not officially support these struggles** as it felt their tactics and timing were wrong. It was evident for congress that the Government would be able to repress.

Statement 4 is correct: Royal Indian Navy agitation was led majorly by the communists, socialist and forward blocists. The **congress role was majorly diffusing the revolutionary situation** prompted by the fear that the situation would go out of its control or by the concern that disciplined armed forces were vital in free India that the party would soon rule.

Q.4) Consider the following statements regarding Wardha Scheme of Basic Education:

1. The detailed national scheme for basic education was formulated by Zakir Hussain committee.
2. It advocated a free and compulsory nationwide education system through mother tongue for the first seven years of schooling.
3. The scheme could not be put into practice due to the start of the First World War.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) 1 and 2 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: The Congress had organised a **National Conference on Education** in October 1937 in Wardha. In the light of the resolutions passed there, **Zakir Hussain committee** formulated a detailed national scheme for basic education.

Statement 2 is correct: The scheme had the provisions like inclusion of a basic handicraft in the syllabus; **first seven years of schooling to be an integral part of a free and compulsory nationwide education system (through mother tongue).**

Statement 3 is incorrect: There was not much development of the **Wardha Scheme of Basic Education**, because of the **start of the Second World War and the resignation of the Congress ministries** (October 1939).

Source: A Brief History of Modern India Revised and Enlarged Edition 2019 Chapter 30 Development of Education

Q.5) Consider the following statements with reference to the Acropora corals, that has been seen recently in news:

1. They are the fast-growing corals found in Australia's Great Barrier Reef.
2. They do not contain zooxanthellae and derive nourishment from capturing different forms of plankton.
3. They can strongly withstand environmental pressures such as rising temperatures, cyclones, and pollution.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 3 only
- c) 1 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Recently, as per a **report Australia's northern and central Great Barrier Reef (GBR) has experienced high levels of coral reef cover** over the past 36 years which has been fueled by the fast-growing **Acropora corals** in the region. Acropora Reef is a species of coral **found over a large range in the Indian Ocean, the Red Sea, the Persian Gulf, the Gulf of Aden, New Caledonia, and Fiji.**

Statement 1 is correct: Acropora species of the Corals are some of the major reef corals responsible for building the immense calcium carbonate substructure in the Great Barrier Reef. It is a dominant type of Corals found in the Great Barrier Reef. These corals are **fast-growing in nature.**

Statement 2 is incorrect: Acropora are common types of corals that live in symbiotic relationship with the zooxanthellae algae which help the coral survive by providing it with food resulting from photosynthesis.

So, this statement is incorrect.

Statement 3 is incorrect: Incidentally, these fast-growing corals **are also the most susceptible to environmental pressures such as rising temperatures, cyclones, pollution,** crown-of-thorn starfish (COTs) attacks which prey on hard corals and so on. **So, the statement is incorrect.**

Q.6) With reference to the Sapru Committee of 1945, consider the following statements:

1. The Committee rejected the Muslim league's demand for Pakistan.
2. It operated under the mandate of Indian National Congress.

3. The Committee recommended the separate electorate for Muslims.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 1 and 2 only
- c) 2 only
- d) 1 only

Ans) d

Exp) Option d is the correct answer.

The constitutional proposals of the Sapru committee were commonly referred to as Sapru Committee Report which was published in 1945.

Statement 1 is correct. The Report rejected the Muslim league's demand for Pakistan as it was not convinced that a separate state would be beneficial to any community and division of India will endanger the peace and growth of the country.

Statement 2 is incorrect. The Committee consisted of 30 members who are experts of public affairs and did not operate under the mandate of any political party.

Statement 3 is incorrect. The Committee rejected the separate electorate for Muslims and proposed joint elections with reservation of seats.

Source:

https://www.constitutionofindia.net/historical_constitutions/sapru_committee_report__sir_tej_bahadur_sapru__1945__1st%20December%201945

Q.7) With reference to the Indian provincial elections of 1946, consider the following statements:

1. The Congress failed to get majority in any of the provinces which were being claimed by the Muslim League as part of a separate nation i.e. Pakistan.
 2. The Muslim league got the majority of Muslim votes.
 3. A Unionist-Muslim League-Akali coalition under Khizr Hayat Khan assumed power in Punjab. Which of the statements given above is/are correct?
- a) 1 only
 - b) 1 and 3 only
 - c) 2 only
 - d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

In July 1945, Labour Party formed the government in Britain. Clement Attlee took over as the new Prime Minister and Pethick Lawrence as the new secretary of state for India. In August 1945, elections to central and provincial assemblies were announced.

Performance of the Congress

- (a) It got 91 per cent of non-Muslim votes. It captured 57 out of 102 seats in the Central Assembly.
- (b) In the provincial elections, it got a majority in most provinces except in Bengal, Sindh and Punjab.
- (c) The Congress majority provinces included the North West Frontier Province (NWFP) and Assam which were being claimed for Pakistan. **Hence, statement 1 is not correct.**

Performance of the Muslim League

1) It got 86.6 per cent of the Muslim votes.

2) It captured the 30 reserved seats in the Central Assembly. In the provincial elections, it got a majority in Bengal and Sindh.

3) Unlike in 1937, now the League clearly established itself as the dominant party among Muslims. **Hence, statement 2 is correct.**

4) In Punjab, a Unionist-Congress-Akali coalition under Khizr Hayat Khan assumed power. **Hence, statement 3 is incorrect.**

Source: Spectrum Modern India 2019-20 Edition

Q.8) Consider the following statements regarding the various acts on press regulation:

1. In Vernacular Press Act (1878), the magistrate's action was final, and no appeal could be made in a court of law.

2. In Indian Press Act (1910), the local government was authorized to forfeit an offending newspaper.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: The Vernacular Press Act (1878) was designed to better control the vernacular press and effectively punish and repress seditious writing. The Act included the following provisions. The district magistrate was empowered to call upon the printer/publisher of any vernacular newspaper to enter into a bond with the government undertaking not to cause disaffection against the government. The printer and publisher could also be required to deposit security which could be forfeited if the regulation were contravened, and press equipment could be seized if the offence re-occurred. **The magistrate's action was final, and no appeal could be made in a court of law.** A vernacular newspaper could get exemption from the operation of the Act by submitting proofs to a government censor.

Statement 2 is correct: This Indian Press Act (1910), revived the worst features of Vernacular Press Act (1878). **The local government was empowered to demand a security at registration from the printer/publisher. It was also authorized to forfeit an offending newspaper.** The printer of a newspaper was required to submit two copies of each issue to local government free of charge.

Knowledge Base: The Vernacular Press Act (1878) came to be nicknamed "the gagging Act". The worst features of this Act were discrimination between English and Vernacular press, and no right of appeal. Under VPA, proceedings were instituted against Som Prakash, Bharat Mihir, Dacca Prakash and Samachar. Incidentally, the Amrita Bazar Patrika turned overnight into an English newspaper to escape the VPA.

Ch 29, Spectrum

Q.9) With reference to C. Rajagopalachari (CR) Formula, consider the following statements:

- 1. It asked Muslim league to form a provisional government with the Indian National Congress.
- 2. It proposed a plebiscite in the North-West and North-East India for creation of a separate nation.
- 3. Mohammed Ali Jinnah opposed the plan as he wanted the Congress to accept the Two Nation Theory.
- 4. Mahatma Gandhi condemned the CR Plan as it indirectly accepted the League's demand for separate nation.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 2, 3 and 4 only
- c) 1, 2 and 4 only
- d) 1, 3 and 4 only

Ans) a

Exp) Option a is the correct answer.

During Indian national Movement (INM), Various efforts were made to solve the constitutional crisis. In fact, some individuals also tried to come up with constitutional proposals. For example, C. Rajagopalachari (CR), the veteran Congress leader, prepared a formula for Congress-League cooperation in 1944. The main points of the CR Plan and the objections raised against it included as follows:

Statement 1 is correct. CR plan asked Indian Muslim League (IML) to endorse Congress demand for independence and also asked Indian Muslim League (IML) to cooperate with Congress in forming a **provisional government at centre.**

Statement 2 is correct. CR Plan tacitly accepted the League's demand for Pakistan. It mentioned that after the end of the war, the **entire population** of Muslim majority areas in the **North-West and North-East India** to decide by a **plebiscite**, whether or not to form a separate sovereign state. In case of acceptance of partition, agreement to be made jointly for safeguarding defence, commerce, communications, etc.

Statement 3 is correct. Jinnah opposed the plan. First, he wanted the Indian National Congress (INC) to accept the **two-nation theory**. Secondly, he wanted only the Muslims of North-West and North-East to vote in the plebiscite and not the entire population. Thirdly, he also opposed the idea of a common centre.

Statement 4 is incorrect. Mahatma Gandhi supported the C. Rajagopalachari formula. However, some sections of nationalist leaders opposed it. For example, **Vir Savarkar**, a Hindu leader condemned the CR Plan.

Q.10) The CAPSTONE, recently seen in news, is a/an:

- protein that can be used for genetic engineering.
- nano satellite launched by NASA.
- important geological feature of Jurassic period.
- medicine that can be used to treat Ebola virus.

Ans) b

Exp) Option b is the correct answer.

Recently, NASA has launched Cislunar Autonomous Positioning System Technology Operations and Navigation Experiment, **CAPSTONE, a microwave oven-sized CubeSat weighing just 25 kg.** As a pathfinder for Gateway, a Moon-orbiting outpost that is part of NASA's Artemis program, CAPSTONE will help reduce risk for future spacecraft by validating innovative navigation technologies and verifying the dynamics of this halo-shaped orbit.

Source: https://www.nasa.gov/directorates/spacetech/small_spacecraft/capstone/

Q.11) Regarding Wood's Dispatch, which of the following statements are true?

- Grants-in-Aid system was introduced.
- Establishment of universities was recommended.
- English as a medium of instruction at all levels of education was recommended.

Select the correct answer using the code given below:

- 1 and 2 only
- 2 and 3 only
- 1 and 3 only
- 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Option 1 and 2 are correct: Wood's Dispatch recommended setting up of universities at Madras, Calcutta and Bombay. It recommended a system of grants-in-aid to encourage private enterprise.

Option 3 is incorrect: Wood's Dispatch recommended promotion of both Western educations at the same time of promotion of Vernacular education at primary level for education of masses. It is often termed as Magna Carta of India education.

Source: UPSC CSE Pre 2018

Q.12) Which of the following was/were the proposals of the Cabinet Mission plan?

1. It proposed the partition of India into two nations, India and Pakistan.
2. The Princely states would no longer be under the paramountcy of the British Government.
3. It had proposed a two-tier executive and legislature at provincial and union levels.

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 2 only

Ans) d

Exp) Option d is the correct answer.

In March 1946, the British Cabinet sent a three-member Cabinet Mission to India. Its members were Pethick Lawrence, Stafford Cripps and A.V. Alexander. Its aim was to negotiate the setting up of a national government and set into motion a machinery for transfer of power.

Statement 1 is incorrect. Cabinet Mission suggested that **India should remain united (and not supported 2 nations)** and constitute itself as a loose **three-tier** confederation with some autonomy for Muslim-majority areas. It was to have a weak central government controlling only foreign affairs, defence and communications with the existing provincial assemblies

Statement 2 is correct: Provinces were to have full autonomy and residual powers. **Princely states were no longer to be under paramountcy of the British government.** They would be free to enter into an arrangement with successor governments or the British Government.

Statement 3 is incorrect: Cabinet mission of three-member committee had recommended the **three-tier executive and legislature at provincial, section and union levels.**

Freedom Struggle, Bipin Chandra

Q.13) Consider the following statements with respect to the Mountbatten plan:

1. Under the plan, referendum was to be conducted in the North West Frontier Province and Sylhet district of Bengal.
2. Under the plan, a boundary commission was to be set up if partition was to be effected.
3. Under the plan, there was provision for two Constituent Assemblies if partition was to be affected.
4. The Plan was opposed by both Congress and Muslim League.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2, 3 and 4 only
- c) 1, 2 and 3 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

Mountbatten plan was announced on June 3, 1947. It recommended for

- Punjab and Bengal Legislative Assemblies would meet in two groups, Hindus and Muslims, to vote for partition. If a simple majority of either group voted for partition, then these provinces would be partitioned.
- Referendums in North West Frontier Province and Sylhet district of Bengal would be conducted. This referendum was to decide the fate of these areas. **Hence, statement 1 is correct.**
- In case of partition, two dominions and two constituent assemblies would be created. Therefore, provision of separate constituent assembly for Pakistan is correct. **Hence, statement 3 is correct.**
- Sindh would take its own decision.
- Accession of Hyderabad to Pakistan ruled out.
- A boundary commission to be set up if partition was to be effected. **Hence, statement 2 is correct.**

Both Congress and Muslim league accepted the proposals of Mountbatten plan. Hence, statement 4 is incorrect.

Pg 493, ch 25, Spectrum

Q.14) Consider the following statements regarding India Independence Act of 1947:

1. The Constituent Assembly of India which also worked as the provisional parliament enacted the India Independence Act, 1947.
 2. Under the act, both the Dominions of India and Pakistan, will have Governor Generals appointed by Britain's King/Queen.
 3. The office of the Secretary of State for India will be continued till the adoption of the Indian constitution.
- Which of the statements given above is/are correct?

- a) 2 only
- b) 1 only
- c) 1 and 3 only
- d) 1 and 2 only

Ans) a

Exp) Option a is the correct answer.

Statement 1 is incorrect: On July 5, 1947 the British Parliament passed the Indian Independence Act which was based on the Mountbatten Plan, and the Act got royal assent on July 18, 1947. The Act was implemented on August 15, 1947.

Statement 2 is correct: Both the dominions (India and Pakistan) were to have Governor Generals appointed by Britain's King/Queen to represent him for the purposes of the Governments of the dominion. The Act also provided for one common General if both the dominions of India and Pakistan, agreed.

Statement 3 is incorrect: The office of the Secretary of State for India and his advisors was abolished and affairs relating to the Dominion of India and Pakistan were to be conducted in future by the Secretary of the Commonwealth Relations Department.

Knowledge Base: The features of India Independence act, 1947 are as follows:

- The Act provided for the creation of two independent Dominions, namely, India and Pakistan from 1st August, 1947.
- The Act defined the territories of the two Dominions adjustable after the award of boundary Commission.
- The Indian States were free to accede to either of the two new Dominions.

- The Legislature of each dominion was empowered to frame the laws for the governance of the Dominion. No law made by that Dominion will be treated as null and void on the ground that it conflicted with any laws of England.
- Those persons who had been appointed by the Secretary of State or Secretary of State-in-Council to Civil Service and the Crown of India before August 15, 1947 would continue in this service after independence
Source: Pg 10, <https://egyankosh.ac.in/bitstream/123456789/43772/1/Unit-5.pdf>
<https://ncert.nic.in/ncerts/l/lehs305.pdf>

Q.15) Which of the following best describes the DeFi (Decentralized Financing) system, that has been recently seen in news?

- a) a system that provides a range of financial services using digital assets.
- b) a technology used for the mining of crypto currencies.
- c) a new loan disbursement scheme launched by the RBI for achieving financial inclusion.
- d) a new type of Non-Banking Financial Company set up to provide credit facilities in rural and tribal areas.

Ans) a

Exp) Option a is the correct answer.

DeFi refers to Decentralised Financing which is a component of the Web 3.0 concept. **DeFi** provides a **range of financial services** like **trading in securities, lending & borrowing, paying for services/ assets, or maintaining saving accounts** using **digital assets** such as cryptocurrencies using a **peer-to-peer system**. In case of DeFi system entire financial transaction occurs between two ordinary individuals without the involvement of a central authority like a tech company or a central bank or a commercial bank which generally regulates financial transactions currently.

These transactions will use the Distributed Ledger Technology (DLT) (such as blockchain) for carrying out these transactions. DLT means that the resources used to complete the transaction and record the financial agreement will be distributed across several personal systems and not concentrated in servers/ clouds owned by a few tech corporates or government.

Q.16) Consider the following statements regarding the Boundary commissions set up to draw borders of India and Pakistan after partition:

1. Sir Cyril John Radcliffe was made the Chairman of two boundary commissions of Punjab and Bengal.
2. The boundary commissions included two nominees each of the Indian National Congress and Muslim League respectively.
3. The award of the Boundary Commissions was announced before India declared its independence.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: In June 1947, Sir Cyril John Radcliffe, a British lawyer, was made the Chairman of two boundary commissions of Punjab and Bengal and given the task to draw up the new borders of India and Pakistan.

Statement 2 is correct: The boundary commissions of Punjab and Bengal included two nominees each of the Indian National Congress and Muslim League respectively. The Punjab commission had Justice Mehr Chand Mahajan, Justice Teja Singh, Justice Din Mohammad and Justice Muhammad Munir as members. The Bengal commission comprised Justice CC Biswas, Justice BK Mukherjee, Justice Abu Saleh Akram and Justice SA Rehman.

Statement 3 is incorrect: On August 17, 1947, the award of the Boundary Commissions for the partition of Punjab and Bengal was announced. It means the award was announced after the Independence.

Source: <https://indianexpress.com/article/explained/1947-boundary-commission-awards-punjab-bengal-india-8086687/>

Q.17) She was the first woman to contest for a legislative seat in India, in the Madras provincial elections. She joined Indian National Congress in 1927. During the Salt March to Dandi, she convinced Gandhi to give equal opportunity to women to be in the forefront of the march. Later, she joined Seva Dal and trained women activists.

Which of the following personality is mentioned above?

- a) Kamaladevi Chattopadhyay
- b) Sarojini Naidu
- c) Vijaya Lakshmi Pandit
- d) Kamala Nehru

Ans) a

Exp) Option a is the correct answer.

Option a is correct: Kamaladevi Chattopadhyay is one of the unsung freedom fighters. Kamaladevi was born on April 3, 1903, in Mangalore. **She was the first woman to run for a legislative seat in India, in the Madras provincial elections.** Many of the iconic cultural institutions in India today exist because of her vision, these include the National School of Drama, Sangeet Natak Akademi, etc. **She joined Indian National Congress in 1927. During the Salt March to Dandi, she convinced Gandhi to give women equal opportunity to be in the forefront of the March. Later, she joined Seva Dal and trained women activists.**

Option b is incorrect: Sarojini Naidu was born in Hyderabad on 13 February, 1879. She was educated in Madras, London and Cambridge. She was arrested for participating in 1930 Salt March. She was appointed the President of the INC in 1925 and later became the Governor of the United Provinces in 1947, becoming the first woman to hold the office of Governor in the Dominion of India.

Option c is incorrect: Vijaya Lakshmi Pandit was born as Swarup Kumari Nehru on 18 August 1900 to the Nehru family. She was imprisoned by the British on three different occasions, in 1932-1933, 1940, and 1942-1943. In 1936 she was elected to the Assembly of the United Provinces, and in 1937 became minister of local self-government and public health, the first Indian woman ever to become a cabinet minister.

Option d is incorrect: Kamala Nehru was born on August 1st, 1899. She was home schooled. The Non-Cooperation Movement of 1921 saw Kamala Nehru's entry into the freedom struggle of the country. She organised no-tax campaigns along with other women volunteers including Durgabai and Kamaladevi Chattopadhyaya.

Q.18) Consider the following pairs regarding the Acts on development of Indian Press:

**Act related to Provision
press**

- | | |
|----------------------------------|---|
| 1. Censorship of Press Act, 1799 | Every newspaper should print the names of the printers. |
| 2. Licensing Act, 1857 | Replaced Metcalfe's Act of 1835 |
| 3. Registration Act, 1867 | Copy of book to be submitted to the local government |

How many pairs given above is/are correct?

- Only one pair
- Only two pairs
- All three pairs
- None of the pairs

Ans) b

Exp) Option b is the correct answer.

Pair 1 is correct: Lord Wellesley enacted the **Censorship of Press Act (1799)**, anticipating the French invasion of India. It imposed wartime press restrictions including pre-censorship. These restrictions were relaxed under Lord Hastings, who had progressive views, and in 1818, pre-censorship was dispensed with. As per this act, every newspaper **should print the names of the printers**, editor and proprietor.

Pair 2 is incorrect: **Licensing Act, 1857 did not replaced Metcalfe's Act of 1835. Registration Act, 1867 replaced the Metcalfe's Act of 1835.** Due to the emergency caused by the 1857 revolt, **Licensing Act, 1857 was enacted.** It imposed licensing restrictions in addition to the already existing registration procedure laid down by Metcalfe Act and the government reserved the right to stop publication and circulation of any book, newspaper or printed matter.

Pair 3 is correct: **Registration Act ,1867** replaced the Metcalfe's Act of 1835 and was of a regulatory, not restrictive, nature. As per the Act, every book/ newspaper was required to print the name of the printer and the publisher and the place of the publication; and **a copy was to be submitted to the local government within one month of the publication of a book.**

Knowledge Base: Pg 557, ch 29, Spectrum

Q.19) With reference to Subhash Chandra Bose and Indian National Army (INA), consider the following statements:

- Subhash Chandra Bose opposed the Quit India Movement as yet another ineffective nonviolent struggle.
- The defeat of British by INA during Imphal campaign encouraged its members to liberate India from British.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) d

Exp) Option d is the correct answer.

Statement 1 is incorrect: Subhas Chandra Bose considered the Indian National Army movement to be never opposed to but rather **complementary to the Quit India Movement**. He described the **Quit India Movement as “India’s epic struggle”** and kept the outside world informed about all events in India and tried to secure sympathy and help for India’s struggle for freedom.

Statement 2 is incorrect: **Imphal Campaign was a failure**. One INA battalion commanded by Shah Nawaz was allowed to accompany the Japanese army to the Indo-Burma front and participate in the Imphal campaign. But the **discriminatory treatment meted out to Indians** which included being denied rations, arms and being made to do menial work for the Japanese army, completely **demoralised the members**. The failure of the Imphal campaign and the following arrest of INA members by the British culminated in the famous **INA trial in India**.

Source: India’s Struggle for Independence: The Quit India movement and the INA

Q.20) Which one of the statements given below most appropriately describes the term ‘Gene Therapy’?

- a) It is a type of medical test that is used in identification of changes in genes, chromosomes, or proteins.
- b) It is a technique of enhancing capabilities of an organism beyond the normal levels through genetic modifications.
- c) It is the ability of genetic improvement through the correction of altered genes or site-specific modifications.
- d) It is a technique that mainly aims at the prevention of communicable diseases through DNA analysis.

Ans) c

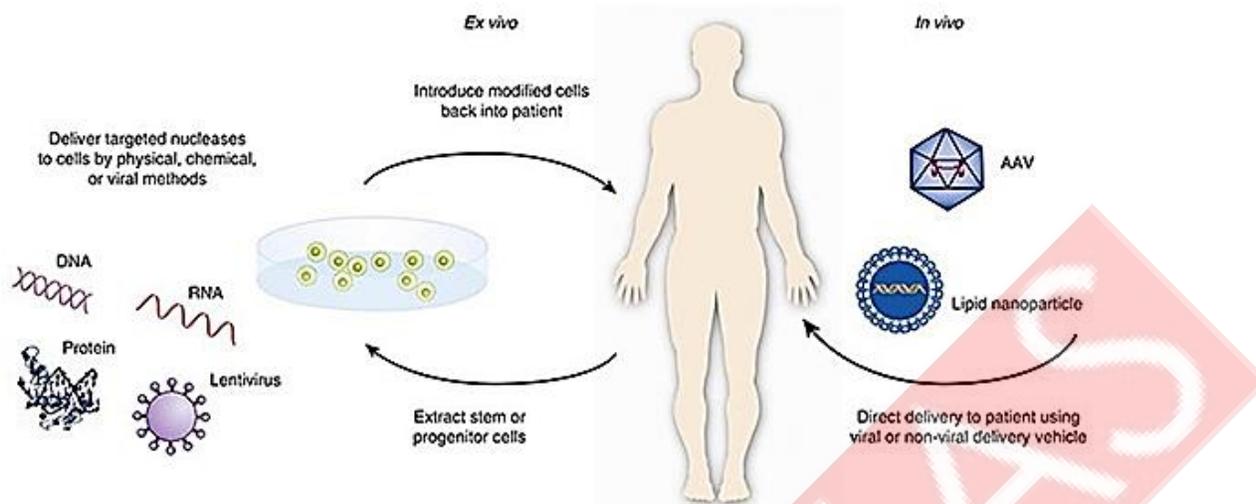

Exp) Option c is the correct answer.

Gene therapy is a technique that modifies a person’s genes to treat or cure disease. It is understood as the **ability of genetic improvement through the correction of altered genes** or site-specific modifications.

Gene therapies can work by several mechanisms:

- Replacing a disease-causing gene with a healthy copy of the gene
- Inactivating a disease-causing gene that is not functioning properly
- Introducing a new or modified gene into the body to help treat a disease

Gene therapy products are being studied to treat diseases including cancer, genetic diseases, and infectious diseases.

There are a variety of types of gene therapy products, including:

- 1) **Plasmid DNA:** Circular DNA molecules can be genetically engineered to carry therapeutic genes into human cells.
- 2) **Viral vectors:** Viruses have a natural ability to deliver genetic material into cells, and therefore some gene therapy products are derived from viruses. Once viruses have been modified to remove their ability to cause infectious disease, these modified viruses can be used as vectors (vehicles) to carry therapeutic genes into human cells.
- 3) **Bacterial vectors:** Bacteria can be modified to prevent them from causing infectious disease and then used as vectors (vehicles) to carry therapeutic genes into human tissues.
- 4) **Human gene editing technology:** The goals of gene editing are to disrupt harmful genes or to repair mutated genes.
- 5) **Patient-derived cellular gene therapy products:** Cells are removed from the patient, genetically modified (often using a viral vector) and then returned to the patient.

Option a is incorrect: **Genetic testing** is a type of medical test that identifies changes in genes, chromosomes, or proteins. The results of a genetic test can confirm or rule out a suspected genetic condition or help determine a person's chance of developing or passing on a genetic disorder.

Option b is incorrect: Gene therapy seeks to alter genes to correct genetic defects and thus prevent or cure genetic diseases. Whereas, **Genetic engineering aims to modify the genes to enhance the capabilities of the organism beyond what is normal.**

Option d is incorrect: Gene therapy mainly deals with genetic diseases which are categorized as non-communicable diseases.

Source: <https://medicine.missouri.edu/centers-institutes-labs/health-ethics/faq/gene-therapy#:~:text=The%20distinction%20between%20the%20two,organism%20beyond%20what%20is%20normal.>

Q.21) The *Vital-Vidhvansak*, the first monthly journal to have the untouchable people as its target audience was published by

- a) Gopal Baba Walangkar
- b) Jyotiba Phule

- c) Mohandas Karamchand Gandhi
- d) Bhimrao Ramji Ambedkar

Ans) a

Exp) Option a is the correct answer.

Gopal Baba Walangkar, also known as Gopal Krishna, (1840–1900) was an early proponent to release the untouchable people of India from their historic socio-economic oppression, and is generally considered to be the pioneer of that movement. He developed a racial theory to explain the oppression and also published the first journal targeted at the untouchable people. **Vital-Vidhvansak means (Destroyer of Brahmanical or Ceremonial Pollution), which was the first to have the untouchable people as its target audience.**

Source: UPSC CSE 2020

Q.22) T B Macaulay's Minute on Indian Education of 1835 is regarded by many as the most significant document in the history of Indian education. In this context, which of the following statements is **incorrect** about this Macaulay's Minute?

- a) The minute rejected indigenous literatures and languages and promoted English.
- b) The minute encapsulates the concept of the White man's burden.
- c) The minute was based on the orientalist view on education.
- d) The minute aimed to help in achieving the Civilizing mission of the British Government.

Ans) c

Exp) Option c is the correct answer.

The Macaulay's Minute is seen as a watershed that not only governed the educational policy of the British administration after 1835 but also reflected a crucial change in the strategy of control and subjugation of the native population

Statement c is incorrect: Macaulay's Minute is **based on Anglicist view** on education. **Macaulay attacks the Orientalists, accusing them of bribing the Indian student to learn Native languages and literatures.** Macaulay finds the Native vernaculars so poor in their vocabulary that no useful instruction can be given in these languages.

Statement a, b and d are correct: According to minute, the limited government resources were to be devoted to teaching of Western sciences and literature through the medium of English language alone. **It rejected indigenous literatures and languages. The Minute also encapsulates the concept of the White man's burden,** which means that it is the responsibility of enlightened Europe to inculcate modern values among the less civilised communities. The new native who will emerge after receiving English education will be "Indian in blood and colour but English in taste, in opinions, in morals and in intellect. In this way, **the Minute will help in achieving the Civilizing mission of British Government.**

Knowledge Base: Civilizing mission was a set of ideas and practices that was used by the colonial powers to legitimize the establishment and continuation of overseas colonies. According to the British, the main aim of civilizing mission was to morally and materially 'uplifting' and 'developing' the supposedly 'backward' or 'rude' people of India to make them more civilized and more modern.

Source: <https://egyankosh.ac.in/bitstream/123456789/23158/1/Unit-2.pdf>

Q.23) Which of the following actions/policies by the British were responsible for the creation of Pakistan as a separate nation?

1. The Cripps mission's proposal provided legitimacy to the demand for the creation of a separate nation.
2. Recognition of Muslim league as a sole representative of Muslims in India by Wavell's plan.

3. The British invited the Congress to form interim government without taking into consideration the Muslim League's demands.

4. Acceptance of Pakistan as a separate nation by the Cabinet mission plan.

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

Statement 1 is correct: Cripps Mission's proposals gave a fillip to the activities of the Muslim League and provided **legitimacy to the Pakistan demand by accommodating it in their provision for provincial autonomy**. In fact, there was a provision in the mission that any province unwilling to join the Indian dominion could form a separate union and have a separate constitution. Hence, at a time when the demand had hardly been taken seriously by Indians, its **sympathetic consideration by officialdom was a great service to the cause of Pakistan**.

Statement 2 is incorrect: Wavell plan had no such proposal. The idea of **Wavell plan was to reconstruct the governor-general's executive council** (except the governor-general and the commander-in-chief, all members of the executive council were to be Indians). For this purpose, a **Simla conference** was convened by the viceroy, Lord Wavell in June 1945. In this conference **Jinnah insisted that league alone has the right to nominate Muslims to the executive council, but congress was opposed to it. Thus, not able to settle their differences Simla conference broke down without taking any decision.**

Statement 3 is correct: The British invited the Congress to form an Interim Government which came into being on 2nd September 1946 with Jawaharlal Nehru functioning as its de facto head **despite of the objections of Muslim League led by Muhamad Ali Jinnah**. In response to this Jinnah launched **direct action day in Calcutta on August 16, 1946, with a slogan "We will fight and get Pakistan"**. It gave a fillip to the demand for creation of Pakistan as a separate nation.

Statement 4 is incorrect: The Cabinet Mission Plan 1946 rejected the demand for a full-fledged separate nation of Pakistan. The Cabinet Mission did so as it would not solve the communal problem and it found no reason to merge the non-Muslim parts of Bengal, Punjab, and Assam. According to the mission It would also result in the disruption of the Indian armed forces, telegraph lines, and the postal system. It would also cause a dilemma among the Princely States to join India or Pakistan. In place of a separate state of Pakistan, the Cabinet mission suggested a plan to safeguard the interests of the Muslim minority within the **overall framework of unity of the country**.

Q.24) Consider the following statements regarding the development of Education under the British rule in India:

- 1. Under the 1913 Resolution on Education policy, the British government agreed to provide free primary education to all.
- 2. In 1902, *Raleigh Commission* was set up to go into conditions and prospects of universities in India.
- 3. The Sergeant plan of 1944 provided for technical, commercial and arts education.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: In 1906, the progressive state of Baroda introduced compulsory primary education throughout its territories. National leaders urged the government to do so for British India. **In its 1913 Resolution on Education Policy, the government refused to take up the responsibility of compulsory education**, but accepted the policy of removal of illiteracy and urged provincial governments to take early steps to provide free elementary education to the poorer and more backward sections.

Statement 2 is correct: In 1902, *Raleigh Commission* was set up to go into conditions and prospects of universities in India and to suggest measures for improvement in their constitution and working. **Based on its recommendations, the Indian Universities Act was passed in 1904.**

Statement 3 is correct: The Sergeant Plan was worked out by the Central Advisory Board of Education in 1944. It recommended for **adequate technical, commercial and arts education**; pre-primary education for 3-6 years age group and free universal and compulsory elementary education for 6-11 years age group; abolition of intermediate course; liquidation of adult illiteracy in 20 years.

Knowledge Base: **The Indian Universities Act was passed in 1904.** As per the Act

- 1) universities were to give more attention to study and research
- 2) The number of fellows of a university and their period in office were reduced and most fellows were to be nominated by the Government.
- 3) Government was to have powers to veto universities' senate regulations and could amend these regulations or pass regulations on its own.
- 4) Conditions were to be made stricter for affiliation of private colleges; and
- 5) Five lakh rupees were to be sanctioned per annum for five years for improvement of higher education and universities

Source: Pg 567, ch 30, Spectrum

Q.25) With reference to the Panchayats Extension to The Scheduled Areas (PESA) Act of 1996, consider the following statements:

1. The act aims to extend the Constitutional provisions of Panchayats to Fifth and Sixth scheduled areas.
2. Chhattisgarh was the first state in India to implement the provisions of PESA act.
3. Rules regarding the implementation of the act can be framed by the Centre alone and not by the states.

Which of the above statements is/are **incorrect**?

- a) 1 and 3 only
- b) 1 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Statement 1 is incorrect: The PESA Act was enacted in 1996 “to provide for the extension of the provisions of Part IX of the Constitution relating to the Panchayats to the Scheduled Areas”. Under the PESA Act, **Scheduled Areas are those referred to in Article 244(1)**, which says that the provisions of the **Fifth Schedule (not the sixth schedule) shall apply to the Scheduled Areas and Scheduled Tribes** in states other than Assam, Meghalaya, Tripura, and Mizoram. It ensures self-governance through Gram Sabhas (village assemblies) for people living in the Scheduled Areas.

Statement 2 is incorrect: With PESA rules being notified recently, **Chhattisgarh became the seventh state in the country to frame rules and implement PESA** after Andhra Pradesh, Gujarat, Himachal Pradesh, Maharashtra, Rajasthan and Telangana.

Statement 3 is incorrect: Recently, Chhattisgarh notified the rules for implementation of the Panchayats (Extension to the Scheduled Areas) (PESA) Act, 1996 on the occasion of World Tribal Day. Basically, PESA is a Central law that has been in existence since the 1990s. **However, its implementation is State-specific. Chhattisgarh has formed its set of rules** while many States with significant tribal population are yet to implement the provisions of the Act. **(Hence, rules for the implementation of PESA act are framed by the state governments.)**

Q.26) Which of the following statements is correct with reference to the provisions of the Wavell's Breakdown plan?

- Except governor- general and commander-in-chief, all other members of the executive council to be Indians.
- Transfer of power to separate provinces and an option given to remain independent.
- Punjab and Bengal legislative assemblies would meet in two groups of Hindus and Muslims to vote for the partition of their provinces.
- Withdrawal of British army and British officials to the Muslim provinces of north west and north east of India.

Ans) d

Exp) Option d is the correct answer.

Wavell presented his plan to the Cabinet Mission in May 1946. It was considered a balanced approach between “repression” and “scuttle”.

Option a is incorrect: Except governor- general and commander-in-chief, all members of executive council to be kept Indians **provision was given under Wavell plan.** It was aimed at reconstructing the governor-general's executive council. It provided that with exception of governor-general and commander-in-chief, all members were to be Indians. Governor-general was also given veto to be exercised with advice of his ministers.

Option b is incorrect: The plan Balkan was introduced in 1947. It was aimed at transferring the power to separate provinces or to a confederation, if formed before the transfer. Punjab and Bengal were given the option to vote for partition of their provinces. The various units thus formed along with the princely states would have the option of joining India or Pakistan or remaining separate. The plan was quickly abandoned.

Option c is incorrect: The Mountbatten Plan provided this provision. Punjab and Bengal Legislative Assemblies to meet in two groups of Hindus and Muslims for voting their partition. If a simple majority of either group voted for partition, then these provinces would be partitioned.

Option d is correct: Breakdown plan proposed the **withdrawal of the British Army and officials to the Muslim provinces of North-West and North-East India.** The rest of the country would be hand over to the Congress. Wavell's plan was evidence of:

- British recognition of the impossibility of suppressing any future Congress-led rebellion.
- desire in some high official circles to make a “Northern Ireland” of Pakistan.

Q.27) The National Defence Council was set up as a result of which of the following events?

- Indian National Session of Haripura
- Cripps Mission
- August Offer
- Indian National Session of Faizpur

Ans) c

Exp) Option c is the correct answer.

On 8 August 1940, the Viceroy Lord Linlithgow made a proposal called the **August Offer** which expanded the Executive Council to include more Indians. The National Defence Council was set up with purely advisory functions.

The National Defence Council's main purpose was to bring the war effort in the Provinces and States, as well as in the ranks of commerce, industry and labour, into more effective touch with the Central Government.

Q.28) With reference to interim government of 1946, consider the following statements:

1. Muslim league members joined the interim government with the condition of not giving up with their 'direct action' program.
2. It functioned according to the provision of Government of India Act of 1919.
3. Jawaharlal Nehru was the President of the Viceroy's Executive Council.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

On, September 1946 interim government was constituted as pure congress government. Wavell later brought the Muslim League into the Interim Government on October 26, 1946.

Statement 1 is correct: Muslim league decided to join the interim government without surrendering 'direct action'. Earlier, the interim government consisted only congress members. On October 26, 1946 the League was allowed to join:

- 1) without giving up the 'direct action'
- 2) despite its rejection of the long-term and short-term plans put forward by cabinet mission.
- 3) And despite its insistence on compulsory grouping and decisions being taken by a majority vote given by section of population for the whole region.

Statement 2 is correct: It functioned under the **provision of government of India act 1919**. A federal scheme provided under the Government of India Act of 1935, was not implemented due to the opposition from India's princely states. As a result, the interim government functioned according to the older Government of India Act of 1919.

Statement 3 is incorrect: The members of the interim Government were members of the Viceroy's Executive Council. The Viceroy continued to be the head of the Council. But, Jawaharlal Nehru was designated as the Vice-President of the Council.

Q.29) What was the immediate reason leading to Muhammad Ali Jinnah's declaration of 16 August, 1946 as Direct Action Day?

- Rejection of demand to form full-fledged Pakistan under Cabinet Mission plan.
- Nehru's statement that the constituent assembly would not have the compulsory grouping of provincial assemblies.
- Congress formed the interim government without accepting the demands put forward by Muslim league.
- Overthrowing the coalition government in Punjab.

Ans) b

Exp) Option b is the correct answer.

Jinnah gave call for 'direct action' from August 16, 1946. It was aimed at achieving Pakistan. Jinnah declared, "Today we have said goodbye to constitutions and constitutional methods."

Option a is incorrect: Although demand for full-fledged Pakistan was rejected under cabinet mission plan. (Though this could be one of the reasons leading to direct action day but not the immediate reason). Also, the long-term provision of cabinet mission was accepted by both Muslim league as well as congress. The long-term provision includes:

- After the first general elections, a province would be free to come out of a group and after 10 years, a province would be free to call for a reconsideration of the group or the union constitution.
- Meanwhile, an interim government would be formed from the constituent assembly.

Option b is correct: Jinnah called for direct action after the Nehru's statement. On July 10, 1946 Nehru gave statement in AICC meeting "We are not bound by a single thing except that we have decided to go into the Constituent Assembly". This implied that the Constituent Assembly to be formed would be sovereign and decide its rules of procedure. Hence, there would be no compulsory grouping (as demanded by Muslim league). As a result on July 29, 1946 the League withdrew its acceptance of the long-term plan in response to Nehru's statement and gave call for direct action.

Option c is incorrect: The Interim Government was formed on 2nd September 1946 while the **day decided for direct action was 16 august 1946**. Also, interim government was formed with Congress members alone with Nehru as de facto head. Wavell later on brought the Muslim League into the Interim Government on October 26, 1946.

Option d is incorrect: On February 20, 1947 Attlee's Statement consists of the provision of transfer of power to more than one centre. It was accepted by Congress but the league encouraged with this, decided to launch a **civil disobedience movement. It was aimed at overthrowing the coalition government in Punjab.**

It was not related to Direct Action Day.

Q.30) Consider the following pair of places and their location:

Place	Location
1. Al-Aqsa Mosque	Turkey
2. Katchal Island	Sri Lanka
3. Lake Garda	Italy

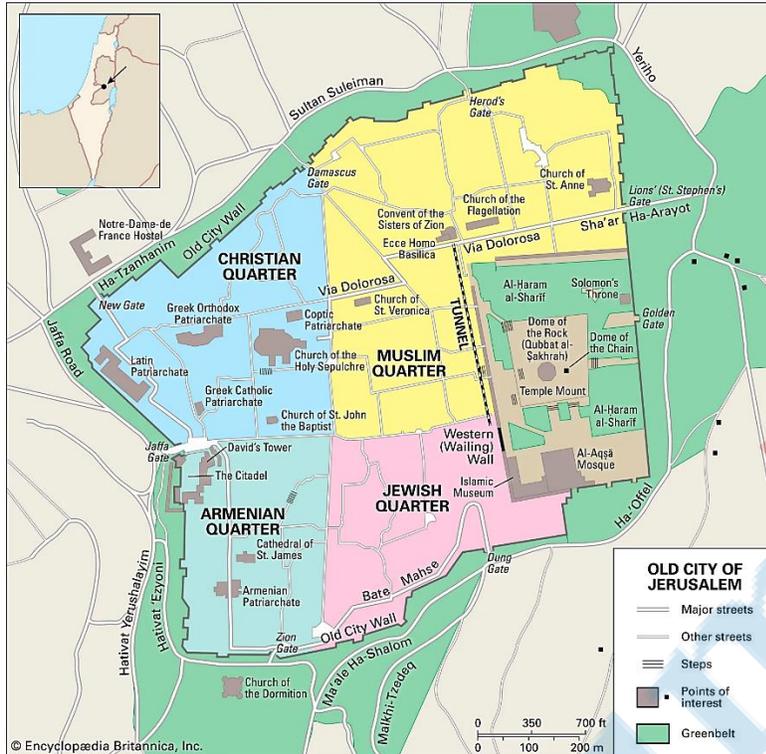

Which of the above pairs is/are correctly matched?

- 2 only
- 3 only
- 1 and 2 only
- 1, 2 and 3

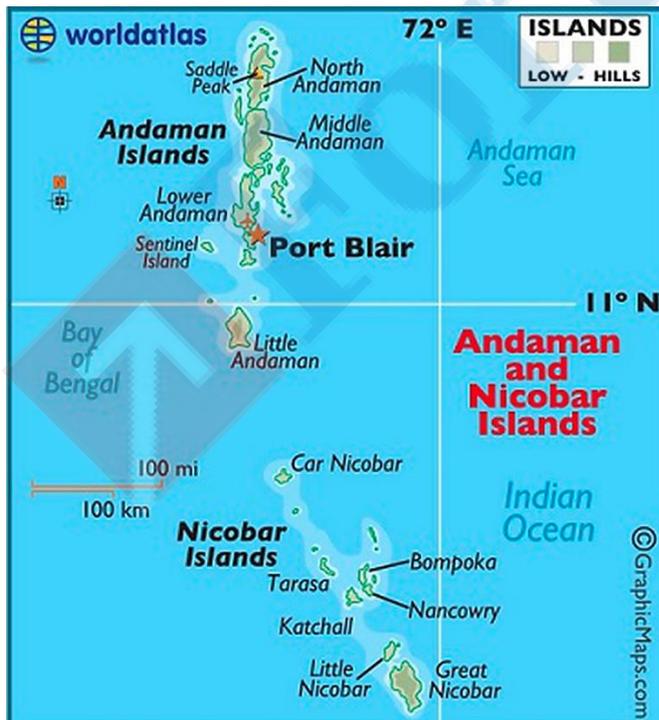

Ans) b

Exp) Option b is the correct answer.

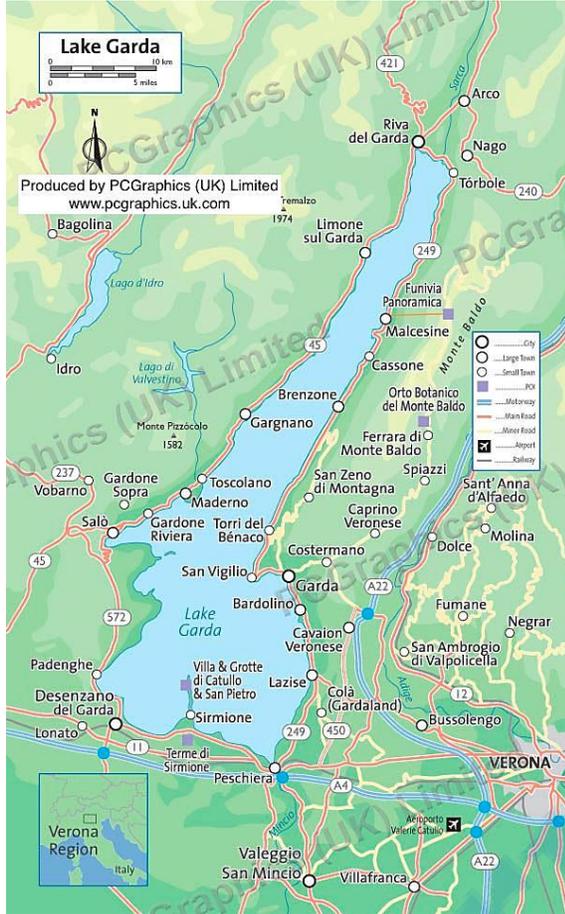

Pair 1 is incorrect: Al-Aqsa Mosque is a congregational mosque in the Old City of Jerusalem. The Al-Aqsa Mosque compound has been the most sensitive site in the Israel-Palestine conflict. The Al-Aqsa Mosque compound is referred to as Temple Mount by Jews. It is a holy site for both Islam and Judaism.

Pair 2 is incorrect: Katchal island is a part of India's Nicobar archipelago. NASA has recently highlighted the loss of mangrove cover on Katchal island. More than 90% of mangrove cover on the island was lost due to the Indian Ocean Tsunami.

Pair 3 is correct: Lake Garda is located in Italy. It is the largest lake in the country. Italy has recently undergone its worst drought and that has reduced the Lake Garda to its lowest level ever.

- Q.31)** With reference to Indian History, the Members of the Constituent Assembly from the Provinces were:
- directly elected by the people of those Provinces
 - nominated by the Indian National Congress and the Muslim League
 - elected by the Provincial Legislative Assemblies
 - selected by the Government for their expertise in constitutional matters

Ans) c

Exp) Option c is the correct answer.

The members of the Constituent Assembly from the Provinces were to be elected to indirectly **by the members of the individual provincial legislative assemblies.**

Source: UPSC CSE Pre 2013

Q.32) With reference to Congress's stand towards Cabinet Mission proposals, consider the following statements:

1. Congress interpreted Cabinet Mission proposals as mandatory grouping of provincial assemblies into three sections.
2. Congress all together rejected the proposals under Cabinet mission.
3. Congress objected to the proposal that provinces need to wait till the first general elections to come out of a group.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 and 3 only
- c) 3 only
- d) 1 and 2 only

Ans) c

Exp) Option c is the correct answer.

The Cabinet Mission reached Delhi on March 24, 1946. It was constituted to provide solution on the issues:

- (1) interim government.
- (2) principles and procedures for framing a new constitution giving freedom to India

Statement 1 is incorrect: Each party Muslim league as well as congress interpreted cabinet mission differently. To the Congress, the Cabinet Mission Plan was interpreted as:

- 1) The grouping of existing provincial assemblies' into three section was optional. Hence, rejecting the plan of Pakistan.
- 2) one constituent assembly was envisaged; and the League no longer had a veto

Statement 2 is incorrect: Congress as well as Muslim league accepted the long-term plan put forward by the Cabinet mission. The long-term plan includes:

- 1) After the first general elections, a province would be free to come out of a group and after 10 years, a province would be free to call for a reconsideration of the group or the union constitution.
- 2) Meanwhile, an interim government would be formed from the constituent assembly

Statement 3 is correct. Congress objected to the plan that provinces need to wait till first general elections to come out of a group. They proposed that provinces should have the option of not joining a group in the first place.

Source: Spectrum, chapter on post war national scenario, pg no 493

Q.33) With reference to the interim Government of 1946, consider the following statements:

1. It was formed from the Constituent Assembly which was elected in August 1946.
2. Dr Babasaheb Ambedkar headed the portfolio of Law in the Interim government.
3. It appointed a committee to advise the government on nationalizing the armed forces.

Which of the above statements is/are correct?

- a) 1 and 3 only
- b) 2 and 3 only
- c) 2 only
- d) 1 and 2 only

Ans) a

Exp) Option a is the correct answer.

On 2nd September 1946, the Interim Government of India was formed to oversee the transition of the country from a British colony to an independent republic.

Statement 1 is correct: The Interim Government was formed from the Constituent Assembly which was elected in August 1946. The election to the Constituent Assembly was not direct and representatives were elected by the provincial assemblies.

Statement 2 is incorrect. Dr. Babasaheb Ambedkar was not part of the interim government formed in 1946. **Jogendra Nath Mandal of Muslim League headed the portfolio of Law in interim government.**

Statement 3 is correct: In November 1946, India ratified the Convention on International Civil Aviation. In the same month, **a committee was appointed to advise the government on nationalizing the armed forces.**
 Knowledge Base: The Interim Government was formed as a provisional government between an imperial structure and a democratic structure.

- 1) It lasted till 15th August 1947 when India became independent and was partitioned into India and Pakistan.
- 2) In these elections, the Indian National Congress (INC) won around 69% of the seats and had a majority. The Congress Party won 208 seats and the Muslim League won 73 seats.
- 3) In the Interim Government, the Viceroy's Executive Council was equivalent to the position of the Council of Ministers acted as the executive.
- 4) Even though the Muslim League refused to be a part of the Interim Government, insisting on their demand for a separate nation, it eventually became a part of it. In Muhammad Ali Jinnah's words, the League was "going into the Interim Government to get a foothold to fight for... the cherished goal of Pakistan.

<https://ncert.nic.in/textbook/pdf/lehs306.pdf>

Q.34) The primary objective of the Pirpur Committee was to:

- a) prepare report on the atrocities supposedly committed by the Congress ministries formed after 1937 elections.
- b) resolve issues pertaining to minorities that has affected Indian political discourse.
- c) examine the governance reforms proposed by the Government of India Act, 1919.
- d) enquire into conditions of universities of India.

Ans) a

Exp) Option a is the correct answer.

Pirpur Committee in 1938 was formed by the **All-India Muslim League** who were annoyed with the Congress for not sharing power with them. The objective of the committee was to prepare a detailed **report on the atrocities supposedly committed by the Congress ministries.** In its report the committee charged the Congress with interference in the religious rites, suppression of Urdu in favour of Hindi, denial of proper representation and of the oppression of Muslims in the economic sphere.

Q.35) Consider the following statements with reference to measures for Data protection in India:

1. CERT-In is the national nodal agency for responding to cybersecurity threats.
2. As per RBI, generally the payment data shall be stored in systems located in India.
3. Ministry of Home Affairs launched 'Cyber Surakshith Bharat' initiative to raise awareness about the cyber-crimes.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 3 only
- c) 1, 2 and 3

d) 1 only

Ans) a

Exp) Option a is the correct answer

Data protection is the **process of safeguarding important information from corruption, compromise, or loss.**

Statement 1 is correct: Computer Emergency Response Team - India (CERT-In) is an organization of the Ministry of Electronics and Information Technology with the objective of securing Indian cyberspace. CERT-In is empowered under **Section 70B of the Information Technology Act** to collect, analyze and disseminate information on cyber security incidents. **It is the national nodal agency which deals with cybersecurity threats like hacking and phishing.**

Statement 2 is correct: With data localization, RBI aims to protect personal data of the country's citizens by restricting data on servers outside the country's geographical boundaries. As per the RBI data localization rules, **the entire payment data shall be stored in systems located only in India.**

Statement 3 is incorrect: Cyber Surakshith Bharat initiative was conceptualized with the mission to spread awareness about cyber-crime and build capacities of Chief Information Security Officers (CISOs) and frontline IT officials, across all government departments. **It was launched in 2018 by the Ministry of Electronics and Information Technology (MeitY) (not the Ministry of Home Affairs).**

Q.36) With reference to the Constituent Assembly of India, consider the following statements:

1. The Indian National Congress officially demanded a Constituent Assembly for the first time in 1935.
2. The demand for the constituent assembly was accepted, in principle, by the British in August Offer.
3. It was constituted under the scheme formulated by Cripps Mission Plan.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 only
- d) 1, 2, and 3

Ans) a

Exp) Option a is the correct Answer.

The idea of a constituent assembly was put forward for the first time by MN Roy. In 1935, the Indian National Congress (INC), for the first time, officially called for a constituent assembly to frame a constitution for India.

Statement 1 is correct: In 1935, the Indian National Congress (INC), for the first time, officially demanded a Constituent Assembly to frame the Constitution of India. In 1938, Jawaharlal Nehru, on behalf of the INC declared that 'the Constitution of free India must be framed, without outside interference, by a Constituent Assembly elected on the basis of the adult franchise'.

Statement 2 is correct: The demand was finally accepted in principle by the British Government in what is known as the 'August Offer' of 1940. In 1942, Sir Stafford Cripps, a member of the cabinet, came to India

with a draft proposal of the British Government on the framing of an independent Constitution to be adopted after World War II.

Statement 3 is incorrect: The Constituent Assembly was constituted in November 1946 under the scheme formulated by the Cabinet Mission Plan

Source: <https://ncert.nic.in/textbook/pdf/hess301.pdf>

Q.37) Which of the following statements are correct with reference to the Objective Resolution introduced by Jawaharlal Nehru?

1. It laid down the general philosophy behind the Indian Constitution.
2. It promises to provide adequate safeguards for the minorities and backward sections of society.
3. India to have a centralized form of government with a strong Centre.
4. It seeks to maintain the sovereign rights on land, sea, and air according to the law of civilized nations.

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 2 and 3 only
- c) 2,3 and 4 only
- d) 1, 2, and 4 only

Ans) d

Exp) Option d is the correct answer.

Objectives Resolution was introduced by Jawahar Lal Nehru on 13th December 1946 in the Constituent Assembly. It not only outlined the goals or objectives of the Constituent Assembly but also provided the philosophy and guiding principles for the framing of the constitution. This Resolution was unanimously adopted by the Constituent Assembly on 22 January 1947 as the Preamble to the Indian Constitution.

Statement 1 is correct: The Objective Resolution forms the basis of the Preamble to the Indian Constitution. It declares the goals of the Indian Constitution, i.e. to foster unity and ensure economic and political security. It lays down the fundamentals and philosophy of the Indian Constitution.

Statement 2 is correct: All people of India shall be guaranteed and secured social, economic, and political justice; equality of status and opportunities and equality before the law; and fundamental freedoms – of speech, expression, belief, faith, worship, vocation, association and action – subject to law and public morality. To provide adequate safeguards to the minorities, backward and tribal areas, depressed, and other backward classes.

Statement 3 is incorrect: All powers and authority of sovereign and independent India and its constitution shall flow from the people. India to have a Federal form of government with a Division of Powers between the Centre and the States.

Statement 4 is correct: To maintain the integrity of the territory of the Republic and the sovereign rights on land, sea, and air according to the law of civilized nations. To attain a rightful and honored place in the world and make a willing contribution to the promotion of world peace and the welfare of mankind.

Source: <https://ncert.nic.in/ncerts/1/lehs305.pdf>

Q.38) The establishment of British territorial control over India brought changes in different spheres of life. Education was one of such areas where lot of changes came with the transfer of power to the British. The British Government in India established many commissions in the field of education. Which of the Commissions/committee mentioned below are related to the development of Education?

1. Hunter Commission (1882-83)
2. Aitchison Committee (1886)
3. Saddler Commission (1917-19)
4. Hartog Committee (1929)

5. Linlithgow Commission (1926)

Select the correct answer using the code given below:

- a) 1, 2, 3 and 4 only
- b) 1, 3 and 4 only
- c) 1, 3 and 5 only
- d) 1, 2, 3, 4 and 5

Ans) b

Exp) Option b is the correct answer..

Option 1 is correct: In 1882, the Government appointed a commission under the chairmanship of W.W. Hunter to review the progress of education in the country since the Despatch of 1854. Its recommendations were to primary and secondary education. Primary education should be imparted through vernacular. To transfer control of primary education to newly set up district and municipal boards. secondary education should have two divisions literary and vocational.

Option 2 is incorrect: The Aitchison Committee on Public Services (1886), set up by Dufferin. It was related to the civil services. It recommended for the classification of the civil service into Imperial Indian Civil Service (examination in England), Provincial Civil Service (examination in India) and Subordinate Civil Service (examination in India). It recommended to increase the age limit to 23.

Option 3 is correct: The Saddler Commission (1917-19) was set up to study and report on problems of Calcutta University, but its recommendations were applicable to other universities also. School course should cover 12 years. Students should enter university after an intermediate stage (rather than matric) for a three-year degree course in university. The university should function as centralised, unitary residential-teaching autonomous body

Option 4 is correct: The Hartog Committee (1929) was set up to report on development of education. Its main recommendations were as follows. Emphasis should be given to primary education but there need be no hasty expansion or compulsion in education. Only deserving students should go in for high school and intermediate stage, while average students should be diverted to vocational courses after VIII standard

Option 5 is incorrect: Linlithgow Commission (1926) inquired into the crisis of Indian agriculture. The Royal commission of Agriculture is also known as Linlithgow commission

Knowledge Base: The British Government in India established many commission/committe in the field of education. The commission are as follows

1) under company's rule:

- a. Charter Act of 1813
- b. Lord Macaulay's Minute (1835)
- c. Wood's Despatch (1854)

2) under British Crown:

- a. Hunter Education Commission (1882-83)
- b. Raleigh Commission (1902,)
- c. Government Resolution on Education Policy (1913)
- d. Saddler University Commission (1917-19)
- e. Hartog Committee (1929)
- f. Sergeant Plan of Education (1944)

Source: Ch 30, Spectrum

Q.39) With reference to the Muslim League's Lahore Resolution of 1940, consider the following statements:

1. One of the demands was the creation of 'Pakistan' as a separate nation for Muslims.
2. The resolution was drafted by Sikandar Hayat Khan.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: The 1940 resolution of Muslim league also called as Lahore resolution never mentioned a word Pakistan. On 23 March 1940, the League moved a resolution demanding a measure of autonomy for the Muslim majority areas of the subcontinent. This ambiguous resolution never mentioned partition or Pakistan.

Statement 2 is correct: Sikandar Hayat Khan, Punjab Premier and leader of the Unionist Party drafted the Lahore resolution in 1940. He declared in a Punjab assembly speech on 1 March 1941 that **he was opposed to a Pakistan** that would mean “Muslim Raj here and Hindu Raj elsewhere. He reiterated his plea for a loose (united) confederation with considerable autonomy for the confederating units.

Source: 12th NCERT Volume 3: Understanding Partition

Q.40) Consider the following statements regarding ‘Ayushman Bharat Digital Mission (ABDM)’:

1. The participation in the Mission is mandatory for the citizens availing subsidies granted by Central government.
2. Under the mission, patients will have opportunity to access their medical records on their mobile phone.
3. The medical records of the patients under ABDM are stored up to a maximum period of one year only.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Ayushman Bharat Digital Mission aims to provide digital health IDs for all Indian citizens to help hospitals, insurance firms and citizens to access health records electronically when required.

Statement 1 is incorrect: Participation in **Ayushman Bharat Digital Mission** is **voluntary for all citizens**. Participation of a healthcare facility or an institution is also voluntary and shall be taken by the respective management (government or private management). **There is no such provision under the scheme to make it mandatory for the citizens who are availing subsidies by the government.**

Statement 2 is correct: **Ayushman Bharat Digital Mission (ABDM)** envisages improving the access, efficiency, effectiveness, and transparency of the healthcare delivery system in the country. **Patients will have opportunity** to link, securely store and **access their medical records on their phone or online**. These may include prescriptions, diagnostic reports, discharge summaries, etc.

Statement 3 is incorrect: Ayushman Bharat Digital Mission **does not store any medical records**. These are **always created and stored by healthcare providers** as per their retention policies and this will continue. ABDM only facilitates secure data exchange between the intended stakeholders on ABDM network after the patient’s consent.

Only the data collected for registries such as Health ID registry, Healthcare Professional Registry and Healthcare Facility Registry is stored centrally. It is necessary for these datasets to be stored centrally

because they are essential to provide interoperability, trust, and identification and single source of truth across different digital health systems.

Knowledge Base:

Key Features of Ayushman Bharat Digital Mission:

- 1) The digital platform will be launched with four key features – **health ID, personal health records, Digi Doctor and health facility registry.**
- 2) It is implemented by the **National Health Authority (NHA)** under the Ministry of Health and Family Welfare.
- 3) The **Digi Doctor** option will allow doctors from across the country to enrol and their details, including their contact numbers if they want to provide them, will be available.
- 4) The national health ID will be a repository of all health-related information of every Indian.
- 5) Every patient who wishes to have their health records available digitally must create **a unique Health ID**, using their basic details and mobile or Aadhaar number.
- 6) Health ID will be voluntary and applicable across states, hospitals, diagnostic laboratories and pharmacies.

NHA | Official website Ayushman Bharat Digital Mission (abdm.gov.in)

Q.41) With reference to the Cabinet Mission, which of the following statements is/are correct?

1. It recommended a federal government.
2. It enlarged the powers of the Indian courts.
3. It provided for more Indians in the ICS.

Select the correct answer using the code given below.

- a) 1 only
- b) 2 and 3
- c) 1 and 3
- d) None

Ans) a

Exp) Option a is the correct answer.

Option 1 is correct: The Cabinet Mission recommended a loose three-tier confederation. A united India was to have a weak central government controlling only foreign affairs, defence and communications with the existing provincial assemblies being grouped into three sections while electing the constituent assembly. Thus, Cabinet Mission plan proposed a weak Centre with provincial autonomy- essentially proposing a federal structure of government.

Option 2 and 3 are incorrect: There was no provision with respect to enlarging the powers of Indian courts and increasing strength of Indians in ICS.

Source: UPSC CSE Pre 2015

Q.42) With reference to the Unionist party, consider the following statements:

1. Sir Syed Ahmed Khan was one of the prominent members of this party.
2. The party mainly defended the rights of landless labourers in Punjab against the landlords.
3. The party supported Muslim League's demand for partition of India.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 3 only
- c) 2 only
- d) None of the above

Ans) d

Exp) Option d is the correct answer.

Statement 1 is incorrect: Sir Syed Ahmed Khan is not a member of the Unionist party. Sir Sikandar Hayat Khan, Sir Fazli Husain, Sir Shahab-ud-Din, Muhammad Hussain Shah and Sir Chhotu Ram were all members of the party. Although a majority of Unionists were Muslims, a large number of Hindus and Sikhs also supported and participated in the Unionist Party.

Statement 2 is incorrect: Unionists party mainly represented the interest of landlords (and not the landless labourers). It was a political party representing landholders- Sikhs, Muslims and Hindus in the Punjab.

Statement 3 is incorrect: Unionist Party leader Malik Khizr Hayat Khan Tiwana played a key role in limiting the Muslim League's influence in Punjab Province during 1942 to 1947. He strongly opposed the Muslim League's demand for a separate Pakistan and presented his own vision of united Punjab within a decentralised Federal India.

Source: 12th NCERT volume 3: Understanding Partition

Book: Khizr Tiwana, the Punjab Unionist Party and the Partition of India

Q.43) With respect to the history of demand for creation of Pakistan as a separate nation, consider the following statements

1. Choudhry Rahmat Ali presented a pamphlet to the British during a round table conference, demanding a separate nation of Pakistan.
2. The demand of Pakistan as a separate nation have been traced back to the Urdu poet Mohammad Iqbal.
3. The Launch of direct-action day by Muhamad Ali Jinnah accentuated the demand for Pakistan as a separate nation.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: Choudhry Rehmat Ali issued a pamphlet to the British and Indian delegates in the Third Round Table Conference in London. But these were dismissed as students' ideas. Choudhry Rehmat Ali, a law student at the University of Cambridge in 1933, designed a pamphlet "Now or Never; Are We to Live or Perish Forever?", also known as the **Pakistan Declaration. The pamphlet talked about providing national status to Pakistan-- "It embodies their demand for the **recognition of their national status, as distinct from the other inhabitants of India, by the grant to Pakistan of a separate Federal Constitution** on religious, social and historical grounds."**

Statement 2 is incorrect: Mohammad Iqbal called for reorganisation of Muslim-majority areas in north-western India into an autonomous unit within a single, loosely structured Indian Federation but didn't visualise the emergence of a separate country. So, the demand of Pakistan as a separate nation cannot be traced back to the Urdu poet Mohammad Iqbal.

Statement 3 is correct: Muhamad Ali Jinnah launched direct action day in Calcutta on August 16, 1946, with a slogan "We will fight and get Pakistan". It gave a fillip to the demand for creation of Pakistan as a separate nation.

Q.44) With reference to the freedom fighter Subhash Chandra Bose, consider the following statements:

1. He established the Forward bloc party in 1939 within the congress.
2. He was elected as president of All India Kisan Sabha in 1930.
3. He resigned from Civil service in response to the Non-Cooperation movement.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is correct: Subhash Bose was elected as president of Tripuri Congress session in 1939 after defeating the Gandhiji's candidate Pattabi Sitharamaya. Following the worsening relationship between Subhash Chandra Bose and moderates in Congress, he and his followers formed the **Forward Bloc in 1939 as a new party within the Congress**. The purpose was to consolidate the political left and major support base in his home state Bengal.

Statement 2 is incorrect: In 1930 he was elected Mayor of Calcutta, the same year he was elected President of All India Trade Union Congress (not All India Kisan Sabha). In fact, Subhash Chandra Bose had never been a president of All India Kisan Sabha.

Statement 3 is correct: He resigned from a prestigious post in the Indian Civil Service in response to the launching of the Non-Cooperation movement in 1922. In the late 1920s, he was amongst the first Congress leaders to call for complete independence from Britain (Purna Swaraj), rather than the previous Congress objective of India becoming a British dominion.

Q.45) Which among the following statements is **incorrect** about the liquefaction of soil during earthquakes?

- a) Liquefaction potential of sand can affect the collapse of structures during earthquakes.
- b) Irregular Grain Shape of the sand increases the soil liquification.
- c) Glass beads-shaped sand with higher roundness and sphericity are liquefied first during earthquakes.
- d) Manufactured sand provides stability against liquefaction.

Ans) b

Exp) Option b is the correct answer.

Liquefaction of sand is a phenomenon in which the strength and stiffness of soil is reduced by earthquake shaking or other rapid loading and lead to the collapse of structures resting on the liquefied ground.

Statement a is correct: There is a **strong relationship between the grain shape of sands and their liquefaction potential**. The liquefaction potential of sand is one of the major factors behind the collapse of structures during earthquakes.

Statements c and d are correct: The **glass bead-shaped sand, which has a regular shape with higher roundness and sphericity, liquefied first**.

The river sand, whose roundness and sphericity fall between glass beads and manufactured sand, liquefied next, **followed by manufactured sand, whose shape is relatively irregular**.

As the irregular shape increase the stability and hence provide stability against liquefaction.

Statement b is incorrect: **Irregular grain shape of the sand increases soil stability and hence the less liquification (Hence option b is incorrect)**. This is because the shear force required to break the inter-particle locking is more for the grains with relatively irregular shapes. As **the shape of the particles**

becomes irregular, they get interlocked with each other during shearing. Interlocking provides additional resistance to shear, and hence the tendency to get separated from each other to float in the fluid becomes lesser for particles with irregular shapes.

Q.46) Which of the following statements is/are **incorrect** features of the elections of 1946 in British India?

1. The election campaign of the Congress was strongly anti-Muslim League in character.
2. It was the first election in British India fought on the basis of universal adult franchise.

Select the correct answer using the code given below:

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

In July 1945, Labour Party formed the government in Britain. Clement Attlee took over as the new Prime Minister and Pethick Lawrence as the new secretary of state for India. In August 1945, elections to central and provincial assemblies were announced.

Statement 1 is incorrect: The election campaign of the Congress was anti-British in its thrust. Congress slogans were “Release the misguided patriots” of the Indian National Army and “punish the guilty” officials who committed excesses in 1942. **It was not anti-League in its tenor despite the elections being fought by the League on the issue of Pakistan.**

Statement 2 is incorrect: The franchise was very limited as for the provinces, less than 10 per cent of the population could vote and for the Central Assembly, less than 1 per cent of the population was eligible.

Q.47) Consider the following pairs regarding the Newspapers/ Journals and their Founders/ Editors:

Newspapers/ Journals	Founders/ Editors
1. Indian Mirror	Devendranath Tagore
2. Sudharak	Gopal Ganesh Agarkar
3. Voice of India	Dadabhai Naoroji

Which of the pairs given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Although, the British were responsible for bringing the printing press in India, they were most allergic to the emergence of a newspaper in this country. Some of the Newspapers/ Journals and their founders are given below.

Pair 1 is correct: Indian Mirror is the first Indian daily paper in English. It was started by Devendranath Tagore. In October 1839, he along with his friends started the Tattwaranjini Sabha which was later renamed to Tattwabodhini Sabha. He was also a founder of the Brahmo religion in 1848.

Pair 2 is correct: Gopal Ganesh Agarkar started his own periodical, Sudharak, which spoke against untouchability and the caste system. He was a cofounder of the New English School, the Deccan Education Society and Fergusson College. He was a principal of Fergusson College. He was also the first editor of Kesari, the journal started by Lokmanya Tilak.

Pair 3 is correct: Voice of India was started by Dadabhai Naoroji. In 1867, he founded the East India Association in London. In 1874, he was appointed the Dewan of Baroda and in 1875 he was elected a Member of the Municipal Corporation, Bombay. He is Known as ‘The Grand Old Man of India’.

Q.48) Consider the following statements with respect to Gandhi's attitude towards actions of Indian National Army (INA):

1. Gandhiji condemned Indian National Army's action of taking help from Nazi Germany, to liberate India from British rule.
2. Gandhi praised the Indian National Army for its secular nature.
3. Gandhi supported the cause of freedom of Indian National Army's prisoners from British.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: Gandhi did not condemn the Indian National Army's action of seeking help from Nazi Germany. His conversation with American Journalist Louis Fischer shows **Gandhi's contempt for British rule in India.** Gandhiji observed **“There are powerful elements of Fascism in British rule”.** So according to him there was nothing wrong in taking the help of Nazi Germany in Fight against the British rule.

Statement 2 and 3 are correct: Gandhi has a difference of opinion with the violent way of working of Indian National Army. **Despite this he praised the INA for its secular nature and bringing together the Indian soldiers without discriminating on the basis of religion or caste. He also admired the selfless sacrifice of INA soldiers and supported the cause of their freedom from British during Redfort Trials.**

Source: India's Struggle for Independence: The Quit India movement and the INA

Q.49) With reference to the role of Subhas Chandra Bose in Freedom Struggle of India, consider the following statements

1. He declared war against both Britain and the United States of America (USA).
2. He secured a promise from the Japanese government that Japan had no intention of occupying India.
3. He set up the headquarter of Indian National Army in Andaman and Nicobar Islands.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: The provisional government established by Subhas Chandra Bose **declared war on Britain and the USA** and was recognised by the Axis powers and their satellites.

Statement 2 is correct: Subhash Chandra Bose went to Tokyo in 1943 and met Japanese PM Tojo. **Tojo declared that Japan had no intention of occupying Indian territory.**

Statement 3 is incorrect: Subhash Bose after reorganising the Indian National Army set up **two headquarters, in Rangoon and in Singapore (not in Andaman and Nicobar Islands).**

Source: India's Struggle for Independence: Quit India movement and the INA

Q.50) Consider the following statements regarding Tiger Conservation:

1. Tiger has been classified as “Endangered” under IUCN Red List.
2. Government of India has launched Project Tiger in 1973, to comply with St. Petersburg Declaration on Tiger Conservation.
3. India achieved the goal of doubling the tiger numbers in 2018, four years in advance from the targeted year 2022.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Recently, India has hosted the Pre-Summit meeting of Tiger Range Countries (TRCs).

Statement 1 is correct: Panthera Tigris i.e., Tiger is categorized as Endangered as per the IUCN red data book.

Statement 2 is incorrect: St. Petersburg Declaration on Tiger Conservation was an outcome of St. Petersburg Tiger Summit, 2010. As per this declaration the 13 tiger range countries pledged to achieve a target of doubling the number of Tigers. **As, Project Tiger was launched in 1973, it was not a consequence of St. Petersburg Tiger Summit.**

Statement 3 is correct: A per the data released by the MoEF&CC:

- 1) India is home to 53 Tiger Reserves covering approximately 75,000 Sq. Km area in 18 States with approximately 75% population of the wild tiger at global level.
- 2) **India achieved the goal of doubling the tiger numbers in 2018 itself, four years in advance from the targeted year 2022.**
- 3) Also, so far 17 Tiger Reserves in the country have got CA/TIS international accreditation and two Tiger Reserves have got International Tx2 Award.

Source: <https://www.worldwildlife.org/species/tiger>

<https://pib.gov.in/PressReleasePage.aspx?PRID=1850581#:~:text=Pre%2Dsummit%20meeting%20of%20the%20Tiger%20Range%20Countries%20as%20a,in%20progress%20in%20New%20Delhi.>

Q.1) After the Santhal Uprising subsided, what was/were the measure/measures taken by the colonial government?

1. The territories called ‘Santhal Parganas’ were created.
2. It became illegal for a Santhal to transfer land to a non-Santhal.

Select the correct answer using the code given below:

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct. It was after the Santhal Revolt (1855-56) that the Santhal Pargana was created, carving out 5,500 square miles from the districts of Bhagalpur and Birbhum. The British hoped that by creating a new territory for the Santhals and imposing some special laws within it, the Santhals could be conciliated.

Statement 2 is correct. After the rebellion was suppressed, the British passed the Santhal Pargana Tenancy Act, 1876 which prohibit the transfer of Santhal owned land to a non-Santhal.

Source) UPSC 2018

Q.2) With reference to the Deccan Riots of 1870s, consider the following statements:

1. Reduction in cotton prices after the end of American Civil War was a reason for these riots.
2. The riots were preceded by a social boycott movement against the money lenders.
3. The riots resulted into the enactment of the Deccan Agriculturists Relief Act.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 1 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

In the year 1874, Maharashtra’s peasants began a revolution against rising agrarian distress.

Statement 1 is correct: The American Civil War of 1861 created a boom in the demand for cotton from India as the war disrupted the cotton trade from America to England. But the cotton demand and its price slashed **due to end of the American Civil War**. All of sudden the tax burden had increased to 50 percent by the government, farmers plunged into economic depression. This meant just one thing for them – increased borrowing from money lenders and more debt.

Statement 2 is correct: In 1874, the growing tension between the moneylenders and the peasants resulted in a **social boycott movement organised by the ryots against the “outsider” moneylenders**. The ryots refused to buy from their shops. No peasant would cultivate their fields. The barbers, washermen, shoemakers would not serve them. This social boycott spread rapidly to the villages of Poona, Ahmednagar, Sholapur and Satara. **Soon the social boycott was transformed into agrarian riots** with systematic attacks on the moneylenders’ houses and shops. The debt bonds and deeds were seized and publicly burnt.

Statement 3 is correct: The Government succeeded in repressing the movement. **As a conciliatory measure, the Deccan Agriculturists Relief Act was passed in 1879.** This spared the farmers from being arrested on grounds of unpaid dues and provided them with financial relief.

A Brief History of Modern India by Rajiv Ahir (Spectrum)

Q.3) With reference to the position of Indian National Congress (INC) on British India's foreign policy, consider the following statements:

1. INC supported the British during World War I in return for Britain's promise of granting dominion status to India.
2. INC supported the annexation of Burma by the British on account of the rising threat of Russian invasion.
3. INC did not favour the Britain's proposal to partition Palestine.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 2 only
- d) 3 only

Ans) d

Exp) Option d is the correct answer.

The pursuance of a foreign policy, guided by interest of British imperialism, often led to India's conflicts. Later INC took major decisions which guided the British India's foreign policy.

Statement 1 is incorrect: The British made no promises of granting dominion status. The Indian National Congress (INC) supported the British Indian Government during **World War I in the belief that Britain would apply the same principles of democracy** for which they were supposed to be fighting.

Statement 2 is incorrect: Indian National Congress (INC) condemned the annexation of Burma in 1885 by the British. This stand was mainly the manifestation of Asia-consciousness by the Indian nationalists and the INC.

Statement 3 is correct: Jews facing a threat from Nazi Germany tried to carve out their own homeland in Palestine with British support. In 1937 the INC protested against the British proposal to partition Palestine and assured the Arabs of the solidarity of the Indian people.

Source: Bipin Chandra: Chapter - The development of a Nationalist foreign policy

Q.4) With reference to the Asiatic Society of Bombay, consider the following statements:

1. It was established by Sir William Jones.
2. It was intended to disseminate knowledge of oriental learning in India.
3. Raja Rajendra Lal Mitra was the first president of this society.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 only
- c) 2 and 3 only
- d) None of the above

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: The Asiatic society of Bombay was established by **Sir James Mackintosh** in **1804**. He was influenced by Sir William Jones who established Asiatic Society of Bengal in 1784.

Statement 2 is correct: The Asiatic Society of Mumbai forms part of the network of institutions created by the British to generate, systematize and **disseminate knowledge of India and Orient**: a vast and cumulative body of information, **learning and knowledge** which became constituted into the field of Indology.

Statement 3 is incorrect: **Raja Rajendralal Mitra was the first president of the Asiatic Society of Bengal**, not Asiatic Society of Bombay. He was one of the major activists of the Bengal renaissance.

Source: <https://asiaticsociety.org.in/index.php/about-us/history-asiatic>

Q.5) Consider the following statements with reference to the Cyber Surakshith Bharat:

1. It is an initiative launched by the Ministry of Electronics and Information Technology.
2. Under the initiative, training sessions for technical officials from the Central Government, State Governments and Union Territories are conducted.
3. It aims to educate and protect all citizens against digital financial frauds.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Cyber Surakshith Bharat initiative was conceptualized with the mission to spread awareness about cyber-crime and build capacities of Chief Information Security Officers (CISOs) and frontline IT officials, across all government departments.

Statement 1 is correct: **The Ministry of Electronics and Information Technology (Meity) has launched the Cyber Surakshith Bharat initiative** in association with National e-Governance Division (NeGO) and industry partners.

Statement 2 is correct: Cyber Surakshith Bharat aims to ensure awareness about cybercrime and adequate safety measures for Chief Information Security Officers (CISOs) and frontline IT staff across all government departments. **Cyber Surakshith Bharat conducts training sessions for Chief Information Security Officers (CISOs) and technical officials from the Central Government, State Governments and Union Territories**, Public Sector Banks, Public Sector Units, Defence Forces, Defence PSUs and technical arms of the Air Force, Army and the Navy.

Statement 3 is incorrect: **The objective of the Cyber Surakshith Bharat programme is to educate & enable the Chief Information Security Officers (CISO) & broader IT community to address the challenges of cyber security (and not all citizens).**

- 1) Create awareness on the emerging landscape of cyber threats
- 2) Provide in-depth understanding on key activities, new initiatives, challenges and related solutions
- 3) Applicable frameworks, guidelines & policies related to the subject
- 4) Share best practices to learn from success & failures

5) Provide key inputs to take informed decision on Cyber Security related issues in their respective functional area.

Source:

<https://www.meity.gov.in/writereaddata/files/Cyber%20Surakshit%20Bharat%20Brochure.pdf>
<https://www.microsoft.com/en-in/about/cybersecurity-surakshit-bharat.aspx>

Q.6) With reference to the Poligars Rebellion (1795–1805), consider the following statements:

1. Poligars were local chiefs who provided military services in the Vijayanagar Empire.
2. The First rebellion of poligars was led by Kattabomman Nayakan.
3. The Third poligar rebellion was the against the prevalent feudal system.
4. The Poligar system was later replaced by the Zamindari system.

Which of the statements given above are correct?

- a) 1, 2 and 4 only
- b) 2 and 3 only
- c) 2 and 4 only
- d) 1, 3 and 4 only

Ans) a

Exp) Option a is the correct answer.

The poligars of Tamil Nadu, Malabar and coastal Andhra revolted against the colonial rule in the late 18th and the early 19th century.

Statement 1 is correct. Poligars were **independent local chiefs** who were descendants of the hunter-gatherers of the forests who had **acquired military skills** and local political leadership in the military service of the **Vijayanagar Empire**.

Statement 2 is correct. The first Poligar rebellion, which is also known as First Poligar War, occurred from 1795–1799 in Tirunelveli region (in modern Tamil Nadu). This first phase of poligar rebellion was led by **Kattabomman Nayak (Veerapandi Kattabomman), who was in charge of Panchalankurichi**.

Statement 3 is incorrect. The Poligar Rebellion took place in **three phases**. **The first Poligar rebellion**, also known as **First Poligar War**, was the **result of oppressive taxation system under the British**.

The Second Poligar Rebellion occurred between 1800–01 after the **poligars imprisoned in the fort** of Palayamkottai were able to escape. **The third phase** was between **1803 to 1805** where the poligars of North Arcot rose in rebellion when they were **deprived of their right to collect Kaval** fees. Whereas it was the **Palamau Uprising in 1800–02** which occurred under leadership of Bukhan Singh that was against the **agrarian landlordism and feudal system**.

Statement 4 is correct. The **poligari system** had evolved with the extension of **Vijayanagar rule** into Tamil Nadu. Each poligar was the holder of a **territory or palayam (usually consisting of a few villages)**, granted to him in return for military service and tribute. The suppression of the poligar rebellions of 1799 and 1800–1801 resulted in the liquidation of the influence of the chieftains. Under the terms of the **Carnatic Treaty (31 July, 1801)**, the British assumed direct control over Tamil Nadu. The poligari system, which had flourished for two and a half centuries, came to a violent end and the Company **introduced a Zamindari system in its place**.

SPECTRUM (CH-PEOPLE RESISTANCE AGAINST BRITISH BEFORE 1857)

Q.7) Consider the following options:

1. There was wide use of lofty pillars.
2. It was derived from ancient Rome.
3. It had extensive use of Geometrical structures.

The above features best describe which of the following architectural styles introduced by British in India?

- a) Indo-Saracenic Style
- b) Neo-Gothic style
- c) Neo-Classical style
- d) Victorian Style

Ans) c

Exp) Option c is the correct answer.

Option a is incorrect: Indo-Saracenic. “Indo” was shorthand for Hindu and “Saracen” was a term Europeans used to designate Muslim. The inspiration for this style was mediaeval buildings in India with their **domes, chhatris, jalis and arches**. By integrating Indian and European styles in public architecture the British wanted to prove that they were legitimate rulers of India.

Option b is incorrect: A neo-Gothic, characterised by high-pitched roofs, pointed arches and detailed decoration. The Gothic style had its roots in buildings, especially churches, built in northern Europe during the mediaeval period.

Option c is correct: Neo-classical or the new classical. Its characteristics included construction of **geometrical structures** fronted with **lofty pillars**. It was **derived from** a style that was originally typical of buildings in **ancient Rome**, and was subsequently revived, re-adapted and made popular during the European Renaissance. It was considered particularly appropriate for the British Empire in India.

Option d is incorrect: Victorian Style refers not to a particular style but to an era—the reign of Queen Victoria over the United Kingdom of Great Britain from 1837 to 1901. **Victorian architecture originated in England** and still largely defines the architecture of its cities and towns.

Source: 12th NCERT volume 3: Colonial cities

Q.8) In the context of 19th century India, which of the following is a characteristic of social life in cities?

- a) Ready acceptance of women working outside home.
- b) Very low gap in the incomes between rich and poor.
- c) Increase in number of educated middle class people.
- d) Rigid adherence to the traditional social customs and practices by all.

Ans) c

Exp) Option c is the correct answer.

For the Indian population, the new cities were bewildering places where life seemed always in a flux. The cities of 19th century had following characteristics:

Option a is incorrect: Cities offered new opportunities for women. But many people resented these attempts to change traditional patriarchal norms. Even reformers who supported women’s education saw women primarily as mothers and wives, and wanted them to remain within the enclosed spaces

of the household. For a long time, women who moved out of the household into public spaces remained the objects of social censure.

Option b is incorrect: For the Indian population, the **new cities** were bewildering places where life seemed always in a flux. There was a **dramatic contrast between extreme wealth and poverty.**

Option c is correct: Within the cities new social groups were formed and the old identities of people were no longer important. All classes of people were **migrating to the big cities.** There was an increasing demand for **clerks, teachers, lawyers, doctors, engineers and accountants.** As a result, the **middle classes increased.**

Option d is incorrect: As educated people, they could put forward their opinions on society and government in newspapers, journals and public meetings. **A new public sphere of debate and discussion emerged. Social customs, norms and practices came to be questioned.**

Source: 12th NCERT volume 3: Colonial cities

Q.9) With reference to Puran Chand Joshi, one of the great Indian freedom fighters, consider the following statements:

1. He was one of the early leaders of communist movement in India.
2. He helped found the Indian People's Theatre Association.
3. He was one of the suspects arrested in Kanpur Conspiracy Case.
4. He remained the general secretary of Congress Socialist Party (CSP) from 1935 to 1947.

Which of the statements given above is/are correct?

- a) 1 and 2 Only
- b) 2 and 3 Only
- c) 3 and 4 Only
- d) 1 and 4 Only

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: **Puran Chand Joshi** was one of the early leaders of **communist movement** in India along with passionate persons like S.A. Dange, Muzaffar Ahmed, Sohan Singh Joshi etc. In the period of late 1920s, the communist movement was on rise, which saw the crystallisation of various communist groups.

Statement 2 is correct: P.C. Joshi played an instrumental role in the launch of the Communist party weekly, National Front, which he edited, and helped found the Indian People's Theatre Association (I.P.T.A) in 1942.

Statement 3 is incorrect: PC Joshi was one of the suspects arrested in **Meerut Conspiracy Case** (not in Kanpur Conspiracy Case). In March 1929, the government arrested 31 communist leaders included Shaukat Usmani, Muzaffar Ahmed, S.A. Dange and S.V. Ghate who were suspects and involved in Meerut Conspiracy Case. And, P.C. Joshi was one of the 31 arrested suspects and he was at the age of 22 year during that time.

Statement 4 is incorrect: **Puran Chand Joshi** was one of the important leaders of Communist Movement. As a result, he also became the **general secretary of the undivided Communist Party (not Congress Socialist Party) Of India from 1935 to 1947.**

Q.10) Consider the following statements with reference to the Potassium Iodide (KI) tablets or Anti-Radiation pills:

1. These pills contain non-radioactive iodine.
2. These can help block absorption and concentration of radioactive iodine in the thyroid gland.
3. These pills reverse and removes all or any damage done by radiation to the thyroid gland.
4. The pills are recommended for the people under 40 years of age, including pregnant and breastfeeding women.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 2 and 4 only
- c) 1, 2 and 4 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

Potassium iodide (KI) tablets, or anti-radiation pills provide some protection in cases of radiation exposure.

Statement 1 is correct: Potassium iodide (KI) tablets or anti-radiation pills contain non-radioactive iodine. Potassium iodide (KI) is a type of iodine that is not radioactive and can be used to help block one type of radioactive material, radioactive iodine from being absorbed by the thyroid.

Statement 2 is correct: Anti-radiation pills can help block absorption, and subsequent concentration, of radioactive iodine in the thyroid gland. After a radiation leak, radioactive iodine floats through the air and then contaminates food, water and soil. According to world health organization radioactive iodine deposited during external exposure can be removed using warm water and soap.

Statement 3 is incorrect: Anti-radiation pills contains so much non-radioactive iodine; the thyroid becomes full and cannot absorb any more iodine either stable or radioactive for the next 24 hours.

But Anti-radiation pills are used as preventive measure only and cannot reverse any damage done by radiation to the thyroid gland. Once thyroid gland absorbs radioactive iodine, those exposed are at a high risk of developing thyroid cancer.

Statement 4 is correct: Anti-radiation pills do not provide 100% protection. The effectiveness of Anti-radiation pill depends on how much radioactive iodine gets into the body and how quickly it is absorbed in the body. **Also, the Anti-radiation pills are not meant for everybody. They are recommended for people under 40 years of age. Pregnant and breastfeeding women are also advised to take them.** While it can protect the thyroid against radioactive iodine, it cannot protect other organs against radiation contamination.

Q.11) The tendency for increased litigation was visible after the introduction of the land settlement system of Lord Cornwallis in 1793. The reason for this is normally traced to which of the following provisions?

- a) Making Zamindar's position stronger *Vis-a-Vis* the Ryot
- b) Making East India Company an overlord of Zamindars

- c) Making judicial system more efficient
- d) None of the (a), (b) and (c) above

Ans) d

Exp) Option d is the correct answer.

The reforms of Cornwallis had increased the litigation after the introduction of the land settlement system. **The main reason for this was the removal of Court Fee** and now everybody could drag anybody to the courts. **The extension to the right of appeal was also one of the reasons.** Lawyers were to prescribe their fees and ordinary people could sue the Indian government servants if they committed mistakes.

Source: UPSC 2011

Q.12) Which of the following were the impact of British rule on tribals in India?

1. The authority of the tribal chiefs was increased as they were allowed to make and enforce their own laws.
2. The practice of shifting cultivation by tribals was replaced by land settlements with definite land rights.
3. All the tribals were disallowed from practicing jhum cultivation in reserve forests marked by Britishers in India.
4. Tribal trade increased many times due to growing demand of silk in European markets.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 4 only
- c) 1, 2 and 3 only
- d) 2, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

Tribal population was spread all over India and most of them occupied wild tracts, hilly and forested areas, away from more civilized centres. Tribals had preserved their near isolation and way of life until the British administration and policies made inroads into their territories.

Statement 1 is incorrect: Under British rule, tribal chiefs had to pay tribute to the British, and discipline the tribal groups on behalf of the British. They **lost the authority** they had earlier enjoyed amongst their people, and were unable to fulfil their traditional functions. **They lost much of their administrative power** and were forced to follow laws made by British officials in India. Whereas, before the arrivals of British, they enjoyed a certain amount of economic power and had the right to administer and control their territories.

Statement 2 is correct: Britishers wanted tribal groups to settle down and become peasant cultivators as they were uncomfortable with shifting cultivators' groups who moved freely and did not have a fixed home. **Settled peasants were easier to control and administer** than people who were always on the move. The British also **wanted a regular revenue source** for the state. So, they introduced land settlements in which they defined the **rights of each individual** to that land, and fixed the revenue demand for the state.

Statement 3 is incorrect: British introduced the forest laws and declared that **all forests as state property**. Some forests were classified as **Reserved Forests** for they **produced timber** which the

British wanted. In these forests, **people were not allowed** to move freely, practise jhum cultivation, collect fruits, or hunt animals. But, in these lands British **allowed some jhum cultivators** cultivate on the condition that those who lived in the villages would have to **provide labour to the Forest Department** and look after the forests.

Statement 4 is correct: Silk production was one of the major jobs of tribals. The fine quality of Indian silk was highly valued and exports from India increased rapidly. Because of this the **trade of tribals was increased many times**. However, they didn't gain much profit due to middleman and traders as they buy their cocoons at very low price and sell them at very high price. Traders and moneylenders came heavily into the forests and wanted to buy more forest produce, offered cash loans.

Q.13) With reference to the Bombay Millhand's Association, consider the following statements:

1. It was the first organised trade union in India.
2. It was founded by Narain Meghajee Lokhande.
3. It demanded reduction in working hours and a weekly holiday for workers.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

In 1890, NM Lokhande established the Bombay Millhand's Association primarily to provide a clearing house for the grievances of the mill-workers and to help in drawing public attention to them. The leaders acted as voluntary advisers to mill-workers.

Statement 1 is incorrect: Bombay Millhand's Association was a **labour association** of India. This Association was **not a trade union**. The Association had no existence as an organized body, having no membership, no funds and no rules.

The first organised Trade Union in India named as the Madras Labour Union was formed in the year 1918. Since then, a large number of unions sprang up in almost all the industrial centres of the country.

Statement 2 is correct: In 1890, **Narain Meghajee Lokhande** set up the Bombay Millhand's Association. N.M. Lokhande was a skilled worker in a textile mill in Bombay and a social reformer of the Satyashodhak Samaj.

Statement 3 is correct: Bombay Millhand's Association put forward the demands of:

- 1) **reduction in working hours,**
- 2) **a weekly holiday and,**
- 3) **compensation for injuries** suffered by the workers during work at the factories.

These demands were submitted to the second Factory Commission.

Knowledge Base: The Association took over the Dinabandhu (Friend of the poor), a social reform journal, and converted it into the first labour journal in India.

Q.14) With reference to ‘Santhal rebellion’, consider the following statements:

1. The revolt began as a reaction against the revenue system of the British East India Company.
2. It began in the Deccan plateau region and spread in region of present-day Madhya Pradesh and Gujarat.
3. Jatra Bhagat and Balram Bhagat provided leadership to the Santhal rebellion.

Which of the statement given above is/are **incorrect**?

- a) 1 and 3 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

The Santhal Revolt took place in 1855-56. Santhals are a **tribal group concentrated in the state of Jharkhand**. This was the first peasant revolt that occurred in India. The revolt can be attributed to the introduction of the Permanent Land Settlement of 1793.

Statement 1 is correct: The rebellion of the Santhals **began as a reaction to end the revenue system of the British East India Company (BEIC)**, usury practices, and the zamindari system in India. When currency was introduced because of the colonial intervention, Santhals began to rely on the moneylenders. These **moneylenders exploited them**. British turned to them for the expansion of the revenue through agriculture. Santhals agreed to clear forests to practice settled agriculture, but soon exploitation started by the British.

Statement 2 is incorrect: As the Santhals were the **agricultural people settled in Rajmahal Hills of Bihar**. The Santhal rebellion spread in present-day **region of Jharkhand and West Bengal**, Eastern India against both the British East India Company.

Statement 3 is incorrect: The rebellion is mainly led by **the four Four Brothers – Sido, Kanhu, Chand and Bhairav**. In 1955, **Sidhu and Kanhu Murmu**, mobilized roughly 60,000 Santhals and declared a rebellion against the East India Company. Sidhu Murmu had accumulated about ten thousand Santhals to run a parallel government during the rebellion. But the rebellion was suppressed by 1856. Whereas, Jatra Bhagat, Balram Bhagat led Tana Bhagat Movements among the Mundas and Oraon tribes.

Q.15) Consider the following statements with reference to the Thamira Barani River:

1. It originates in the Doli Gutta Hills of the Eastern Ghats.
2. It is mentioned extensively in Sangam Era literature.
3. It originates and ends in the same state.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

The district administration of Tirunelveli in Tamil Nadu is using a ‘hyper local’ approach called TamiraSES to restore the Thamira Barani River.

Statement 1 is incorrect: Thamiraparani river originates in the Pothigai Hills of the Western Ghats (and not eastern ghats) in Tirunelveli district. It was called the Tamraparni River in the pre-classical period, a name it lent to the island of Sri Lanka. The old Tamil name of the river is Porunai. The river supports wildlife such as the Nilgiris marten, slender loris, lion-tailed macaque, white spotted bush frog, galaxy frog, Sri Lankan Atlas moth and the great hornbill.

Statement 2 is correct: The river has historical value for the people of the state of Tamil Nadu. Besides the ecosystem services it provides, it is mentioned extensively in Sangam Era literature. A study published in 2021 found that paddy and soil discovered in an urn during an archeological excavation near the river in Thoothukudi district’s Sivakalai were at least 3,200 years old.

Statement 3 is correct: The Thamiraparani river is unique in many respects. It is the only perennial river in Tamil Nadu. The river flows through Tirunelveli and then neighboring Thoothukudi and ends in the Gulf of Mannar at Punakayil. It thus originates and ends in the same state.

Source: <https://www.downtoearth.org.in/news/water/thamirabarani-govt-atree-adopt-hyper-local-approach-to-restore-one-of-south-asia-s-oldest-rivers-85134>

Q.16) With reference to ‘Tribal movements during British rule’, consider the following pairs:

Tribal movements	Reason
1. Kol rebellion	Failure of British to protect them from Kuki violence
2. Bastar revolt	Recruitment of labour for World War I
3. Munda uprisings	Exploitation by forest contractors
4. Rampa revolt	Against imposition of Madras Forest Act, 1882

Which of the given above pairs are correctly matched?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 and 4 only
- d) 2, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Tribal movements under British rule were the most frequent, militant and violent of all movements. The mainland tribal rebellions were sparked off by a number of factors, an important one **concerned with the tribal lands or forests.**

Pair 1 is incorrect: The Kol uprising was a revolt of the **Adivasi Kol people of Chhota Nagpur region**, during 1829-1839 as a reaction to British Policies. The uprising was a reaction to the appointment of a political agent to the government in South Bihar and ceded districts. This resulted in many **people moving into these areas which were the lands of numerous Adivasi tribes.** Also, with the **application of new land laws**, the Kols were **exploited by outsiders** moving into the area. Whereas,

Zeliangsong movement (1920) of Manipur happened due to failure of British in protecting them during Kuki violence. Kukis' Revolt (1917–19; Manipur) was against British policies of recruiting labour during the first World War.

Pair 2 is incorrect: The Bastar Rebellion was an Adivasi rebellion in 1910 against the British Raj led by Gunda Dhur in the princely state of Bastar in central India. The primary cause of the rebellion were **British colonial policies regarding usage of the forests**. The British colonial government had begun reserving forests, which **only allowed certain corporations to exploit forest resources**. This resulted in the **barring of tribals** from using the forests for their livelihoods, and oftentimes, the displacement of tribal villages. **Whereas, it was Kukis revolt** of 1917 of Manipur, spread out mainly against the British policies of **recruiting labour during First World War**.

Pair 3 is correct: Munda rebellion was happened in 1899–1900, in the region **south of Ranchi under Birsa Munda**. The Ulgulan was one of the most significant tribal uprisings in the period 1860–1920. The rebellion which began as a religious movement gathered **political force to fight against introduction of feudal, zamindari tenures, and exploitation by money-lenders and forest contractors**. The Mundas claimed Chhotanagpur as their area in 1879. British armed forces were then deployed. Birsa was captured and imprisoned.

Pair 4 is correct: The Rampa Rebellion of 1922, also known as the Manyam Rebellion, was a tribal uprising led by **Alluri Sitarama Raju in Godavari Agency**. In 1922, Indian revolutionary Alluri Sitaram Raju led the Rampa Rebellion against the British raj for their **imposition of the 1882 Madras Forest Act**, which severely restricted the free movement of the tribal community within their own forests.

Bastar's Bhumkaal Rebellion and its Forgotten Legacy (livehistoryindia.com)

A Brief History of Modern India by Rajiv Ahir (Spectrum)

Q.17) With reference to the Congress and the Princely States, consider the following statements:

1. Congress, during its early phase, favoured non-interference in the politics of Princely states.
2. Praja Mandals were established as the local units of Congress in the Princely states.
3. Congress vehemently opposed the participation of the people of Princely states in the Quit India Movement.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

Congress policy towards the Princely states has changed through time to time.

Statement 1 is correct: The Indian National Congress had consciously distanced itself from the princes as well as from the political mobilisation in the princely states. **This strategy of non-interference continued even with the coming of spectacular mass mobilisation in the early Gandhian phase.** There were perhaps some weighty issues that were responsible for such an approach of non-interference in the politics of princely states.

Statement 2 is incorrect: During the 1910s the urban educated subjects of the princely states formed the Praja mandals or lok parishads in some states. **Till 1939, congress did not support these praja**

mandala. Due to the impact of Non-Cooperation movement in the beginning of 1920s, praja mandals (states' people's conferences) appeared in some of the princely states. Informal relation between nationalist organisation and local praja mandals existed and paved the way for more intense mobilisation patterns in the states in subsequent phases of national movement.

Statement 3 is incorrect: The Congress at its Tripuri Session (1939) passed a resolution, removing the earlier restraint on the Congress activities in the states. Now there was greater identification between the Congress and the praja mandals. As a result of this, unlike previous movements, the impact of Quit India movement was felt more uniformly in the princely states and the British Indian territories. **This time the Congress extended the call for struggle to the people of the States. The people of the States thus formally joined the struggle for Indian independence.** In addition to their demand for responsible government people of states asked the British to quit India and demanded that the States become integral parts of the Indian nation.

Source: <https://egyankosh.ac.in/bitstream/123456789/44317/3/Unit-19.pdf>

Q.18) With reference to the Indian Factory Act of 1881, consider the following statements:

1. It completely prohibited the employment of children under 18 years of age in any industry.
2. It regulated the working hours of women labourers.
3. The law did not apply to British-owned tea and coffee plantations in India.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

The **first-ever demand** for regulation of the condition of workers in factories in India came from the **Lancashire textile capitalist lobby** in response to the emergence of a **competitive rival** in the Indian textile industry under conditions of cheap and unregulated labour.

Statement 1 is incorrect: The Indian Factory Act, 1881 classified those who aged between **7 to 12 years as children**. It primarily dealt with the problem of **child labour**. Important provisions are

- 1) **employment of children under 7 years of age was prohibited,**
- 2) **working hours restricted to 9 hours per day for children,**
- 3) children to get four holidays in a month,
- 4) hazardous machinery to be properly fenced off

Statement 2 is incorrect: The Indian factory act 1881 did not have provisions that regulated the working hours of women. Instead, the Indian Factory Act, 1891 fixed **maximum working hours for women at 11 hours per day** with a one-and-a-half-hour interval. **However, working hours for men were left unregulated.** Also, it classified those who aged between **12 to 14 years as children** and it reduced maximum working hours for children to 7 hours a day,

Statement 3 is correct: The Indian Factory Act, 1881 did not apply to British-owned tea and coffee plantations where the labour was exploited ruthlessly and treated like slaves. A breach of contract was a **criminal offence**, with a planter having the right to get the defaulting labourer arrested.

Source: Spectrum: Chapter-Survey of British plantations in India

Q.19) Which of the following were the features of Peasant Movements which occurred in British India after 1857?

1. Peasant demands were largely centred around economic issues.
2. These movements mainly targeted the British Rule, and were not against the indigenous zamindars and moneylenders.
3. The peasants became aware of their legal rights and asserted them in the courts.
4. All these movements had a very wide territorial reach.

Select the correct answer using the codes given below:

- a) 1 and 3 only
- b) 1, 3 and 4 only
- c) 1, 2 and 4 only
- d) 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

Peasant revolts have been a characteristic feature of the agrarian Indian society. Peasant rebellions after 1857 were starkly characterized by different features than the pre-mutiny peasant revolts. The main characteristics of the peasant revolt were as follows:

Statement 1 is correct: Peasants emerged as the **main force in agrarian movements**, fighting directly for their own demands. The demands were centred almost wholly on **economic issues**.

Statement 2 is incorrect: The movements were directed against the immediate enemies of the peasant–foreign planters and indigenous zamindars and moneylenders. **Colonialism was not the target of these movements.**

Statement 3 is correct: The peasants tried to educate themselves legally and took high course to legal measures. They believed in the legal route to curb the zamindars and tenants' oppressive measures. The peasants developed a **strong awareness of their legal rights and asserted them in and outside the courts.**

Statement 4 is incorrect: The peasant revolts were localized and did not leave any successors. Territorial reach was limited. There was **no continuity of struggle or long-term organisation.** The struggles were directed towards specific and limited objectives and redressal of particular grievances. Source: A Brief History of Modern India by Rajiv Ahir (Spectrum)

Q.20) With reference to Forest Rights Act, 2006, which of the following is/are the Forest rights recognised under the act?

1. Right to ownership to land farmed by tribals.
2. Right to extracting Minor Forest Produce.
3. Right to rehabilitation in case of illegal eviction.
4. Right to manage any community forest resource.

Select the correct answer using the code given below:

- a) 1 and 3 only
- b) 2 and 4s only
- c) 1, 2 and 4 only
- d) 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct answer.

The Forest Rights Act (FRA), 2006 recognizes the rights of the forest dwelling tribal communities and other traditional forest dwellers to forest resources, on which these communities were dependent for a variety of needs, including livelihood, habitation and other socio-cultural needs.

The act recognizes and vest the forest rights and occupation in Forest land in forest Dwelling Scheduled Tribes (FDST) and Other Traditional Forest Dwellers (OTFD) who have been residing in such forests for generations.

The act identifies four types of rights:

- 1) **Title rights:** It gives FDST and OTFD the **right to ownership to land farmed by tribals or forest dwellers** subject to a maximum of 4 hectares. Ownership is only for land that is actually being cultivated by the concerned family and no new lands will be granted. **(Hence, option 1 is correct)**
- 2) **Use rights:** The rights of the dwellers extend to **extracting Minor Forest Produce**, grazing areas, to pastoralist routes, etc. **(Hence, option 2 is correct)**
- 3) **Relief and development rights:** To rehabilitation in case of illegal eviction or forced displacement and to basic amenities, subject to restrictions for forest protection. **(Hence, option 3 is correct)**
- 4) **Forest management rights:** It includes the right to protect, regenerate or conserve or **manage any community forest resource** which they have been traditionally protecting and conserving for sustainable use. **(Hence, option 4 is correct)**

Source: <https://tribal.nic.in/fra.aspx>

Q.21) Who among the following were the founders of the "Hind Mazdoor Sabha" established in 1948?

- a) B. Krishna Pillai, E.M.S. Namboodiripad and K.C. George
- b) Jayaprakash Narayan, Deen Dayal Upadhyay and M.N. Roy
- c) C.P. Ramaswamy Iyer, K. Kamaraj and Veeresalingam Pantulu
- d) Ashok Mehta, T.S. Ramanujam and G.G. Mehta

Ans) d

Exp) Option d is the correct answer.

Till independence, there was only one central trade union organization, the All-India Trade Union Congress (AITUC) which was formed in 1920 and created lot of industrial strife. The Congress Party therefore took the initiative in forming a trade union center (INTUC). **The socialists in INTUC were dissatisfied with the functioning of INTUC and founded Hind Mazdoor Sabha (HMS) in Howrah as a National Trade Union Centre in India.** Its founders included Basawan Singh (Sinha), **Ashok Mehta**, R.S. Ruikar, Mani Benkara, Shibnath Banerjee, **T.S. Ramanujam**, VS. Mathur, **G.G. Mehta**. Mr. R.S. Ruikar was elected president and Ashok Mehta as its General Secretary. It acted as a balancing force between the INTUC and AITUC.

Q.22) With reference to 'Eka Movement', consider the following statements:

1. It was a peasant movement that erupted in regions of the United Provinces.
2. The movement was originated as an offshoot of Civil Disobedience Movement.
3. One of the objectives of the movement was the refusal to do forced labour.
4. Madari Pasi was one of the leaders of the Eka Movement.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1, 3 and 4 only
- c) 3 and 4 only
- d) 1, 2, 3 and 4

Ans) b

Exp) Option b is the correct answer.

Eka Movement or Unity Movement is a peasant movement which surfaced in Hardoi, Bahraich and Sitapur during the end of 1921.

Statement 1 is correct: The Eka Movement is a peasant movement that started in Lucknow, and soon spread to **Hardoi, Unnao, and Sitapur districts (northern districts regions of the United Provinces)** and became a strong force. The movement erupted in November 1921 to last till April 1922.

Statement 2 is incorrect: The end of the **Non-cooperation movement (not CDM)** in 1922, marked the beginning of a new peasant movement in Awadh which is known as the Eka movement. Initially, the movement was supported by Indian National Congress and Khilafat leadership.

Statement 3 is correct: The meetings of the Eka or the Unity Movement involved a symbolic religious ritual in which the assembled peasants vowed that they would:

- **pay only the recorded rent but would pay it on time;**
- not leave when evicted;
- **refuse to do forced labour;**
- give no help to criminals; and
- abide by panchayat decisions.

Statement 4 is correct: The grassroots leadership of the Eka Movement came from **Madari Pasi** and other **leaders**, and many small zamindars. The leadership of Movement changed from Congress to Madari Pasi, who was not inclined to accept non-**violence**. This led the movement **losing contact with nationalist class**.

Q.23) With reference to the working-class movements in India, consider the following statements:

1. The Moderates generally did not support the Factory Acts of 1881 and 1891.
2. The Congress supported the formation of the All-India Trade Union Congress.
3. Dadabhai Naoroji started a newspaper 'Bharat Shramjeevi' for expressing the demands of the working class.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is correct. The early nationalists, especially the **Moderates**, believed that labour legislations would **affect the competitive edge** enjoyed by the Indian-owned industries, so they **did not support** the Factory Acts of 1881 and 1891.

Statement 2 is correct. The All-India Trade Union Congress was founded on October 31, 1920. The **Indian National Congress president for the year, Lala Lajpat Rai, was elected as the first president of AITUC** and Dewan Chaman Lal as the first general secretary. The prominent Congress and swarajist leader C.R. Das presided over the third and the fourth sessions of the AITUC.

The **Gaya session of the Congress (1922) welcomed the formation of the AITUC** and a committee was formed to assist it.

Statement 3 is incorrect. **Sasipada Banerji** (and not Dadabhai Naoroji) started a workingmen's club and newspaper **Bharat Shramjeevi** for voicing the demands of the working class.

Source: A Brief History of Modern India by Rajiv Ahir - The Movement of the Working Class

Q.24) In context of 'Peasant activity in provinces during first half of 20th Century in India', which of the statements given below are correct?

1. In the Malabar region, the most popular way of meeting peasant's demand was to appeal through Judicial courts.
2. Andhra Kisan Sabha was setup as provincial ryot association for anti-Zamindari movement.
3. The Provincial Kisan Sabha of Bihar dissented with the Congress over the 'Bakasht land' issue.
4. The peasants of Punjab went on strike on the issue of resettlement of land revenue and increase of water rates.

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 2 and 4 only
- c) 3 and 4 only
- d) 2, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: In the Malabar region, the peasants were mobilised mainly by the Congress Socialist Party activists. The most **popular method was the marching of jaths or peasant** groups to the landlords to get their demands accepted. One significant campaign by the peasants was in 1938 for the **amendment of the Malabar Tenancy Act, 1929** through marching.

Statement 2 is incorrect: In Andhra region, there was decline in the prestige of zamindars after their defeat by Congressmen in elections. Many provincial ryot associations were active. Hence, **Indian peasant institute** (not Andhra Provincial Sabha) **was setup by N.G. Ranga**, in 1933. After 1936, the Congress socialists started organising the peasants. At many places, the summer schools of economics and politics were held and addressed by leaders like P.C. Joshi, Ajoy Ghosh and R.D. Bhardwaj.

Statement 3 is correct: In 1935, the Provincial Kisan Conference adopted the anti-zamindari slogan. The **Provincial Kisan Sabha developed a rift with the Congress over the 'bakasht land' issue because of an unfavourable government resolution** which was not acceptable to the sabha. Sahjanand Saraswati was joined by Karyanand Sharma, Yadunandan Sharma, Rahul Sankritayan, Panchanan Sharma, Jamun Karjiti, etc. The movement died out by August 1939.

Statement 4 is correct: The peasant activity of Punjab taken **over the issue of resettlement of land revenue in Amritsar and Lahore and increase in water rates** in canal colonies of Multan and Montgomery, Here the peasants went on a strike and were finally able to win concessions. But, the **peasant activity in Punjab was mainly concentrated** in Jullundur, Amritsar, Hoshiarpur, Lyallpur and

Shekhupura. The Muslim tenants of **west Punjab** and the Hindu peasants of **south-eastern Punjab (today's Haryana) remained largely unaffected.**

Q.25) The WEST Initiative was recently launched in which of the following context?

- To increase English proficiency among the school going children.
- To attract tourism from the European nations to India.
- To strengthen India's strategic relations with the West Asian nations on the lines of Act East Policy.
- To facilitate scientifically inclined women researchers for pursuing research in basic or applied sciences.

Ans) d

Exp) Option d is the correct answer.

Women in Engineering, Science, and Technology (WEST), a new I-STEM (Indian Science Technology and Engineering facilities Map) initiative called “Women in Engineering, Science, and Technology (WEST)” has been launched by Government of India in September 2022.

The WEST programme will cater to women with a STEM background and empower them to contribute to the science, technology, and innovation ecosystem.

Through the WEST initiative, I-STEM shall provide a separate platform to scientifically inclined women researchers, scientists, and technologists **for pursuing research in basic or applied sciences in frontier areas of science and engineering. (Hence, Option d is correct)**

I-STEM is a national web portal for sharing research equipment/facilities and is the umbrella under which many programmes for promoting collaborations in R&D and technological innovation among and between academia and industry, especially start-ups, are underway.

Q.26) With reference to Kuka Movement, consider the following statements:

- The Movement was started by Bhagat Jawaharmal.
- The movement emphasized on discouraging the caste system.
- The movement propagated the concept of swadeshi and non-cooperation much before they became part of the Indian national movement.

Which of the statements given above is/are correct?

- 1 and 2 only
- 1 and 3 only
- 2 and 3 only
- 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

The Namdhari Movement, is popularly known as Kuka movement was founded in 1840 in western Punjab.

Statement 1 is correct. The Kuka Movement was founded by **Bhagat Jawaharmal** also known as Sian Sahab who was later followed Baba Ram Singh who established Namdhari Sikh sect.

Statement 2 is correct. The followers of Bhagat Jawaharmal and Baba Ram Singh emphasized on the **worship of one God** through prayer and meditation. They preached against social evils such as the **caste system**, infanticide, early marriage and barter of daughters in marriage and popularized simple and inexpensive Anand Marriage. They also emphasized on **discouraging the consumption of meat and alcohol** and drugs, permission for intermarriages, widow remarriage, and encouraging women to step out of seclusion.

Statement 3 is correct. On the political side, the Kukas wanted to remove the British and restore Sikh rule over Punjab. For this they advocated wearing hand-woven clothes and boycotting English laws and education and products. So, the concept of **Swadeshi and Non-Cooperation** were propagated by the Kukas much **before they became part of the Indian national movement** in the early twentieth century.

SPECTRUM (CH-PEOPLE RESISTANCE AGAINST BRITISH BEFORE 1857)

Q.27) With reference to Ahom Revolt of 1828, consider the following statements:

1. The revolt took place after the Treaty of Yandaboo, 1826.
2. It was led by Gomdhar Konwar and Dhanjay Borgohain.
3. The revolt occurred due to extortionist land revenue policy of Britishers.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1 and 3 only

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct. The Ahom Revolt took place after **the Treaty of Yandaboo, 1826**, with increased suspicions and dissatisfactions among the Ahoms since the British had promised to leave Assam after the end of the **Anglo-Burmese War (1824-26)** but rather tried to incorporate the Ahom territories in the Company's dominion.

Statement 2 is correct. The Ahom revolt was led by an Ahom Prince **Gomadhar Konwar** along with the support of **Dhanjay Borgohain and Jairam Khargharia Phukan**. Under his leadership, the rebels started advancing toward the British stronghold in Rangpur. However, the British learned about the plans of Ahom rebels and caught them off guard at Mariani.

Statement 3 is incorrect. The Ahom revolt was the result of **annexation of Ahom territories** under the British Empire in 1828. It was the **Paika Rebellion that occurred in 1817** due to extortionist land revenue policy of the company that caused resentment among zamindars and peasants of Orissa.

SPECTRUM (CH-PEOPLE RESISTANCE AGAINST BRITISH BEFORE 1857)

Q.28) Which of the following can be considered as a consequence of the arrival of European traders especially British in India?

- a) Rapid increase in the share of Urban population in India.
- b) Rapid economic growth of some port cities.
- c) Rapid increase in the number of towns located along the rivers.
- d) Rapid modernisation of traditional Industries.

Ans) b

Exp) Option b is the correct answer.

Option a is incorrect: After 1800, **urbanisation** in India was sluggish. All through the nineteenth century up to the first two decades of the twentieth, the proportion of the urban population to the total population in India was extremely low and had **remained stagnant**.

Option b is correct: **Commercial centres such as Surat, Masulipatnam and Dhaka** declined when trade shifted to other places. As the British gradually acquired political control after the Battle of Plassey in 1757, and the trade of the English East India Company expanded, **colonial port cities such as Madras, Calcutta and Bombay rapidly emerged as the new economic capitals**.

Option c is incorrect: **The introduction of railways in 1853** gradually shifted economic activity away from traditional towns which were located along **old routes and rivers**. Every railway station became a collection depot for raw materials and a distribution point for imported goods. For instance, **Mirzapur on the Ganges**, which specialised in collecting cotton and cotton goods from the Deccan, **declined** when a railway link was made to Bombay. **Railway towns like Jamalpur, Waltair and Bareilly developed**.

Option d is incorrect: **India never became a modern industrialised country, since discriminatory colonial policies** limited the levels of industrial development in India. There were **only two proper industrial cities - Kanpur**, specialising in **leather**, woollen and cotton textiles, and **Jamshedpur, specialising in steel**.

Source: 12th NCERT volume 3: Colonial cities

Q.29) With reference to Lord Macaulay, consider the following statements:

1. He headed the Law Commission for codification of Indian laws.
2. His education policy attempted to educate Indian masses in western sciences through vernacular.
3. He was India's first law member of the Governor General in Council.
4. The concept of a merit based modern Civil Service in India was introduced due to his efforts.

Which of the statements given above are correct?

- a) 1, 3 and 4 only
- b) 1 and 3 only
- c) 1, 2 and 4 only
- d) 2, 3 and 4 only

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct. Lord Macaulay headed the Law Commission set up in 1833 for codification of Indian laws. As a result, a Civil Procedure Code (1859), an Indian Penal Code (1860) and a Criminal Procedure Code (1861) were prepared.

Statement 2 is incorrect. The Lord Macaulay's Minute (1835) was an attempt to create a system of education that educates only the upper strata of society through English (and not Indian masses). In his minute, Macaulay recommended that the limited government resources were to be **devoted to teaching of Western sciences** and literature through the **medium of English language alone**. Lord Macaulay held the view that Indian learning was inferior to European learning. The government soon made English as the medium of instruction in its schools and colleges. It opened a few English schools and colleges instead of a large number of elementary schools, thus **neglecting mass education**.

Statement 3 is correct. The passing of Charter Act of 1833, was led by **appointment of Lord Macaulay as India's First Law member** of the Governor General in Council. He served from 1834 to 1838.

Statement 4 is correct. Following Lord Macaulay's Report of the Select Committee of British Parliament, the concept of a **merit based modern Civil Service in India was introduced** in 1854. The Report recommended that patronage based system of East India Company should be replaced by a permanent Civil Service based on a merit based system with entry through competitive examinations. For this purpose, a Civil Service Commission was setup in 1854 in London and competitive examinations were started in 1855. Initially, the examinations for Indian Civil Service were conducted only in London. Maximum age was 23 years and minimum age was 18 years.

Q.30) With reference to Merchant Discount Rate (MDR), consider the following statements:

1. It is a fee charged from a merchant by a bank for accepting payments from customers through credit and debit cards.
2. It is not applicable to any transactions that are made to the Government of India.
3. It is not applicable on RuPay debit cards and Unified Payments Interface (UPI) systems.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

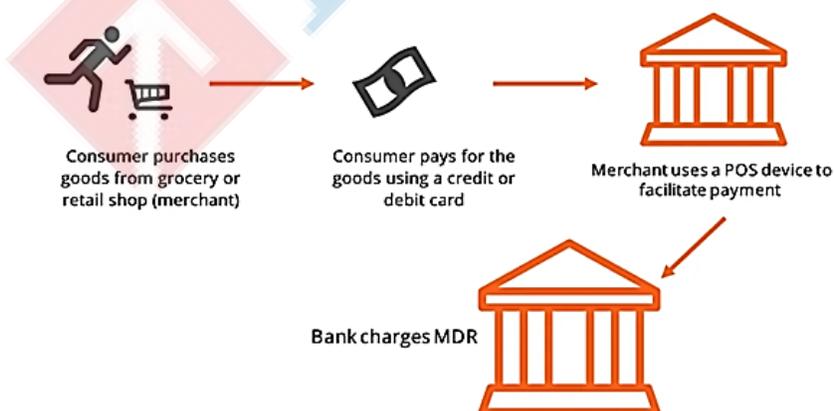

Ans) c

Exp) Option c is the correct answer.

Recently, RBI has directed that no Merchant Discount Rate (MDR) charges will apply for RuPay credit card use on Unified Payments Interface (UPI) for transactions up to ₹2,000 which was before restrained to debit cards and UPI payments only.

Merchant Discount Rate also referred to as the Transaction Discount Rate or TDR.

Statement 1 is correct. The **Merchant Discount Rate, or MDR**, is the rate charged to a merchant for the payment processing of **debit and credit card transactions**. The rates are dependent on the level of business transactions being processed, the types of cards (debit or credit) used by customers, and the value of the average transaction.

Statement 2 is incorrect. The Government of India (GoI) absorbs the Merchant Discount Rate (MDR) charges in respect of **debit card transactions** while making payments to Government of India. The Reserve Bank of India (RBI) will reimburse banks the MDR on debit cards used for payment of **tax and non-tax dues** to the Government of India. It doesn't cover payments made by credit cards, net banking or any other means.

Statement 3 is correct. The Reserve Bank of India attracts **zero Merchant Discount Rate on Unified Payments Interface (UPI) systems and RuPay debit card transactions** to encourage further adoption of digital payments and promotion of payment platforms that are economical and user-friendly.

Q.31) Indigo cultivation in India declined by the beginning of the 20th century because of:

- peasant resistance to the oppressive conduct of planters
- its unprofitability in the world market because of new inventions
- national leaders' opposition to the cultivation of indigo
- Government control over the planters

Ans) b

Exp) Option b is the correct answer.

Indigo (Neel) is a blue dye which comes from the Indigo plant. It was widely grown in India firstly for the East India Company and later for the British Raj. In the nineteenth century, it was one of the most profitable commodities traded in the European market often called "Blue Gold".

There was a significant increase in the Indigo production in the 18th and 19th century in Bengal and Bihar due to increasing demand and production. Though the revolts of farmers and oppressive zamindari system had some negative impact on indigo farming, **a major reason for its falling cultivation was the invention of Synthetic indigo, which made natural indigo non-profitable for farmers as well as traders.**

Source) UPSC 2020

Q.32) With reference to 'Warli Rebellion', consider the following statements:

- The reason of revolt was poor labour wages offered by the landlords to the tribal workers.
- Both men and women played an important role in the revolt against the Landlords.
- The rebellion was spread across Jharkhand, Bihar and in the coastal regions of West Bengal.

Which of the statements given above is/are correct?

- 1 only
- 1 and 2 only
- 3 only
- 2 and 3 only

Ans) b

Exp) Option b is the correct answer.

The **Warli or Varli is an indigenous tribe** (Adivasi Bhil) of western India, living in mountainous as well as coastal areas along the **Maharashtra-Gujarat border**. They are small-scale cultivators and cultivate rice, pulses and vegetables. They are nature worshippers.

Statement 1 is correct: The Warli rebellion started in Zari village in 1945 of Talasari taluka of Maharashtra. They were affected **from the exploitation from the landlords and money-lenders**, nearly 5,000 indentured tribals **gathered and refused to work** on landlords' fields **until they received 12 annas a day in wages**. Their resistance sowed the first seeds of rights-based movements among the region's indigenous communities.

Statement 2 is correct: Women played an important role in the revolt and helped the men in all possible aspects. The involvement of the women was supported by the Kisan Sabha leader, Godavari Parulekar, also known as Godutai (elder sister) by the Adivasis. Women followed her and spoke at meetings about the oppression they faced and encouraged other women to join the struggle.

Statement 3 is incorrect: Warli rebellion were spread across the regions of **Thane, Nashik and Dhule districts of Maharashtra, Valsad district of Gujarat, Karnataka, Goa** and also the region of the Union Territories of Dadra & Nagar Haveli and Daman & Diu. It was not spread in the region of Bengal and Bihar.

Chap 1-4.pmd (ncert.nic.in)

Q.33) With reference to the workers participation during the freedom struggle movement, consider the following statements:

1. A Railwaymen's Union was formed during the Swadeshi movement in 1906.
2. The large-scale participation of labourers in the Non-Cooperation movement gave impetus to the formation of the All-India Trade Union Congress.
3. Workers did not participate in post-World War national upsurge of 1945 to 1947.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

The presence of colonialism in India gave a distinctive touch to the Indian working-class movement. The Indian working class had to face two basic antagonistic forces—an imperialist political rule and economic exploitation at the hands of both foreign and native capitalist classes. Under the circumstances, inevitably, the Indian working-class movement became intertwined with the political struggle for national emancipation.

Statement 1 is correct: During the **Swadeshi movement**, many strikes were organised on the issue of rising prices and racial insult, primarily in the foreign owned companies. In July 1906, a strike of workers in the East Indian Railway, resulted in the **formation of a Railwaymen's Union**.

Statement 2 is correct: The following reasons were responsible for the **formation of the All-India Trade Union Congress**:

- (a) The heightened political activities during the Non-Cooperation movement resulted in formation of several unions in many centres. By 1920, according to an estimate there were 125 unions consisting of 250,000 members.
- (b) Many people connected with labour were realising that there was a need for a central organisation of labour to coordinate the works of the trade unions all over India.
- (c) The formation of the International Labour Organisation acted as a catalyst for it. It was felt that there should be a national organisation of the trade unions whose nominees could be chosen to represent the Indian labour in the ILO.
- (d) Formation of the Comintern and establishment of a socialist republic in the Soviet Union gave impetus to the feelings of the workers movement.

All these developments led to the establishment of the AITUC in 1920, with Lala Lajpat Rai, the Congress President of that year, as its first president and Dewan Chaman Lall as its first general secretary.

Statement 3 is incorrect: In the period 1945 to 1947, workers participated actively in the post-War national upsurges. In 1945, the dock workers of Bombay and Calcutta refused to load ships taking supplies to the warring troops in Indonesia. During 1946, the workers went on a strike in support of the Naval Ratings. During the last year of foreign rule, there were strikes by workers of posts, railways and many other establishments.

Knowledge Base: During Swadeshi Movement, strikes were organised by Ashwini Coomar Banerjea, Prabhat Kumar Roy Chaudhuri, Premtosh Bose and Apurba Kumar Ghosh. In Rawalpindi (Punjab), the arsenal and railway workers went on strike led by Lala Lajpat Rai and Ajit Singh. Subramania Siva and Chidambaram Pillai led strikes in Tuticorin and Tirunelveli in a foreign-owned cotton mill.

Q.34) With reference to the Trade Union Act, 1926, consider the following statements:

1. It provided for the registration of the trade unions.
2. It specified sixteen years as the minimum age for being the member of a trade union.
3. It secured legal immunity for trade unions from prosecution for legitimate activities.
4. It provided that the trade unions cannot spend money on any political work including the holding of political meetings.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 4 only
- d) 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

Trade Union ACT 1926 IS an Act to provide for the registration of Trade Unions and in certain respects to define the law relating to registered Trade Unions

Statement 1 is correct: The **Trade Union Act, 1926 recognised trade unions as legal associations.**

Thus, it laid down conditions for registration and regulation of trade union activities.

Statement 2 is incorrect: The **Trade Union Act, 1926** specified that any person who has attained the **age of fifteen years** may be a **member of a registered Trade Union** and enjoy all the rights of a member.

Statement 3 is correct: The **Trade Union Act, 1926** secured **immunity, both civil and criminal, for trade unions** from prosecution for legitimate activities.

Statement 4 is incorrect: The **Trade Union Act, 1926 provided that a** registered Trade Union may **constitute a separate fund** from which payments may be made, **for the promotion of the civic and political interests of its members.** The fund received the money from contributions separately levied for or made to that fund. This fund may make the payment of any expenses incurred by a candidate or prospective candidate for election as a member of any legislative body or **holding of political meetings** of any kind, or the distribution of political literature or political documents of any kind.

<https://www.ilo.org/dyn/natlex/docs/WEBTEXT/32075/64876/E26IND01.htm>

Q.35) Which of the following is correct regarding the ‘Triple Test Formula’?

- It is a criterion laid down by the Supreme Court to identify backward communities that are eligible for political reservation.
- It is a criterion that decides which offences are punishable with the death penalty, imprisonment for life and imprisonment exceeding two years.
- It is a criterion used while considering whether more than five Justices should sit in a panel when dealing with a case of high constitutional importance.
- It is a criterion used by Justice of Supreme Courts to decide if they will take the case of lower courts for review.

Ans) a

Exp) Option a is the correct answer.

Recently, the Supreme Court of India allowed local body elections in Madhya Pradesh with reservation for OBCs based on a second report filed by the state backward classes commission after modifying its previous order, in which it had directed that the elections should be notified without a quota for OBCs because the state had not completed the “triple test”.

Option a is correct. The **‘triple test formula’** is a criterion laid down by the **Supreme Court** to decide **backward quota (reservation) in politics.** This may result in the identification of a new set of backward communities eligible for political quotas, different from those availing the Mandal quotas for education and employment.

Option b is incorrect. **Warrant case** includes offence punishable with the death penalty, imprisonment for life and imprisonment exceeding two years. A **trial in a warrant case** begins either by filing an FIR in a Police Station or by filing it before a Magistrate.

Option c is incorrect. **Panel number criteria** is used in the **Supreme Court of UK** while considering whether more than five Justices should sit on a panel dealing with any of these cases-

- If the Court is being asked to depart, or may decide to depart from a previous decision
- A case of high constitutional importance**
- A case of great public importance
- A case where a conflict between decisions in the House of Lords, JCPC and/or the Supreme Court must be reconciled

5) A case raising an important point in relation to the European Convention on Human Rights.

Option d is incorrect. The **Justices of the US Supreme Court** use the "**Rule of Four**" to decide if they will take the case from lower courts or not. If four of the nine Justices feel the case has value, they will issue a **writ of certiorari**. This is a legal order from the high court for the lower court to send the records of the case to them for review.

Q.36) With reference to the working-class movement during the British rule in India, consider the following statements:

1. During the Second World War, a faction led by N.M. Joshi broke away from the All-India Trade Union Congress to set up the All-India Trade Union Federation.

2. Initially, the Indian working class supported the British war efforts during second World War.

Which of the statements given above is/are correct?

a) 1 only

b) 2 only

c) Both 1 and 2

d) Neither 1 nor 2

Ans) d

Exp) Option d is the correct answer.

The modern working class arose in India in the nineteenth century. This development was due to the establishment of modern factories, railways, dockyards and construction activities relating to roads and buildings. It was a modern working class in the sense of relatively modern organisation of labour and a relatively free market for labour

Statement 1 is incorrect: In 1931, the corporatist trend led by N.M. Joshi broke away from the All-India Trade Union Congress to set up the All-India Trade Union Federation. In 1935, the communists re-joined the AITUC. Now, the left front consisted of the communists, Congress socialists and the leftist nationalists like Nehru and Subhas.

Statement 2 is incorrect: During the Second World War, **initially the workers opposed the War.**

But after 1941 when Russia joined the war on behalf of the Allies, the communists described the war as a "peoples' war" and supported it. The **communists dissociated themselves from the Quit India Movement**. A policy of industrial peace was advocated by the communists.

Knowledge Base: In the period 1945 to 1947, workers participated actively in the post-War national upsurges. In 1945, the dock workers of Bombay and Calcutta refused to load ships taking supplies to the warring troops in Indonesia. During 1946, the workers went on a strike in support of the Naval Ratings.

During the last year of foreign rule, there were strikes by workers of posts, railways and many other establishments.

Source: A Brief History of Modern India by Rajiv Ahir – 2019 Edition – Chapter 32 – The Movement of the Working Class – P 586.

Q.37) He was a social worker and leader of the Brahma Samaj. He was one of the earliest workers for labour welfare in India and started the workingmen's club. He was the editor of the newspaper Bharat Shramjeevi.

Who among the following is described in the above passage?

- a) Sasipada Banerjee
- b) M N Roy
- c) Sorabjee Shapoorji Bengalee
- d) Narain Meghajee Lokhanday

Ans) a

Exp) Option a is the correct answer.

Option a is correct: Sasipada Banerjee (02 February, 1840– 15 December, 1924) was a social worker and leader of the **Brahmo Samaj**, He was a champion of women's rights and education and as one of the earliest workers for **labour welfare in India**. He was the founder of several girls' schools, a widow's home, temperance societies and a workers' organization.

He was the editor of the **journal Bharat Sramajivi**. The Bharat Sramajivi was one of the first Indian journal of the working class and its circulation peaked at 15,000 copies a remarkable number for its time. He started a **workingmen's club** in 1870 that has been described as the first labour organisation in Kolkata.

Option b is incorrect: Manabendra Nath Roy founded the Communist Party of India in 1925 at Tashkent now in Uzbekistan. He undertook a journey to Moscow to attend the second congress of Comintern (Communist International). He was sentenced to six years imprisonment in 1931 for his involvement in the 1924 Kanpur Bolshevik Conspiracy case. In 1936, Roy joined the Indian National Congress. He tried to radicalize the congress from within towards the socialist goals. He left the party later in 1940 as a result of Congress' reluctance to aid the British in World War II.

Option c is incorrect: In 1878, Sorabjee Shapoorji Bengalee tried to get a bill, providing better working conditions to labour, passed in the Bombay Legislative Council. He was the joint Honorary Secretary to the Parsi Law Association from 1855, which obtained certain legislative measures for the Parsis. He became a Member of the Bombay Corporation, and, in 1876, a Member of the Bombay Legislative Council. As a member of the Factory Commissions of 1884 and 1890, he argued for a weekly holiday and for reduced working hours. Through his newspaper Rast Goftar, he publicised the abject working conditions of mill workers.

Option d is incorrect: Narayan Meghaji Lokhande (1848–1897) was the father of trade union movement in India. He started the newspaper Deenbandhu and set up the Bombay Mill and Millhand's Association. Apart from this he was also awarded the title of Rao Bahadur in 1895 for his work during riots between Hindus and Muslims. "Justice of peace" was awarded with great respect to him by the then British Indian Government.

Q.38) With reference to the policy of British government towards Princely states in India, consider the following pairs:

Policy	Features
1. Policy of Subordinate Isolation	It abandoned the policy of annexation and now the focus was on punishing or toppling a state.
2. Policy of Ring of Fence	It ensured that the native Indian ruler's defence would be reliant on the East India Company.
3. Policy of Subordinate Union	Its aim was to seek the assistance of Princely States in reducing the influence of the National Movement

How many of the pairs given above are matched correctly?

- Only One pair
- Only Two pairs
- All the Three pairs
- None

Ans) a

Exp) Option a is the correct answer.

The making of Indian states was largely governed by the same circumstances which led to the growth of East India Company's power in India. The evolution of relations between the British authority and states can be traced under various policies adopted by British like Policy of Ring fence, policy of subordinate union etc.

Pair 1 is incorrect: Under the **Policy of Subordinate Union** (1857-1935), the **policy of annexation was abandoned** due to the states' loyalty during the 1857 revolt and their potential use as breakwaters in future political storms. The **new policy was to punish or depose rather than annex**.

Under the **Policy of Subordinate Isolation** (1813-1857), the imperial concept grew, and the theory of paramountcy began to emerge. Now the **Indian states were supposed to work in subordinate cooperation with the British government while starting to acknowledge its supremacy**.

Pair 2 is correct: Under the **Policy of Ring of Fence** (1765-1813), the **East India Company would send troops to bolster the defences of its allies**, with the cost of their upkeep borne by the rulers of such a state. In this way, the **native Indian ruler's defence would be reliant on the East India Company**.

Pair 3 is incorrect: Under the **Policy of Equal Federation** (1935-1947), an all-India federation was proposed by the Government of India Act of 1935. The aim behind the equal Federation policy toward Indian states was to enlist the **assistance of Princely States in reducing the power of the National Movement**.

Q.39) With reference to the Lord Curzon's approach towards the Princely states during the British rule in India, consider the following statements:

1. He considered the relation between princely states and British India government to be federal.
2. He followed the policy of the 'intrusive surveillance' to keep the Indian rulers in check.
3. He appointed Butler committee for developing cordial relations with the princely states.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) 1 and 3 only
- d) 2 and 3 only

Ans) b

Exp) Option b is the correct answer.

Lord Curzon was a British Conservative statesman who served as Viceroy of India from 1899 to 1905.

Statement 1 is incorrect: Curzon thought the relations between the states and government were **neither feudal nor federal**. But a type not based on a treaty but consisting of a series of relationships having grown under different historical conditions that, in the course of time, gradually conformed to a single line. The new trend seemed to reduce all states to a single type—uniformly dependent on the British government and considered as an integral part of Indian political system.

Statement 2 is correct: Curzon adopted a **policy of patronage and 'intrusive surveillance'**. He thought the relations between the states and government were neither feudal nor federal, but a type not based on a treaty but consisting of a series of relationships having grown under different historical conditions that, in the course of time, gradually conformed to a single line.

Statement 3 is incorrect: The Butler Committee (1927) was set up by **Lord Irwin** to examine the nature of relationship between the princely states and government.

Knowledge Base:

Curzon stretched the interpretation of old treaties to mean that the princes, in their capacity as servants of people, were supposed to work side-by-side with the governor-general in the scheme of Indian government. The new trend seemed to reduce all states to a single type - uniformly dependent on the British government and considered as an integral part of Indian political system.

Q.40) Which of the following are the countries bordering Iraq?

1. Turkey
2. Kuwait
3. Lebanon
4. Jordan
5. Syria

Select the correct answer using the code given below.

- a) 1, 2, 3 and 5 only
- b) 1, 3 and 4 only
- c) 1, 2, 4 and 5 only
- d) 2, 3, 4 and 5 only

Ans) c

Exp) Option c is the correct answer.

Recently, a power struggle in Iraq between the influential Shiite cleric Moqtada Sadr and Iran-backed Shiite rivals.

Iraq is bordered to the north by **Turkey**, to the east by **Iran**, to the west by **Syria and Jordan**, and to the south by **Saudi Arabia and Kuwait**.

Q.41) Which of the following is/are the principal feature(s) of the Government of India Act, 1919?

1. Introduction of dyarchy in the executive government of the provinces
2. Introduction of separate communal electorates for Muslims
3. Devolution of legislative authority by the centre to the provinces

Select the correct answer using the codes given below:

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

The reforms suggested by Government of India Act, 1919 are known as Montagu-Chelmsford reforms or Montford reforms.

Statement 1 is correct. The Act divided the **provincial subjects into two parts-transferred and reserved**. The transferred subjects were to be administered by the Governor with the aid of Ministers responsible to the legislative council. The reserved subjects, on the other hand, were to be administered by the Governor and his executive council without being responsible to the legislative council. This dual scheme of governance was known as 'dyarchy'-a term derived from the Greek word di-arche which means double rule. However, this experiment was largely unsuccessful.

Statement 2 is incorrect. The Indian Councils Act of 1909 also known as Morley-Minto reforms introduced a system of communal representation for Muslims by accepting the concept of separate electorates.

Statement 3 is correct. The government of India Act 1919 gave the provinces more legislative powers provided for the framing of rules for the devolution of authority between the Centre and the Provinces.

Source: UPSC 2012

Q.42) With reference to the Narendra mandal, consider the following statements:

1. It was set up on the recommendations of the Montford Committee.
2. It was set up as a consultative body to help the Princely states to voice their needs to the British government.
3. It had the powers to discuss matters concerning internal affairs of an individual state.
4. Its members included representatives from all the princely states of erstwhile India under British rule.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 4 only
- d) 3 and 4 only

Ans) a

Exp) Option a is the correct answer.

The Chamber of Princes is also known as the Narendra Mandal.

Statement 1 is correct: The **Chamber of Princes (Narendra Mandal)** was set up as a consultative and advisory body on the **recommendations of the Montford Reforms**.

Statement 2 is correct: **Narendra Mandal** was an institution established in 1920 by a royal proclamation of King-Emperor George V to provide a **forum in which the rulers of the princely states of India could voice their needs and aspirations to the colonial government of British India**. It survived until the end of the British Raj in 1947.

Statement 3 is incorrect: **Narendra Mandal had no say in the internal affairs of individual states** and having no powers to discuss matters concerning existing rights and freedoms.

Statement 4 is incorrect: **Narendra Mandal was represented by 120 princes** out of 565 in all. For the purpose of the chamber the Indian states were divided into three categories -

- 1) Directly represented
- 2) Represented through representatives

3) Recognised as feudal holdings or jagirs.

Knowledge Base:

The full Chamber elected from its princely ranks a permanent officer styled the Chancellor, who chaired the Standing Committee.

In all its years of existence, only the rulers of Bikaner, Patiala, Nawanagar and Bhopal were chosen as chancellors of the Chamber of Princes.

The Chamber of Princes usually met only once a year, with the Viceroy of India presiding, but it appointed a Standing Committee which met more often.

The chamber convened at the Parliament House. Today the hall is used as the parliament's library.

A Brief History of Modern India by Rajiv Ahir – 2019 Edition - Chapter 34 - The Indian States P 606.

Q.43) With reference to the Mainland and Northeast Tribal revolts of colonial India, consider the following statements:

1. Tribal revolts of the Northeast did not concern itself with uprooting colonial rule from India.
2. Mainland tribal revolts were mainly caused due to agrarian distress and disruption of lifestyle.
3. The mainland tribal revolts generally lasted much longer than those in the Northeast.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Tribal movements under British rule were the most frequent, militant and violent of all movements. The tribal movements can be categorised into mainland tribal revolts and frontier tribal revolts concentrated mainly in the north-eastern part of India.

Statement 1 is correct: The tribal revolts in the frontier regions of **Northeast** were mainly **motivated** by the desire for **political autonomy, regardless of the ruling dispensation** in the mainland. They did not care if India was ruled by Indians or the British, they just wanted their political autonomy. The **forests** and **agricultural lands** were **generally in their control**, as the British **did not disturb** these areas much, and **arrived here much later** compared to the mainland, so there was no question of resentment on that front.

Statement 2 is correct: The tribal revolts of the **mainland** were motivated chiefly by the **disruptions** created in the **social and economic life** of the Tribals by **British interference**. The British forced them to **give up shifting cultivation** and take up **oppressive feudal style settled agriculture** where they were burdened by **heavy revenue obligations**. The British also **restricted their access to the forest** which were **central to their social identity** as well as a **chief source of their income**, thus impoverishing them. The **new cash economy** forcibly introduced by the Britishers led to an **influx of outsiders** in tribal areas such as **zamindars, moneylenders and traders**, all of whom were **oppressive and exploitative**. All this created resentment in the mainland tribals leading to a series of rebellions like Munda Ulgulan, Santhal Uprising, Ho rebellion, etc.

Statement 3 is incorrect: The revolts among the tribes of **northeast lasted longer** than those by the tribes of **mainland**. The Northeast tribes wanted political autonomy, which they demanded under

colonial rule as well as later from the Indian Union post-independence too. The **British could not defeat them easily** as the **terrain** was very **difficult as well as unknown** to them, leading to **protracted wars**, for example **Khasi uprisings, Singpho rebellion, etc.**

The revolts of **mainland** tribes were **intense and violent** using **old and primitive weapons** like battle axes and bow and arrows. The British succeeded in **crushing them quickly** with **superior military** tech and might, so they were **not long lasting**. Later the British would reduce their resentment by giving them concessions and recognizing some of their traditional laws and systems.

Q.44) With reference to Princely states in colonial India, consider the following statements:

1. Under Cabinet Mission plan, the Princely states were no longer to be under paramountcy of the British Crown.
2. The Mountbatten Plan allowed the princely states to remain independent of both India and Pakistan.
3. It was optional for the princely states to join the All-India Federation as proposed under the Government of India Act, 1935.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

princely state was a nominally sovereign entity of the British Indian Empire indirectly ruled by an Indian ruler, subject to a paramountcy of the British crown.

Statement 1 is correct: Cabinet mission discontinued the domination of British crown over Indian princely states i.e. Princely states were no longer to be under paramountcy of the British government. They were given freedom to enter into an agreement with successor governments or the British Government.

Statement 2 is incorrect: Under the Mountbatten plan it was decided to concede the demand of congress. Independence for princely states was not to be allowed, they would have to join either India or Pakistan.

Statement 3 is correct: Government of India act ,1935 had provision to constitute All India Federation consisting of all the British India provinces, and the Chief commissioner Provinces and Indian Princely States. Accession was compulsory for British India Provinces but optional for Indian States. Indian States acceding to the Federation were required to execute Instruments of Accession thereby delegating the powers to the Federal Government and surrendering their authority.

Q.45) Consider the following statements:

1. India is the largest importer of palm oil in Asia.
2. Andhra Pradesh is the largest producer of palm oil in India.
3. Palm oil production in India has declined significantly in the last five years.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

India is the world's second-largest consumer of palm oil. Palm oil accounts for about 40% of India's edible oil consumption and the nation is almost entirely dependent on imports to meet this demand.

Statement 1 is correct. In Asia, **India** is the **largest importer of palm oil** and accounts for **15 percent of global imports**. China with 9 percent, Pakistan with 4 percent, and Bangladesh with 2 percent of global imports are the other significant countries with a stake in palm oil production and trade. India relies on **Indonesia** to fulfil nearly half of its palm oil requirement of around 700,000 tonnes per month.

Statement 2 is correct. **Andhra Pradesh (AP)** is the largest producer of Palm oil in India with **240016 Metric Tons** of production in 2020-21. It is followed by Telangana with 39347 Metric Tons of palm oil.

Statement 3 is incorrect. According to the Economic Survey 2021-2022, the palm oil production in India has **increased between 2015-2016 and 2020-2021** at a compound annual growth rate of **6.1 percent**. Since the launch of the **National Edible Oil Mission**, around **2.8 million hectares** of land have been assessed to be fit for oil palm cultivation by the reassessment committee of the Indian Council for Agricultural Research-Indian Institute of Oil Palm Research.

Q.46) With reference to freedom struggle in princely states, consider the following statements:

1. Early agitation in princely states were politically mobilised towards local grievances such as unemployment.
2. Leaders of Praja Mandals demanded outright abolition of princely states.

Which of the statements given above is/are **correct**?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

A princely state was a nominally sovereign entity of the British Indian Empire that was under the indirect rule of Indian ruler. It was under the paramountcy of the British crown. There were officially 565 princely states when India and Pakistan became independent in 1947. The political mobilisation in the princely states passed through three distinct phases.

Statement 1 is correct: The early mobilisation in princely states was centred on some specific local grievances such as employment in administrative services of the state. It also included lack of freedom of press and assembly. The main demands of these early agitators were greater recruitment of the state's subject in government employment, the guarantee of civil liberties especially the freedom of press, assembly, an association, and the establishment of representative assembly in the state.

Statement 2 is incorrect: Praja mandal leaders protested the authoritarian or corrupt officials and outsiders. They did not question the legitimacy of the princely order or demand its outright abolition. Some examples of such Praja Mandali includes Praja Mithra Mandali (1917) of Mysore, Kathiawad Rajkiya Parishad (1921) and the Deccan State Subject's Conference etc.

Knowledge Base: The political mobilisation in the princely states passed through three distinct phases. In the first phase, **the newly emergent urban literate groups earlier had petitioning as the principal mode of the articulation.** In the second phase of struggle during the 1920s and first half of 1930s the petitioning leads to direct confrontation. There was a public protest in the form of street demonstrations by the literate urban class of people. In the third phase, peasant mobilisation emerged and became the prominent feature of second half of 1930s and 1940s overall. In fact, peasant-based movements went side by side with the urban educated middle-class mobilisation

Source: <https://egyankosh.ac.in/bitstream/123456789/44317/3/Unit-19.pdf>

Q.47) With reference to 'Indigo revolt', consider the following statements:

1. The revolt was mainly confined to the Vidarbha region of present-day Maharashtra
2. It was against government's policy of higher export duty on indigo.
3. Revolt consists of violent attack on governments properties followed with armed rebellion.
4. The dance-drama 'Chitrangada' by Rabindranath Tagore portrayed this revolt accurately.

Which of the statement given above is/are correct?

- a) 1 only
- b) 1 and 4 only
- c) 2 and 3 only
- d) None of the above

Ans) d

Exp) Option d is the correct answer.

The Indigo revolt was a peasant movement and subsequent uprising of indigo farmers against the indigo planters, that arose in Bengal in 1859, and continued for over a year. The village headmen (Mandals) and substantial ryots were the most active and numerous groups who led the peasants.

Statement 1 is incorrect: The Indigo revolt was a peasant movement and subsequent uprising of indigo farmers against indigo planters that erupted in 1859 in **Chaugacha village of Nadia, Bengal.** The most militant and widespread of the peasant movements was the Indigo Revolt of 1859-60.

Statement 2 is incorrect: The revolt was against European planters. They forced Indian farmers to **grow indigo by signing fraudulent deals** with them. The cultivators were forced to grow indigo in place of food crops. They were **advanced loans** for this purpose. Once the farmers took loans, they could never repay it due to the **high rates of interest.** The farmers were brutally oppressed if they could not pay the rent or refused to do as asked by the planters. They were **forced to sell indigo** at non-profitable rates so as to maximize the European planters' profits. If a farmer refused to grow

indigo and planted paddy instead, the planters **resorted to illegal means** to get the farmer to grow indigo such as looting and burning crops, kidnapping the farmer's family members, etc.

Statement 3 is incorrect: The methods of resistance used by peasants differed from place to place. However, it varied according to time and place and was **mostly passive and non-violent**. And the revolt was majorly non-violent (said to be forerunner of Gandhi's nonviolent passive resistance), it impacted the government and immediately 'Indigo Commission' were established. By the end of 1860, indigo cultivation was literally washed away from Bengal since the planters closed their factories and left for good.

Statement 4 is incorrect: The play **Nil Darpan (The Mirror of Indigo)** by **Dinabandhu Mitra** written in 1858 – 59 **portrayed the farmers' situation accurately**. It showed how farmers were coerced into planting indigo without adequate payment. The play became a talking point and it urged the Bengali intelligentsia to lend support to the indigo revolt. Chitrangada is a dance-drama, written by Rabindranath Tagore. The drama is based on the story of Chitrāngadā, the mythological princess of the Kingdom of Manipur and one of the wives of Arjuna according to the Mahabharata.

A Brief History of Modern India by Rajiv Ahir (Spectrum)

Q.48) Consider the following statements, with reference to different schools of thought in Britain and their views on Indian society and culture:

1. The Conservatives considered Indian Civilisation necessarily inferior to European civilisation.
2. The Paternalistic Imperialists justified economic and political enslavement of India.
3. The Radicals wanted to make India a part of the modern progressive world of science and humanism.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

British government introduced many policies in India which led to large scale impact in various forms.

Statement 1 is incorrect: The Conservatives advocated introduction of as few changes as possible. Indian civilisation, they felt, was different from the European one but **not necessarily inferior** to it. Many of these thinkers respected Indian philosophy and culture.

Statement 2 is correct: The Paternalistic Imperialists became influential especially after 1800. They were sharply critical of Indian society and culture and used to **justify economic and political enslavement of India**.

Statement 3 is correct: The Radicals went beyond the narrow criticism and imperialistic outlook of the Conservatives and the Imperialists and applied advanced humanistic and rational thought to the Indian situation. They thought that India had the capacity to improve and that they must help the country do that. **They wanted to make India a part of the modern progressive world of science and humanism** and therefore advocated the introduction of modern western science, philosophy and literature.

Q.49) With reference to ‘Bardoli Satyagraha’, consider the following statements:

1. It was against the British decision to levy an additional tax on salt production in the region.
2. An Inquiry Committee was set up in 1928 by the British government under the leadership of Vallabhai Patel to review the issue.
3. Under the movement, Bardoli Satyagraha Patrika was brought out to mobilize public opinion in the region.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 3 only

Ans) d

Exp) Option d is the correct answer.

The Bardoli Satyagraha was a major phase of civil disobedience and revolt in the Indian Independence Movement on 12 June 1928. The movement was eventually led by Sardar Vallabhbhai Patel, and its success gave rise to Patel becoming one of the main leaders of the independence movement.

Statement 1 is incorrect: The Bardoli Satyagraha, 1928 was a movement led by Sardar Vallabhai Patel for the farmers of Bardoli against the **unjust raising of taxes**. The movement had witnessed intense politicisation after the coming of Gandhi on the national political scene. The movement resulted in January 1926 when the **authorities decided to increase the land revenue by 30 per cent**.

Statement 2 is incorrect: A committee was set up in 1928 under the **Judicial officer Broomfield and the other officer was Maxwell (Broomfield and Maxwell Commission)**. The findings of the committee were that the increased tax rate of 30% from the previous 6% was **unjustified** and the government agreed to give back the confiscated land and properties and the 30% raise was cancelled for many years.

Statement 3 is correct: In February 1926, Vallabhbhai Patel was called to lead the movement. The women of Bardoli gave him the title of “Sardar”. To organise the movement, Patel set up 13 chhavanis or workers’ camps in the taluqa. **Bardoli Satyagraha Patrika** was brought out to **mobilise public opinion**. An intelligence wing was set up to make sure all the tenants followed the movement’s resolutions.

Q.50) Which of the following pairs are correctly matched?

List I

Textiles in news

1. Toda embroidery

2. Himroo weaves

3. Bandha weaving

List II

State

Telangan

a

Mizoram

Odisha

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 2 only
- c) 3 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

The United Nations Educational, Scientific and Cultural Organization in September 2022 released a list of iconic heritage textile crafts of the country. **Toda embroidery and Sungadi from Tamil Nadu, Himroo weaves from Hyderabad (Telangana) and Bandha tie and dye weaving from Sambalpur in Odisha were some of the textiles that made the cut.**

Pair 1 is incorrect: The Toda Embroidery which is also locally known as Pukhoor is an art work among the Toda pastoral people of the Nilgiris in Tamilnadu (and not Telangana). It is made exclusively by Toda women. Both sides of the embroidered fabric are usable and the Toda people are proud of this heritage. Both men and women adorn themselves with the Toda embroidered cloaks and shawls. This handicraft product is protected under Geographical Indications (GI) of the Government of India.

Pair 2 is incorrect: Himroo weaves is traditional brocade with a history extending back to Mughal times which belongs to the Hyderabad (Telangana) (and not Mizoram). It is an extra-weft, figured fabric. A complex weave, decorated with figurative motifs it was originally woven in running lengths to be made-up into Shervanis – the traditional dress of the Mughal courts. Now woven into shawls and other unstitched garments.

Pair 3 is correct: Odisha Ikat is a resist dyeing technique which has been originated from Indian state of Odisha. It is also known as “**Bandha of Odisha**”, and is a geographically tagged product of Odisha since 2007. It is made through a process of tie-dyeing the warp and weft threads to create the design on the loom prior to weaving. Ikat/ Bandha or yarn tie-resist dyed textiles of Odisha are widely acknowledged for their skillful patterns, distinctively rendered curvilinear motifs and the combination of ikat and relief texture for elaborate dyeing processes before weaving requires precision.

Q.1) Consider the following:

1. Calcutta Unitarian Committee
2. Tabernacle of New Dispensation
3. Indian Reform Association

Keshab Chandra Sen is associated with the establishment of which of the above?

- a) 1 and 3 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: Raja Ram Mohan Roy along with Dwarka Nath Tagore and William Adam established Calcutta Unitarian committee in 1823. Keshab Chandra was not associated with it.

Statement 2 is correct: On 24th January 1868, Keshab Chandra Sen laid the foundation stone of his new church called, the Tabernacle of New Dispensation (Naba Bidhan) for the purpose of establishing the truth of all the great religions in an institution that he believed would replace them all.

Statement 3 is correct: Indian Reform Association was established in 1870 at Calcutta by Keshab Chandra Sen to put into practice the ideas that he got during his visit to Britain. Its objective also included to create public opinion against child marriage, get Brahma form of marriage legalized, promote status of women.

Q.2) With reference to the Cornwallis code, 1793, consider the following statements:

1. It recognised zamindars as sole owner of land and gave them the rights to transfer land.
2. The code allowed Indians to file a case against the employees of the East India company.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: The Cornwallis code recognised **zamindars (landlord) as the sole owner of land** and gave **full rights to transfer or donate such land**. The government revenue was **permanently fixed** and if the zamindar failed to pay it, the land would be auctioned off to realise the government revenues.

Statement 2 is correct: **Until 1793** (before the introduction of Cornwallis code) a **British citizen could only be tried by the Supreme Court of Calcutta, and no Indians could file a case** against any employee of the East India Company. This **discrimination** was **removed** by this code, and everyone declared equal in the eye of law. **The natives (Indians) were now entitled to file a case against government officials including Europeans.**

Source: Spectrum: Chapter- Constitutional, Administrative and Judicial Developments (Reforms under Cornwallis)

Q.3) With reference to the major resolutions related to local governance passed by the British India government, consider the following pairs:

Major resolutions	Important provisions
1. Mayo's Resolution, 1870	It authorised the provincial governments to resort to local taxation
2. Ripon's Resolution, 1882	It provided for the majority of elected-nonofficial members in local bodies
3. Government of India Resolution, 1915	It declared local government as a transferred subject under the direct control of provincial ministers

Which of the pairs given above is/are matched correctly?

- a) 1 only
- b) 3 only
- c) 1 and 2 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

Option 1 is correct: The Mayo's Resolution of 1870 authorised the **provincial governments to resort to local taxation to balance their budgets**. This was done in the context of transfer of certain departments of administration, such as medical services, education and roads, to the control of provincial governments. This was the **beginning of local finance i.e., financial decentralisation**.

Option 2 is correct: Lord Ripon is called the father of local self-government in India. One of the main points of **Ripon's resolution 1882** is that it stipulated **elected non-officials' majority in local bodies**. Also, it demanded **non-officials to act as chairpersons of local bodies**.

Option 3 is incorrect: The Government of India act 1919 made local government the transferred subject under popular ministerial control. It allowed each province to develop local government according to provincial needs and requirements, **The Government of India resolution 1915 contained the official views on the recommendations of the Royal Commission on Decentralisation (1908)**.

Knowledge Base: **Royal Commission on Decentralisation (1908)** urged the withdrawal of existing restrictions on local government's powers of taxation and **the stoppage of regular grants-in-aid from provincial governments** except for undertaking large projects.

Source: Spectrum: Chapter- Constitutional, Administrative and Judicial Developments

Q.4) With reference to the reorganisation of military in India post 1857 revolt, consider the following statements

- 1. In the British army, the company's troops were merged with the Queen's forces.
- 2. The proportion of Europeans to Indians in the army was fixed uniformly for all the presidencies.
- 3. British categorised Indians into martial and non-martial races to favour certain communities in recruitment process.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) d

Exp) Option d is the correct answer.

The Indian sepoys played a major role during the 1857 revolt. The British's urge of preventing another major revolt like 1857 led them to reorganise the military in India.

Statement 1 is correct: The military was the backbone of the Company's rule in India. **Prior to the revolt of 1857**, there were two separate sets of military forces under British control: one was the **Queen's army and the other was the Company's troops**. But **with the abolition of company rule after the 1857 revolt, company troops were merged with the Queen's army**.

Statement 2 is incorrect: **After the 1857 revolt**, the domination of the European branch over the Indian branches was ensured by following the **principle of a one-third white army (as against 14% before 1857)**. However, it is **different for different provinces, the proportion of Europeans to Indians was carefully fixed at one to two in the Bengal Army and two to five in the Madras and Bombay Armies**.

Statement 3 is correct: British came up with an ideology of **martial races and non-martial races**. It categorised those who supported British in repressing 1857 revolt as martial races and those who took active part in revolt as non-martial races. **It was used to justify a discriminatory recruitment policy directed in favour of Sikhs, Gurkhas and Pathans** who had assisted in the suppression of the revolt. The **soldiers from Awadh, Bihar, Central India and South India** who had participated in the revolt were declared to be **non-martial races**.

Source: Spectrum: Chapter- Constitutional, Administrative and Judicial Developments

Q.5) With reference to Social Stock Exchange (SSE), consider the following statements:

1. It is a platform where companies spend a percentage of their profits in the welfare of the community and social initiatives.
2. It is regulated by the Securities and Exchange Board of India.
3. The existing Stock Exchanges can introduce their own social stock exchanges with a separate Governing Council.

Which of the above statements is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

The idea of a Social Stock Exchange (SSE) in India was floated in the budget 2019-2020 to revive the economy by boosting social and environmental impact investing in India. Whereas Brazil was the first nation that instituted the world's first SSE in 2003, with the establishment of Bolsa de Valores Socioambientais (BVSA).

Statement 1 is incorrect. **Social Stock Exchange (SSE)** is a revenue-generating platform that allows investors to invest in select social enterprises or social initiatives. It allows the listing of a Non-Profit Organization on stock exchanges and helps social and voluntary enterprises to raise capital in the form of

equity or debt or a unit of the mutual fund. Whereas **Corporate Social Responsibility** is a concept where companies integrate social and environmental concerns in their business operations. It makes **companies to spend a percentage of their profits** towards the welfare of the community or initiatives that have social, economic and environmental impact.

Statement 2 is correct. Social Stock Exchange (SSE) is regulated by **the Securities and Exchange Board of India (SEBI)**. It notifies a framework introducing a social stock exchange in India, which provides social enterprises an additional avenue to raise funds.

Statement 3 is correct: The existing Stock Exchanges like BSE and National Stock Exchange (NSE) can introduce their own Social Stock Exchanges as a separate segment. But the Stock Exchange shall constitute a Governing Council for the Social Stock Exchange prior to seeking final approval from SEBI for introduction of Social Stock Exchange as a separate segment.

Q.6) British India's colonial policy can be divided into three phases namely Mercantilism, Free trade and Era of foreign capital and international competition for colonies. Which among the following policies marks the emergence of the third phase of colonialism?

1. Retaining trade monopoly of East India Company.
2. Introduction of various land revenue settlement policies.
3. Large amount of investment in railways.
4. Associating more Indians in the governance

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 3 only
- c) 3 and 4 only
- d) 2, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

The British colonial policy in India can be broadly divided into three stages, each marked by its own features. **Mercantilism, Free trade and Era of Foreign capital and international competition for colonies** were those three stages.

Option 1 is incorrect: First phase of colonialism i.e., **Mercantilism is based on two basic objectives** (i) to acquire a **monopoly of trade** with India (ii) to directly take over governmental revenues through **control over State power**. Thus, **retaining trade monopoly is a feature of the Mercantilism phase**.

Option 2 is incorrect: Second phase of colonialism i.e., **Colonialism of free trade**. It started with the Charter Act of 1813 and continued till the 1860s. This phase is marked by the feature of converting India into a destination of British manufactured goods and a source of raw materials. **Discriminatory tariff policy** and the **Permanent Settlement and the Ryotwari system in agriculture were introduced to transform traditional agrarian structure into a capitalist one**.

Option 3 is correct: Third phase of colonialism – era of foreign capital and international competition for colonies. It began around the 1860s in India owing to Britain's industrial supremacy being challenged by several countries of Europe, the United States and Japan and also the revolution in transport technology. This phase is marked by

1) The strengthening of colonial rule over India to keep other nations such as Russia, France out of the reach of India.

2) Large amount of investment in railways to attract British capital to India and provide it security

Option 4 is incorrect: In the third phase, the British notion of **training the Indian people for self-government vanished (revived only after 1918** because of pressure exerted by the Indian national movement). Now, the **aim of British rule was declared as permanent ‘trusteeship’ over the Indians.** The Indians were declared to be permanently immature for inclusion in government services or governance related works. The British also declared that Indians does not have a sense of governance and they **needs British control and trusteeship.**

Source: Spectrum: Chapter - Economic Impact of British Rule in India

https://nios.ac.in/media/documents/SrSec315NEW/315_History_Eng/315_History_Eng_Lesson17.pdf

Q.7) With reference to the process of deindustrialisation in India during the nineteenth century, consider the following statements

1. Increased inflow of British machine-made goods after the passage of Charter Act of 1813 accelerated the decline of handloom industries in India.
 2. Moneylenders and tradesmen benefited from the deindustrialisation process in India.
 3. The deindustrialisation process drastically reduced the pace of commercialisation of agriculture in India.
- Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 1 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) a

Exp) Option a is the correct answer.

De-industrialisation is the process of **destruction of a nation's industrial capacity.** India had a strong industrial base before the arrival of British in India. The British colonial government systematically deindustrialised India to serve its self-interest.

Statement 1 is correct: The Charter Act of 1813 ended the monopoly of the East India Company with the exception of tea and trade with China. This increased the demand for British manufactured cheap goods in India. As a result, **Indian craftsmen had to compete with machine made goods from England.** This effectively led to the loss of the market for handicrafts made by Indian craftsmen and ultimately led to the decline of the Indian handloom industry.

Statement 2 is correct: Indian traders, moneylenders and bankers had amassed wealth as junior partners of English merchant capitalists in India. Their role fitted in the British scheme of colonial exploitation. The **money lenders** provided loans to hard pressed agriculturists and thrived on the high interest rate for such loans. The **trader carried imported British products** to the remotest corners and helped in the movement of Indian agricultural products for exports.

Statement 3 is incorrect: The deindustrialisation process increased the pace of Commercialisation of agriculture in India during the nineteenth century. Commercialization of agriculture means the production of crops for **sale in the market** rather than for self-consumption. British systematically deindustrialised India to reduce India to the status of a **mere exporter of important raw materials.** Thus, **Indians were forced to cultivate cash crops to meet British's needs.**

<https://ncert.nic.in/textbook/pdf/keec101.pdf>

Q.8) With reference to Royal Commission on decentralization (1908), consider the following statements:

1. William Meyer was the Chairman of the commission.
2. Its main objective was to investigate the financial and administrative relations of the Central and provincial governments.
3. The commission recommended the intervention of the Governor-General of India on the matters of revenue of the provinces.
4. R.C. Dutt was the only Indian member of the commission.

Which of the above statements are correct?

- a) 1 and 2 only
- b) 2 and 4 only
- c) 3 and 4 only
- d) 1, 2 and 4 only

Ans) b

Exp) Option b is the correct Answer.

In the year 1907, the Royal Commission on Decentralization was constituted by the British Government. Its main objective was to investigate the financial and administrative relations of the Central and provincial governments. The only Indian member of this commission was R.C. Dutt.

Statement 1 is incorrect: The Royal Commission upon Decentralization was appointed in 1907 under the chairmanship of **Sir Henry William Primrose**. It was a six-member body including the Chairman, the other five members being Frederic Lely, Steyning Edgerley, Romesh Chunder Dutt, William Meyer, and William Hichons.

Statement 2 is correct: The Royal Commission on Decentralization in India was appointed to inquire into the **relations existing for financial and administrative purposes** between the Supreme Government (i.e., the Government of India) and the various Provincial Governments. It also included such relations between the Provincial Governments and the authorities subordinate to them. It also was to report whether, by measures of decentralization or otherwise, these relations can be simplified and improved.

Statement 3 is incorrect: In the year 1907, the Royal Commission on Decentralization was constituted by the British Government. As per the report of the commission published in 1909, the **intervention of the Governor-General of India was not allowed on the matter of revenues of the provinces**. The needs of the provinces should be considered. The residual part of the revenue should be taken as a fixed fractional share. The recommendations were accepted, and the Government passed a resolution in the year 1912.

Statement 4 is correct: The only Indian member of this commission was R.C. Dutt, and the report of this commission was published in 1909.

Knowledge Base: Indian Councils Act 1909 or Morley-Minto Reform was an extension of the 1892 reforms. The Morley-Minto Reforms, so named after John Morley, who was the secretary of state for India (1905-1910 & 1911) and Minto was the Governor-General of India (1905-1910).

The British Parliament appointed a Royal Commission on Decentralization in 1908, to inquire into relations between the Government of India and the provinces and suggest ways and means to simplify and improve them. Thus, the Royal Commission on Decentralization report came as the basis for Morley-Minto Reform.

Q.9) This leader was selected as Imperial Civil Services (ICS) officer in 1869 but he was barred from services in 1869 due to an age dispute, and he was fired in 1871 due to racial discrimination. Later, He led the Indian National Conference session for two years between 1883 and 1885. He also became a senior leader of Indian National Congress.

In the above passage, which among the following personalities has been discussed?

- a) Surendranath Banerjea
- b) Satyendra Sinha
- c) Pherozeshah Mehta
- d) Womesh Chandra Banerjee

Ans) a

Exp) Option a is the correct Answer.

Option a is correct: Surendranath Banerjee was a resident of Calcutta and was born on November 10, 1848. He was known as one of the early political leaders of India during the rule of the Britishers. He was the founding member of the Indian National Association, a nationalist organization. **He and Ananda Mohan Bose led the Indian National Conference session for two years between 1883 and 1885.** He later became one of the senior members of the Indian National Congress and was also responsible for rejection of reforms about Montagu–Chelmsford. He graduated from the University of Calcutta and, in 1868, traveled to England to compete in an examination for the Indian Civil Service. In 1869 he was barred from services due to an age dispute, and he was fired in 1871 due to racial discrimination.

Option b is incorrect: Satyendra Sinha was a lawyer. He was appointed the first Governor of Bihar and Odisha in 1920 (29th December). He was the first Indian to become a member of the Viceroy's Executive Council.

Option c is incorrect: Pherozeshah Mehta was dubbed "Lion of Bombay." He was elected president of the Indian National Congress in 1890. He founded the Bombay Chronicle, an English weekly newspaper, in 1910. For his legal services, he was knighted by the British.

Option d is incorrect: W C Banerjee was born on 29th December 1844 in Calcutta. In 1862, he joined a law firm in Calcutta as a clerk from where he got acquainted with law. He later went to England to study law. He was the first President of the Indian National Congress (INC). Womesh Chandra Bonnerjee passed away on 21st July 1906.

Source: <https://pib.gov.in/newsite/printrelease.aspx?relid=148779>

Q.10) With reference to Anticipatory Bail Laws in India, consider the following statements:

1. The anticipatory bail can be granted strictly for a limited and specified time.
2. The Anticipatory bail can be granted to a person in case of committing bailable offences only.
3. The anticipatory bail can be rejected if the accused has previously undergone imprisonment for a cognizable offense after the judgement of a court.

Which of the statements given above is/are correct?

- a) 1 only
- b) 3 only
- c) 2 and 3 only
- d) 1 and 2 only

Ans) b

Exp) Option b is the correct answer.

Recently, a division bench of the Bombay High Court has referred to its full bench the issue of whether the HC or sessions courts can grant transit anticipatory bail to accused in cases registered or likely to be registered in another state, outside their jurisdiction.

Statement 1 is incorrect: The **Supreme Court (SC)** in **Sushila Aggarwal v. State of NCT of Delhi (2020) case** delivered a significant verdict, ruling that **no time limit can be set** while granting anticipatory Bail and it can continue even until the end of the trial. The Court made reference of India's **freedom movement**

claiming that **arbitrary arrests, indefinite detentions, and lack of institutional safeguards** played an important role in rallying the people to raise the demand for Independence

Statement 2 is incorrect: The Allahabad High Court has held that an application for grant of Anticipatory bail under Section 438 Cr.P.C. is not maintainable in case of an offence that has been declared by the concerned statute as a bailable offence. The Bench of Justice Samit Gopal further clarified that anticipatory bail does not arise for an offence that is bailable.

Statement 3 is correct. The Anticipatory Bail granted by a High court under Section 438 of the CrPC can only be cancelled by the High Court under Section 439(2) of the CrPC but not by any Magistrate or Sessions Judge. The Anticipatory bail can be rejected if the **accused has previously undergone imprisonment on conviction by a court in respect of any cognizable offence.**

Source: <https://www.livelaw.in/news/updates/anticipatory-bail-plea-not-maintainable-bailable-offence-allahabad-high-court-193724#:~:text=a%20bailable%20offence.->

Q.11) Which of the following parties were established by Dr. B. R. Ambedkar?

1. The Peasants and Workers Party of India
2. All India Scheduled Castes Federation
3. The Independent Labour Party

Select the correct answer using the codes given below:

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Statements 2 and 3 are correct: The parties established by Dr. B. R. Ambedkar were - All India Scheduled Castes Federation and The Independent Labour Party. Bahishkrit Hitakarini Sabha was the first organization formed by Dr. Ambedkar in 1924.

Statement 1 is incorrect: Peasants and Workers Party of India was founded in 1947 in Maharashtra by Keshavrao Jedhe, Nana Patil and Madhavrao Bagal.

Source: UPSC PRELIMS 2012

Q.12) With reference to the C. Rajagopalachari Formula for ending constitutional deadlock during Indian National Movement, consider the following statements:

1. It provided that only the Muslim population of North-West and North-East India would decide by a plebiscite, whether or not to form a separate sovereign state.
2. In case of acceptance of partition, it proposed a common center for safeguarding defense, commerce and communication.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) None of the above

Ans) b

Exp) option b is the correct Answer.

In 1944, C. Rajagopalachari proposed a formula for Congress-League Cooperation to solve the ongoing constitutional crisis.

Statement 1 is incorrect: It was proposed under the C.R. formula that the entire population of North-West and North-East would take part in deciding whether or not to form a sovereign state.

Statement 2 is correct: Further, in case of acceptance of partition, Formula proposed a common center for defense, commerce, and communication.

Knowledge Base: The main points in the CR Plan were:

Muslim League to endorse Congress's demand for independence. League to cooperate with Congress in forming a provisional government at the center.

Other proposals were:

- (1) Muslim league to endorse Congress's demand for independence.
- (2) League to cooperate with Congress in forming a provisional government at the center.
- (3) The above terms are to be operative only if England transferred full powers to India.

While the Congress was ready to cooperate with the League for the independence of the Union, the League wanted the Congress to accept the two-nation theory. Jinnah wanted only the Muslim population of the North-West and North-East to vote in the plebiscite and he also opposed the idea of a common center.

C.R. formula was also condemned by Hindu leaders led by Vir Savarkar.

Source: Spectrum, Pg 454, 845

Q.13) With reference to the British policies in India after 1857, consider the following statements:

1. After 1857, the British intervention increased in social and religious matters of Indians.
2. After the revolt of 1857, the Zamindars and landlords were hailed as natural and traditional leaders of Indian people.
3. The British Government drastically reduced the expenditure on Army.
4. There was increased restrictions on Freedom of Press after 1857.

Which of the above statements is/are correct?

- a) 3 and 4 only
- b) 2 and 4 only
- c) 1, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) b

Exp) option b is the correct Answer.

Contrary to their pre-1857 intentions of trying to modernize India on progressive lines, now the administration adopted blatantly reactionary policies on the pretext that Indians were not fit for self-governance and needed British presence in their lives.

Statement 1 is incorrect: Having decided to side with the reactionary elements of Indian society, the British withdrew support for social reforms and decided to minimize their intervention in social and religions aspects of the life of Indian people. They felt that their earlier intervention in socio-religious matters had aroused the wrath of orthodox sections against them. Also, by encouraging caste and communal consciousness, the British helped the reactionary forces.

Statement 2 is correct: In their pursuit of reactionary policies and hope to expand their social base, the British looked for alliances with the most reactionary of social groups—the princes, zamindars, etc. The British intended to use them as a counterweight against nationalist-minded intelligentsia. Now, the zamindars and landlords were hailed as the 'natural' and 'traditional' leaders of people.

Statement 3 is incorrect: The British Government increased the expenditure on Army.

A disproportionately large expenditure was spent on army and civil administration and very little was spent on social services.

Statement 4 is correct: There was Increased Restrictions on the Freedom of Press. Whenever the press was seen to be favouring the nationalist upsurge, it was restricted. For example, the Licensing Act of 1857, The Registration Act of 1867, the Vernacular Press Act of 1878, the Newspapers (incitement of offences) Act of 1908, Indian Press Act of 1910 and the Indian Press (emergency powers) act of 1931 had the provisions of restriction of the freedom of press in India.

Q.14) In the context of British Foreign Policy in India, consider the following statement:

1. The need to check Russian ambition in Burma led to the Anglo-Burmese war.
2. Treaty of Gandamak resulted in Great Britain's control over Tibet's foreign affairs.

Which of the above statements is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) d

Exp) Option d is the correct Answer.

The pursuit of a foreign policy, guided by the interest of British imperialism, often led to India's conflicts with neighboring countries. These conflicts arose due to various reasons like the political and administrative consolidation of the country, and the Introduction of modern means of communication.

Statement 1 is incorrect: The expansionist urges of the British resulted in three Anglo-Burmese Wars, and in the end, the annexation of Burma into British India in 1885. The reason for these wars were the lure of the forest resources of Burma, market for British manufactures in Burma and the **need to check French ambitions in Burma (not the Russian aggression)** and South-Asia.

Statement 2 is incorrect: Treaty of Gandamak (May 1879) was signed after the Second-Anglo Afghan War. It provided that: • the Emir (Amir) of Afghanistan will conduct his foreign policy with the advice of Government of India; • a permanent British resident will be stationed at Kabul; and • the Government of India will give Amir all support against foreign aggression, and an annual subsidy.

Treaty of Lhasa (1904) between Tibet and British provided that Tibet will give Great Britain some control over foreign affairs of Tibet.

Source: Spectrum page 532

Q.15) Consider the following statements regarding Financial Stability and Development Council (FSDC) in India:

1. The Chairman of the Council is the Prime Minister.
2. Separate funds are allocated to the Council for undertaking its activities.
3. It assesses the functioning of the large financial conglomerates operating in India.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

In order to strengthen and institutionalize the mechanism for maintaining financial stability, enhancing inter-regulatory coordination and promoting financial sector development, the Financial Stability and Development Council (FSDC) was set up by the Government as the apex level forum in December 2010.

Statement 1 is incorrect: The Chairman of the Council is the finance minister and its members include the heads of financial sector Regulators (RBI, SEBI, PFRDA, IRDA & FMC) Finance Secretary and/or Secretary, Department of Economic Affairs, Secretary, Department of Financial Services, and Chief Economic Adviser. The Council can invite experts to its meeting if required.

Statement 2 is incorrect and statement 3 is correct: The Council deals, inter-alia, with issues relating to financial stability, financial sector development, inter-regulatory coordination, financial literacy, **financial inclusion and macro prudential supervision of the economy including the functioning of large financial conglomerates. No funds are separately allocated to the Council for undertaking its activities.**

Source: <https://dea.gov.in/sites/default/files/StrucFSDC.pdf>

<https://www.thehindu.com/business/Economy/fsdc-asks-regulators-to-keep-steady-vigil-on-financial-sector/article36280845.ece>

Q.16) With reference to the Indian Councils Act, 1892, consider the following statements:

1. It gave the legislative councils the power to discuss the budget for the first time.
2. The members of the Indian legislative council were given the power to ask questions from the Executive for the first time.
3. It introduced an Indian member into the Viceroy's Executive Council for the first time ever.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1, 2 and 3
- c) 1 and 3 only
- d) 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

The pressure on the colonial British Indian government from the nationalists to make the government more accountable to the Indian people had steadily been on the rise since the second half of the 19th century, and had increased even more with the creation of the Indian National Congress in 1885. The legislations brought by the British until now for the administration in India were deemed inadequate by the nationalist leaders. So, to pacify them as well as the masses they represented, the British decided to bring further changes in the governance structure of British India through the Indian Councils Act of 1892.

Statement 1 is correct: The **Indian Councils Act of 1861** did **set up legislative councils** at Central and Provincial levels, but they had **very limited functions and powers** and their role was limited to drafting and passing legislations required for administration. They **could not even discuss any financial legislation**. That however **changed** with the **Indian Councils Act, 1892**. This Act gave the council members the **power to discuss financial statements like the Annual Budget for the first time**. Hence this statement is **correct**. The council members could **discuss the various provisions and give their opinions**, but it must be noted that they were **still not allowed to move a motion against any of the provisions** in these financial legislations. So, although this Act was a step forward in the right direction, it still left much to be desired from as far as accountability of the government was concerned.

Statement 2 is correct: The **Indian Council Act, 1861** did **not give the council members the right to question the members of the Executive** regarding their various policies, decisions and reasons for omission

and commission. However, the **Indian Council Act, 1892 gave the right** to the Council Members to **cross question the Executive** regarding their various decisions and policies. Hence this statement is **correct**.

However, it must be noted, that there were **many limits** on this new power of the council members, such as the **type of questions**, or the **subjects regarding which they could question** the Executive, and a **mandatory notice period of 6 days** to be given before asking the Question, etc.

Statement 3 is incorrect: It was the **Indian Council Act of 1909** (also known as the Morley-Minto Reforms) and **not the Indian Councils Act of 1892** which **introduced an Indian member in the Viceroy's Executive Council** for the **first time**.

This was an **important development** in India's **constitutional history** under the British Rule, as the **Viceroy's Executive Council was the highest decision-making body** in the British Indian Government, and **virtually held all the important powers**. So, the **inclusion of an Indian** in this body was **momentous** as it **signified the increasing pressure of nationalist movement on the colonial government**. **Satyendra Prasad Sinha** became the **first Indian** to be inducted into the Viceroy's Executive Council. He was included in the capacity of the **law member**.

Knowledge Base: For details regarding the various provisions of this Act and the others mentioned herein, kindly refer to Ch-41 of History of Modern India by BL Grover

History of Modern India by BL Grover, Ch-41, Pg-376, 377, 379, 380,

Q.17) With reference to Cornwallis' contributions to the evolution of Civil Services in British India, consider the following statements:

1. He separated the judicial and revenue powers of the District Collectors.
2. He prohibited the civil servants from taking presents and bribes.
3. He was the first to open all posts of the covenanted civil services for the Indians.

Which of the statements given above is/ are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Cornwallis succeeded Warren Hastings as Governor-General in 1786 and remained the Governor General till 1793. He is credited with many reforms in the administration in British India like Judicial reforms, introducing Permanent Settlement revenue system as well as reforming the nascent civil administration and civil services.

Statement 1 is correct: Cornwallis is most known for **ensuring the principle of Separation of Powers (SoP)** in the **civil services**. In the administrative system set up by his predecessors, the **District Collector** was a civil servant responsible for **both revenue collection** as well as **making judicial decisions** in small cases. However, **Cornwallis** was a big believer in the **Separation of Powers** being an **important requirement for good governance**. So, he **took away the judicial powers** and functions of the **Collector** and **shifted** them to a **judicial magistrate**. Hence this statement is **correct**.

Statement 2 is correct: Cornwallis (governor-general, 1786-93) was the first to bring into existence and organise the civil services. He tried to check corruption through raising the civil servants' salary, strict enforcement of rules against private trade, debarring civil servants from taking presents, bribes etc., enforcing promotions through seniority.

Statement 3 is incorrect: Lord Cornwallis displayed a high level of racial prejudice and **did not believe in opening higher posts of civil services** (known as the **Covenanted services**) to the **Indians**. He believed that they were **untrustworthy** (being colonial subjects) and **did not have the skills and talents** required to handle such jobs. Officially, the Charter Act of 1853, as well as the Act for Good Governance (Government of India Act), 1858 announced that all subjects of the Crown – those in England as well as those in British India had equal footing in being eligible for the Covenanted Services. Hence this statement is **incorrect**.

History of Modern India by BL Grover, Ch-14, Pg-128

Q.18) With reference to the Fort William College, consider the following statements:

1. It was established by Warren Hastings.
2. Its aim was to teach local languages and laws to British civil servants posted in British India.
3. It went on to become the famed Presidency University of Calcutta.

Which of the statements given above is/ are correct?

- a) 1 and 2 only
- b) 2 only
- c) 3 only
- d) 1 and 3 only

Ans) b

Exp) Option b is the correct answer.

The Fort William College was a college in British Colonial Calcutta that had been established in 1800 to train the new recruits to civil services in British India in local languages and laws as well as administration in order to ensure that the Company could govern in India peacefully.

Statement 1 is incorrect: It was **established** by **Lord Wellesley** on **July 10th, 1800**, and **not by Warren Hastings**. Hence this statement is **incorrect**.

Warren Hastings was responsible for setting up the **Calcutta Madrasa in 1781**.

Statement 2 is correct: **Wellesley** established this institution to **train the new recruits to the Civil Services** for **administering the rapidly expanding British Indian territories**. He decided to establish **Fort William College** as an **institute** that would **teach the new recruits** to the civil services, **local languages like Arabic, Persian, Hindustani, etc, as well as local laws, history and culture**, so that they may understand the land, its people and their customs. Hence this statement is **correct**.

Statement 3 is incorrect: **The Fort William College** was **shut down** soon in **1802** after its opening. This was because Wellesley had established it **without permission from the Court of Directors (CoD)** who controlled the affairs of the East India Company from England. So, the CoD decided to shut this college down and later **opened the Haileybury College in Hertfordshire in England in 1807** to **train the new recruits** to the civil services in British India. It was the **Hindu College (not the Fort William College)** established by **David Hare and Raja Ram Mohun Roy in 1817**, which went on to become the famed **Presidency University of Calcutta** which still exists today. **Hence this statement is incorrect**.

Source: Modern Indian History by Spectrum, Ch-26, Pg-577; Ch-30, Pg-620, 621

Q.19) With reference to the Aitchison Committee, consider the following statements:

1. It was set up during the tenure of viceroy Dufferin.
2. It recommended holding the imperial civil services exams simultaneously in England & India.
3. It recommended lowering the age limit for recruitment to civil services to 19 years.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

The Aitchison Commission on Public Services was established in 1886 under the chairmanship of Sir Charles Umpherston Aitchison to determine the course of action to be taken to address Indians' claims to higher and more extensive employment in the British Indian Civil Services.

Statement 1 is correct: The **Indian National Congress** after its **formation in 1885** had been **pressing for reforms** in the British administration of India. These demands included **wider representation of Indians in the British Indian Civil Services**, both at the **lower and higher levels** (from which Indians had been deliberately excluded). So, to **pacify** the nationalist leaders, as well as the masses whom they represented, the then **Viceroy, Lord Dufferin** ordered the **Aitchison Committee on Public Services to be set up in 1886**. Hence this statement is **correct**.

Statement 2 is incorrect: One of the **recommendations** of this commission was that the civil services be structured into **3 branches - Imperial, Provincial and Subordinate Civil Services**. It further recommended that the **exams for the Provincial and Subordinate Civil Service be held in India**, while those for the **Imperial Civil Services be held in England**. Hence **this statement is incorrect, as the Commission recommended the holding of imperial civil services recruitment exams in England only and not simultaneously in both England and India**.

Statement 3 is incorrect: The age limit for Indians for recruitment to the civil services had been gradually reduced from 23 (in 1859) to 22 (in 1860) to 21 (in 1866) and finally to 19 (in 1878), as a result of consistent British policy to make the services more inaccessible to the Indians. However, in line with the **demands of the nationalists** to make the **civil services more accessible** to Indians by **increasing the age limit for recruitment**, this commission **recommended raising the age limit to 23 years (not dropping it to 19 years)**. Hence this statement is **incorrect**.

Knowledge Base:

- 1) This commission also recommended ending the artificial classification of British Indian Civil Services into the 'covenanted' and the 'uncovenanted' services.
- 2) The House of Commons in 1893 passed a resolution approving the recommendations of this Commission to hold simultaneous exams in England and India, however, this resolution was never implemented.

Q.20) With reference to the Legionnaires' disease, consider the following statements:

1. It is caused by a protozoan.
2. It spreads through inhalation of contaminated aerosols.
3. It can be prevented through BCG vaccine.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 3 only
- c) 2 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

Legionnaires' disease is a severe form of pneumonia – lung inflammation usually caused by infection. It's caused by a bacterium known as legionella. Most people catch Legionnaires' disease by inhaling the bacteria from water or soil.

Recently 11 people have been infected and four have succumbed to the **Legionnaires' disease** in Argentina.

Statement 1 is incorrect: Legionellosis is a “pneumonia-like illness that varies in severity from mild illness to a serious and sometimes fatal form of pneumonia. **It is caused by exposure to the Legionella bacteria** species found in contaminated water and potting mixes. Cases of legionellosis are often categorized as being community, travel or hospital acquired based on the type of exposure.

Transmission

Statement 2 is correct: **The most common form of transmission of Legionella is inhalation of contaminated aerosols from contaminated water.** Sources of aerosols that have been linked with transmission of Legionella include air conditioning cooling towers, hot and cold-water systems, humidifiers and whirlpool spas. To date, there has been no reported direct human-to-human transmission.

Treatment

Statement 3 is incorrect: Treatments exist, **but there is currently no vaccine available for Legionnaires' disease.** The non-pneumonic form of infection is self-limiting and does not require medical interventions, including antibiotic treatment. Patients with Legionnaires' disease always require antibiotic treatment following diagnosis.

Source: <https://www.downtoearth.org.in/news/health/argentina-s-mystery-pneumonia-outbreak-finally-identified-as-legionellosis-disease-84753>

<https://www.who.int/news-room/fact-sheets/detail/legionellosis>

Q.21) The staple commodities of export by the English East India Company from Bengal in the middle of the 18th century were:

- Raw cotton, oil-seeds and opium
- Sugar, salt, zinc and lead.
- Copper, silver, gold, spices and tea
- Cotton, silk, saltpetre and opium

Ans) d

Exp) Option d is the correct answer.

Cotton, raw silk, saltpetre, opium were the major commodities exported from Bengal by the English East India Company.

Source: UPSC PRELIMS 2018

Q.22) With reference to the life and career of Macaulay in British Indian government, consider the following statements:

- Being a proponent of mass education, he opposed the downward filtration theory regarding the development of education in India.
- His efforts resulted in the uniform and secular codification of laws in India.
- He laid the foundation for the modern police services in India.

Which of the statements given above is/ are correct?

- 1 only
- 2 only
- 1 and 3 only
- 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Thomas Babington Macaulay was a British Historian, Politician and later Member of Parliament, who served the British Indian Government as well. He joined as the law member of the Governor General's Council during the tenure of William Bentick. He also presented his famous Minute on Education to the Committee on Public Instruction which settled the debate of British sponsored public education in Indian in favour of Anglicists.

Statement 1 is incorrect: Macaulay was a proponent of the “Downward Filtration Theory” (not an opponent). He believed in educating a select section of Indians and was not concerned about taking education to the masses and making it accessible to them by using a vernacular medium. Hence this statement is incorrect.

Statement 2 is correct: Macaulay joined the British Indian government as the Law Member of the Governor-General's Council. **In that capacity he was instrumental in the codification of laws which were uniform and secular (not based on personal religious laws, as had been the case until now).** His efforts resulted in the Civil Procedure Law, 1859; the Indian Penal Code, 1860 and the Criminal Procedure Code, 1861. These laws laid the foundation of a more rule based and uniform and modern legal and judicial system in India, which being used even today. Hence this statement is correct.

Statement 3 is incorrect: Cornwallis, in 1793, **not Macaulay**, was responsible for laying the foundations of the modern police services in British India. Hence this statement is incorrect.

Source: Modern Indian History by Spectrum, Ch-26, Pg-587; Ch-30, Pg-634

Q.23) With reference to the administrative machinery in India at the eve of British conquest, consider the following pairs:

Official	Description
1. Kotwal	Maintained law and order within a city area
2. Faujdar	Took care of the army stationed in various provinces
3. Amil	Assessed and supervised revenue collection

Which of the pairs given above is/ are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 2 only

Ans) b

Exp) Option b is the correct answer.

In the administrative reforms process, some of the earlier Mughal offices like that of the Amil were abolished by the British and replaced by their own officials like the District Collector, while some like Kotwal, Thanedar etc were phased out gradually or retained in the British police system too with minor changes.

Pair 1 is correct: The **Kotwal** was an official who was expressly **in charge of maintaining law and order in a particular city area.** Hence this pairing is **correct.**

He was also supposed to **prevent any criminal activities and catch** those **responsible** for creating any disorder. He was responsible for **safeguarding the life and property of the residents** of a particular urban area.

Pair 2 is incorrect: The **Faujdar** was an official at the **provincial and district levels** whose main function was to **prevent law and order issues created by rebellions**. He was **not in charge of taking care of the army stationed** in the area. Hence this pairing is **incorrect**.

In the administration of the Mughal State and its Successor States, his duties included **ensuring safe passage to traders** within his jurisdiction, keeping **vigil over the recalcitrant zamindars**, **helping the Amil** in matters of revenue collection in special circumstances, etc.

Pair 3 is correct: The **Amil**, also sometimes known as the **Amalguzar**, was an official at the **provincial and district levels** whose main duty was to **assess and supervise the collection of revenue** from a particular area, with the **help of subordinate officials**. Hence this pairing is **correct**.

He must not be confused with the Patwari, whose main job was to maintain revenue records at the village level; or the Khot/ Muqaddam who was the village chief.

Source: Modern Indian History by Spectrum, Ch-26, Pg-580

<https://egyankosh.ac.in/bitstream/123456789/20236/1/Unit-14.pdf> Pg 26, Pg-27

Q.24) With reference to the Frazer Commission, consider the following statements:

1. It was appointed by Lord Curzon.
2. It resulted in the creation of the specialised CID branch of police.
3. It recommended that only Europeans be allowed to occupy officer level jobs in the Police.

Which of the statements given above is/ are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

In 1902-03, a Police Commission was established for Police Reforms under Sir Andrew Frazer. Some of its features and recommendations are discussed below.

Statement 1 is correct: **Lord Curzon**, the then **Viceroy of India**, appointed a **Commission on Police Reforms in 1902**, under the **chairmanship of Andrew Frazer** (hence called the Frazer Commission). Hence this statement is **correct**.

Statement 2 is correct: The Committee **recommended** that a **separate and specialised criminal investigation branch** be opened in the police services for **each Presidency**, under the **direct command and direction** of the **Inspector General of Police**. This **resulted in the creation** of the **Criminal Investigation Department (CID)** in the **provinces** and a **Central Intelligence Bureau at the Centre**. Hence this statement is **correct**.

Statement 3 is incorrect: The **Frazer Committee recommended** an **increase** in the number of **Police Officers recruited** from among the **Indians**, **not keeping them excluded** from Officer level jobs in the Police. Hence this statement is **incorrect**.

The Committee **recommended** that the **British Indian Police Services** should have **4 categories** - an **Imperial Service** (police **officers recruited entirely from England**), a **Provincial Police Service** (police **officers recruited from amongst Indians**), an Upper and a Lower Subordinate Service (non-officer cadre consisting of Inspectors, Sub-Inspectors, etc).

Source: Modern Indian History by Spectrum, Ch-26, Pg-582;

<http://mahacid.com/history-of-CID.html>

<https://www.indianculture.gov.in/rarebooks/report-indian-police-commission-1902-03> Pg 144

Q.25) Consider the following statements with reference to the Dark sky reserve:

1. Dark Sky Reserve is a land or region that has been developed such that it has minimal artificial light interference.
2. The cloudless skies and low atmospheric water vapor are the ideal conditions for the setting up of dark sky reserve.
3. India's first Dark Sky Reserve, administered by the Department of Science & Technology, will be set up in Hanle, Ladakh.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Statement 1 is correct: Dark Sky Reserve is a designation given to a place that has policies in place to ensure that a tract of land or region has minimal artificial light interference. It is a public or private land with a distinguished nocturnal environment and starry nights that has been developed responsibly to prevent light pollution. The International Dark Sky Association is a U.S.-based non-profit that designates places as International Dark Sky Places, Parks, Sanctuaries and Reserves, depending on the criteria they meet. Several such reserves exist around the world but none so far in India.

Statement 2 is correct: The cloudless skies and low atmospheric water vapour make it one of the best sites in the world to set up the Dark sky reserve for optical, infrared, sub-millimeter, and millimeter wavelengths. The Indian Astronomical Observatory at the high-altitude station of Indian Institute of Astrophysics is situated to the north of Western Himalayas at an altitude of 4,500 meters above mean sea level. It is a dry and cold desert with sparse human population and has the Hanle monastery as its nearest Neighbour.

Statement 3 is correct: India's first Dark Sky Reserve administered by the Department of Science & Technology will be set up in Hanle, Ladakh. Hanle is regarded as one of the world's most optimal sites for astronomical observations which are about 4,500 meters above sea level. However, ensuring that the site remains well-suited for astronomy implies keeping the night-sky pristine, or ensuring minimal interference to the telescopes from artificial light sources such as electric lights and vehicular lights from the ground.

Source: <https://www.thehindu.com/sci-tech/science/india-to-have-first-astronomy-dark-reserve-in-ladakh/article65849890.ece>

<https://indianexpress.com/article/explained/explained-sci-tech/ladakh-dark-sky-reserve-to-promote-astronomy-tourism-8132171/>

Q.26) With reference to the evolution of the Police system in British India, consider the following statements:

1. The system of putting a division under a Superintendent of Police was introduced by Lord Mayo.
2. An All-India Police Service was set up by the Police Act of 1861.
3. Lord Bentick put the police forces under the charge of the District Collector.

Which of the statements given above is/ are correct?

- a) 1 only
- b) 2 and 3 only
- c) 3 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: The **post of the Superintendent of Police (SP) was introduced by Lord Cornwallis, not Lord Mayo**, as a part of his famous administrative reforms to the civil services in British India. Hence this statement is **incorrect**.

Statement 2 is incorrect: The **Indian Police Act, 1861** (result of recommendations of the Police Reform Commission of 1860), created guidelines for setting up of **Provincial Police Services only (not an All-India Police Services)**. Hence this statement is **incorrect**.

All the **Provinces enacted this Act uniformly**, which is why the **Police system throughout British India was uniform**. However, in reality the **Police system existed in each Province separately** and there was **no pan-India police service at that time**. The police system in each Province was led by the Inspector General. **Statement 3 is correct:** **Lord Bentick**, the Governor General of British India from 1828-35 **reversed Cornwallis' policy of Separation of Powers** and put the police forces under the charge of **the District Collector**. Hence this statement is **correct**.

He abolished the office of the Superintendent of Police (SP). The collector was now to head the police force in his jurisdiction and the commissioner in each division was to act as the Superintendent of Police (SP). This arrangement **resulted in a badly organised police force**, putting a **heavy burden on the collector/magistrate**.

Source: Modern Indian History by Spectrum, Ch-26, Pg-581, 582;

<https://blog.ipleaders.in/police-policing-india-historical-perspective/#:~:text=1920%2C%20the%20imperial%20forces%20were%20open%20for%20the%20Indians>

Q.27) Consider the following statements:

1. Provincial autonomy in legislative matters was introduced by the Indian Council Act, 1861.
2. Lytton assigned provinces with certain sources of revenue like excise, licence fee, etc.
3. Ripon divided the sources of revenue into three groups viz, general, provincial and those to be divided between centre and provinces.

Which of the statements given above is/ are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: Legislative Decentralization (not Provincial Autonomy) was introduced by the Indian Council Act, 1861. **Hence this statement is incorrect**.

Statement 2 is correct: Lytton took further steps in the direction of policy of financial devolution. The provincial governments were authorised to meet out the expenditure on certain heads like land revenue, excise, stamps, law and justice etc., as suited them. For this purpose, the provinces were assigned certain

sources of revenue like excise, licence fee, etc. It was also decided that the surplus above the estimated income would be shared equally between the centre and the provinces and, in case of deficit, the centre would meet half the deficit of a province. It was expected that the new system would induce the provincial governments to develop their revenue resources.

Statement 3 is correct: In 1882, Ripon divided all sources of revenue into three groups—general (going entirely to centre), provincial (going entirely to the provinces) and those to be divided between the centre and the provinces.

Source: <https://www.legalserviceindia.com/legal/article-7006-the-emergence-and-evolution-of-high-courts-in-india-before-the-constitution-of-india-came-into-effect.html>

Modern Indian History by Spectrum, Ch-26, Pg-570, 572, 591

Q.28) With reference to the evolution of Judiciary in British India, consider the following statements:

1. Urdu was the official language of the courts before William Bentinck's reign.
2. The Europeans did not come under any sort of judicial jurisdiction before the reign of Cornwallis.
3. Before the enactment of Criminal Procedure code, Muslim law was administered in Fauzdari adalats.

Which of the statements given above is/ are correct?

- a) 3 only
- b) 2 and 3 only
- c) 1 and 2 only
- d) 1 and 3 only

Ans) a

Exp) Option a is the correct answer.

Statement 1 is incorrect: Persian (not Urdu) was the official language in courts before the reign of William Bentinck (1828-33). Then the practice was changed. Now, the suitor had the option to use Persian or a vernacular language. While in the Supreme Court, English language replaced Persian.

Statement 2 is incorrect: The Supreme Court established under the Regulating Act of 1773 during the tenure of Warren Hastings (Cornwallis' predecessor), included even European subjects under its jurisdiction. Hence this statement is incorrect.

Cornwallis went further and decided to expand the number of courts which could try Europeans and also the number of laws which were applicable to the Europeans. This went a great way in ensuring some level of equality between the Europeans and Indians in front of law.

Statement 3 is correct. District Fauzdari Adalats were set up to try criminal disputes and were placed under an Indian officer assisted by Qazi's and muftis. These adalats also were under the general supervision of the collector. Before the enactment of Criminal Procedure code in 1861, Muslim law was administered in Fauzdari Adalats.

Source: Modern Indian History by Spectrum, Ch-26, Pg-563 to 565

Q.29) Consider the following statements with reference to the economic impact of British rule in India:

1. In the zamindari system, there was rise in absentee landlordism due to increased number of intermediaries.
2. Zamindars introduced modern technology in agriculture with the help of the British government to increase the agricultural yield.
3. The trend of commercialization of agriculture was encouraged by the emergence of a unified national market and the growth of internal trade.

Which of the above-given statements is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) d

Exp) Option d is the correct answer.

The Britishers made several structural changes that impacted Indian agriculture and Industry aiding them in draining India's wealth.

Statement 1 is correct: The British government was only interested in the maximization of rents and in securing its share of revenue, had enforced the Permanent Settlement in many parts. Most of the Zamindars used to sublet the land to intermediaries and would relocate to big cities like Calcutta to live a luxurious life which created absentee landlordism. Landlords were not interested in increasing the yield. Land was just divided into many intermediaries. Increase in number of intermediaries to be paid also gave rise to absentee landlordism and increased the burden on the peasant. The interests of the zamindars lay only in the perpetuation of British rule and in opposing the national movement.

Statement 2 is incorrect: During the British times, the peasants had neither the means nor any incentive to invest in agriculture. The zamindar had no roots in the villages, while the government spent little on agricultural or technical education. There was also fragmentation of land. All of this made it difficult to introduce modern technology, which caused a perpetually low level of productivity. Thus, there was no attempt from Zamindars to introduce the modern technology in Agriculture.

Statement 3 is correct: In the second half of the 19th century in British rule, a significant trend was the emergence of the commercialization of agriculture. The new market trend of commercialization and specialization was encouraged by many factors—spread of money economy, replacement of custom and tradition by competition and contract, emergence of a unified national market, growth of internal trade, improvement in communications through rail and roads, and boost to international trade given by entry of British finance capital, etc.

Q.30) With reference to Global Agreement on the Ethics of Artificial Intelligence (AI), which of the following multilateral institutions is/are associated with it?

- 1. World Bank
- 2. International Monetary Fund
- 3. UNESCO
- 4. World Economic Forum

Select the correct answer using the code given below:

- a) 1 only
- b) 1, 2 and 4 only
- c) 3 only
- d) 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

All the Member states of the UN Educational, Scientific and Cultural Organization (UNESCO) recently adopted a historic agreement that defines the common values and principles needed to ensure the healthy development of AI.

Artificial intelligence leverages computers and machines to mimic the problem-solving and decision-making capabilities of the human mind. Global Agreement on the Ethics of Artificial Intelligence (AI), defines the common values and principles which will guide the construction of the necessary legal infrastructure to ensure the healthy development of AI.

Option 1 is incorrect: World Bank has no role in Global Agreement on the Ethics of AI.

Option 2 is incorrect: International Monetary Fund has no role in Global Agreement on the Ethics of AI.

Option 3 is correct: In November 2021, 193 countries reached a groundbreaking agreement at **UNESCO** on “Ethics of Artificial Intelligence”. It sets the first global normative framework while giving States the responsibility to apply it at their level. The agreement aims at how AI should be designed and used by the governments and the tech companies.

The main contents of the Recommendation include protecting data, banning social scoring and mass surveillance, helping to monitor and evaluate, and protecting the environment.

Option 4 is incorrect: World Economic Forum has no role in Global Agreement on the Ethics of AI.

Source: https://www.unesco.org/en/articles/unesco-member-states-adopt-first-ever-global-agreement-ethics-artificial-intelligence?TSPD_101_R0=080713870fab2000e5d326606e89171ef4c93404f444ff1fd7080004a6c25e4bd3fb059728eeebcc0864885f6a1430001ab8d2bb043ffa1cac803c96b5045ff36ae0d578b2656951a5a7cf45de4b1a361de9fe0fe42e84c6adc8b1ef4c578fc1

Q.31) Consider the following statements:

1. The first woman President of the Indian National Congress was Sarojini Naidu.
2. The first Muslim President of the Indian National Congress was Badruddin Tyabji.

Which of the statements given above is / are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: Annie Besant was the first woman President of Indian National Congress in 1917, Calcutta session. The **first Indian women President** of INC was Sarojini Naidu in 1925, Kanpur session.

Statement 2 is correct: Badruddin Tyabji was the "First Muslim" to become the "President of Indian National Congress" in 1887, Madras session. The first session was presided by W C Bonnerjee in 1885 at Bombay.

Q.32) Consider the following statements with reference to the impact on Industry during the British rule in India:

1. The local ship-building thrived under British rule as they wanted to connect India with International market.
2. Indian steel industry was restricted by Britishers from producing lower standard of steel.

Which of the above given statements is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

The Britishers steadily destroyed local Industry in India and due to their prohibitory practices, there was a late development of the modern industry in India.

Statement 1 is incorrect: The Britishers crushed the thriving local ship-building industry. Earlier, Surat and Malabar on the western coast and Bengal and Masulipatnam on the eastern coast were known for their ship-building industries. The British ships contracted by the Company were given a monopoly over trade routes, while even the Indian merchant ships plying along the coast were made to face heavy duties. In 1814, a law was passed under which Indian- built ships were refused to be considered 'British-registered vessels' which could trade with America and the European continent. So, by several restrictive policies, the decline of the Indian shipping industry was ensured by the British.

Statement 2 is correct: The British did not allow the Indian steel industry to grow much. Industries like the Tatas, which began to produce steel after a lot of trouble getting the required permissions, were restricted by being forced to produce a higher standard of steel for British use. The firms were not able to produce the lower standard of steel at the same time, so they were left out of the larger market that demanded the lower quality of steel. As restrictions were placed by Britain on Indian steel imports, this steel could only be used in India. Thus, the growth of the steel industry was hampered in India.

Q.33) Consider the following statements with reference to the nationalist critique of the colonial economy in India:

1. Prithwishchandra Ray and Gopal Krishna Gokhale were key people in the nationalist critique of colonial economy.
2. It was argued that India has been made a field for investment of British capital.

Which of the above given statements is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

The continuous economic drain caused by the Britishers did not go unnoticed and many nationalists gave a critique of British economic policies in colonial India.

Statement 1 is correct: Dadabhai Naoroji, Justice Mahadev Govind Ranade, Romesh Chandra Dutt, Gopal Krishna Gokhale, G. Subramania Iyer, and Prithwishchandra Ray were at the forefront of giving the critique economic of British policies.

Statement 2 is correct: Many nationalists said that the essence of 19th century colonialism lied in the transformation of India into a supplier of foodstuffs and raw materials to the metro cities, a market for metropolitan manufacturers and a field for investment of British capital.

Source: A Brief History of Modern India by Rajiv Ahir (Spectrum), Chapter 28; 2020th Edition

Q.34) Which of the following actions represent the British Policy during the mercantile phase of colonization in India?

1. Major changes were introduced in the judicial system of India to protect British Interests.
2. Traditional Indian culture and civilization was criticized to promote the British culture.

Select the correct answer using the code given below:

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) d

Exp) option d is the correct answer.

The **Period of Merchant Capital (Mercantilism)** is often described as the **Period of Monopoly Trade and Direct Appropriation**. It is also known as the **Period of East India Company's Domination** which ranged between **1757–1813**.

Statement 1 and 2 are incorrect: During the period of mercantilism (1757 to 1813), the primary objective of the East India company was to focus on the revenue collection from India and to invest that same revenue in purchasing the raw material for British Industries as it was the peak of Industrial revolution in Britain. The British were least concerned about the administrative, political, economic or sociocultural changes in India. So, during the period of Merchant Capital (Mercantilism), **no basic changes were introduced in administration, judicial system, transport and communication**, methods of agricultural or industrial production, forms of business management or economic organization. Nor were any major changes made in education or intellectual field, culture or social organisation. In fact, **the traditional Indian civilization, religions, laws, caste system, family structure, etc., were not seen as obstacles in colonial exploitation as their focus was on revenue collection only.**

Source: A Brief History of Modern India by Rajiv Ahir (Spectrum), Chapter 28; 2020th Edition

Q.35) Consider the following statements with reference to the National Clean Air Programme:

1. This programme is executed by Central Pollution Control Board in accordance with Air (Prevention and Control of Pollution) Act, 1981.
2. It is being implemented only in cities which are non-conforming to national ambient air quality standards (NAAQS) consecutively for more than 10 years.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

National Clean Air Programme (NCAP) is the first ever effort in the country to frame a national framework for air quality management with a time-bound reduction target.

Statement 1 is correct: **National Clean Air Programme (NCAP) mentions that the Central Pollution Control Board (CPCB) will execute this nation-wide programme in consonance with the section 162 (b) of the Air (Prevention and Control of Pollution) Act, 1981.**

Statement 2 is incorrect: The National Clean Air Programme (NCAP) launched in 2019 **is today being implemented in targeted 132 cities, non-conforming to national ambient air quality standards (NAAQS) consecutively for five years (not 10 years)**. Out of 132, 124 cities include 34 million plus cities (MPCs)/urban agglomerations identified by Fifteenth Finance Commission (XV-FC). There are 8 others million plus cities covered under XV-FC grant for receiving performance-based grant for air quality improvement, which are also covered under the programme.

Q.36) Which of the following statements is/are correct with reference to Liaquat Hussain?

1. He was associated with the Swadeshi Movement.
2. He organized the East Indian Railway strike in Bengal region.
3. He wrote critical articles in Urdu to rouse nationalist sentiments among Muslims.

Select the correct answer using the code given below:

- a) 2 and 3 only
- b) 2 only
- c) 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Statement 1,2 and 3 are correct: Liaquat Hussain of Patna was a popular agitator against British during the Swadeshi Movement and was one of a very few Muslim leaders who supported the Swadeshi Movement. During 1906, he organized the East Indian Railway strike in Bengal region.

He also wrote fiery articles in Urdu to rouse nationalist sentiments in Muslims. He was supported by other Muslim swadeshi agitators like **Ghaznavi, Rasul, Din Mohammed, Deedar Bux, Moniruzzaman, Ismail Hussain, Abdul Hussain, and Abdul Gaffar.**

Source: A Brief History of Modern India by Rajiv Ahir (Spectrum), Appendices; 2020th Edition

Q.37) Who among the following launched an Anti-Non-Cooperation Association in 1920 in India?

1. Purushottamdas Thakurdas
2. Jamnadas Dwarkadas
3. Pheroze Sethna

Select the correct answer using the code given below:

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

The **Anti-Non-Cooperation Association 1920** was started by **big businessmen of Bombay in 1920** against the Non-Cooperation/Khilafat Movement (1920–1921). It was **established by Jamnadas Dwarkadas, Purshottamdas Thaukr Dass, Cowasji Jehangir, Pheroze Sethna and Setalvad.** The businessmen of Bombay felt that the movement would encourage the labour strikes which in Bombay Presidency turned out be violent at earlier occasion.

Source: A Brief History of Modern India by Rajiv Ahir (Spectrum), Appendices; 2020th Edition

Q.38) Consider the following statements with reference to Deepawali Declaration made during British rule in India.

1. It was made by Lord Chelmsford.

2. It declared the intention of the British government to facilitate India in attaining dominion status.
3. The signatory to the declaration included Moti Lal Nehru and Mahatma Gandhi.

Which of the above given statements is/are correct?

- a) 2 only
- b) 3 only
- c) 1 and 2 only
- d) 1 and 3 only

Ans) a

Exp) Option a is the correct answer.

After Nehru report, leaders of Indian nationalist movement become increasingly vocal in demanding dominion status for India. The Deepawali Declaration was made to quell such rising sentiments.

Statement 1 is incorrect: Deepawali Declaration was a statement made by Lord Irwin, then Viceroy of India, on 31 October 1929 regarding the status of India in the British empire. It is also known as Irwin Declaration. There was great rejoicing because it was just three days before Deepawali and therefore called “Deepawali Declaration”.

Statement 2 is correct: The Deepawali Declaration attempted to clarify to its British and Indian audiences that the intention of the British government was to facilitate India attaining dominion status in the future. However, there was no mention of any timeline. It was intended to calm leaders of the Indian nationalist movement who had become increasingly vocal in demanding dominion status for India.

Statement 3 is incorrect: The Declaration was a five-line statement in simple non-legal language. There were no signatories such as Moti Lal Nehru or Mahatma Gandhi. In India, nationalist leaders welcomed the Declaration and radically changed their mode of engagement with the British government and they now wanted all negotiations between Indian political leaders and Britain to be about the formalization of dominion status for India and the framing of a new Constitution.

Q.39) Which of the following events occurred during the Viceroyship of Lord Linlithgow?

1. Rajkot Satyagraha
2. August Revolution
3. Separation of Burma from India

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Lord Linlithgow was the longest serving viceroy of India. He was the viceroy from 1936 to 1944. During his time, many important events took place.

Option 1 is correct: Rajkot Satyagraha took place in 1938-39. It was against the princely ruler of Rajkot state known as the ‘Thakore. The ruler’s oppressive taxation regimes, curbs/restrictions on civil liberties such as freedom of speech, freedom to assemble, lack of access to education and other welfare services resulted into this satyagraha against him.

Option 2 is correct: The **Quit India Movement, also known as the August Kranti Movement, was a movement** launched at the Bombay session of the All-India Congress Committee by Mahatma Gandhi on

8th August 1942, during World War II, demanding an end to British rule in India. It is also known as **August Revolution which happened during Lord Linlithgow rule.**

Option 3 is correct: The British colony of Burma was part of the British run-state in India, the Empire of India, from 1824 to 1937. **Burma was separated from the rest of the Indian Empire in 1937 and at that time, Lord Linlithgow was the Viceroy (1936-1944).**

Knowledge Base:

Other important events during Lord Linlithgow's time:

- Winston Churchill was elected as the prime minister of England in 1940.
- The Congress passed the 'Quit India Resolution' in 1942 which started the Quit India movement. It was famously called as August revolution.
- It was launched after the failure of the Cripps Mission when it failed to solve the constitutional deadlock.
- Aruna Asaf Ali hoisted the tricolor on the Gowalia Tank ground and on August 9 night, the senior leaders of the Congress were arrested. Due to the arrests, an action plan for the movement was made.
- Second world war began in 1939 and lasted till 1945. It was during Linlithgow's time that the congress ministries resigned due to outbreak of second world war.

Q.40) Dvorak technique, which was recently seen in news, refers to?

- a) It is the conceptual model that scientists use to describe the origin and subsequent evolution of the Universe.
- b) It is a cloud pattern recognition technique based on development and decay model of the tropical cyclone.
- c) It is an effect which explains upward and downward shift in frequency of a moving source for an observer.
- d) It allows tracking a questioned object and referring it to a specific location.

Ans) b

Exp) Option b is the correct answer.

Option a is incorrect: The big bang theory is the conceptual model that scientists use to describe the origin and subsequent evolution of the Universe. It states that the universe began as a tiny, violent explosion about 14 billion years ago. That event produced all of the matter and energy in the Universe, including its hydrogen and helium. Some of these light atoms were forged in the cores of stars, over billions of years, into atoms of the heavier elements that exist today, including the atoms of which we ourselves are made.

Option b is correct: Dvorak technique was first developed in 1969 and tested for observing storms in the northwest Pacific Ocean. Forecasters used the available satellite images obtained from polar orbiting satellites to examine the features of the developing tropical storms (hurricanes, cyclones and typhoons). During day time, images in the visible spectrum were used while at night, the ocean would be observed using infrared images.

- 1) **The Dvorak technique was a cloud pattern recognition technique based on a concept model of the development and decay of the tropical cyclone.**
- 2) The Dvorak technique helps forecasters to do pattern recognition from the observed structure of the storm, locate its eye and estimate the intensity of the storm.
- 3) Dvorak was an American meteorologist best credited for developing the Dvorak technique in the early 1970s. The technique has been upgraded multiple times since then, and after a recent software update in May in the year 2022, it has been named the Advanced Dvorak Technique (ADT), coined by the National Hurricane Centre of the National Oceanic and Atmospheric Administration (NOAA)

Option c is incorrect: The Doppler effect can be described as the effect produced by a moving source of waves in which there is an apparent upward shift in frequency for observers towards whom the source

is approaching and an apparent downward shift in frequency for observers from whom the source is receding. It is important to note that the effect does not result because of an actual change in the frequency of the source.

Option d is incorrect: Geospatial technology allows tracking a questioned object and referring it to a specific location. This feature helps people to complete scientific or non-scientific tasks, governmental and non-governmental, military and civil. Using geospatial technology is comparatively inexpensive and simple, while its possibilities are next to unlimited. Applications of geospatial technologies are incorporated in almost any sector, industry, or research where the location is important.

Q.41) Mahatma Gandhi said that some of his deepest convictions were reflected in a book titled, “Unto this Last” and the book transformed his life. What was the message from the book that transformed Mahatma Gandhi?

- Uplifting the oppressed and poor is the moral responsibility of an educated man
- The good of individual is contained in the good of all
- The life of celibacy and spiritual pursuit are essential for a noble life
- All the statements (a), (b) and (c) are correct in this context

Ans) b

Exp) Option b is the correct answer.

Option b is correct: Gandhi summarised Unto This Last's teachings in these three points:

1) That the good of the individual is contained in the good of all.

2) That a lawyer's work has the same value as the barber's, inasmuch as all have the same right of earning their livelihood from their work.

3) That a life of labour, i.e., the life of the tiller of the soil and the handicraftsman, is the life worth living.

Option a and c are incorrect: These were not the message from the book ‘Unto this Last’ that transformed Gandhi

Source: UPSC PRELIMS 2011

Q.42) The famous Curzon-Kitchener controversy is associated with which of the following?

- The partition of Bengal.
- Ending the dual control of military affairs.
- Reducing the land tax during famine
- Appointment of Indians in Executive Council

Ans) b

Exp) Option b is the correct.

In the Viceroy executive council in British India, there used to be two members representing the military department, the first one was Commander in chief who was the executive head of the army in India. The second was the military member who advised Governor-General on military matters. **Lord Kitchener who came to India in 1902 objected to such dual control on the military. He wanted to abolish the office of**

the military member who advised the Governor General on military matters. But Lord Curzon strongly opposed the idea.

<https://www.cambridge.org/core/journals/comparative-studies-in-society-and-history/article/abs/issue-role-and-personality-the-kitchenercurzon-dispute/089C1F9CA5BBE5DB5C7CA840E0C5AA9D>

Q.43) Warren Hastings used the method of revenue farming or Ijaradari in Bengal. Which of the given option best describe the term Ijaradari system?

- The practice in which the contract of collecting revenue was given to the highest bidder.
- It is related to the land-grants and rights given for a specific service.
- It is a system in which the state collected land-revenues directly from the body of peasant proprietors.
- In this system the settlements were made estate-wise with landowners who collectively claimed to be landlords of the estate.

Ans) a

Exp) Option a is the correct answer.

Option a is correct: Warren Hastings used the method of revenue farming or Ijaradari in Bengal to collect the revenues. **Ijaradari is a practice of revenue farming in which contract of collecting revenue was given to the highest bidder.** The system contained many abuses associated with speculative profit making and revenue collections fluctuated widely causing uncertainties.

Option b is incorrect: Inams are the Land-grants and rights given for a specific service.

Option c is incorrect: Ryotwari is the system of land-settlement in which cultivators were given proprietary rights in land and state tried to collect land-revenues directly from this body of peasant proprietors.

Option d is incorrect: In Mahalwari system, the revenue settlements were made either village wise or estate-wise (Mahals) with landowners or heads of families who collectively claimed to be landlords of the village or the estate. In these areas joint-landlords of village lands were collectively responsible for revenue appropriation.

Q.44) Consider the following statements regarding the Indian Factory Act, 1891:

- The act prohibited the children under the age of twelve years from working in the factories.
- The District Magistrate was to function as the Inspector of all the factories in his district.
- The act allowed the women to work in night shifts.

Which of the statements given above are correct?

- 1 and 2 only
- 2 only
- 1 and 3 only
- 2 and 3 only

Ans) b

Exp) Option b is the correct answer.

The first Factory Act was passed by the Indian Government in 1881. This Act was amended to pave the way for Factory Act of 1891. The provisions of the 1891 act are as follows:

Statement 1 is incorrect: Provision 7 (1) of the act's states that "No child shall be employed in any factory if he is under the age of nine years (not 12 years)."

Statement 2 is correct: According to the act “The District Magistrate shall be the Inspector of all the factories in the district.”

Statement 3 is incorrect: No woman was allowed to work in night. There was fixed maximum working hours for women which was 11 hours per day.

Knowledge Base: The other features of 1891 are as follows:

1) The act increased the minimum age from 7 to 9 years and the maximum age from 12 to 14 years for children.

2) It reduced the maximum working hours for children to 7 hours per day.

Source: https://www.indiacode.nic.in/repealed-act/repealed_act_documents/A1881-15.pdf

https://www.indiacode.nic.in/repealed-act/repealed_act_documents/A1891-11.pdf

Q.45) Consider the following statements with reference to the PM-SHRI:

1. It is a scheme for the development of schools which will reflect the key features of the new National Education Policy, 2020.

2. The National Quality Assurance Framework (NQAF) will be used to measure the performance outcomes under the scheme. Which of the statements given above is/are correct?

a) 1 only

b) 2 only

c) Both 1 and 2

d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: Prime Minister Narendra Modi has announced that nearly 14,500 schools will be upgraded across India under a new centrally sponsored scheme, Pradhan Mantri Schools for Rising India (PM-SHRI). **According to the Ministry of Education, the scheme will cover 14,500 existing schools which will be redeveloped to reflect the key features of the new National Education Policy, 2020. The plan to launch the PM SHRI scheme was first discussed with the education ministers of states and UTs, at a conference which was organized by the Ministry of Education.**

Statement 2 is incorrect: A School Quality Assessment Framework (SQAF) (Not NQAF) is being developed, specifying the key performance indicators to measure outcomes. Quality evaluation of these schools at regular interval will be undertaken to ensure the desired standards.

Source: <https://www.google.com/url?>

Q.46) Consider the following statements regarding the development of Hill Station's during the British Rule:

1. The development of Hill Stations led to the development of cantonments.

2. Hill stations were developed to protect the army from diseases and epidemics.

3. Sir John Lawrence officially declared Manali the summer capital of the British empire in 1864.

Which of the statements given above are correct?

a) 1 and 2 only

b) 1 and 3 only

c) 2 and 3 only

d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: The founding and settling of hill stations was initially connected with the needs of the British army. Shimla was founded during the Gurkha War (1815-16); the Anglo-Maratha War of 1818 led to British interest in Mount Abu; and Darjeeling was wrested from the rulers of Sikkim in 1835. **The overwhelming presence of the army made these stations a new kind of cantonment in the hills.**

Statement 2 is correct: The temperate and cool climate of the Indian hills was an advantage, particularly since the **British associated hot weather with epidemics.** Cholera and malaria were particularly feared, **and attempts were made to protect the army from these diseases.** These hill stations were also developed as sanitariums, i.e., places where soldiers could be sent for rest and recovery from illnesses.

Statement 3 is incorrect: The hills stations approximated the cold climates of Europe; they became an attractive destination for the new rulers. It became a practice for viceroys to move to hill stations during the summer months. **Sir John Lawrence officially declared Shimla (not Manali) the summer capital of the British empire in 1864.** Shimla also became the official residence of the commander-in-chief of the Indian army.

Knowledge Base: Hill stations became strategic places for billeting troops, guarding frontiers and launching campaigns against enemy rulers. In the hill stations the British and other Europeans sought to recreate settlements that were reminiscent of home. The buildings were deliberately built in the European style.

<https://indianculture.gov.in/stories/shimla-summer-capital>

Q.47) Consider the following statements regarding the shortcomings of the Zamindari System in India:

1. Some of the zamindars used to add extra charges called 'abwabs' on top of the regular land revenue rates.
2. Government used to sell zamindari rights if zamindar failed to pay the due tax.
3. The zamindar could seize the tenant's property if the rent was not paid in time.

Which of the statements given above are correct?

- a) 1, 2 and 3
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) a

Exp) Option a is the correct answer.

Under the Permanent Settlement of Bengal or Zamindari System, the Zamindars were given proprietary rights provided they paid a fixed land-revenue to the East India Company. Permanent Settlement was introduced in Bengal and Bihar in 1793. There were many shortcomings in the Zamindari system, few of them are mentioned below:

Statement 1 is correct: The actual cultivation was carried on by peasants who paid the zamindars at customary rates fixed in every pargana. **Oppressive zamindars often added extra charges called 'abwabs' on top of the regular land revenue rates.**

Statement 2 is correct: The zamindar had to pay the tax fixed upon it, if he did so then he was the proprietor, the owner of his zamindari. He could sell, mortgage or transfer it. The land would be inherited by heirs in due course. **If the Zamindar failed to pay the tax due, then the Government would take the zamindari and sell it by auction and all the rights would vest in the new owner.**

Statement 3 is correct: The actual cultivation of the Land was carried on by peasants who were reduced to the status of tenants of the zamindars. **The zamindar could seize and carry away the tenant's property if the rent was not paid. He did not need the permission of any court of law to do this.** This was a legal method of harassment.

Source: <https://egyankosh.ac.in/bitstream/123456789/20325/1/Unit-15.pdf>

<https://egyankosh.ac.in/bitstream/123456789/22092/1/Unit-25.pdf>

Q.48) Which one of the following options is correct regarding the Madras Torture Commission?

- It enquired into the atrocities committed by British in process of enforcement of the Press act of 1908 and 1910 in India.
- It enquired into violence practised by the native revenue and police officials in Madras region.
- It enquired into the violence committed during Jallianwala Bagh massacre.
- It enquired about the atrocities done to political prisoners during Quit India Movement in Madras region.

Ans) b

Exp) Option b is the correct answer.

Option a is incorrect: In 1921, the Press Committee was constituted under Sir Tej Bahadur Sapru, Law Member, Viceroy's Executive Council. **The Committee inquired into the atrocities done during the Press act of 1908 and 1910.** It recommended to repeal the 1908 and 1910 acts. This was done so by the government under the Press Law Repeal and Amendment act, 1922.

Option b is correct: Madras Torture Commission was set up by the then Madras Government in the year 1854, under orders from the Court of Directors of the East India Company. The Commission was appointed to enquire into the use of torture by the native servants of the state for realising the Government revenue. However, the scope of the enquiry was soon enlarged to include the alleged use of torture in extracting confessions in police cases. **It enquired into personal violence practised by the native revenue and police officials.**

Option c is incorrect: After the Jallianwala Bagh massacre, the Secretary of State for India, Edwin Montagu, ordered a committee of inquiry to investigate the matter. So, on October 14, 1919, the Government of India announced the formation of the **Disorders Inquiry Committee** also known as **Hunter Commission.**

Option d is incorrect: No such committee was formed to enquire the Quit India Movement.

Knowledge Base:

Madras Torture Commission:

The commission consisted of three members. It was an all-European body called upon to investigate the prevalence of torture in a South Indian province in the mid-nineteenth century. **The Report was Published in 1855.** It recommended for the spread of education, the opening of communications, these were only gradual and general remedies. It also recommended to have European superintendents of police for each district.

Q.49) Consider the following statements regarding the overall impact of the British land revenue system:

- The Land revenue system promoted the commercialization of Indian Agriculture.
- It resulted in shifting of land into the hands of money-lenders from the cultivators.

Which of the statements given above is/are correct?

- 1 only
- 2 only
- Both 1 and 2
- Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

The British Land revenue system mainly consist of three systems.

- Permanent Settlement.
- Ryotwari System.

- Mahalwari Settlement

The above three systems were developed to increase the revenue of the British Government. These three systems had very high impact on Indian Society.

Statement 1 is correct: The Land revenue system helped in Commercialization of Indian Agriculture. The commercial transactions in the agrarian economy multiplied as the markets for agricultural inputs including land expanded. **The high assessment of revenue stimulated production of cash crops like sugarcane, cotton, indigo, etc.** The improved transport networks, the railways and the cotton roads facilitated growth of internal markets for agricultural products.

Statement 2 is correct: The revenue system resulted in shifting of land into the hands of money-lenders and merchants who ousted the old cultivating proprietor and reduced them to tenants at will. New markets and profitable opportunities become available to merchants and moneylenders due to increased possibilities of spatial mobility. The creation of new proprietary rights in land and expansion of canal irrigation increased the value of land. The peasants pushed by the market-prices borrowed money from moneylenders. Peasants were often forced to mortgage their lands due to debt-trap and this resulted in a substantial number of land-transfers.

Q.50) With reference to Scheme for Economic Empowerment of De-notified tribes (SEED) Scheme, consider the following statements:

1. It is an initiative for economic development of tribal hunters and gatherers and transforming them into entrepreneurs.
2. It is implemented by the Ministry of Social Justice & Empowerment.
3. One of its components is to provide health insurance cover of a specified amount to eligible tribal families.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 2 and 3 only

Ans) d

Exp) Option d is the correct answer.

The Minister of Social Justice and Empowerment launched the Scheme for Economic Empowerment of DNTs (SEED) for the welfare of De-notified, Nomadic and Semi Nomadic Communities.

Statement 1 is incorrect. The **Scheme for Economic Empowerment of De-notified tribes (DNTs) (SEED)** aim to economically empower De-notified, Nomadic and Semi Nomadic Communities. There are four components of the SEED scheme:

- 1) **Educational empowerment- Free coaching to students from these communities for Civil Services, entry to professional courses like medicine, engineering, MBA, etc.**
- 2) Health Insurance through PMJAY of National Health Authority.
- 3) Livelihoods to support income generation, and
- 4) Housing through PMAY/IAY

Whereas, **Van Dhan Yojana or Van Dhan Scheme**, that is implemented by TRIFED targets for economic development and livelihood generation of tribal gatherers and transforms them into entrepreneurs.

Statement 2 is correct. The Scheme for Economic Empowerment of DNTs (SEED) is implemented by the **Ministry of Social Justice & Empowerment** for a period of 5 years starting Financial Year 2021-22 to 2025-26.

Statement 3 is correct. The Scheme for Economic Empowerment of DNTs (SEED) will provide financial assistance to **National Health Authority (NHA)** in association with **State Health Agencies (SHAs)** for providing a health insurance cover of Rs 5 lakhs **per family** per year to DNT, NT and SNT families as per norms of AB-PMJAY. The families having income from all sources of Rs.2.50 lakh or less per annum and not availing any such benefits from similar Scheme of Centre Government or the State Government are eligible for availing benefits of SEED Scheme.

Q.1) Which one of the following straits is nearest to the International Date Line?

- a) Malacca Strait
- b) Bering Strait
- c) Strait of Florida
- d) Strait of Gibraltar

Ans) b

Exp) Option b is the correct answer.

The **international date line** passes through the mid-Pacific Ocean and roughly follows a 180 degrees longitude north-south line on the Earth. It is located halfway around the world from the prime meridian – the 0 degrees longitude line in Greenwich, England.

Option b is correct. The Bering Strait is a **strait between the Pacific and Arctic oceans**, separating the Chukchi Peninsula of the Russian Far East from the Seward Peninsula of Alaska.

The Bering Strait is nearest to the International Date line. The International Date Line runs between the Diomed Islands and St. Lawrence Islands located in the middle of the strait.

Options a, c and d are incorrect.

Malacca Strait: The Strait of Malacca is a narrow stretch of water, 580 mi (930 km) in length, between the Malay Peninsula (Peninsular Malaysia) and the Indonesian island of Sumatra.

1) Strait of Florida: The Straits of Florida is a strait located south-southeast of the North American mainland, between the Gulf of Mexico and the Atlantic Ocean.

- 2) **Strait of Gibraltar:** The Strait of Gibraltar also known as the Straits of Gibraltar is a narrow strait that connects the Atlantic Ocean to the Mediterranean Sea and separates the Iberian Peninsula in Europe from Morocco in Africa.

Source) Bering Strait | strait, Pacific Ocean | Britannica

Q.2) Which among the following can be considered the best description for the Elastic Rebound Theory of Earthquakes?

- Emergence of the molten lava from inside the crust causes earthquakes.
- Earthquakes are caused by the elasticity of the inner core of the earth.
- Crust of the earth gradually stores stress that is released suddenly causing earthquakes.
- Earthquakes are ruptures of the surface as the result of strong ground shaking.

Ans) c

Exp) Option c is the correct answer.

The elastic rebound theory was given by Harry Fielding Reid explaining earthquakes.

Option a is incorrect: The **emergence of lava would more appropriately be explained by volcanoes** and not earthquakes.

Option b is incorrect: **Earth's inner core** is the innermost geologic layer of planet Earth. It is primarily a **solid ball** and thus **no question of it having elasticity** rises.

Option c is correct: The **elastic rebound theory is an explanation for how energy is spread during earthquakes**. As **rocks on opposite sides of a fault are subjected to force and shift, they accumulate energy and slowly deform until their internal strength is exceeded. At that time, a sudden movement occurs along the fault, releasing the accumulated energy**, and the rocks snap back to their original undeformed shape. If a stretched rubber band is broken or cut, elastic energy stored in the rubber band during the stretching will suddenly be released. Similarly, **the crust of the earth can gradually store elastic stress that is released suddenly during an earthquake**. In geology, the elastic rebound theory was the first

theory to satisfactorily explain earthquakes. Previously, it was thought that ruptures of the surface were the result of strong ground shaking.

Option d is incorrect: Earthquakes are ruptures of the surface as the result of strong ground shaking was a previous theory explaining earthquakes. Elastic rebound theory proves otherwise.

Source: <https://courses.seas.harvard.edu/climate/eli/Courses/EPS281r/Sources/Earthquake-cycle/1-Elastic-rebound%20theory%20Wikipedia.pdf>

<https://earthquake.usgs.gov/earthquakes/events/1906calif/18april/reid.php>

Q.3) Consider the following statements with reference to the distribution of the Earthquakes in the world:

1. Earth's major earthquakes occur mostly in regions coinciding with the margins of tectonic plates.
2. The seismic activity is uniform throughout the Circum-Pacific Belt where most of earthquakes occur.
3. Alpine-Himalayan belt is the region of occurrence of more than half of the Earthquakes of the world.

Which of the above given statements is/are correct?

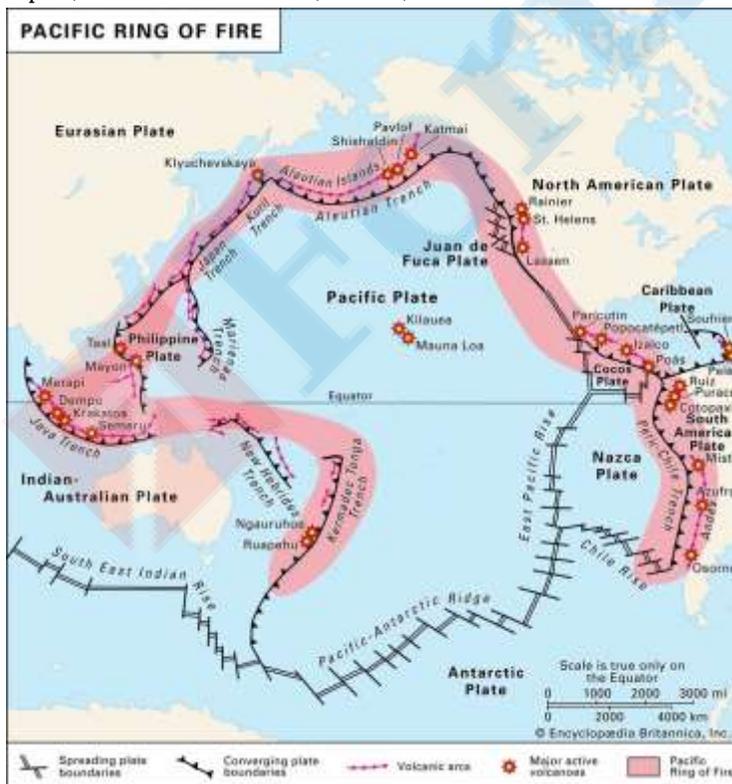

- a) 1 only
- b) 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) a

Exp) Option a is the correct answer.

The distribution of the earthquakes around the world follows a certain pattern as they occur around tectonic plates.

Statement 1 is correct: Earth's major earthquakes occur mainly in belts coinciding with the margins of tectonic plates. The most important earthquake belt is the Circum-Pacific Belt, which affects many populated coastal regions around the Pacific Ocean—for example, those of New Zealand, New Guinea, Japan, the Aleutian Islands, Alaska, and the western coasts of North and South America.

Statement 2 is incorrect: The seismic activity is not uniform throughout the Circum-Pacific Belt, and there are many branches at various points. It is so because at many places the Circum-Pacific Belt is associated with volcanic activity, it has been popularly dubbed the “Pacific Ring of Fire.”

Statement 3 is incorrect: The Circum-Pacific Belt accounts for more than two third of all earthquakes. Alpine-Himalayan belt is responsible for only 15-17 per cent of the earthquakes in the world.

Source: <https://www.usgs.gov/faqs/where-do-earthquakes-occur>

Q.4) Which among the following can be considered as the impact of the earthquake in a region?

1. Tsunamis
2. Landslides
3. Fires
4. Soil liquefaction

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 1 and 4 only
- c) 2 and 4 only
- d) 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct answer.

The damage caused by earthquakes is from ground shaking, ground rupture, landslides, fires, tsunamis, and soil liquefaction.

Option 1 is correct: A large number of tsunamis are a result of earthquakes. When an earthquake occurs, the ground shakes, and the movement moves up or down. As a result, the water gets displaced, and it starts moving randomly in all directions and ends up disturbing the ocean's surface. The displaced water tries to recover equilibrium, but it creates waves because of the gravitational pull. These waves can eventually become destructive and result in a natural disaster.

Option 2 is correct: Strong earthquake ground shaking greatly increases the likelihood of landslides where landscape is susceptible to these types of ground failure. If the ground is saturated with water, particularly following heavy rainfall, the shaking will result in more landslides than normal.

Option 3 is correct: Earthquake damage facts show that fires caused by earthquakes are the second most common hazard. Earthquake fires start when electrical and gas lines are dislodged due to the earth's shaking. Fires are often caused by broken or damaged lines that cause a spark after coming into contact with flammable substances or structures.

Option 4 is correct: Liquefaction takes place when loosely packed, water-logged sediments at or near the ground surface lose their strength in response to strong ground shaking. Liquefaction occurring beneath buildings and other structures can cause major damage during earthquakes.

Source: <https://www.clark-shawnee.k12.oh.us/userfiles/36/Classes/1702/chap08.pdf?id=2780>

<https://www.earthquakeauthority.com/Blog/2020/How-Earthquakes-Cause-Damage-Destruction>

Q.5) Which one of the following statements correctly describes the term ‘Click Chemistry’, recently seen in news?

- a) It is a type of gene editing technique that gives scientists the ability to change an organism's DNA.
- b) It is a new approach to the synthesis of drug-like molecules that can accelerate the drug discovery process.
- c) It is a branch of chemistry to study the properties and behavior of naturally occurring organometallic compounds.

d) It examines the abundance of elements and compounds in the universe and their reactions with each other.

Ans) b

Exp) Option b is the correct answer.

Recently, Carolyn Bertozzi and Barry Sharpless of the United States and Morten Meldal of Denmark have been given the **Nobel Prize for Chemistry for developing the relatively recent field of 'Click Chemistry'** and demonstrating its vast potential in pharmaceutical and other industries.

Option b is correct: Barry Sharpless is the originator of the concept of 'Click Chemistry'. The name 'click' has been taken from the click sound that airline seat belts make when they are fastened. The idea is that while trying to produce any particular compound or a complex molecule, one must look for starting molecules that easily react with each other.

(1) Click chemistry describes chemistry tailored to generate substances quickly and reliably by joining small units together. It is a newer approach to the **synthesis of drug-like molecules that can accelerate the drug discovery process** by utilizing a few practical and reliable reactions. In other words, scientists have to look for molecules that easily fit into each other, or 'click' with each other. It makes the resultant chemical reaction more efficient.

Option a is incorrect: Genome editing (also called gene editing) is a group of technologies that give scientists the ability to change an organism's DNA. These technologies allow genetic material to be added, removed, or altered at particular locations in the genome. Several approaches to genome editing have been developed. A well-known one is called **CRISPR-Cas9**, which is short for clustered regularly interspaced short palindromic repeats and CRISPR-associated protein9.

Option c is incorrect: Inorganic chemistry is the study of inorganic compounds, or compounds that don't contain a C-H bond. A few inorganic compounds do contain carbon, but most contain metals. Topics of interest to inorganic chemists include ionic compounds, **organometallic compounds**, minerals, cluster compounds, and solid-state compounds.

Option d is incorrect: Astrochemistry examines the abundance of elements and compounds in the universe, their reactions with each other, and the interaction between radiation and matter.

Knowledge Base:

Application of Click Chemistry:

(a) The pharmaceutical industry uses a lot of naturally occurring but industrially synthesized molecules. Every kilogram of a drug produced results in the generation of nearly 25-100 kg of chemical waste. This can be reduced by click chemistry.

(b) Click Chemistry could work in the chemical processes happening in the living cells as well. This has shown the promise of treating advanced stage cancer. Cancer drugs based on this approach are now undergoing clinical trials.

Q.6) Consider the following statements with reference to the Tsunamis:

1. It can be caused by submarine landslides due to movement of sediments along the floor of the sea.
2. The speed of the tsunami decreases as tsunami moves from deep waters to the shallow waters.
3. The attraction of moon plays an important role in the formation of Tsunamis.

Which of the above given statements is/are correct?

- a) 3 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

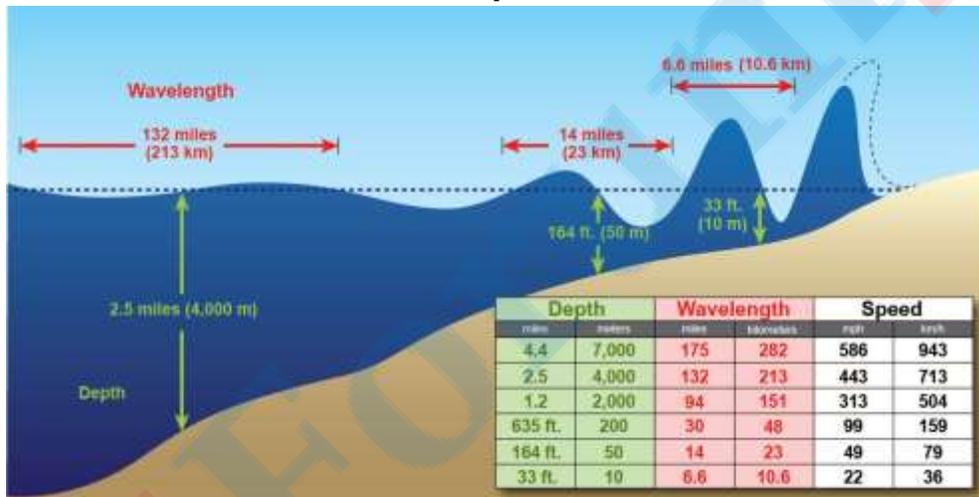

Ans) b

Exp) Option b is the correct answer.

Tsunami is a Japanese word for “Harbour wave”. A tsunami is a series of very long-wavelength waves in large water bodies like seas or large lakes caused by a major disturbance above or below the water surface or due to the displacement of a large volume of water.

Statement 1 is correct: Submarine landslides are a broad term for indicating the phenomena of failure of near-seabed sediments under the effect of gravity. **During a submarine landslide, the equilibrium sea-level is altered by sediment moving along the floor of the sea. Gravitational forces then propagate a tsunami.** Tsunamis can be generated when a landslide displaces the water from above (subaerial) or below (submarine).

Statement 2 is correct: As a tsunami leaves deep waters of an ocean or sea and then propagates into the shallow waters, it transforms. This is because as the depth of the water decreases, the speed of the tsunami reduces. With the decrease in speed, the height of the tsunami wave grows as the total energy of the tsunami remains constant and the amplitude of the wave increases as the wavelength decreases.

Statement 3 is incorrect: Though the Tsunamis are also commonly referred to as tidal waves because of their wavelengths, but **the attractions of the Moon and Sun play no role in their formation.**

Source:

https://www.unisdr.org/preventionweb/files/60737_tsunamipropagationoftsunamiwaves200.html#

<https://www.britannica.com/science/earthquake-geology/Surface-phenomena>

<https://www.clark-shawnee.k12.oh.us/userfiles/36/Classes/1702/chap08.pdf?id=2780>

Q.7) Consider the following statements with reference to the earthquakes:

- Mercalli scale describes the earthquake's magnitude by measuring the seismic waves.
- Richter scale describes the intensity of an earthquake based on its observed effects.

Which of the above given statements is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) d

Exp) Option d is the correct answer.

Magnitude is popularly used as a shorthand measure of earthquake size and severity.

Statement 1 is incorrect: The **Richter scale (and not Mercalli scale) describes the earthquake's magnitude by measuring the seismic waves** that cause the earthquake by an instrument called seismograph. The **Richter scale is logarithmic. i.e., a magnitude 5 earthquake is ten times as intense as a magnitude 4 earthquake.**

Statement 2 is incorrect: The **Modified Mercalli Intensity (MMI) scale is a scale used for measuring the intensity of an earthquake and not Richter scale. It measures the effects of an earthquake and based on observed effects., and is distinct from the moment magnitude usually reported for an earthquake** (sometimes misreported as the Richter magnitude), which is a measure of the energy released. The intensity scale consists of a series of certain key responses such as people awakening, movement of furniture, damage to chimneys, and finally - total destruction.

Source: <https://ncert.nic.in/ncerts/l/kegy203.pdf>

<https://assessments.hpc.tools/attachments/f8f0208e-dee3-4380-93ab-d9f4c610fd86/>

Q.8) Consider the following statements with reference to the process of Exfoliation:

1. It can occur due to expansion and contraction induced by temperature changes.
2. It is the combined effect of biological and chemical weathering.
3. Exfoliation due to pressure release is also known as sheeting.

Which of the above given statements is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Exfoliation is a process in which sheets of rock fracture and are detached from the outcrop due to pressure release.

Statement 1 is correct: large variations in temperature, are credited with producing exfoliation. The expansion from heating during the day followed by contraction from rapid cooling at night cause the separation of thin slabs from large blocks of rock at the surface. Various minerals in rocks possess their own limits of expansion and contraction. With rise in temperature, every mineral expands and pushes against its neighbour and as temperature falls, a corresponding contraction takes place. This results in weathering process of exfoliation.

Statement 2 is incorrect: Exfoliation is a type of mechanical weathering; it is also known as onion weathering. Exfoliation refers to peeling off concentric shells of rocks due to the combined actions of heat and wind in hot arid and semi-arid regions and monsoon lands. Exfoliation is more common over crystalline rocks. It **does not occur due to combined effect of chemical or biological weathering.**

Statement 3 is correct: When the sheets of rock break away from the exposed rocks along the fractures, this process is known as exfoliation. And **thus, Exfoliation due to pressure release is also known as sheeting.**

Source: <https://ncert.nic.in/ncerts/l/kegy206.pdf>

[https://www.geo.fu-](https://www.geo.fu-berlin.de/en/v/geolearning/mountain_building/weathering/weathering2/index.html#)

[berlin.de/en/v/geolearning/mountain_building/weathering/weathering2/index.html#](https://www.geo.fu-berlin.de/en/v/geolearning/mountain_building/weathering/weathering2/index.html#)

Q.9) With reference to the types of lavas, consider the following statements:

1. Basic lavas have poor silica content whereas acidic lavas are rich in silica.
2. Acidic lavas are more viscous than basic lavas.
3. Acidic lavas are less explosive in nature compared to basic lava.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 2 and 3 only
- d) 3 only

Ans) a

Exp) Option a is the correct answer.

Lava is a molten magma that has been expelled from the interior of the earth during **volcanic eruptions**. It is heavily charged with gases such as **carbon dioxide, sulphurated hydrogen, and small proportions of nitrogen, chlorine and other volatile substances**. There are two types of lavas i.e., basic and acidic lavas.

Statement 1 is correct: **Basic lavas** are **dark coloured** like basalt **rich in iron and magnesium but poor in silica**. The **acidic** lava is **light coloured**, of low density and with **higher silica content**.

Statement 2 is correct: **Acidic lavas** are **highly viscous (higher the viscosity, lower the fluidity)** hence they flow slowly and travel less. It ends up forming cone shaped volcanoes. **Basic lava is highly fluid** thus travels far and forms sheet volcanoes.

Statement 3 is incorrect: The rapid congealing of **acidic lava** in the vent obstructs the flow of outpouring lava **resulting in loud explosions**. **Basic lavas** flow quietly out of the volcano and are **not very explosive**.

Source: G.C.Leong: Chapter 3 - Vulcanism and Earthquakes

Q.10) Recently, the term ‘Moonlighting’ was seen in news. In this context, which of the following statements is/are correct?

- 1 It refers to the practice of employers to overburden their employees in order to seek favorable terms for their layoff in future.
2. The Companies Act of 2013 has made the practice of ‘Moonlighting’ as a punishable offence in Information Technology companies in India.

Select the correct answer using the codes given below:

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) d

Exp) Option d is the correct answer.

Recently, Swiggy has launched a Moonlighting Policy allowing its employees to work on their passion projects outside of their work (calling it a step towards a “remote-first organization”). The term ‘Moonlighting’ has become popular nowadays. Companies are framing strict policies around moonlighting, and many top company owners have given their opinion on moonlighting by their employees. It has become an important topic of discussion for companies and employees.

Statement 1 is incorrect: Moonlighting is the **act of working at an extra job** beyond regular working hours, usually without the knowledge of the employer. Moonlighting by employees means that the **full-time employee of a company takes up an extra job**, usually without the employer’s knowledge. In India, moonlighting by employees increased after the COVID-19 pandemic and the work-from-home model, especially among IT-sector employees.

Statement 2 is incorrect: There is **no legal framework around moonlighting** by employees of **IT companies**. There is restriction on double employment under the Factories Act. However, that law does not apply to IT companies. The Industrial Employment (Standing Orders) Central Rules, 1946, state that a **workman cannot be doing dual employment work** against the interest of an industrial establishment. Companies Act of 2013 is silent on the issue of Moonlighting in India.

Source: <https://www.financialexpress.com/jobs/moonlighting-should-it-be-legalised/2759942/>

<https://blog.forumias.com/explained-what-is-moonlighting-and-if-its-legal-in-india/>

<https://news.cleartax.in/know-all-about-moonlighting-in-india/8584/>

<https://timesofindia.indiatimes.com/business/india-business/explained-what-is-moonlighting-and-is-it-legal-in-india/articleshow/93704728.cms>

Q.11) Which of the following pairs is/are correctly matched?

Theory/Law : Associated Scientist

1. Continental Drift : Edwin Hubble
2. Expansion of Universe : Alfred Wegener
3. Photoelectric Effect : Albert Einstein

Select the correct answer using the code given below:

- a) 2 and 3 only
- b) 3 only
- c) 2 only
- d) 1 only

Ans) b

Exp) Option b is the correct answer.

Pair 1 is incorrectly matched. **Continental drift** is the hypothesis that the Earth's continents have moved over geologic time relative to each other, thus appearing to have "drifted" across the ocean bed. The speculation that continents might have 'drifted' was first put forward by **Abraham Ortelius in 1596**. A pioneer of the modern view of mobilise was the Austrian geologist, Otto Ampferer. The **concept was independently and more fully developed by Alfred Wegener** in 1912, but his hypothesis was rejected by many for lack of any motive mechanism. **Arthur Holmes later proposed mantle convection for that mechanism.** The idea of continental drift has since been subsumed into the science of plate tectonics, which studies the movement of the continents as they ride on plates of the Earth's lithosphere.

Edwin Hubble contribution was in describing the universe’s rate of expansion.

Pair 2 is incorrectly matched. The **expansion of the universe** is the increase in distance between any two given gravitationally unbound parts of the observable universe with time. **Edwin Hubble contributed in development of expansion of universe theory.** Hubble's brilliant observation was that the red **shift of galaxies was directly proportional to the distance of the galaxy from earth.** That meant that things farther

away from Earth were moving away faster. In other words, the universe must be expanding. He **announced his finding in 1929**.

Pair 3 is correctly matched. Photoelectric effect is phenomenon in which electrically charged particles are released from or within a material when it absorbs electromagnetic radiation. The effect is often defined as the ejection of electrons from a metal plate when light falls on it. In a broader definition, the radiant energy may be infrared, visible, or ultraviolet light, X-rays, or gamma rays; the material may be a solid, liquid, or gas. The released particles may be ions (electrically charged atoms or molecules) as well as electrons. The phenomenon was fundamentally significant in the development of modern physics because of the puzzling questions it raised about the nature of light–particle versus wavelike behaviour–that **were finally resolved by Albert Einstein in 1905**.

Source) UPSC CSE 2008

Q.12) Which among the following can be considered as the reasons to activate mass movements?

1. Undercutting of steep slopes
2. The removal of vegetation
3. Heavy rainfall
4. Animal movement

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 1 and 4 only
- c) 1, 2 and 3 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

Mass wasting occurs when a slope is too steep to remain stable with existing material and conditions.

Option 1 is correct: Undercutting of a slope reduces the slope's resistance to the force of gravity by removing much-needed support at the base of the slope. Alternating cycles of freeze and thaw can result in a slow, virtually imperceptible loosening of rock, thereby weakening the rock and making it susceptible to slope failure.

Option 2 is correct: Vegetation removal can trigger mass wasting. Vegetation stabilizes soil. When it is removed from a slope the slope is vulnerable to water and wind erosion. The plant roots bind the soil and rocks together.

Option 3 is correct: Heavy rains can saturate regolith (the layer of unconsolidated solid material) reducing grain to grain contact and reducing the angle of repose, thus triggering a mass movement. Heavy rains can also saturate rock and increase its weight. Excessive precipitation is the most common trigger of landslides.

Option 4 is incorrect: Animals movements are not of that magnitude that can cause mass movement.

Source: <https://ncert.nic.in/ncerts/l/kegy206.pdf>

<https://opengeology.org/textbook/10-mass-wasting/>

<https://www2.tulane.edu/~sanelson/eens1110/massmovements.htm#:~:text=>

Q.13) Which among the following can be considered as reason for frequent occurrence of landslides in Himalayas?

1. Relatively younger mountains
2. High range of diurnal temperature change
3. Composed of igneous rock
4. Lack of isostatic equilibrium

Select the correct answer using the code given below:

- a) 2, and 3 only
- b) 1, 2 and 4 only
- c) 1, 3 and 4 only
- d) 1 and 4 only

Ans) b

Exp) Option b is the correct answer.

Landslides may be caused by natural factors such as heavy rain, snowfall, earthquake, or it may be induced by human factors like over-interference with the slope-stability by deforestation, unplanned construction, or mining.

Option 1 and 4 are correct: Isostatic Equilibrium means that the Earth's surface is in equilibrium when the buoyancy force of the mantle, pushing up on the lithosphere, is equal to the gravitational force pushing down on it. **Himalayas have relatively younger age and has not thus achieved the Isostatic Equilibrium** which frequently causes the landslides.

Option 2 is correct: Diurnal changes of temperature are much more in northern India. This weakens the rocks and aids mass wasting causing landslides.

Option 3 is incorrect: Himalayas are made of sedimentary rocks (not igneous rocks) which can easily be eroded. These rocks are more susceptible to denudation and erosion and thus can cause landslides. Also, **igneous rocks are hard** and are not very susceptible for erosion.

Source: <https://ncert.nic.in/ncerts/l/kegy107.pdf>

Q.14) Consider the following statements with reference to Earthquakes:

1. The point within the Earth from where the energy is released is called the Epicentre of an earthquake.
2. Focus is the point at the surface which is directly above the Epicentre.
3. During Earthquake, the energy is released and travels in the form of seismic waves.

Which of the above given statements is/are correct?

- a) 3 only
- b) 1 and 2 only
- c) 1 and 3 only
- d) 2 and 3 only

Ans) a

Exp) option a is the correct answer.

An earthquake is shaking or trembling of the earth's surface, caused by the seismic waves or earthquake waves that are generated due to a sudden movement (sudden release of energy) in the earth

Statement 1 is incorrect: The **point where the energy is released is called the focus (not the epicenter)** or the hypocenter of an earthquake.

Statement 2 is incorrect: The **point on the surface directly above the focus is called the epicenter (not the focus)**. It is the first surface point to experience earthquake waves. The waves are felt most strongly at the epicentre, becoming less strong as they travel further away.

Statement 3 is correct: The energy radiates outward from the fault in all directions in the form of seismic waves like ripples on a **pond. The seismic waves spreading out from the focus shake the earth as they move through it**, and when the waves reach the earth's surface, they shake the ground and anything on it.

Source: <https://ncert.nic.in/ncerts/l/kegy203.pdf>

Q.15) Nord stream pipelines, that connects Russia with Europe has been in news recently. It passes through which one of the following Seas?

- North Sea
- Mediterranean Sea
- Baltic Sea
- Celtic Sea

Ans) c

Exp) Option c is the correct answer.

Recently, the US has approved the Germany-Russia Nord Stream 2 Pipeline (NS2P) project – which significantly increases Europe's energy dependence on Russia.

Nord stream pipelines: It is a 1,200km-long offshore **natural gas pipeline** being constructed from **Russia to Germany across the Baltic Sea**. The pipeline will run along with the already-completed Nord Stream 1 system, and the two together will supply an aggregate of 110 billion cubic meters of gas to Germany per year. The pipeline is intended to provide Europe with a sustainable gas supply while providing Russia with more direct access to the European gas market.

Germany-Russia Nord Stream 2 Pipeline

Q.16) With reference to the intrusive landforms of volcanoes, consider the following statements:

- Sills are horizontal structures formed almost parallel to Earth's surface.
- Dykes are formed as a result of accumulation of molten magma perpendicular to the Earth's surface.
- Batholiths are dome-shaped structures formed very close to the Earth's surface.
- Laccoliths are lens-shaped structures that occupy either the crest of an anticline or the trough of a syncline.

Which of the statements given above is/are correct?

- 1 and 2 only
- 1 and 4 only
- 3 only
- 2 and 4 only

Ans) a

Exp) Option a is the correct answer.

During volcanic eruption, the **molten magma** while thrusting its way up to the **surface may cool and solidify** within the crust as plutonic rocks resulting in **intrusive landforms**.

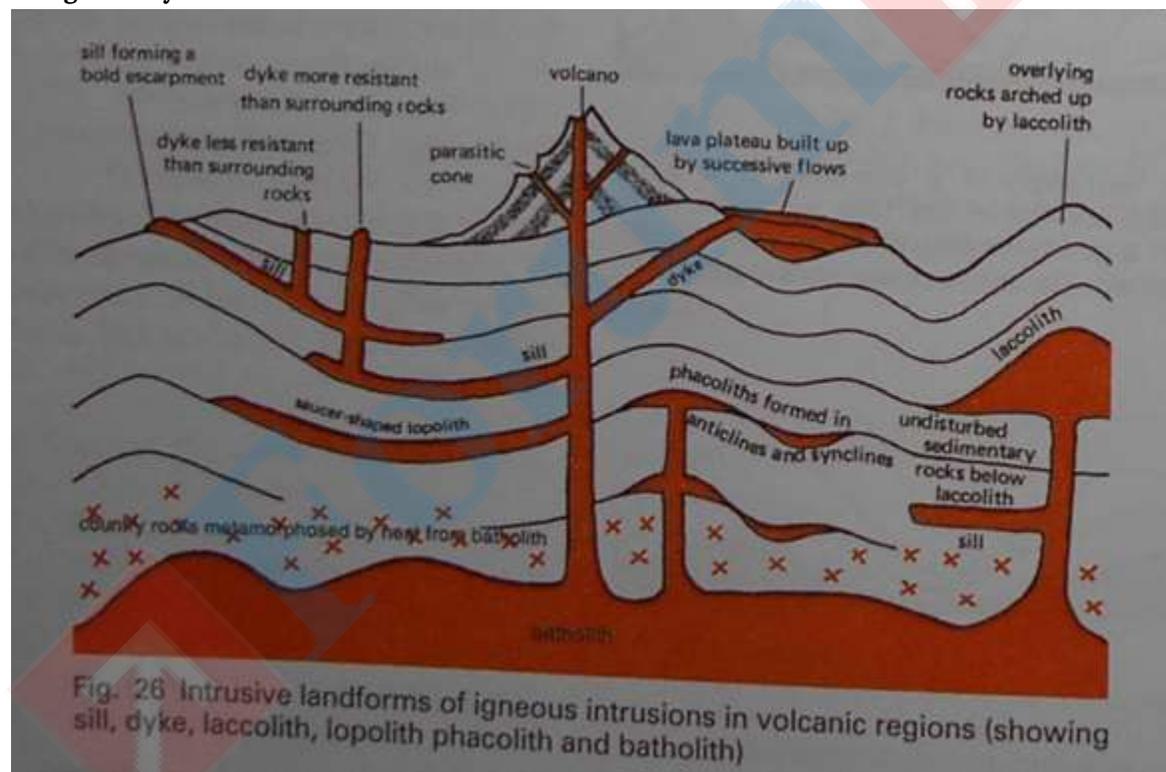

Statement 1 is correct: Sills are formed as result of accumulation of molten magma parallelly to earth's surface. Erosion of overlying sedimentary layers will expose the sill landforms which will resemble a lava flow.

Statement 2 is correct: Dykes form when the lava makes its way through cracks and the fissures developed in the land, **it solidifies almost perpendicular to the ground**. It gets cooled in the same position to develop a **wall-like structure and such structures are called dykes**.

Statement 3 is incorrect: Batholith is a large mass of intrusive igneous rock that forms **from solidification of hot magma deep inside earth's crust**. It is a huge mass of igneous rock, usually **granite** appears only after the erosion of overlying materials.

Statement 4 is incorrect: A **laccolith** is a body of intrusive rock with a **dome-shaped upper surface fed by a conduit from below**. A laccolith forms when magma rising through the Earth's crust begins to spread out horizontally. The pressure of the magma is high enough that the overlying strata are forced upward, giving the laccolith its dome-like form.

A **Phacolith** is a pluton of igneous rock parallel to the bedding plane or foliation of folded country rock. More specifically, it is a typically **lens-shaped pluton that occupies either the crest of an anticline or the trough of a syncline**.

Source: G.C.Leong; Chapter 3 - Vulcanism and Earthquakes

Q.17) With reference to the chemical weathering phenomena, consider the following statements:

1. Carbonation process speeds up with a decrease in temperature.
2. In oxidation, rocks containing iron turn to rust.
3. Chemical hydrolysis process results in decrease of the volume of rock.
4. Under the soil cover, chemical weathering of rock becomes extremely slow.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 1 and 2 only
- c) 1, 3 and 4 only
- d) 2, 3 and 4 only

Ans) b

Exp) Option b is the correct Answer.

When rocks undergo weathering, some minerals are removed through chemical/ physical leaching by groundwater, thereby increasing the concentration of remaining (valuable) minerals.

Weathering can be classified as – physical, chemical, and biological, whereas Chemical weathering can be due to solution, carbonation, hydration, or oxidation/reduction.

Statement 1 is correct: Carbonation is the process in which atmospheric carbon dioxide leads to solution weathering. Carbonation occurs on rocks that contain calcium carbonates such as limestone and chalk. This **process speeds up with a decrease in temperature** and therefore is a large feature of glacial weathering as carbon dioxide is more soluble at lower as opposed to higher temperatures.

Statement 2 is correct: In the process of oxidation, chemical weathering works on rocks that contain iron. These rocks turn to rust in the process. As rust expands, it weakens rock and helps break it apart. Oxidation occurs where there is ready access to the atmosphere and oxygenated waters. The minerals most commonly involved in this process are iron, manganese, sulphur etc. In the process of oxidation rock breakdown occurs due to the disturbance caused by addition of oxygen.

Statement 3 is incorrect: Hydrolysis is any chemical reaction in which a molecule of **water breaks one or more chemical bonds**. Minerals take up water and expand; this expansion causes an **increase in the volume of the material itself or rock**. Calcium sulphate takes in water and turns to gypsum, which is more unstable than calcium sulphate. This process is reversible and long, continued repetition of this process causes fatigue in the rocks and may lead to their disintegration.

Statement 4 is incorrect: Under the soil cover, chemical weathering of rock becomes **enhanced and fast**. This is because the soil absorbs rainwater and keep the under lying rock in contact with the moisture. The rainwater absorbs organic acids from the soil and thus becomes a stronger weathering agent than pure rainwater acting on bare rock.

Knowledge Base: Chemical Weathering changes the molecular structure of rocks and soil. It involves multiple modes like Solution, Carbonation, Oxidation, and Reduction, etc. Sometimes, it dissolves large portions of limestone or other rock on the surface of the Earth to form a landscape called karst. One of the world's best examples of karst is the Stone Forest, near Kunming, China.

Source: <https://ncert.nic.in/ncerts/l/kegy206.pdf>

Q.18) It is a collection of broken rock fragments at the base of a cliff or other steep rocky mass that has accumulated through periodic rock falls. It is result of physical and chemical weathering acting on a rock face.

Which among the following explains the above description correctly?

- a) Pyroclast
- b) Colluvium
- c) Screens
- d) Sand dunes

Ans) c

Exp) option c is the correct answer.

The rock and soil materials transported by erosion processes are eventually deposited in the sea, although they may be temporarily deposited in other locations such as below cliff faces (e.g., as screes), on hillsides (e.g., as colluvium) beside rivers (e.g., as flood plains), in lakes (e.g., as deltas), or on desert plains (e.g., sand dunes).

Option c is correct. Screes: Scree is a collection of broken rock fragments at the base of a cliff or other steep rocky mass that has accumulated through periodic rock falls. The term scree is applied both to an unstable steep mountain slope composed of rock fragments and other debris and to the mixture of rock fragments and debris itself. It is result of physical and chemical weathering acting on a rock face.

Option a is incorrect. Pyroclast: A pyroclastic flow is a dense, fast-moving flow of solidified lava pieces, volcanic ash, and hot gases. It occurs as part of certain volcanic eruptions. A pyroclastic flow is extremely hot, burning anything in its path.

Option b is incorrect. Colluvium: Soil transported by the gravitational force is called Colluvium soil. Colluvium is a type of matrix material that has been moved downslope because of gravity. Colluvium is a heterogeneous, unsorted material of all particle sizes (from boulders to clay) that requires relatively little abrasion to round the particles. As a result, colluvium consists of very sharp and angular rock fragments that accumulate at the bottom of steep slopes.

Option d is incorrect. Sand dunes: A sand dune is any hill of loose sand shaped by the wind. Dunes are one of the most common types of eolian landforms.

Source: <https://hkss.cedd.gov.hk/hkss/eng/education/gs/eng/hkg/chapter4.htm#maincontent>

Q.19) In the context of the type of weathering, consider the following:

1. Tree roots penetrating the soil
2. Burrowing by organisms
3. Acids produced by algae
4. Cryofracturing
5. Exfoliation

Which of the above options is/are the form of biological weathering?

- a) 1, 2, 3 and 5 only
- b) 1, 2 and 3 only
- c) 2, 4 and 5 only
- d) 1, 2, 3, 4 and 5

Ans) b

Exp) Option b is the correct Answer.

Biological weathering is the removal of minerals and ions from the environment due to the development or movement of organisms. It is also known as Organic Weathering. Its main agents are animals, microorganisms, plants, and humans.

Types of Biological Weathering

Plant roots: Some trees grow within rocks, which contributes to biological weathering. Plant and tree **roots penetrate the soil** in search of nutrients and water. As the roots penetrate the soil, they **pass through cracks** or joints in the rocks, gradually cracking the rock apart. Larger growing roots can also **put pressure on nearby rocks**. Some plant roots also produce organic acids that help dissolve the minerals in rocks. **(Hence option 1 is correct.)**

Burrowing animals: Some animals, such as moles, squirrels, and rabbits, can create fissures in rocks. These animals, however, suck up the nutrients from the rock by creating a fissure. It gradually breaks the rock into large chunks. **(Hence option 2 is correct.)**

Microbial activity: Organic acids are produced by microscopic organisms such as algae, moss, lichens, and bacteria. This changes the chemical composition of the rock and gradually erodes its outer layer. **(Hence option 3 is correct.)**

Cryofracturing is caused **by water**, in either liquid or solid form, is often a key agent of **mechanical weathering**. For instance, liquid water can seep into cracks and crevices in rock. If temperatures drop low enough, the **water will freeze**. When water freezes, it expands. The ice then works as a wedge. It slowly **widens the cracks** and splits the rock. When ice melts, liquid water performs the **act of erosion** by carrying away the tiny rock fragments lost in the split. This specific process (the freeze-thaw cycle) is called frost weathering or cryofracturing. **(Hence option 4 is incorrect.)**

Exfoliation is caused due to thermal stress. Temperature changes can also contribute to mechanical weathering in a process called thermal stress. Changes in temperature cause rock to expand (with heat) and contract (with cold). Rocky desert landscapes are particularly vulnerable to thermal stress. **(Hence option 5 is incorrect.)**

<https://ncert.nic.in/textbook/pdf/kegy207.pdf>

Q.20) Which of the following factors are responsible for causing the phenomenon of Ocean Acidification?

1. Eutrophication
2. Acid Rains
3. Combustion of fossil fuel
4. Melting of Arctic Ice
5. Growth of phytoplankton

Select the correct answer using the codes given below:

- a) 1, 2 and 5 only
- b) 1, 2, 3 and 5 only
- c) 1, 2, 3 and 4 only
- d) 1, 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

Ocean acidification is the change in ocean chemistry - lowering of ocean pH (i.e., increase in concentration of hydrogen ions) driven by the uptake of carbon compounds by the ocean from the atmosphere.

Statement 1, 2 and 3 and 4 are correct: Various factors can locally influence the chemical reactions of CO₂ with sea water and add to the effects to ocean acidification. For example:

(a) Eutrophication: It is the process by which an entire body of water, or parts of it, becomes progressively enriched with minerals and nutrients, particularly nitrogen and phosphorus. Coastal waters are also affected by excess nutrient inputs, mostly nitrogen, from agriculture, fertilizers and sewage. The resulting

eutrophication leads to large plankton blooms, and when these blooms collapse and sink to the sea bed the subsequent respiration of bacteria decomposing the algae leads to a decrease in sea water oxygen and an increase in CO₂ (a decline in pH).

(b) Acid rain: Acid rain is caused by atmospheric pollution from acidic gases such as Sulphur dioxide and oxides of nitrogen emitted from the burning of fossil fuels. Acid rain can have a pH between 1 and 6 and has impact on surface ocean chemistry. It has major effect on ocean acidification locally and regionally but very small globally.

(c) Combustion of fossil fuels: Burning fossil fuels such as coal, petroleum, etc. release a large amount of carbon dioxide in the atmosphere. This carbon dioxide gets entry into oceanic water through acidic rain or sometimes through direct modes. This increases the acidity of ocean water, which is very harmful to the ecology of ocean water.

(d) Fast-melting Arctic ice: Recently, a team of researchers has flagged the changing chemistry of the western region of the Arctic Ocean after discovering acidity levels increasing three to four times faster than ocean waters elsewhere. The water under the sea ice, which had a deficit of carbon dioxide, is exposed to the atmospheric carbon dioxide due to melting of ice and can take it up freely. The seawater mixed with meltwater is light and can't mix easily into deeper waters, which means the carbon dioxide is concentrated at the surface.

Statement 5 is incorrect: The **growth of phytoplankton is not among the factors responsible for the phenomenon of Ocean acidification.** But has a negative consequence of ocean acidification. Increase in seawater acidity reduces the ability of phytoplankton's' to build strong cell walls, making them smaller and less effective at storing carbon. This has a negative effect on the growth of phytoplankton.

Q.21) Which is the difference between asteroids and comets?

1. Asteroids are small rocky planetoids, while comets are formed of frozen gases held together by rocky and metallic material.
2. Asteroids are found mostly between the orbits of Jupiter and Mars, while comets are found mostly between Venus and Mercury.
3. Comets show a perceptible glowing tail, while asteroids do not. Which of the statements given above is/are correct?
 - a) 1 and 2 only
 - b) 1 and 3 only
 - c) 3 only
 - d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Asteroids, sometimes called minor planets, are rocky, airless remnants left over from the early formation of our solar system about 4.6 billion years ago.

Comets are cosmic snowballs of frozen gases, rock, and dust that orbit the Sun.

Statement 1 and 3 are correct.

Asteroids are small, rocky objects that orbit the Sun. Comets are frozen leftovers from the formation of the solar system composed of dust, rock and ices. They range from a few miles to tens of miles wide, but as they orbit closer to the sun, they heat up and spew gases and dust into a glowing head that can be larger than a planet. This material forms a tail that stretches millions of miles.

Statement 2 is incorrect.

The asteroid belt is located roughly between the orbits of the planets Jupiter and Mars.

Comets are not limited to any specific region; they are spread all over the solar system.

Q.22) With reference to the significance of weathering, consider the following statements:

1. Weathering tends to help in soil enrichment.
2. Weathering helps in the mining and quarrying of the rocks.
3. It also helps in the augmentation and concentrations of minerals.

Which of the above statement is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) option d is the correct Answer.

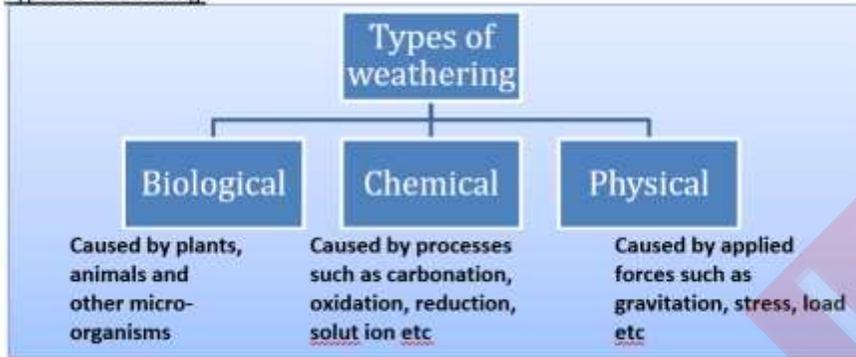

Weathering denotes the process of wearing, breaking up, and fragmentation of the rock that creates the surface of the ground and that remains exposed to the weather. The process results from forces of weather like rain action, variations in temperature, and frost action.

Statement 1 is correct: Weathering helps in soil enrichment. Without weathering, the concentration of the same valuable material may not be sufficient and economically viable to exploit, process, and refine. This is what is called enrichment.

Statement 2 is correct: Weathering is the initial stage in the formation of soil. It produces other natural resources, for instance, clay which is used for making bricks. Another significance is weathering weakens rocks making them easier for people to exploit, for example, by mining and quarrying. This process is accountable for the fragmentation of the rocks into smaller fragments and making the way for the creation of not only soils and regolith, but also mass movements and erosion.

Statement 3 is correct: It aids erosion, mass wasting, reduction of relief, and modifications in landforms. Weathering of rocks helps in the augmentation and concentrations of some ores of manganese, aluminium, iron, copper, etc. which have a great demand in the economy of the country.

Knowledge Base:

Factors affecting weathering:Types of weathering:

Source: <https://hkss.cedd.gov.hk/hkss/eng/education/gs/eng/hkg/chapter4.htm#maincontent>

Q.23) Consider the following statements regarding the terms related with Groundwater:

1. Vadose zone is an unsaturated zone of soil where water is totally absent.
2. Phreatic zone is the zone where the crustal pores and fractures are saturated with water.
3. The Groundwater table marks the upper limit of the zone of saturation.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) c

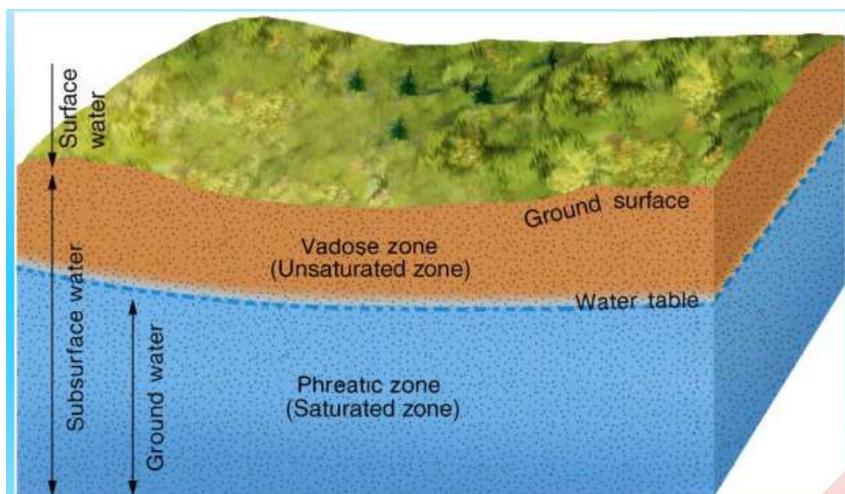

Exp) Option c is the correct answer.

The rain water flows either as run off that generates streams which combine together to form a river or percolates down to form Groundwater. The Groundwater accounts for approximately 22% of the world's supply of fresh water. The source of groundwater is rainfall and snow melt.

Statement 1 is incorrect: Water percolates from the soil moisture zone through the unsaturated zone to the water table. This **Unsaturated zone is called as Vadose zone. At vadose zone the pores contain some air. The water is present in the zone.** The zone is situated at shallow depth and is above the water table.

Statement 2 is correct: **The phreatic zone is situated below the water table, in which relatively all pores and fractures are saturated with water.** The phreatic zone size, color, and depth may fluctuate with changes of season, and during wet and dry periods.

Statement 3 is correct: At the boundary between Vadose zone and Phreatic zone is the groundwater table, usually called water table. **The water table is a surface that marks the upper limit of the zone of saturation.**

Source: <https://egyankosh.ac.in/bitstream/123456789/53277/3/Block-2.pdf>
<https://www.sciencedirect.com/topics/agricultural-and-biological-sciences/vadose-zone>

Q.24) Consider the following statements regarding the Hydrological Cycle:

1. The total volume of water in the global hydrological cycle remains constant.
2. The distribution of water on continents and within local drainage basin remains same always.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

Hydrological cycle is the continuous process by which water is transported from the oceans to the atmosphere and then onto the land and back to the sea. It is a global process linking up seas, lakes, streams, groundwater, soil moisture and atmospheric vapour into a single whole.

Statement 1 is correct and 2 is incorrect: The hydrological cycle in its atmospheric, land and oceanic phases undergoes various processes like evaporation, precipitation, interception, transpiration, infiltration, percolation, storage and runoff. **The total volume of water in the global hydrological cycle remains essentially constant, while the distribution of this water is continually changing on continents, within regions, and within local drainage basins.**

Source: <https://egyankosh.ac.in/bitstream/123456789/29518/1/Unit-1.pdf>

Q.25) With reference to 'Role and Responsibilities of Chief of Defense Staff (CDS)', consider the following statements:

1. He/she acts as the Principal Military Adviser to the defense minister on tri-services matters.
2. He/she is designated as the permanent chairperson to the Nuclear Command Authority.
3. He/she is mandated to facilitate restructuring of Military Commands for optimal resource utilization.
4. He/she is a member of Defense Acquisition Council.

Which of the statements given above are correct answer?

- a) 1, 2 and 4 only
- b) 1 and 4 only
- c) 2 and 3 only
- d) 1, 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

In 2012, the Naresh Chandra Task Force recommended the appointment of a Permanent Chairman of the Chiefs of Staff Committee as a midway to eliminate apprehensions over the CDS. The post of CDS was created in 2019 on the recommendations of a committee of defence experts headed by Lt General DB Shekatkar. The Chief of Defence Staff (CDS) will oversee and coordinate the working of the three defense Services in India.

Statement 1 is correct: The Chief of Defence Staff is the **highest-ranking uniformed officer** on active duty in the Indian military. He acts as the **Principal Military Adviser to the Defence Minister** on tri-services matters. This would lead to enhanced security in the region.

Statement 2 is incorrect: Chief of Defence Staff is the **military adviser to the Nuclear Command Authority**. The Nuclear Command Authority (NCA) of India is the authority responsible for command, control and operational decisions regarding India's nuclear weapons programme. It comprises a **Political Council headed by the Prime Minister of India** and an Executive Council headed by the National Security Advisor. The CDS will be the **permanent Chairman of the Chiefs of Staff Committee (COSC)**.

Statement 3 is correct: The Department of Military Affairs is headed by the Chief of Defence Staff. He will help in the tackling of threats in an integrated manner and would **help in optimal use of available resources**. Policy-making on operations, procurement and joint logistics will be improved.

Statement 4 is correct: The Defence Acquisition Council (DAC) is the highest decision-making body of the defence ministry on procurement of defence materials. The defence minister is the chairman of DAC. Its **members include Chief of Defence Staff (CDS)** and chiefs of Army, Navy and Air Force. The main objective of the DAC is to ensure expeditious procurement of the approved requirements of the armed forces in terms of capabilities sought and time frame prescribed by optimally utilizing the allocated budgetary resources.

Source: <https://blog.forumias.com/answereddiscuss-the-role-and-significance-of-chief-of-defence-staff-cds-how-it-would-help-in-indias-security/>

https://www.mod.gov.in/dod/sites/default/files/DEFENCE_PROCUREMENT_ORGANISATION.pdf

Q.26) An aquifer is defined as a formation of sizeable mass of sufficiently saturated permeable material that can yield water to wells and springs. In this context, which of the following options are correct about Aquifer?

1. Unconsolidated sand and gravel deposits form the best aquifers.
2. Sedimentary materials constitutes the largest percentage of earth's aquifers.
3. Clays which constitute a large proportion of pores, are good aquifers.

Select the correct answer using the code given below:

- a) 1 only
- b) 2 and 3 only
- c) 1 and 2 only
- d) 1, 2 and 3

Ans) c

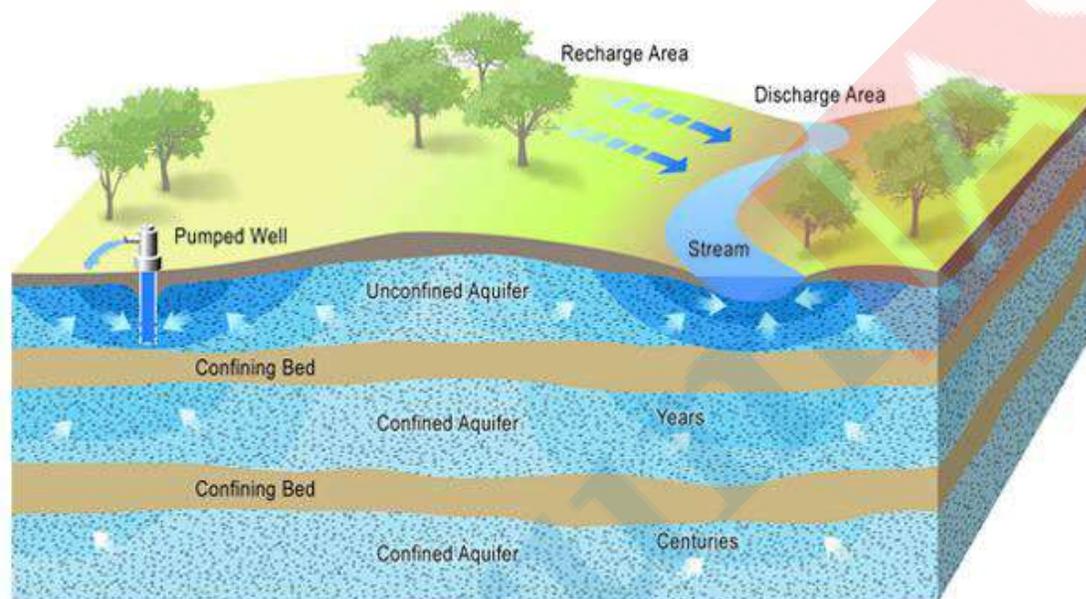

Exp) Option c is the correct answer.

An aquifer can be defined as a formation containing sufficient saturated permeable material which can yield significant quantities of water to wells and springs.

Statement 1 is correct: Unconsolidated or loosely consolidated sand and gravel deposits form the best aquifers. This deposit consists of strata of coarse material in between silt and clay layers. Alluvial fans form good water bearing deposits when groundwater level is quite high.

Statement 2 is correct: It is observed that **sedimentary materials constitute the largest percentage of earth's aquifers**, including coarse unconsolidated materials and hard sedimentary rocks like, limestone and dolomite.

Statement 3 is incorrect: Clays, which contain large proportion of pores, are not good aquifers. The pores being very small in size therefore water cannot move readily through the clay mass.

Knowledge Base:

An aquifer material must have enough pore spaces, and must be large enough to permit the extraction of water at useful rates. Thus, an aquifer should have an ability to store and to transmit water.

Source: <https://egyankosh.ac.in/bitstream/123456789/29529/1/Unit-12.pdf>

Q.27) Consider the following statements regarding the Porosity and Permeability in the rocks:

1. Permeability is the ease of flow of a fluid through a porous solid.
2. The surface water percolates well when the rocks are permeable.
3. Extremely porous rock will necessarily have good permeability.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 2 only
- d) 1, 2 and 3

Ans) c

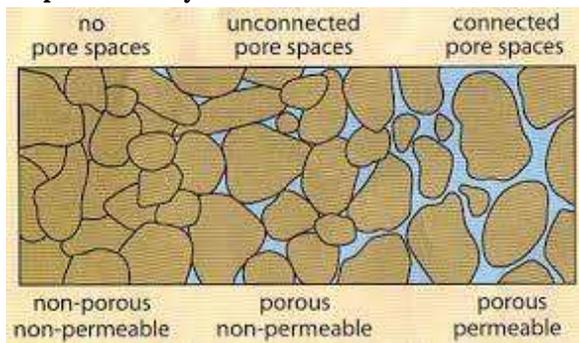

Exp) Option c is the correct answer.

Porosity is a measure of the void spaces in a material and Permeability is a measure of the ability of a material to transmit fluids. Porosity and permeability are related properties of any rock or loose sediment. Both are related to the number, size, and connections of openings in the rock.

Statement 1 is correct: The porosity of a rock is a measure of its ability to hold a fluid. It is the open space in a rock divided by the total rock volume. **Permeability is a measure of the ease of flow of a fluid through a porous solid.**

Statement 2 is correct: The surface water percolates well when the rocks are permeable, thinly bedded and highly jointed and cracked. After vertically going down to some depth, the water under the ground flows horizontally.

Statement 3 is incorrect: A rock may be extremely porous, but if the pores are not connected, it will have no permeability.

Source:

https://deq.louisiana.gov/assets/docs/Water/DWPP_forkidsandeducators/PorosityandPermeability.pdf

Q.28) Consider the following statements regarding the different types of Wells:

1. In Artesian wells, the water is trapped between layers of impermeable rock.
2. Dug wells are shallow and are subject to contamination from nearby surface sources.
3. As the pressure inside the Artesian wells is low, pumps are required to extract it.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) a

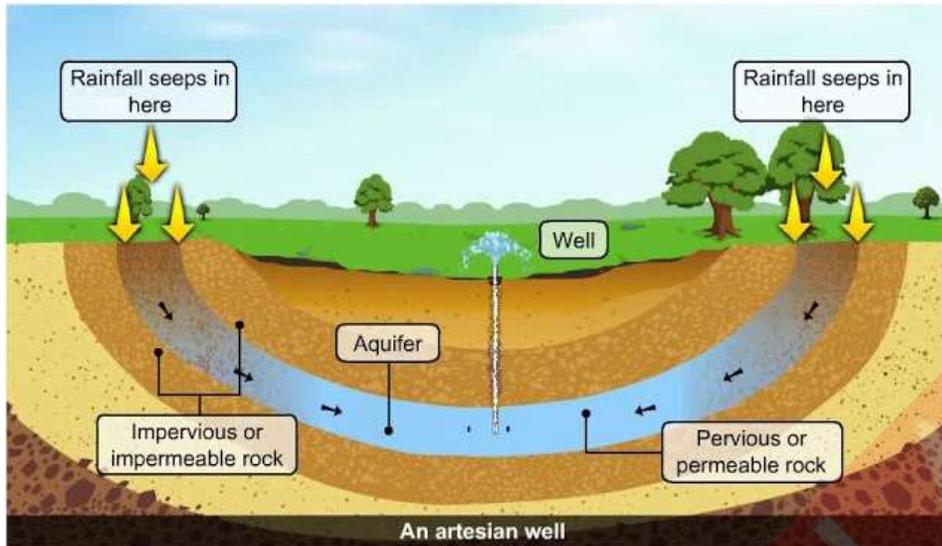

Exp) Option a is the correct answer.

Ground water is tapped from the sub-surface rock layers by means of wells.

Statement 1 is correct: In Artesian wells, the aquifer(water) is trapped between impermeable rock on both top and bottom. In between these two impermeable layers is the permeable layer, where water is stored. If an artificial hole is made to the porous rock, the water comes out like a fountain. These are called Artesian wells.

Statement 2 is correct: Dug wells are excavated by hand shovel to below the water table. The well is lined with stones, bricks, and tile to prevent collapse. These wells are able to obtain water from less-permeable materials such as very fine sand, silt, or clay. They are shallow and are subject to contamination from nearby surface sources. Hand-driven wells usually are only around 30 feet deep.

Statement 3 is incorrect: In Artesian well, the water is trapped under intense pressure. This intense pressure forces the water in basin to the surface like a fountain. In general, there is no requirement to pump the water as the pressure is too high.

Source: <https://wellowner.org/resources/basics/types-of-wells/>
Pg 36, CH 4, Gc leong

Q.29) With reference to the planets in the solar system, consider the following statements:

1. The terrestrial planets rotate slower than the Jovian planets.
2. The solar wind has removed more amounts of gas and dust from the terrestrial planets than the Jovian planets.
3. The terrestrial planets have higher gravity as compared to the Jovian planets.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Out of the eight planets, mercury, Venus, earth and mars are called as the inner planets as they lie between the sun and the belt of asteroids the other four planets are called the outer planets. Alternatively, the first four are called Terrestrial, meaning earth-like as they are made up of rock and metals, and have relatively high densities. The rest four are called Jovian or Gas Giant planets. Jovian means Jupiter-like.

Statement 1 is correct: Unlike the spherical shapes of terrestrial planets, the Jovian planets are all slightly oblong. **The Jovian planets rotate much faster than any of the terrestrial planets.** Gravity by itself would make a planet spherical, but their rapid rotation flattens out their spherical shapes by movement of the materials outwards from the equator.

Statement 2 is correct: The solar wind is most intense nearer the sun; so, it blew off lots of gas and dust from the terrestrial planets. The solar winds were not all that intense to cause similar removal of gases from the Jovian planets. The terrestrial planets are smaller and their lower gravity could not hold the escaping gases. Most of Jovian planets are much larger than the terrestrial planets and have thick atmosphere, mostly of helium and hydrogen.

Statement 3 is incorrect: The force of gravity is directly proportional to the mass of the two bodies in question and inversely proportional to the square of their distance. This means that the more massive a body is, the more gravity it has. **The Jovian planets have greater gravitational pull than the terrestrial**

planets because of their great masses which result in stronger gravitational fields. And Jovian planets also occupy greater space and hold larger volumes of mass in their surrounding atmospheres.

Knowledge Base:

The terrestrial planets were formed in the close vicinity of the parent star where it was too warm for gases to condense to solid particles. Jovian planets were formed at quite a distant location.

The terrestrial planets are nearly isolated worlds, with only Earth (1 moon) and Mars (2 moons) orbited by any moons at all. In contrast, many moons and rings orbit each of the Jovian planets.

Source: NCERT Class 11 – Fundamentals of Physical Geography – Chapter 2 – The Origin and Evolution of the Earth – P 16.

Q.30) With reference to historical significance of Mahakal Temple of Ujjain, consider the following statements:

1. It has the only Jyotirlinga facing the south direction among all the twelve Jyotirlingas in India.
2. The temple in its present form of five-storied structure was built by Maharaja Jai Singh II.
3. It is mentioned in the early part of the Meghadutam composed by Kalidasa.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 3 only

Ans) c

Exp) Option c is the correct answer.

The Prime Minister has recently inaugurated the Mahakaleshwar Corridor, constructed in Madhya Pradesh's Ujjain. Mahakal Maharaj Mandir Parisar Vistar Yojna is a plan for the expansion, beautification, and decongestion of the Mahakaleshwar temple and its adjoining area in Ujjain district.

Statement 1 is correct: Mahakaleshwar Jyotirlinga is a Hindu temple dedicated to Lord Shiva. It is located in the ancient city of Ujjain in the state of Madhya Pradesh. It is the **only Jyotirlinga facing the south, while all the other jyotirlingas face east**. This is because the direction of death is believed to be the south. In fact, people worship Mahakaleshwar to prevent an untimely death.

Statement 2 is incorrect: According to Hindu mythology, the Mahakaleshwar temple in Ujjain is built by Lord Brahma. However, the temple structure suggests that the temple in its present form of a five storied structure was built midway through the 18th century in Bhumija, Chalukya, and Maratha styles of architecture. The temple in its present form of five-storied structure was built by the **Maratha general Ranoji Shinde in 1734 CE**.

In the 18th century, an observatory was built here by **Maharaja Jai Singh II**, known as the Vedh Shala or Jantar Mantar, comprising 13 architectural instruments to measure astronomical phenomena.

Statement 3 is correct: The mention of Mahakal temple in the Puranas (where it is stated that Prajapita Brahma built it) is proof of its ancient existence. In the **early part of the Meghadutam (Purva Megha) composed in the 4th century, Kalidasa gives a description of the Mahakal temple**. It is described as one with a stone foundation, with the ceiling on wooden pillars. There would be no shikharas or spires on the temples prior to the Gupta period.

Source: <https://indianexpress.com/article/explained/explained-culture/mahakal-temple-in-ujjain-why-it-holds-special-significance-in-hinduism-8202228/>

<https://blog.forumias.com/what-is-the-rs-600-crore-redevelopment-plan-for-ujjains-mahakaleshwar-temple/>

<https://www.artofliving.org/mahashivratri/mahakaleshwar-jyotirlinga>

Q.31) Consider the following statements:

1. Total land area of Earth is approximately 1475 lakh square kilometres.
2. Ratio of land area to water area of Earth is approximately 1:4.
3. Maximum percentage of Earth's water is in the Pacific Ocean.

Which of the statements given above is/are correct?

- a) 1 and 3
- b) 2 and 3
- c) 1 only
- d) 3 only

Ans) a

Exp) Option a is the correct answer.

"Land area" refers to the total surface area of the land of a geographical region or country (which may include discontinuous sections of land such as islands).

Statement 1 is correct. Earth's total planimetric (flat) land area is approximately 147,539,063.133 km² (57,505,693.767 sq. mi) **which is about 29.2% of its total surface**, including that which is covered by ice. Water covers approximately 70.8% of planimetric Earth's surface, mainly in the form of oceans and ice formations; but this proportion is decreased by the land's increased terrain.

Statement 2 is incorrect. The ratio of **land area and water area on earth is not in the ratio of 1:4.**

About 71 percent of the Earth's surface is water-covered, and the oceans hold about 96.5 percent of all Earth's water. Water also exists in the air as water vapor, in rivers and lakes, in icecaps and glaciers, in the ground as soil moisture and in aquifers.

Statement 3 is correct. **Pacific Ocean** is the **largest water mass on the planet.** It covers more than 30 percent of the Earth's surface. With a surface area of more than 155 million square kilometres (60 million square miles), this ocean basin is **larger than the landmass of all the continents combined.** Additionally, it contains almost twice as much water as the world's second largest body of water, the Atlantic Ocean.

Source) How big is the Pacific Ocean? Ocean Exploration Facts: NOAA Office of Ocean Exploration and Research

Q.32) With respect to the origin of Moon, which of the following theories/hypothesis explains formation of moon?

1. As per George Darwin, the Moon formed when a dumb-bell-shaped body eventually broke into Earth and Moon.
2. As per the Big Splat theory, the material forming the Moon was separated from the depression occupied by the Pacific Ocean.
3. As per the Accretion hypothesis, the Earth and the Moon formed together as a double system originating from the primordial accretion disk.

Select the correct answer form the code given below:

- a) 1 only
- b) 2 only
- c) 1 and 3 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

Origin of the Moon refers to any of the various explanations for the formation of the Moon, Earth's natural satellite.

Statement 1 is correct: In 1838, **Sir George Darwin** suggested that initially, the earth and the moon formed a single rapidly rotating body. The **whole mass became a dumb-bell-shaped body and eventually it broke.** It was also suggested that the **material forming the moon was separated from what we have at present the depression occupied by the Pacific Ocean.**

Statement 2 is incorrect: As per the “**giant impact**” or “**the big splat**” theory, a **body of the size of one to three times that of mars collided into the earth** sometime shortly after the earth was formed. It blasted a large part of the earth into space. This **portion of blasted material then continued to orbit the earth and eventually formed into the present moon** about 4.44 billion years ago.

Statement 3 is correct: The **hypothesis of accretion suggests that the Earth and the Moon formed together as a double system from the primordial accretion disk of the Solar System.** The problem with this hypothesis is that it does not explain the angular momentum of the Earth–Moon system or why the Moon has a relatively small iron core compared to the Earth (25% of its radius compared to 50% for the Earth).

Knowledge Base:

A more radical alternative hypothesis, published in 2010, proposes that the Moon may have been formed from the explosion of a geo-reactor located along the core-mantle boundary at the equatorial plane of the rapidly rotating Earth. This hypothesis could explain the compositional similarities.

Source: NCERT Class 11 – Fundamentals of Physical Geography – Chapter 2 – The Origin and Evolution of the Earth – P 16, 17.

<https://courses.seas.harvard.edu/climate/eli/Courses/EPS281r/Sources/Origin-of-the-Moon/1-Wikipedia-Origin-of-the-Moon.pdf>

Q.33) With reference to the evolution of Earth, consider the following statements:

1. The primordial atmosphere consisted majorly of hydrogen and helium gases.
 2. The process of degassing allowed addition of water vapour, nitrogen and carbon dioxide to the atmosphere.
 3. The oxygen was added into the atmosphere through photosynthesis only after the life developed on land.
- Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

There are three stages in the evolution of the present atmosphere: Solar winds removing primordial gases – Degassing added nitrogen and carbon dioxide – Photosynthesis leading to addition of gases.

Statement 1 is correct: The first stage is marked by the loss of primordial atmosphere. The **early atmosphere, with hydrogen and helium**, is supposed to have been stripped off as a result of the solar winds. This happened not only in case of the earth, but also in all the terrestrial planets, which were supposed to have lost their primordial atmosphere through the impact of solar winds.

Statement 2 is correct: In the second stage, **gases and water vapour were released** from the interior solid earth. The process through which the gases were outpoured from the interior is called **degassing**. Continuous volcanic eruptions contributed water vapour and gases to the atmosphere. This led to addition of **water vapour, nitrogen, carbon dioxide, methane, ammonia and very little of free oxygen** to the atmosphere.

Statement 3 is incorrect: In the third stage, the composition of the atmosphere was modified by the living world through the process of photosynthesis. Around 2,500-3,000 million years before the present, the process of **photosynthesis** got evolved. Life was confined to the oceans for a long time. **Oceans began to have the contribution of oxygen through the process of photosynthesis.** Eventually, oceans were saturated with oxygen, and **2,000 million years ago, oxygen began to flood the atmosphere.** The present composition of earth's atmosphere is chiefly contributed by nitrogen and oxygen. First trace of life on land began 408 - 438 million years ago.

Knowledge Base:

As the earth cooled, the water vapour released started getting condensed. The carbon dioxide in the atmosphere got dissolved in rainwater and the temperature further decreased causing more condensation and more rains. The rainwater falling onto the surface got collected in the depressions to give rise to oceans. The earth's oceans were formed within 500 million years from the formation of the earth. This tells us that the oceans are as old as 4,000 million years.

Source: NCERT Class 11 – Fundamentals of Physical Geography – Chapter 2 – The Origin and Evolution of the Earth – P 17, 18.

Q.34) Which of the following is **incorrect** in regard to the interaction of meteoroids with the Earth's atmosphere?

- Meteorites burn in the mesosphere layer of the atmosphere.
- When a meteoroid survives a trip through the atmosphere and hits the ground, it's called a meteor.
- A meteor shower happens when a stream of dust particles traveling through atmosphere burns.
- The "shooting stars" is that part of the meteoroids that burns in the atmosphere.

Ans) b

Exp) Option b is the correct answer.

Meteoroids are objects in space that range in size from dust grains to small asteroids.

Option a is correct: **Mesosphere** is one of the layers of the atmosphere. It lies above the stratosphere. It extends up to the height of 80 km. **Meteorites burn up in this layer on entering from the space.**

Option b is incorrect: When a **meteoroid survives a trip through the atmosphere and hits the ground**, it's called a **meteorite**.

Option c is correct: **Meteor showers** is seen when a **stream of dust particles** traveling together through atmosphere burns. We see meteors diverging from a spot in the sky called the radiant of the shower. Many meteor showers recur each year and are associated with particular comets that have left dust behind as they come close to the Sun and their ices evaporate.

Option d is correct: When **meteoroids enter Earth's atmosphere** at high speed and **burn up**, the fireballs is called "**shooting stars**" or **meteors**. Most meteoroids that enter the Earth's atmosphere are so small that they vaporise completely and never reach the planet's surface.

Knowledge Base:

When it comes to counting meteorites, though, Antarctica is an easy target. Most meteorites collected so far have been found on the continent because a single dark rock can be spotted easily enough against a white background.

Q.35) With reference to Narmada River, consider the following statements:

1. It is the longest west flowing river of Peninsular India.
2. The famous Ajanta Caves are situated on the banks of this River.
3. Hiran and Orsang are major tributaries of this River.
4. Maheshwar Dam is one of the dams constructed on this river.

Which of the statements given above are correct?

- a) 1 and 3 only
- b) 2 and 4 only
- c) 1, 3 and 4 only
- d) 1, 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

Narmada River is located in central India and the fifth longest river of India. The source of the Narmada is Narmada Kund located at Amarkantak in Anuppur District, Madhya Pradesh. It is one of the major rivers in India that run from east to west along with Tapti and the Mahi. It flows through the states of Madhya Pradesh (1,077 km), Maharashtra (74 km) and in Gujarat (161 km).

Statement 1 is correct: Narmada is the **longest west flowing river of the peninsular India**. Narmada flows westwards through a rift valley between the Vindhyan Range on the north and the Satpura Range on the south. Narmada basin extends over states of Madhya Pradesh, Gujarat, Maharashtra and Chhattisgarh having an area ~1 Lakh Sq.km.

Statement 2 is incorrect: Ajanta Caves is a series of rock-cut caves in the Sahyadri ranges (Western Ghats) situated on the **bank of Waghora river (not Narmada River) near Aurangabad in Maharashtra**. Important towns situated on the bank of Narmada rivers are Jabalpur, Barwaha, Hoshangabad, Harda, Narmada Nagar, Omkareshwar, Dewas (Nemavar, Kity, Pipri), Mandla and Maheshwar in Madhya Pradesh, and Rajpipla and Bharuch in Gujarat.

Statement 3 is correct: The major tributaries are the Hiran, the Orsang, the Barna and the Kolar.

Statement 4 is correct: The major Hydro Power Project and dams in the Narmada basin are Indira Sagar, Sardar Sarovar, Omkareshwar, Bargi & Maheshwar. The Maheshwar dam is one of the large dams of the Narmada Valley Development Project, which envisages the construction of 30 large and 135 smaller dams in the Narmada valley.

Source: <https://www.britannica.com/place/Narmada-River>

<https://blog.forumias.com/question/world-famous-ajanta-caves-are-situated-on-the-banks-of-which-of-the-following-river/>

<https://www.downtoearth.org.in/news/governance/madhya-pradesh-govt-cancels-all-maheshwar-hydroelectric-contracts-85235>

Q.36) With reference to the Earth's satellite moon, consider the following statements:

1. Only one side of the moon is visible from the earth because the moon takes exactly the same time to rotate around its axis as the time taken by it to revolve around the earth.
2. Due to moon's gravity, the rotation speed of Earth is decreasing.

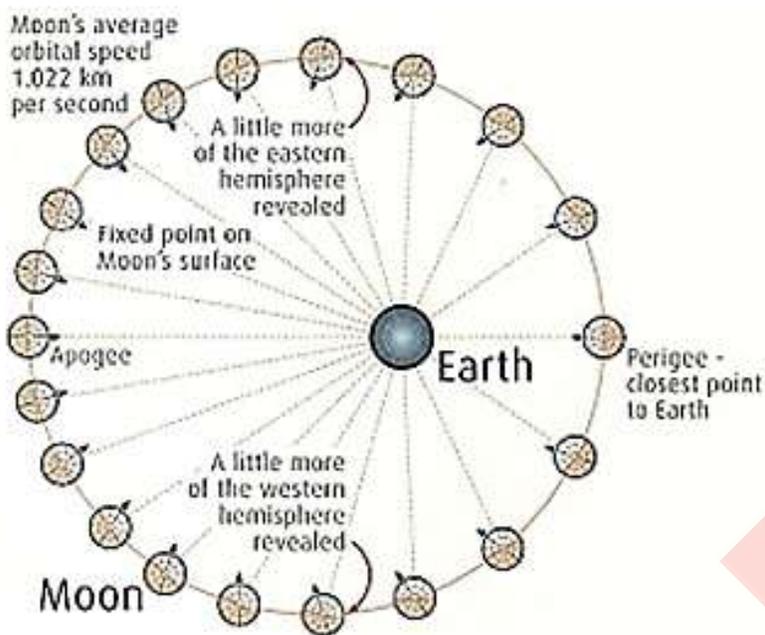

Which of the statements given above are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: The time taken for the Moon to spin on its axis is almost exactly the same as the time it takes to orbit the Earth. The moon moves around the earth in about 27 days. It takes exactly the same time to complete one spin. As a result, **only one side of the moon is visible to us on the earth**. This is not a coincidence. Over billions of years, the Earth's gravity has forced the Moon to spin synchronously with its orbit.

Statement 2 is correct: The same forces that caused the Moon to always show the same face to Earth continue to influence the Moon and Earth today. The Moon still drifts further away a few centimetres a year. The Moon's gravitational force is **slowing down the Earth's rotation** a tiny bit too. If it were not for the Sun's eventual demise, this would continue until the Earth and Moon were 'tidally locked'. In this situation, both the Moon and Earth would spin at the same rate of 47 days, showing the same face to each other for the rest of their existence.

Source: <https://www.sciencefocus.com/space/why-can-we-only-see-one-side-of-the-moon/>

<https://www.iop.org/explore-physics/moon/phases-and-orbits-moon#gref>

<https://penningtonplanetarium.wordpress.com/2013/10/31/why-do-we-see-only-one-side-of-the-moon/>

Q.37) With reference to the seismic waves, consider the following statements:

1. P waves are the first waves to be recorded on a seismograph during an earthquake.
2. S-waves are more destructive than P-waves because of their larger amplitudes.
3. Rayleigh waves cause only horizontal shearing of the ground.
4. Love waves usually travel slightly slower than Rayleigh waves.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 4 only
- d) 3 and 4 only

Ans) a

Exp) Option a is the correct answer.

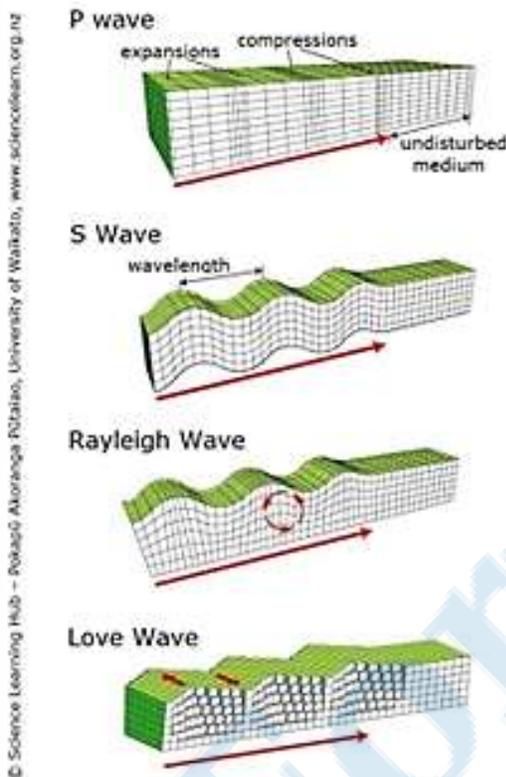

Seismic waves are caused by the sudden movement of materials within the Earth, such as slip along a fault during an earthquake.

Statement 1 is correct: **P-waves**, also known as primary waves or pressure waves, travel at the greatest velocity through the Earth. When they travel through air, they take the form of sound waves – compressing

and expanding the medium. Because of their speed, they are the **first waves to be recorded by a seismograph during an earthquake.**

Statement 2 is correct: **S-waves** are also known as secondary waves, shear waves or shaking waves. They are transverse waves that travel about 1.7 times slower than P waves. In this case, particle motion is perpendicular to the direction of wave propagation. **S-waves cannot travel through air or water but are more destructive than P-waves because of their larger amplitudes.** S waves produce vertical and horizontal motion in the ground surface.

Statement 3 is incorrect: **Rayleigh waves, also called ground roll, travel as ripples similar to those on the surface of water.** They move in an elliptical motion, producing both a vertical and horizontal component of motion in the direction of wave propagation.

Statement 4 is incorrect: **Love waves** cause horizontal shearing of the ground. **Love waves (4.4 km/s)** usually travel slightly faster than **Rayleigh waves (3.5 km/s)**. They move parallel to the Earth's surface and perpendicular to the direction of wave propagation.

Knowledge Base:

In the Earth, P waves travel at speeds from about 6 km per second in surface rock to about 10.4 km per second near the Earth's core some 2,900 km below the surface. As the waves enter the core, the velocity drops to about 8 km per second.

Love waves and Rayleigh waves are called surface waves. Surface waves are typically generated when the source of the earthquake is close to the Earth's surface. Although surface waves travel more slowly than S-waves, they can be much larger in amplitude and can be the most destructive type of seismic wave.

Source: <https://www.sciencelearn.org.nz/resources/340-seismic-waves#:~:text=There%20are%20three%20basic%20types,sometimes%20collectively%20called%20body%20waves.>

Q.38) With reference to the interior of the Earth, consider the following statements:

1. Generally as we go deeper into the mantle, the speed of seismic waves increases.
2. The disappearance of P waves in the outer core signifies that it is in liquid state.
3. There is complete disappearance of S waves when passing through the asthenosphere.
4. Sudden jumps in seismic velocities across a boundary denotes the presence of discontinuity in earth's interior.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 4 only
- d) 3 and 4 only

Ans) c

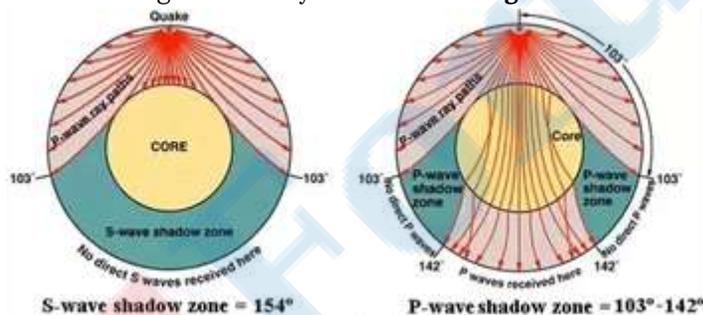

Exp) Option c is the correct answer.

The Longitudinal motion of P waves can pass through solids, liquids, and gases, while liquids and gases prevent the shearing motion of S waves.

Statement 1 is correct: Both S and P waves travel faster through more dense material. **Since density generally increases with depth, waves speed up as they move deeper into the Earth.** The change in density also causes the waves to follow curved paths as they move through the Earth.

Statement 2 is incorrect: At **core-mantle boundary boundary**, the sheer **S waves disappear** completely. **P waves refract significantly** at the core-mantle boundary providing more information about the changes in composition here. It is the disappearance of S waves in this region that shows that the **outer core is liquid**.

Statement 3 is incorrect: Hotter areas cause waves to travel more slowly, revealing the presence of hot spots. Molten regions cause P waves to slow down and completely stop S waves. Since **asthenosphere** is a **partially molten area**, the S waves don't completely disappear but only slows down. This shows up as another change in velocity and a **weakening of S waves**.

Statement 4 is correct: Sudden jumps in seismic velocities across a boundary are known as seismic discontinuities. It denotes the presence of discontinuity in earth's interior.

Knowledge Base:

The curving of seismic waves is similar to the refraction that occurs when a light ray passes through an interface between two media (like air to glass), but rather than an abrupt change in direction the waves undergo a gradual change in direction as the density changes gradually with depth. They undergo gradual refraction that can eventually reach a critical angle, resulting in them turning back towards the surface.

The disappearance of the S waves and the refraction of the P waves create shadow zones where no waves are detected. Consistent with the liquid outer core preventing the propagation of shear waves, no S waves are detected past 103 degrees from the origin of the waves. P waves make shadow zone between 103 and 143 degrees. This is due to the refraction patterns of P wave that creates a gap in P wave detection.

The S waves completely disappear while passing through the Gutenberg discontinuity.

The **Gutenberg discontinuity** is the transition zone between the mantle and core located at the depth of 2900 km beneath the earth surface. In this zone the velocity of seismic waves changes suddenly. The **velocity of P wave decreases and S wave completely disappear at this depth in this zone**. The mantle core boundary does not remain constant. As the heat of the earth's interior constantly but slowly dissipated, the molten core within earth solidifies and shrinks, causing the core mantle boundary to slowly move deeper and deeper within the earth's core.

Source: <https://scienceprimer.com/studying-inside-earth>
http://www.columbia.edu/~vjd1/earth_int.htm

Q.39) Which of the following is **incorrect** in regard to the discontinuities in interior of the Earth?

- The Conrad discontinuity is not found in oceanic regions.
- There is no change in the velocity of P waves while passing through the Mohorovicic discontinuity.
- Lehmann discontinuity is the transition zone between outer and inner core.
- Repetti discontinuity is the transition zone present within the mantle layer.

Ans) b

Exp) Option b is the correct answer.

The discontinuity is a zone within the earth where a sudden change in physical properties, such as the velocity of earthquake waves, occurs. Such a zone marks the boundary between the different layers of the earth such as between the core and mantle.

Option a is correct: The **Conrad discontinuity** was named after the seismologist Victor Conrad). It is a transition zone between upper and lower Crust. This boundary is observed in various continental regions at a depth of 15 to 20 km; however, it is **not found in oceanic regions**. In passing through the Conrad discontinuity the velocity of longitudinal seismic waves increases abruptly from approximately 6 to 6.5km/sec.

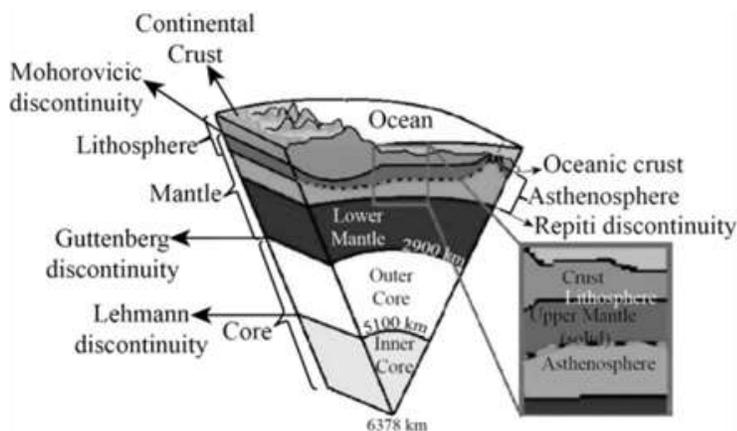

Option b is incorrect: The mohorovicic discontinuity is the transition zone between the crust and mantle. It was discovered by Andrija Mohorovicic in the year of 1909. It lies at the depth of 35km beneath the continents and 8 km beneath the oceanic crust. It lies almost entirely within the lithosphere except beneath the Mid Oceanic Ridge where it is defined as the lithosphere and asthenosphere boundary. There is a **change in the velocity of the P wave from 8 km/sec below the Moho to 6km/sec above the Moho** discontinuity.

Option c is correct: Lehmann Discontinuity is the transition zone between outer and inner core. It is an abrupt increase of P-wave and S-wave velocities at the depth of 220 km. It appears beneath continents, but not usually beneath oceans.

Option d is correct: Repetti discontinuity is the transition zone between **outer mantle and inner mantle**. It is located approximately between 660 and 700 km deep. Passing through this discontinuity, seismic waves increase its speed.

Knowledge Base:

The portion of the interior beyond the crust is called the mantle. The upper portion of the mantle is called asthenosphere.

Source: <https://geologyscience.com/geology/structure-of-earth/>
<https://geology.com/articles/mohorovicic-discontinuity.shtml>

Q.40) This national leader played a key role in the formation of the Congress Socialist Party (1934). Later, he was imprisoned for his opposition to Indian participation in World War II. After the political independence of the country was achieved, he advocated ‘Sampoorna Kranti’ (total revolution) with a broad aim of fighting corruption in public life.

Which one of the following important personalities is being described in the above given paragraph?

- Ram Manohar Lohia
- Acharya Vinoba Bhawe
- Jayaprakash Narayan
- Achyut Patwardhan

Ans) c

Exp) Option c is the correct answer.

Recently biography of **Jaya Prakash Narayan** – The Dream of Revolution, authored by Bimal Prasad and Sujata Prasad, was released. It is an excellent account of his life, containing details about the various stages of his evolution.

Jaya Prakash Narayan was born on 11th October 1902 in Sitabdiara, Bihar. He is also known as ‘Lok Nayak’. People also affectionately called him JP. He was a freedom fighter and one of the pioneers of the socialist movement in India. He was a man of great intellect and ethical values and standards.

(a) His formative years were the ones where he evolved as a political leader. He played a key role in the formation of the Congress Socialist Party (1934). Later on, he was imprisoned for his opposition to Indian participation in World War II.

(b) He then turned to socialism. He also waged a guerrilla struggle against the British in the Terai region of Nepal. However, his life had a transition from socialism to Sarvodaya. This also led to the initiation of the Total Revolution with a broad aim of fighting corruption in public life.

(c) He used this term Total Revolution for the first time in a British magazine called The Time in 1969. The concept of Total Revolution as enunciated by JP is a confluence of his ideas on seven revolutions i.e., social, economic, political, cultural, ideological and intellectual, educational and spiritual.

Source: <https://egyankosh.ac.in/bitstream/123456789/22499/1/Unit-15.pdf>
<https://blog.forumias.com/remembering-jayaprakash-narayan-the-peoples-hero/>

Q.41) Consider the following statements:

1. The albedo of an object determines its visual brightness when viewed with reflected light.
2. The albedo of Mercury is much greater than the albedo of the Earth.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

Albedo is the fraction of light that is reflected by a body or surface. It describes the reflective properties of planets, satellites, and asteroids.

Statement 1 is correct. Albedo is a non-dimensional, unitless quantity **that indicates how well a surface reflects solar energy.** The albedo of an object will determine its visual brightness when viewed with reflected light. For example, the **planets are viewed by reflected sunlight and their brightness depends upon the amount of light received from the sun** and their albedo. When an object reflects most of the light that hits it and looks bright then it has high albedo.

Statement 2 is incorrect. Mercury receives the maximum amount of sunlight, but its **albedo is only 0.1** so it is not as bright as it would be with a higher albedo. The albedo of the **Earth is 0.37**. Therefore, Albedo of Earth is greater than Mercury.

Planet	Mercury	Venus	Earth	Moon	Mars	Pluto
Geometric Albedo	0.138	0.84	0.367	0.113	0.15	0.44-0.61
Bond Albedo	0.119	0.75	0.29	0.123	0.16	0.4

Planet	Jupiter	Saturn	Uranus	Neptune
Bond Albedo	0.343 +/-0.032	0.342 +/-0.030	0.290 +/-0.051	0.31 +/-0.04

Source) Albedo of the Earth (gsu.edu)

Q.42) With reference to the interior of Earth, consider the following statements:

1. Gneiss characterizes the continental crust while the gabbro characterizes the oceanic crust.
2. The asthenosphere is more ductile than the lithosphere but lesser ductile than the lower mantle.
3. The Earth's magnetic field originates due to the eddy currents formed in the outer core.
4. The inner core is composed primarily of iron and nickel.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 2, 3 and 4 only
- c) 1, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: Different types of rocks distinguish lithospheric crust and mantle. **Lithospheric crust is characterized by gneiss (continental crust) and gabbro (oceanic crust).** Below the Moho, the mantle is characterized by peridotite, a rock mostly made up of the mineral's olivine and pyroxene.

Statement 2 is incorrect: The asthenosphere is the denser, weaker layer beneath the lithospheric mantle. The temperature and pressure of the asthenosphere are so high that rocks soften and partly melt, becoming semi-molten. **The asthenosphere is much more ductile than either the lithosphere or lower mantle.** The asthenosphere is generally more viscous than the lithosphere. The very slow motion of lithospheric plates “floating” on the asthenosphere is the cause of plate tectonics.

Statement 3 is correct: The **outer core** is 2300 km thick that extends to a radius of ~3,400 km. In this region, the density is estimated to be much higher than the mantle or crust, ranging between 9,900 and 12,200 kg/m³. The outer core is believed to be composed of 80% iron, along with nickel and some other lighter elements. Because of its high temperature, the outer core exists in a **low viscosity fluid-state that undergoes turbulent convection and rotates faster than the rest of the planet.** This causes **eddy currents to form in the fluid core**, which in turn creates a dynamo effect that is believed to cause the Earth's magnetic field.

Statement 4 is correct: The **inner core is composed primarily of iron and nickel** and has a radius of ~1,220 km.

The temperature of the inner core is estimated to be about ~5,400 °C. The only reason why iron and other heavy metals can be solid at such high temperatures is because their melting temperatures dramatically increase at the pressures present there.

Source: NCERT Class 11 – Fundamentals of Physical Geography – Chapter 3 – Interior of the Earth – P 25, 26.

<https://education.nationalgeographic.org/resource/mantle>

Q.43) With reference of the Continental Drift Theory, consider the following statements:

1. Continental Drift refers to the horizontal movements of continents relative to one another over a long period of geologic time.
2. The matching of the shorelines of Africa and South America is one of the evidences proposed in support of the theory.
3. The Gravity, the Convection currents and the Primordial Heat are the main forces causing the Continental drift.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) 1 and 2 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

Alfred Wegner proposed the Continental Drift Theory to explain the movement of continents over the geological period of time.

Statement 1 is correct: Continental drift refers to the large-scale horizontal movements of continents relative to one another and to the ocean basins during one or more episodes of geologic time.

Statement 2 is correct: Evidences of Continental drift:

- **The Matching of Continents (Jig-Saw-Fit): The shorelines of Africa and South America facing each other have a remarkable and unmistakable match.** The match was tried at 1,000- fathom line instead of the present shoreline.
- **Rocks of Same Age across the Oceans:** The belt of ancient rocks of 2,000 million years from Brazil coast matches with those from western Africa. The earliest marine deposits along the coastline of South America and Africa are of the Jurassic age. This suggests that the ocean did not exist prior to that time.

• Distribution of Fossils: The observations that Lemurs occur in India, Madagascar and Africa led some to consider a contiguous landmass 'Lemuria' linking these three landmasses. The skeletons of Mesosaurus are found only in two localities: the Southern Cape province of South Africa and Iraver formations of Brazil.

Statement 3 is incorrect: Alfred Wegener suggested that the movement responsible for the drifting of the continents was caused by pole-fleeing force and tidal force. But most of scholars considered these forces to be totally inadequate. In Convectional Current Theory, Arthur Holmes in 1930s discussed the possibility of **convection currents operating in the mantle portion**. These currents are generated due to radioactive elements causing thermal differences in the mantle portion. As per the Plate Tectonic theory, these convective currents are considered as the major forces for the tectonic movement.

Source: NCERT Class 11 – Fundamentals of Physical Geography – Chapter 4 – Distribution of Oceans and Continents – P 30-32.

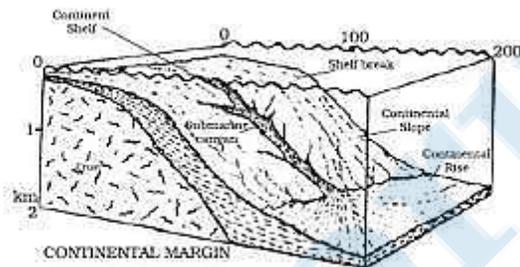

Q.44) Which of the following is the correct description of continental margin?

- It refers to the region that starts at the bottom of continental shelf and then abruptly descend into a slope.
- It refers to the shallowest part of the ocean having an average gradient of 1° or even less.
- A transition zone that lies between continental shores and deep-sea basins.
- Gently sloping areas of ocean basin having smoothest and flattest regions of the world.

Ans) c

Exp) Option c is the correct answer.

continental margin is the transition zone which connects continental crust to the oceanic crust.

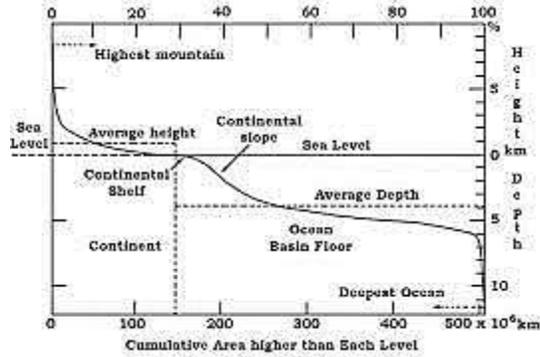

Option a is incorrect: The continental slope starts at the bottom of the continental shelf sharply drops off into a steep slope. It connects the continental shelf and the ocean basins. The depth of the slope region ranges from 200 to 3,000 m. The slope boundary indicates the end of the continents. Canyons and trenches are observed in this region.

Option b is incorrect: The continental shelf is the shallowest part of the ocean showing an average gradient of 1° or even less. It is the margin stretched out of each continent. It is occupied by relatively shallow seas and gulfs. The width of the continental shelves varies from one ocean to another.

Option c is correct: Continental margin is the region that form the transition between continental shores and deep-sea basins. They include continental shelf, continental slope, continental rise and deep-oceanic trenches.

Option d is incorrect: Deep Sea plain are gently sloping areas of the ocean basins. These are the flattest and smoothest regions of the world. The depths vary between 3,000 and 6,000m.

Source: NCERT: FUNDAMENTALS OF PHYSICAL GEOGRAPHY, chapter no.4

Q.45) The term "Pillars of creation" recently seen in news, is associated with:

- supercomputer for Quantum computing.
- new biotechnology initiative of ISRO.
- photograph taken in space by James Webb Space Telescope.
- architectural pattern used in the new Parliament building.

Ans) c

Exp) Option c is the correct answer.

NASA's James Webb Space Telescope has captured a lush, highly detailed landscape – the photograph of iconic Pillars of Creation – where new stars are forming within dense clouds of gas and dust.

The Hubble Space Telescope is a space telescope that was launched into low Earth orbit in 1990 and remains in operation. It was not the first space telescope, but it is one of the largest and most versatile, renowned both as a vital research tool and as a public relations boon for astronomy.

The three-dimensional pillars look like majestic rock formations, but are far more permeable. These columns are made up of cool interstellar gas and dust that appear – at times – semi-transparent in near-infrared light.

Source: <https://www.nasa.gov/feature/goddard/2022/nasa-s-webb-takes-star-filled-portrait-of-pillars-of-creation>

Q.46) With reference to plate boundaries, consider the following statements:

1. Island arcs are the feature observed at the convergent plate boundary.
2. Volcanic eruptions at the diverging plate boundaries are more violent than those observed at the converging plate boundaries.
3. Rift valley is seen at the divergent plate boundary.
4. Earthquake's are absent at the transform plate boundary.

Which of the statements given above is/are correct?

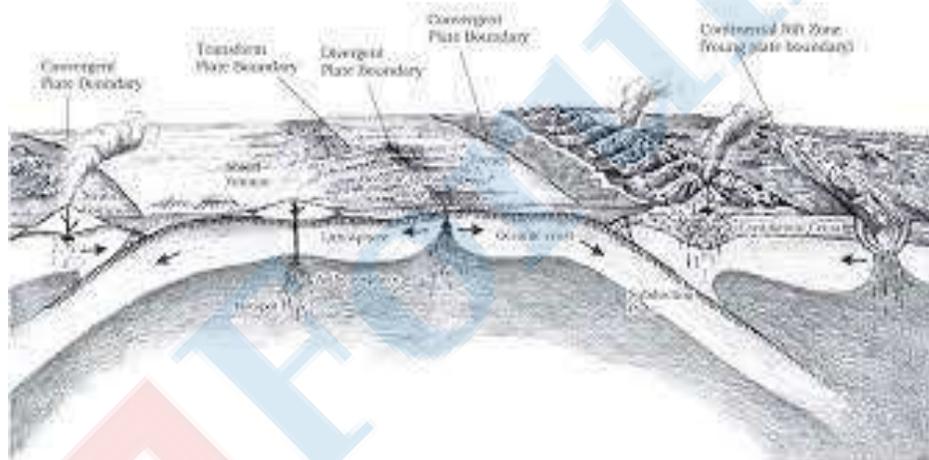

- a) 1, 2 and 3 only
- b) 1 and 3 only
- c) 2, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) b

Exp) Option b is the correct answer.

Plate boundaries refers to the region where two tectonic plate meets. Most of the geological activities takes place at the plate boundary. A single tectonic plate can have multiple plate boundaries. There are three types of plate boundaries:

- 1) **Convergent plate boundary:** It refers to the region where the crust is destroyed as **one Earth's plate subducts below another plate**. The site where sinking of a plate occurs is called a **subduction zone**.
- 2) **Divergent plate boundary:** It refers to the site where new crust is formed when the **Earth's plates move away from each other**. The sites where the plates pull away from each other are called spreading sites.
- 3) **Transform plate boundary:** It refers to the place where the crust is neither produced nor destroyed as the **plates slide horizontally past each other**.

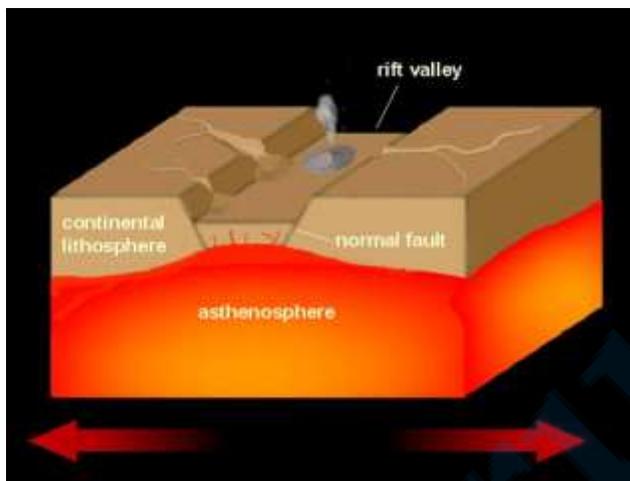

Statement 1 is correct: Island arcs are long curved chains of volcanic islands found along the convergent tectonic plate boundaries. Island arcs result due to the interaction of two oceanic crust where they converge and form the subduction zone. For example, Japanese Island.

Statement 2 is incorrect: Volcanoes observed at the divergent plate boundary are less violent than those appearing at the subduction zone of convergent plate boundary. The reason being the magma at convergent site is more viscous and it has more volatile material (mostly water).

Statement 3 is correct: Rift valley is a linear shaped lowland region that is found between the mountain ranges. It is formed when Earth's tectonic plates move apart or diverges. Rift valleys are found both on land and at the bottom of the ocean, where they are created by the process of seafloor spreading. For example, East African rift valley.

Statement 4 is incorrect: The third type of plate boundary occurs where tectonic plates slide horizontally past each other. This is known as a transform plate boundary. As the plates rub against each other, huge stresses can cause portions of the rock to break, resulting in **earthquakes**. Places where these breaks occur are called faults. A well-known example of a transform plate boundary is the San Andreas Fault in California.

Q.47) With reference to igneous rocks, consider the following statements:

1. Igneous rocks generally occur as stratified rocks.
2. Igneous rocks are considered as good source of coal and petroleum.
3. Gabbro is an example of igneous rocks.

Which of the statements given above is/are **correct**?

- a) 1 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

When magma in its upward movement cools and turns into solid form it is called **igneous rock**. The process of cooling and solidification can happen in the earth's crust or on the surface of the earth. They are also known as primary rocks. Igneous rocks can be divided into groups depending upon the conditions under which they solidify. They are:

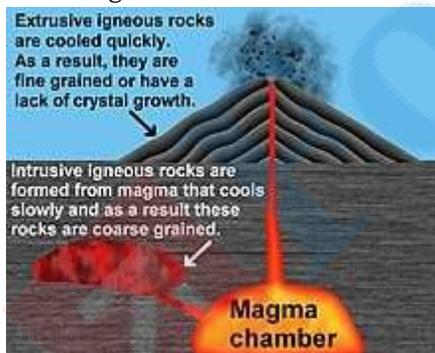

1. Extrusive rocks: Extrusive rocks are those rocks which are formed when the magma accumulates and solidifies on the surface of the earth.
2. Intrusive rocks: The rising magma solidifies below the earth's surface during a volcanic activity is called intrusive rocks.

Statement 1 is incorrect: The igneous rocks are generally massive and unstratified. They show distinct signs of having cooled from a high temperature.

Statement 2 is incorrect: Igneous rocks are to be the hardest rocks. They are not considered as good source of coal and petroleum, because they are not arranged as strata like sedimentary rocks and thus do not contain fossils. They are resistant to weathering, having fine to coarse grained texture.

Statement 3 is correct: Gabbro is an example of igneous rocks. Nearly all gabbros are found beneath the earth's surface. Granite, pegmatite, basalt, volcanic breccia and tuff are some other examples of igneous rocks.

Knowledge Base:

[http://epgp.inflibnet.ac.in/epgpdata/uploads/epgp_content/S000017GE/P001786/M025395/ET/1512630470Rocks-TypesFormationProcesses-\(E-Text.pdf](http://epgp.inflibnet.ac.in/epgpdata/uploads/epgp_content/S000017GE/P001786/M025395/ET/1512630470Rocks-TypesFormationProcesses-(E-Text.pdf)

Q.48) Which of the following phenomenon occurs due to revolution of earth?

1. Earth experiencing daylight and darkness.
2. Sun is vertically above the equator for two days every year.
3. Change in lengths of day and night.
4. High temperature in summers and low temperature in winters.

Which of the statements given above is/are correct?

- a) 1, 2 and 3 only
- b) 2, 3 and 4 only
- c) 2 and 3 only
- d) 1, 2, 3 and 4

Ans) b

Exp) Option b is the correct answer.

Earth revolves around the sun at the speed of 66,600 m.p.h. One complete revolution takes approx. 365 days and 6 hours. The six hours then add to a day every four years, which is called a leap year.

Statement 1 is incorrect: It is due to rotation of earth and not revolution that earth experiences daytime and night-time. When the earth rotates on its axis, one portion of the earth faces daylight. Whereas the other portion which is away from the sun faces darkness.

Statement 2 is correct: Sun is vertically overhead at equator for two days each year.

Earth is tilted at 66.5 degrees with respect to the orbital plane. And it is due to earth's revolution around the sun in its elliptical orbit, that sun for two days each year is vertically above the equator. They usually fall on 21st march and 21st September and known as equinoxes.

Statement 3 is correct: Revolution of the earth causes varying length in days and night. Earth is tilted on its axis and as earth revolves around the sun, the variation in length of days and night occurs. It also causes change in seasons.

Statement 4 is correct: Revolution of earth around the sun also causes change in season and its effect on temperature. In summer, the sun is higher on the sky than on the winter. As a result, the sunrays are concentrated on a small area, temperature therefore always rises in the summer. Whereas in winters, the slanted rays of sun fall indirectly over the earth. Also, much of the heat absorbed through atmosphere impurities and water vapour causing low temperature in winters.

Source: GC Leong, chapter:1. Pg no. 6

Q.49) With reference to the temperature of Earth, consider the following statements:

1. The shape of the Earth affects the amount of heat received on different places on Earth.
2. Temperature generally increases with increasing altitude.
3. The variation in temperature over the sea is more compared to land.

Which of the statements given above is/are **correct**?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Latitude is the measurement of the distance of a location on the Earth from the equator. The further away from the equator that you are the less sunlight that this location receives. More heat is lost to the atmosphere as the rays travel a longer distance through the atmosphere.

Statement 1 is correct: Latitude is one of the primary factors that affect temperature. As one moves further away from the equator, the temperature falls because regions receive less sunlight. The reason behind this is the shape of the earth. The shape of the earth is an oblate spheroid. Thus, not all locations receive the same amount of sunlight heat or insolation (Incoming Solar Radiation).

Statement 2 is incorrect: The atmosphere is indirectly heated by terrestrial radiation from below. Therefore, the places near the sea-level record higher temperature than the places situated at higher

elevations. In other words, the **temperature generally decreases with increasing height**. **Statement 3 is incorrect:** Another factor that influences the temperature is the location of a place with respect to the sea. Compared to land, the sea gets heated slowly and loses heat slowly. Land heats up and cools down quickly. Therefore, **the variation in temperature over the sea is less compared to land**. The places situated near the sea come under the moderating influence of the sea and land breezes which moderate the temperature.

Knowledge Base: The oblique sunrays become more and more slanting when it reaches from the equator towards the poles. And temperature also decreases poleward. But **the highest temperature is not located in equator but at the subtropical high-pressure belt**. The reason being Rainfall and Cloud cover throughout the year at equator.

Source: <https://www.scienceabc.com/eyeopeners/why-are-tropical-regions-hotter-than-equatorial-regions.html>

http://profhorn.aos.wisc.edu/wxwise/AckermanKnox/chap14/climate_spatial_scales.html

Q.50) With reference to 'Jim Corbett Tiger Reserve', consider the following statements:

1. It has the highest tiger density among India's tiger's reserves.
2. Kali River is one of the major rivers flowing through this Tiger Reserve.
3. It is the only Tiger Reserve present in the state of Uttarakhand.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 3 only
- c) 2 only
- d) 2 and 3 only

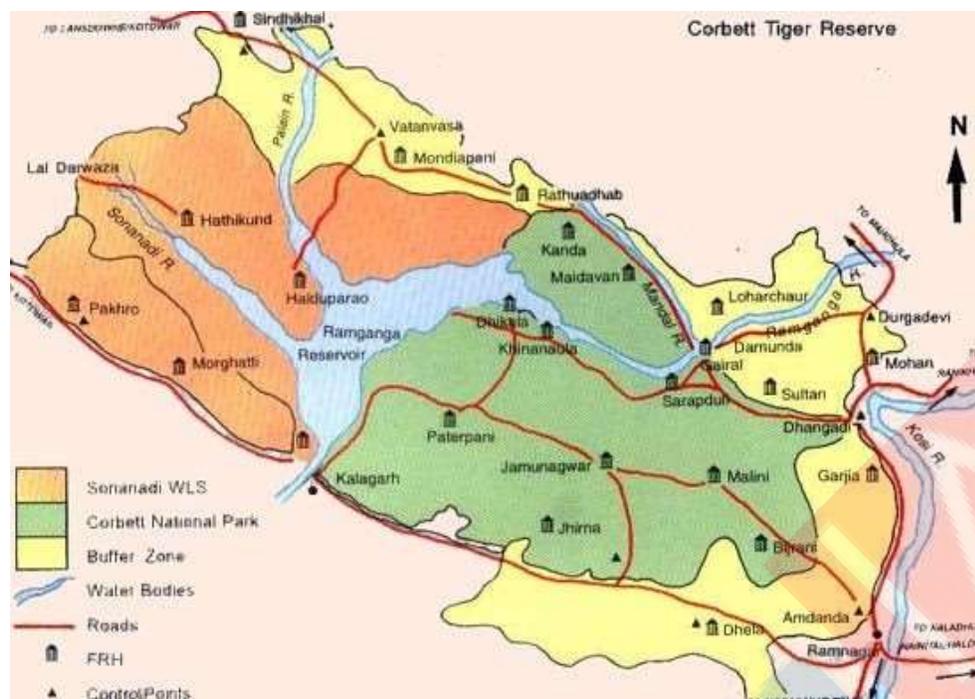

Ans) a

Exp) Option a is the correct answer.

Corbett Tiger Reserve was **established in 1936 as Hailey National Park- the first national park of India**. The Tiger Reserve is situated in the Shivalik hills of the Himalayas while administratively it spreads over Pauri Garhwal, Nainital and Almora districts of Uttarakhand State in India. Uttarakhand have the highest number of Tigers in the recent Tiger census which held in every 4 years.

Statement 1 is correct: Uttarakhand's Jim Corbett National Park has reported the **highest tiger density** among India's 50 tiger's reserves with 14 tigers per 100 square kilometres.

Statement 2 is incorrect: **Ramganga, Sonanadi, Mandal, Palain and Kosi** are the **major rivers flowing through the Jim Corbett National Park**. Kali river originates from a place called Kalapani in Pithoragarh district of Uttarakhand. It flows along Nepal's western border with India and it does not pass-through Jim Corbett National Park.

Corbett Tiger Reserve

Statement 3 is incorrect: There are **total of three Tiger reserve in Uttarakhand**- Corbett National Park, Kalagarh Tiger Reserve, Rajaji Tiger Reserve. **The Jim Corbett National Park** is situated in the Nainital district of Uttarakhand and is the oldest national park in India. When Jim Corbett Park was established in 1974, the northern region of the park was renamed as **Kalagarh Tiger Reserve**.

Rajaji Tiger Reserve (earlier Rajaji National Park) is located in the Shivalik range of Himalayas. It is famous as an elephant habitat as there are around 600 elephants in Rajaji.

Knowledge Base:

Facts about Jim Corbett National Park:

- According to the botanical survey of India, Corbett has 600 species of plants - trees, shrubs, ferns, grass, climbers, herbs and bamboos. Sal, Khair and Sissoo are the most visible trees found in Corbett.
- The Corbett Reserve also has leopards. Other mammals such as jungle cats, barking deer, spotted deer, sambar deer, sloth etc. are also found there.

Source: Celebrating Great News for India's Tigers, Corbett Records Highest Density of Tigers in World - Corbett National Park

Q.1) On the planet earth, most of the freshwater exists as ice caps and glaciers. Out of the remaining freshwater, the largest proportion

- a) is found in atmosphere as moisture and clouds
- b) is found in freshwater lakes and rivers
- c) exists as groundwater
- d) exists as soil moisture

Ans) c

Exp) Option c is the correct answer.

The distribution of water on the Earth's surface is extremely uneven.

Only 3% of water on the surface is fresh; the remaining 97% resides in the ocean. Of freshwater, 69% resides in glaciers, 30% exists as groundwater, and less than 1% is located in lakes, rivers, and swamps.

Source) UPSC 2013

Q.2) Consider the following pairs:

Types of Sand Features

Dunes

- | | |
|--------------------|--|
| 1. Barchans | Crescent-shaped with a steep slip face |
| 2. Linear dunes | Pointed ridges and slip faces on at least three sides. |
| 3. Dome dunes | Circular in shape and do not have a slip face |
| 4. Parabolic dunes | U-shaped with vegetation-anchored tips |

Which of the pairs given above are correctly matched?

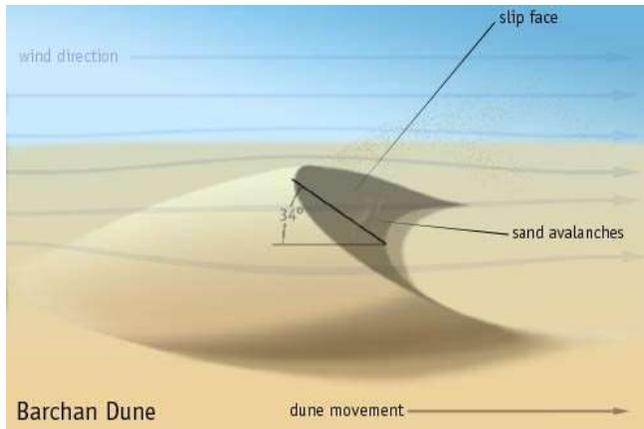

- a) 1 and 2 only
- b) 2 and 4 only
- c) 1, 3 and 4 only
- d) 3 and 4 only

Ans) c

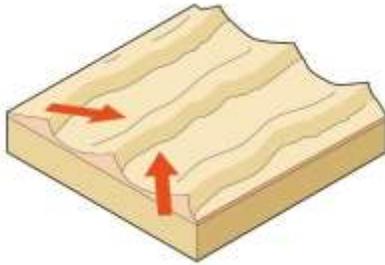

Exp) Option c is the correct answer.

Sand dunes are mounds formed by loose grains of sand blown by the wind and gathered in one place creating a small hill. Sand dunes cannot be formed without sand and wind. Most sand dunes form in deserts and sandy beaches. Subsequently, the five major types of sand dunes are Star, linear, parabolic, barchan, and reversing sand dunes.

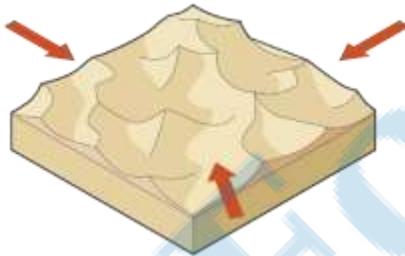

Pair 1 is correctly matched: A barchan sand dune is a **crescent-shaped dune**. It has a steep slip face whose tips point away from the wind. The dunes are separated from each other and keep moving along the surface of the barren deserts.

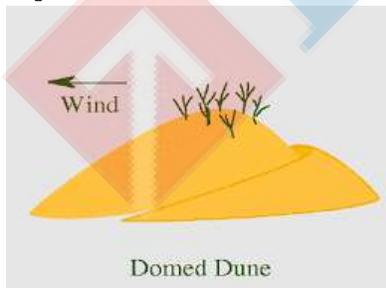

Pair 2 is incorrectly matched: Linear sand dunes are the longest type of sand dunes in the world. They are **straight, regular-spaced, and snake-like in shape**. A prominent feature of the linear sand dunes is the ridges. The dunes appear as isolated and large symmetrical peaks.

Whereas, Star dunes have **pointed ridges and slip faces on at least three sides**. Star dunes develop where winds come from many different directions.

Pair 3 is correctly matched: Dome dunes are the rarest type of dune. They are **circular and do not have a slip face**. The wind can blow material onto the dune from any side.

Pair 4 is correctly matched: U-shaped mounds of sand with convex noses trailed by elongated arms are parabolic dunes. A parabolic sand dune is an **inverted crescent-shaped dune** that has vegetation-anchored tips. The tips of the parabolic dune point towards the upwind direction. On the other hand, its steep slip face points to the downwind side.

Parabolic Shaped Sand Dunes

NCERT PHYSICAL GEOGRAPHY CLASS 11

CHAPTER 7

Q.3) With reference to 'Meanders', consider the following statements:

1. They are landforms associated with only flat-bottomed glacial valleys.
2. They are the result of both erosional and depositional processes.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

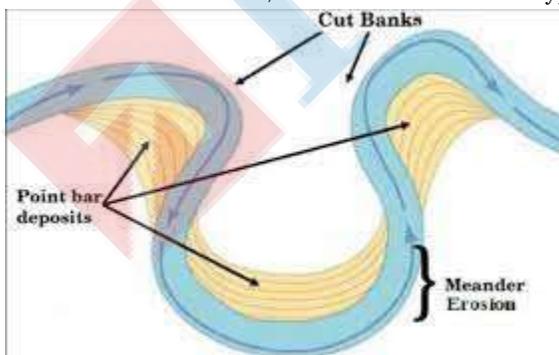

Ans) b

Exp) Option b is the correct answer.

In large flood and delta plains, rivers rarely flow in straight courses. Loop-like channel patterns called meanders develop over flood and delta plains.

Statement 1 is incorrect: Meander is **not a landform but is only a type of channel pattern**. Meanders are associated with the rivers in the **middle and mature stage of the river**, especially in the **plain region**. Usually, the energy accompanying flow water in a river decreases progressively from the upper course of the river to the lowest course of the river.

Statement 2 is correct: Meanders are the result of **both erosional and depositional processes**. It is produced as a watercourse erodes the sediments of an outer, concave bank (cut bank) and deposits sediments on an inner, convex bank which is typically a point bar.

Source: NCERT PHYSICAL GEOGRAPHY CLASS 11

CHAPTER 7

<https://earthclipse.com/science/geography/meander-definition-formation-facts.html>

<https://www.alevelgeography.com/meanders/>

Q.4) With reference to ‘Stream Erosion’, consider the following statements:

1. Hydraulic action is the mechanical loosening and removal of the material from the rocks due to pressure exerted by the running water.
2. Abrasion involves wear and tear of the load sediments through the process of mutual impacts and collisions.
3. Corrosion implies slow but steady chemical action of the flowing stream water on the rocks.
4. Attrition is the process by which irregular bed of the stream is smoothed by the constant friction.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 4 only
- c) 1 and 3 only
- d) 2, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

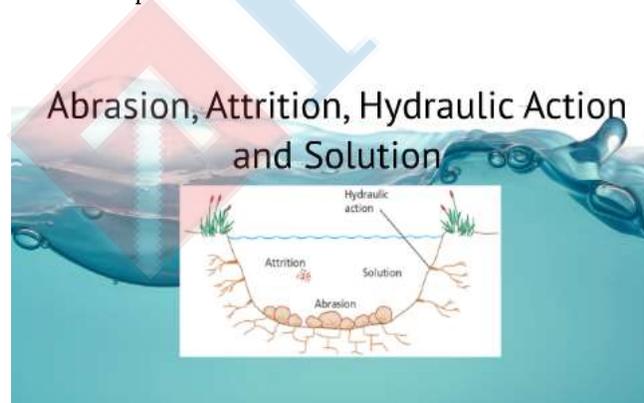

Streams are one of the most effective surface agents that erode rock and sediment. In addition to eroding the bedrock and previously deposited sediments along its route, a stream constantly abrades and weathers the individual rock and soil particles carried by its water. Hydraulic action, abrasion, and solution are the three main ways that streams erode the earth's surface.

Statement 1 is correct: Hydraulic action is the **mechanical loosening and removal of the material from the rocks due to pressure exerted by the running water**. The higher the velocity the greater is the pressure of the running water and hence greater is its capacity to bodily move out parts of the rock or grains of soil from the parent body occurring along its base or sides.

Statement 2 is incorrect: Abrasion is the **process by which a stream's irregular bed is smoothed by the constant friction** and scouring impact of rock fragments, gravel, and sediment carried in the water. The individual particles of sediment also collide as they are transported, breaking them down into smaller particles.

Statement 3 is correct: The **slow but steady chemical action of the stream water** on the rocks is expressed by the term corrosion. The extent of corrosion depends such on the composition of rocks and also on the composition of flowing water. Thus, all rocks are not equally susceptible to corrosive action of stream water. Limestones, gypsum and rock salt bodies are soluble in water to varying degrees.

Statement 4 is incorrect: Attrition is used for **wear and tear of the load sediments being transported by a moving natural agency** through the **process of mutual impacts and collisions** which they suffer during their transport.

SFG 2023 | LEVEL 1 | Test #26 – Solutions |

Q.5) Which one of the following is the main objective of recently launched YUVA 2.0 scheme?

- Encouraging Youth participation in Swachh Bharat Abhiyan.
- Attracting Young Women towards entrepreneurship through focusing on soft skills.
- Training the Youth in culinary skills in order to boost employment in hospitality sector.
- Mentoring Young Authors to promote reading, writing and book culture in India.

Ans) d

Exp) Option d is the correct answer.

The Ministry of Education, Department of Higher Education, launched YUVA 2.0 – Prime Minister’s Scheme for Mentoring Young Authors.

(a) YUVA (Young, Upcoming and Versatile Authors) 2.0 Scheme: It is an Author Mentorship programme to train young and budding authors (below 30 years of age) in order to promote reading, writing and book culture in the country, and project India and Indian writings globally.

(b) YUVA 2.0 is a part of India@75 Project (Azadi Ka Amrit Mahotsav) to bring to the fore the perspectives of the young generation of writers on the THEME: ‘Democracy (institutions, events, people, constitutional values – past, present, future)’ in an innovative and creative manner. This scheme will thus help to develop a stream of writers who can write on a spectrum of subjects to promote Indian heritage, culture and knowledge system.

(c) The National Book Trust, India, under the Ministry of Education as the Implementing Agency, will ensure phase-wise execution of the Scheme under well-defined stages of mentorship. Source: <https://www.pib.gov.in/PressReleasePage.aspx?PRID=1864515>

Q.6) Which of the following is the correct statements regarding the significance of presence of bars, barriers and beaches?

- Off-shore bars provides defense against storm and tsunami by absorbing most of their destructive force.
- Barrier islands offer an important habitat for a wide variety of fish, shellfish, sea bird and sea turtle species.
- Beaches help to protect the coastal structures by creating enough space for the ocean current energy to dissipate.

Select the correct answer using the codes given below:

- 1 only
- 2 and 3 only
- 1 and 3 only
- 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Coastal deposition is when the sea drops or deposits material. This can include sand, sediment, and shingle, resulting in landforms of coastal deposition. Bars, barriers and beaches are the depositional features of coasts. They have various significance for marine as well as human life.

Statement 1 is correct: A ridge of sand and shingle formed in the sea in the off-shore zone (from the position of low tide waterline to seaward) lying approximately parallel to the coast is called an off-shore

bar. The coastal off-shore bars offer the **first buffer or defence against storm or tsunami** by absorbing most of their destructive force.

Statement 2 is correct: Barrier islands are a type of island made up of long stretches of sand that are parallel to the mainland. Barrier islands offer an **important habitat for a wide variety of fish, shellfish, sea bird and sea turtle species**. The ecosystems which develop around barrier islands are unique in many respects. Sea turtles, for example, use the ocean-facing beaches of barrier islands to nest.

Statement 3 is correct: Beaches are characteristic of shorelines that are dominated by deposition, but may occur as patches along even the rugged shores. Beaches assist **in the protection of coastal structures** from destruction from storms. The beach also protects the **upland structures by forming storm bars**, which prevent storms from breaking into the upland. It helps to **protect the coastal structures** by creating enough space for the ocean current energy to dissipate.

Q.7) Which one of the following statements correctly explains the landform of 'Bajada'?

- It is a large sheet of ice that reshapes the landscape around them as they move.
- It is a broad slope of debris spread along the lower slopes of mountains by descending streams.
- It is a narrow and shallow channel cut into soil by the erosive action of flowing water.
- It is a naturally occurring desert rock whose shape resembles a mushroom.

Ans) b

Exp) Option b is the correct answer.

Bajada is a **broad slope of debris** spread along the lower slopes of mountains by descending streams, usually found in arid or semiarid climates. It may be formed by the **coalescence of a series of adjacent Alluvial Cones**. A bajada is usually composed of gravelly alluvium and may even have large boulders interbedded in it.

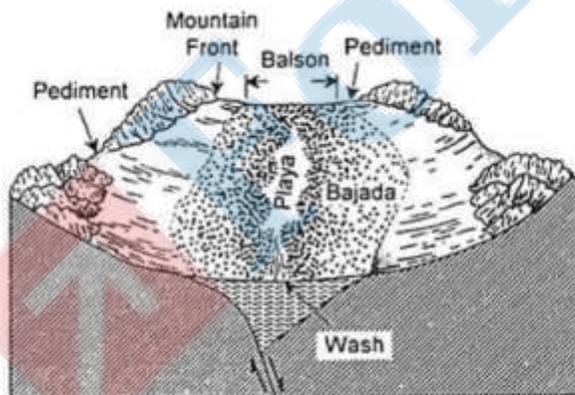

Fig. 21.10 : Mountainous desert landforms—mountain front, pediments, bajada, bolson and playa.

Gently sloping depositional plain between pediments and playa is called bajada. Bajada is formed due to coalescence of several alluvial fans. Thus, **bajada is a wholly depositional feature**. The slope in its upper part ranges between 8° and 10° but it becomes 1° in its lowermost portion touching the playa.

Source: G C Leong

<https://www.britannica.com/science/bajada>

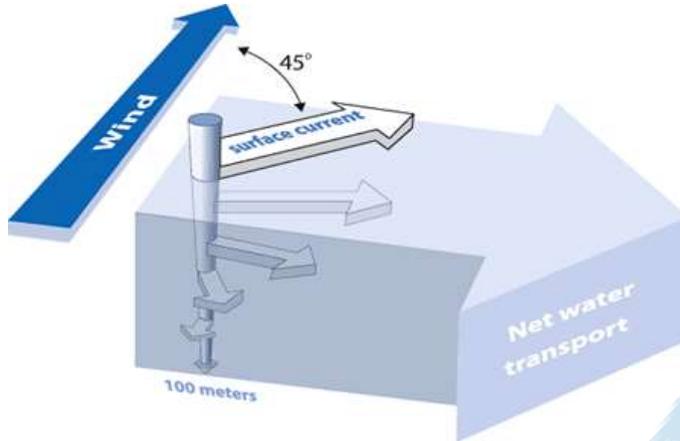

Q.8) Which of the following is **incorrect** with respect to the Ekman Spiral?

- It is a combined result of the friction force of wind and Coriolis force on the ocean water.
- It ceases to operate in ocean water at depths of more than 100 metres.
- It has reduced action of wind with increasing depth of ocean water.
- It necessarily results in the increased biological activity in the area of its occurrence.

Ans) d

Exp) Option d is the correct answer.

The Ekman spiral is named after Swedish scientist Vagn Walfrid Ekman (1874-1954) who first theorised it in 1902.

Option a is correct: Ekman spiral is a consequence of both the friction force of wind and coriolis force on ocean water. occurs when **ocean surface waters are influenced by the friction force acting on them via the wind**. However, due to the influence of the **Coriolis effect**, the ocean water moves at a 90° angle from the direction of the surface wind.

Option b is correct: Each layer of water molecules is moved by friction from the shallower layer, and each deeper layer moves more slowly than the layer above it, until the movement **ceases at a depth of about 100 metres** (330 feet).

Option c is correct: When surface water molecules are moved by the wind, **they drag deeper layers of water molecules below them**. Like surface water, the deeper water is deflected by the Coriolis effect—to the right in the Northern Hemisphere and to the left in the Southern Hemisphere. As a result, **each successively deeper layer of water moves more slowly to the right or left, creating a spiral effect**. Thus it has reduced action of wind with increasing depth of ocean water.

Option d is incorrect: **Ekman spiral(transport)** leads to both increased and decreased biological activity which depend on the **upwelling (Ekman suction) and downwelling of the ocean (Ekman pumping)**. Downwelling leads to nutrient poor waters, therefore reducing the biological productivity of the area and Upwelling leads to nutrient rich water thus increasing the biological productivity of the area.

Source:

https://oceanservice.noaa.gov/education/tutorial_currents/04currents4.html#:~:text=The%20Ekman%20spiral%2C%20named%20after,of%20water%20molecules%20below%20them.

Q.9) With reference to Polymetallic Nodules, consider the following statements:

- They are found in all the oceans of the world.
- Copper constitutes the largest component of polymetallic nodules.
- The Indian Ministry of Earth Sciences is implementing a Polymetallic Nodules programme.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 1 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Polymetallic nodules, also called **manganese nodules**, are rock concretions formed of **concentric layers of iron and manganese hydroxides** around a core.

Statement 1 is correct: Nodules have been found in all the oceans and even in lakes. However, nodules of **economic interest** are more localised. **Three areas** have been selected by industrial explorers: the centre of the **north central Pacific Ocean, the Peru Basin in the south-east Pacific Ocean and the centre of the north Indian Ocean.** Also, they can occur at any depth, but the **highest concentrations have been found between 4,000 and 6,000m.**

Statement 2 is incorrect: Magnesium constitutes the largest component followed by Iron. The components of Polymetallic nodules are **Manganese (29%) Iron (6%) Silicon (5%) and Aluminum (3%)** and other metals such as Nickel, Copper, Cobalt, Oxygen, Hydrogen, Sodium, Calcium, Magnesium, Potassium, Titanium and Barium.

Statement 3 is correct: India is implementing a long-term programme on exploration and utilization of Polymetallic Nodules (Polymetallic Nodules programme) through Ministry of Earth Sciences.

Source: <https://www.isa.org.jm/files/documents/EN/Brochures/ENG7.pdf>

https://www.business-standard.com/article/news-cm/india-s-exclusive-rights-to-explore-polymetallic-nodules-from-central-indian-ocean-seabed-basin-extended-by-five-years-117082200207_1.html

Q.10) What is 'Dechlorane Plus', which was recently seen in news?

- a) It is an informal association of countries advocating for ban on certain toxic chemicals based on chlorine chemical group.
- b) It is a type of polychlorinated flame retardant that can lead to significant adverse effects on human health.
- c) It is a newly discovered chlorine-based antibiotic that can kill bacteria by blocking the function of the bacterial cell wall.
- d) It is a type of chemical used in the production of leather that is causing water pollution in river basins in India.

Ans) b

Exp) Option b is the correct answer.

Dechlorane plus is a polychlorinated flame retardant produced by OxyChem company. The draft of the List of Persistent Organic Pollutants (POP) Review Committee (POPRC-18) to the Stockholm Convention published on October 11, 2021 stipulates that "the production, use, import and export of Dechlorane Plus will be banned from 1 January 2026," the working document states that this implies that a specific exemption over five years is not likely to be necessary.

India is not in favour of listing of dechlorane plus under the draft of the List of Persistent Organic Pollutants (POP) Review Committee. India seeks more information on the socio-economic implications of global action on it. The Stockholm Convention has listed 31 chemicals as of December 2020. This list is likely to expand further amid evidence pointing towards the health burden of hazardous chemicals and pesticides.

Knowledge Base: Stockholm Convention is an international environmental treaty that aims to eliminate or restrict the production and use of POPs or the substances that persist in the environment and pose risk to our health. Source: <https://www.downtoearth.org.in/news/pollution/stockholm-convention-to-take-final-call-on-5-persistent-organic-pollutants-85199>

Q.11) With reference to Ocean Mean Temperature (OMT), which of the following statements is/are correct?

1. OMT is measured up to a depth of 26°C isotherm which is 129 meters in the south -western Indian Ocean during January–March.
2. OMT collected during January –March can be used in assessing whether the amount of rainfall in monsoon will be less or more than a certain long -term mean.

Select the correct using the code given below:

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

Ocean Mean Temperature (OMT) is an important climatic parameter required for atmospheric and oceanic study.

Statement 1 is incorrect. OMT is measured up to a depth of 26°C isotherm, is seen at depths varying from 50–100 metres. During January–March, the mean 26°C isotherm depth in the South-western Indian Ocean is 59 metres.

Statement 2 correct. OMT collected during January – March can be used in assessing whether the amount of rainfall in monsoon will be less or more than a certain long-term mean. Using OMT data collected during January–March 2018, it was able to predict with greater probability the pattern of monsoon.

Source) UPSC 2020

Q.12) Which of the following factors affect the movement of ocean current?

1. Latitudinal location of the ocean.
2. Rotation of the earth.
3. Direction of the wind.
4. Variation of salinity across the ocean.
5. Gravitational force of Sun and Moon on the Earth.

Select the correct answer using the code given below:

- a) 1, 2 and 3 only
- b) 2, 3 and 4 only
- c) 1, 2, 3 and 4 only
- d) 1, 2, 3, 4 and 5

Ans) d

Exp) Option d is the correct answer.

Ocean currents are like **river flow in oceans**. They represent a regular volume of water in a **definite path and direction**.

Option 1 is correct: Heating by solar energy causes the water to expand. That is why, near the equator the ocean water is about 8 cm higher in level than in the middle latitudes. This causes a very slight gradient and water tends to flow down the slope. Thus, the latitudinal position of ocean affects the movement of ocean current.

Option 2 is correct: The **Coriolis force** is caused by the **rotation of the earth** on its own axis. The Coriolis force intervenes and causes the **water to move to the right in the northern hemisphere and to the left in the southern hemisphere.**

Option 3 is correct: **Wind blowing on the surface of the ocean pushes the water to move.** Friction between the wind and the water surface affects the **movement of the water body** in its course. For example, **trade winds** influence the direction of ocean current in the ocean.

Option 4 is correct: **Differences in water density affect vertical mobility of ocean currents.** Water with **high salinity is denser** than water with low salinity. Water with higher density tends to move towards the water with lower density.

Option 5 is correct: The attraction **of the sun and the moon on the earth causes the ocean water to rise up and fall down twice a day.** The vertical motion of the **tides near the shore causes the water to move horizontally**, creating currents. Hence tides too have its influence on ocean currents.

Source: 11th Physical Geography: Chapter Movements of Ocean water

Q.13) With reference to the upwelling and downwelling process of the ocean water, consider the following statements:

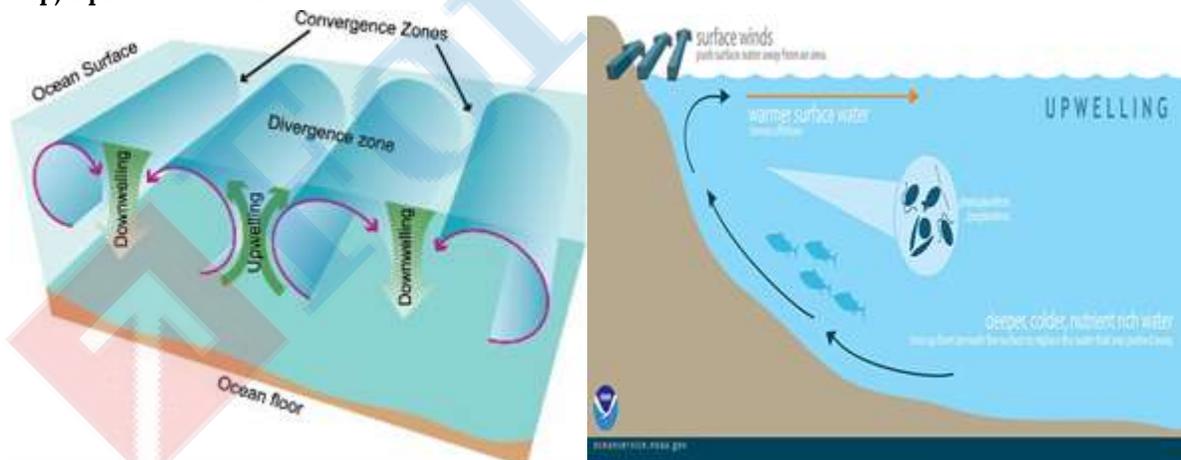

1. Upwelling of an ocean occurs when the wind blows towards the shore.
2. Downwelling of an ocean occurs in the divergence zone of ocean water.
3. Upwelling region offers one of the best fishing grounds across the world.
4. Fogs near the coastal area are a likely indicator of an upwelling zone.

Which of the statements given above is/are correct?

- a) 1, 2 and 3 only
- b) 1, 2 and 4 only
- c) 3 only
- d) 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

Statement 1 is incorrect: The **winds** blowing from the **land towards the oceans** drive warm surface water away from the coast resulting in the Upwelling of ocean. Water then rises up to replace the water that was pushed away and this process is known as upwelling.

Statement 2 is incorrect: **Downwelling occurs in the convergence zone of ocean water and upwelling in the divergence zone.** Downwelling occurs when wind blows towards the shore and causes **surface water**

to build up along a coastline. During this process, the surface water eventually **sinks toward the bottom.** This water will be warmer and poor in nutrients.

Statement 3 is correct: Subsurface water that rises to the surface as a result of upwelling is typically colder, rich in nutrients, and biologically productive. Good fishing grounds typically are found where upwelling is common. For example, the rich fishing grounds along the **west coasts of Africa and South America are supported by year-round coastal upwelling.**

Statement 4 is correct: During **upwelling** the water that rises to replace the water that has been pushed away is **typically colder.** This will lead to fog near coastal zones. For example, **upwelling in the San Francisco area contributing to the frequent summer fogs.**

Source: https://oceanservice.noaa.gov/education/tutorial_currents/03coastal4.html

Q.14) With reference to the salinity in oceans, which of the following statements is/are correct?

1. Areas near the equator usually have high salinity because of the high rate of evaporation.
2. The mid latitude regions have low salinity because of the large amount of rainfall.
3. Large influx of freshwater into oceans near polar regions results in low salinity.

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Salinity is the term used to define the total content of dissolved salts in seawater. It is calculated as the amount of salt (in gm) dissolved in 1,000 gm (1 kg) of seawater. It is usually expressed as parts per thousand or ppt.

Option 1 is incorrect: Equatorial regions have low salinity because they receive the most rain on a consistent basis. As a result, the fresh water falling into the ocean helps decrease the salinity of the surface water in that region

Option 2 is incorrect: As one moves away from the equator **towards poles, rainfall decreases.** Thus, the **mid latitude regions with less rain and more sunshine, evaporation increases.** Evaporation leads to **loss of fresh water** from the ocean in the form of water vapour causing higher salinity. For example, the **Mediterranean Sea** records higher salinity due to high evaporation.

Option 3 is correct: In the polar region, the influx of **fresh water from melting ice decreases the salinity** of ocean water. For example, **Baltic Sea records low salinity** due to the influx of river waters in large quantities.

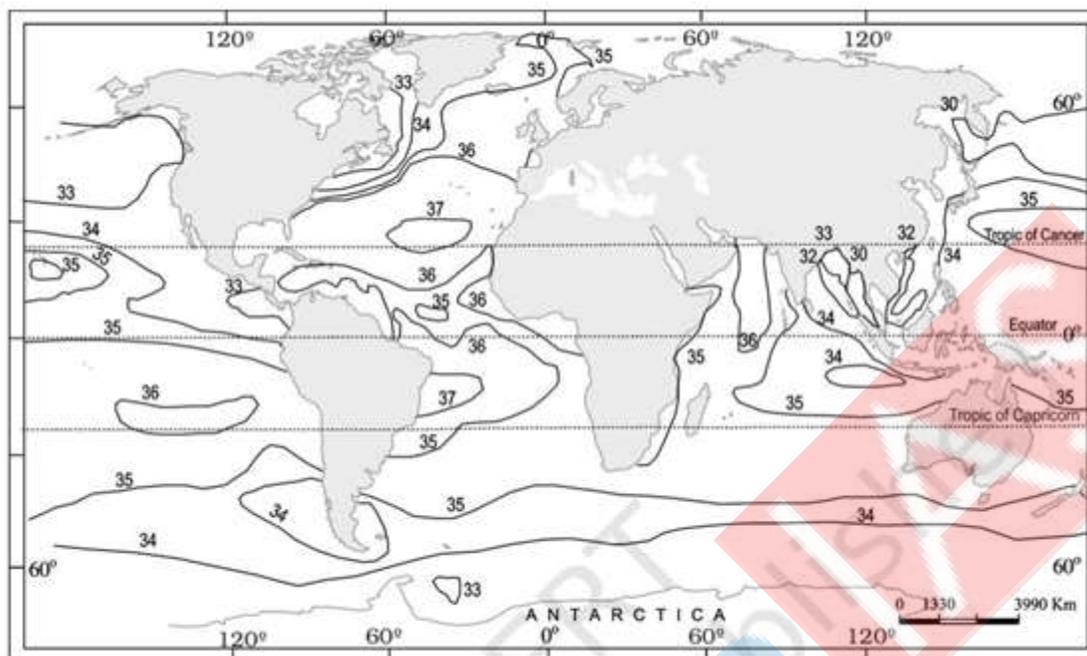

Figure 13.5 : Surface salinity of the World's Oceans

Source: 11th Physical Geography: Chapter-Water (Oceans)

Q.15) With reference to 'Biomass Co-firing', consider the following statements:

1. It is a biomass treatment method that involves the use of water at high temperatures and pressures.
2. Ministry of Agriculture has released a policy initiative towards promotion of Biomass Co-firing in India.
3. It can help in addressing the problem of stubble burning, especially in the northern region of the country.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

As one of the measures to tackle the coal shortage in India, the Government of India (GoI) has made it mandatory for thermal power plants to use a 5% blend of biomass pellets with coal. The policy came into effect in October 2022, with a requirement to increase the blend to 7% within two years for certain categories of coal based thermal power plants.

Statement 1 is incorrect: Biomass co-firing is the practice of substituting a part of the fuel with biomass at coal based thermal plants. Biomass co-firing stands for adding biomass as a partial substitute fuel in high efficiency coal boilers. Co-firing is an option to convert biomass to electricity, in an efficient and clean way, and to reduce GHG (Greenhouse Gases) emissions of the power plant.

On the other hand, the **Hydrothermal gasification** is a biomass treatment method that involves the use of water at high temperatures and pressures. It is used to convert biomass into several useful products for energy generation and chemicals.

Statement 2 is incorrect: Ministry of Power has set up National Mission on use of biomass for coal thermal power plants to promote Biomass Co-firing in India. According to the ministry, around 95,000-96,000 Tonnes of biomass pellets are required per day for co-firing. National Mission on use of Biomass in coal-

based thermal power plants, also called SAMARTH (Sustainable Agrarian Mission on use of Agro-residue in Thermal Power Plants) has shared a list of 70–80 pellet manufacturers with the power plants.

Statement 3 is correct: One of the advantages of Biomass Co-firing is the reduction in pollution due to drop in residue burning. Around 85 to 100 million tons of crop residue have been burnt in recent years, despite various government policies aimed at reducing crop burning. Biomass co-firing in places where agro-residue burning is prevalent, can result in a reduction of coal dependence and a sharp decline in pollution levels.

Knowledge Base:

National Mission on use of Biomass in Coal Based Thermal Power Plants:

(a) It aims to address the issue of air pollution by farm-stubble burning. Further, it will also reduce the carbon footprints of thermal power generation.

(b) It will promote the use of Biomass in Thermal Power Plants to increase the present level of co-firing at 5% from biomass to a higher level.

(c) It will promote the use of Biomass in Thermal Power Plants to increase the present level of co-firing at 5% from biomass to a higher level. Source: <https://blog.forumias.com/can-biomass-co-firing-offer-a-viable-solution-to-coal-shortage-and-stubble-burning/>

<https://www.downtoearth.org.in/news/energy/biomass-co-firing-why-india-s-target-for-coal-power-plants-is-challenging-83261> <https://blog.forumias.com/national-mission-on-use-of-biomass-in-thermal-power-plants>

Q.16) With respect to ocean temperatures consider the following statements:

1. The annual range of temperature in oceans is larger than the range of temperature on land.
2. There is a constant reduction of mean annual temperature in oceans as we go from lower to higher latitudes.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) d

Exp) Option d is the correct answer.

Statement 1 is incorrect: The **annual range** of temperatures across the **oceans is low than that of land areas** due to the fact that **water warms up and cools down much more slowly than land**. It is less than 10-degree Fahrenheit for most of the open seas.

Statement 2 is incorrect: There is a reduction of mean annual temperature of the oceans as we go from the equator to the poles. But **this reduction is never constant due to the interference of warm and cold currents, winds and air masses**. Unlike the land areas ocean water is mobile and so there are variations in temperatures across the ocean parts.

Source: 11th Physical Geography: Chapter-Water (Oceans), certificate of physical geography

G.C Leong - The Oceans

Q.17) Consider the following statements regarding the Ocean Gyres:

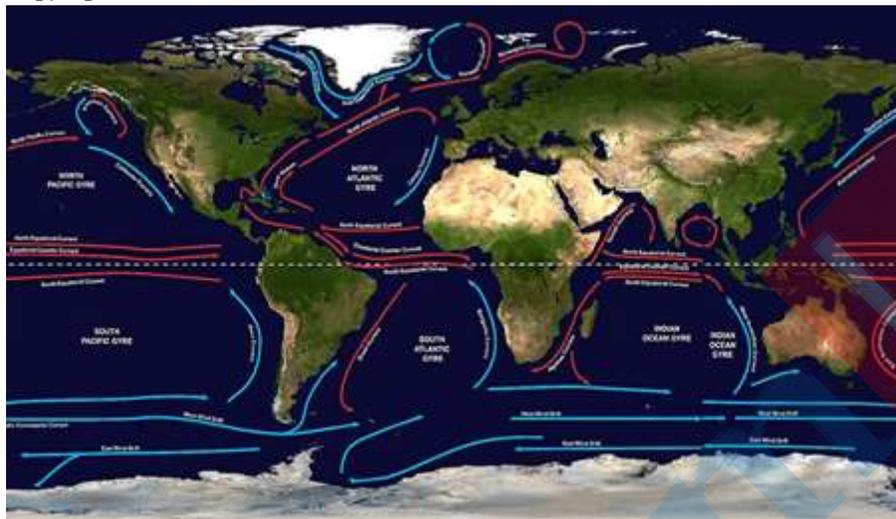

1. They are the large systems of circular ocean currents.
2. They are most prominent at the equator, as compared to higher latitudes.
3. All the Ocean Gyres flow in clockwise direction.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) 1 and 2 only
- d) 1 and 3 only

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: An ocean gyre is a large system of circular ocean currents formed by global wind patterns and forces created by Earth's rotation. Earth's continents and other landmasses (such as islands) can influence the creation of ocean gyres.

Statement 2 is incorrect: The Coriolis force is one of the important factors in causing ocean gyres. Earth's rotation deflects, or changes the direction of the ocean. **The Coriolis effect is not present at the Equator, and winds are the primary creators** of currents. For this reason, the currents in the equatorial region tend to flow in an east-west pattern instead of circular pattern. Thus, we cannot say that the Gyres are most prominent at the equator, as compared to higher latitudes.

Statement 3 is incorrect:

Generally, in the Northern Hemisphere the gyres rotate in clockwise direction, while in the Southern Hemisphere the gyres rotate in counter-clockwise direction.

Source: G C Leong: Chapter -The Oceans

Q.18) Consider the following statements with reference to the 'Continental Shelves':

1. Continental shelves are characterised by a very steep gradient of slope.
2. Continental shelves can be almost absent along some of the coasts.
3. Continental shelves are major source of oil deposits around the world.
4. Continental shelves have among world's richest fishing grounds.

Which of the statements given above are correct?

- a) 2 and 3 only
- b) 2, 3, and 4 only
- c) 3, and 4 only
- d) 1, 2, 3 and 4

Ans) b

Exp) Option b is the correct answer.

Continental shelf is a seaward extension of the continent from the shoreline to the continental edge. These extended margins of each continent are occupied by relatively shallow seas and gulfs. Gradient of continental is of 1° or even less.

Statement 1 is incorrect. It is the shallowest part of the ocean showing an average gradient of 1° or even less. The shelf typically ends at a very steep slope, called the shelf break. The continental slope shows the steep gradient than continental shelves.

Statement 2 is correct. The width of the Continental Shelves varies greatly. In some places where the coasts are extremely mountainous the continental shelf may be entirely absent. **The Continental shelves are almost absent or very narrow along some of the margins like the coasts of Chile, the west coast of Sumatra, etc.** On the contrary, the Siberian shelf in the Arctic Ocean, the largest in the world, stretches to 1,500 km in width.

Statement 3 is correct. Continental shelves are **major source of oil deposits around the world.** More than a third of the oil and gas extracted worldwide comes from offshore sources. Petroleum is not distributed evenly around the world. Slightly less than half of the world's proven reserves are located in the Middle East.

Statement 4 is correct. Continental shelves are of great geographical significance. Their shallowness enables sunlight to penetrate through the water, which encourages the growth of minute plants and other microscopic organisms. **The continental shelves are therefore the richest fishing grounds in the world, e.g., the Grand Banks off Newfoundland, the North Sea and the Sunda Shelf.** Their limited depth and gentle slope keep out cold under-currents and increase the height of tides. Most of the world's greatest seaports including Southampton, London, Hamburg, Rotterdam, Hong Kong and Singapore are located on continental shelves.

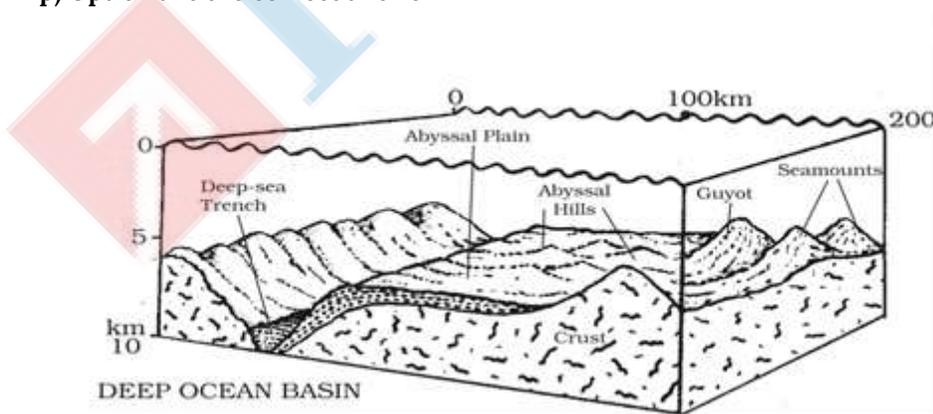

Source: fundamentals of physical geography NCERT and Certificate physical and human geography. GOHCHENGLEONG.

Q.19) Which of the following is correct about the Oceanic Trenches?

- They are usually formed at the base of Continental Slopes.
- They are relatively calm zones free from earthquakes and volcanoes.
- Generally, the Deepest Ocean trenches are found in the Pacific Ocean.
- Mariana Trench is a result of convergence of two Continental Plates.

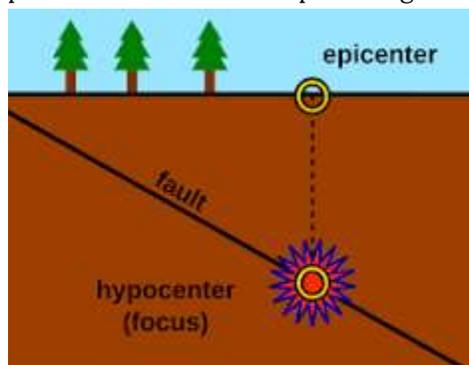

Ans) a

Exp) Option a is the correct answer

Option a is correct: Oceanic trenches are formed at **the bases of continental slopes**. These areas are the deepest parts of the oceans. The trenches are relatively steep sided and narrow basins. They are some 3-5 km deeper than the surrounding ocean floor.

Option b is incorrect: Oceanic trenches are associated with **strong earthquakes** and active volcanoes because of the **existence of deep-seated focus of the earthquake in the oceanic trenches**. The focus is the point at which the earthquake originates.

Option c is incorrect: Ocean trenches are found in every ocean basin on the planet, although the **deepest ocean trenches are found in the Pacific** as part of the Ring of Fire region witnesses active volcanoes and earthquakes. As many as 57 deeps have been explored so far; of which 32 are in the Pacific Ocean; 19 in the Atlantic Ocean and **6 in the Indian Ocean**.

Option d is incorrect: Oceanic trenches are commonly formed as a result of convergence of Continental and Oceanic plate. However, it can **rarely** be formed when **two oceanic plates meet**. **The Mariana Trench, in the South Pacific Ocean, is formed as result of convergence of two oceanic plate i.e., the mighty Pacific plate** subducts beneath the smaller, less-dense **Philippine plate**

Source: 11th Physical Geography: Chapter-Water (Oceans)

Q.20) In the context of economics terminology, the term 'Impossible Trinity' is often seen in news. It means-

- In order to achieve economic development (E), energy expenditure (E) needs to increase, but this raises the environmental issues (E).
- An economy cannot pursue independent monetary policy, maintain a fixed exchange rate, and allow the free flow of capital at the same time.
- In order to achieve global economic stability, money flow needs to be increased, but this raises the level of inflation throughout the world economy.
- A country cannot maintain all three policy goals of small fiscal deficits, social welfare and high economic growth simultaneously.

Ans) b

Exp) Option b is the correct answer.

The idea of 'impossible trinity' or the 'trilemma' was proposed independently by Canadian economist Robert Mundell and British economist Marcus Fleming in the early 1960s.

Accordingly, the impossible trinity, or the trilemma, refers to the idea that an economy cannot pursue independent monetary policy, maintain a fixed exchange rate, and allow the free flow of capital across its borders at the same time. According to economists, any economy can choose to pursue only two out of the three policy options noted above simultaneously in the long-run.

The impossible trinity or the trilemma in the present world: Practically, in today's world, capital is largely free to move across borders with ease. So, the choice before policymakers is between maintaining a fixed

exchange rate and pursuing an independent monetary policy. So, the government may follow any of the two conditions below.

(a) Condition 1: If policymakers choose to peg or maintain the value of their currency at a certain level against a foreign currency, this decision will limit the monetary policy they adopt in the long-run. This is because the decision to peg the exchange value of the currency can tie down the hands of central bankers when it comes to their domestic monetary policy stance.

(b) Condition 2: If policymakers of a country choose to pursue independent monetary policy, they may not be able to maintain the foreign exchange value of their currency at the desired peg. This is because the kind of monetary policy adopted by an economy's central bank invariably influences the exchange value of its currency against foreign currencies.

Knowledge Base: Earth Trilemma: It posits that in order to achieve economic development €, we need to increase the energy expenditure €, but this raises the environmental issue €.

Ramesh Singh Glossary

Q.21) What explains the eastward flow of the equatorial counter-current?

- The Earth's rotation on its axis
- Convergence of the two equatorial currents
- Difference in salinity of water
- Occurrence of the belt of calm near the equator

Ans) b

Exp) Option b is the correct answer.

There are two equatorial currents flowing from east to west - the North equatorial current and South equatorial current. In between the two, there flows an equatorial counter current in the opposite direction, i.e., from west to east. Example: Piling up of waters in the area near Brazil, due to convergence of the two equatorial currents give rise to the equatorial counter current.

Equatorial counter-currents are major surface flows that carry water eastward in the Atlantic, Indian, and Pacific Oceans. They are located near the equator and are sandwiched between two westward-flowing currents, the North Equatorial Current and the South Equatorial Current. Equatorial counter-currents are unique, in that they flow in the opposite direction of the surface winds.

Source) UPSC CSE 2015

Q.22) In the context of volcanic eruption, “Lahar” is the:

- molten rock that flows out of a volcano
- hot or cold mixture of water and rock fragments
- mixture of pulverised rock, ash and hot gases
- volcanic fallout consisting of fragmented rocks

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: Molten rock that flows out of a volcano is called Lava and it is extremely hot with temperatures between 1000 - 2000 degree Celsius.

Statement 2 is correct: Lahar is an Indonesian term that describes a hot or cold mixture of water and rock fragments that flows down the slopes of a volcano and typically enters a river valley. They are basically **mudflow of volcanic debris** formed as a result of heavy rain on loose ash material and other volcanic debris. Lahars generally occur on or near **stratovolcanoes**, such as those of the Aleutian volcanic arc in Alaska

Flow of Lahar

Statement 3 is incorrect: A mixture of pulverised rock, ash and gases is a type of explosive volcanic hazard called **pyroclastic density currents**. They can move up to 100 Km/hour and occur when magma interacts explosively with water.

Statement 4 is incorrect: Volcanic fallout consisting of fragmented rocks is termed Tephra. The particles range from a few metres to microns in size. They are hazardous to agriculture.

Source: <https://www.usgs.gov/programs/VHP/lahars-move-rapidly-down-valleys-rivers-concrete>
<https://www.bgs.ac.uk/discovering-geology/earth-hazards/volcanoes/volcanic-hazards/#:~:text=A%20volcanic%20hazard%20refers%20to,and%20landslides%20or%20debris%20avalanches>.

Q.23) Consider the following statements:

Ocean topography	Features
1. Mid oceanic ridges	Zone of intense volcanic activity
2. Sea mounts	Zone of low biological productivity
3. Submarine canyons	Deep valleys in the continental shelves

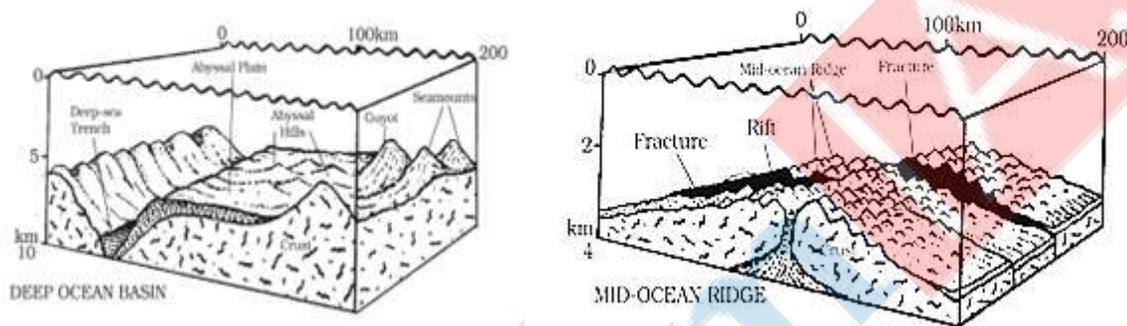

4. Guyots Mountain in ocean
with pointed
summits

How many pair is/are correctly matched?

- a) only one pair
b) only two pairs
c) only three pairs
d) All the four pairs

Ans) b

Exp) Option b is the correct answer.

Pair 1 is correct: The Mid Ocean Ridges exist in the middle of the ocean basins, where the **divergent plate boundaries are located**. These zones are tectonically active regions and they are the **most active volcanic regions on the earth**.

Pair 2 is incorrect: **Seamounts are undersea mountains formed by volcanic activity**. Seamounts often have a **high level of biological productivity** because they provide habitats for many species of plants and animals. Over 200 species of sea creatures have been observed at a single guyot in the New England Seamount.

Pair 3 is correct: **Submarine Canyons are deep valleys cutting across the continental shelves and slopes**, often extending from the mouths of large rivers. The Hudson Canyon is the best-known submarine canyon in the world.

Pair 4 is incorrect: Guyots It is a **flat-topped seamount** whereas the seamounts is a mountain with pointed summits, rising from the seafloor that does not reach the surface of the ocean.

Source: 11th Physical Geography: Chapter-Water (Oceans)

Q.24) With reference to the effects of ocean currents on the climate and temperature around the world, consider the following statements:

1. The presence of warm ocean currents along the Peruvian coast results in good monsoonal rainfall in India.
2. The presence of canaries current along the Western coast of Africa leads to the formation of Sahara deserts.
3. The presence of cold Labrador currents along the east coast of America freezes their ports for several months.
4. The presence of warm ocean currents along the eastern coast of South America leads to the formation of pampas grassland.

Which of the statements given above is/are correct?

- a) 2, 3 and 4 only
- b) 1 and 4 only
- c) 2 and 3 only
- d) 1, 3 and 4 only

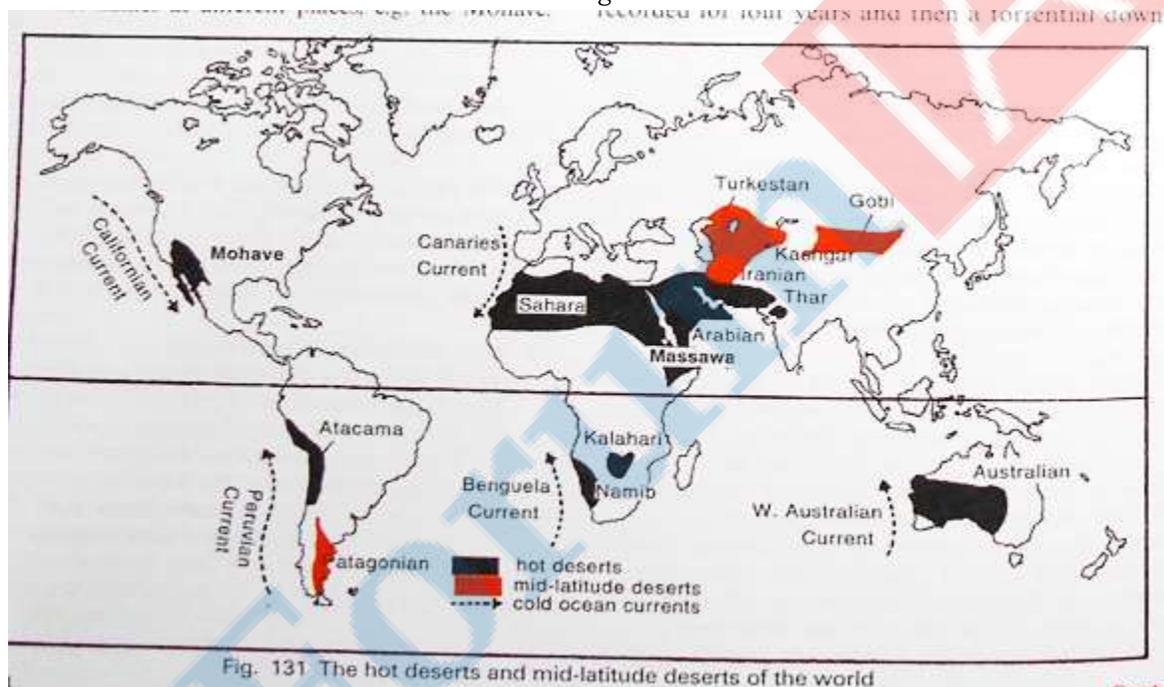

Ans) a

Exp) Option a is the correct answer.

Ocean currents affect temperature by transporting their heat or coldness into adjacent regions.

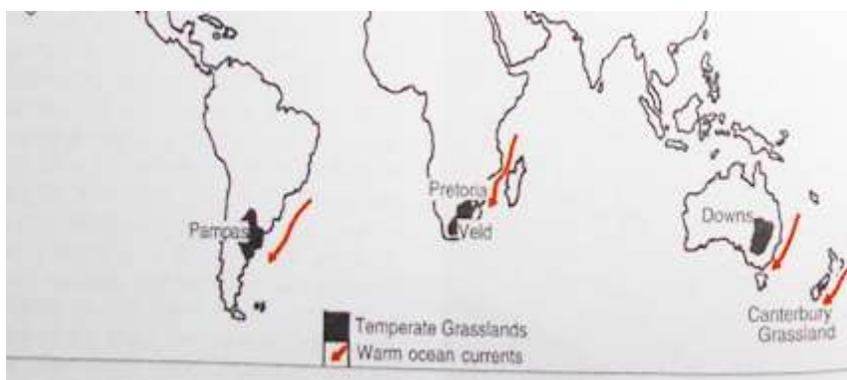

Statement 1 is incorrect: El Nino refers to the periodic development of a **warm ocean current along the Peruvian coast** as a temporary replacement for the cold Peruvian Current. The presence of El Nino leads to below average monsoon rainfall in India.

Statement 2 is correct: The presence of canaries, the cold current, on the western coasts of Africa leads to the formation of Sahara Desert in the African region.

Statement 3 is correct: The cold Labrador Current flows along the east coast of America freeze the ports located in that area for several months. The coastal districts of western Europe are in the same latitude under the influence of warm current, the North Atlantic Drift, keeps their ports ice-free.

Statement 4 is correct: The presence of **warm ocean current along the eastern coast of South America** leads to the formation of grassland vegetation (**Pampas**) in that area.

Source: 11th Physical Geography: Chapter-Water (Oceans)

Q.25) With reference to Electoral bonds, consider the following statements:

1. A foreigner cannot purchase electoral bonds.
2. All political parties are eligible to receive Electoral bond.
3. They need to be encashed through any authorised bank.
4. Electoral bonds will not carry the name of payee.

Which of the above statements are correct?

- a) 1 and 4 only
- b) 1, 3 and 4 only
- c) 2 and 3 only
- d) 1, 2 and 3 only

Ans) b

Exp) Option b is the correct answer.

The Government has introduced the scheme of Electoral Bonds to eliminate corruption in political funding in the country. Electoral Bond would be a bearer instrument in the nature of a Promissory Note and an interest free banking instrument.

Statement 1 is correct. As per provisions of the Scheme, Electoral Bonds may be purchased by a person, who is a citizen of India or incorporated or established in India. A person being an individual can buy Electoral Bonds, either singly or jointly with other individuals.

Statement 2 is incorrect. Only the Political Parties registered under Section 29A of the Representation of the People Act, 1951 and which secured not less than one percent of the votes polled in the last General Election to the House of the People or the Legislative Assembly of the State, shall be eligible to receive the Electoral Bonds.

Statement 3 is correct. The Electoral Bonds shall be encashed by an eligible Political Party only through a Bank account with the Authorised Bank.

Statement 4 is correct.

The purchaser would be allowed to buy electoral bond(s) only on due fulfilment of all the extant KYC norms and by making payment from a bank account. It will not carry the name of payee. Electoral Bonds would have a life of only 15 days. Source: <https://pib.gov.in/PressReleasePage.aspx?PRID=1786345>

Q.26) Which of the following statement are correct with respect to variation of the temperature of ocean water across the world?

1. There is a uniform increase in the rate of decrease of temperature with an increasing depth of the ocean.
2. The oceans in the northern hemisphere are hotter than in the southern hemisphere.
3. The enclosed seas in both lower and higher latitudes have higher temperatures than the open seas.

4. The atmospheric air circulation can influence the temperature of the ocean.

Select the correct answer using the code given below:

- a) 1, 2 and 4 only
- b) 2 and 3 only
- c) 2 and 4 only
- d) 1 and 4 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: The maximum temperature of the oceans is always at their surfaces because they directly receive the heat from the sun and the heat is transmitted to the lower sections of the oceans through the process of convection. It results in a **decrease of temperature with the increasing depth, but the rate of decrease is not uniform throughout**. The temperature falls very rapidly up to the depth of 200 m and thereafter, the rate of decrease of temperature is slowed down.

Statement 2 is correct: The oceans in the northern hemisphere record relatively higher temperature than in the southern hemisphere. The average annual temperatures for the northern and southern hemisphere are around 19° C and 16° C respectively. This variation is due to the unequal distribution of land and water in the northern and southern hemispheres.

Statement 3 is incorrect: The enclosed seas in the low latitudes record relatively higher temperature than the open seas, whereas the enclosed seas in the high latitudes have lower temperature than the open seas as the rate of evaporation decreases towards the poles because the amount of solar insolation decreases towards poles.

Statement 4 is correct: The atmospheric air circulation influences the temperature of the oceans. For instance, under the influence of westerlies, the warm Gulf stream is driven to the western coast of Europe as the North Atlantic Drift. North Atlantic drift flows along the east coast of the UK as a warm current thus increasing the temperature of the ocean in this region.

Source: 11th Physical Geography: Chapter-Water (Oceans)

G.C. Leong : Chapter- The Oceans

Q.27) With reference to the Ocean Currents, consider the following statements:

1. Warm Currents are mostly found along the West Coasts of Continents in tropical and subtropical latitudes.
2. Ocean Currents are stronger at the surface than at the deeper depths.
3. The mixing of Warm and Cold Ocean Currents can cause rainfall in the region.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 1 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) option c is the correct answer.

Statement 1 is incorrect: Cold currents flow parallel to the west coasts of the continents in tropical and subtropical latitudes E.g., Canaries current along the west coast of Africa. Warm currents flow parallel to the east coasts of the continents in tropical and subtropical latitudes E.g., Kuroshio current along the eastern coast of Asia.

Statement 2 is correct: Ocean currents are generally referred to by their “drift”. Ocean currents are stronger at the surface and may attain speeds over 5 knots. At depths, currents are generally slow with speed less than 0.5 knots.

Statement 3 is correct: Mixing of warm and cold current creates foggy weather where precipitation occurs in the form of drizzle. The mixing of Labrador current (cold current) with Gulf of stream (warm current) causes drizzling in Newfoundland.

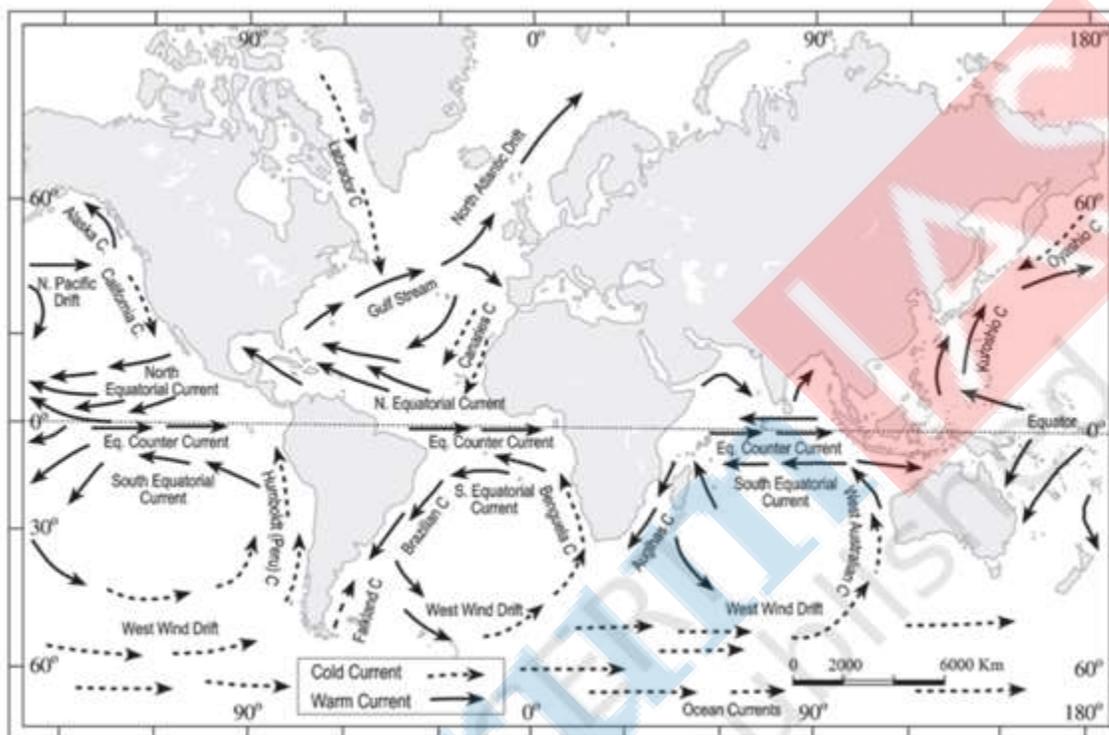

Fig. 14.3 : Major currents in the Pacific, Atlantic and Indian oceans

Source: 11th Physical geography- Chapter- Movements of Ocean water

Q.28) With reference to the Thermocline, consider the following statements:

1. It represents the topmost layer of the ocean water in tropical regions.
2. It is characterised by rapid decrease in temperature with increasing depth.
3. The zone of thermocline is non-permanent in temperate regions.
4. Thermocline can be absent in the polar regions.
5. Most of the volume of seawater is usually found below the Zone of Thermocline.

Which of the statements given above are correct?

- a) 1, 3 and 4 only
- b) 2, 3, 4 and 5 only
- c) 3 and 4 only
- d) 2 and 5 only

Ans) b

Exp) Option b is the correct answer.

Thermocline is a boundary region in the ocean, from where there is a **rapid decrease of temperature**.

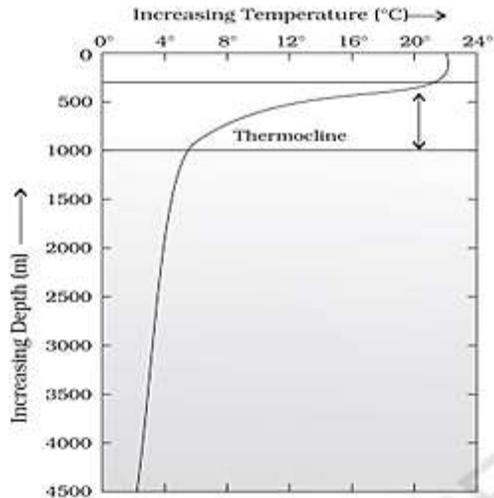

Figure 13.3: Thermocline

Statement 1 is incorrect: Following are the temperature structure of the ocean. The first layer represents the **top layer of warm oceanic water with** temperatures ranging between **20° and 25° C**. The **second layer comprises thermocline** and the third layer is very cold and extends up to the deep ocean floor.

Statement 2 is correct: The thermocline layer is characterised by **rapid decrease in temperature with increasing depth**. Thermocline region begins around 100 - 400 metres below the sea surface and extends several hundred metres downward.

Statement 3 is correct: In the ocean, the depth and strength of the thermocline vary from season to season and year to year. While it is **semi-permanent in the tropics**, it varies in temperate regions e.g., **thermocline is deepest during the summer in temperate regions**.

Statement 4 is correct: In the Arctic and Antarctic circles, the **surface water temperatures are close to 0° C**. **Thermocline is shallow to non-existent in the polar regions**, where the water column is cold from the surface to the bottom.

Statement 5 is correct: About **90 per cent of the total volume of water is found below the thermocline, in the deep ocean**.

Source: NCERT fundamentals of physical geography: Chapter- Oceans (Waters)

Q.29) With reference to the life forms in the deep ocean, consider the following:

Assertion: Some Aquatic life forms are found even in the submarine trenches.

Reason: Some Aquatic life forms can rely upon the chemosynthesis for energy.

- Both A and R are true and R is the correct explanation of A
- Both A and R are true but R is not the correct explanation of A
- A is true but R is false
- A is false but R is true

Ans) a

Exp) Option a is the correct answer.

Assertion is correct: Oceanic exploration have revealed the life forms do exist even in trenches. For instance, as per study of Mariana Trench which is the deepest location in earth's crust about which although little is known about the life forms living in the Trench but despite the lack of light, acidic and freezing conditions, more than **200 known micro-organisms and small creatures, including crustaceans and amphipods, have been known to be living there**. The three most common organisms at

the bottom of the Mariana Trench are xenophyophores, amphipods and small sea cucumbers (holothurians).

Reason is correct: The deep-sea fauna/life form in trenches has found source of energy alternative to sunlight. **To compensate for the absence of photosynthesis, they rely on chemosynthesis carried out by various bacteria**, in which they turn inorganic substances into organic.

Chemosynthesis is the process by which certain microbes create energy by mediating chemical reactions. So the animals that live around hydrothermal vents make their living from the chemicals coming out of the seafloor in the vent fluids.

Some have developed much sharper vision while some have abandoned the need of vision, as they rely on touch and vibration.

Source: <https://pubs.usgs.gov/gip/dynamic/exploring.html>

<https://oceanexplorer.noaa.gov/edu/curriculum/section6.pdf>

Q.30) Which of the following countries are the bordering countries of Ethiopia?

1. Eritrea
2. Djibouti
3. Uganda
4. Democratic republic of Congo

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 and 4 only
- d) 1 and 4 only

Ans) a

Exp) Option a is the correct answer.

Ethiopia, a country on the Horn of Africa. Ethiopia is the largest and most populated country in the Horn of Africa. With the 1993 secession of Eritrea, its former province along the Red Sea, Ethiopia became landlocked. Ethiopia is bounded by Eritrea to the north, Djibouti to the northeast, Somalia to the east, Kenya to the south, and South Sudan and Sudan to the west.

Source: https://www.researchgate.net/figure/Map-of-Africa-highlighting-countries_fig1_332380173

Q.31) Tides occur in the oceans and seas due to which among the following?

1. Gravitational force of the Sun
2. Gravitational force of the Moon
3. Centrifugal force of the Earth

Select the correct answer using the code given below.

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Tides are the rise and fall of sea levels caused by the combined effects of the gravitational forces exerted by the moon and the sun, and the rotation of the earth.

Earth rotates around a fixed axis, creating a centrifugal force away from the axis.

Tides occur due to an imbalance between the various forces acting on the ocean water at a point in time. In general, the tide-generating force is the difference between these two forces; i.e., the gravitational attraction due to the mass of the moon and the centrifugal force due to rotation of the earth.

Source) UPSC 2015

Q.32) With reference to the distribution of major ocean currents across the ocean, which of the following are correctly matched?

Major Ocean Currents	Location
1. Humboldt current	Western coast of Africa
2. Labrador current	Eastern coast of Canada.
3. Agulhas current	Eastern coast of Australia.
4. Kuroshio current	Eastern coast of Japan.

Select the correct answer using the code given below:

- a) 1, 2 and 4 only
- b) 2 and 3 only
- c) 2 and 4 only
- d) 1 and 4 only

Ans) c

Exp) Option c is the correct answer.

Pair 1 is incorrect: The **Humboldt Current**, also called the Peru Current, is a **cold ocean current** that flows north along the **western coast of South America**. **Benguela** is a cold current that flows along the **western coast of Africa**.

Pair 2 is correct: The **Labrador Current** is a **cold current** in the North Atlantic Ocean which flows from the Arctic Ocean south along the **east coast of Canada** near Nova Scotia.

Pair 3 is incorrect: It flows south along the **east coast of Africa**. It forms the western boundary current of the southern Indian Ocean.

Pair 4 is correct: Kuroshio current, also called Japan current, is a strong surface oceanic current of the Pacific Ocean. It flows along the east coast of Japan

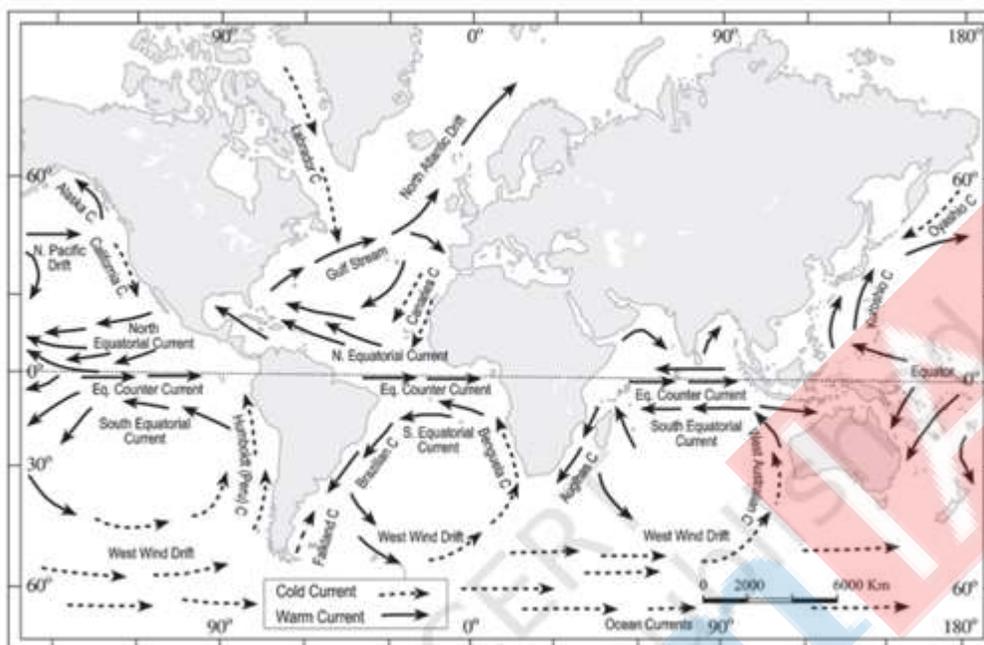

Fig.14.3 : Major currents in the Pacific, Atlantic and Indian oceans

Source: NCERT fundamentals of physical geography: Chapter- Movement of Oceans

Q.33) With reference to the Oceanic Waves, consider the following statements:

1. They move across the ocean because of the action of both wind and gravitational force on the water.
2. They can transport water particles to a larger distance.
3. They break when the depth of water is less than half the wavelength of the wave.
4. They lose energy and continue to become smaller in size as they move.

Which of the statements given above are correct?

- a) 1, 2 and 4 only
- b) 1 and 3 only
- c) 2 and 4 only
- d) 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

Statement 1 is correct: Waves travel because **wind pushes the water body** in its course while **gravity pulls the crests** of the waves downward. The falling water pushes the former troughs upward and the wave moves to a new position.

Statement 2 is incorrect: Waves are actually the energy, not the water as such, which moves across the ocean surface. **Water particles only travel in a small circle as a wave passes.** The **actual motion** of the water beneath the waves is **circular**. It indicates that things are carried up and forward as the wave approaches, and down and back as it passes.

Statement 3 is correct: The **wave breaks** when the **depth of water is less than half the wavelength** of the wave. Wavelength is the horizontal distance between two successive crests.

Statement 4 is incorrect: Waves **continue to grow larger** as they move and **absorb energy** from the wind. This is why **the largest waves are found in the open oceans.**

Source: Fundamentals of Physical Geography: Chapter- Movement of ocean water

Q.34) With reference to ‘Playas’, consider the following statements:

1. They are flat-bottom depressions found in the interior of desert basins.
2. They may serve as sources of mineral deposits and salts.
3. These are depositional landforms formed by the sudden rains in the deserts.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

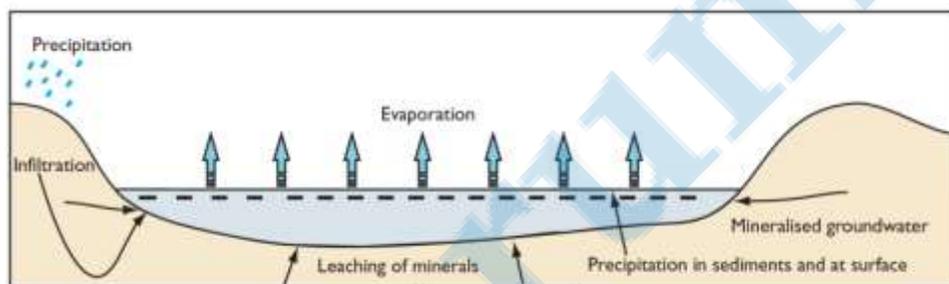

Ans) b

Exp) Option b is the correct answer.

A playa is a dry, vegetation-free, flat area at the lowest part of an undrained desert basin. It is a location where ephemeral lakes form during wet periods, and is underlain by stratified clay, silt, and sand, and commonly, soluble salts.

Statement 1 is correct: Playas are **flat-bottom depression found in interior desert basins** and adjacent to coasts within arid and semiarid regions. Playas are among the flattest known landforms.

Playas are **periodically covered by water that slowly filtrates into the ground water system or evaporates into the atmosphere**, causing the deposition of salt, sand, and mud along the bottom and around the edges of the depression. When filled with only a few centimeters of water, many kilometers of surface may be inundated.

Playas

Statement 2 is correct: Playas serve as **important sources of dust and salts**. Playas may be sources of **mineral deposits** formed by evaporation. Water evaporating in closed basins precipitates minerals such as gypsum.

The salt deposits are found in the playas. Complex assemblages of minerals and sediments occur on the playa surfaces. These directly reflect their environment of deposition and may be used to interpret ancient environmental conditions.

Statement 3 is incorrect: Playas are the erosional landforms created by winds in the deserts (not by the water or sudden rainfall in desert).

Source: NCERT PHYSICAL GEOGRAPHY CLASS 11

CHAPTER 7+ G C LEONG+ INTERNET

<https://www.britannica.com/science/playa>

<https://pubs.usgs.gov/of/2004/1007/playas.html>

Q.35) With reference to impacts of ‘internationalization of Indian rupee’, consider the following statements:

1. Domestic market vulnerability to external shocks may increase.
2. It may help in containing the inflation in India.
3. Liquidity of rupee in the global market may improve.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Internationalisation means the currency can be transacted freely by both resident and non-residents across the border. Also, it can be used as a reserve currency for global trades.

Statement 1 is correct: If a significant portion of trade is in rupee, non-residents would hold rupee balances in India which would be used to acquire Indian assets. This could amplify vulnerability to external shocks to domestic market for e.g., a global risk-off phase could lead non-residents to convert their Rupee holdings and move out of India.

Statement 2 is correct: India has high import bill due to crude oil import. Trade of oil in rupee terms is expected to help control rupee depreciation and inflation caused by fluctuating oil prices. Hence, it will be beneficial for a country like India which has huge energy requirements to reduce the strain on its trade and current account balance caused by volatile international crude oil prices.

Statement 3 is correct: The internationalization of rupee would improve depth and liquidity of Rupee in global markets. It can lower transaction costs of cross-border trade and investment operations by mitigating exchange rate risk. It will also improve the uniform pricing across border hence diversifying the trade partners especially in energy sector requirements.

Source: statement 1: <https://indianexpress.com/article/business/banking-and-finance/internationalisation-of-rupee-has-risks-but-they-are-unavoidable-rbi-deputy-governor-8224133/> Statement 2: <https://www.financialexpress.com/market/rupee-internationalisation-by-rbi-a-step-in-right-direction-india-must-look-at-long-term-sustainable-solutions/2627374/> Statement 3: <https://www.thehindubusinessline.com/markets/forex/internationalisation-of-rupee-india-needs-to-calibrate-moves-to-evolving-size-of-economy-says-rbi-deputy-governor/article66043816.ece>

Q.36) With respect to Oceanic Tides, consider the following statements.

1. Neap tides occur during full moon and new moon days.
2. Spring tides occur when the sun and the moon are at right angles to each other.
3. The spring tides are generally higher than the neap tides.
4. The tidal range is usually higher when the moon is closer to the earth.

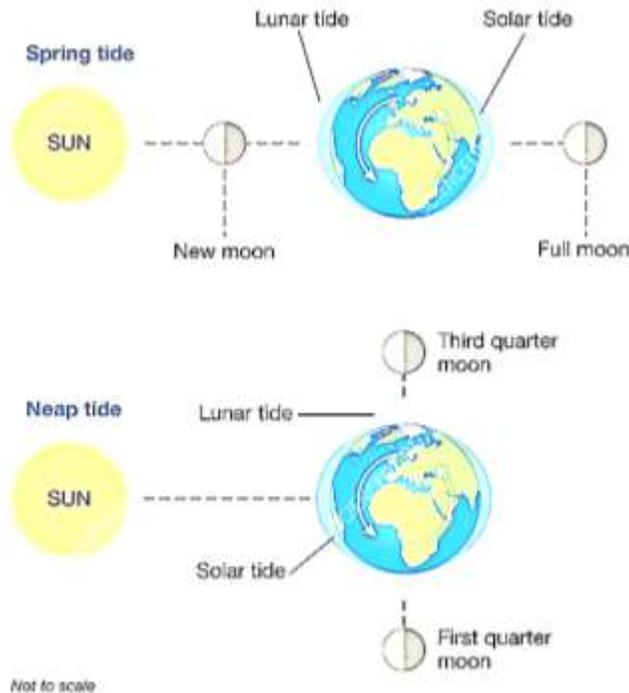

Which of the statements given above are correct?

- a) 1 and 4 only
- b) 2 and 3 only
- c) 3 and 4 only
- d) 1 and 2 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: Spring tides occur when the sun, the moon and the earth are in a straight line and they occur twice a month during **full moon and new moon days**. The **tide** that occurs during this alignment will be **higher**.

Statement 2 is incorrect: Neap tides occur normally 7 days after spring tides when the sun, the earth and moon are at right angles to each other. The gravitational pulls of the moon and sun on the earth counteract each other and the resultant tide will be lower in height.

Statement 3 is correct: The position of the sun and moon have a direct bearing on the height of the tide. Spring tide occurs when the sun, the earth and the moon are in straight line hence the resultant tide is higher than the Neap tide.

Statement 4 is correct: Once in a month when the moon's orbit is much closer to the earth during perigee, unusually high and low tides occur resulting in higher-than-normal tidal range.

Source: Fundamentals of Physical Geography: Chapter- Water (Oceans)

Q.37) How are the Gorges different/similar from/to the Canyons?

1. Both Gorges and Canyons can be formed by erosional activities of streams or rivers.
2. Gorges and Canyons are both deep, but Canyons are generally wider than Gorges.
3. Unlike Gorges, Canyons are never found in arid regions.

Select the correct answer using the code given below:

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Canyons and gorges are geographical landforms belonging to the broad categories of valleys. Morphologically, they are either V-shaped or U-shaped with a down ward fold extending below the earth surface. They are classically low areas and could be separating mountains or hills.

Statement 1 is correct: The movement of rivers, **the processes of weathering and erosion**, and tectonic activity create canyons. The most familiar type of canyon is probably the river canyon. The water pressure of a river can cut deep into a river bed. Sediments from the river bed are carried downstream, creating a deep, narrow channel.

A number of natural forces form gorges. The most common is **erosion due to streams or rivers**. Streams carve through hard layers of rock, breaking down or eroding it.

Statement 2 is correct: In terms of the proportions of the two, **a canyon is considered larger than a gorge**. **They are both deep valleys, but a canyon is often wider compared to a gorge**. The term gorge is at times used to describe ravines which are narrower than canyons. Gorge is almost always steeper and narrower than a canyon.

Statement 3 is incorrect: Canyons can be located in arid regions where the climate is dry and deserty. Canyons are much more common in arid region because physical weathering has a more localized effect in arid zones. The wind and water from the river combine to erode and cut away fewer resistant materials such as shales. Gorges are located in areas that have temperate climate. E.g., Mountain Ranges due to constant erosion of sediments by flowing streams.

Source: NCERT PHYSICAL GEOGRAPHY CLASS 11 CHAPTER 7

<https://www.worldatlas.com/articles/what-is-the-difference-between-a-canyon-and-a-gorge.html>

<http://www.differencebetween.net/science/nature/difference-between-gorge-and-canyon/>

Q.38) Which of the following erosional landforms are developed by running water?

1. Plunge Pools
2. Alluvial fans
3. River Terraces
4. Incised Meanders
5. Natural Levees

Select the correct answer using the codes given below:

- a) 1, 2 and 3 only
- b) 1, 3 and 4 only
- c) 2, 3, 4 and 5 only
- d) 1, 2, 3, 4 and 5

Ans) b

Exp) Option b is the correct answer.

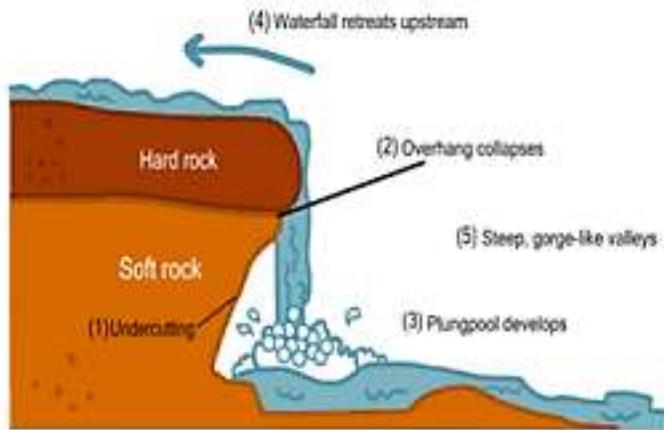

A river is the best example of the **linear flow of running water**. Erosion occurs when overland flow moves soil particles downslope. The rock materials carried by erosion is the load of the river. This load acts as a

grinding tool helping in cutting the bottom and sides of the river bed, resulting in deepening and widening of the river channel.

The Erosional Landforms due to Running Water are Valleys, Potholes and Plunge Pools, Incised or Entrenched Meanders and River Terraces.

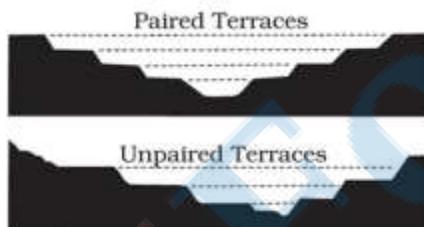

Statement 1, 3 and 4 are correct:

Potholes and Plunge Pools: Plunge pools are nothing but **large, deep potholes commonly found at the foot of a waterfall**. They are formed because of the sheer impact of water and rotation of boulders. Potholes are more or less circular depressions over the rocky beds of hills streams.

Plunge Pools

River Terraces: They are **surfaces marking** old valley floor or flood plains. They are basically the result of vertical erosion by the stream. When the terraces are of the same elevation on either side of the river, they are called as paired terraces. When the terraces are seen only on one side with none on the other or one at quite a different elevation on the other side, they are called as unpaired terraces.

River Terraces

Incised or Entrenched Meanders: They are very **deep wide meanders** (loop-like channels) found cut in hard rocks. In the course of time, they deepen and widen to form gorges or canyons in hard rock. The difference between a normal meander and an incised/entrenched meander is that the latter found on hard rocks.

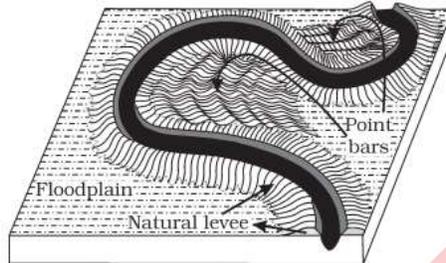

An entrenched meander loop of river Colorado in USA showing step-like side slopes of its valley typical of a canyon

Statement 2 and 5 are incorrect: Alluvial Fans and Natural Levees are the **depositional features (not the erosional landform)** of running water. Alluvial fans are formed when streams flowing from higher levels break into foot slope plains of low gradient. Natural levees are found along the banks of large rivers. They are low, linear and parallel ridges of coarse deposits along the banks of a river.

Alluvial Fans

Natural Levees

Source: NCERT PHYSICAL GEOGRAPHY CLASS 11 CHAPTER 7

Q.39) Consider the following pairs:

Depositional Landforms made by Rivers	Features
1. Point Bars	Loop-like channel patterns developed over the flood and delta plains
2. Braided Channels	Network of river channels separated by small islands
3. Oxbow lakes	Separate body of water formed by cutting-off from a meander

Which of the pairs given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 3 only

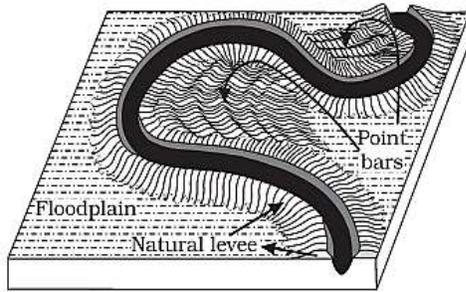

Ans) b

Exp) Option b is the correct answer.

River processes, or fluvial processes, occur by erosion, transport and deposition. Deposition in a river happens when the current is no longer strong enough to carry materials, also known as sediments. The depositional landforms of Running water are **Alluvial Fans, Deltas, Floodplains, Natural Levees and Point Bars, Meanders and Braided Channels.**

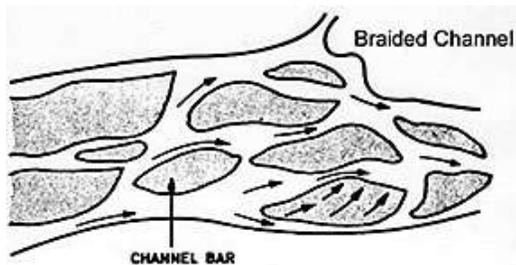

Pair 1 is incorrectly matched: Point bars are found on the concave side of meanders of large rivers and are **sediments deposited in a linear fashion** by flowing waters along the bank. They are almost uniform in profile and in width and contain mixed sizes of sediments. **Natural levees are low, linear and parallel ridges**

of coarse deposits along the banks of rivers, quite often cut into individual mounds. Meanders are loop-like channel patterns develop over the flood and delta plains.

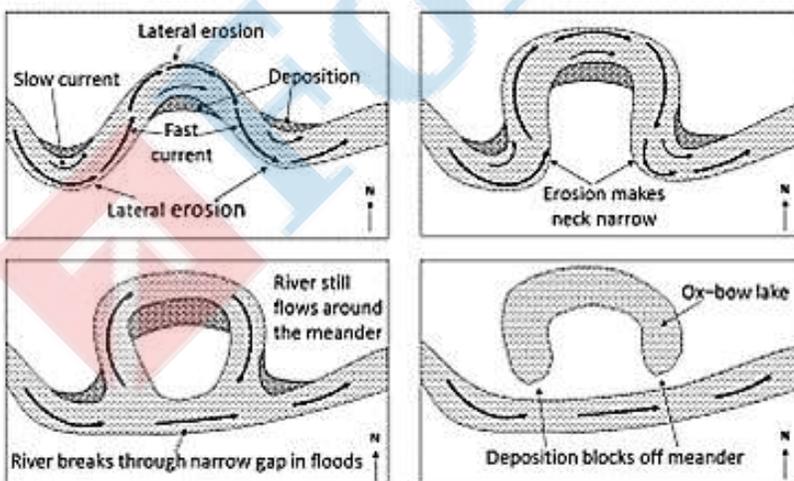

Natural levee and point bars

Pair 2 is correctly matched: A braided river, or braided channel, consists of a **network of river channels separated by small, often temporary, islands** called braid bars. Braided streams tend to occur in rivers with high sediment loads or coarse grain sizes, and in rivers with steeper slopes than typical rivers with straight or meandering channel patterns. They are also associated with rivers with rapid and frequent variation in the amount of water they carry, i.e., with "flashy" rivers, and with rivers with weak banks.

Pair 3 is correctly matched: Oxbow lakes is a **U-shaped Lake or pool** that forms when a wide meander of a river is cut off, creating a free-standing body of water. An oxbow lake forms when a meandering river erodes through the neck of one of its meanders. This takes place because meanders tend to grow and become more curved over time.

Oxbow Lakes

Source: NCERT PHYSICAL GEOGRAPHY CLASS 11 CHAPTER 7

Q.40) Consider the following pairs:

Animal IUCN Red List status

1. Cheetah Vulnerable
2. Leopard Endangered
3. Jaguar Near threatened

Which of the pairs given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

The International Union for Conservation of Nature (IUCN) Red List of Threatened Species, also known as the IUCN Red List founded in 1964. The criteria used to evaluate the risk is relevant to all species across the world

Pair 1 is correct: The IUCN status of cheetah is vulnerable. The cheetah is a large cat native to Africa and central Iran. It is the fastest land animal. Recently, eight cheetahs from Namibia were introduced in Madhya Pradesh's Kuno National Park in September. They were released as part of the programme to reintroduce the feline in India.

Pair 2 is incorrect: leopard is one of the members of the cat family occurs in a wide range in sub-Saharan Africa, in some parts of Western and Central Asia, Southern Russia, and on the Indian subcontinent to Southeast and East Asia. **They are listed as vulnerable.**

Pair 3 is correct: The jaguar is listed as “Near Threatened” on the IUCN red list. jaguar is a large cat species and the only living member of the genus Panthera native to the Americas.

Source: <https://www.iucnredlist.org/>

Q.41) Consider the following statements:

1. Most of the world's coral reefs are in tropical waters.
2. More than one-third of the world's coral reefs are located in the territories of Australia, Indonesia and Philippines.
3. Coral reefs host far a greater number of animal phyla than those hosted by tropical rainforests.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Coral reefs are large underwater structures composed of the skeletons of colonial marine invertebrates called coral. Coral polyps, the animals primarily responsible for building reefs, can take many forms: large reef building colonies, graceful flowing fans, and even small, solitary organisms.

Statement 1 is correct: Coral reefs are predominantly present in tropical shallow waters less than 50 meters deep. Coral reefs can be found in tropical destinations around the world, mostly in areas around the equator where the water is warmer. More than 100 countries have a coral reef within their borders, and over half of the world's coral reefs are found within six countries: Australia, Indonesia, Philippines, Papua New Guinea, Fiji, and the Maldives.

Statement 2 is correct: Global distribution of corals- Australia-17% Indonesia-16% Philippines-9% So, Australia, Indonesia and Philippines have more than one-third of the world's coral reefs (42% combined).

Statement 3 is correct: It is estimated that more than 25,000 described species from thirty-two of the world's thirty-three animal phyla live in coral reef habitats. It is around four times the number of animal phyla found in tropical rain forests.

Source) UPSC CSE 2018

Q.42) With reference to 'Delta Formation', consider the following statements:

1. Deltas are wetlands formed at the mouth of the river in its senile stage.
2. The high velocity of the river along with finer sedimentary load are the essential condition for delta formation.
3. The delta of river Ganga is shaped by the rise and fall of tides in the Bay of Bengal.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 1 and 3 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

Deltas are **wetlands that form as rivers empty their water and sediment into another body of water**, such as an ocean, lake, or another river. A river moves more slowly as it nears its mouth, or end. This causes sediment, solid material carried downstream by currents, to fall to the river bottom. The slowing velocity of the river and the build-up of sediment allows the river to break from its single channel as it nears its mouth. Under the right conditions, a river forms a delta.

Statement 1 is correct: Delta is a “**depositional feature**” of a river formed at the mouth of the river. These are **wetlands that form as rivers empty their water** and sediment into another body of water, such as an ocean, lake, or another river. It is a **characteristic feature of a river in its senile stage (old stage)**.

Statement 2 is incorrect: A river moves more slowly as it nears its mouth, or end. This causes sediment, solid material carried downstream by currents, to fall to the river bottom.

The **slowing velocity of the river** and the build-up of sediment allows the river to break from its single channel as it nears its mouth. Under these conditions, a river forms a deltaic lobe.

Statement 3 is correct: The **Ganga-Brahmaputra delta is a tide-dominated delta**. It is shaped by the rise and fall of tides in the Bay of Bengal. Tide-dominated deltas usually form in areas with a large tidal range, or area between high tide and low tide.

Source: NCERT PHYSICAL GEOGRAPHY CLASS 11 CHAPTER 7

<https://education.nationalgeographic.org/resource/delta>

Q.43) With reference to 'Stalactite and Stalagmite', consider the following statements:

1. The elongated structure of minerals hanging from the ceilings of caves is known as stalagmite.
2. The formation of the stalactite is directly dependent on the source of the rock above a cave.
3. These cave features are not found in Indian subcontinent.

Which of the statements given above is/are correct?

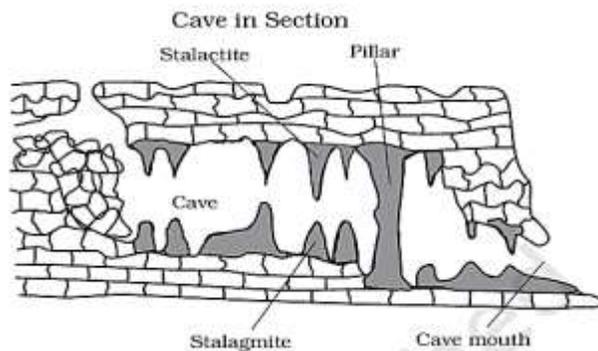

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 3 only

Ans) b

Exp) Option b is the correct answer.

Many depositional forms develop within the caves. The chief chemical in limestone is calcium carbonate which is easily soluble in carbonated water (carbon dioxide absorbed rainwater). This calcium carbonate is deposited when the water carrying it evaporates or loses its carbon dioxide as it trickles over rough rock surfaces. **Stalactites, Stalagmites and Pillars are the depositional features found in caves.**

Statement 1 is incorrect: A stalactite (not the stalagmite) is an elongated structure of minerals formed and hanging from the ceilings of caves, hot springs, or man-made structures such as bridges and mines. They are deposited from a solution of minerals in the water, slowly dripping from the ceilings. A stalagmite appears like an inverted stalactite, rising from the floor of a cave.

Stalactite and Stalagmite

Statement 2 is correct: There are **four conditions that favor the deposition of the minerals and formation of the stalactite.** They are:

- a **source of rock above a cave or a cavern,**
- percolation of water downward, supplied from rain or any other source such as moisture in the wind,
- a very well regulated, tight but continuous flow of the solution of the mineral and water for determining slow-drip, and
- proper hollow air space to provide for either evaporation or escape of carbon dioxide from the water, thus, in turn, losing the solvent ability.

Statement 3 is incorrect: The formation of stalactite and stalagmites common in caves and are **found in various region of Indian subcontinent.** One such formation is Shiva Linga inside Borra Caves (Andhra Pradesh), Caves in India's Meghalaya state etc.

The Belum Caves, located in Nandyala district of Andhra Pradesh's Rayalaseema region, is the second largest cave system on the Indian subcontinent, known for its speleothems, such as stalactite and stalagmite formations.

Belum Caves, Andhra Pradesh

Source: NCERT PHYSICAL GEOGRAPHY CLASS 11 CHAPTER 7

Q.44) With reference to ‘Landforms formed by Groundwater’, consider the following statements:

1. Sinkhole is an opening which is circular at the top and funnel-shaped towards the bottom.
2. Lapiés are the spherical mounds formed through deposition of limestone by groundwater.
3. Uvala is a compound sinkhole formed by the collection of multiple smaller individual sinkholes.

Which of the statements given above is/are correct?

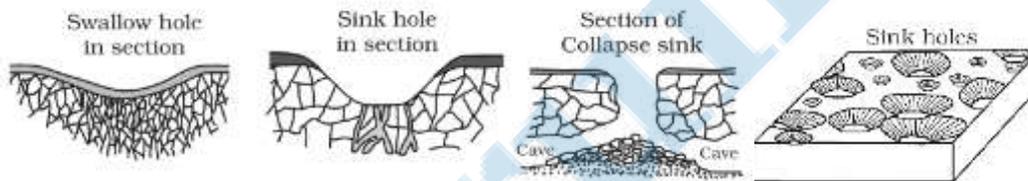

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

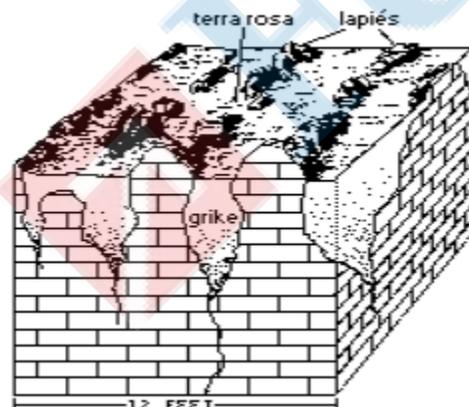

As groundwater dissolves the **solid rock, it is regarded as a powerful erosional force**. Carbonic acid is particularly effective in dissolving rock limestone. Groundwater moves through minor cracks slowly over many years. The **water dissolves the solid rock and transports it away**, gradually widening the cracks and eventually forming a cave. The dissolved minerals in the solution are carried by groundwater. **This process is termed groundwater erosion.**

Statement 1 is correct: Sinkholes are very common in limestone/karst areas. A sinkhole is an opening more or less circular at the top and funnel-shaped towards the bottom with sizes varying in area from a few sq. m to a hectare and with depth from a less than half a metre to thirty metres or more. Some of these forms solely through solution action (solution sinks).

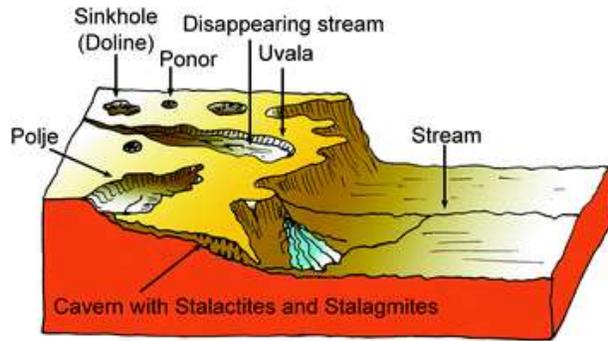

Formation of Sinkholes

Statement 2 is incorrect: Lapiés are the **irregular grooves and ridges (not mounds) formed when most of the surfaces of limestone are eaten by solution process (not by deposition of limestones).** This rugged surface is formed by the solution of rock along with joints and areas of greater solubility by water containing carbonic and humic acids.

Statement 3 is correct: The **collection of multiple smaller individual sinkholes gathers to form a compound sinkhole** called uvala. It denotes a closed karst depression, a terrain form usually of elongated or compound structure and of larger size than of sinkholes. Uvalas are large, irregular, contiguous hollow forms in karst areas.

FORMATION OF UVALAs

Source: NCERT PHYSICAL GEOGRAPHY CLASS 11

G C LEONG

Q.45) With reference to ‘Global Food Security Platform’, consider the following statements:

1. It is launched by the World Food Programme (WFO) in collaboration with Food and Agriculture Organization (FAO).
2. It provides finances to improve food security and to reduce volatility in food markets.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: Global Food Security Platform is not launched by United Nations World Food Programme. It is launched by World Bank’s private sector investment arm, the International Finance Corp.

Statement 2 is correct: Global Food Security Platform is a \$6 billion financing facility which will support vulnerable communities, boost the flow of vital commodities to emerging markets, and help reduce food insecurity. IFC’s Global Food Security Platform will seek to reduce volatility in food markets through emergency financing to farmers, commodity traders, food and feed processors, and other private players that face restricted funding and sudden spikes in costs that are limiting their operations.

Knowledge Base:

Additional information on Global Food Security Platform:

(a) It also aimed at facilitating trade of food commodities, delivery of inputs to farmers, supporting efficient production in major origins such as Iraq, Lebanon, Libya, and Tunisia etc., including Ukraine, and effective distribution of food products in destination countries

(b) The platform will supplement the World Bank’s commitment of US\$30 billion in response to the food crisis. Source: Feeding the Future: IFC’s Global Food Security Platform Confronts Multiple, Overlapping Crises IFC launches financing platform to respond to global food crisis | Mint (livemint.com)

Source) <https://www.livemint.com/news/world/ifc-launches-financing-platform-to-respond-to-global-food-crisis-11664871022576.html>

Q.46) Which of the following pairs are correctly matched?

List I	List II
1. Ventifacts	These are pebbles faceted by sand-blasting and thoroughly polished by wind abrasion.
2. Yardangs	These are steep-sided ridges of rocks separated from one another by long grooves.
3. Peneplain	It is the landform produced by fluvial erosion

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 3 only
- c) 1 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Pair 1 is correct. Ventifacts or dreikanter: These are pebbles faceted by sand-blasting and thoroughly polished by wind abrasion. Rock fragments are moved by wind and smoothed on the windward side and another facet is developed if wind direction changes. Such rocks have characteristic flat facets with sharp edges. Amongst the ventifacts, those with three wind-faceted surfaces are called dreikanter form the desert pavement.

Pair 2 is correct. Yardangs are **steep-sided deeply undercut over hanging rock ridges separated from one another** by long grooves or corridors or passageways cut in desert floors of relatively softer rocks. It's size ranges from a metre to kilometre They are usually formed in the areas which are characterized by directional steady winds. They are formed where **alternate bands of hard and soft rocks are vertical or inclined to the horizontal plane**. The intervening beds of softer rocks are abraded and eroded materials are blown away by deflation process. The most characteristic feature of yardangs is their parallelism. They are formed by the action of wind, usually parallel to the wind direction.

Pair 3 is correct. The peneplain is the final stage of his geomorphic cycle of landform evolution. It is gently undulating, almost featureless plain. **It is produced by fluvial erosion** and reduce the land almost to baselevel (sea level), leaving so little gradient that essentially no more erosion could occur.

Source: Certificate physical and human geography. GOHCENGLEONG.

Q.47) Which of the following situations would most likely result in the formation of a 'Lagoon'?

- a) Sedimentary beds of rivers/streams become gentler due to continued erosion.
- b) A River shifts laterally making a series of natural levees.
- c) Barrier bars and spits are formed at the mouth of a bay and they block it.
- d) Waters spill over the banks during flooding above the river bed.

Ans) c

Exp) Option c is the correct answer.

A **lagoon** is a shallow body of water protected from a larger body of water (usually the ocean) by sandbars, barrier islands, or coral reefs. It is an elongated narrow saline – water lake. It provides security to coast

which is associated with the sea even after its formation. **Such lakes which are found at the conjunction of bars and beaches are known as lagoons.**

When **barrier bars and spits form at the mouth of a bay and block it, a lagoon forms.** The lagoons would gradually get filled up by sediments from the land giving rise to a coastal plain.

Formation of Lagoon

Option a is incorrect: When the stream beds turn gentler due to continued erosion, downward cutting becomes less dominant and lateral erosion of banks increases and as a consequence the hills and valleys are reduced to plains. **It does not lead to formation of Lagoon.**

Option b is incorrect: When rivers shift laterally, a series of **natural levees** can form. Natural levees are found along the banks of large rivers. They are low, linear and parallel ridges of coarse deposits along the banks of rivers, quite often cut into individual mounds. **It is not responsible for formation of Lagoon.**

Option d is incorrect: When the waters carrying finer sediments spill over the banks during flooding above the bed, **floodplains are formed.** **It is not responsible for formation of a Lagoon.**

G C LEONG

Q.48) What is the difference between an Alluvial plain and an Outwash Plain?

1. Outwash plains are located on the floor of the ocean, whereas Alluvial plains are glacial sediments deposited on land surface.
2. Unlike Outwash plains, Alluvial plains are usually fertile due to its loamy texture.

Select the correct answer using the codes given below:

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

The plain landform is mostly formed from materials **deposited by rivers, glaciers, waves and wind.** The type of sediment which constitutes this plain landform has a significant impact on the fertility and economic relevance of the consequent plain formed by deposition.

Statement 1 is incorrect: An **outwash plain** is a plain formed by the **sedimentary deposits by a glacier when it melts**, while the alluvial plains are caused by the weathering that is caused by the water currents in the seas, river or lakes. This water flows down the higher lands, to regions that have low land.

Alluvial plains are formed by the **deposition of sediments** called alluvium. An alluvial plain usually includes floodplains as part of its area but extends beyond such plains. As a river flows down mountains or hills, it carries sediments resulting from erosion and transports the sediments to the lower plain. As the sediments build up over time, the elevation of the floodplain increases while the width of the river channel decreases. Unable to bear the pressure, the river now looks for an alternative course with a higher channel capacity. Thus, the river forms a meander and flows through a new channel. In this way, floodplains continue growing and adding up to form massive stretches of alluvial plains.

Statement 2 is correct: Alluvial plains are the **most fertile soil** because it has a loamy texture (contain sand, clay and slit) and is rich in humus, contains organic nutrients. A granular material composed of finely divided rock and mineral particles are called sand. Sand with clay and slit helps to increase fertility of alluvial soil. **Outwash plains are infertile.** It consists of gravel, silt, sand and clay.

CHAPTER 7+ G C LEONG+ INTERNET

Q.49) With reference to ‘Karst Topography’, consider the following statements:

1. It is formed from the erosional effects of underground water on soluble limestones.
2. In Karst region, there is a general absence of surface drainage as most of the surface water goes underground.
3. The region provides raw material used in the manufacturing of cement.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Karst is a landscape which is underlain by limestone which has been eroded by dissolution, producing towers, fissures, sinkholes, etc. It is so named after a province of Yugoslavia on the Adriatic Sea coast where such formations are most noticeable.

Statement 1 is correct: Karst is a type of landscape where the **dissolving of the bedrock** has created sinkholes, sinking streams, caves, springs, and other characteristic features. Karst is associated with soluble rock types such as **limestone**, marble, and gypsum. It results from the excavating effects of underground water on massive soluble limestone.

Statement 2 is correct: In karst region, there is a general absence of surface drainage as most of the surface water has gone underground. Limestones are well jointed and it is through these joints and cracks that rain-water finds its way into the underlying rock. Progressive widening by solution enlarges these cracks into trenches and a most intriguing feature called limestone pavement is developed. The enlarged joints are called grikes and the isolated, rectangular blocks are termed clints.

Statement 3 is correct: The karst environment provides the main raw material used in the manufacture of cement (limestone). Carbonate rocks found within the karst formations are also used as raw materials for a number of other purposes in a variety of industrial sectors

Q.50) With reference to 'Slender Loris', consider the following statements:

1. They are small nocturnal mammals native to India and Sri Lanka.
2. They cause heavy damage to the crops at seedling and ripening stages of farming.
3. Recently, the state of Kerala has notified India's first Slender Loris Sanctuary.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 3 only
- d) 1 and 3 only

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: Slender lorises are small nocturnal mammals and are arboreal in nature, as they spend most of their life on trees. The species is listed as endangered as per the International Union for the Conservation of Nature (IUCN). The slender lorises (Loris) are a genus of loris native to India and Sri Lanka. The genus comprises two species, the red slender loris found in Sri Lanka and the gray slender loris from Sri Lanka and India.

Statement 2 is incorrect: Slender lorises are not among the animal that damages crops.

The slender loris is mostly insectivorous. It eats insects from fields and helps farmers protect their crops. Rather they act as a biological predator to pests of agricultural crops and benefits farmers. They are found in tropical rainforests, scrub forests, semi-deciduous forests, and swamps.

Statement 3 is incorrect: Recently, Tamil Nadu government has notified the country's first Kadavur Slender Loris Sanctuary. It is located in Karur and Dindigul districts of the State.

Source: India's first slender loris habitat in Karur, Dindigul districts of Tamil Nadu notified | Cities News, The Indian Express

Q.1) Westerlies in southern hemisphere are stronger and persistent than in northern hemisphere. Why?

1. Southern hemisphere has less landmass as compared to northern hemisphere.
2. Coriolis force is higher in southern hemisphere as compared to northern hemisphere.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

The Westerlies are prevailing winds from the west toward the east in the middle latitudes between 30°N and 60°N, and 30°S and 60° S. They originate from the high-pressure areas in the horse latitudes and tend towards the poles and steer extra tropical cyclones in this general manner. Westerlies in southern hemisphere are stronger and persistent than in northern hemisphere.

Statement 1 is correct. Land comprises only 19.1% of Southern Hemisphere, In Northern Hemisphere, the majority of area is composed of land masses. **Less landmass in Southern Hemisphere results in lesser frictional drag in motion of westerlies**, thus resulting in stronger and persistent Westerlies.

Statement 2 is incorrect. Coriolis force is equal in both the hemispheres at their respective latitudes. The magnitude of the Coriolis force depends on the speed of the object and its latitude. The Coriolis force is zero at the equator and increases toward the poles.

Source) UPSC CSE 2011

Q.2) With respect to the Air Masses, consider the following statements:

1. They are very small packets of atmospheric air showing great changes in temperature and moisture.
2. They are formed when wind speeds are sufficiently low.
3. They do not form over oceans, and can be formed over lands only.
4. They often bring changes in the weather conditions.

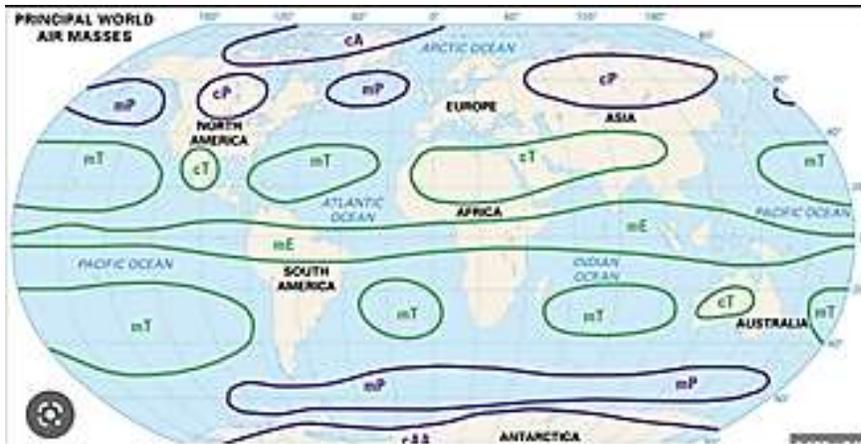

Which of the statements given above are correct?

- a) 1, 2 and 4 only
- b) 2 and 4 only
- c) 1 and 4 only
- d) 2 and 3 only

Ans) b

Exp) Option b is the correct answer.

When the air remains over a homogeneous area for a sufficiently long time, it acquires the characteristics of that area. The air with distinctive characteristics in terms of temperature and humidity is called an air mass.

Statement 1 is incorrect: An Air Mass is a large volume of atmospheric air that has almost homogenous (not greatly varying) characteristics such as temperature and moisture throughout a significant horizontal distance. Hence this statement is **incorrect**.

Also, it must be noted that the **homogeneity** in characteristics **typically extends horizontally** and **not vertically**.

A **mass of air** wherein there is a **great variation in temperature and moisture** is known as a “**Front**”. It is typically the **narrow region** where **two different types of air masses meet**.

Statement 2 is correct: For the Air Mass to form, a **large volume of air** needs to **lie undisturbed** over a piece of land or water, for **long periods of time**, so that it **can absorb** the temperature, etc of the **underlying source region**. This is possible only when there is **low or no wind to disturb** this air mass. Hence this statement is **correct**.

Statement 3 is incorrect: Air masses are identified based on whether they form over land or over water. Maritime air masses form over water and are humid. Continental air masses form over land and are dry.

Statement 4 is correct: An Air Mass **often brings changes to the weather** in **destinations** where it ends up. For example, a tropical continental air mass moving from North Africa to Europe will bring dry and warm conditions to the otherwise cold climate over there. Similarly, when two different types of air masses, such as warm and humid and cold and dry meet, it gives rise to a Front where a rapid change in temperature, humidity, etc gives rise to storm like conditions. Hence this statement is **correct**.

Knowledge Base:

(a) Air masses can extend thousands of kilometres across the surface of Earth, and can reach from ground level to the stratosphere—16 kilometres (10 miles) into the atmosphere.

(b) Following types of air masses are recognised: (1) Maritime tropical (mT); (2) Continental tropical (cT); (3) Maritime polar (mP); (4) Continental polar (cP); (5) Continental arctic (cA). Tropical air masses are warm and polar air masses are cold.

Read More Details: <https://www.geographynotes.com/climatology-2/air-masses-meaning-and-classification-climatology-geography/2814>

Source: <https://ncert.nic.in/textbook.php?kegy2=10-16>

<https://education.nationalgeographic.org/resource/air-mass#:~:text=source%20regions,-Low%20wind%20speeds,-let%20air%20remain>

Q.3) With reference to Isotherms, consider the following statements:

1. These are imaginary lines connecting the places with same temperatures.
2. These lines are generally parallel to the lines of longitude.
3. Closely spaced isotherms indicate very gradual variation in temperature.

Which of the statements given above is/ are correct?

- a) 1 and 3 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1 only

Ans) d

Exp) Option d is the correct answer.

Isotherms are imaginary lines drawn on maps in order to study the variations and distribution in temperature over various regions of the earth. Following are a few characteristics of Isotherms.

Statement 1 is correct: Isotherms are imaginary lines on a map connecting points experiencing similar (Iso) temperature (Therm) at a given point of time. Hence this statement is correct.

These lines help **understand the distribution and variation of temperature** in a region and make **predictions** regarding the weather there.

It is not to be confused with other types of imaginary lines such as those connecting places with similar atmospheric pressure (Isobars), sea water salinity (Isohaline), etc.

Statement 2 is incorrect: These lines are generally parallel to lines of Latitude (not Longitude) in both Hemispheres. Hence this statement is incorrect.

Latitudes determine the **angle at which sun rays fall on a particular place** on earth. Spots on Higher latitudes receive more slanted and hence less intense sun rays, and hence are cooler, and vice versa Hence **Latitude are closely correlated with the distribution of temperature** on earth, and hence by extension to **Isotherms** as they are the graphical representation of that temperature distribution. This is why Isotherms are generally parallel to lines of Latitude

Statement 3 is incorrect: Closely spaced isotherms indicate a High Range (i.e., very steep rate of change, not gradual change) of temperature. Hence this statement is incorrect.

If two isotherms are spaced closely, this means that **two places, very close by to each other in distance, have different types of temperatures.** This means that the **temperature has changed fast within a very short distance.** Hence the rate of change in temperature is steep not gradual (which would be represented by widely spaced isotherms).

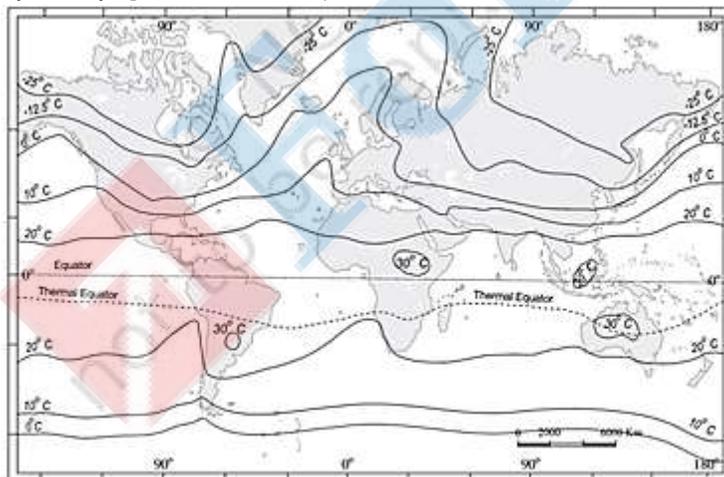

Figure 9.4 (a) : The distribution of surface air temperature in the month of January

Source: <https://ncert.nic.in/textbook.php?kegy2=9-16> Pg 79

Q.4) With reference to the likely effects of the Inversion of Temperature, consider the following:

1. Suppression of rainfall.
2. Poor air quality in winter months.
3. Shifting of human settlements to mountain tops from the mountain valleys.
4. Thriving vegetation in the Valley regions.

Which of the options given above are correct?

- a) 1, 2 and 3 only
- b) 1 and 4 only
- c) 2 and 3 only
- d) 1, 2, 3 and 4

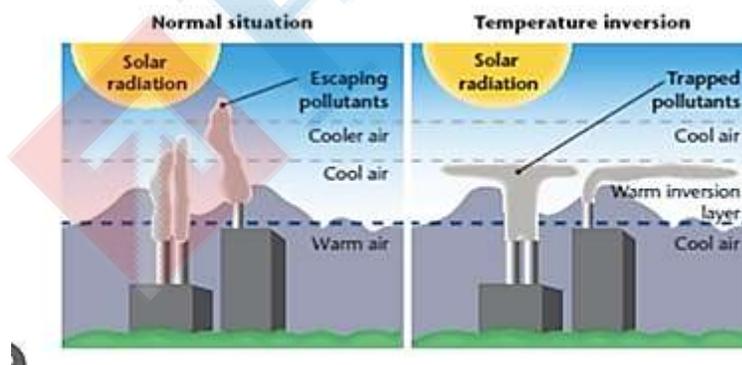

Ans) a

Exp) Option a is the correct answer.

Temperature decreases with increasing altitudes in the troposphere at an average rate of 6.5°C per 1000 metres (normal lapse rate) but sometimes this normal trend of decrease of temperature with increasing heights is reversed under special circumstances i.e., temperature increases upward to a few kilometres from the earth's surface. This is called negative lapse rate. Thus, the warm air layer lies over the cold air layer. This phenomenon meteorologically is called inversion of temperature.

Statement 1 is correct: Having **colder, sinking air below the lighter, warmer, more mobile air**, results in very **stable conditions** where the **cold layer acts like a lid**. This lid-like layer **prevents any convective movements of particles below it**, effectively **trapping those things** near the earth surface. Thus, the normal process of convection (hot air rising to higher colder altitudes) is unable to occur. As the warm moisture bearing air is unable to rise to cooler upper layers and cool adiabatically to create condensation, rain bearing clouds (cumulonimbus and nimbus) are unable to form. This leads to **anticyclonic conditions** which are characterised by **aridity and lack of rainfall**. Hence this statement is **correct**.

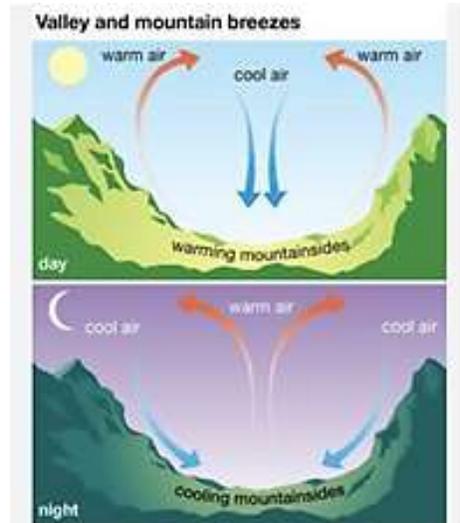

Statement 2 is correct: As explained above, the **inversion creates a lid-like condition** near the earth's surface. This results in creation of **fog** (as the cold aids condensation of tiny suspended water droplets), while **preventing pollutants** emitted due to human activity during the day **from escaping** through convection currents at night. This **fog and pollutants combine** to form a **smog** that results in **poor air quality**, as is being seen in North India currently, especially in Delhi. This phenomenon is seen **mostly in winters** as Surface Inversion **occurs** only during **long winter nights with no winds**, as the earth heat gets radiated during the long winter night and the inverted layer is not disturbed in the absence of winds. Hence this statement is **correct**.

Statement 3 is correct and 4 is incorrect: In the **Valley Type of Temperature Inversion**, during the long, cold winter nights, the **earth's heat quickly escapes to higher altitudes** (nearer the mountain tops), while its place is **occupied by the cold air at the mountain tops** which being colder is heavier and hence **sinks to the valley bottom**. Thus, **valleys are colder** than the mountain tops. Also, the **valleys experience frost** in

the **morning** due to the **lid-like effect**, and the **pollutants are also more heavily concentrated** in the valley region. Thus, the **people prefer to build settlements at mountain tops** (as there are fewer toxic pollutants). Hence this statement is **correct**.

Another effect of this phenomenon is that the **vegetation in the valley bottom generally dies** (due to the frost, while that on the mountain top thrives).

Knowledge Base:

Read about the various types of Inversions: <https://www.geographynotes.com/climatology-2/temperature-inversion-meaning-types-and-significance-climatology-geography/2732>

Source: <https://ncert.nic.in/textbook.php?kegy2=9-16> Pg 81

Q.5) With reference to Kalanamak Rice, consider the following statements:

1. This rice variety has been recently developed by the Indian Institute of Sciences.
2. It is a high yielding rice variety owing to its tall height.
3. It is usually grown in the Terai region of Uttar Pradesh.

Which of the statements given above is/are correct?

- a) 1 only
- b) 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Kalanamak is a rice grown in Nepal and India. It is a black husk, having a strong fragrance.

Statement 1 is incorrect: It is a traditional rice variety has been grown by the people in the Himalayan terai belt since a long time.

Statement 2 is incorrect: The traditional rice variety has low yield due to its tall height, making it prone to lodging. Lodging is a condition in which the top of the plant becomes heavy because of grain formation, the stem becomes weak, and the plant falls on the ground. To address the issue, the **Indian Agriculture Research Institute (IARI) has successfully developed two dwarf varieties of Kalanamak rice.** They have been named Pusa Narendra Kalanamak 1638 and Pusa Narendra Kalanamak 1652.

Statement 3 is correct: The traditional rice variety is grown in 11 districts of the Terai region of north-eastern Uttar Pradesh and in Nepal.

Knowledge Base: The traditional Kalanamak rice has been given the Geographical Indication (GI) tag. It's recorded in the GI application that Lord Buddha gifted Kalanamak paddy to the people of Sravasti so that they remembered him by its fragrance

Source: <https://www.thehindu.com/sci-tech/agriculture/fragrant-and-nutritious-kalanamak-rice-buddhas-gift-to-people-gets-new-powers-and-name/article66069818.ece>

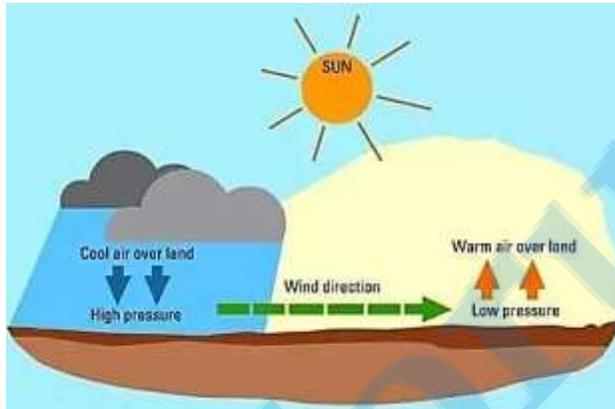

Q.6) In Northern India during summer season, local winds called 'loo' can be observed to be blown. This wind is mainly the outcome of which one of the following processes?

- Conduction
- Radiation
- Advection
- Convection

Ans) c

Exp) Option c is the correct answer.

The **Loo** is a strong, dusty, gusty, hot and dry summer wind from the west which blows over the Indo-Gangetic Plain region of North India. It is especially strong in the months of May and June. It is the outcome of **advection process**. Advection is a lateral or horizontal transfer of mass, heat, or other property. Accordingly, winds that blow across Earth's surface represent advective movements of air.

Advective Movements of Air

Advective winds move from areas of higher temperature toward areas of lower temperature. In contrast, convection, the vertical movement of mass or transfer of heat, manifests itself as air currents. Accordingly, winds are a result of advection, while air currents are a result of convection.

Source: NCERT 11th Geography Unit 4 Climate, Chapter 8 COMPOSITION AND STRUCTURE OF ATMOSPHERE

Q.7) With reference to the Coriolis Force, consider the following statements:

- It is responsible for the deflections in the direction of Winds.
- It acts perpendicular to the direction of velocity of the object.
- Coriolis Force is higher at the Poles, than at the Equator.
- The latitude is the sole factor influencing its strength.

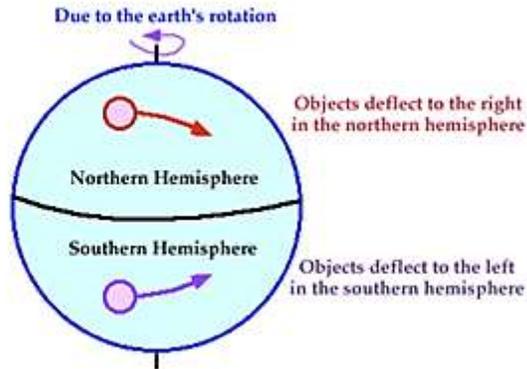

Which of the statements given above are correct?

- 1, 2 and 3 only
- 2 and 4 only
- 1 and 3 only
- 1, 2, 3 and 4

Ans) a

Exp) Option a is the correct answer.

The Coriolis Force is a pseudo force that causes objects travelling over great distances to deflect from their original path (to the right in the Northern Hemisphere and to the Left in the Southern Hemisphere). It is a result of the Rotation of Earth on its Axis.

Statement 1 is correct: Coriolis Force is a geophysical phenomenon responsible for the deflection in the direction of flow of fluid systems (winds and ocean currents) on earth surface.

Statement 2 is correct: The Coriolis force acts in a direction perpendicular to the angular velocity of the rotating frame.

Statement 3 is correct: The Coriolis Force is directly proportional to the angle of latitude. As the latitude at which horizontally and freely moving objects are located increases, the twisting of the underlying Earth's surface and its velocity due to the planet's rotation increases. Hence the Coriolis Force is maximum at the Poles and almost absent at the Equator.

Statement 4 is incorrect: The Coriolis Force is dependent on following factors

- 1) The Velocity of the object travelling over great distances across the latitudes on earth relative to the Velocity of the earth.
- 2) The Latitude at which the travelling object is originating. (Sine of the angle of the latitude)
- 3) The mass of the moving body.

Hence this statement is incorrect as Latitude is not the sole factor influencing the strength of the Coriolis Force.

Source: <https://ncert.nic.in/textbook.php?kegy2=10-16> Pg 86, 87

<https://www.geographynotes.com/climatology-2/coriolis-force-definition-and-characteristics-climatologygeography/2791>

Q.8) Which of the following statements is/are correct regarding the 'anti-cyclones'?

1. Anti-cyclones are the regions of high pressure around which air circulates.
2. Anti-cyclones always brought heavy rain, thus leading to flood like conditions.
3. Anti-cyclones are more frequent during the summer season.

Select the correct answer using the code given below:

- a) 1 and 3 only
- b) 2 and 3 only
- c) 1 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

An anticyclone is a weather phenomenon defined as a large-scale circulation of winds around a central region of high atmospheric pressure.

Statement 1 is correct. Anticyclones are regions of relatively high pressure on horizontal surfaces around which air circulates clockwise in the Northern Hemisphere and counterclockwise in the Southern Hemisphere.

Statement 2 is incorrect. Anti-cyclones are indicative of dry weather which mostly **remain rainless**. Anticyclones are **largely rainless**. The sky is free of clouds because of the fact that descending air in the centre of anticyclone is warmed up at dry adiabatic rate due to subsidence. This is why anticyclones are indicative of dry weather. This does not mean that anticyclones are always rainless. While passing over oceans sometimes they **pick up moisture** and yield light rains or drizzles with moderate clouds.

Statement 3 is correct. In summer, the **clear settled conditions associated with anticyclones** allow the Sun's light to warm the ground. **This is why anticyclones are more frequent in summers**. This can bring long sunny days and warm temperatures. The weather is normally dry, although occasionally, very hot temperatures can trigger localized thunderstorms.

Source: savinder singh climatology page 233

Q.9) With reference to 'Spatial Distribution of Insolation at the earth's surface', consider the following statements:

1. The subtropical deserts receive maximum insolation on Earth.
2. The amount of insolation received by the equator is more as compared to the tropics.
3. The middle and higher latitudes receive less insolation in the winter season than in the summer.
4. At the equinoxes, the solar insolation is zero at the poles.

Which of the following statements given above are correct?

- a) 1 and 4 only
- b) 2 and 3 only
- c) 1, 3 and 4 only
- d) 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

The amount of insolation received on the earth's surface is not uniform everywhere. It varies from place to place and from time to time. The tropical zone receives the maximum annual insolation. It gradually decreases towards the poles. Insolation is more in summers and less in winters.

Statement 1 is correct: Maximum insolation is received over the subtropical deserts, where the cloudiness is the least. The cloudless skies allow for maximum insolation in the subtropical deserts as compare to other cloudy regions that reflects sunlight.

Statement 2 is incorrect: Equator receives **comparatively less insolation than the tropics due to presence of clouds**.

Statement 3 is correct: The **middle and higher latitudes receive less radiation in the winter season** than in the summer. Seasonal change has impact on insolation in this region, hence, dissimilarities are found in the amount of solar radiation.

Statement 4 is correct: At the equinoxes, solar insolation is at a maximum at the equator and is zero at the poles. At the summer solstice of the northern hemisphere, daily insolation reaches a maximum at the North Pole because of the 24-hour-long solar day. At the winter solstice, the sun does not rise above the horizon north of about 66.5°, where solar insolation is zero.

<https://www.uou.ac.in/lecturenotes/science/MSCGE->

[19/Insolation,%20Atmospheric%20temperature%20and%20Heat%20Budget%20of%20the%20Earth.pdf](https://www.uou.ac.in/lecturenotes/science/MSCGE-19/Insolation,%20Atmospheric%20temperature%20and%20Heat%20Budget%20of%20the%20Earth.pdf)

Q.10) Consider the following tribal communities and the region/states in which they are found:

Tribal communities	Region/states in which they are found
1. Jarawas	Andaman Island
2. Dorla	Nilgiris hills
3. Betta kuruba	Bastar region
3. Hatti	Himachal Pradesh

How many pairs given above are correct?

- one pair only
- two pairs only
- three pairs only
- all four pairs

Ans) b

Exp) Option b is the correct answer.

Scheduled Tribes (ST) constitute approximately **8.6% of the population** of India i.e., around 10.4 crores. There are over 705 Scheduled tribes notified under article 342 of the Constitution of India. The Article 342 states that the President may specify the tribes or tribal communities which shall be deemed to be Scheduled Tribes in relation to that State or Union Territory.

Pair 1 is correct: Jarawas are indigenous people of the Andaman Islands in India. They live in parts of South Andaman and Middle Andaman Islands. The traditional Jarawa hut is called a **Chadda**. There are about 500 members of the Jarawa tribe.

Pair 2 is incorrect: Dorla also called Dora are a tribal people community found mainly in Bastar area of central India. They are mainly found in Dantewada and Bijapur districts of present-day Chhattisgarh.

Pair 3 is incorrect: Betta Kuruba tribe lives in the hilly regions of Karnataka and is one of the few indigenous communities of the Nilgiris.

Pair 4 is correct: The Hatti tribe is found in the **Trans-Giri area of Sirmour district in Himachal Pradesh**. The Hatti community got their name from their tradition of selling homegrown vegetables, crops, meat and wool etc. at small markets called 'haat' in towns.

Knowledge Base:

• To showcase the heritage of tribal communities, the Anthropological Survey of India (AnSI) has recreated the huts of several communities at its different regional centers. These tribal communities included:

- Jarawa of Andaman Island
- Shompen of Great Nicobar Island
- khasis of Meghalaya
- Dorla of Bastar region
- Betta kuruba of Karnataka

Q.11) La Nina is suspected to have caused recent floods in Australia. How is La Nina different from El Nino?

1. La Nina is characterized by unusually cold ocean temperature in equatorial Indian Ocean whereas El Nino is characterized by unusually warm ocean temperature in the equatorial Pacific Ocean.

2. El Nino has adverse effect on south-west monsoon of India, but La Nina has no effect on monsoon climate.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) d

Exp) Option d is the correct answer.

La Nina events represent periods of below-average sea surface temperatures across the east-central Equatorial Pacific. It is indicated by sea-surface temperature decrease by more than 0.9°F for at least five successive three-month seasons.

Statement 1 is incorrect. La Nina is characterized by unusually **cold ocean temperatures in the Equatorial Pacific** compared to El Nino, which is characterized by unusually warm ocean temperatures in the Equatorial Pacific.

Statement 2 is incorrect. La Nina is favorable to Indian monsoon whereas, El Nino has adverse effect on south-west monsoon. La Nina leads to **heavy floods in Australia**. Heavy floods often lead to waterlogging resulting in **poor agricultural output**. There are increased temperatures in Western Pacific, Indian Ocean and off the Somalian coast. In the **western Pacific**, La Nina increases the potential for landfall in those areas most vulnerable to their effects, and especially into continental Asia and China.

Source) UPSC 2011

Q.12) Which among the following is/are ideal condition(s) for the development of a thunderstorm in a region?

- 1. Presence of moisture in the air
- 2. Rapidly rising air
- 3. Absence of sunlight

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 1 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Thunderstorms form when warm, moist air rises into cold air. The warm air becomes cooler, which causes moisture (water vapor) to form small water droplets through condensation. The cooled air drops lower in the atmosphere, warms, and rises again forming a convection cell. All thunderstorms begin with air rising into the atmosphere to form a convection cell, but the air can be lifted in different ways. There are three basic ingredients needed for thunderstorm development: moisture, an unstable atmosphere, and some way to start the atmosphere moving.

Option 1 is correct: Moisture is necessary to produce the thunderstorm clouds and precipitation. Presence of sufficient moisture in the air can generate thunderstorms at any time of the year, even in extreme winter.

Option 2 is correct: Atmospheric instability also plays an important role in thunderstorm development. **Rising air is needed to produce clouds, and rapidly rising air is needed to produce thunderstorms.** For

air to rise rapidly, it must become buoyant compared to the surrounding air. When the atmosphere is unstable, air near the ground can become buoyant and rise rapidly through the atmosphere.

Option 3 is incorrect: Sunlight contributes to the trigger motion in the atmosphere. Trigger motion is some sort of boundary such as a front. Once a thunderstorm has developed, it will continue to generate boundaries that can trigger additional storms. In the summer, thunderstorms typically develop in the afternoon when the sun heats air near the ground.

Knowledge Base: The amount of moisture in the air and the air temperature determines how often thunderstorms form at a particular location. Geographic location also plays a role. Formation of cumulus clouds, which can lead to thunderstorms, often creates conditions for thunder and lightning to form as electric charges accumulate within the clouds.

Source: <https://scied.ucar.edu/learning-zone/storms/thunderstorms>

<https://www.weather.gov/safety/lightning-thunderstorm-development>

Q.13) In context of Climatology, which of the following conditions are necessary for the occurrence of tropical cyclones?

1. Temperature higher than 27° C.
2. Presence of the Coriolis force.
3. Absence of vertical wind
4. Upper air convergence above the sea level

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 1, 2 and 3 only
- c) 1, 2 and 4 only
- d) 1, 3 and 4 only

Ans) a

Exp) Option a is the correct answer.

Tropical cyclones are low pressure systems that form over warm tropical waters. It is a rapid rotating storm originating over tropical oceans from where it draws the energy to develop.

The conditions favourable for the formation and intensification of tropical storms are:

- A pre-existing weak low- pressure area or low-level-cyclonic circulation.
- Large sea surface with temperature higher than 27° C. **(Hence, option 1 is correct)**
- Presence of the Coriolis force. **(Hence, option 2 is correct)**
- Small variations in the vertical wind speed. **(Hence, option 3 is incorrect)**
- Upper air divergence above the sea level system. **(Hence, option 4 is incorrect)**

Knowledge Base: Cyclones are rapid inward air circulation around a low-pressure area. The air circulates in an anticlockwise direction in the Northern hemisphere and clockwise in the Southern hemisphere.

Source: NCERT Class XI

<https://public.wmo.int/en/our-mandate/focus-areas/natural-hazards-and-disaster-risk-reduction/tropical-cyclones>

<http://www.bom.gov.au/cyclone/tropical-cyclone-knowledge-centre/understanding/tc-info/>

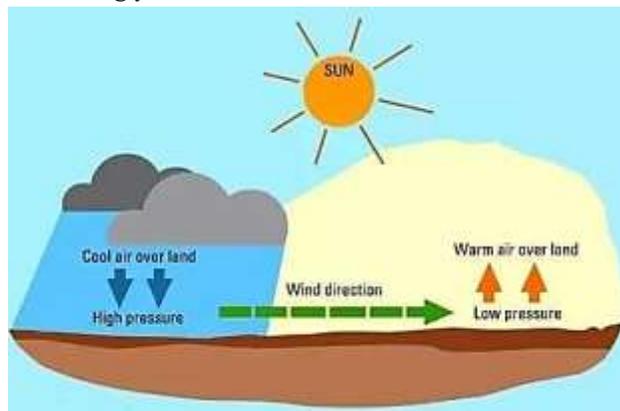

Q.14) In tropical regions particularly in northern India during summer season local winds called 'loo' is mainly the outcome of which one of the following processes?

- a) Conduction
- b) Radiation
- c) Advection
- d) Convection

Ans) c

Exp) Option c is the correct answer.

The **Loo** is a strong, dusty, gusty, hot and dry summer wind from the west which blows over the Indo-Gangetic Plain region of North India. It is especially strong in the months of May and June. It is the outcome of **advection process**. Advection is a lateral or horizontal transfer of mass, heat, or other property. Accordingly, winds that blow across Earth's surface represent advection movements of air.

Advectional Movements of Air

Advection winds move from areas of higher temperature toward areas of lower temperature. In contrast, convection, the vertical movement of mass or transfer of heat, manifests itself as air currents. Accordingly, winds are a result of advection, while air currents are a result of convection.

Q.15) Consider the following traditional crafts recently seen in news:

Traditional Crafts	Description
1. Patan Patola	It is a tie and dye saree from Maharashtra.
2. Mata Ni Pachedi	It is handmade Gujarati textile which is offered in temples.
3. Pithora painting	A wall mural painting done by the Saura tribe of Odisha
4. Kanal Brass set	Traditional musical instrument manufactured in Himachal Pradesh

How many pairs given above are correct?

- One pair only
- Two pairs only
- Three pairs only
- All four pairs

Ans) b

Exp) Option b is the correct answer.

India has rich tradition consisting of crafts and paintings done by the people across the country. At the G20 summit, Prime Minister Narendra Modi gifted traditional artworks from Gujarat and Himachal Pradesh to world leaders.

Pair 1 is incorrect: Patan Patola is a double ikat saree from Gujarat. The ancient art of double ikat or Patola woven in pure silk dates to the 11th century. It has equal intensity of colours and design on both sides. This peculiar quality has its origins in an intricate and difficult technique of dyeing or knot dyeing, known as 'bandhani'. One of the major practitioners of the dwindling art form is the Salvi family from North Gujarat.

Pochampally sarees are silk saree having intricate geometric patterns handwoven and dyed. It is worn by the women of Pochampally, Telangana region.

Pair 2 is correct: It is a handmade textile of **Gujarat state** meant to be an offering in the temple shrines which house the Mother Goddess. It is done by the artisans of Waghari community. Traditionally, four or five pieces of Mata-ni-Pachedi are erected to form a temporary shrine

Pair 3 is incorrect: Pithora is a tribal folk art from Chhota Udaipur, Gujarat. They are painted on the walls of the houses to bring prosperity and peace. Depiction of animals are common especially **horses**.

Saura paintings are a wall mural painting done by the Saura tribe of Odisha.

Pair 4 is correct: Kanal brass set is a musical instrument from the Mandi and Kullu of Himachal Pradesh. These traditional musical instruments are now increasingly used as décor objects and are manufactured by skilled metal craftsman in Mandi & Kullu district of Himachal Pradesh.

Knowledge Base:

At the G20 Summit, PM Modi presented US President Joe Biden with Kangra miniature paintings; agate bowls from Kutch to the leaders of France, Germany and Singapore.

Source: <https://indianexpress.com/article/explained/modi-gifts-italian-pm-a-patan-patola-scarf-what-the-ancient-gujarat-art-form-is-8272441/>

Q.16) With reference to the Earth's Rossby Waves, consider the following statements:

1. The equatorial Rossby waves can result in formation of twin cyclones.
2. The Rossby waves transfer heat from the tropics toward the poles.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Rossby waves, also known as planetary waves, naturally occur in rotating fluids. Within the Earth's ocean and atmosphere, these waves form as a result of the rotation of the planet.

Statement 1 is correct. The twin tropical cyclones are caused by **equatorial Rossby waves**. The twin cyclone is a vortex (circulation with a definable centre) in the northern hemisphere and another in the southern hemisphere, and each of these is a mirror image of the other. It is formed when **vortex in the north spins counter clockwise** and has a positive spin, while the **one in the southern hemisphere spins in**

the clockwise direction and therefore has a negative spin. Both have positive value of the vorticity which is a measure of the rotation. Hence resulting in formation of twin cyclones.

Statement 2 is correct. Rossby waves formed in atmosphere help **transfer heat from the tropics toward the poles and cold air toward the tropics** in an attempt to return atmosphere to balance. This also help in locating the jet stream (narrow bands of strong wind in the upper levels of the atmosphere) and mark out the track of surface low pressure systems. The slow motion of these waves even results in fairly long, persistent weather patterns.

Source: <https://www.thehindu.com/sci-tech/science/explained-the-science-behind-twin-cyclones/article65402306.ece/amp/>

<https://oceanservice.noaa.gov/facts/rossby-wave.html>

Q.17) With reference to Planetary Winds and their associated regions, consider the following statements:

1. The Westerlies originate in the sub-tropical high-pressure belt and blow towards poles.
2. The Westerlies result in heavy precipitation and strong winds at horse latitudes.
3. The Westerlies of the Southern hemisphere are more robust and constant than the westerlies of the Northern hemisphere.

Which of the statements given above are correct?

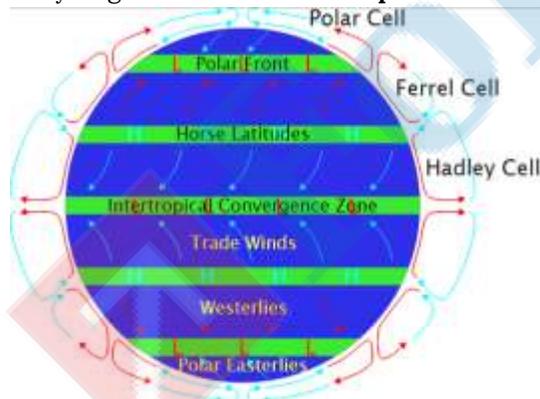

- a) 1 and 2 only
- b) 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

The planetary winds are permanent winds which blow throughout the year from low latitude to the other in response to the latitudinal differences in air pressure. The two most significant winds for climate and human activities are the trade winds and the westerly winds.

Statement 1 is correct. The westerlies blow from 35-40 degree to 60-65 degree North and South latitude. They originate in the **northern parts of sub-tropical high-pressure cells and blow toward the poles.**

Statement 2 is incorrect. The **horse latitudes** are regions located at **about 30 degrees north and south** of the equator. These latitudes are characterized by **calm winds and little precipitation**. In this region of the subtropics, winds diverge and either flow toward the poles (known as the prevailing westerlies) or toward the equator (known as the trade winds). These diverging winds are the result of an area of high pressure, which is characterized by calm winds, sunny skies, and little or no precipitation.

Statement 3 is correct. The westerlies of the **southern hemisphere are stronger and persistent** due to the vast expanse of water, while those of the northern hemisphere are irregular because of uneven relief of vast land-masses.

NCERT-11TH (OLD) (CH-ATMOSPHERIC PRESSURE, WINDS AND AIRMASS)

<https://www.climate-policy-watcher.org/global-climate-2/winds-westerlies.html>

Q.18) With reference to Polar Vortex, consider the following statements:

1. It is a whirling cone of high pressure over the poles.
2. When the vortex becomes strong, a wave of cold air is always pushed southwards.
3. The term vortex refers to counterclockwise flow of air.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 3 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

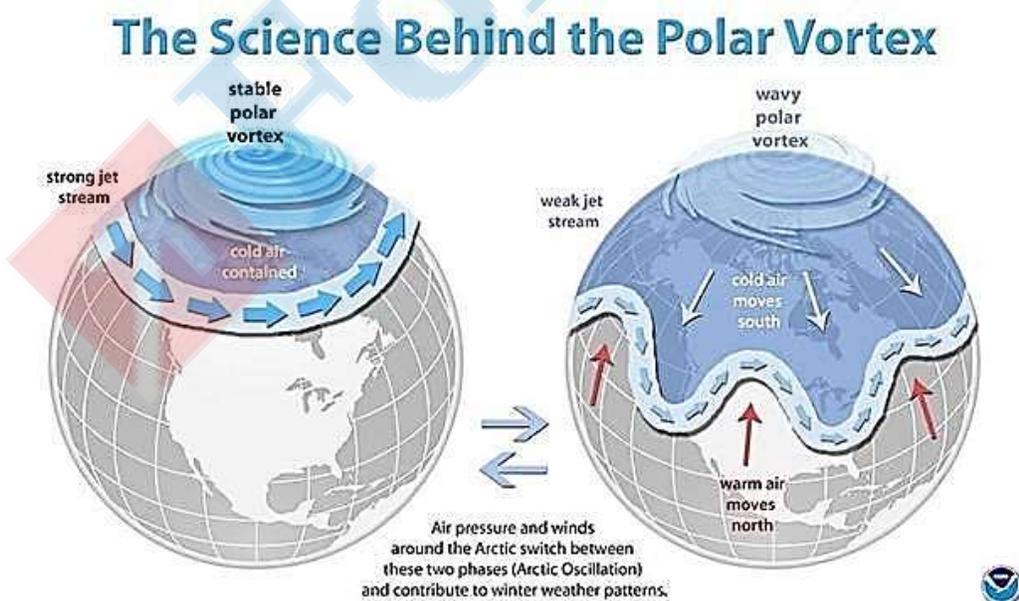

A circumpolar vortex, or simply polar vortex, is a large region of cold, rotating air that encircles both of Earth's polar regions.

Statement 1 is incorrect. Polar vortex is described as a whirling cone of **low pressure** over the poles.

Statement 2 is incorrect. Normally, when the vortex is strong and healthy, it helps to keep a current of air (the jet stream) travelling around the globe in almost a circular path. This current keeps the cold air up north and warm air down south. **When the vortex becomes weak there is a lack of a strong low-pressure system, resulting in jet stream losing the hold to keep it in line, and becoming wavy and all of a sudden, a river of cold air is pushed down south.**

Statement 3 is correct. The term vortex refers to counterclockwise flow of air that keeps the colder air near the poles.

Knowledge Base:

Source: <https://indianexpress.com/article/explained/whats-causing-extreme-cold-in-us-midwest-polar-vortex-5563646/>

<https://www.downtoearth.org.in/news/climate-change/just-what-exactly-is-a-polar-vortex--62648>

Q.19) Which of the following statements are correct about the 'Chinook Winds'?

1. These are warm and dry winds that usually blow in Winter Season.
2. They blow along the eastern slopes of the Rocky Mountains.
3. These winds are useful for the ripening of grapes.

Select the correct answer using the code given below:

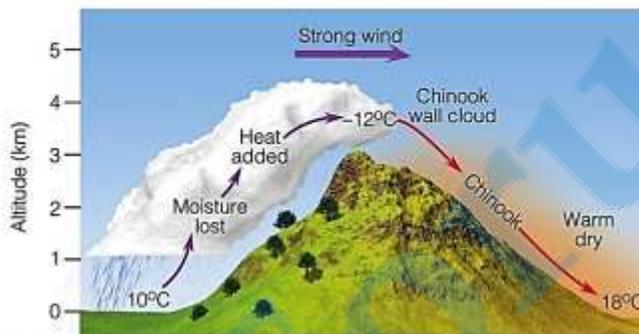

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Foehn or Chinook is a type of periodic wind that changes direction periodically with change in season.

Statement 1 and 2 are correct. Chinook winds is a hot dry wind that blows in winter on leeward side of mountain. It blows **east of the Rocky Mountains in Canada** and the **United States**. Chinook's literal meaning is 'snow eater,' as they aid in the melting of snow.

Statement 3 is correct. The temperature of the wind varies between 15°C and 20°C that helps animal grazing by melting snow and aids to the suitability for the **ripening of grapes**.

Knowledge Base:

Chinook wind formed by the adiabatic warming of air that has lost most of its moisture on windward slopes (orographic lift).

Source: NCERT-11TH (OLD) (CH-ATMOSPHERIC PRESSURE, WINDS AND AIRMASSSES)

<https://worldinmaps.com/weather-and-climate/foehn-winds/>

Q.20) A Constitution Bench of the Supreme Court has held that a judgment delivered by a larger Bench will prevail irrespective of the number of Judges constituting the majority. In this context, consider the following statements:

1. Bench of equal strength can review or reconsider the decision of another bench of same strength.
2. In case of conflict of decisions between the co-equal benches, it is referred to the Chief Justice of India.
3. Decision of larger bench of the court is always binding on smaller bench of the same court.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Most of the cases before the Supreme Court is heard and decided by a Bench of two judges called as Division Bench or of three judges called as full Bench.

Statement 1 is incorrect: Bench of equal strength cannot overrule or reconsider a decision of bench of same strength. At most it can do is to doubt the correctness of it.

Statement 2 is correct: In case of doubt or conflict between decisions of co-equal Benches, it is referred to the Chief Justice of India. This is where larger Benches are constituted. The larger Benches examine the question or correctness of the decision and the majority opinion expressed by them becomes the verdict, which is binding on the lower Benches.

Statement 3 is correct: The decision of a larger Bench is binding on a smaller Bench of the same court. Similarly, the decision of a superior court is binding on a lower court. This aims at ensuring that there is stability and consistency in the decisions of the court. This principle stems from the assumption that a Bench with more strength is more likely to arrive at a correct decision.

Source: <https://www.thehindu.com/opinion/op-ed/judicial-comity-over-arithmetic/article66022585.ece#:~:text=Photo%20Credit%3A%20PTI-Changes%20are%20required%20in%20terms%20of%20how%20larger%20Benches%20are,majority%20in%20the%20larger%20Bench.>

Q.21) Which one of the following is the characteristic climate of the Tropical Savannah Region?

- a) Rainfall throughout the year
- b) Rainfall in winter only
- c) An extremely short dry season
- d) A definite dry and wet season

Ans) d

Exp) Option d is the correct answer.

The **Savannah or Sudan Climate** is a transitional type of climate found between the equatorial forest and the trade wind hot deserts. It is confined within the tropics and is best developed in the Sudan. The savannah landscape is typified by tall grass and short trees.

Option d is correct. The tropical savanna climate has alternating dry and wet seasons. The wet summer season lasts 6 to 8 months and during these days, there is plenty of rainfall. Winter lasts for 4 to 6 months and there might be no rains in winter this results in frequent forest fires.

Option a is incorrect. Rainfall throughout the year is a characteristic of Equatorial region.

Option b is incorrect. The Mediterranean region falls under the influence of wet westerlies during winter season and receive rainfall in winters only.

Option c is incorrect. Tropical Savannah region experience dry conditions for a longer duration than wet conditions.

Source) UPSC 2012

Q.22) Which of the following statements correctly describes the ‘Storm Surge’?

- a) It is a rise in sea level that occurs during tropical cyclones or intense storms.
- b) It is a displacement of large volume of water caused by movements in Earth's Tectonic plates.

- c) It is an overflow of excessive water on dry land caused by large storms.
 d) None of the statements (a), (b) or (c) is the correct description.

Ans) a

Exp) Option a is the correct answer.

Option a is correct. A **storm surge** is a rise in sea level that occurs during tropical cyclones, intense storms also known as typhoons or hurricanes. The storm surge is a result of atmospheric pressure and Coriolis force that produces strong winds pushing the water into shore, which can lead to flooding. This makes storm surges very dangerous for coastal regions. **Typhoon Haiyan in 2013** is one of the current examples of a devastating storm surge.

Option b is incorrect. **Tsunamis** are giant waves that are produced when a large volume of water is displaced in an ocean or large lake by movements in Earth's outer layer, or crust like an earthquake, volcanic eruption, underwater landslide or meteorite.

Option c is incorrect. **Flooding** is the process where the water overflows or soaks land that is normally dry caused by large storm or tsunami that leads the water of the sea or river to rush inland.

Source: <https://education.nationalgeographic.org/resource/storm-surge>
<https://oceanservice.noaa.gov/facts/stormsurge-stormtide.html>

Q.23) With reference to Fog and Mist, consider the following statements:

1. The visibility range in fog is more than the visibility range in mist.
2. Fog usually carries much more moisture as compared to the mist.
3. Mist tend to be much denser than the fog.

Which of the statements given above are **incorrect**?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

When the temperature of an air mass containing a large quantity of water vapour falls suddenly, condensation takes place within itself on fine dust particles. Both fog and mist follow the same process for condensation and are tiny water droplets that hang in the air on ground level.

Statement 1 is incorrect: Although both fog and mist cause poor visibility **but the visibility range in mist is more than in fog.** Fog is when one can see less than 1,000 metres away, and if the visibility is further than 1,000 metres, we call it mist. Fogs are mini clouds in which condensation takes place around nuclei provided by the dust, smoke, and the salt particles.

Statement 2 is incorrect: **Mist contains more moisture than the fog.** In mist each nuclei contains a thicker layer of moisture. Mists are seen in mountain ranges, where warm air rising the slopes meet a cold surface.

Statement 3 is incorrect: **Fog are denser than the mist.** Both fog and mist follow the same process of forming water condensation. However, the formation is less coalescing meaning the merger of tiny water droplets is less in mist. So, the mist is not as dense as fog.

Source: Class-11, Fundamentals of physical geography, chapter :11

<https://www.metoffice.gov.uk/weather/learn-about/weather/types-of-weather/fog/difference-mist-and-fog#:~:text=Fog%20and%20mist%20differ%20by,metres%2C%20we%20call%20it%20mist.>

Q.24) Which one of the following is the cause for formation of Intertropical Convergence Zone?

- The convergence of equatorial air mass with the tropical and sub-tropical air mass near equator.
- The intense heating of mid-latitude belt in summers.
- The convergence of northeast and southeast trade winds near equator.
- The high sea surface temperature and high evaporation rate near equator.

Ans) c

Exp) Option c is the correct answer.

The Inter Tropical Convergence Zone (ITCZ) is a low-pressure zone located at the equator where trade winds from two hemispheres converge. It is a zone where air tends to ascend.

This convergence zone lies more or less parallel to the equator but moves north or south with the apparent movement of the sun.

Option c is correct. The Intertropical Convergence Zone is formed when the **trade winds** of the Northern and Southern Hemispheres come together. In the **northern hemisphere** the northeast trade winds converge with southeast winds from the **Southern Hemisphere**. The point at which the trade winds converge forces the air up into the atmosphere, forming the ITCZ.

Source: <https://earthobservatory.nasa.gov/images/703/the-intertropical-convergence-zone>
<https://www.weather.gov/jetstream/itcz>

Q.25) With reference to the outcome of Conference of Parties (COP) 27 of the United Nations Framework Convention on Climate Change (UNFCCC), consider the following statements:

- The Sharm El-Sheikh Implementation Plan was adopted by the parties.
- It was decided to set up a Loss and Damage fund to provide financial assistance to developing countries.
- A binding commitment was reached to phase down the usage of all fossil fuels.
- A new 5-year work program to promote climate technology solutions was launched.

Which of the statements given above are correct?

- 1 and 2 only
- 1, 2 and 4 only
- 3 and 4 only
- 1, 2, 3 and 4

Ans) b

Exp) Option b is the correct answer.

The United Nations Climate Change Framework Convention (UNFCCC)'s **27th Conference of Parties (COP 27) concluded recently in Sharm el-Sheikh (Egypt)**. The COP is the apex decision-making body of the United Nations Climate Change Framework Convention (UNFCCC).

Statement 1 is correct. The **Sharm El-Sheikh Implementation Plan was adopted by COP 27**. It highlights that a global transformation to a low-carbon economy is expected to require investments of at least US\$ 4-6 trillion a year.

Statement 2 is correct: The COP 27 decided to establish a **Loss and Damage fund to provide financial assistance to vulnerable nations stricken by climate disaster. The fund will assist developing countries that are particularly vulnerable to the adverse effects of climate change.** However, there is no agreement yet on the mechanism of operation of the fund or how finance should be provided and administered.

Statement 3 is incorrect: At COP27, some countries, led by **India, wanted to include a commitment to phase down all fossil fuels.** It was a subject of intense debate **but was not included** in the final resolution.

Statement 4 is correct: COP27 saw the launch of **a new 5-year work program to promote climate technology solutions** in developing countries.

Source: <https://www.theguardian.com/environment/2022/nov/20/cop27-climate-summit-egypt-key-outcomes>

https://unfccc.int/sites/default/files/resource/cop27_auv_2_cover%20decision.pdf (pg no 9)

Q.26) “It consists of frozen raindrops and refrozen melted snow-water. When a layer of air having above-freezing point temperature overlies a subfreezing layer near the ground, precipitation takes place in this form. Raindrops leaving the warmer air, encounter the colder air below and as a result, they solidify and reach the ground as small pellets of ice not bigger than the raindrops from which they are formed.”

The above description refers to which of the following types of precipitation?

- a) Snowfall
- b) Sleet
- c) Hailstones
- d) Ice-Crystals

Ans) b

Exp) Option b is the correct answer.

There is a continuous process of condensation occurring in the free air. When the resistance of the air fails to hold them against the force of gravity, they fall on to the earth's surface. So, after the condensation of water vapour, the release of moisture is known as precipitation. This may take place in liquid or solid form.

Option a is incorrect: Precipitation taking place when the **temperature is lower than the 0°C** in the form of fine flakes of snow is called **snowfall**. Moisture is released in the form of hexagonal crystals. These crystals form flakes of snow.

Option b is correct: Sleet is frozen raindrops and refrozen melted snow-water. When a layer of air having above freezing point temperature overlies a subfreezing layer near the ground, precipitation takes place in the form of sleet. Raindrops leaving the warmer air, encounter the colder air below. As a result, they solidify and reach the ground as small pellets of ice not bigger than the raindrops from which they are formed.

Option c is incorrect: Hailstones have several concentric layers of ice one over the other. Drops of rain after being released by the clouds become solidified into small rounded solid pieces of ice and which reach the surface of the earth are called hailstones. They are associated with thunderstorms and individual hail stones are 5 mm or greater in diameter.

Option d is incorrect: Ice-crystals are falling crystals of ice in the form of needles, columns, or plates. They occur in very cold region. Also called 'diamond dust', ice crystals appear like fog with individual water particles forming directly as ice.

Source: Class-11, Fundamentals of physical geography, chapter :11

Q.27) Consider the following pairs:

Clouds	Description
1. Cumulus clouds	White, thin, and detached cloud having feathery appearance.
2. Stratus clouds	Clouds formed due to loss of heat and covering the large portion of the sky.
3. Nimbus clouds	They are featureless mass of vapour, thick enough to block the rays of sun.

Which of the following pairs given above are correct?

- a) 1 and 2 only

- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

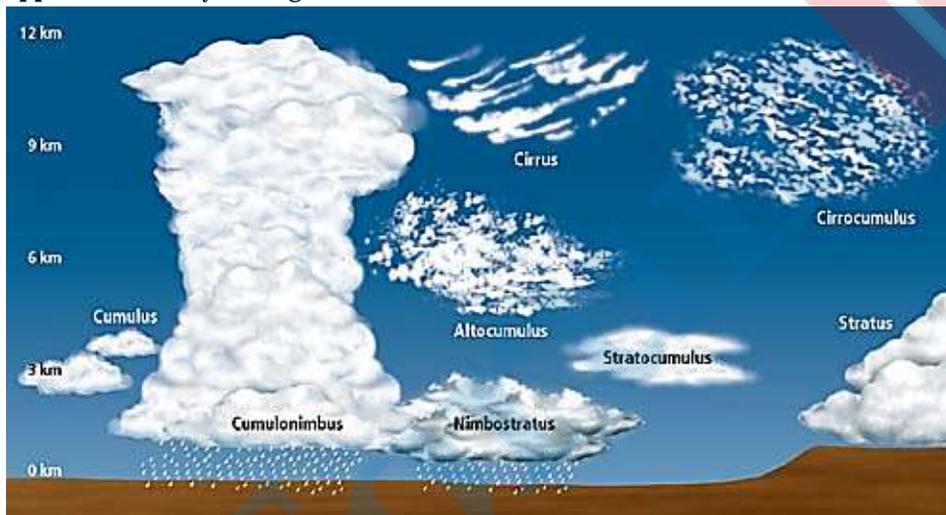

Ans) b

Exp) Option b is the correct answer.

Cloud is a mass of small water droplets or tiny crystals of ice formed by the condensation of the water vapour in free air at considerable height. They take various shapes according to their elevation. According to their height, expanse, density and transparency or opaqueness clouds are grouped under four types:

- (1) cirrus
- (2) cumulus
- (3) stratus
- (4) nimbus

Pair 1 is incorrect: Cumulus clouds look like cotton wool having flat base. They are generally formed at a height of 4,000 - 7,000 m. They are usually spotted in fair weather. They exist in patches and can be seen scattered here and there. **Cirrus clouds are white, thin, and detached clouds having a feathery appearance.** They are high clouds, formed at altitudes of 8,000 - 12,000m.

Pair 2 is correct: Stratus clouds low level clouds characterised by layering and covering large portions of the sky. These clouds are generally formed either **due to loss of heat or the mixing of air masses with different temperatures.**

Pair 3 is correct: Nimbus clouds are featureless mass of thick vapour. They are extremely dense and opaque to the rays of the sun. Sometimes, the clouds are so low that they seem to touch the ground. They are in colour of black or dark grey. They form at middle levels or very near to the surface.

Source: Class-11, Fundamentals of physical geography, chapter :11

Q.28) Which of the following is the correct description of Koeppen's "C" type of climate?

- a) Sun is overhead throughout the year, with a low annual range of temperature and high annual rainfall.
- b) Climate present in mid-latitudes characterized by warm summers and mild winters.
- c) Climate having low rainfall over the region, insufficient for the growth of plants.
- d) Climate having cold winters with a large annual range of temperature.

Ans) b

Exp) Option b is the correct answer.

Koepfen's scheme of classification of climate is an empirical classification based on mean annual and mean monthly temperature and precipitation data. Koepfen recognised five major climatic groups namely A, B, C, D and E. Four of them are based on temperature and one on precipitation.

Option a is incorrect: Group A consists of tropical humid climates. It exists between Tropic of Cancer and Tropic of Capricorn. The sun is present overhead throughout the year and the presence of Inter Tropical Convergence Zone (ITCZ) make the climate hot and humid. **It has low annual range of temperature and high annual rainfall.** The tropical group is divided into three types, namely

- (1) Af- Tropical wet climate
- (2) Am - Tropical monsoon climate
- (3) Aw- Tropical wet and dry climate.

Option b is correct: Warm temperate (mid-latitude) climates constitute as Koepfen's type C climate. It extends from 30° - 50° of latitude on the eastern and western margins of continents. **These climates generally have warm summers with mild winters.** They are grouped into four types:

- (1) Humid subtropical, i.e., dry in winter and hot in summer (Cwa)
- (2) Mediterranean (Cs)
- (3) Humid subtropical, i.e., no dry season and mild winter (Cfa)
- (4) Marine west coast climate (Cfb)

Option c is incorrect: Dry climate is grouped under type B as per Koepfen's classification. It is characterised by very low rainfall that is not adequate for the growth of plants. These climates cover a very large area of the planet extending over large latitudes from 15° - 60° north and south of the equator. Dry climates are divided into steppe or semi-arid climate (BS) and desert climate (BW).

Option d is incorrect: Cold snow forest climates comes under group D. It is further sub divided into Df- cold climate with humid winter and Dw- cold climate with dry winter. Climate with humid winter has winters that are cold and snowy. The frost-free season is short. **The annual ranges of temperature are large. The weather changes are abrupt and short.** Towards the pole, winters are more severe.

Knowledge

Base:

Table 12.1 : Climatic Groups According to Koepfen

Group	Characteristics
A - Tropical	Average temperature of the coldest month is 18° C or higher
B - Dry Climates	Potential evaporation exceeds precipitation
C - Warm Temperate	The average temperature of the coldest month of the (Mid-latitude) climates years is higher than minus 3°C but below 18°C
D - Cold Snow Forest Climates	The average temperature of the coldest month is minus 3° C or below
E - Cold Climates	Average temperature for all months is below 10° C
H - High Land	Cold due to elevation

Source: Class-11, Fundamentals of physical geography, chapter: World climate and climate change.

Q.29) It is a measure of the actual amount of water vapor in the air, regardless of the air's temperature. The higher the amount of water vapor, the higher is its value. It is expressed as grams of moisture per cubic meter of air (g/m³).

Which of the following options best describe the paragraph?

- a) Relative Humidity
- b) Dew Point Temperature
- c) Specific Humidity
- d) Absolute Humidity

Ans) d

Exp) Option d is the correct answer.

Humidity is the amount of water vapour in the air. Atmospheric water vapour regulates air temperature by absorbing thermal radiation both from the Sun and the Earth. Water vapour is the ultimate source of all forms of condensation and precipitation.

Option a is incorrect: Relative Humidity is the percentage ratio of actual water vapour contained in the given sample of air to the maximum quantity of vapour that air sample can hold at that temperature. If the temperature of sample of air is raised, its capacity to hold water vapour increases and if so, its relative humidity will decrease. It is often expressed in percentage.

Option b is incorrect: The dew point is the temperature the air needs to be cooled to (at constant pressure) in order to achieve a relative humidity of 100%. At this point the air cannot hold more water in the gas form. **Dew point temperature is commonly referred to as the dew point** is another way of expressing humidity. It is a temperature to which a sample of air should be lowered in order to saturate it with respect to its water vapour content.

Option c is incorrect: Specific Humidity is defined as the ratio of mass of water vapour to the mass of moist air. Absolute and specific humidity are quite similar in concept. The specific humidity does not vary as the temperature or pressure of a body of air changes, as long as moisture is not added to or taken away from it.

Option d is correct: Absolute Humidity is the measure of water vapor in the air, regardless of the temperature. It is expressed as grams of moisture per cubic meter of air (g/m³). The higher the amount of water vapor, the higher is the absolute humidity.

Source: <https://www.britannica.com/science/humidity>

Q.30) Recently, the Supreme Court upheld the validity of the 103rd Constitutional Amendment Act. In this context, consider the following statements:

1. This amendment required the ratification by at least half of the states.
2. This act provides 10% reservation for Economically Weaker Section (EWS) in both public and private educational institutions.
3. The Supreme Court upheld the 103rd CAA by including the EWS group within the Socially and Educationally Backward Community (SEBC).
4. The Supreme Court has removed altogether the 50% ceiling imposed on reservations to backward classes.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 1, 2 and 4 only
- c) 2 only
- d) 2 and 4 only

Ans) c

Exp) Option c is the correct answer.

The 103rd Constitutional Amendment Act provided 10% reservation for the Economically Weaker Sections (EWS) in education and public employment. The Act was challenged before the Supreme Court as violative

of the Constitution of India in 2020. The Supreme Court in **Janhit Abhiyan v. Union of India** case, through a 3:2 verdict, has **upheld its validity**.

Statement 1 is incorrect: The 103rd CAA does not require the ratification by at least half the states. However, it required constitutional amendment **by a special majority of the parliament** as it required **changes in fundamental rights (Article 15 and 16) of the Indian constitution**.

Statement 2 is correct: The 103rd CAA added Article 15 (6) which provides reservations to economically weaker sections for admission to **educational institutions including Public and private educational institutions**. Thus, the act provides 10% reservation for Economically Weaker Section (EWS) in both public and private educational institutions.

Statement 3 is incorrect: The Supreme court upheld the 103rd Constitutional Amendment Act by observing EWS as deemed a separate and distinct category from Social and Economically Backward Classes (SEBC) as provided in Article 15 and 16 of the Indian constitution. The court also observed poverty **as an adequate marker of deprivation** that the State can address through reservations.

Statement 4 is incorrect: The Supreme Court held that the 50% ceiling is for socially and educationally backward classes. The SC held that the 50% ceiling is for backward classes and it “overstretched to the reservation provided for entirely different class, consisting of the economically weaker sections”. Thus, it has not changed the 50% limit in case of backward classes.

Source: <https://blog.forumias.com/supreme-courts-judgment-on-ews-reservation/>

Q.31) Why are dewdrops not formed on a cloudy night?

- Clouds absorb the radiation released from the Earth's surface.
- Clouds reflect back the Earth's radiation.
- The Earth's surface would have low temperature on cloudy nights.
- Clouds deflect the blowing wind to ground level.

Ans) b

Exp) Option b is the correct answer.

Dew is small drops of water that form on the ground and other surfaces outdoors during the night.

Option b is correct. Dewdrops are formed when the moisture is deposited in the form of water droplets on cooler surfaces of solid objects such as stones, grass blades and plant leaves. **The ideal conditions for its formation are clear sky, calm air, high relative humidity, and cold and long nights.** When the sky is clear and the trees and plants are cooler at nights, there is more evaporation of water and hence more dew formation.

For the formation of dew, it is necessary that the dew point is above the freezing point. The air containing moisture to its full capacity at a given temperature is said to be saturated. The temperature at which saturation occurs in a given sample of air is known as dew point.

Dew forms when the temperature becomes equal to the dewpoint. This often happens first at ground level for two reasons. First, longwave emission causes the earth's surface to cool at night. Condensation requires the temperature to decrease to the dewpoint. Second, the soil is often the moisture source for the dew. Warm and moist soils will help with the formation of dew as the soil cools overnight. Cloudy skies reflect back the Earth's radiation and that prevents earth's surface to become cool at night.

Source) UPSC 2019

Q.32) Consider the following regarding the characteristics of Equatorial Regions:

- High temperature and humidity throughout the year
- Prevalence of bacteria and insects
- Poor quality of soil

4. Presence of dense Forest
 5. Commercial extraction of Timber is difficult
 Which of the above given options are correct?
 a) 1, 3 and 5 only
 b) 1, 2, 3 and 4 only
 c) 3, 4, and 5 only
 d) 1, 2, 3, 4, and 5

Ans) d

Exp) Option d is the correct answer.

The characteristics of Equatorial Regions are as follows.

Option 1 is correct: There is high average temperatures and humidity throughout the year.

Option 2 is correct: Prevalence of Bacteria and Insect Pests: The hot, wet climate which stimulates rapid plant growth also encourages the spread of insects and pests. Insects and pests not only spread diseases but are injurious to crops.

Option 3 is correct: Poor quality of soil: The region has poor soil because of the amount of rain in the area.

Option 4 is correct: Presence of Dense Forest: The Forest is so dense that it is quite a problem to clear a small patch of it and even more difficult to maintain it.

Option 5 is correct: Commercial extraction of Timber is difficult. The trees do not occur in homogenous stands, there are no frozen surfaces to facilitate logging and the tropical hardwoods are sometimes too heavy to float in the rivers.

Source: Pg 119, ch15 The Hot, Wet Equatorial climate, G C Leong

Q.33) “It is a violently rotating column of air touching the ground. It is attached to and extends from the base of a thunderstorm. It generally develops extremely rapidly, and also dissipates quickly. It is capable of completely destroying well-made structures and uprooting trees. It is also known as Twister.”

Which of the following atmospheric phenomena is being described in the above paragraph?

- a) Blizzard
 b) Air Mass
 c) Tornadoes
 d) Downbursts

Ans) c

Exp) Option c is the correct answer.

Tornadoes are violently spinning, funnel-shaped columns of air that extend from the dark thunderclouds (bottom layer of the sky where they form) to the ground. Tornadoes are also known as twisters. The wind from a tornado can be more than 250 Km/Hour. Tornadoes occur all over the planet, but the United States leads the world in the number of storms followed by Argentina and Bangladesh. Some tornadoes are clearly visible, while rain or nearby low-hanging clouds obscure others. Tornadoes develop extremely rapidly, and may dissipate just a quickly. Most tornadoes are on the ground for less than 15 minutes.

Source: <https://www.weather.gov/safety/tornado>

Q.34) Which of the following winds blow over or around the Mediterranean Sea?

1. Sirocco
 2. Nor wester
 3. Bora
 4. Santa Ana

5. Mistral

Select the correct answer using the code given below:

- a) 2 and 4 only
- b) 1, and 5 only
- c) 1, 3 and 5 only
- d) 1, 2, 3, 4 and 5

Ans) c

Exp) Option c is the correct answer.

Many local winds are common around the Mediterranean Sea due to the varied topography of the region. The various local wind around the Mediterranean Sea are as follows:

1) Sirocco: This is a hot, dry, dusty wind which originates in the Sahara Desert. It blows outward from the desert interior to the cooler Mediterranean Sea. It is known by different local names such as Chili in Tunisia, Ghibli in Libya, Leveche in Spain, and Khamsin in Egypt and Malta. In Adriatic & Aegean Sea, this hot wind is known as Gharbi. Hence, option 1 is correct.

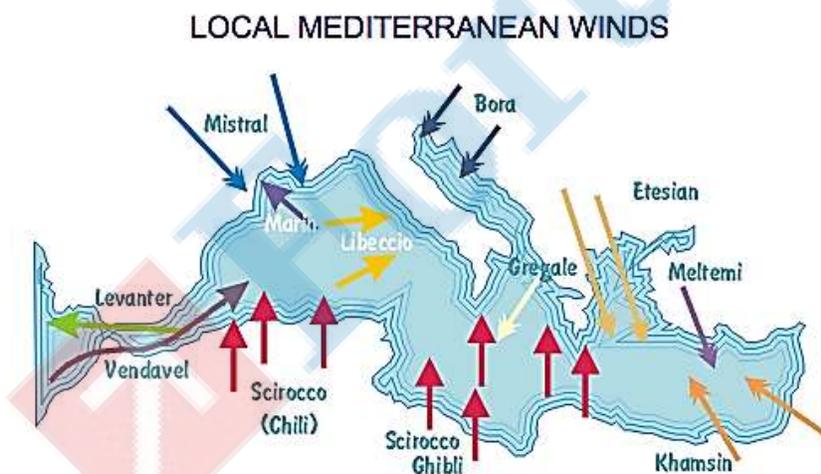

2) Bora Wind: It is Cold north-easterly wind experienced along the Adriatic. It is caused by a difference in pressure between continental Europe & Mediterranean. Bora wind is more violent than the Mistral & speeds of over 100 mph have been recorded. Hence, option 3 is correct.

3) Mistral Wind: The mistral is a strong, cold, northwesterly wind that blows from southern France into the Gulf of Lion in the northern Mediterranean. Hence, option 5 is correct.

4) Fohn wind: Fohn is experienced in the valleys of northern Alps, particularly in Switzerland in spring.

Option 2 is incorrect: Nor wester/ Kalbaishakhi wind: During the pre-monsoon season, the eastern and north-eastern state of **India** experience the appearance of a special type thunderstorm known as nor-wester.

Option 4 is incorrect: The Santa Ana winds are strong, extremely dry downslope winds that originate inland and affect coastal California in **USA**.

Source: Pg 143, Ch 19 The Warm Temperate Western Margin, G C Leong

Q.35) Recently, the Reserve Bank of India (RBI) had allowed international trade settlements between India and other countries in Rupees. Which of the following is the most likely impact of this measure?

- a) Appreciation of Indian rupee against foreign currencies.
- b) Reduction in demand for Indian rupee in the global financial market.
- c) It necessarily leads to the decline of India's foreign currency reserves.

d) Indian goods will become more competitive in global markets.

Ans) a

Exp) Option a is the correct answer.

Recently, the **RBI had issued a circular allowing international trade settlement in Rupees**. It came in the backdrop of continuous fall in the value of Indian Rupee against the US Dollar. It is expected that the decision to allow Indian traders to settle imports and exports in rupees will **ease the demand for US Dollar and help control the falling exchange rate**.

Option a is correct: The trade settlement in Indian rupees will likely **result in the increasing demand for Indian rupee in the global exchange rate market** as countries will start converting foreign currency into rupee to engage in trade transactions with India. This will likely result in appreciation of Indian rupee.

Option b is incorrect: With this measure, the value of Indian rupee against foreign currencies such as US Dollar, Euro etc., will increase, thus **appreciation of Indian rupee**. As the **demand for the Indian rupee is rising, its value will start rising**.

Option c is incorrect: This measure will **not necessarily reduce the foreign currency reserve of the country**. The measure will reduce India's dependency on dollars and other Hard currencies, which is likely to reduce the depletion of forex reserves of India.

Option d is incorrect: This measure will likely lead to **appreciation of Indian rupee**. With the **increase in value of Indian rupee against foreign currency**, Indian goods will lose their trade competitiveness because **foreign countries have to pay more to buy Indian goods**.

Source: <https://indianexpress.com/article/explained/explained-rbi-international-trade-settlements-rupees-8025178/>

Q.36) In this type of climate, rainfall occurs throughout the year. They are the regions of frontal cyclonic activity or Temperate Cyclones. It is also called as Cool Temperate Western Margin region. The climate is ideal for maximum comfort and mental alertness. Deciduous forest is the natural vegetation of this area.

Which of the options given below best describes the above climatic type?

- a) British Type Climate
- b) China Type Climate.
- c) Steppe Type Climate
- d) Siberian Type Climate

Ans) a

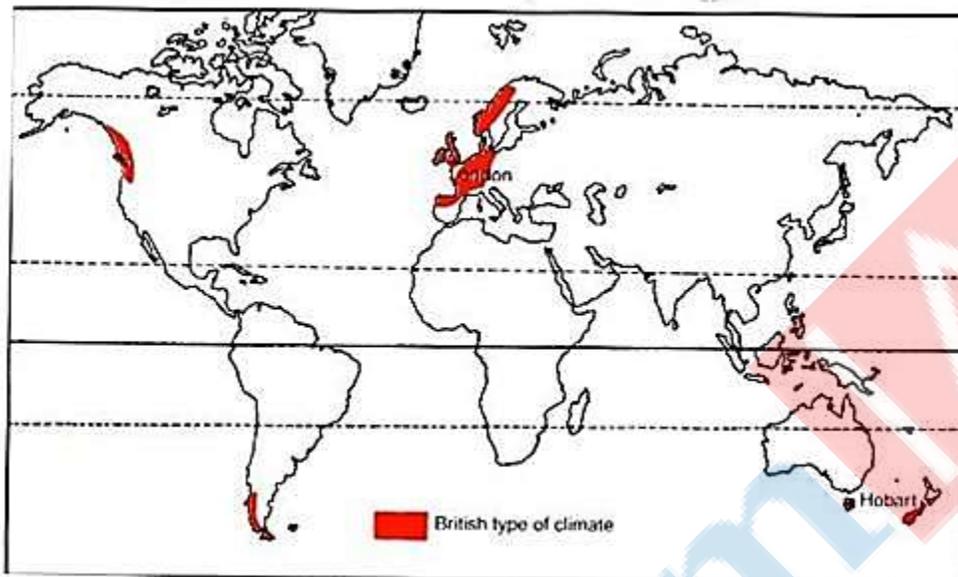

Exp) Option a is the correct answer.

Option a is correct: **British Type Climate is also called as Cool Temperate Western Margin Climate. They are under the influence of the Westerlies all-round the year.** They are the regions of frontal cyclonic activity or Temperate Cyclones. Rainfall occurs throughout the year. **The natural vegetation of this climatic type is deciduous forest.** The deciduous trees occur in pure stands and have greater lumbering value. **The climate is ideal for maximum comfort and mental alertness.**

Option b is incorrect: **Warm Temperate Eastern Margin Climate is also called as China Type Climate.** Characterized by a warm moist summer and a cool, dry winter. There is fairly uniform distribution of rainfall throughout the year. Local storms like typhoons and hurricanes occur here.

Option c is incorrect: **Temperate Continental/Grassland Climate is also called as Steppe Climate.** They lie in the Westerly wind belt, and in interiors of the continents. Grasslands are practically treeless due to continentality. Grasses are tall, fresh and nutritious and are ideal for extensive wheat cultivation. Temperatures vary greatly between summer and winter. The steppe type of climate in the southern hemisphere is never severe.

Option d is incorrect: Cool Temperature Continental climate is also called as Siberian Climate. The Siberian Climate is absent in the southern hemisphere because of the narrowness of the southern continents. The vegetation is predominantly evergreen coniferous forest. It stretches in a great, continuous belt across North America, Europe and Asia. The greatest single band of the coniferous forest is the taiga in Siberia. The climate is characterized by a bitterly cold winter of long duration, and a cool brief summer.

Source: Pg161, Ch 22 The Cool Temperate Western Margin Climate, G C Leong

Q.37) Consider the following pairs:

Type of grassland	Region
1. Puszta	Hungary
2. Prairies	Argentina
3. Pampas	USA
4. Canterbury	New Zealand
5. Velds	South Africa

Which of the above pairs are correctly matched?

- a) 2 and 3 only
- b) 1, 2 and 4 only
- c) 1, 4 and 5 only
- d) 3, 4 and 5 only

Ans) c

Exp) Option c is the correct answer.

Steppes are a class of regions characterized by vast, wide-open grasslands. In this area, trees are generally absent, except near lakes or rivers. The climate of the steppes differs from region to region. Steppe biomes comprise the montane grasslands and shrub lands biome and the temperate grasslands, savannas, and shrub lands biome.

Pair 1 is correct: The **Hungarian Puszta** is a temperate grassland biome of the Alföld or Great Hungarian Plain. It is an exclave of the Eurasian Steppe and lies around the river Tisza in the eastern part of Hungary, as well as in the western part of the country and in the Burgenland of Austria.

Pair 2 is incorrect: The **prairies** are temperate **grasslands of North America**. They are enormous stretches of flat grassland with moderate temperature, moderate rainfall, and few trees and in the middle of North America they are usually golden, wheat-covered land.

Pair 3 is incorrect: The **Pampas** grassland is found in **South America**. Pampas are the temperate grasslands of Argentina.

Pair 4 is correct: The **Canterbury grasslands** is an ecoregion of the South Island, **New Zealand**, part of the wider tussock grasslands of New Zealand. This type of Grassland is frequently found between woods and desert.

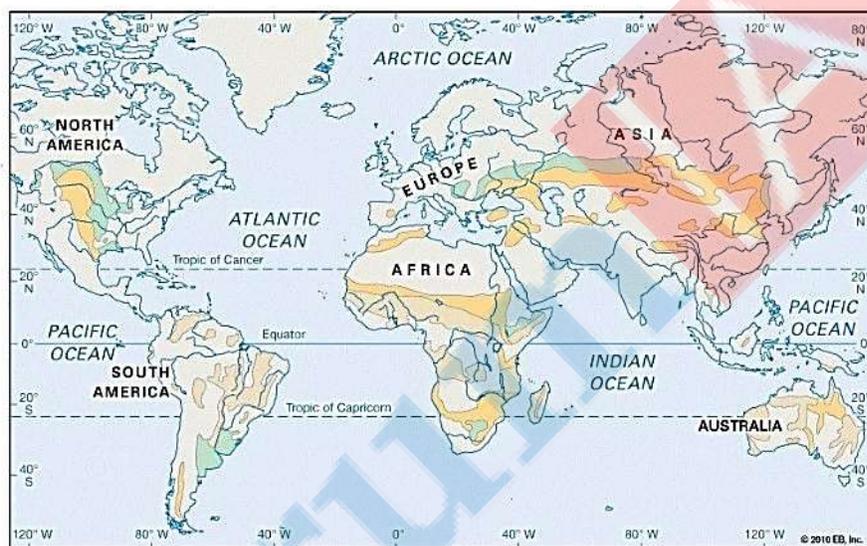

Pair 5 is correct: The temperate grasslands of **South Africa** are called the **Velds**. The Velds have a mild climate due to the influence of the Indian Oceans. The vegetation cover is sparse, with red grasses growing in the bush Velds and acacia and maroola growing in the high Velds.

Knowledge

Base:

Major Grasslands of the World

- Savanna**
1. Llanos of the Orinoco in Venezuela and Colombia
 2. Campos of Brazil
 3. Sudan in Africa
 4. South African veld
 5. Australia
- Prairie**
1. Midwestern United States and Canada
 2. Pampa of Argentina, Uruguay, and southeastern Brazil
 3. Plains of Hungary, Romania, and historic Yugoslavia
 4. Black Earth Belt of Russia
 5. Manchurian Plain

Source: <https://ncert.nic.in/ncerts/l/gess209.pdf>

<https://ncert.nic.in/textbook/pdf/kegy212.pdf>

<https://ncert.nic.in/textbook/pdf/gess206.pdf>

Q.38) Consider the following statements regarding grasslands:

1. A high annual range of temperature is found over all the temperate grasslands.
2. Savanna Grasslands are characterized by high diurnal range of temperature.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

Temperate grasslands are found in the regions with temperate and semi-arid to semi-humid climates. The Veldts of South Africa, the Puszta of Hungary, the Pampas of Argentina and Uruguay, the Steppes, and the plains and Prairies of Central North America are Temperate Grasslands

Statement 1 is incorrect. In the northern hemisphere, the climate of Temperate grasslands is continental with a high range of annual temperature. Temperate grassland in the northern hemisphere is extensive and continental.

In the southern hemisphere, the climate is never severe. It is mainly due to the narrowness of the temperate portions of the southern continents. Here, **the annual range of temperature is very low.** Temperate grassland in the southern hemisphere is restricted and less continental i.e., their annual range of temperature is very low.

Statement 2 is correct. The tropical savanna climate is also called the tropical wet and dry climate. It is the climate experienced in savanna or tropical grassland regions of the world. These places are located near the equator, and they lie between the Southern and the Northern Tropics.

Savanna (or Sudan) type of climate has alternate hot, rainy season and cool, dry seasons but has considerably less annual rainfall. It is confined within the tropics and is best developed in Sudan, hence its name the Sudan Climate. It is a transitional type of climate found between the equatorial rainforests and hot deserts. Other features of this climate are:

- 1) Mean annual temperature is greater than 18° C.
- 2) Highest temperatures do not coincide with the period of the highest sun (e.g. June in the northern hemisphere) but occur just before the onset of the rainy season, i.e. April in Northern Hemisphere and October in Southern Hemisphere.
- 3) This **extreme diurnal range of temperature** is another characteristic feature of this climate with days being hot and nights being cold.
- 4) The prevailing winds of the region are the **Trade Winds**, which bring rain to the coastal districts.

Temperate Grasslands Biome: Location, Climate, Temperature, Plants and Animals | Conserve Energy Future (conserve-energy-future.com)

What Are The Characteristics Of A Tropical Savanna Type Of Climate? - WorldAtlas

Q.39) Arrange the following surfaces in increasing order of their albedo:

1. Fresh snow
2. Sand
3. Grass
4. Thin Cloud

Select the correct answer using the code given below:

- a) 3-4-2-1
- b) 3-2-4-1
- c) 2-3-4-1
- d) 2-3-1-4

Ans) a

Exp) Option a is the correct answer.

Albedo is the **portion of solar energy reflected from the surface** of the Earth back into space.

It is a **reflection coefficient and has a value of less than one.**

Option a is correct.

When solar radiation passes through the atmosphere, a certain amount of it is scattered, reflected and absorbed. The **reflected sum of radiation is called the albedo** of the earth.

Albedo is an important concept in climatology, astronomy, and environmental management.

It **plays a major role in the energy balance of the earth's surface**, as it **defines the rate of the absorbed portion of the incident solar radiation**

Different surfaces have different values.

Albedo is higher in Snow or Ice.

TABLE 2-3 Albedo (reflectivity) of various surfaces

Surface	Percent Reflected
Fresh snow	80–90
Old snow	50–60
Sand (beach, desert)	20–40
Grass	5–25
Dry soil (plowed field)	15–25
Wet earth (plowed field)	10
Forest	5–10
Water (Sun near horizon)	50–80
Water (Sun near zenith)	5–10
Thick cloud	70–85
Thin cloud	25–30
Earth and atmosphere (overall total)	30

Knowledge Base: NCERT: FUNDAMENTALS OF PHYSICAL GEOGRAPHY - chapter 9-SOLAR RADIATION, HEAT BALANCE AND TEMPERATURE page 81

Q.40) With reference to the Pradhan Mantri Kisan Samridhi Kendra (PMKSK) Scheme, consider the following statements:

1. It will help in providing agricultural inputs to the farmers.
2. It promotes competition among various fertiliser companies by ranking their brands according to its quality.
3. It envisages the conversion of retail fertiliser shops into PMKSK.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 and 3 only
- c) 1 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Recently, The Hon'ble Prime Minister Narendra Modi inaugurated **600 Pradhan Mantri Kisan Samruddhi Kendra (PMKSK)** under the Ministry of Chemicals & Fertilisers.

Statement 1 is correct: Under the scheme, the retail fertiliser shops in the country will be converted into PMKSK in a phased manner. PMKSK will cater to a wide variety of needs of the farmers and **provide Agri-inputs (fertilisers, seeds, implements), testing facilities for soil, seeds, and fertilisers;** generate **awareness** among farmers.

Statement 2 is incorrect: **Pradhan Mantri Bhartiya Jan Urvarak Pariyojana** aims to make One Nation One Fertilizer a reality. Under this scheme, the government of India launched **Bharat Urea Bags** and from now on the urea sold in the country will be of the same name, same brand and same quality and **it will be available only under 'Bharat' brand name in the entire country (thus ranking brands based on its quality is not correct)**

Statement 3 is correct: The scheme ensures regular capacity building of retailers at block/district level outlets. It also provides information regarding various government schemes. **It envisages converting more than 3.3 lakh retail fertiliser shops into PMKSK.**

Source: <https://pib.gov.in/PressReleasePage.aspx?PRID=1868496>

Q.41) The annual range of temperature in the interior of the continents is high as compared to coastal areas. What is/are the reason/reasons?

1. Thermal difference between land and water
2. Variation in altitude between continents and oceans
3. Presence of strong winds in the interior
4. Heavy rains in the interior as compared to coasts

Select the correct answer using the codes given below.

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2, 3 and 4

Ans) a

Exp) Option a is the correct answer.

The annual range of temperature is defined as the difference between the hottest and coldest months at a place, taking monthly mean temperatures in each case. It is given approximately by the difference between the average of the January maximum and minimum temperatures, and the corresponding average for July.

Statement 1 is correct. The continents get heated faster and get cooled faster in comparison to the Oceans. The annual range of temperature is high in the interior of the continent because places located in the interior of the continent are far away from the moderating influence of the sea.

Statements 2 is incorrect. Altitude affects the daily range of temperature and annual mean temperature but has negligible impact on annual range of temperature. **Latitude affects the** annual range of temperature. The annual range of temperature increases with increasing latitude.

Statement 3 is incorrect. Wind is generally stronger near the coasts compared to interior areas of continents.

Statement 4 is incorrect. Rainfall in the interiors of the Continents is generally low as compared to Coasts. It is because the rain bearing winds from seas and oceans tend to lose most of the moisture till they reach the interiors.

The continents get heated faster and get cooled faster in comparison to the Oceans. The annual range of temperature is high in the interior of the continent because places located in the interior of the continent are far away from the moderating influence of the sea.

Source) UPSC 2013

Q.42) Which among the following are the likely reasons for Japan having a well-established fishing industry?

1. Meeting of warm and cold ocean currents near the coast of Japan
2. The presence of the indented coastline along the coasts of Japan.
3. Lack of plankton on continental shelves around the coasts of Japan.

Select the correct code from the options given below:

- a) 1 and 3 only
- b) 2 and 3 only
- c) 1 and 2 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Commercial fishing is the activity of catching fish and other seafood for commercial profit, mostly from wild fisheries. It provides a large quantity of food to many countries around the earth, but those who practice it as an industry must often pursue fish far into the ocean under adverse conditions.

Statement 1 is correct: The climate of Japan is modified by the **meeting of warm and cold ocean currents**. It receives **adequate rainfall** from both the South-East Monsoon in summer and the North- West Monsoon in winter (western coasts of Japan). The meeting zone between warm Kuroshio from the south and cold Oyashio from the north produces fog and mist, making north Japan a 'second Newfoundland'. Due to this **fishing becomes more favorable** replacing agriculture as the main occupation in many of the indented coastlands.

Statement 2 is correct: The indented coastline of Japan, provides sheltered fishing ports, calm waters, and safe landing places, ideal for the fishing industry.

Statement 3 is incorrect: The continental shelves around the islands of Japan are rich in plankton, **due to the meeting of the warm Kuroshio and the cold Oyashio currents** and provide excellent breeding grounds for all kinds of fish.

Source: <https://ncert.nic.in/ncerts/l/legy105.pdf>

<https://ncert.nic.in/ncerts/l/hess405.pdf>

Q.43) With reference to the Tundra region, consider the following statements:

1. There is a general absence of tree cover in the tundra region.
2. Extraction and mining activities are totally prohibited in the Tundra region.
3. The Tundra plays a significant part in mitigating the negative impacts of carbon emission.

Which of the above statement is/are correct?

- a) 1 and 2 only
- b) 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Tundra ecosystems are treeless regions found in the Arctic and on the tops of mountains, where the climate is cold and windy, and rainfall is scant. Tundra lands are covered with snow for much of the year, but summer brings bursts of wildflowers.

Statement 1 is correct: The tundra biome is a cold, **treeless plain where harsh conditions make survival difficult for both plants and animals**. Tundra vegetation is composed of dwarf shrubs, sedges, grasses, mosses, and lichens. Scattered trees grow in some tundra regions. The ecotone (or ecological boundary region) between the tundra and the forest is known as the tree line or timberline. The tundra soil is rich in nitrogen and phosphorus.

Statement 2 is incorrect: Human impact in the tundra biome is most obvious in the **exploration and development of mining**, oil, gas, and other extractive industries.

There is no blanket ban on extraction and mining activities in the Tundra region around the World.

Statement 3 is correct: The Tundra plays a significant part in the planet's temperature management. It works as a carbon sink, absorbing carbon dioxide from the atmosphere and assisting in the mitigation of the negative impacts of carbon emissions.

Knowledge Base: Tundra climate is a Köppen climatic type with sub-freezing mean annual temperatures, large annual temperature ranges (albeit not as large as the adjacent continental subarctic climate), and moderately low precipitation. It is known for its frost-molded landscapes, extremely low temperatures, little precipitation, depleted nutrients, and short growing seasons.

Source: <https://sciencing.com/what-is-the-human-impact-on-the-tundra-13427779.html>

<https://education.nationalgeographic.org/resource/tundras-explained>

Q.44) Higher concentration of dust particles is found in subtropical and temperate regions as compared to equatorial and polar regions. The most appropriate reason for this is:

- Anti-cyclonic conditions in subtropical high-pressure belts
- Presence of belt of strong upper-level wind circulation
- Presence of drier winds in the region
- Higher elevation of continental landmass in the region

Ans) c

Exp) Option c is the correct answer.

Dust is defined as sediment particles less than 100 µm in diameter. Dust can travel substantial distances from continent to continent and across oceans and affects all of Earth's climatic zones from the tropics to the poles. Atmosphere has a sufficient capacity to keep small solid particles, which may originate from different sources and include sea salts, fine soil, smoke-soot, ash, pollen, dust and disintegrated particles of meteors. Dust particles are generally concentrated in the lower layers of the atmosphere; yet, convectional air currents may transport them to great heights.

The **higher concentration of dust particles is found in subtropical and temperate regions** due to **dry winds in comparison to equatorial and polar regions**. Dust and salt particles act as hygroscopic nuclei around which water vapour condenses to produce clouds. Polar regions are ice covered and so cannot be dusty. Equatorial regions are either in oceans or there are dense equatorial rainforests in South America and Africa. Hence there is very little dust there.

Option a is incorrect: Anticyclones are high-pressure systems and are more common in subtropical high-pressure belts and polar high-pressure belts where the air is sinking from the upper troposphere to the lower troposphere. The **average velocity of an anticyclone is 30 to 50 km per hour**. It is not the reason for the higher concentration of dust particles found in subtropical and temperate regions.

Option b is incorrect: The subtropical high pressure is located at 30 degrees and 35 degrees both north and south. The air in this region is comparatively dry and calm. It is not the reason for the higher concentration of dust particles found in subtropical and temperate regions.

Option d is incorrect: The elevation of Continental landmass is not related to the higher concentration of dust particles found in subtropical and temperate regions.

Source: NCERT 11th Geography Unit 4 Climate, Chapter 8 COMPOSITION AND STRUCTURE OF ATMOSPHERE

Q.45) Which one of the following statements best reflects the definition of the term 'Bhoota Kola', that was recently in news?

- It is an ancient style of brass work prevalent in Western India.
- It is a type of puppetry performed by certain tribal communities.
- It is an ancient style of hand painting done on cotton clothes.
- It is an annual folk ritual practised in some parts of Karnataka and Kerala.

Ans) d

Exp) Option d is the correct answer.

The traditional art Bhoota kola gained everyone's attention following the **success of Kanada movie Kantara**. The film revolves around the tradition of a certain local community in Karnataka and portrays the art Bhoota Kola.

Option d is correct: Bhoota Kola is an annual **folk ritual** of Tulu-speaking people in Dakshina Kannada, Uttara Kannada and Udupi in **Karnataka** and **some Kerala districts** where local spirits or deities are worshipped. It is performed by a trained person who is believed to have temporarily become a god himself.

The **face is painted, wrapped in a Siri** made of **coconut feathers, and danced invoking the deity**. The Divine Dancer gives **justice to human beings** and resolves disputes through the **Word of God**.

By praying together during Bhoota Kola, the community seeks God's blessing, prosperity and riddance of various problems the community is challenged with. It is said to have **some influence from Yakshagana**, a more popular and widely performed **folk dance in coastal Karnataka**.

Source: <https://karnatakaturism.org/destinations/bhootha-aradhane/>

<https://www.firstpost.com/explainers/explained-the-controversy-around-bhootha-kola-ritual-depicted-in-kantara-11511171.html>

Q.46) With reference to 'Water Vapour in atmosphere', consider the following statements:

1. It is responsible for about half of Earth's greenhouse effect.
2. The amount of water vapour generally decreases from the equator towards the poles.
3. It redistributes heat energy on the Earth through latent heat energy exchange.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Main gases of the atmosphere are nitrogen, oxygen, water vapour, carbon dioxide, methane, nitrous oxide, and ozone. These gases are extremely important to the health of the Earth's biosphere.

Statement 1 is correct: Water vapor is Earth's most abundant greenhouse gas. **It is responsible for about half of Earth's greenhouse effect** – the process that occurs when gases in Earth's atmosphere trap the Sun's heat. Greenhouse gases keep our planet liveable. It absorbs parts of the insolation from the sun and preserves the earth's radiated heat. It thus, acts like a blanket allowing the earth neither to become too cold nor too hot.

Statement 2 is correct: Water vapour is a variable gas in the atmosphere, which decreases with altitude. Water vapour **decreases from the equator towards the poles**. The highest concentrations of water vapour are found near the equator over the oceans and tropical rain forests. Cold polar areas and subtropical continental deserts are locations where the volume of water vapour can approach zero percent.

Statement 3 is correct: Water vapour has several very important functional roles on our planet. It **redistributes heat energy on the Earth** through latent heat energy exchange. Heat radiated from Earth's surface is absorbed by water vapor molecules in the lower atmosphere. The water vapor molecules, in turn, radiate heat in all directions. Some of the heat returns to the Earth's surface. Thus, water vapor is a second source of warmth (in addition to sunlight) at the Earth's surface.

Source: NCERT 11th Geography Unit 4 Climate, Chapter 8 COMPOSITION AND STRUCTURE OF ATMOSPHERE

<https://climate.nasa.gov/ask-nasa-climate/3143/steamy-relationships-how-atmospheric-water-vapor-amplifies-earths-greenhouse-effect/#:~:text=Water%20vapor%20is%20Earth's%20most,gases%20keep%20our%20planet%20livable.>

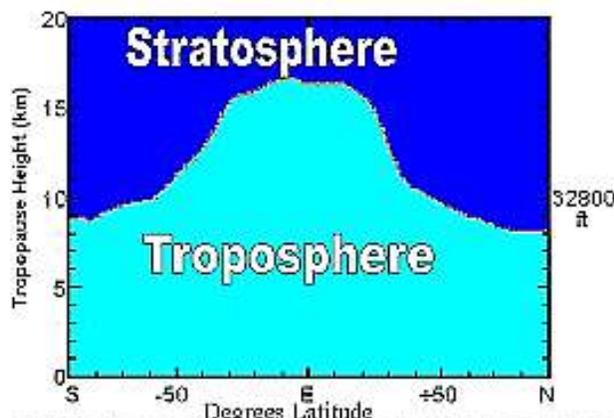

Q.47) The thickness of the troposphere is greatest at the equator because of-

- a) Convergence of northeast and the southeast trade winds near the equator.
- b) Earth's axis making an angle of $66\frac{1}{2}$ with the plane of its orbit.
- c) Heat being transported to great heights by strong convectional currents.
- d) Bulging of the earth at equator as compare to poles

Ans) c

Exp) Option c is the correct answer.

The troposphere is the lowermost layer of the atmosphere. Its average height is 13 km and extends roughly to a height of 8 km near the poles and about 18 km at the equator. Thickness of the troposphere is greatest at the equator because heat is transported to great heights by strong convective currents. Heat differential on the planet's surface causes convection currents to flow from the equator to the poles. This implies that the warmer the weather, the thicker is the troposphere.

The troposphere is shallowest -- or narrowest -- at the poles, and deepest -- or thickest -- at the equator. At the geographic North and South Poles, the troposphere reaches only 6 kilometers (4 miles) high, while at the equator, it extends nearly 20 kilometers (12 miles) high.

Option a, b and d are incorrect: Convergence of northeast and south east trade winds, axial tilt of earth and bulging of earth at equator are not directly responsible for the thickness of troposphere at equator.

Knowledge Base: NCERT 11th Geography Unit 4 Climate, Chapter 8 COMPOSITION AND STRUCTURE OF ATMOSPHERE

<https://education.seattlepi.com/over-part-earth-atmosphere-deepest-thickest-6169.html>

Q.48) Consider the following pairs:

Atmospheric Layers	Features
1. Stratosphere	Nearly free from clouds and weather phenomena
2. Thermosphere	Temperature increases with altitude
3. Mesosphere	Aurora borealis is observed here

How many pairs given above are correctly matched?

- None of the pairs
- Only one pair
- Only two pairs
- All three pairs

Ans) c

Exp) Option c is the correct answer.

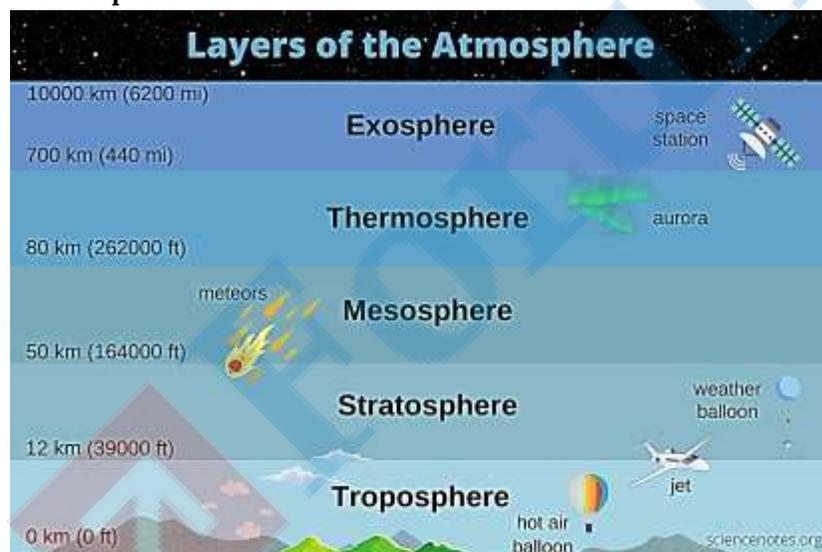

The atmosphere consists of different layers with varying density and temperature. Density is highest near the surface of the earth and decreases with increasing altitude. The column of atmosphere is divided into five different layers depending upon the temperature condition. They are: troposphere, stratosphere, mesosphere, thermosphere and exosphere.

Pair 1 is correctly matched: Stratosphere is located between approximately 12 and 50 kilometres above Earth's surface. It is **best known as home to Earth's ozone layer**, which protects us from the Sun's harmful ultraviolet radiation. Because of that UV radiation, the higher up you go into the stratosphere, the warmer temperatures become. The stratosphere is **nearly cloud- and weather-free**, but polar stratospheric clouds are sometimes present in its lowest, coldest altitudes. It's also the highest part of the atmosphere that jet planes can reach.

Pair 2 is correctly matched: Thermosphere is located between about 80 and 700 kilometres above Earth's surface, whose lowest part contains the ionosphere. In this layer, **temperatures increase with altitude due to the very low density of molecules** found here. It is both cloud- and water vapor-free. The aurora borealis and aurora australis are sometimes seen here. The International Space Station orbits in the thermosphere.

Pair 3 is incorrectly matched: Mesosphere is located between about 50 and 80 kilometre above Earth's surface, the mesosphere gets progressively colder with altitude. In fact, the top of this layer is the coldest place found within the Earth system, with an average temperature of about minus 85 degrees Celsius (minus 120 degrees Fahrenheit). The very scarce water vapor present at the top of the mesosphere forms noctilucent clouds, the highest clouds in Earth's atmosphere, which can be seen by the naked eye under certain conditions and at certain times of day. **Most meteors burn up in this atmospheric layer. Sounding rockets and rocket-powered aircraft** can reach the mesosphere.

Most Earth satellites orbit in the exosphere and aurora borealis and aurora australis are seen in thermosphere.

Source: <https://climate.nasa.gov/news/2919/earths-atmosphere-a-multi-layered-cake/>
 NCERT 11th Geography Unit 4 Climate, Chapter 8 COMPOSITION AND STRUCTURE OF ATMOSPHERE

Q.49) With reference to 'Solar Radiation on Earth', consider the following statements:

1. The surface of Earth receives most of its energy in long ultraviolet wavelength.
2. The solar output received at the top of the atmosphere is constant throughout the year.
3. The angle of inclination of the rays of sun influences the amount of insolation received at different latitudes.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) 2 and 3 only
- d) 3 only

Ans) d

Exp) Option d is the correct answer.

Statement 1 is incorrect: The earth-atmosphere energy balance is the balance between incoming energy from the Sun and outgoing energy from the Earth. Energy released from the Sun is **emitted as shortwave light and ultraviolet energy**. The earth's surface receives most of its energy in short wavelengths.

Statement 2 is incorrect: The solar output received at the top of the atmosphere **varies slightly in a year due to the variations in the distance between the earth and the sun**. During its revolution around the sun, the earth is farthest from the sun (152 million km) on 4th July. This position of the earth is called aphelion. On 3rd January, the earth is the nearest to the sun (147 million km). This position is called perihelion. Therefore, the annual insolation received by the earth on 3rd January is slightly more than the amount received on 4th July.

Statement 3 is correct: The amount and the intensity of insolation vary during a day, in a season and in a year. The factors that cause these variations in insolation includes the **angle of inclination of the sun's rays**. The fact that the earth's axis makes an angle of $66\frac{1}{2}^\circ$ with the plane of its orbit round the sun has a greater influence on the amount of insolation received at different latitudes. The **higher the latitude the less is the angle they make with the surface of the earth resulting in slant sun rays**. The area covered by vertical rays is always less than the slant rays. If more area is covered, the energy gets distributed and the net energy received per unit area decreases. Moreover, the slant rays are required to pass through greater depth of the atmosphere resulting in more absorption, scattering and diffusion.

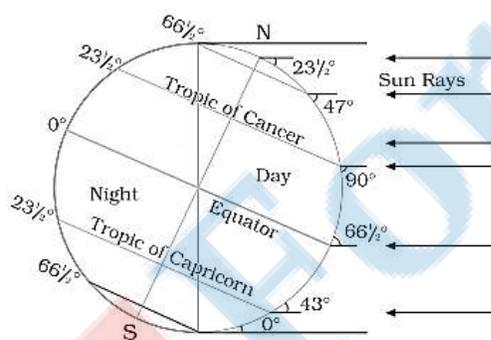

Figure 9.1 : Summer Solstice

Source: NCERT 11th Geography Unit 4 Climate, Chapter 9 SOLAR RADIATION, HEAT BALANCE AND TEMPERATURE

Q.50) With reference to the Law Commission of India, consider the following statements:

1. It is a non-constitutional and non-statutory body.
2. Its recommendations are binding on the Government.
3. It can be chaired only by a retired judge of the Supreme court.
4. Its origin can be traced back to the pre-independent India.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1, 3 and 4 only

- c) 2 and 4 only
- d) 1 and 4 only

Ans) d

Exp) Option d is the correct answer.

Recently, the Supreme Court issued notice to the Centre on **PIL seeking the Law Commission to be declared a 'statutory body'**. The PIL contended that the non-working of the Law Commission is depriving the Centre of the benefit of the law commission's insights on the various aspects of the law.

Statement 1 is correct: Law Commission of India is a non-constitutional and non-statutory body and is constituted by a **notification of the Government of India** to carry out research in the field of law and make recommendations to the Government.

Statement 2 is incorrect: The recommendations of the law commission are not binding on the government even the recommendations were made on the matter referred to it by the Supreme court. The law commission has **taken up various subjects on references made by the Department of Legal Affairs, Supreme Court and High Courts and submitted 277 reports.**

Statement 3 is incorrect: The retired chief justice of the High court can also become a **chairperson of the Law commission. Retired High Court Chief Justice Rituraj Awasthi** has been appointed as the **chairperson of the 22nd law commission of India** which was constituted in 2020. Also **Mr. M. C. Setalvad who is the first chairperson of the law commission was an Attorney General of India.**

Statement 4 is correct: The first Law Commission was established during the British Raj era in 1834. It was established by the **Charter Act of 1833 and was chaired by Lord Macaulay.** In 1955, the first Law Commission of independent India was established for a three-year term. Since then, twenty-one more Commissions have been established

<https://indianexpress.com/article/india/sc-notice-to-centre-on-pil-seeking-law-commission-to-be-declared-statutory-body-7161881/>

Q.1) The Brahmaputra, Irrawaddy and Mekong rivers originate in Tibet and flow through narrow and parallel mountain ranges in their upper reaches. Of these rivers, Brahmaputra makes a “U” turn in its course to flow into India. This “U” turn is due to:

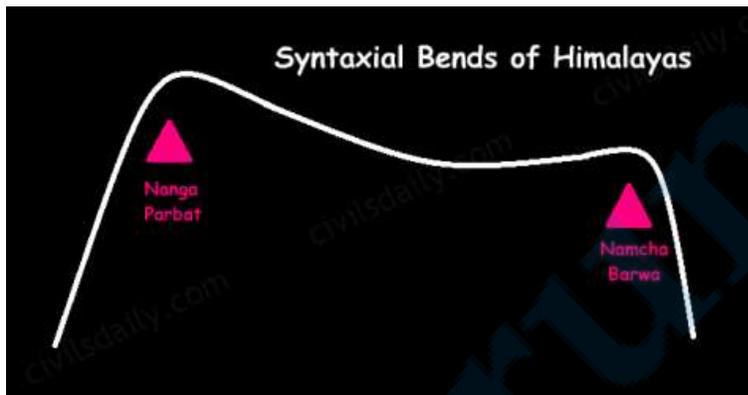

- Uplift of folded Himalayan series
- Syntaxial bending of geologically young Himalayas
- Geo-Tectonic disturbance in the tertiary folded mountain chains
- Both (a) and (b) above

Ans) b

Exp) Option b is the correct answer.

Syntaxial bending near the Namche Barua is the primary reason for the sudden “U” turn of Brahmaputra when it enters India.

Syntaxial Bands of Himalayas: Himalayas extend in the east-west direction from the Indus gorge in the west to the Brahmaputra gorge in the east. Himalayan ranges take sharp southward bends at these gorges. These bends are called syntaxial bends of the Himalayas. The western syntaxial bend occurs near the **Nanga Parbat** where the Indus River has cut a deep gorge. **The eastern syntaxial bend occurs near the Namche Barwa.**

Source: UPSC 2011

Q.2) With reference to India's position within different heat Zones of Earth, consider the following statements:

Assertion (A): Only around half of the territory of India lies in the Tropical zone, yet India has a Tropical climate.

Reason (R): The Himalayas act as a climatic barrier for India.

Which of the options given below is correct?

- Both A and R are correct and R is the correct explanation for A.
- Both A and R are correct but R is not the correct explanation for A.
- A is incorrect but R is correct.
- Neither A nor R is correct.

Ans) a

Exp) Option a is the correct answer.

Assertion (A) is correct: The Tropic of Cancer passes almost halfway through India. So, the part below the Tropic of Cancer falls within the Torrid zone and exhibits Tropical climate.

However, the upper half of the country which lies in the Temperate Zone, also does not exhibit the kind of extremes of climate expected in such areas. Most of India has a Hot and Humid Climate characteristic of Tropical climate despite being only half of its territory being in the tropical zone. **Hence the Assertion is correct.**

Reason (R) is correct: The Himalayas separate the Indian subcontinent from the rest of Asia by acting as a huge physical barrier. It prevents the moisture laden monsoon winds from escaping onto Tibet, forcing these winds to shed their moisture in India's Plains. Likewise, during winter, it prevents the extremely cold winds coming from Siberia and China from entering North India, thereby preventing extremely cold winters. Hence the Himalayas act as a climate barrier. So, the Reason is also a correct statement.

Since the Himalayas prevent the climate of Northern half of India from becoming very extreme and stops the monsoon winds which keeps the climate hot and humid, the Reason is the correct explanation of the Assertion.

Source: NCERT CLASS 11, CHAPTER 4

Q.3) With reference to the various passes in the different mountain ranges of India, consider the following pairs:

Pass	Importance
1. Lipu Lekh	Provides passage for pilgrims to Kailash Manasarovar
2. Rohtang Pass	Connects Kashmir and Himachal Pradesh
3. Nathu La	Used as a trade route between India and China
4. Khardung La	Connects Srinagar to Jammu region

Which of the pairs given above is/ are correct?

- 1 and 3 only
- 2 and 4 only
- 1 and 4 only

d) 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

Pair 1 is correct: Lipu Lekh is a pass between Uttarakhand and Tibet Autonomous Region (TAR) of China. It is located at India, Nepal and Tibet (China) border trijunction at an elevation of 5000m. It is located in the Pithoragarh district of Uttarakhand. It is an ancient route that is used even today by pilgrims to visit Kailash Manasarovar located in the TAR. Hence this pairing is **correct**.

Pair 2 is incorrect: Rohtang Pass is a mountain pass situated in the state of Himachal Pradesh (3979m) and provides road link between Kullu and Lahaul & Spiti Valleys. It does not connect Himachal and Jammu-Kashmir. Hence this pairing is incorrect.

Bara La Cha is the pass situated in Himachal Pradesh which connects Jammu & Kashmir regions with the Himachal region.

Pair 3 is correct: Nathu La is a pass located on the Indo-China border near the strategically important Chumbi valley. It connects Sikkim to Tibet. Standing at a height of 4310m, it straddles the states of Sikkim and West Bengal. It has been a part of the ancient Silk Route path and is still used for inter border trade between India and China.

Pair 4 is incorrect: Khardung La at an elevation of 5602m is the highest motorable road in the world. It is located in the Leh district of Ladakh range and connects it to the Kashmir region. **Hence this pairing is incorrect.**

Source: <https://ncert.nic.in/textbook.php?kegy1=2-7> Pg-

Q.4) “It is a steep shoreline formed by fluvial deposition action in the Punjab-Haryana region. It is formed just beyond the region of fresh alluvial deposition brought in by the annual flooding of the rivers. It is often more than 3 metres in height. It has been subjected to heavy gully erosion by the streams along which they are formed.”

Which physiographic subdivision of India is being described in the paragraph above?

- a) Bhur
- b) Cho
- c) Reh
- d) Dhaya

Ans) d

Exp) Option d is the correct answer.

The Great Indian Plains is one of the 5 main physiographic divisions of India. These Plains are subdivided into many regions/ divisions, each showing many depositional features which have their own terms/ names in local parlance such as Khadar, Bhangar, Bet, Bhur, Dhaya, etc.

Option a is incorrect: The Bhur refers to an elevated piece of land formed along the Ganga, especially in the upper Ganga-Yamuna Doab region (not Punjab Haryana region). Also, they are formed by aeolian (due to wind) deposits, not fluvial deposits. Hence this option is **incorrect**.

Option b is incorrect: The Cho refers to the numerous streams which create gully erosion in the plains near the Shivalik region. They are in fact not any sort of depositional feature. Hence this option is **incorrect**.

Option c is incorrect: The Reh refers to barren saline areas around Uttar Pradesh (not Punjab & Haryana). These are not formed due to or near fertile alluvial deposits as mentioned in the para. Hence this option is incorrect.

These are also known by the name **Kallar**.

Option d is correct: Dhaya is the local name given to bluffs (steep shorelines formed by fluvial deposition). They are formed adjoining the Khadar areas in the Punjab-Haryana Plains subdivision of the Great Plains physiographic division of India. They are as high as 3m and are marked by gully erosion due to the streams emanating from the river along which these are formed. Hence this option is **correct**.

Source: Indian Geography by Khullar, Ch-3, Pg-77

Q.5) With reference to ‘Mangrove Alliance for Climate’, consider the following statements:

1. It is an initiative led by India and Bangladesh formed in collaboration with United Nations Environment Programme (UNEP).
2. The Alliance aims to educate and spread awareness worldwide on the role of mangroves in curbing global warming.
3. The parties in the Alliance will decide their own commitments and deadlines regarding the planting and restoring of mangroves.

Which of the statements given above is/are correct?

- a) 2 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

At the **27th Session of Conference of Parties (COP27)** of UNFCCC at Sharm-El-Shaikh (Egypt), Mangrove Alliance for Climate (MAC) was launched. Mangroves are salt tolerant trees and shrubs that grow in the intertidal regions of the tropical and subtropical coastlines. They are among the most carbon-rich forests in the tropics. Mangrove forests serve as natural barriers against storms and rising tides. They can store ten times more carbon per hectare as compared to terrestrial forests. **Statement 1 is incorrect:** Mangrove Alliance for climate is an **initiative launched by the United Arab Emirates (UAE) in partnership with Indonesia (not by India and Bangladesh)** at COP27 Summit in Egypt in 2022. It includes UAE, Indonesia, India, Sri Lanka, Australia, Japan, and Spain as parties.

Statement 2 is correct: The alliance will raise awareness about the role of mangroves as a “nature-based solution to climate change. It aims to educate and spread awareness worldwide on the role of mangroves in curbing global warming and its potential as a solution for climate change.

Statement 3 is correct: The alliance works on a **voluntary basis** which means that there are no real checks and balances to hold members accountable. Instead, the **parties will decide their own commitments and deadlines** regarding the planting and restoring mangroves.

Source: <https://blog.forumias.com/what-is-the-mangrove-alliance-for-climate-which-india-joined-at-cop27/>

<https://indianexpress.com/article/explained/what-is-the-mangrove-alliance-for-climate-which-india-joined-at-cop27-8261674/>

Q.6) With reference to the geological history of India, consider the following rock systems:

1. Dharwar
2. Cuddapah
3. Archaean
4. Vindhyan

Which of the options given below shows the correct chronological order of formation of these rock systems from oldest to newest?

- a) 1-2-4-3
- b) 3-2-1-4
- c) 1-4-3-2
- d) 3-1-2-4

Ans) d

Exp) Option d is the correct answer.

The Archaean Rock System is the oldest in this group at 4000 MYA (Million Years Ago), followed by Dharwar system (3100 MYA), followed by the Cuddapah system (1400 MYA) followed by the Vindhyan system (1300 - 600 MYA). Hence the correct order of oldest to newest rock systems is 3-1-2-4.

Option 3: The Archaean Rock system is the oldest rock system of Indian geological history. The Schists and Gneiss of this system are the oldest rocks of India and are referred to as the “Fundamental/ Basement complex”. They were formed during the cooling and solidification of the earth’s crust (4000 MYA). They are Azoic (having no trace of life or organic remains), crystalline plutonic intrusions. Apart from the Peninsular block, they are found in Odisha, Meghalaya, Madhya Pradesh, Chhattisgarh and Chota Nagpur Plateau of Jharkhand. They are also found in the Bundelkhand region and in some areas around the Aravalli’s. They are also found all along the Himalayas forming the bulk of high ranges and the backbone of the mountain system.

Option 1: Dharwar is a subseries of the Archean Rock system. The oldest of this subseries dates back to 3100 million years ago (MYA), and continues up to 1000 MYA. Most of these rocks are Metamorphic rocks of both sedimentary and igneous origin. It is found primarily in the Dharwar-Bellary-Mysore belt of Karnataka. These are believed to be the most ancient sedimentary metamorphic rocks of India, almost as old as basement gneiss and schists. The major rocks of this system are hornblende, schists, quartzites, slates, phyllites, crystalline limestones and dolomites.

Option 2: The Cuddapah Rock System is a subseries of the Purana Rock System. It dates back to almost 1400 MYA. It came after a significant gap after the Dharwar system. It contains many layers of Un fossiliferous clay, slates, quartzites, sandstones, and limestones. It is most widespread in the Cuddapah and Kurnool districts of Andhra Pradesh. It is also found in southern parts of Chhattisgarh such as Dantewada, Bastar, Raipur, Durg, etc. A few isolated occurrences are also seen in Singhbhum district of Jharkhand, Kalahandi & Keonjhar districts of Odisha and along the Aravalli axis. It is economically significant as it contains ores of iron, manganese, cobalt, nickel, copper, etc as well as cement grade limestone, etc.

Option 4: The Vindhyan Rock system is also a subseries of the Purana Rock System. It came after the Cuddapah series and is dated almost 1300 MYA. It comprises ancient sedimentary rocks lying over the Archaean system. It consists of stratified formations of sandstones, shales and limestones. These are found in vast stretches from Bihar to Rajasthan with a gap around the Bundelkhand region. It is also found in Chhattisgarh, Bhima valley in Karnataka and Kurnool district of Andhra Pradesh. It continues into the Gangetic region and is believed to have bucked under the Himalayan region during tectonic upheaval and subsequent Folding. These rocks have 2 types of deposits

- Lower Vindhyan: Marine origin, calcareous origin, Folding, older (1300-1100 MYA)
- Upper Vindhyan: Fluvial origin, newer (1000-600 MYA)

Source: Indian Geography by Khullar, Ch-2, Pg-41, 43

Q.7) With reference to the various divisions of the Western Coastal Plains and their characteristic features, consider the following pairs:

Region	Feature
1. Konkan	A number of Natural Harbours are located.
2. Kathiawar	It is of Volcanic origin
3. Malabar	Not suitable for agriculture
4. Karnataka plains	Broadest part of the Western Coastal Plains

How many pairs given above are correctly matched?

- Only one pair
- Only two pairs
- Only three pairs
- All four pairs

Ans) b

Exp) Option b is the correct answer.

The Western Coastal Plains are one of the 5 Physiographic divisions of India. It refers to the strip of land between the Western Ghats and the Arabian Sea. It is formed of various sediments ranging from salty ones to gravelly sandy beaches. It can be further subdivided into many divisions, each with its distinct characteristic features. These divisions are - The Kathiawar Plains, the Konkan Plains, the Karnataka Plains, and the Malabar Plains.

Pair 1 is correct: The Konkan is the division of the Western Coastal Plains between the river Narmada (south of the Gujarat/Kathiawar Plain) and the southern end of Goa. It runs for a length of about 500 km with its width varying between 50-80 km. **This region was formed as a result of submergence, hence there are**

many ports which have deep waters and are naturally suited to being harbours, such as the JNPT port in Mumbai, etc. Hence this pairing is **correct**.

Pair 2 is correct: The Kathiawar Plains are the division of the Western Coastal Plains between the Kutch and the Konkan Plains (north of Narmada). Its highest point is Mount Girnar which is supposed to be a continuation of India's Peninsular block. Hence this region is believed to be of Volcanic origin like the rest of the Peninsular region. Hence this pairing is **correct**.

Pair 3 is incorrect: The Malabar is the division of the Western Coastal Plain between the Karnataka plains up to Kanyakumari. It is also known as Kerala Plains. This region is famous for its unique feature of lagoons called the backwaters/ Kayals. These are often formed as a result of depressions along coastlines wherein the ground level is lesser than the mean sea level, leading to incursion of brackish waters. Almost half of population in Malabar coast is engaged in agricultural activities. The fertile soil alluvial is useful for growing many crops in this region Hence this pairing is **incorrect**.

Pair 4 is incorrect: The Karnataka Plains (also known as Kannad/Kanara/Karavali plains), as the name suggests, is the division of the Western Coastal Plains between the Konkan Plains in the North and the Malabar Plains in the South, along the state of Karnataka. The Western Coastal Plains are broad at tips (both north and south), and at its narrowest in the middle. The average width of this division is a mere 30-50 km. **Thus, this division is the narrowest (not broadest) section of the Western Coastal Plains.** Hence this pairing is **incorrect**.

Source: <https://ncert.nic.in/textbook.php?kegy1=2-7> Pg 18
Indian Geography by Khullar, Ch-3, Pg-86, 87

Q.8) With reference to the Satpura Mountain Range, consider the following statements:

1. It is an example of Young Fold Mountains.
2. The height of this mountain range is still increasing, at a pace even greater than Himalayas.
3. It is one of the richest sources of coal and manganese deposits in India.

Which of the statements given above is/ are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) None of the above

Ans) d

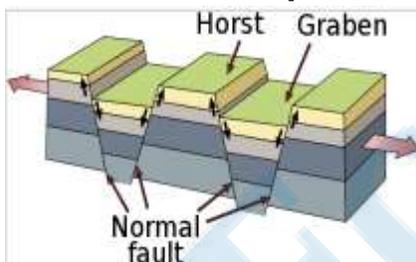

Exp) Option d is the correct answer.

The Satpura is a Hill Range in Central India and forms the northern border of the Deccan Plateau. It is bound by the Vindhya Range and River Narmada in the North and the River Tapi in the South. It runs in an east-west manner. Several protected areas have been earmarked in the area, including the Kanha, Pench, Gugamal and Satpura National Parks, Pachmarhi Biosphere Reserve, Melghat Tiger Reserve and the Bori Reserve Forest.

Statement 1 is incorrect: The Satpura range is an example of Block Mountains not the young fold mountains. Hence this statement is incorrect.

There are many ways by which a mountain may form – two main methods are by a) Folding b) Faulting. When due to tectonic pressures a Fault occurs, a block of earth is thrust upwards and is known as the Horst (mountain), while the other sides slip downwards and are known as Graben (valleys). The Satpura range is the Horst Mountain created by upthrust when large-scale Faulting took place in this region. It is flanked by the Narmada and the Tapi Grabens on either side.

Statement 2 is incorrect: The Satpura Range is an example of Relict mountains. Relict mountains are very old mountains which have **become severely denuded and lost a lot of their height and continuity due to prolonged exposure to agents of weathering and erosion.** Today the Satpura range stands at an average elevation of 600-900m, which is very less compared to young mountains like the Himalayas with peaks standing 7000-8000 m tall. Thus, the Satpura range is termed Relict Mountain which reflects its old and denuded status. Hence this statement is **incorrect**.

Statement 3 is incorrect: The Satpura ranges are not very rich in the deposits of minerals. It contains small quantities of manganese and coal. Hence this statement is **incorrect**.

It is the eastern part of the Central Highlands that is geologically rich in minerals of commercial value.

Indian Geography by Khullar, Ch-3, Pg-84

Q.9) Arrange the following mountain peaks of India in correct order of their location from East to West:

1. Kanchenjunga
2. Kamet
3. Nokrek
4. Nun-Kun

Select the correct answer using the code given below:

- a) 1-2-3-4
- b) 3-2-1-4
- c) 3-1-2-4
- d) 1-3-4-2

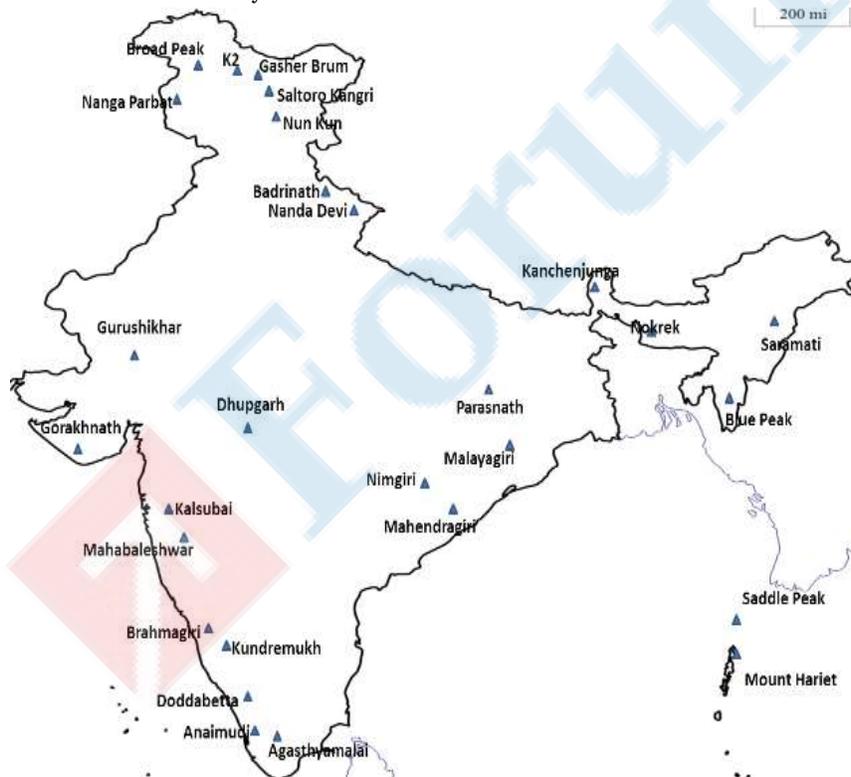

Ans) c

Exp) Option c is the correct answer.

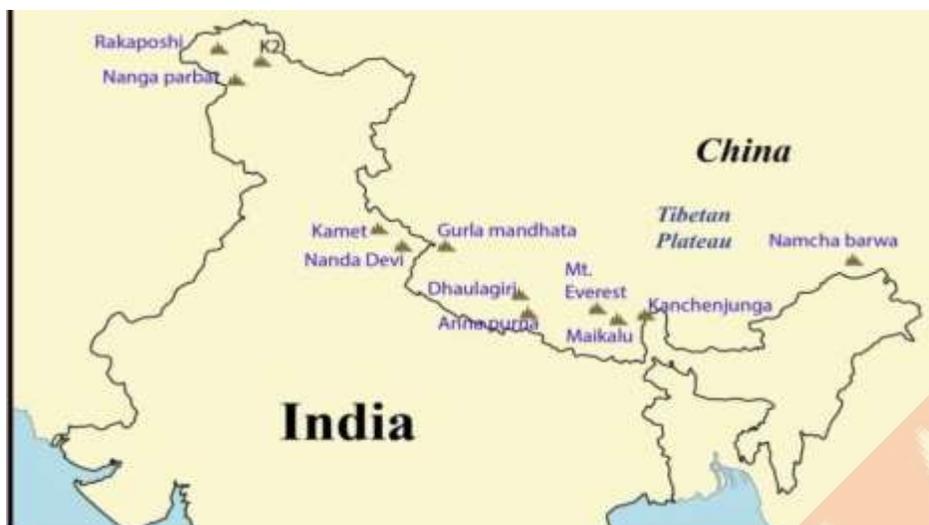

The correct order of peaks starting from east, and ending in west among given options is 3 (Nokrek) -> 1 (Kanchenjunga) -> 2 (Kamet) -> 4 (Nun-Kun).

Option 3: Mount Nokrek is the highest peak on the Garo Hills. It stands at a height of 1720m in the state of Meghalaya. The surrounding area is rich in biodiversity and has been declared a National Park as well. The mother germplasm of Citrus-indica has been discovered by science researchers within the Nokrek Range.

Option 1: Mount Kanchenjunga is a peak in the North Eastern section of the Greater Himalayas. At 8586m, it is the 3rd highest mountain peak in the world. It lies along the border of Nepal and India (in the state of Sikkim). It has also been designated a National Park and was declared to be a UNESCO World Heritage Site in 2016. It is bound by the river Teesta to the east.

Option 2: Mount Kamet is a peak in the western section of the Greater Himalayas. It is located in the Garhwal region of the state of Uttarakhand and stands at a height of 7756. It lies immediately to the west of Nanda Devi Peak (highest in the Garhwal region).

Option 4: Nun Kun is a mountain massif of the greater Himalayan range, located on the border of Jammu and Kashmir and Ladakh in northern India. It consists of two main peaks: Nun and Kun, separated from each other by a 4 km long snowy plateau, with a third peak of the massif, known as Pinnacle Peak, lying at its eastern end.

Source: <https://ncert.nic.in/textbook.php?kegy1=2-7>

Q.10) With reference to “UNSC Counter-Terrorism Committee”, consider the following statements:

1. It was established by UN Security Council resolution in the wake of the 9/11 terror attacks in the United States of America.
2. All the member states of United Nation Organization are the members of this committee.
3. The committee provides technical assistance on counter terrorism directly to Member States.
4. The decisions of the committee with respect to counter terrorist activities are binding on all the member states of United Nations Organization.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1, 2 and 3 only
- c) 1 and 4 only
- d) 1, 3 and 4 only

Ans) a

Exp) Option a is the correct answer.

Recently, India has hosted a special meeting of the United Nations Security Council’s Counter Terrorism Committee (CTC) to discuss terror-financing through crypto-currency and use of drones in the new-age terrorism. This will be the first such meeting of the UNSC-CTC in India since its establishment in 2001. The Permanent Representative of India (Ruchira Kamboj) to the UN (United Nations) serves as the Chair of the CTC for 2022.

Statement 1 is correct: United Nations Security Council’s Counter Terrorism Committee (CTC) was established by **Security Council resolution 1373** which was adopted unanimously on 28th September 2001 in the wake of the 9/11 terror attacks in the US.

Statement 2 is incorrect: The Committee comprises all 15 Security Council members. Five permanent members: China, France, Russian Federation, the United Kingdom, and the United States, and ten non-permanent members elected for two-year terms by the General Assembly. **Secretary-General of UN and presiding officer of the UN General Assembly are not the members of UN CTC.**

Statement 3 is incorrect: The UNSC Counter-Terrorism Committee do not provide technical assistance directly to Member States. Rather, they facilitate the delivery of technical assistance, in accordance with the CTC Policy Guidance on Technical Assistance, through **close engagement with a broad range of donor and provider organizations**. Its **primary task** includes taking steps to **criminalize the financing of terrorism, freezing any funds related to persons involved in acts of terrorism, deny all forms of financial support for terrorist groups**, suppress the provision of safe haven, sustenance or support for terrorists and share information with other governments on any groups practicing or planning terrorist acts.

Statement 4 is incorrect: The decisions of the committee with respect to counterterrorist activities are **non-binding**. The Committee is tasked with monitoring the implementation of resolution 1373 which **requested countries to implement a number of measures** aimed at enhancing their legal and institutional ability to counterterrorist activities.

<https://www.un.org/securitycouncil/ctc/>

Frequently Asked Questions (FAQs) | Security Council - Counter-Terrorism Committee (CTC)

Q.11) When you travel in Himalayas, you will see the following:

1. Deep gorges
2. U-turn river courses
3. Parallel mountain ranges
4. Steep gradients causing land-sliding

Which of the above can be said to be the evidences for the Himalayas being young fold mountains?

- a) 1 and 2 only
- b) 1, 2 and 4 only
- c) 3 and 4 only
- d) 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct answer.

Statement 1,2,3 and 4 are correct: The Himalayas represent the young fold mountains because they have formed only a few million years ago by a collision of the Eurasian plates as well as the Indo-Australian plates as a result of the Continental drift. These young fold mountains are formed because of the folding of the earth's crust due to tectonic activity or the colliding of tectonic plates with one another. They are also higher than that of the old fold mountains and have steeper slopes and deeper valleys. **The Himalayas have parallel mountain ranges because of folding and the U-turn of Indus and Brahmaputra revers respectively because of eastern and western syntaxial bands. These all are the evidences of Himalayas being young fold mountains.**

Source: UPSC PRELIMS 2012

Q.12) In context to India's physical geography, which of the following statements correctly explains the term 'Dhrian'?

- a) Region of marshy and swampy land along the Himalayan foothills
- b) Elevated Plateau region along the Ganga River
- c) Area of saline deposits in the Northern Plains
- d) Shifting sand dunes in western Rajasthan

Ans) d

Exp) Option d is the correct answer.

The great plains of North India are considered monotonous and characterized by its extreme horizontality and low elevation that exhibits distinctive fluvial patterns, directions of flow, and geomorphology. It is divided into the following four regions: The Rajasthan Plain; the Punjab–Haryana Plain; the Ganga Plain and the Brahmaputra Plain.

Option d is correct. In the Thar Desert, the shifting sand dunes are locally known as Dhrian. The Indian desert or the thar desert accounts for a greater part of the Marwar plain of Rajasthan is called Marusthali. The eastern part of the Thar Desert near the Aravali Range is a semi-arid plain which is known as the Rajasthan Bagar. In general, the eastern part of the Marusthali is rocky while its **western part** is covered by **shifting sand dunes** locally known as **Dhrian**.

Source: <https://egyankosh.ac.in/bitstream/123456789/80895/1/Unit-2.pdf>

https://books.google.co.in/books?id=RxCzONmxUp0C&pg=PA193&lpg=PA193&dq=shifting+sand+dunes+in+thar+is+dhrian&source=bl&ots=xNydyJHh5u&sig=ACfU3U1UaR8SYiIRWCExTaQEIG5HmnjICA&hl=en&a=X&ved=2ahUKEwjNx_TlhPf7AhXZUGwGHeFoD2U4HhDoAXoECACQAw#v=onepage&q=shifting%20sand%20dunes%20in%20thar%20is%20dhrian&f=false

Q.13) With reference to Rift Valleys, consider the following statements:

1. It is a lowland region that forms where the Earth's tectonic plates move apart.
2. Many of the Earth's rift valleys are found on the Ocean floors.
3. Narmada is the only river in India that flows through a rift valley.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct. A rift valley is a **lowland region that forms where Earth's tectonic plates move apart, or rift**. Rift valleys differ from river valleys and glacial valleys in that they are created by tectonic activity and not the process of erosion.

Statement 2 is correct. Rift valleys are **found both on land and at the bottom of the ocean**, where they are created by the process of seafloor spreading. **Many of Earth's deepest rift valleys are found underwater**, dividing long mountain ranges called mid-ocean ridges. As tectonic plates move away from one another at mid-ocean ridges, molten rock from the mantle may well up and harden as it contacts the frigid sea, forming new oceanic crust at the bottom of the rift valley.

Statement 3 is incorrect. The **Narmada and the Tapi** are the rivers which flow through a rift valley. The Damodar River also flows through a rift valley.

Source: <https://education.nationalgeographic.org/resource/rift-valley>

<https://ncert.nic.in/textbook/pdf/kegy103.pdf>

Q.14) “These are the alluvial floodplains in the foothills of the Eastern Himalayas in the region of Eastern and North-eastern India. The region has Teesta River on the west and Sankosh river on the east. The region forms the gateway to Bhutan from India”

Which of the following region is mentioned in the above paragraph?

- a) Bugyals
- b) Marg
- c) Duars
- d) Payar

Ans) c

Exp) Option c is the correct answer.

The Dooars or Duars are the **alluvial floodplains** at the foothills of the eastern Himalayas in North-East India. The Dooars valley (also called Duars) stretches from River Teesta on the west to River Sankosh on the east, an area covering roughly 130 km by 40 km that forms the gateway to Bhutan from India. The doors are bifurcated into two regions-**Western Dooars** is known as the Bengal Dooars and the **Eastern Dooars** as the Assam Dooars. The Eastern Duars, in western Assam state, comprises a level plain intersected by numerous rivers and only slightly populated. The Western Duars lies in northern West Bengal state and is a portion of the Tarai, a lowland belt linking the Himalayas and the plains region.

Source: <https://www.britannica.com/place/Duars>

<https://www.dooarstourism.com/>

Q.15) NASA has recently completed the technology demonstration of LOFTID mission. What is the intended objective behind this mission?

- a) It is a space based medical innovation to undertake surgery in zero gravity.
- b) It will help in the display of “aeroshell” technology which would help humans to land on Mars.
- c) It is a Spacecraft which will help in Forging the New Path for NASA’s Future Moon Missions.
- d) It will help in altering the trajectory of an asteroid by sending a spacecraft to crash into it.

Ans) b

Exp) Option b is the correct answer.

NASA completed the technology demonstration of its Low-Earth Orbit Flight Test of an Inflatable Decelerator (LOFTID) mission. The “inflatable aerodynamic decelerator,” or “aeroshell” technology that will help land humans on Mars.

Option a is incorrect: The University of Louisville’s Surgical Fluid Management System (SFMS) were tested in microgravity. It was a NASA supported space surgery system which was tested in microgravity on a Zero Gravity Corp. It will help in providing critical data to advance space-based medical innovations.

Option b is correct: LOFTID is an inflatable aerodynamic decelerator,” or “aeroshell” technology which will help land future astronauts on Mars. It is the first such test of an inflatable decelerator from Earth-orbital speed. LOFTID acts as a giant brake by deploying a large inflatable aeroshell (a deployable structure protected by a flexible heatshield) before entering the atmosphere.

Option d is incorrect: NASA’s DART (Double Asteroid Redirection Test) was aimed at asteroid Dimorphos which was orbiting a larger asteroid Didymos. NASA scientists for the first time have succeeded in altering the path of the asteroid by hitting the spacecraft into it.

Q.16) With reference to the Andaman & Nicobar Islands group, consider the following statements:

1. It is considered an extension of the Arakan–Yoma Mountains of Myanmar.
2. Unlike the Lakshadweep Islands, Andaman & Nicobar Islands are of coral origin.
3. The island group is marked by the presence of the Mangrove forests.
4. The Ritchie’s Archipelago is a part of this Island group.

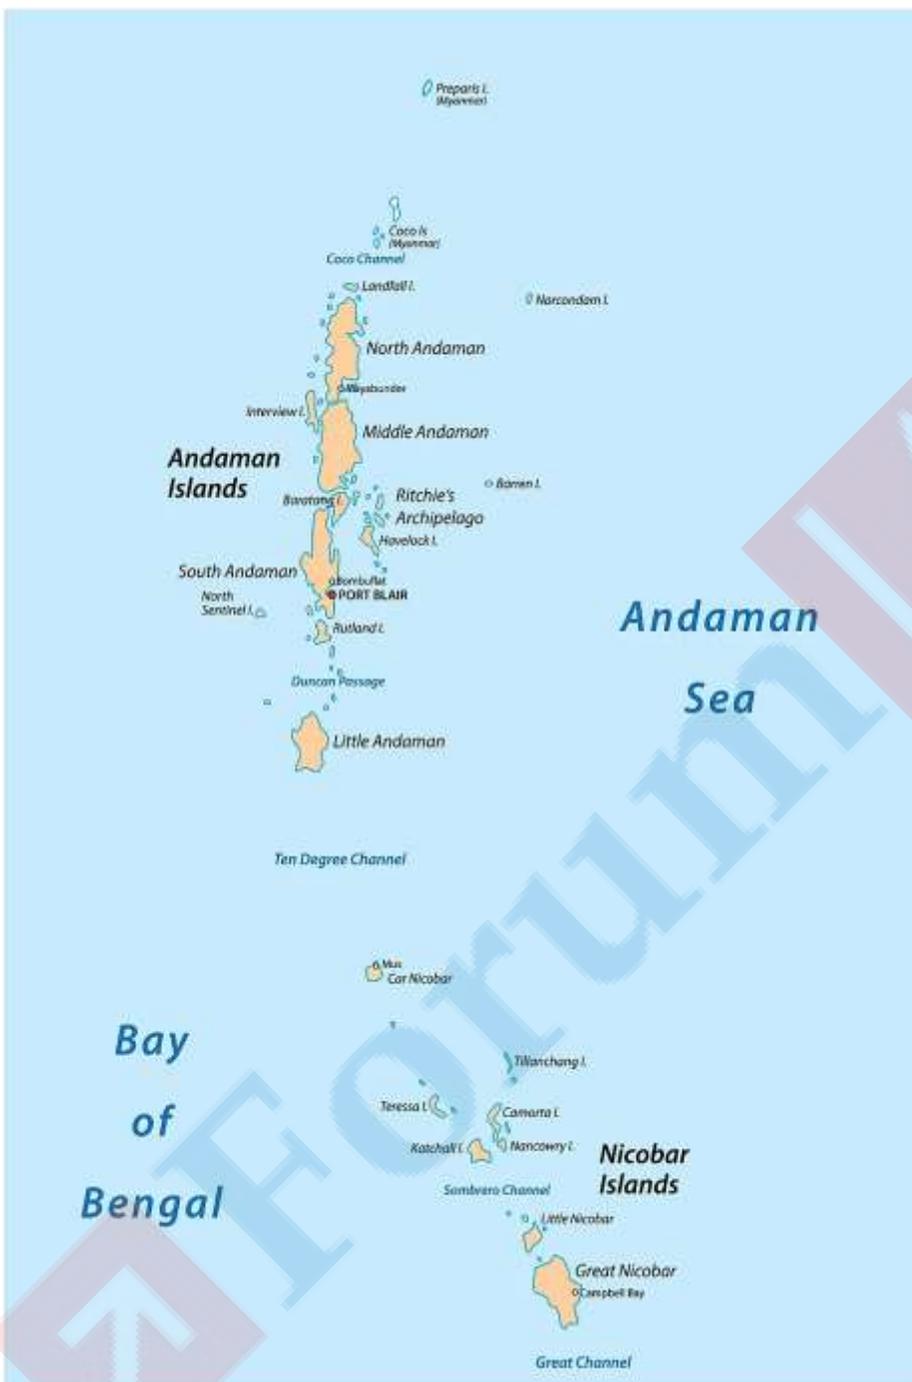

Which of the statements given above are correct?

- a) 1 and 3 only
- b) 1 and 4 only
- c) 2, 3 and 4 only
- d) 1, 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

Andaman and Nicobar Islands, considered a union territory in India, consists of two groups of islands. The islands located north of 10° north latitude are known as Andaman Islands while the islands located south of 10° north latitude are called Nicobar.

Statement 1 is correct. The Andaman–Nicobar Islands is the emergent part of a long ridge which extends from the **Arakan–Yoma ranges** of western Myanmar (Burma) in the north to **Sumatra in the south**. The arc constitutes the boundary between the Bay of Bengal to the west and the Andaman Sea to the east.

Statement 2 is incorrect. **The Andaman and Nicobar Islands are not of coral origin, unlike the Lakshadweep.** The Andaman & Nicobar Islands is formed by sandstone, limestone, and rocks of **Cenozoic era** (Neogene and Paleogene age i.e., some 2.6 to 65 million years old). This makes the terrain of Andamans & Nicobar rough, with hills enclosing narrow longitudinal valleys.

Statement 3 is correct. According to the Forest Survey report 2021, the total mangrove cover in the country is 4,992 sq. km. Out of this, **615 sq.km, area** is mangrove vegetation occur in Andaman & Nicobar Islands. In the **Andaman group of islands** alone, area under mangroves is **612 sq.km**, while in **Nicobar group of island** mangroves occupy **only 3 sq. km**.

Statement 4 is correct. **Ritchie's Archipelago** is an island of the Andaman Islands. It is a cluster of smaller islands which lie 20 km east of **Great Andaman**, the main island group of the Andaman Islands. It comprises some 4 larger islands, 7 smaller islands and several islets, extending in a roughly north-south chain, parallel to the **main Great Andaman group**.

Q.17) With reference to the Indus River, consider the following statements:

1. The Indus originates from Rakshas Tal Lake of the Tibetan Plateau.
2. Shyok and Gilgit are the Right-Bank tributaries of the Indus.
3. The river cuts across the Pir-Panjal range to form a gorge near Kashmir Valley.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 only
- c) 2 and 3 only
- d) 1 and 2 only

Ans) b

Exp) Option b is the correct answer.

The Indus River System is one of the largest river basins of the world that is a part of the Himalayan River drainage system. It covers an area of 11,65,000 sq. km that has 321, 289 sq. km of its area in India. The total length of the river is 2,880 km with 1,114 km that lies in India.

Statement 1 is incorrect. The Indus River originates from a glacier near **Bokhar Chu** in the Tibetan region at an altitude of 4,164 m in the **Kailash Mountain range**. The Satluj river originates near Manasarovar from Rakshastal in the Tibetan Plateau.

Statement 2 is correct. The left bank tributaries of Indus are– Jhelum River (total length is 724 kms), Chenab River (total length is 1,180 kms), Ravi River (total length 725 kms), Beas River (total length 460 kms), Sutlej River (total length 1,450 kms), Zaskar River (total length 338 km), Suru River (total length 185 km), Soan River (total length 250 km) etc. The **Right bank tributaries of the Indus River are–Shyok River (total length 550 km), Hunza River (total length 190 km), Gilgit River (total length 240 km), (total length 304 km), Gomal (total length 400 km) etc.**

Statement 3 is incorrect. The Indus River flows between the Ladakh and Zaskar ranges, it **cuts across the Ladakh range**, forming a spectacular gorge near Gilgit. The Chenab River flows parallel to Pir Panjal range through Pangi Valley and enters Jammu and Kashmir & cuts a deep gorge near Kishtwar.

Source: <https://ncert.nic.in/textbook/pdf/kegy103.pdf>

<https://egyankosh.ac.in/bitstream/123456789/80896/1/Unit-3.pdf>

<https://www.mapsofindia.com/maps/india/physical-map.html> (FOR MAP-CROPPED)

Q.18) With reference to Black Soils of India, consider the following statements

1. Black soils are mostly found in the peninsular plateau of India.
2. Black soils are rich in lime but lack phosphorus and organic matter.
3. Black soils are generally clayey and impermeable.
4. Black soils are not at all suitable for cultivation during dry season.

Which of the statements given above are correct?

- a) 1 and 3 only
- b) 2 and 4 only
- c) 1, 2 and 3 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: Among the in-situ soils of India, black soils are found in lava-covered areas. These soils are often referred to as Regur soils or “black cotton soils,” since cotton has been the most common traditional crop in these areas. Black soils are derivatives of trap lava and are spread mostly across interior Gujarat, Maharashtra, Karnataka, and Madhya Pradesh on the Deccan lava plateau and the Malwa Plateau, where there is both moderate rainfall and underlying basaltic rock. Thus, they are mostly found in the Peninsular Plateau of India.

Statement 2 is correct: Black soil covers most of the Deccan Plateau which includes parts of Maharashtra, Madhya Pradesh, Gujarat, Andhra Pradesh, and some parts of Tamil Nadu. Chemically, the black soils are rich in lime, iron, magnesia, and alumina. They also contain potash. But they lack phosphorus, nitrogen, and organic matter. The color of the soil ranges from deep black to grey.

Statements 3 is correct and 4 is incorrect. The black soils are generally clayey, deep and impermeable. They swell and become sticky when wet and shrink when dried. So, during the dry season, these soils develop wide cracks. Thus, there occurs a kind of ‘self-ploughing’. Because of this character of slow absorption and loss of moisture, the black soil retains the moisture for a very long time, which **helps the crops, especially, the rain fed ones, to sustain even during the dry season.**

Source: <https://ncert.nic.in/ncerts/l/kegy106.pdf>

Q.19) In the context of the Laterite Soil and the Red Soil, consider the following statements:

1. Like Laterite soils, Red Soils also develop only in areas with high temperatures and high rainfall.
2. Laterite soils are generally less fertile than Red Soils due to intensive leaching.
3. Both the Red soils and the Laterite soils are poor in nitrogen, phosphorus, and humus.

Which of the following statements is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: The Red soil develops on crystalline igneous rocks in areas of low rainfall in the eastern and southern parts of the Deccan Plateau. The laterite soils develop in areas with elevated temperatures and high rainfall. These are the result of intense leaching due to tropical rains.

Statement 2 is correct: laterites are generally not suitable for cultivation. This soil is deficient in fertility because of extensive leaching caused by high rainfall. However, the application of manure is required for making the soil fertile for cultivation. On the other hand, the Red Soils generally occur in areas of low rainfall and are free from leaching. So, red soils are generally more fertile when compared to the laterite soils.

Statement 3 is correct: Fine-grained red and yellow soils are normally fertile, whereas coarse-grained soils found in dry upland areas are poor in fertility. They are poor in nitrogen, phosphorous, and humus. While in laterite soil, Humus content of the soil is removed fast by bacteria that thrive well in elevated temperature. These soils are poor in organic matter, nitrogen, phosphate, and calcium, while iron oxide and potash are in excess.

Knowledge Base: Laterite has been derived from the Latin word 'Later' which means brick. The laterite soils develop in areas with hot temperatures and high rainfall. These are the result of intense leaching due to tropical rains. With rain, lime, and silica leak away, and soils rich in iron oxide and aluminum compound are left behind. The Humus content of the soil is removed fast by bacteria that thrives well in elevated temperature and moisture. These soils are poor in organic matter, nitrogen, phosphate, and calcium, while iron oxide and potash are in excess. Hence, laterites are not suitable for cultivation; however, the application of manures and fertilizers are required for making the soils fertile for cultivation. Red laterite soils in Tamil Nadu, Andhra Pradesh and Kerala are more suitable for crops like cashew nut. Laterite soils are widely cut as bricks for use in house construction. This soil has developed in the higher areas of the Peninsular plateau. The laterite soils are commonly found in Karnataka, Kerala, Tamil Nadu, Madhya Pradesh and the hilly areas of Odisha and Assam.

Source: <https://ncert.nic.in/ncerts/l/kegy106.pdf>

Q.20) The colonial rule of British India had seen some large-scale killings of freedom fighters/ protestors. In this context, which of the following events is also referred to as 'Adivasi Jallianwala'?

- a) Mangarh Massacre
- b) Pal-Dadhvav massacre
- c) Tarapur massacre
- d) Kuka massacre

Ans) a

Exp) Option a is the correct answer.

PM Modi calls for a roadmap to develop Mangarh Dham as a tribal destination. He observed, given that the place's heritage is shared by the people of Rajasthan, Gujarat, Madhya Pradesh and Maharashtra, the four States should work to develop it.

Option a is correct: Mangarh Massacre is also known as Adivasi Jallianwala. It is a massacre of around **1500 tribals by the British Indian Army in 1913.** The Bhil tribes living in these regions gathered under the leadership of **Guru Govind to protest the British exorbitant land revenue demand and inhumane labour treatment (bonded labour)** they suffered at the hand of the British. The unfortunate event followed this protest, the British indiscriminately fired at the crowd and ended up killing at least 1500 tribals including children and women.

Option b is incorrect: On 7 March 1922, Pal-Dadhvav massacre took place in the Pal-Chitariya and Dadhvav villages of modern Gujarat. A number of tribal people led by **Motilal Tejawat had gathered on the banks of Heir River** to protest against the **land revenue system** by the British rulers. Following this protest The British army opened fire at the crowd and ended up killing at least 1200 tribes.

Option c is incorrect: Tarapore massacre took place in modern Bihar. On 15th February, 1932, a group of young freedom fighters planned to **hoist an Indian national flag at Thana Bhawan in Tarapur** (in Bihar). Following the tension between British forces (around 4000 policemen) and protestors, it changed into a violent movement. Then the British in response fired at the crowd and **killed at least 32 people.**

Option d is incorrect: The Kuka Movement marked the first major reaction of the people in the Punjab to the new political order initiated by the British after 1849. It aimed to overthrow British rule and they called for a boycott of educational institutions of British and laws established by them. **The British ordered the around 65 Kukas to be executed with cannons, without any trial, 1872** and this event is known as the **Kuka Massacre.**

Q.21) The 2004 Tsunami made people realize that mangroves can serve as a reliable safety hedge against coastal calamities. How do mangroves function as a safety hedge?

- The mangrove swamps separate the human settlements from the sea by a wide zone in which people neither live nor venture out
- The mangroves provide both food and medicines which people are in need of after any natural disaster.
- The mangrove trees are tall with dense canopies and serve as an excellent shelter during a cyclone or tsunami
- The mangrove trees do not get uprooted by storms and tides because of their extensive roots

Ans) d

Exp) Option d is the correct answer.

The sturdy root system of mangrove trees helps form a natural barrier against disasters such as tsunamis and floods. River and land sediment is trapped by the roots, which stabilizes shoreline, coastline areas and slows erosion. Mangroves provide valuable protection for communities at risk from sea-level rises and severe weather events caused by climate change.

Source: UPSC PRELIMS 2011

Q.22) Consider the following pairs:

Local storm	Characteristic
1. Blossom Shower	Useful for coffee plantation
2. Mango Shower	Post-monsoon showers
3. Nor Westers	Evening thunderstorms in Assam
4. Loo	A hot and dry summer wind

How many pairs given above are correctly matched?

- Only one pair
- Only two pairs
- Only three pairs
- All four pairs

Ans) c

Exp) Option c is the correct answer.

April, May and June are the months of summer in north India. These months of hot weather season are characterized by many local storms.

Some Famous Local Storms of Hot Weather Season:

Pair 1 is correct: Blossom Shower: Blossom Showers are the Pre-Monsoon Rains. These showers occur mainly during the March- May months, i.e., before the arrival of monsoon into India. Therefore, they are also called as the April Rains. Blossom Showers in Kerala, help in the flowering of plantation crops like Coffee and Tea. Hence, pair 1 is correctly matched.

Pair 2 is incorrect: Mango Shower: Towards the end of summer, there are pre-monsoon showers which are a common phenomenon in Kerala and coastal areas of Karnataka. Locally, they are known as mango showers since they help in the early ripening of mangoes. Hence, pair 2 is incorrectly matched.

Pair 3 is correct: Nor Westers: These are dreaded evening thunderstorms in Bengal and Assam. Their notorious nature can be understood from the local nomenclature of 'Kal-Baisakhi', a calamity of the month of Baisakh. These showers are useful for tea, jute and rice cultivation. In Assam, these storms are known as "Bardoli-Chheerha". Hence, pair 3 is correctly matched.

Pair 4 is correct: Loo: Loo are hot and dry winds, which blow very strongly over the northern plains of India and Pakistan in the months of May and June. Their direction is from west to east and they are usually experienced in the afternoons. Their temperature varies between 45°C to 50°C. These winds raise the temperature of the region, and exposure to these winds can even prove fatal.

Hence, pair 4 is correctly matched.

Source: Page 45, Chapter 3, NCERT, India Physical Geography

Q.23) With reference to the Peaty and the Saline Soils, consider the following statements:

1. Unlike Saline soil, Peaty soils are mostly found in arid and semi-arid regions.
2. Both Saline soil and Peaty soil have a poor presence of humus and organic matter.
3. Both Peaty soil and Saline soil do not support any vegetative growth.

Which of the statements above is/are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 only
- d) None of the above

Ans) d

Exp) option d is the correct answer.

Statement 1 is incorrect: Saline Soils occur in arid and semi-arid regions, and in waterlogged and swampy areas. **Peaty Soils are found in the areas of heavy rainfall and high humidity**, where there is a good growth of vegetation.

Statement 2 is incorrect: Peaty Soils are found in the areas of heavy rainfall and high humidity, where there is a good growth of vegetation. Thus, large quantity of dead organic matter accumulates in these areas, and **this gives a rich humus and organic content to the soil.** Organic matter in these soils may go even up to 40-50 per cent.

Statement 3 is incorrect: Saline soils contain a larger proportion of sodium, potassium and magnesium, and thus, they are infertile, **and do not support any vegetative growth.** Peaty Soils are found in the areas of heavy rainfall and high humidity, **where there is a good growth of vegetation.**

Q.24) Which of the following best explains the reason behind absence of well-defined winter season in Peninsular India?

- a) Moderating influence of the sea on weather in peninsular region
- b) Higher atmospheric pressure over the peninsular region than northern India
- c) Lower atmospheric pressure over the peninsular region than northern India
- d) Absence of rains in winter months in peninsular India.

Ans) a

Exp) Option a is the correct answer.

The Peninsular region of India does not have any well-defined cold weather season. Also, there is hardly any seasonal change in the distribution pattern of the temperature in coastal areas.

Option a is correct. The Peninsular region of India does not have any well-defined cold weather season because of **moderating influence of the sea and the proximity to equator.** For example, the mean maximum temperature for January at Thiruvananthapuram is as high as 31°C, and for June, it is 29.5°C.

There is an exchange between sea breeze and land breeze during day and night, the temperature remains moderate and no extreme weather conditions are experienced there.

Q.25) Which of the following countries are the part of recently launched 'Black Sea Grain Initiative'?

1. Germany
2. Ukraine
3. India
4. Turkey
5. Russia

Select the correct answer using the codes given below:

- a) 1, 3 and 4 only
- b) 1, 2 and 4 only
- c) 2, 4 and 5 only
- d) 1, 2, 4 and 5 only

Ans) c

Exp) Option c is the correct answer.

The Black Sea Grain initiative was brokered by the United Nations (UN) and Turkey. It was signed in Istanbul in July, 2022. The Black Sea Grain initiative endeavors to tackle escalating food prices emanating from supply chain disruptions because of Russian actions in the world's 'breadbasket'.

Black Sea Grain Initiative: Also known as Initiative on the Safe Transportation of Grain and Foodstuffs from Ukrainian ports, it is an agreement between **Russia and Ukraine made with Turkey** and the **United Nations (UN)** during the 2022 Russian invasion of Ukraine.

- 1) It was aimed to tackle **escalating food prices emanating from supply chain disruptions** because of Russian actions in the world's 'breadbasket'.
- 2) It created **procedures to safely export grain from certain ports** to attempt to address the 2022 food crisis.
- 3) A **joint coordination and inspection center was set up in Turkey**, with the UN serving as secretariat. By late November, over 500 voyages had successfully left Ukrainian ports carrying over 12 million Tonnes of grain and other food products.

Source: https://www.un.org/en/black-sea-grain-initiative?gclid=Cj0KCQiAwJWdBhCYARIsAJc4idBf4pNYFdi6KBzBj30y79jK8CIUw54FNZ8v1h6kxUr_m6HEaO9gQ5IaAmqlEALw_wcB

<https://blog.forumias.com/suspension-of-black-sea-grain-initiative-expected-to-further->

Q.26) In the context of Soil erosion, consider the following statements:

1. Terrace cultivation is one of the important causes of soil erosion in India.
2. Eluviation is a process in which soil materials get washed away by running water.
3. Pigeon Pea is one of the effective crops for controlling soil erosion.
4. Rill erosion occurs when rainwater does not get soaked completely into the soil but instead runs across it.

Which of the above statements are correct?

- a) 2, 3 and 4 only
- b) 2 and 3 only
- c) 1 and 4 only
- d) 1, 3 and 4 only

Ans) a

Exp) Option a is the correct answer.

Statement 1 is incorrect: Terrace cultivation is one of the methods for soil conservation. Terracing is a soil conservation practice applied to prevent rainfall runoff on sloping land from accumulating and causing serious erosion. Terraces consist of ridges and channels constructed across the slope.

Statement 2 is correct: In eluviation, when rainfall surpasses evaporation, dissolved or suspended material is removed from a layer or layers of soil by water movement. Illuviation involves the deposition of these nutrients and organic materials in deeper horizons, forming horizons in organic materials.

Statement 3 is correct: Different trials with pigeon peas for preserving the topsoil have been successful because of their vigorous and rapid canopy development. The soft soil and high soil moisture on the riverbanks help the pigeon pea plants in developing strong and deep root systems which help in holding the soil together.

Statement 4 is correct: Rill erosion is a type of erosion that produces small but distinct streams. It occurs when rainwater does not soak into the soil but instead runs across it. Rill erosion is removal of soil by concentrated water flow, and it occurs when the water forms small channels in the soil as it flows off site. The rills or small channels (often only 30cm deep) form when water flowing across the ground collects in a natural depression in the soil and erosion is concentrated as the water flows through the depression.

Source: <http://oar.icrisat.org/11561/1/Arresting%20Soil%20erosion%20using%20pigeonpea.pdf>

<https://ncert.nic.in/ncerts/1/hess402.pdf>

<https://ncert.nic.in/textbook/pdf/gesc109.pdf>

<https://ncert.nic.in/textbook/pdf/jess101.pdf>

Q.27) “This soil is formed in hilly and forest areas where sufficient rainfall and vegetation are available. The soils vary in structure and texture depending on the mountain environment where they are formed. They are loamy and silty on valley sides and coarse-grained on the upper slopes. In the snow-bound areas of the Himalayas, they experience denudation and are acidic with low humus content. The soils found in the lower valleys are fertile.”

The above paragraph refers to which of the following soil types?

- a) Forest soil
- b) Arid soil
- c) Red soil
- d) Laterite soil

Ans) a

Exp) Option a is the correct answer.

As the name suggests, forest soils are formed in the forest areas where sufficient rainfall is available. The soils vary in structure and texture depending on the mountain environment where they are formed. They are loamy and silty on valley sides and coarse-grained on the upper slopes. In the snow-bound areas of the Himalayas, they experience denudation and are acidic with low humus content. The soils found in the lower valleys are fertile. It is evident from the foregoing discussions that soils, their texture, quality, and nature are vital for the germination and growth of plants and vegetation including crops. Soils are living systems. Like any other organism, they too develop and decay, get degraded, and respond to proper treatment if administered in time. These have serious repercussions on other components of the system of which they themselves are important parts.

Source: <https://ncert.nic.in/textbook/pdf/kegy106.pdf>

Q.28) Why are the western slopes of Western Ghats covered with dense forest in comparison to the eastern slopes?

- a) Due to the large presence of the Rocky Mountains on the Eastern slopes.
- b) Western slopes receive much less sunlight as compared to Eastern Slopes.
- c) Eastern slopes are on the leeward side of the Western Ghats and hence receive scanty rainfall.
- d) Forest at the Eastern slopes got cut down because of industrial purposes.

Ans) c

Exp) Option c is the correct answer.

Precipitation and sunlight are the two major deciding factors for the development of thick forests. Where there is more rainfall and more sunlight, the vegetation is denser. The western slopes of the Western Ghats are covered with thick forests as compared to the eastern slopes since the eastern slopes are on the leeward side of the Western Ghats and hence receive scanty rainfall. It is because the western slope gets much heavier rainfall than the eastern slope. Moisture-laden air moves eastwards across the Western Ghats during the monsoon season.

Knowledge Base: The slopes of the Western Ghats have thick forests and wildlife as the western Ghats receive more rainfall than the Eastern Ghats. The hills in the Western Ghats have an average elevation of about 2,695 meters while the hills of the eastern Ghats have an average elevation of 1,501 meters. Therefore, the hills of the western Ghats are higher than that of the Eastern Ghats. The southwest monsoon winds are blocked by the hills of the Western Ghats. Hence, the western Ghats receive more rainfall as compared to the eastern Ghats which receive scanty rainfall during the monsoon retreat by the end of November.

<https://ncert.nic.in/textbook/pdf/iess102.pdf>

<https://ncert.nic.in/ncerts/l/iess102.pdf>

Q.29) Consider the following statements regarding the various Medicinal plants in India:

1. Patwa is a Himalayan medicinal shrub having antioxidant properties.
2. Himalayan Fritillary can be used in the treatment of bronchial disorders and pneumonia.
3. Salamanja is used in the treatment of dysentery and chronic fever.

Which of the statements given above are correct?

- a) 1, 2 and 3
- b) 2 and 3 only
- c) 1 and 2 only
- d) 1 and 3 only

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: *Meizotropis pellita*, commonly known as Patwa, is a perennial shrub with restricted distribution that is endemic to Uttarakhand. The species is listed as ‘critically endangered’ based on its limited area of occupancy (less than 10 sq. km). The species is threatened by deforestation, habitat fragmentation and forest fires.

The essential oil extracted from the leaves of the species possesses strong antioxidants and can be a promising natural substitute for synthetic antioxidants in pharmaceutical industries.

Statement 2 is correct: *Fritillaria cirrhosa* (Himalayan fritillary) is a perennial bulbous herb. It is found in the Himalayan Region.

In China, **the species is used for the treatment of bronchial disorders and pneumonia.** The plant is also a strong cough suppressant and source of expectorant drugs in traditional Chinese medicine.

Statement 3 is correct: *Dactylorhiza hatagirea* (Salampanja) is a perennial tuberous species endemic to the Hindu Kush and Himalayan ranges of Afghanistan, Bhutan, China, India, Nepal, and Pakistan. It is threatened by habitat loss, livestock grazing, deforestation, and climate change, the species is listed as ‘endangered’.

It is extensively used in Ayurveda, Siddha, Unani and other alternative systems of medicine to cure dysentery, gastritis, chronic fever, cough and stomach aches.

Q.30) With reference to the Millet crop, consider the following statements:

1. The Food and Agricultural Organisation has declared ‘2023’ as the International Year of Millets.
2. India produces more than one third of the global millet production.
3. The United States of America is India’s top millet export destination.
4. Rajasthan is the highest millet producing state in India.
5. Millets Exports Promotion Programme is an initiative of Agricultural and Processed Food Products Export Development Authority (APEDA) to promote millet exports of India.

Which of the statements given above are correct?

- a) 1, 2 and 5 only
- b) 2, 3 and 4 only
- c) 2, 4 and 5 only
- d) 1, 3, 4 and 5 only

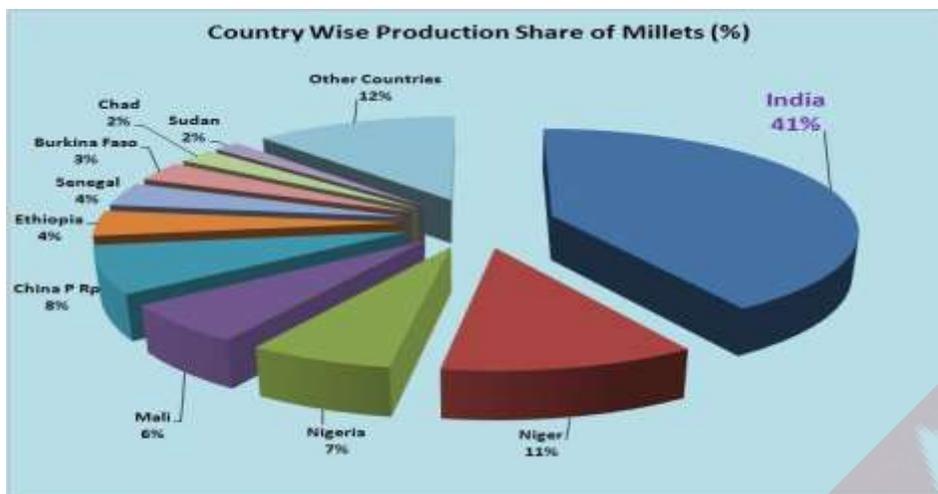

Ans) c

Exp) Option c is the correct answer.

Millets are a highly varied group of small-seeded grasses, widely grown around the world as cereal crops or grains for fodder and human food. It is considered as a nutrient rich and drought resistant crop, thus plays an important role in fighting poverty, hunger and climate change.

Statement 1 is incorrect: The **United Nations General Assembly (UNGA) (not the Food and Agricultural Organisation (FAO))** at its 75th session in March 2021 **declared 2023 the International Year of Millets (IYM 2023).** This resolution was sponsored **by India** and supported by **72 other countries.**

Statement 2 is correct: India produces around 41% of the global millet production. As per FAO, world production of millets in the year 2020 was 30.464 million metric tonnes (MMT) and India’s share was 12.49 MMT, which accounts to 41 percent of the total millet production.

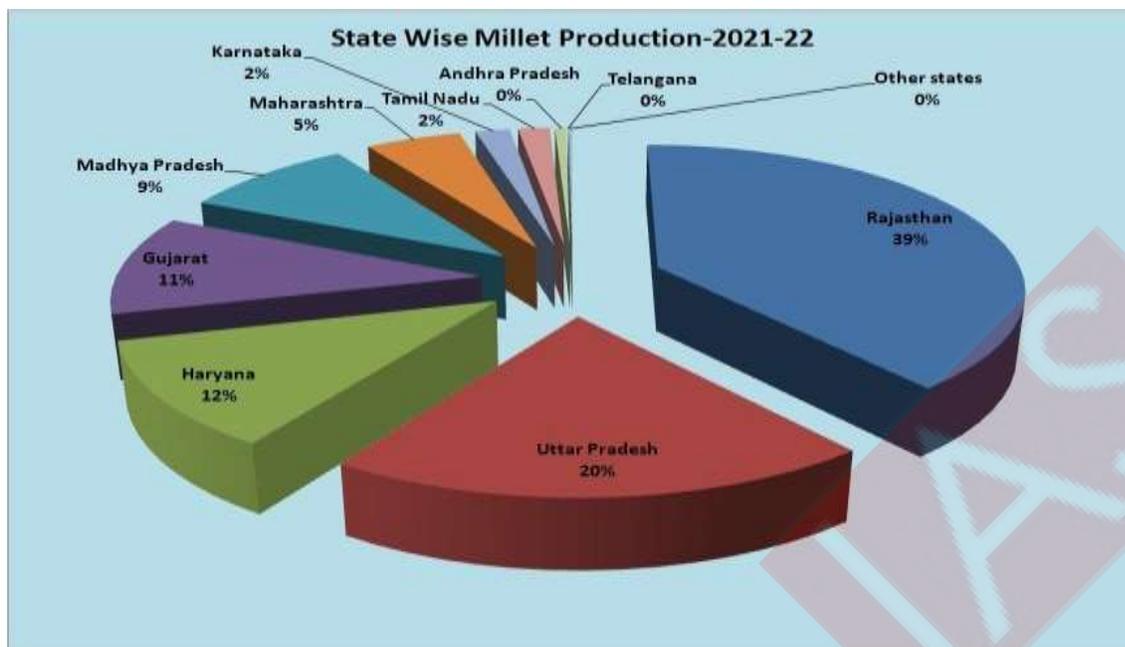

Statement 3 is incorrect: India's export share of millet is nearly 1% of its total millet production. India's major millet exporting countries are U.A.E, Saudi Arabia, Nepal and USA in the same order. The varieties of millets exported by India include Bajra, Ragi, Canary, Jawar, and Buckwheat.

India's Export of Millets to World

https://apeda.gov.in/milletportal/files/India_Millet_Exporting_Destination.pdf

Q.31) Consider the following statements:

1. The duration of the monsoon decreases from southern India to northern India.
2. The amount of annual rainfall in the northern plains of India decreases from east to west.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: Southern part of India, being near to sea, gets rainfall early and for a longer duration than in northern part.

Statement 2 is correct: Rainfall decreases from the east to the west in Northern India because there is a decrease in the moisture of the winds. As the moisture bearing winds of the Bay of Bengal branch of the south west monsoon move further and further inland, the moisture gradually decreases and results in low rainfall when moving westwards. Consequently, states like Gujarat and Rajasthan in western India get very little rainfall.

Source: UPSC PRELIMS 2012

Q.32) Arrange the following states of India in descending order of their mangrove cover:

1. Andhra Pradesh
2. Gujarat

3. Andaman & Nicobar

4. West Bengal

Select the correct answer from the codes given below:

- a) 4-2-1-3
- b) 2-4-3-1
- c) 4-2-3-1
- d) 1-2-3-4

Ans) c

Exp) Option c is the correct Answer.

West Bengal has the highest percentage of area under total Mangrove cover followed by Gujarat and Andaman Nicobar Islands.

Mangrove Cover Assessment 2021					(in sq km)	
Sl. No.	State/UT	Very Dense Mangrove	Moderately Dense Mangrove	Open Mangrove	Total	Change with respect to ISFR 2019
1.	Andhra Pradesh	0	213	192	405	1
2.	Goa	0	21	6	27	1
3.	Gujarat	0	169	1,006	1,175	-2

11.	D&NH and Daman & Diu	0	0	3	3	0
12.	Puducherry	0	0	2	2	0
Total		1,475	1,481	2,036	4,992	17

Source: <https://fsi.nic.in/forest-report-2021-details>

Q.33) Which of the following are the east flowing Peninsular Rivers in India?

- 1. Sharavati River
- 2. Bharathapuzha River
- 3. Pennar River
- 4. Brahmani River

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 and 4 only
- d) 1 and 4 only

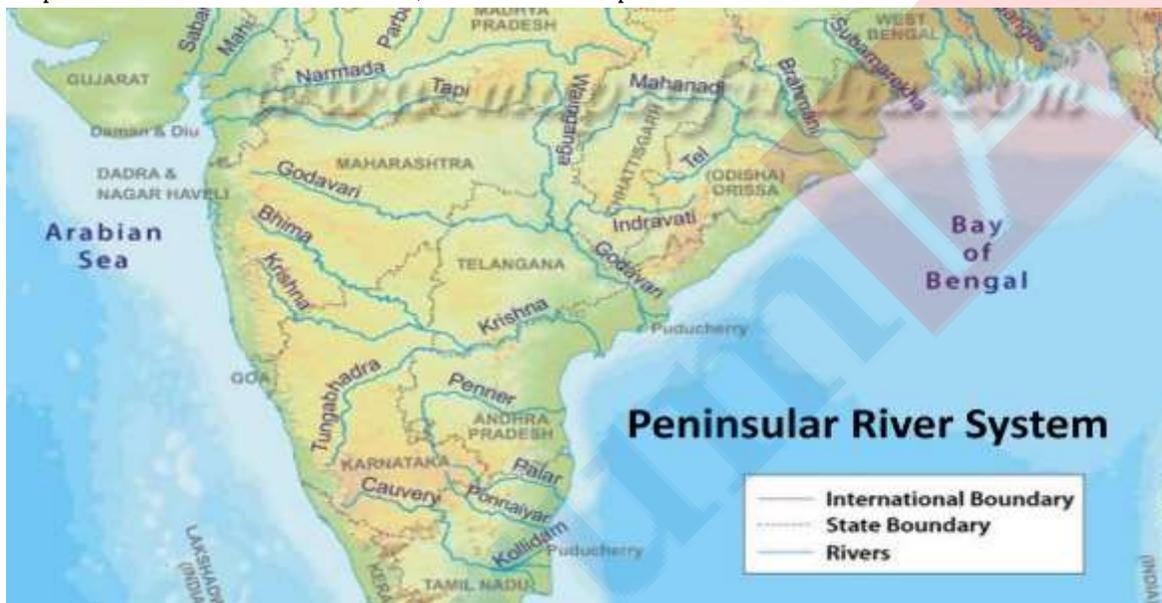

Ans) c

Exp) Option c is the correct answer.

The Peninsular drainage system is the oldest drainage system of India. The Western Ghats running close to the western coast act as the water divide between the major Peninsular rivers, discharging their water in the Bay of Bengal. Some of the major river systems of the Peninsular drainage are – the Mahanadi, the Godavari, the Krishna, the Kaveri etc.

Option 1 is incorrect. Sharavati River is a river in western Karnataka state of southern India. It rises in the Western Ghats and flows in a north-westerly direction to the Arabian Sea. The river falls to a depth of 253 meters forming the highest waterfalls in India, the Jog Falls. The major tributaries of the river are Nandihole, Haridravathi, Mavinahole, Hilkunji, Yennehole, Hurlihole, and Nagodihole. The Mahatma Gandhi Hydroelectric Power Station and the Sharavati Valley Project, situated on it, generate much of the electricity for Karnataka state.

Option 2 is incorrect. The Bharathapuzha river is the second longest West Flowing River that drains into the Arabian Sea in Kerala State. This basin is bounded in the East by the Cauvery basin, in the West by the Arabian Sea. Its drainage area is 6,186 sq.km spread over the two states namely Tamil Nadu and Kerala. 29% drainage area of river lies in Tamil Nadu whereas & 71% of it lies in Kerala. The Gayathripuzha, the Kalpathi Puzha and the Pulanthode, are the three important tributaries

Option 3 is correct. The Pennar is a peninsular river in south India that covers the states of Andhra Pradesh and Karnataka. It rises in the Channakeshava hill of the Nandi Durga range, in Chikkaballapura district of Karnataka and flows towards east eventually draining into the Bay of Bengal. The total length of the river from origin to its outfall in the Bay of Bengal is 597 km. The principal tributaries of the river joining from left are the Jayamangali, the Kunderu and the Sagileru whereas the Chiravati, the Papagni and the Cheyyeru join it from the right.

Option 4 is correct. Brahmani River is a river in north-eastern Odisha state of India. It is formed by the confluence of the Sankh and South Koel rivers in southern Bihar state. It joins northern branches of the Mahanadi River, before emptying into the Bay of Bengal at Palmyras Point. It is one of the few rivers that cut across the Eastern Ghats, and forms a minor gorge at Rengali. The important tributaries of Brahmani are the Karo, the Shankh, and the Tirka.

Q.34) With reference to Inland Drainage Basins in India, consider the following statements:

1. These types of drainage basins can be found in Aksai Chin region of Ladakh.
2. The rivers with inland drainage pattern fall in a lake or disappear in ground.
3. The tributaries of inland drainage rivers always form the parallel drainage patterns.
4. These types of drainage basins help in enhancing a country's international trade with other nations.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 3 and 4 only
- c) 1, 2 and 4 only
- d) 2, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Inland drainage is that drainage in which rivers do not reach an ocean or sea but empty their waters in a lake or an inland sea. The major characteristics of this type of drainage are-rain-fed; ephemeral (short-lived); experience flash flood during rainy season; dry up in summers.

Statement 1 is correct. In India, **less than 10 percent** of the total drainage basin, lies in regions of inland drainage. The area constitutes, the **Great Indian Desert of Rajasthan state, the Aksai Chin region in Ladakh**, a barren plateau in a portion of Kashmir and less than 1 percent of India's area, along the border with Myanmar, drains into the Andaman Sea via tributaries of the Irrawaddy River.

Statement 2 is correct. Inland drainage basin pattern is formed by rivers **pouring their waters in a lake or an inland sea**. The rivers of the Inland Drainage Basin that are centered in western Rajasthan, parts of Kutch in Gujarat and mostly **disappear before they reach the sea** as the rainfall here is scarce. Some of them drain into **salt lakes or simply get lost in the vast desert sands**.

Statement 3 is incorrect. The **Parallel drainage patterns** are formed by the rivers that **develop on steep slopes** where the tributaries and main river flow **parallel to each other**. On the other hand, for **inland drainage River basins**, the tributaries of the rivers **generally join from both direction to the mainstream rather flowing parallelly** with the river. E.g.- Luni River tributaries Sukri, Mithri, Bandi, Khari, Jawai, Guhiya and Sagi join it from its left while y Jojari River joins it from the right side. Hence making the pattern unsuitable **for forming parallel drainage patterns**.

Statement 4 is correct. The Inland drainage basin helps in enhancing a country's **international trade with other nations** through water. A well-coordinated inland waterways network creates seamless **interconnectivity connecting hinterlands** along navigable river coasts and coastal routes that help in fuel efficient, cost effective and environment-friendly mode of transport, especially for bulk goods, and cargos between the neighbouring nations. E.g.- The **India-Bangladesh international inland waterway connectivity route** till Sonamura in Tripura's Sepahijala district with Bangladesh for trade of cement.

<https://www.britannica.com/place/India/The-Deccan>

Q.35) Recently seen in news, which of the following is the most appropriate description of the 'Long-Term Low Emission Development Strategy' (LT-LEDS)?

- It is an international accounting tool to quantify the damage done by vehicular emissions to the atmosphere.
- It is a plan of action for reducing the production of Ozone depleting substances under the Montreal Protocol.
- It is a pledge of business leaders to reduce greenhouse gas emissions and to adopt eco-friendly technologies.
- It is a plan of action for reducing-carbon emissions, to be prepared under the Paris Climate Agreement.

Ans) d

Exp) Option d is the correct answer.

Long-Term Low Emission Development Strategy (**LT-LEDS**), a document that outlines the actions countries propose to take towards low carbon development. It is an outcome of the 2015 Paris climate conference.

LT-LEDS emerged at the 2015 Paris climate conference. According to the Paris Agreement's Article 4 paragraph 9: "All Parties should strive to formulate and communicate long-term low greenhouse gas emission development strategies, mindful of Article 2 taking into account their common but differentiated responsibilities and respective capabilities, in the light of different national circumstances." It is non-binding in nature.

The Glasgow conference in 2022 asked the member countries failed to submit their LT LEDES to do so at the COP 27-Shram El Sheik conference. As such **India submitted its LT LEDES in the COP 27 which was recently concluded in 2022.**

Source:

<https://pib.gov.in/PressReleasePage.aspx?PRID=1875816#:~:text=The%20Long%2DTerm%20Low%20Emission,6%2D18%20November%2C%202022.>

Q.36) Which of the following statements are **incorrect** about Luni River?

1. The river is saline throughout its course.
2. It drains into the Arabian Sea.
3. The river forms a deep river bed by easily eroding the sandy terrain of the desert.
4. Jojari is the only right-bank tributary of the Luni River.

Select the correct answer using the code given below.

- a) 1, 2 and 3 only
- b) 3 and 4 only
- c) 1, 2 and 4 only
- d) 1, 3 and 4 only

Ans) a

Exp) Option a is the correct answer.

Luni is the river basin in Western Rajasthan, which forms the bulk of the arid zone. It originates from western slopes of the Aravalli ranges near Ajmer flowing in Southwest direction and traversing a course of 511 km in Rajasthan, and finally flows into the Rann of Kachchh.

Statement 1 is incorrect. Luni that originates from the Naga Hills of the Aravalli Range in Rajasthan's Ajmer district, **have freshwater** during the **first hundred kilometres** but as it reaches **Balotra in Barmer**, the water starts to turn saline from the rich salt content of the surface it flows on.

Statement 2 is incorrect. Luni river **does not drain in the Arabian Sea**, rather being a part of the inland drainage basin, **it ends in Barine**, located at the north-eastern part of the marsh called the Rann of Kutch in Gujarat, without flowing into any larger water body.

Statement 3 is incorrect. The major characteristic of the Luni River is that it tends to **increase its width rather than deepening the bed** because the banks are of soils, which are easily erodible whereas beds are of sand. Since the terrain is sandy, the river cannot cut a deep bed hence a wider channel is created as the river moves forward and when there is more water, the banks overflow instead of deepening the river bed. So wide and shallow the river becomes, that it can evaporate from the surface.

Statement 4 is correct. The main tributaries of Luni are the **Jawai, Sukri, Guhiya, Bandi (Hemawas) and Jojari rivers**. Jojari is the **only right-bank tributary** while its left bank has 10 tributaries. Also, it is the **only tributary** of the Luni River which **does not have its origin at Aravalli hill**.

Source: <https://indiawris.gov.in/wiki/doku.php?id=luni>

Q.37) Which of the following rivers cut across the tropic of cancer?

1. Mahanadi
2. Narmada
3. Mahi
4. Son
5. Betwa

Select the correct option using the code given below:

- a) 1, 2 and 3 only
- b) 1, 3, 4 and 5 only
- c) 3, 4 and 5 only
- d) 1, 2, 4 and 5 only

Ans) c

Exp) Option c is the correct answer.

The river that crosses the tropic of cancer are- Sabarmati, **Mahi**, Kali Sindh (tributary of the Chambal River), Parbati (tributary of river Chambal), Ken, **Betwa**, **Son**, Damodar and Hugli.

Q.38) Which of the following rivers is/are the tributaries of Brahmaputra River?

1. Desang
2. Subarnarekha
3. Manas
4. Dhansiri

Select the correct answer using the code given below.

- a) 1, 2 and 3 only
- b) 2 and 3 only
- c) 1 and 4 only
- d) 1, 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

Options 1, 3 and 4 are correct: The Brahmaputra River originates in the north from Kailash ranges of Himalayas at an elevation of 5,150 m just south of the lake called Konggyu Tsho and flows for about a total length of 2,900 km. The **right tributaries or the North Bank tributaries** of the Brahmaputra River are- the Lohit, the Dibang, the **Subansiri**, the Jiabharali, the Dhansiri(**North**), **the Manas**, the Torsa, the Sankosh, Ronganadi, Buroi, Borgong, Jiabharali, and the Teesta.

The **left tributaries or the South bank tributaries** of Brahmaputra River are- the Burhidihing, the **Desang**, the Dikhow, the **Dhansiri(South)**, Dikhow, Bhogdoi, Dhansiri (South), Kulsi, Krishnai, Dhdhnoi, Jinjiran and the Kopili.

Option 2 is incorrect: Subarnarekha is not the tributary of Brahmaputra River. The Subarnarekha originates from the Ranchi Plateau in Jharkhand forming the boundary between West Bengal and Odisha in its lower course. It joins the Bay of Bengal forming an estuary between the Ganga and Mahanadi deltas. Its total length is 395 km.

<https://waterresources.assam.gov.in/portlet-innerpage/brahmaputra-river-system>

Q.39) Which of the following is the best description for the term 'Monsoon'?

- These are the heavy rains that pour down for weeks and months.
- It is the seasonal reversal in the direction of the winds.
- It is the sea and land breeze on a large scale.
- It is the wind that blows from a high pressure area to a low pressure area.

Ans) b

Exp) Option b is the correct answer.

When we think of a monsoon, we often think of heavy rains that pour down for weeks. While a rainy season is part of a monsoon, a monsoon is more than just rain. In fact, monsoons can also cause dry weather. Monsoons are caused by a **change in the direction of the wind that happens when the seasons change**. In fact, even the word monsoon comes from the Arabic word Mausam, which means “season.”

A monsoon is caused by a seasonal shift in the winds. The winds shift because the temperature of the land and the temperature of the water are different as seasons change. For example, at the beginning of summer, the land warms up faster than bodies of water. Monsoon winds always blow from cold to warm. In the summer, warm air rising off the land creates conditions that reverse the direction of the wind. **Hence, statement (b) is the correct answer.**

Option a is incorrect: Heavy rains that pour down for weeks and months are the impacts of the monsoon but not a definition.

Option c is incorrect: Till recent times researchers believed that monsoon is a land breeze-sea breeze on a large scale. But now a little number of researchers supporting this view. It might be one of few factors behind the monsoon but not the definition.

Option d is incorrect: Every wind blows from high pressure areas to low pressure areas. But every wind is not called as monsoon.

Source: <https://scijinks.gov/what-is-a-monsoon/>

Q.40) Recently, One of India's neighbouring countries was removed from the 'Grey List' by the Financial Action Task Force (FATF). Which of the following statements are correct about the FATF and the Grey List?

- FATF is an international non-governmental organisation which provides technical assistance to countries in financial matters.
- It includes countries on the grey list on account of its non-cooperation to fight the menace of money laundering and terrorist financing.

3. There is a likely reduction in the international investment in the country if it was grey listed by FATF.

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Recently, Pakistan has been taken off the ‘grey list’ of the Financial Action Task Force (FATF) after four years.

Statement 1 is incorrect: The Financial Action Task Force (FATF) is the global money laundering and terrorist financing watchdog. **It is an inter-governmental body** that sets international standards that aim to prevent these illegal activities and the harm they cause to society. It does not provide technical assistance to countries in financial matters.

Statement 2 is correct: FATF included countries in the Grey List on account of its failure to prevent terror funding and money laundering. This inclusion serves as a warning to the country that it may enter the blacklist. These countries have to comply with **certain conditions laid down by the FATF, failing which they run the risk of being “blacklisted” by the FATF.**

Statement 3 is correct: Although **no legal consequences** follow grey listing, it is understood that the country’s access to international loans gets restricted. Once the country is grey listed, **organisations transacting with those particular countries will increase its scrutiny to avoid any violations and international agencies may downgrade the credit rating** of these countries. This may ultimately result in the **reduction of international investment.**

Source: <https://www.fatf-gafi.org/about/>

<https://blog.forumias.com/pakistan-is-out-of-fatf-grey-list-on-terror-funding/>

<https://www.thehindu.com/news/international/explained-why-has-fatf-retained-pakistan-on-grey-list/article37121875.ece>

Q.41) What are the benefits of implementing the ‘Integrated Watershed Development Programme’?

- 1. Prevention of soil runoff
- 2. Linking the country’s perennial rivers with seasonal rivers
- 3. Rainwater harvesting and recharge of groundwater table
- 4. Regeneration of natural vegetation

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 2, 3 and 4 only
- c) 1, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

Statement 2 is incorrect: Inter-Linking the country’s perennial rivers with seasonal rivers is not a benefit of implementing the ‘Integrated Watershed Development Programme.’

Statement 1, 3 and 4 are correct: Integrated Watershed Development Programme (IWMP) is implemented by Department of Land Resources of Ministry of Rural Development. The main objective of IWMP is to restore ecological balance by harnessing, conserving and developing degraded natural resources such as

soil, vegetative cover and water. Hence, statements 1, 3 and 4 are correct as these are the benefits associated with the implementation of IWDP.

Source: UPSC 2014

Q.42) Consider the following statements:

1. Houses in Rajasthan have thick walls to neutralize the effects of extreme temperature in different seasons.
2. The houses in the Tarai region are constructed with sloping roofs as these places receive heavy snowfall.
3. The houses in Assam are built on stilts to conserve water during the rainy season.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 3 only
- c) 2 only
- d) 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

The climate of India is described as the 'monsoon' type. Despite an overall unity in the general pattern, there are perceptible regional variations in climatic conditions within the country. These variations have given rise to variety in lives of people – in terms of the food they eat, the clothes they wear and also the kind of houses they live in.

Statement 1 is correct: The temperature in Rajasthan can be extremely high during summers. It can touch degrees Celsius. Also, during winters, it gets very cold there. **The thick walls prevent the heat and cold from affecting the people in the houses.** Flat roofs are made as rainfall is scanty there. It helps in the collection of rain water on the roof.

Statement 2 is incorrect: The houses in the Tarai region, Goa and Mangalore are constructed with sloping roofs as these places are heavy rainfall areas. The monsoons shed a vast amount of moisture here. **So, the shape of the roof enables the extra water to move down to the ground.**

Statement 3 is incorrect: Assam lies in the high monsoon rainfall region of India. Being in the northeast and affected by southwest monsoons, it can be prone to floods due to heavy rainfall. So, houses are built on stilts, **to prevent water from entering homes and damaging property.**

Source: <https://ncert.nic.in/textbook.php?iess1=4-6>

Q.43) Directions: In the question given below, there are two statements marked as Assertion (A) and Reason (R). Read the statements and choose the correct option:

Assertion (A): The neutral phase of the Southern Oscillation is linked to below average monsoon in India.

Reason (R): The neutral phase of the Southern Oscillation usually brings areas of high pressure to the western Indian Ocean.

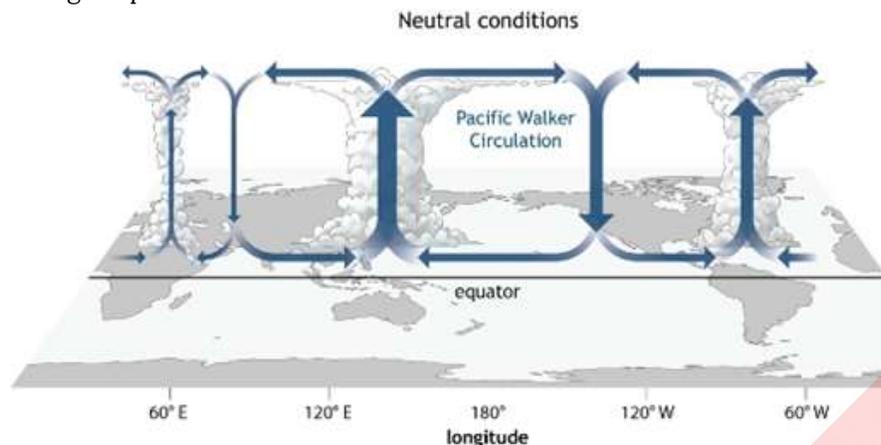

- a) Both (A) and (R) are true and (R) is the correct explanation of (A).
- b) Both (A) and (R) are true and (R) is not the correct explanation of (A).
- c) (A) is correct but (R) is wrong.
- d) (A) is wrong but (R) is correct.

Ans) d

Exp) Option d is the correct answer.

Changes in the pressure conditions over the southern oceans affect the monsoons. Normally when the tropical eastern south Pacific Ocean experiences high pressure, the tropical eastern Indian Ocean experiences low pressure. But in certain years, there is a reversal in the pressure conditions and the eastern

Pacific has lower pressure in comparison to the eastern Indian Ocean (during El Nino years). This periodic change in pressure conditions is known as the Southern Oscillation or SO.

The neutral phase of SO is when the tropical eastern south Pacific Ocean experiences high pressure, the tropical eastern Indian Ocean experiences low pressure.

The neutral phase of SO is considered good for Monsoon (**hence Assertion is wrong**) as it usually brings areas of high pressure to the western Indian Ocean (**hence Reason is correct**) but, in years when El Nino occurs, this pattern gets shifted eastward, bringing high pressure over India and suppressing the monsoon, especially in spring when the monsoon begins to develop. **Hence, option d is the correct answer.**

Source: Page 30, Chapter 4, NCERT, Geography, class 9

<https://www.downtoearth.org.in/news/global-warming-hits-walker-circulation-7892>

<https://www.thehindubusinessline.com/news/science/global-warming-to-hit-indian-monsoon-system-say-researchers/article23087945.ece>

Q.44) Consider the following statements:

1. The southwest monsoon is a continuation of the southeast trade winds.
2. The monsoon enters West Bengal from the south-westerly direction.
3. The passage of cyclonic depressions cause widespread rain during the season of retreating monsoon.
4. The Coromandel coast is situated parallel to the Bay of Bengal branch of southwest monsoon.

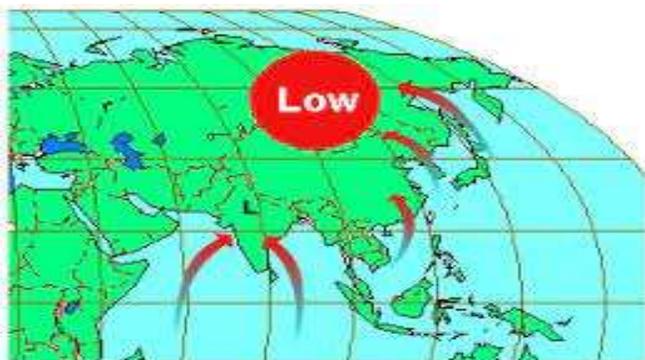

Which of the statements given above are correct?

- a) 1 and 3 only
- b) 2 and 4 only
- c) 1, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

During April and May when the sun shines vertically over the Tropic of Cancer, the large landmass in the north of Indian ocean gets intensely heated. This causes the formation of an intense low pressure in the northwestern part of the subcontinent.

Statement 1 is correct: Since the pressure in the Indian Ocean in the south of the landmass is high as water gets heated slowly, the low-pressure cell over the Indian landmass attracts the southeast trades across the Equator. **The southwest monsoon may thus, be seen as a continuation of the southeast trades deflected towards the Indian subcontinent after crossing the Equator.** These winds cross the Equator between 40°E and 60°E longitudes.

Statement 2 is incorrect: The Bay of Bengal branch strikes the coast of Myanmar and part of southeast Bangladesh. But the Arakan Hills along the coast of Myanmar deflect a big portion of this branch towards the Indian subcontinent. **The monsoon, therefore, enters West Bengal and Bangladesh from south and southeast instead of from the south-westerly direction.**

Statement 3 is correct: **The widespread rain during the season of retreating monsoon is associated with the passage of cyclonic depressions which originate over the Andaman Sea** and manage to cross the eastern coast of the southern Peninsula.

Statement 4 is correct: The Tamil Nadu (**Coromandel**) coast remains dry during southwest monsoon season. There are two factors responsible for it: (i) **The Tamil Nadu coast is situated parallel to the Bay of Bengal branch of southwest monsoon.** (ii) It lies in the rain shadow area of the Arabian Sea branch of the south-west monsoon.

Source: NCERT CLASS 9 and 11 chapter 4

Q.45) Consider the following pairs:

Organisation	Published by
1. Emissions Gap Report	United Nation Environment Programme
2. State of Global Climate Report	Intergovernmental Panel on Climate Change
3. Adaptation Gap Report	Worldwide Fund for Nature

How many pairs given above are correctly matched?

- Only one pair
- Only two pairs
- Only three pairs
- None of the pairs

Ans) a

Exp) Option a is the correct answer.

Option 1 is correct: The Emissions Gap Report has been published by the **United Nations Environment Programme (UNEP)**. Its recent report on 2022 observed that the world is **falling short of the goal of restricting global warming to under 1.5 degrees Celsius** above pre-industrial levels. **The top seven emitters** are China, the EU27, India, Indonesia, Brazil, the Russian Federation and the United States of America.

Option 2 is incorrect: The State of Global Climate Report is published by the World Meteorological Organization (WMO). It uses the following four parameters to gauge climate change viz **greenhouse gas concentrations, sea level rise, ocean heat and ocean acidification**. It observed that these indicators reached new heights in 2021, showing the increased phase of global warming and resulting climate change.

Option 3 is incorrect: The Adaptation Gap Report is published by the United Nations Environment Programme (UNEP). UNEP released its recent report on 2022 titled **“Too Little, Too Slow: Climate adaptation failure puts world at risk”**. The report called for ambitious, accelerated action to adapt to climate change is therefore paramount together with strong mitigation efforts.

Source: <https://indianexpress.com/article/india/emissions-in-india-6-other-nations-top-pre-covid-levels-8234183/>

Q.46) With reference to Season of Retreating Monsoon in India, consider the following statements:

1. October heat is a weather condition associated with the retreating monsoon season.
2. The retreating southwest monsoon season is marked by clear skies and rise in temperature.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

The climatic conditions of India can best be described in terms of an annual cycle of seasons. The meteorologists recognize the following four seasons: (i) the cold weather season (ii) the hot weather season (iii) the southwest monsoon season (iv) the retreating monsoon season.

The Season of Retreating Monsoon

Statements 1 and 2 are correct: The months of October and November are known for retreating monsoons.

The retreating southwest monsoon season is marked by clear skies and rise in temperature. The land is still moist. **Owing to the conditions of high temperature and humidity, the weather becomes rather oppressive. This is commonly known as the ‘October heat’.**

Q.47) Which of the following is/are the reasons behind the occurrence of dry spells of monsoons?

1. Less frequency of rain-bearing storms along the Inter Tropical Convergence Zone
2. Blowing of the monsoon winds parallel to the west coast
3. Southward shifting of the monsoon trough
4. Pressure gradient at Gangetic plains weakens

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 2, 3 and 4 only
- c) 1, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) a

Exp) Option a is the correct answer.

During the south-west monsoon period after having rains for a few days, if rain fails to occur for one or more weeks, it is known as break in the monsoon. These dry spells are quite common during the rainy season.

Option 1 is correct. In northern India rains are likely to fail **if the rain-bearing storms are not very frequent along the monsoon trough** or the Inter Tropical Convergence Zone (ITCZ) over this region. This would result in a **drop in humidity levels in northern plains** and the surface winds start blowing from the northwest direction. This would reduce rainfall considerably.

Option 2 is correct. Over the **west coast** the dry spells are associated with days when monsoon winds blow parallel to the coast.

Option 3 is incorrect. The monsoon breaks are brought about by the **northward shifting of the monsoon trough** (minimum low-pressure cell in ITCZ). The axis of the trough lies at the foothills of the Himalayas during the break period. Consequently, **a southward position of the monsoon trough is usually an indication of well-distributed rain** over central India and the Indo-Gangetic plains.

Option 4 is incorrect. The Monsoon trough normally slopes southward with height because there is a drop in temperature. The **pressure gradient at surface levels over the Peninsular India weakens**, while it becomes **more over the Gangetic plains**. Normally, the reverse happens during the four month-long Monsoon season.

Knowledge Base:

The Inter Tropical Convergence Zone (ITCZ) is a low-pressure zone located at the equator where trade winds converge, and so, it is a zone where air tends to ascend. In July, the ITCZ is located around 20°N-25°N latitudes (over the Gangetic plain), sometimes called the monsoon trough.

Source: Geography, Old NCERT XI, Chapter-4, Pg. 37-40

<https://www.skymetweather.com/content/weather-faqs/what-is-break-monsoon-period/>

Q.48) With reference to the effects of monsoon on lives of Indian people and the economy of India, consider the following statements:

1. The unique wetland agriculture practiced in Marathwada region is attributed to the Monsoon rains.
2. Monsoon rainfall is a major source of soil erosion in India.
3. Winter rainfall by Monsoons in north-western India is highly beneficial for rabi crops.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 2 and 3 only

Ans) b

Exp) Option b is the correct answer.

Monsoons and the Economic Life in India:

Monsoon is that axis around which revolves the entire agricultural cycle of India. It is because about 64 per cent people of India depend on agriculture for their livelihood and agriculture itself is based on southwest monsoon. Variability of rainfall brings droughts or floods every year in some parts of the country. Regional variations in monsoon climate help in growing various types of crops.

Statement 1 is incorrect: Marathwada usually receives scanty rainfall during Monsoon. The region is far from the western coast and eastern coast – and the mountain regions of Western Ghats restricts all the weather activity and leaves very little for Marathwada and interior Peninsular India.

Statement 2 is correct: Sudden monsoon burst creates problem of soil erosion over large areas in India. Erosion due to the rainfall is a major type of water induced soil erosion.

Statement 3 is incorrect: Winter rainfall by temperate cyclones in north India is highly beneficial for rabi crops. **Monsoons do not cause rain in the north-western part of India in winters to have any beneficial effect on the rabi crops.**

Source: Page 53, Chapter 4, NCERT, India Physical Geography, class 11

Page 35, Chapter 4, NCERT, Geography, class 9

Q.49) With reference to the climatic regions of India according to Koeppen's scheme, consider the following pairs:

Type of Climate	Area
1. Monsoon with short dry season	West coast of India south of Goa
2. Monsoon with dry summer	Coromandel coast of Tamil Nadu
3. Tropical savannah	western Rajasthan
4. Monsoon with dry winter	Most of North-east India
5. Cold humid winter with short summer	Arunachal Pradesh

How many pairs given above are correctly matched?

- Only two pairs
- Only three pairs
- Only four pairs
- All five pairs

Ans) c

Exp) Option c is the correct answer.

Major climatic types of India based on Koeppen's scheme Koeppen based his scheme of Climatic classification on monthly values of temperature and precipitation. He used letter symbols to denote climatic types which are further sub-divided into sub-types on the basis of seasonal variations in the distributional pattern of rainfall and temperature.

He used S for semi-arid and W for arid and the following small letters to define sub-types: f (sufficient precipitation), m (rain forest despite a dry monsoon season), w (dry season in winter), h (dry and hot), c (less than four months with mean temperature over 10°C), and g (Gangetic plain). **Accordingly, India can be divided into eight climatic regions given below:**

Type of Climate	Area
1) Amw Monsoon with short dry season	West coast of India south of Goa (Hence, pair 1 is correctly matched)
2) As – Monsoon with dry summer	Coromandel coast of Tamil Nadu (Hence, pair 2 is correctly matched)
3) Aw – Tropical savannah	Most of the Peninsular plateaus, south of the Tropic of Cancer (Hence, pair 3 is incorrectly matched)

4) Bwhw – Semi-arid steppe climate	North-western Gujarat, some parts of western Rajasthan and Punjab
5) Bwhw – Hot desert	Extreme western Rajasthan
6) Cwg – Monsoon with dry winter	Ganga plain, eastern Rajasthan, northern Madhya Pradesh, Most of North-east India (Hence, pair 4 is correctly matched)
7) Dfc – Cold humid winter with short summer	Arunachal Pradesh (Hence, pair 5 is correctly matched)
8) E – Polar type	Jammu and Kashmir, Himachal Pradesh and Uttarakhand

Source: Page 53, Chapter 4, NCERT, India Physical Geography

Q.50) Recently seen in news, 'Dirty Bomb' is a-

- Type of explosive that utilizes oxygen from the surrounding air to generate an intense explosion.
- Weapon that can attack space systems in orbit and attack targets on the earth from space.
- Second-generation thermonuclear weapon based on fusion explosion.
- Device containing radioactive material as well as conventional explosives.

Ans) d

Exp) Option d is the correct answer.

Recently, Russia has delivered a letter to the United Nations claiming that Ukraine is preparing to detonate a 'Dirty-Bomb' on its territory. The allegations, however, have been denied by Ukraine.

Option d is the correct: A **dirty bomb** also known as a radiological dispersal device is a weapon that **combines conventional explosives like dynamite and radioactive material** such as uranium.

- The primary objective of a dirty bomb is to **create panic, confusion and anxiety** by hurling radioactive dust and smoke into the atmosphere. Hence, it has been long feared as a potential weapon of terrorists.
- A dirty bomb doesn't need to contain highly refined radioactive material, as is used in a nuclear bomb. Instead, it could use radioactive materials from hospitals, nuclear power stations or research laboratories. This makes them much cheaper and quicker to make than nuclear weapons.

Option a is incorrect: A **thermobaric bomb** is a type of explosive that utilizes oxygen from the surrounding air to generate an intense, high-temperature explosion, and in practice the blast wave typically produced by such a weapon is of a significantly longer duration than that produced by a conventional condensed explosive. The fuel-air bomb is one of the best-known types of thermobaric weapons.

Option b is incorrect: Space weapons are weapons used in space warfare. They **include weapons that can attack space systems in orbit** (i.e., anti-satellite weapons), attack targets on the earth from space or disable missiles travelling through space.

Option c is incorrect: A thermonuclear weapon, **fusion weapon or hydrogen bomb** (H bomb) is a second-generation nuclear weapon design. Its greater sophistication affords it vastly greater destructive power than first-generation nuclear bombs, a more compact size, a lower mass, or a combination of these benefits.

Source: <https://blog.forumias.com/russia-tells-china-india-ukraine-planning-dirty-bomb-attack/>

https://www.icanw.org/what_are_dirty_bombs

<https://www.bbc.com/news/world-63373637>

Q.1) With reference to 'Changpa' community of India, consider the following statements:

1. They live mainly in the State of Uttarakhand.
2. They rear the Pashmina goats that yield a fine wool.
3. They are kept in the category of Scheduled Tribes.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: The Changpa are semi-nomadic Tibetan people. They are mainly found in the Changtang, a high plateau that stretches across the cold desert of Ladakh, Jammu and Kashmir.

Statement 2 is correct: They usually stay in one place for a few months in a row, near pastures where their sheep, yaks and Pashmina goats can graze.

Statement 3 is correct: In 1989 the Changpa were granted official status in India as a Scheduled Tribe.

Source: UPSC CSE 2014

Q.2) Consider the following statements with reference to the Spatial distribution of World population:

1. Climate, soil and minerals affect the distribution of the world population.
2. About 90 per cent of the world population lives in about 10 per cent of its land area.
3. The rate at which the population of countries doubles is almost the same in all the regions of the world.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1 and 2 only

Ans) d

Exp) Option d is the correct answer.

Statement 1 is correct: The Spatial distribution of the population is affected by following factors:

Geographical factors- Availability of water, Landforms, Climate, Soils.

Economic Factors- Minerals, Urbanization, Industrialization.

Social and Cultural Factors - Religious and Cultural significance.

Statement 2 is correct: The term population distribution refers to the way people are spaced over the earth's surface. **Broadly, 90 per cent of the world population lives in about 10 per cent of its land area.** The 10 most populous countries of the world contribute about 60 per cent of the world's population. Of these 10 countries, 6 are located in Asia.

Statement 3 is incorrect: There is a great variation among regions in doubling their population. Developed countries take more time to double their population as compared to developing countries.

Most of the population growth is taking place in the developing world, where population is exploding.

Source: <https://ncert.nic.in/textbook/pdf/legy102.pdf>

Q.3) Consider the following statements regarding the Population Density and the Population Growth:

1. The Population Density is a measure of the concentration of population in a geographic area.
2. Natural Growth of Population is analysed by assessing the crude birth and death rates.
3. Induced Growth of Population is assessed by inward and outward movement of people from a given area.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Statement 1 is correct: The Density of population is expressed as the number of persons per unit area. It helps in getting a better understanding of the spatial distribution of the population in relation to land. The density of population is a crude measure of human and land relationship. Population density is the concentration of individuals within a species in a specific geographic locale.

Statements 2 and 3 are correct: Growth of population is the change in the number of people living in a particular area between two points of time. The Growth rate is expressed in percentages. Population growth has two components namely; natural and induced. **The natural growth is analysed by assessing the crude birth and death rates and the induced components are assessed by the volume of inward and outward movement of people in any given area.**

Source: Pg 3, Ch: 1, NCERT Class XII: India People and Economy

Q.4) Consider the following tribes and the geographical regions where they are predominantly located:

Tribes	Geographical region
1. Yanomami	Brazil
2. Maori	Ethiopia
3. Bindibu	South Africa
4. Zulus	Australia

Which of the pairs given above is/are correct?

- a) 1 only
- b) 1 and 4 only
- c) 2 and 4 only
- d) 1, 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

Pair 1 is correct: For centuries, the **Yanomami** have inhabited a vast area of pristine forest and meandering rivers on the border between **Brazil and Venezuela**, living off fishing, hunting and fruit gathering. The lust for gold and other valuable minerals that lay beneath their ancestral territory has in recent years attracted a wave of illegal prospectors who have cut down forests, poisoned rivers and brought deadly diseases to the tribe.

Pair 2 is incorrect: **Maori people are the indigenous people of New Zealand**, also known as Polynesian indigenous tribes. It is not clear to historians on their original land but it's a well-known fact that the Māori people arrived in New Zealand in the 1300's and currently make up 15% of the population.

Pair 3 is incorrect: **The Bindibu were the native group of western Australia.** They consisted of native peoples who practiced occupations like hunting, fishing and gathering etc.

Pair 4 is incorrect: **Zulu** people refer to themselves as 'the people of the heavens' and they are **the largest ethnic group of South Africa.**

GC Leong

Q.5) With reference to 'Base Editing Technology', consider the following statements:

1. It is a genome editing technology based on CRISPR-Cas9 technique.
2. The technique causes double strand breaks (DSBs) in DNA in order to alter the molecular structure of DNA.
3. It can help in developing new type of T-cells that are capable of killing the cancerous T-cells.

Which of the statements given above is/are correct?

- a) 1, 2 and 3
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) d

Exp) Option d is the correct answer.

Recently, scientists in the United Kingdom (UK) have successfully tested a new form of cancer therapy, 'Base Editing' for the first time on a patient with T-cell Acute Lymphoblastic Leukemia (T-ALL). A teenage cancer patient suffering from T-cell acute lymphoblastic leukemia (T-ALL) has defeated her seemingly incurable cancer with the help of base editing technique.

Statement 1 is correct: Base editing is a **CRISPR-Cas9-based genome editing technology** designed to overcome the limitations of existing approaches and expand the potential of genetic medicine. Base editors can target specific base pairs within a gene and make specific changes, which makes them useful for correcting point mutations that cause genetic diseases.

Statement 2 is incorrect: Base editing allows scientists to **zoom to a precise part of the genetic code** and then alter the molecular structure of just one base, converting it into another and changing the genetic instructions **without having to break the DNA** to force the cell machinery to repair it. Base editing allows the **introduction of point mutations in the DNA without potentially harmful double strand breaks (DSBs)**. Base editing avoids double-strand breaks, thereby minimizing errors.

Statement 3 is correct: Recently, the large team of doctors and scientists used Base Editing tool to engineer a new **type of T-cell that was capable of hunting down and killing cancerous T-cells**. Using this technology, patient received genetically modified cells that were programmed to specifically attack her cancer while leaving the rest of her body alone.

Q.6) Arrange the following countries in increasing order of their Population Density.

1. India.
2. Singapore.
3. Bangladesh.
4. Maldives.

Which of the options given below is correct?

- a) 3-4-2-1
- b) 4-3-2-1
- c) 4-3-1-2

d) 1-3-4-2

Ans) d**Exp) Option d is the correct answer.**

Population density is the concentration of individuals within a species in a specific geographic locale. The Food and Agriculture Organization and World Bank population estimates ranked the countries on basis of population density.

Option d is correct: The densely populated countries in the world are as follows:

- 1) Monaco - 19,361/km².
- 2) **Singapore - 8,019/km².**
- 3) Bahrain - 2,182/km².
- 4) **Maldives - 1,802/km².**
- 5) Malta - 1,642/km².
- 6) **Bangladesh - 1,265/km².**

India is having a population density of **464/ km².**

Source: https://data.worldbank.org/indicator/EN.POP.DNST?most_recent_value_desc=true
<https://www.statista.com/statistics/264683/top-fifty-countries-with-the-highest-population-density/>

Q.7) With reference to the 'Migration in India 2020-21' report, recently released by the Ministry of Statistics and Programme Implementation, consider the following statements:

1. The rural-to-rural migration in India is dominated by the males.
2. The rural-to-urban migration was greater than the rural-to-rural migration.
3. The share of urban males that migrated in search of employment was higher than the share of rural males.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 only
- c) 2 and 3 only
- d) 3 only

Ans) d**Exp) Option d is the correct answer.**

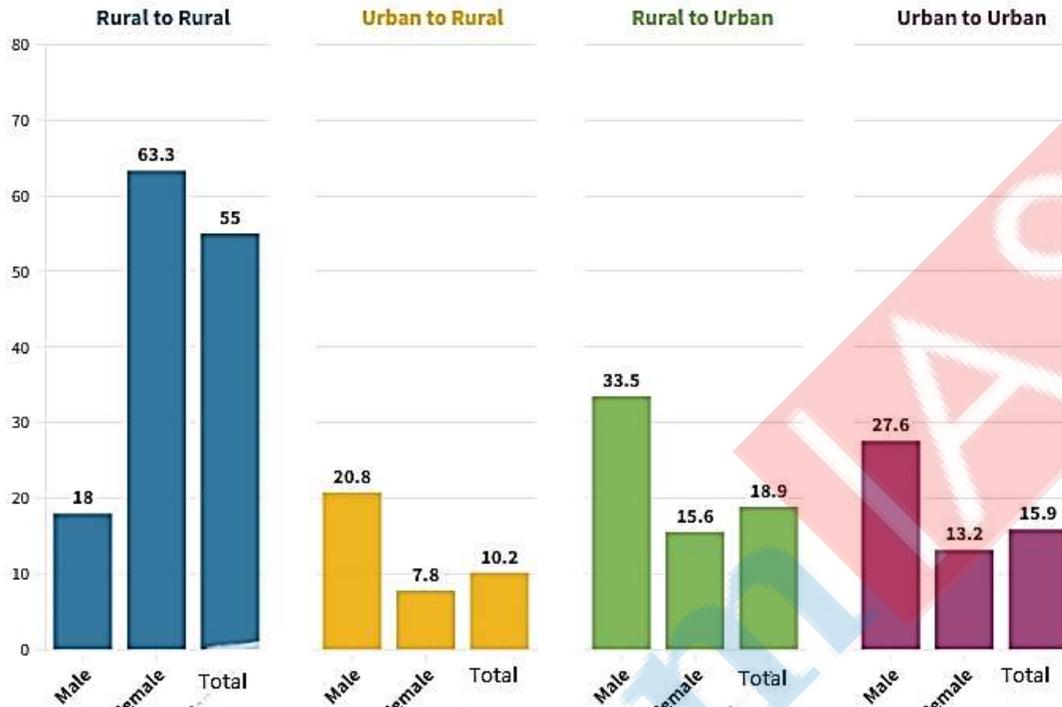

People move from one place to another in search of temporary or permanent settlements. Migration is considered the barometer of changing socio-economic and political conditions at the national and international levels. **The migration in India report (2020-21) was released for the first time along with the annual PLFS.** The key findings of the report are as follows:

Statement 1 is incorrect: More than 63% of the female internal migrants moved from rural to rural, and only 18% of males moved. **The female dominates the rural-to-rural migration.**

Statement 2 is incorrect: **The rural-to-rural migration was greater than the rural-to-urban migration.** 55% of the population moved from rural-to-rural, whereas, rural-to-urban migration was 18.9%.

Statement 3 is correct: Migration is more among rural males than urban males for all other reasons except employment and migration of earning members. That is, **the share of urban males that migrated in search of employment or for employment was higher than the share of rural males.**

Distribution of internal migrants over migration streams (2020-21 in Percentage)

Knowledge Base: some of the other key findings of the report are as follows:

- 1) The migration rate across the country was 28.9% during the period from July 2020 to 2021. The rate was 34.9% in urban areas and 26.5% in rural areas. Overall, the male migration rate was 10.7% and 47.9% for females.
- 2) 92.6% of females and 65.6% of males had moved within the same state while 7.2% of females and 31.4% of males moved to another state.
- 3) Overall, the intra-state migration was 87.5% and inter-state migration was 11.8%.
- 4) Marriage was the prime reason behind migration for more than 71% of the migrants. 86.8% of females and 6.2% of males migrated for marriage.

Source:

<https://www.mospi.gov.in/documents/213904/301563/Migration%20in%20India%202020%20211655182158691.pdf/b3963885-92fe-fd3c-a9e4-6a1732b990cc>

Q.8) India has the largest diaspora population in the world with about 18 million people from the country living outside their homeland. Arrange the following countries in ascending order based on the population of the Indian diaspora residing in these countries:

1. Saudi Arabia.
2. United Arab Emirates.
3. United States of America.
4. United Kingdom.

Which of the option given below is correct?

- a) 4-3-2-1
- b) 4-1-3-2
- c) 3-2-1-4
- d) 3-1-4-2

Ans) b

Exp) Option b is the correct answer.

The correct ascending order is United Kingdom<Saudi Arabia<USA<UAE i.e., 4<1<3<2.

The report 'International Migration 2020 Highlights', by the Population Division of the UN Department of Economic and Social Affairs (UN DESA), said the spatial distribution of transnational populations varies greatly and India's diaspora, the largest in the world, is distributed across a number of major countries of destination.

In 2020, 18 million persons from India were living outside their country of birth. Other countries with a large diaspora population included Mexico and Russia (11 million each), China (10 million) and Syria (8 million).

India's large diaspora is distributed across the **United Arab Emirates (3.5 million), the United States of America (2.7 million) and Saudi Arabia (2.5 million)**. Other countries hosting large numbers of Indian migrants included **Australia, Canada, Kuwait, Oman, Pakistan, Qatar and the United Kingdom**, the report said.

Source: <https://economictimes.indiatimes.com/nri/migrate/at-18-million-india-has-the-worlds-largest-diaspora-population/articleshow/80290768.cms?from=mdr>

Q.9) Consider the following statements regarding the International Organization for Migration (IOM):

1. It is an Intergovernmental organization working as a part of the United Nations System.
2. It was established as a result of large-scale displacement caused by the dissolution of the Soviet Union.
3. World Migration Report is an initiative of the International Organization for Migration.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: International Organization for Migration (IOM) is the leading intergovernmental organization in the field of migration and works closely with governmental, intergovernmental and non-governmental partners. It is a part of the United Nations System.

Statement 2 is incorrect: IOM was born in 1951 out of the chaos and displacement of Western Europe following the Second World War. It was set up to facilitate the resettlement of European migrants uprooted by the Second World War.

The dissolution of the Soviet Union occurred in 1991.

Statement 3 is correct: Since 2000, IOM has been producing its flagship World Migration Report every two years.

Source: <https://www.iom.int/who-we-are>

Q.10) In context of 'Art and Traditions of India', which one of the following statements correctly describes 'Dokra'?

- It is the folk dance that portrays the pain of the women, whose partners are away from home.
- It is the traditional one-act play of north India that uses masks to depict special expressions.
- It is a form of ancient bell metal craft practiced in several states of the country.
- It is a form of rod and string puppetry that is indigenous to the southern region of India.

Ans) c

Exp) Option c is the correct answer.

Dokra is a form of **ancient bell metal craft** practiced by the Ojha metalsmiths living in states like Jharkhand, Chhattisgarh, Odisha, West Bengal and Telangana. The name 'Dokra' comes from the Dhokra Damar tribes, who are the traditional metal smiths of West Bengal. Their **technique of lost wax casting is named after their tribe**, hence Dhokra metal casting.

Dokra Metal Art

The Dokra artifacts are made in **brass and are unique in that the pieces do not have any joints**. The method is combining metallurgical skills with wax techniques employing the lost wax technique, a unique form where mould is used only once and broken, making this art the only one-of-its-kind in the world. Dokra Art is still used to **craft artefacts, accessories, utensils and jewellery**.

Source: <https://www.thehindu.com/news/national/other-states/bengal-village-lalbaz-a-hub-for-dokra-metalcraft-basks-in-the-lustre-of-metal/article66288504.ece>

Q.11) Consider the following minerals:

- Bentonite
- Chromite
- Kyanite
- Sillimanite

In India, which of the above is/are officially designated as major minerals?

- 1 and 2 only
- 4 only
- 1 and 3 only
- 2, 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

Options 2, 3 and 4 are correct: Chromite is a metallic major mineral. Sillimanite and Kyanite are non-metallic major mineral.

Option 1 is incorrect: Bentonite is a minor mineral.

Source: UPSC CSE 2020

Q.12) Consider the following pairs regarding the disputed territories of the world:

Disputed Territories	Dispute Between
1. Migingo Island	Uganda and Tanzania.
2. Nagorno-Karabakh	Armenia and Azerbaijan.
3. Kuril Island	Japan and Russia.
4. Senkaku Island	Japan and China.

Which of the pairs given above are correct?

- a) 1 and 2 only
- b) 3 and 4 only
- c) 1, 2 and 3 only
- d) 2, 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

Pair 1 is incorrect: The Migingo island is the center of a territorial dispute between Kenya and Uganda. Presently, the island is co-managed by both countries. It is a 2,000 sq-meter island. It rises out of the waters of Lake Victoria.

Pair 2 is correct: Nagorno-Karabakh is a disputed territory between Armenia and Azerbaijan. It is located in a region known as the South Caucasus. The Soviet Union established the Nagorno-Karabakh Autonomous Oblast in 1923. It is home to a maximum of Armenian population and is located within Azerbaijan. In 1994, Russia brokered a ceasefire known as the Bishkek Protocol, leaving Nagorno-Karabakh de facto independent, with a self-proclaimed government.

Pair 3 is correct: Kuril Island separates the Sea of Okhotsk from the wider Pacific Ocean. The dispute is over the sovereignty of the South Kuril Islands, comprising Etorofu island, Kunashiri island, Shikotan Island and Habomai island. **Japan and Russia claim their territorial ownership of the land.** Presently, as a successor state to the USSR, Russia has occupied the region, but Japan continues to stake its claim on the islands.

Pair 4 is correct: The Senkaku Islands, controlled by Japan, are also claimed by the People's Republic of China (PRC), which refers to them as the Diaoyu Dao, as well as the Republic of China (ROC) in Taiwan, which calls them the Diaoyutai Lieyu.

Source: <https://www.thehindu.com/news/international/an-african-islands-troubled-waters/article25290324.ece>

Q.13) Consider the following statements regarding urbanisation in India with reference to Census 2011:

1. The decadal growth rate of urbanization has increased continuously since 1950.
2. Tamil Nadu is the most urbanized State in India.
3. None of the states or Union Territories in India has 100% urban population.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 3 only
- c) 2 and 3 only
- d) 1 only

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect. Enlargement of urban centers and emergence of new towns have played a significant role in the growth of urban population and urbanization in the country. But the growth rate of urbanization has slowed down from 1981 onwards. Decennial growth rate of urbanization in 1981 was 46.14%, in 1991–36.47%, in 2001–31.13%, in 2011–31.08. Thus, it has decreased.

Table 4.1 : India – Trends of Urbanisation 1901-2011

Year	Number of Towns/UAs	Urban Population (in Thousands)	% of Total Population	Decennial Growth (%)
1901	1,827	25,851.9	10.84	—
1911	1,815	25,941.6	10.29	0.35
1921	1,949	28,086.2	11.18	8.27
1931	2,072	33,456.0	11.99	19.12
1941	2,250	44,153.3	13.86	31.97
1951	2,843	62,443.7	17.29	41.42
1961	2,365	78,936.6	17.97	26.41
1971	2,590	1,09,114	19.91	38.23
1981	3,378	1,59,463	23.34	46.14
1991	4,689	2,17,611	25.71	36.47
2001	5,161	2,85,355	27.78	31.13
2011*	6,171	3,77,000	31.16	31.08

*Source: Census of India, 2011 <http://www.censusindia.gov.in> (Provisional)

Statement 2 is incorrect. Among States, Goa is the most urbanized State with 62.2 percent urban population.

Statement 3 is correct. Among all the States and Union territories, the National Capital Territory of Delhi and the Union territory of Chandigarh are most urbanized with 97.5 percent and 97.25 percent urban population respectively, followed by Daman and Diu (75.2 percent) and Puducherry (68.3 percent). Thus, there is **no state or Union Territory with 100% urbanized population.**

Source: https://censusindia.gov.in/2011-prov-results/paper2/data_files/india2/1.%20data%20highlight.pdf

Q.14) Which of the following are the Non- Conventional Energy sources?

1. Biomass.
2. Fuel cells.
3. Geothermal Energy.
4. Wind Energy.
5. Natural Gas.

Select the correct answer using the code given below:

- a) 1, 3, and 4 only
- b) 1, 3, 4, and 5 only
- c) 1, 2, 3 and 4 only
- d) 1, 2, 3, 4, and 5

Ans) c

Exp) Option c is the correct answer.

Statement 1, 2, 3 and 4 are correct: Non-Conventional Energy Sources: The sources of energy that are being produced continuously in nature and are inexhaustible are called non-conventional energy or renewable sources of energy. Following are the non-Conventional energy resources.

- 1) Biomass energy.
- 2) Solar Energy.
- 3) Fuel Cells.
- 4) Wave and Tidal Energy.
- 5) Geothermal Energy.

- 6) Co-generation.
- 7) Wind Energy.
- 8) Biogas.

Statement 5 is incorrect: Conventional sources of energy: They are generally non-renewable sources of energy, which are being used for a long time. These sources of energy are being used extensively therefore the reserves have been depleted to a great extent. Following are the Conventional energy resources.

- 1) Oil (Fossil Fuel).
- 2) Natural Gas.
- 3) Petroleum.
- 4) Atomic Energy/ Nuclear fission materials.

Source: <https://egyankosh.ac.in/bitstream/123456789/62427/1/Unit7.pdf>

Q.15) With reference to 'Purse seine fishing', consider the following statements:

1. It is a selective fishing method which captures fishes by using spear or another projectile.
2. It is used in the open ocean to target midwater fish species like tuna and mackerel.
3. This fishing method results in the accidental catch of non-target species known as bycatch.
4. Recently, the Centre has banned the seine fishing citing it is detrimental to marine ecosystem.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1, 2 and 4 only
- d) 2, 3 and 4 only

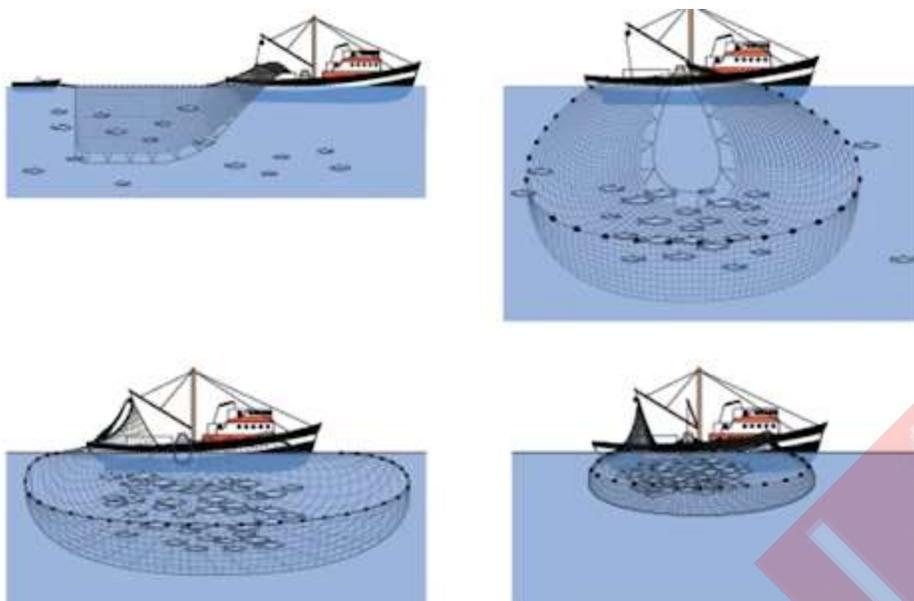

Ans) b

Exp) Option b is the correct answer.

Recently, the Central Government has told the Supreme Court that a **ban imposed by certain coastal States on purse seine fishing is not justified**. Tamil Nadu, Kerala, Puducherry, Odisha, Dadra and Nagar Haveli and Daman and Diu, and the Andaman and Nicobar Islands banned the purse seine fishing citing detrimental to marine resources in the territorial waters up to 12 nautical miles.

Statement 1 is incorrect: Purse seining is a **non-selective types of fishing method that captures everything that it surrounds**, including sea turtles and marine mammals which come in the way of the net. Purse seine fishing is typically carried out by **large vessels that are equipped with specialized equipment for deploying and hauling in the net**. The net is typically made of synthetic materials such as nylon or polyethylene, and it is typically deployed from a large drum on the back of the vessel. When a school of fish is located, the net is deployed in a circular pattern around the school and then the bottom of the net is drawn tight, or pursed, to enclose the fish. The net is then brought on board the vessel, and the fish are removed. It does not involve the use of a spear or other projectile to catch fish.

Statement 2 is correct: Purse seines fishing is used in the **open ocean to target pelagic (midwater) fish like tuna and mackerel**. A vertical net 'curtain' is used to surround the school of fish, the bottom of which is then drawn together to enclose the fish. The pelagic zone fish inhabiting the zone do not come in contact with the bottom or the shore throughout their lives.

Pure Seine Fishing

Statement 3 is correct: One of the advantages of purse seine fishing is that it allows for the capture of large quantities of fish in a single haul, which makes it an efficient fishing method. However, it can result **in the accidental catch of non-target species**, such as dolphins, turtles, and sharks, which is **known as bycatch**. The issue of bycatch has led to the development of more selective fishing gear and the implementation of measures to minimize the impact of fishing on non-target species.

Statement 4 is incorrect: The Union Ministry of Fisheries, Animal Husbandry and Dairying has recommended the **lifting of the ban on purse seine fishing (imposed by some of the states) on a report submitted by an expert committee**. The expert panel has said that this mode of fishing “per se has not resulted in any serious resource depletion so far, given the available evidence”.

Source: Purse seine fishing reveals faultlines in fisher community - The Hindu
Ban by coastal States on purse seine fishing not justified, Centre tells SC-ForumIAS Blog

Q.16) Consider the following pairs:

Region	Well-known for the production of
1. Kinnaur	Areca nut
2. Mewat	Mango
3. Coromandel	Soya bean

Which of the above pairs is/are correctly matched?

- a) 1 and 2 only
- b) 3 only
- c) 1, 2 and 3
- d) None

Ans) d

Exp) Option d is the correct answer.

Pair 1 is incorrect. The cultivation of Areca nut is mostly confined to 28° north and south of the equator. It grows well within the temperature range of 14°C and 36°C and is adversely affected by temperatures below 10°C and above 40°C. Extremes of temperature and wide diurnal variations are not conducive for

the healthy growth of the palms. Due to its susceptibility to low temperature, a good crop of Areca nut cannot be obtained at an altitude of more than 1000 metre MSL. Thus, Kinnaur is not conducive for the cultivation of Areca nut.

Areca nut is mainly grown in the states of Karnataka, Kerala and Assam.

Pair 2 is incorrect. The major mango-growing states are Andhra Pradesh, Uttar Pradesh, Karnataka, Bihar, Gujarat and Tamil Nadu. Whereas, Mewat lies on the border of Haryana and Rajasthan. Thus, Mewat and Coromandel are not known for Mango and Soya bean respectively.

Pair 3 is incorrect. The major soyabean growing states are Madhya Pradesh, Maharashtra, Rajasthan, Karnataka, and Telangana. Production of soybean in India is dominated by Maharashtra and Madhya Pradesh which contribute 89 per cent of the total production. Coromandel is not well-known for production of Soya bean.

UPSC 2014

<https://vikaspedia.in/agriculture/crop-production/package-of-practices/plantation-crops/arecanut>

Q.17) This Rural Settlement is formed on the basis of forms and shapes, and it extends on both sides of a river where there is a bridge or a ferry.

Which of the following Rural settlement is mentioned above?

- Star-shaped settlement
- T-shaped village settlement
- Double village settlement
- Linear village settlement

Ans) c

Exp) Option c is the correct answer.

The rural settlement's pattern reflects the way the houses are sited in relation to each other. Rural settlements are classified based on a number of criteria:

1) Basis of setting: Plain and plateau villages, coastal villages, forest and desert villages

2) Basis of functions: Farming and fishermen's villages, lumberjack villages, pastoral villages.

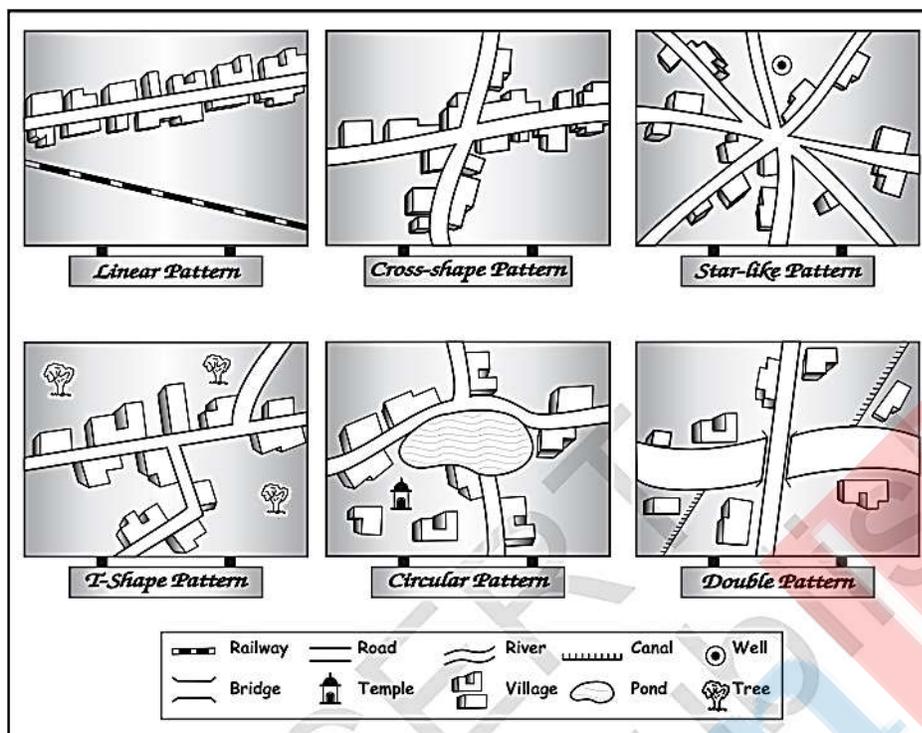

3) Basis of forms/shapes: Linear, rectangular, circular star-like, T-shaped village, **double village**, cross-shaped village, etc

Option a is incorrect: In a Star-like pattern, several roads get converged. These settlements develop by the houses built along the roads.

Option b is incorrect: In T-shaped settlements, houses develop at tri-junctions of the road.

Option c is correct: Double village is a settlement that extends on both sides of a river where there is a bridge or a ferry.

Option d is incorrect: In the Linear pattern, the houses are located along a road, railway line, river, canal edge of a valley, or along a levee.

**Knowledge Base:**

- 1) Rectangular pattern: These are found in plain areas or wide intermontane valleys. The roads are rectangular and cut each other at right angles.
- 2) Circular pattern: These villages develop around lakes, and tanks.

Source: Chapter 10: Human Settlements, NCERT Class XII: Fundamentals of Human Geography

Q.18) With reference to the market gardening, consider the following statements:

1. It usually deals with high value crops such as vegetables, fruits and flowers.
2. It completely avoids the usage of chemical fertilisers and insecticides.
3. It is ideally located in an area with good transportation links to urban areas.
4. It is different from truck farming in the sense that truck farming deals mainly with vegetables.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2, 3 and 4 only
- d) 1, 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

Statement 1 is correct: Market gardening specialise in the cultivation of high value crops such as vegetables, fruits and flowers, solely for the urban markets.

Statement 2 is incorrect: Market gardening lays emphasis on the use of irrigation, HYV seeds, fertilisers, insecticides, greenhouses and artificial heating in colder regions. Thus, it is a both labour- and capital-intensive activity.

Statement 3 is correct: The ideal location for market gardening is an area that has good transportation links with the urban centre where a high-income group of consumers is located. The farms used for market gardening are usually small.

Statement 4 is correct: Truck farming refers to the practice of **farming vegetables only**. The distance of truck farms from the market is governed by the distance that a truck can cover overnight, hence the name truck farming.

Source: NCERT Class XII: Fundamentals of Human Geography- Chapter: Primary activities.

Q.19) Which among the following can be considered as tertiary activities?

1. Transport of extracted minerals.
2. Manufacturing of Goods in a fully automated industry.
3. Making of Space ships.
4. Providing loans to farmers for acquiring tools and machines.

Select the correct answer using the code given below:

- a) 1, 2 and 4 only
- b) 2 and 3 only
- c) 1 and 4 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

Tertiary activities are not directly involved in the extraction of natural resources or processing of physical raw materials. It involves the **production of intangible goods (services) rather than the production of tangible goods**. Thus, tertiary activities are related to the service sector.

Option 1 is correct: Transport activity belongs to tertiary activity as it does not involve the production of tangible goods, rather it provides a supportive role to the mining sector (belongs to the primary sector) by moving extracted minerals from one place to another.

Option 2 is incorrect: Goods manufactured by fully automated industry is a secondary activity. Secondary activity means adding value to natural resources by transforming **raw materials into valuable products**. Hence all **manufacturing activities** are considered secondary activity because it involves a process of transforming raw materials into finished goods of higher value for sale. The degree of automation/mechanisation improves the efficiency of the process.

Option 3 is incorrect: As explained in the above statement, **making of space ships is also a manufacturing activity**.

Option 4 is correct: Loans given by moneylender or anyone to farmers or anyone is a **tertiary activity**. Financial services such as Banking, Insurance etc., are classified as tertiary activity.

Source: NCERT Class XII: Fundamentals of Human Geography- Chapter: Primary activities.

Q.20) With reference to 'Bomb Cyclones', consider the following statements:

1. It is a mid-latitude cyclone characterized by a rapid drop in atmospheric pressure.
2. It forms when high speed wind passes over the warm ocean waters.
3. These types of cyclones do not generate 'eyes' similar to the center of a hurricane.
4. It can instantly turn boiling water into ice due to heavy snow and howling winds.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 4 only
- d) 2, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Recently, Bomb Cyclone in the United States (US) have brought damaging winds and freezing temperatures that caused power outages, closed highways, grounding flights, and misery for Christmas travellers.

Statement 1 is correct: A bomb cyclone is a **large, intense mid latitude storm** that has low pressure at its centre, weather fronts and an array of associated weather, from blizzards to severe thunderstorms to heavy precipitation. It occurs when a **storm's central barometric pressure drops at least 24 millibars in 24 hours.**

Statement 2 is incorrect: Bomb cyclones form (Bombogenesis) when a **mass of low-pressure air (warm air mass) meets a high-pressure mass (cold air mass).** The air flows from high pressure to low, creating winds. Whereas, Hurricanes are formed when high speed wind passed over the warm ocean waters. Hurricanes tend to form in tropical areas and are most common in summer whereas, bomb cyclones generally occur during colder months.

Statement 3 is incorrect: The formation of eyes in the cyclones is totally dependent on the pressure gradient or the speed of wind which was eventually an effect of pressure difference. Bomb cyclones are intensified as rapidly as 690 millibars in 24 hours which is **sufficient reason for forming of the eyes in the cyclone.** Generally, Hurricane are fast blowing cyclones in the summer season and they also possess eyes in their center.

Statement 4 is correct: The hazards of a bomb cyclone can be multifaceted and vary based on the location and speed of the storm. The band of intense pressure can create heavy winds, blizzard conditions – heavy snow that can possibly reduce visibility and rainfall. Heavy snow, howling winds and air so frigid it **instantly turned boiling water into ice** took hold of much of the nation, including normally temperate southern states.

What is a Bomb Cyclone?-ForumIAS Blog

What Is a 'Bomb Cyclone'? - The New York Times (nytimes.com)

Q.21) Consider the following statements:

1. In India, State Governments do not have the power to auction non-coal mines.
2. Andhra Pradesh and Jharkhand do not have gold mines.
3. Rajasthan has iron ore mines.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 3 only

Ans) d

Exp) Option d is the correct answer.

Statement 1 is incorrect: Respective state governments conduct auction of mining licenses of non-coal minerals in India. As per the new mining law – Mines and Minerals (Development and Regulation) Amendment Act, 2015 – which came into effect from January 2015, **the non-coal mines have to be auctioned by the respective state governments.**

Statement 2 is incorrect: Both Jharkhand and Andhra Pradesh have gold mines.

Statement 3 is correct: The Iron-Ore Deposits are located in the district of Jaipur, Udaipur, Jhunjhunu, Sikar, Bhilwara, Alwar, Bharatpur, Dausa and Banswara. About 2621 million tonnes resources of Iron-Ore (Both Hematite & Magnetite) are estimated in the State. The important localities of Iron-Ore are Morija-Neemala (Jaipur), Lalsot (Dausa), Rampura, Dabla (Sikar), Taonda (Jhunjhunu), Pur-Banera, Bigod (Bhilwara), Nathara-Ki-Pal, Thur (Udaipur), Indergarh, Mohanpura (Bundi), Dedrauli, Liloti, Todupura, Khora (Karauli). Q.22) In India, the steel production industry requires the import of

- a) Saltpetre
- b) rock phosphate
- c) coking coal
- d) All of the above

Ans) c

Exp) Option c is the correct answer.

The coal found in India is mainly of non-coking quality and hence coking coal has to be imported. 70% of the steel produced today uses coal. Coking coal is a vital ingredient in the steel making process.

Saltpetre is one of the major constituents of gun powder, it is not used in the production of steel. It is used in fertilizers, fireworks.

UPSC 2015

<https://steel.gov.in/sites/default/files/chapter-21.PDF>

Q.23) With reference to types of Mining and their features, which of the following pairs is/are correctly matched?

Types of Mining	feature/ description
1. Open surface mining	Overhead costs such as safety precautions and equipment are relatively low
2. Underground mining	Higher incidents of fatal accidents
3. Rat hole mining	Deep vertical shafts with narrow horizontal tunnels

Select the correct answer using the code given below:

- a) 2 only
- b) 1 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Depending on the mode of occurrence and the nature of the ore, mining is of two types: surface and underground mining.

Pair 1 is correct. The surface mining also known as **open-cast mining is the easiest and the cheapest way of mining minerals** that occur close to the surface. Open-cast mining is a surface mining technique of extracting rock or minerals from the earth by their removal from an open pit or borrow.

Overhead costs such as safety precautions and equipment are relatively low in this method. The output is both large and rapid.

Pair 2 is correct. When the ore lies deep below the surface, **underground mining method (shaft method)** has to be used. In this method, **vertical shafts have to be sunk**, from where **underground galleries radiate to reach the minerals**. Minerals are **extracted and transported to the surface** through these passages.

This method is **risky**. Poisonous gases, fires, floods and caving in lead to fatal accidents.

When it comes to coal mining accidents, India has a higher proportion of deaths resulting from strata fall (or fall of the roof and sides of underground mines) than from the use of explosives, which account for the bulk of the accidents in countries such as China and the US.

Pair 3 is correct. Since the 1980s, rat-hole mining is the primarily practiced **mining technique in Meghalaya** in which **deep vertical shafts with narrow horizontal tunnels of 3 to 4 feet diameter** are dug and miners are sent down to extract coal till 100 to 150 metre and in some case even more than that.

Source: <https://www.firstpost.com/india/why-meghalaya-struggles-to-prevent-illegal-coal-mining-despite-repeated-tragedies-9714351.html>

<https://ncert.nic.in/ncerts/1/jess105.pdf>

Q.24) With reference to the major ports in India, consider the following:

1. Paradip port
2. Mumbai port
3. Kolkata port
4. Kandla port

Arrange the above ports from north to south and select the correct answer using the code given below?

- a) 4-3-1-2
- b) 3-4-1-2
- c) 4-3-2-1
- d) 3-4-2-1

Ans) a

Exp) Option a is the correct answer.

India has 13 major ports and 205 notified minor and intermediate ports. While the **Major Ports are under the administrative control of the Ministry of Shipping**, the non-major ports (**minor ports**) are under the jurisdiction of the respective State Government. **The twelve major seaports in India** include **Kandla port in Gujarat, Kolkata port (including Haldia) in West Bengal, Paradeep in Odisha, Mumbai port and Jawaharlal Nehru Port in Maharashtra**, Ennore, Chennai and Tuticorin port in Tamil Nadu, Marmagao in Goa, Mangalore in Karnataka, Visakhapatnam in Andhra Pradesh and Kochi in Kerala.

Kandla port in Gujarat is the northernmost major port in India.

Kolkata port in West Bengal is a major port located immediately below the Kandla port.

Paradip port in Odisha is a major port located immediately below the Kolkata port,

Mumbai port and Jawaharlal Nehru Port in Maharashtra are major ports located immediately below the Paradip port in the same order.

Source: <https://shipmin.gov.in/division/ports-wing>

Q.25) In the context of Indian Polity, which of the following statements is/are correct with respect to the ‘Delegated Legislations/Acts’?

1. The Executive organ of the Government is not authorised to make changes to a Delegated Legislation.
2. Unlike legislations enacted by the Parliament, delegated legislations cannot be subjected to judicial review.
3. The word ‘delegated legislation’ is mentioned in the Constitution of India.
4. The Parliamentary Committee on Petitions is exclusively responsible for monitoring the matters related to delegated legislation.

Select the correct answer using the code given below:

- a) 1 only
- b) 1 and 3 only
- c) 2 and 4 only
- d) None of the above

Ans) d

Exp) Option d is the correct answer.

Most of the modern socio-economic legislations passed by the **legislature lay down the guiding principles and the legislative policy**. The legislature because of lack of time leaves **matters of details to the executive**, this process is known as delegated legislation.

Statement 1 is incorrect: The Parliament makes laws in a skeleton form and authorises the **Executive to make detailed rules and regulations within the framework of the parent law**. This is known as delegated legislation or executive legislation or subordinate legislation. Such rules and regulations are placed before the Parliament for its examination.

Statement 2 is incorrect: Both delegated legislation and parliamentary legislation are subject to judicial review. For instance, recently the Supreme Court ruled that if a rule goes beyond the rule-making power conferred by the statute, the same has to be declared invalid. If a rule supplants any provisions for which power has not been conferred, it becomes invalid.

Statement 3 is incorrect: The word delegated legislation had been mentioned nowhere in the constitution of India. The concept of delegated legislation was not mentioned specifically in the Indian Constitution, but it can be understood by interpreting Article 312.

Statement 4 is incorrect: The Parliamentary Committee on Subordinate Legislation examines and reports to the House whether the powers to make regulations, rules, sub-rules and bye-laws delegated by the Parliament to the Executive are being properly exercised by it. Its role is to ensure that delegated legislation does not transgress into areas not prescribed for it and that it does not intrude into the sphere which is the sole concern of the legislature.

Source: <https://www.thehindu.com/news/national/rules-made-by-centre-state-cannot-exceed-powers-granted-by-parent-statute-sc/article66313557.ece> <https://blog.forumias.com/subordinate-legislation/#:~:text=Subordinate%20legislation%20is%20the%20legislation,Necessity%20for%20subordi,nate%20legislation>

Indian Polity -Lakshmikanth (Parliamentary committees)

Q.26) With reference to the road network in India, consider the following statements

1. The share of state highways in the total road network is higher than the share of national highways.
2. Rural roads in India constitute more than two third of the total road network in India.
3. Road sector's contribution to GVA is more than the contribution of railways, waterways and airways together.
4. NH 44 is the longest national highway of India.

Which of the statements given above are correct?

- a) 1, 2 and 4 only
- b) 2 and 3 only
- c) 4 only
- d) 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct answer.

India has a road network of over 63, 31,757 kilometres, which is the second largest in the world.

Statement 1 is correct: The State Highways constitute 2.8 percent of the total road network in the country and its total length is 1, 79,535km. **National Highways constitute 2.09 %** of the total road network in the country and its total length is 1, 32,499km.

Statement 2 is correct: Rural Roads constitute 71.4 % of the total road network in the country and its length rose to 45, 22,228 km. **Maharashtra** accounted for the largest network of Rural Roads with 4,26,327 km followed by Assam 3,72,510 km, Bihar 2,59,507 km, Uttar Pradesh 2,55,576 km and Madhya Pradesh 2,32,344 km.

Statement 3 is correct: Road transport contributes to the total GVA of the country is 3.06% against the total transport sector contribution of 4.58%. The share of Railways is 0.74% and air transport is 0.12% and Water Transport is 0.08%. **Thus, road transport contributes more than the air, railways and water transport together.**

Statement 4 is correct: NH 44 connecting Srinagar in north to Kanyakumari in south with a total length of 3745 Kilometres is the longest national Highway in India

Source: <https://pib.gov.in/PressReleasePage.aspx?PRID=1843072>

Q.27) With reference to the National Waterways of India, consider the following pairs

National Waterways	Route
1. National Waterway 1	Dhubri to Sadiya
2. National Waterway 2	Haldia to Allahabad
3. National Waterway 3	Kottapuram to Kollam
4. National Waterway 4	Kakinada to Puducherry

How many of the above given pairs are correctly matched?

- Only one pair
- Only two pairs
- Only three pairs
- All the four pairs

Ans) b

Exp) Option b is the correct answer.

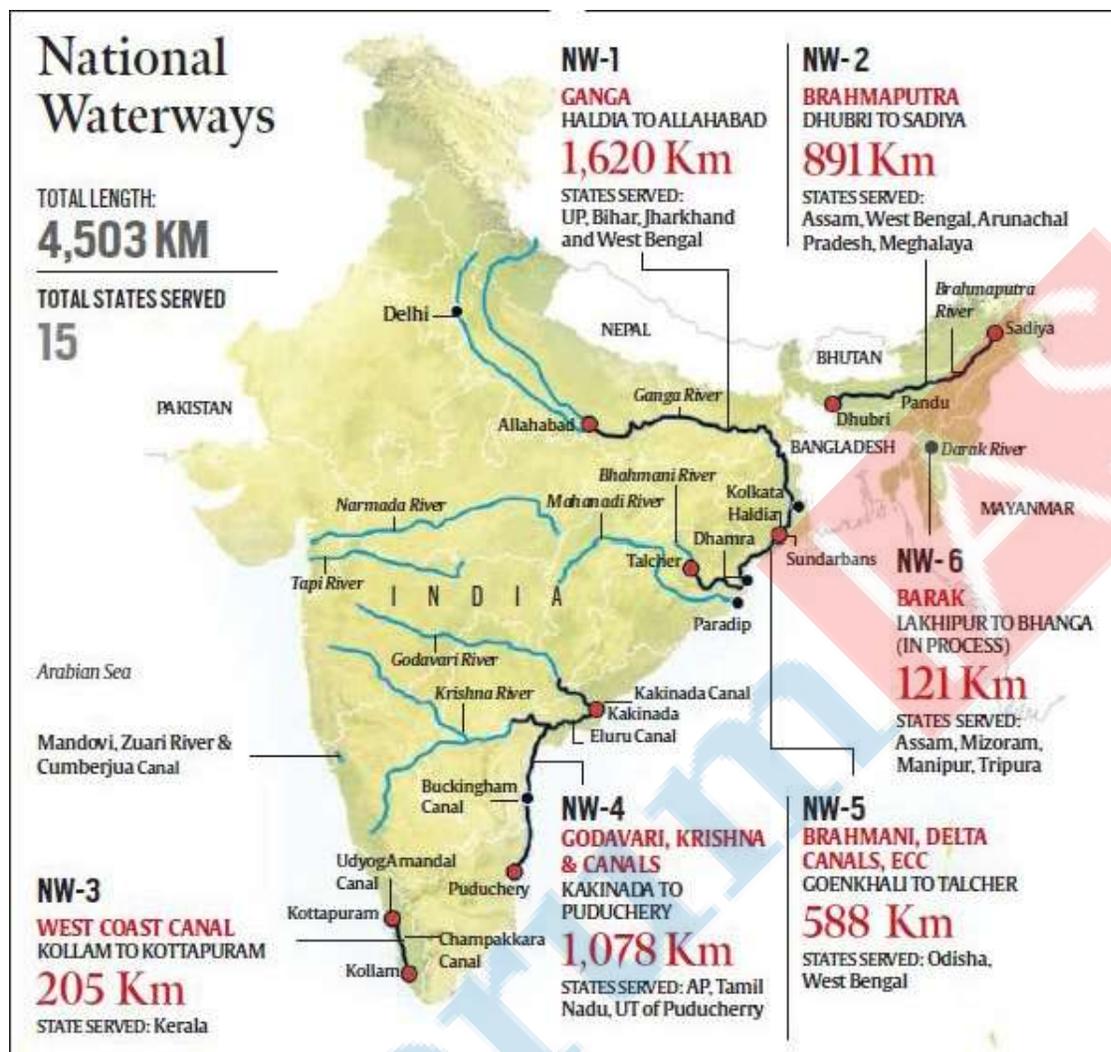

The National Waterways Act, 2016 has declared 111 inland waterways as 'National Waterways' (NWs) in the country to promote shipping and navigation on them. The total length of NWs is 20,275 kms spread across 24 States in the country.

Pair 1 is incorrectly matched: National waterway 1 on the Ganga - Bhagirathi-Hooghly River system connects **Haldia in West Bengal with Allahabad in Uttar Pradesh**. It stretches across a total distance of **1620 km**.

Pair 2 is incorrectly matched: National waterway 2 lies on the river **Brahmaputra** having a length of **891 Km** between Bangladesh Border near **Dhubri** and **Sadiya in Assam**.

Pair 3 is correctly matched: National Waterway 3 also known as the West Coast Canal is a **205 km** stretch of inland navigational route located in **Kerala, India**. It **connects Kollam and Kottapuram**.

Pair 4 is correctly matched: National waterway 4 is declared on the Krishna-Godavari River. It **connects Puducherry with Kakinada in Andhra Pradesh**. It connects the Indian states of Telangana, Andhra Pradesh, Tamil Nadu, and the union territory of Puducherry.

Source: <http://www.iwai.nic.in/waterways/national-waterways>

Q.28) According to the 2011 census, the total literacy rate in the country is 74.04%. Also, the male literacy rate is 82.14% and the female literacy rate is 65.46%. In this context, a literate is one who is aged seven and above and who has the ability to:

- do basic arithmetic calculations.
- either read or write with understanding in any language.
- do basic arithmetic calculations and read any language.
- both read and write with understanding in any language.

Ans) d

Exp) Option d is the correct answer.

For the purpose of **census 2011**, a **person aged seven and above, who can both read and write with understanding in any language**, is treated as literate. A person, who can **only read** but cannot write, is **not considered literate**.

According to the 2011 census, the total literacy rate in the country is 74.04%. The male literacy rate is 82.14% and female literacy rate is 65.46%.

Kerala remains the top state in literacy ranking in India with **93.91% literacy rate** followed by **Lakshadweep** with **92.28%** and **Mizoram** with **91.58%**. **Bihar** with a literacy rate of **63.82%** ranks last in the country preceded by Arunachal Pradesh (66.95%) and Rajasthan (67.06%).

Source: <https://knowindia.india.gov.in/profile/literacy.php>

Q.29) With reference to the major industrial regions in India, consider the following pairs:

Major Industrial regions of India **Factors responsible for its growth**

- | | |
|--|--|
| 1. Gurgaon-Delhi-Meerut Region | It's easy accessibility to minerals and power resources. |
| 2. Bangalore-Chennai Industrial Region | Its location near coalfields. |
| 3. Chotanagpur Region | Its location near iron ore sources. |
| 4. Gujarat Industrial Region | Its location near cotton growing area |

Which of the pairs given above are correctly matched?

- 1 and 3 only
- 1 and 4 only
- 2, 3 and 4 only
- 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

Option 1 is incorrect: Gurgaon-Delhi-Meerut Region is located far away from the mineral and power resources, and therefore, the industries are **light and market-oriented**. Electronics, light engineering and electrical goods are major industries of this region.

Option 2 is incorrect: Bangalore-Chennai Industrial Region is located **far away from the coalfields**. Industries in this region faces thermal power shortage and it is relying on other sources such as Hydroelectricity, Nuclear energy, Solar and Wind energy to bridge the gap. Aircraft (HAL), machine tools, telephone (HTL) and Bharat Electronics are industrial landmarks of this region.

Option 3 is correct: Chotanagpur Region owes its development to its **location near the sources of coal, iron ore and other minerals**. This facilitated the location of heavy industries in this region. Six large integrated iron and steel plants at **Jamshedpur, BurnpurKulti, Durgapur, Bokaro and Rourkela** are located within this region.

Option 4 is correct: The development of Gujarat Industrial Region is associated with the location of the cotton textile industry since the 1860s. **Located in cotton growing area, this region has double advantage of the proximity of raw materials as well as of the market.**

Statement 3 is correct: As per the WLPA 2022, both **states and the Centre can notify a conservation reserve** – an area adjacent to national parks and sanctuaries.

Statement 4 is incorrect: **The WLPA 2022 reduces the number of schedules from Six to Four now. Earlier,** there were six schedules: protected plants (one), specially protected animals (four), and vermin species (one). The new bill removes the schedule for vermin species (Vermin refers to small animals that carry diseases and destroy food e.g., Monkeys, Nilgai).

Source: <https://www.thehindu.com/sci-tech/energy-and-environment/explained-indias-wild-life-protection-act-features-shortcomings-recommended-changes/article65579474.ece>

<https://www.downtoearth.org.in/news/wildlife-biodiversity/rajya-sabha-passes-wildlife-protection-amendment-bill-2021-86456>

[https://prsindia.org/files/bills_acts/acts_parliament/2022/The%20Wild%20Life%20\(Protection\)%20Amendment%20Act,%202022.pdf](https://prsindia.org/files/bills_acts/acts_parliament/2022/The%20Wild%20Life%20(Protection)%20Amendment%20Act,%202022.pdf)

Q.31) In which of the following regions of India are shale gas resources found?

1. Cambay Basin
2. Cauvery Basin
3. Krishna-Godavari Basin

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is correct answer.

Options 1, 2 and 3 are correct: In India, Shale gas reserves are found in Cambay Basin, Krishna-Godavari Basin, Cauvery Basin, Damodar Valley, Upper Assam, Rajasthan and Vindhyan basins.

Source: UPSC CSE 2016

Q.32) It refers to work related to the highest level of decision making and policy making. It involves work related to the administration. It focuses on the creation, re-arrangement and interpretation of new and existing ideas and the use and evaluation of new technologies.

Which one of the following terms best define the above activity?

- a) Secondary activity
- b) Quaternary activity
- c) Quinary activity
- d) Primary activity

Ans) c

Exp) Option c is the correct answer.

Production involves the process of alteration of resources and/or value addition over goods produced. It takes place in five sectors of the economy viz a viz **primary, secondary, tertiary, quaternary and quinary.**

Option a is incorrect: **Secondary activities** involve manufacturing processes and construction (infrastructure) industries. It is concerned with transforming raw materials into valuable products, e.g., conversion of iron ore into steel, making yarn out of cotton, etc.

Option b is incorrect: Quaternary activities involve **the collection, production and dissemination of information.** Quaternary activities centre around **research, development** and may be seen as an advanced

form of services. **Tax consultants, software developers and statisticians**, accounting and brokerage firms all belong to this category of service.

Option c is correct: Quinary activities are services that focus on the **creation, re-arrangement and interpretation of new and existing ideas**; data interpretation and the use and evaluation of new technologies. They represent special and **highly paid skills of senior business executives**, government officials, research scientists, **financial and legal consultants, etc**

Option d is incorrect: A primary economic activity refers to an economic activity that involves collecting, extracting or harvesting natural resources. The goods produced through a primary economic activity can either be consumed directly or can be used as a raw material to produce or manufacture a different product.

Source: NCERT Class XII: Fundamentals of Human Geography- Chapter: Tertiary and Quaternary Activities

Q.33) With reference to the cotton and textile industry in India, consider the following statements:

1. As cotton is a weight losing material, the cotton industry favours its location near cotton growing areas.
2. The production of cotton in India has been steadily increasing in the last five years.
3. Government of India has launched PM MITRA scheme for the development of integrated textile regions and apparel parks.

Which of the statement/s given above is/are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 3 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

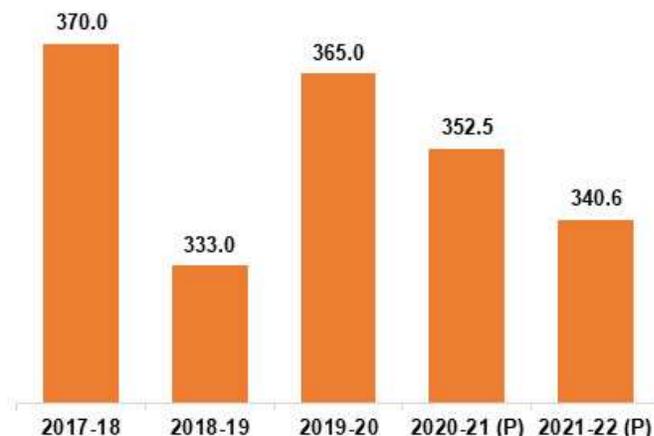

The cotton textile industry is one of the traditional industries of India. In 1854, the first modern cotton mill was established in Mumbai.

Statement 1 is incorrect: Unlike Sugarcane which loses its weight in the manufacturing process, **Cotton is a pure raw material** which does **not lose weight in the manufacturing process**. Hence the importance of raw materials has given way to the market or other factors.

Statement 2 is incorrect: India is having 1st place in the world with estimated production of 362.18 lakh bales (6.16 million Metric Tonnes during cotton season 2021-22 i.e., 23% of world cotton production of 1555 lakh bales (26.44 million Metric Tonnes). India is also the 2nd largest consumer of cotton in the world with estimated consumption of 338 lakh bales (5.75 million Metric Tonnes i.e., 22% of world cotton consumption of 1507 lakh bales (25.63 million Metric Tonnes).

The details of production of cotton during the last 5 years is given below: -

Cotton Production in India (lakh bales of 170Kg)

Source: The Cotton Corporation of India Limited (CCI); P-Provisional

So, the statement is incorrect as the production of cotton has not steadily increased in last 5 years.

Statement 3 is correct: Ministry of Textiles (MoT) has launched PM Mega Integrated Textile Regions and Apparel Parks (MITRAs) Scheme to strengthen the Indian textile industry by way of enabling scale of operations, reduce logistics cost by housing entire value chain at one location, attract investment, generate employment and augment export potential. The scheme will develop integrated large scale and modern industrial infrastructure facility for total value-chain of the textile industry for example, spinning, weaving, processing, garmenting, textile manufacturing, processing & printing machinery industry. The PM MITRA scheme is Inspired by the **5F vision Farm to Fibre to Factory to Fashion to Foreign**. It aims to **create an integrated textiles value chain** right from spinning, weaving, processing/dyeing and printing to garment manufacturing at **1 location**. Several states such as Tamil Nadu, Punjab, Odisha, Andhra Pradesh, Gujarat, Rajasthan, Assam, Karnataka, Madhya Pradesh and Telangana have expressed interest to associate themselves with this scheme.

Source: Class XII: Indian people and economy: Chapter-Manufacturing Industries

<https://www.india.gov.in/spotlight/pm-mega-integrated-textile-region-and-apparel-pm-mitra>

Q.34) With reference to the fertiliser industry in India, consider the following statements:

1. Currently, only Indian Farmers Fertiliser Cooperative Limited (IFFCO) produces the Government approved nano urea in India.
2. Many fertiliser industries in India are located near the oil refineries.
3. India meets more than two third of its urea demand through imports.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

India is the second largest producer of nitrogenous fertilisers in the world. India is the **3rd largest producer of phosphatic fertilisers** however India meets its entire **potash requirement through imports** because of the limited resources.

Statement 1 is correct: Indian Farmers Fertiliser Cooperative Limited (IFFCO) has developed **nanotechnology-based Nano Urea (Liquid) fertilizers**. IFFCO's Nano Urea is the **only Nano fertilizer approved by the Government of India**. It is Patented by IFFCO and application of 1 bottle of Nano Urea can effectively replace at least 1 bag of Urea.

Statement 2 is correct: Fertiliser industries are located near the source of raw materials. Naphtha is the most important raw material for manufacturing fertilisers. **Naphtha is derived from petroleum**; hence many fertiliser industries are **located near oil refineries**.

Statement 3 is incorrect: India, the **top importer of urea, imports about 30%** of its average annual consumption of the Urea. It means more than **2/3rd of India's urea needs is met through her domestic production**.

Source: [https://www.iffco.in/en/nano-urea-liquid-fertilizer#:~:text=IFFCO%20NANO%20UREA%20\(Liquid\),least%201%20bag%20of%20Urea.](https://www.iffco.in/en/nano-urea-liquid-fertilizer#:~:text=IFFCO%20NANO%20UREA%20(Liquid),least%201%20bag%20of%20Urea.)

<https://www.thehindu.com/business/india-aims-to-end-urea-imports-from-2025-pegs-fy23-fertilisers-subsidy-at-272-bn/article66088095.ece>

Q.35) Recently, the Ministry of Culture organised an international conference on the contributions of Jagadish Chandra Bose. Which of the following are the contributions of Jagadish Chandra Bose?

1. He was the first in the world to demonstrate wireless transmission of electromagnetic waves.
2. He developed an instrument for measuring the growth in plants.
3. He developed a method to describe chemical and physical conditions in stars.
4. His work 'Bose statistics' laid the foundation for quantum statistics.

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 1, 2 and 4 only
- c) 3 and 4 only
- d) 1, 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

Jagadish Chandra Bose (1858 – 1937) was an Indian physicist and plant physiologist. Recently the Ministry of culture organised an international conference on the contributions of J C Bose: A Satyagrahi Scientist as part of Azadi Ka Amrit Mahotsav (AKAM).

Statement 1 is correct: J C Bose **discovered wireless communication** and was named the Father of Radio Science by the Institute of Electrical and Electronics Engineering. In 1895 in Calcutta, he **publicly demonstrated wireless transmission of electromagnetic waves for the first time anywhere in the world**, using the waves to ring a distant bell and thereby to explode some gunpowder.

Statement 2 is correct: A **crescograph is a device for measuring growth in plants**. It was **invented in the early 20th century by Sir Jagadish Chandra Bose**. He developed the crescograph **to establish that plants have life** and to introduce their world to human life. He went on to demonstrate the similarities between animals and plants, particularly when it came to **reactions to different environmental, electrical, and chemical influences**.

Statement 3 is incorrect: Meghnad Saha was an **Indian astrophysicist** who developed the **Saha ionisation equation**, used to describe **chemical and physical conditions in stars**. His work allowed astronomers to accurately relate the **spectral classes of stars to their actual temperatures**.

Statement 4 is incorrect: Satyendra Nath Bose is best known for his work such as **Bose Statistics**, Bose Einstein Condensation and Higgs Boson. His work laid the **foundations of Quantum Statistics and a basis for modern Atomic Theory**. Einstein's biographer Abraham Pace regarded his work as one of the last four revolutionary papers on old Quantum Theory.

Q.36) With reference to the distribution of lithium reserves around the world, consider the following statements:

1. Australia is the world's largest producer of lithium.
2. The lithium triangle spanning Bolivia, Chile and Argentina have more than half of the world's total identified lithium reserves.
3. Currently there is no presence of Lithium reserves in India.

Which of the statement/s given above is/are correct?

- a) 1 and 3 only
- b) 2 only
- c) 1 and 2 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

Lithium is a key component of the batteries used in electric cars. Lithium is also called as white gold.

Statement 1 is correct: Australia is the world's largest lithium producer, accounting for nearly half of global production in 2020.

Statement 2 is correct: The South American Lithium triangle spanning Bolivia, Chile and Argentina have the largest estimated resources. **About 56 percent** of the world's 89 million tonnes of **identified lithium resources** are found in the South American triangle, according to the US Geological Survey (USGS).

Statement 3 is incorrect: The Atomic Minerals Directorate for Exploration and Research (AMDER) under Department Atomic Energy (DAE) has undertaken **lithium exploration in Karnataka and Rajasthan**. Preliminary surveys on surface and limited subsurface exploration by AMD, have shown **presence of Lithium resources of 1,600 tonnes (inferred category) in the pegmatites of Marlagalla – Allapatna area, Mandya district, Karnataka**. So, the statement is incorrect as lithium reserves have been found in India.

Source: <https://www.euronews.com/green/2022/10/28/south-americas-lithium-triangle-communities-are-being-sacrificed-to-save-the-planet>

<https://www.thehindu.com/news/national/karnataka/research-paper-points-to-lithium-reserves-in-mandya-district/article30864653.ece>

<https://www.weforum.org/agenda/2022/07/electric-vehicles-world-enough-lithium-resources/>

Q.37) With reference to the distribution of minerals across the world, consider the following pairs:

Regions	Rich in Minerals of
1. Ruhr	Coal
2. Boke	Lithium
3. Donbass	Bauxite

4. Antofagasta Copper

How many pairs given above is/are correctly matched?

- Only one pair
- Only two pairs
- Only three pairs
- All four pairs

Ans) b

Exp) Option b is the correct answer.

Option 1 is correct: Ruhr in Germany is bestowed with rich coal reserves. The Ruhr coalfield is one of the world's largest coalfields. Steel production and diversified chemical manufacturing constitute the other basic industries of the region. The Ruhr region is responsible for 80% of Germany's total steel production.

Option 2 is incorrect: The Boke region possesses about 57% of Guinea's total bauxite reserve. Guinea has the world's largest reserves of bauxite, a mineral used in the manufacture of aluminium, which is essential for the automotive and food industries.

Option 3 is incorrect: The Donbas region is an economic region in eastern Ukraine. It is endowed with a vast amount of lithium reserves. Ukrainian researchers have speculated that this region holds close to 500,000 tons of lithium oxide, a source of lithium, which is critical to the production of the batteries that power electric vehicles.

Option 4 is correct: The Antofagasta region in Chile is endowed with large reserves of copper. This region accounts for more than 50% of Chile's copper production. Chile is the top copper producer in the world with 29 percent of global copper production.

Q.38) With reference to the iron ore reserves in India, consider the following statements:

- Almost entire production of iron in India comes from the Haematite ore because of absence of Magnetite iron ore reserves in the country.
- Nearly one third of the total hematite resources are located in Odisha.
- Noamundi mines are the major iron ore mines located in Odisha.

Which of the statements given above is/are correct?

- 2 only
- 1 and 2 only
- 2 and 3 only
- 1 and 3 only

Ans) a

Exp) Option a is the correct answer.

There are two main types of iron ore found in India one is **haematite iron ore** and other is **magnetite** iron ore. **Magnetite** iron ore has a **higher content of iron up to 70 per cent** whereas **Haematite** ore has iron content of **50-60%**. **About 79% haematite ore deposits** are found in the **Eastern Sector** (Assam, Bihar,

Chhattisgarh, Jharkhand, Odisha & Uttar Pradesh) while about **93% magnetite ore** deposits occur in the **Southern Sector** (Andhra Pradesh, Goa, Karnataka, Kerala, & Tamil Nadu).

Statement 1 is incorrect: As per United Nations Framework Classification (UNFC) of mineral resources, **almost all the entire present-day production of iron & its products in India comes from hematite reserves. Magnetite reserves are not being exploited as these are mostly in eco-fragile areas of the Western Ghats.** Therefore, these reserves (magnetite) would remain locked up for the next decade till these can be considered for exploitation through special mining methods, which take care of environmental issues satisfactorily. **(Hence the statement is incorrect because there are ample reserves of magnetite iron ore in India but they are not being used due to the given reasons).**

Statement 2 is correct: Major reserves of haematite are located in Odisha (34% of the total hematite resources in the country) followed by **Jharkhand (23%) and Chhattisgarh (22%).**

Statement 3 is incorrect: Noamundi and Gua are important iron ore mines located in Jharkhand (not Odisha). The important iron ore mines in Odisha are Gurumahisani, Sulaipet, Badampahar (Mayurbhajar), Kiruburu (Kendujhar) and Bonai (Sundergarh)..

https://ibm.gov.in/writereaddata/files/06062017100713Iron%20and%20Steel%202020_2.pdf

Q.39) With reference to the Polymetallic nodules, consider the following statements:

1. Cobalt and Copper form the largest components of polymetallic nodules.
 2. The licence to extract it from the international sea is given by the International Maritime Organisation.
 3. The Deep Ocean mission of India aims to send humans deep into the ocean to mine polymetallic nodules.
- Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 3 only
- c) 1 and 3 only
- d) 2 and 3 only

Ans) b

Exp) Option b is the correct answer.

Polymetallic nodules, also called manganese nodules, are mineral concretions on the sea bottom formed of concentric layers of iron and manganese hydroxides around a core.

Statement 1 is incorrect: The **largest component of polymetallic nodules is Manganese (29%), Iron (6%), Silicon (5%). It contains Nickel (1.4%), cobalt (0.25%) and copper (1.3%)** along with lesser amounts of calcium, sodium, magnesium, potassium, titanium and barium.

Statement 2 is incorrect: **International Seabed Authority (not International Maritime Organisation) gives licence to mine polymetallic nodules.** The International Seabed Authority (ISA) is an autonomous international organisation established under the United Nations Convention on the Law of the Sea (UNCLOS). Its headquarters is located in Kingston, Jamaica. It granted **India an exclusive right to explore polymetallic nodules from seabed in the Central Indian Ocean Basin (CIOB).**

Statement 3 is correct: India recently launched Deep Ocean Mission, which among other things involves **developing a submersible vehicle that will allow a crew to plunge 6,000 metres into the ocean and hunt the floor for precious metals.** If this works, India would be among a handful of countries able to launch an underwater mission at such depths.

Source: <https://www.isa.org.jm/files/documents/EN/Brochures/ENG7.pdf>

<https://www.thehindu.com/news/national/government-approves-proposal-to-roll-out-project-to-explore-deep-ocean-for-resources/article34830803.ece>

Q.40) With reference to the global space exploration, consider the following pairs:

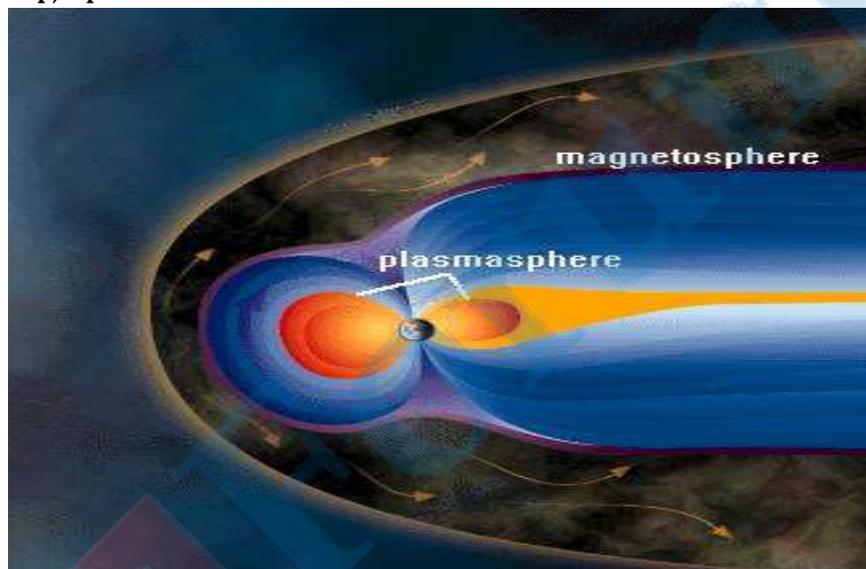

Space Mission	Objective
1. EQUULEUS	To study a region of Earth's magnetosphere
2. ARTEMIS I	To deflect asteroids' path by hitting them with spacecraft
3. Planck	To study the origin of Universe

How many pairs above are correctly matched?

- a) only one pair
- b) only two pairs
- c) only three pairs
- d) None of the pairs

Ans) b

Exp) Option b is the correct answer.

Pair 1 is correct: The Japan Aerospace Exploration Agency (JAXA) launched EQUULEUS mission. It will measure the distribution of plasma that surrounds the Earth's plasmasphere to help scientists understand the radiation environment in that region. The plasmasphere is a region of the Earth's magnetosphere consisting of low-energy (cool) plasma.

Pair 2 is incorrect: ARTEMIS I is NASA's Mission. Artemis I is the first in a series of increasingly complex missions that will enable human exploration to the Moon and Mars. Double Asteroid Redirection Test (DART) is a NASA space mission aimed at testing a method of planetary defence against near-Earth objects (NEOs).

Pair 3 is correct: Planck was Europe's first mission to study the Cosmic Microwave Background, the relic radiation from the Big Bang, which occurred about 14 thousand million years ago. It was placed in the Lagrange (L2) point.

SFG 2023 | LEVEL 1 | Test #29 – Solutions | ForumIAS

Source: <https://nssdc.gsfc.nasa.gov/nmc/spacecraft/display.action?id=EQUULEUS>
<https://www.nasa.gov/content/artemis-i-overview/>

Q.41) Consider the following pairs:

- Tribe : State**
1. Limboo (Limbu) : Sikkim
 2. Karbi : Himachal Pradesh
 3. Dongaria Kondh : Odisha
 4. Bonda : Tamil Nadu

Which of the above pairs are correctly matched?

- a) 1 and 3 only
- b) 2 and 4 only
- c) 1, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) a

Exp) Option a is the correct answer.

Pairs 1 and 3 are correct: Limboo (Limbu) tribe is found in Sikkim and Dongaria tribe is found in Odisha.

Pair 2 is incorrect: Karbi tribe is found in Assam.

Pair 4 is incorrect: Bonda tribe is found in Odisha.

Source: UPSC CSE 2013

Q.42) With reference to mining in India, consider the following mines:

1. Malanjkhand Mine
2. Banwas Mine
3. Kendadih Mine

Which of the following minerals are associated with these mines?

- a) Mica
- b) Copper
- c) Lead
- d) Aluminium

Ans) b

Exp) Option b is the correct answer.

Copper is an indispensable metal in the **electrical industry for making wires**, electric motors, transformers and generators. It is mixed with gold to provide strength to jewellery.

The Copper deposits mainly occur in Singhbhum district in **Jharkhand**, Balaghat district in **Madhya Pradesh** and Jhunjhunu and Alwar districts in **Rajasthan**.

The Malanjkhand Mine is a surface and underground **Copper** mine located in **Madhya Pradesh**. It is owned by Hindustan Copper.

The Banwas Mine is a **copper mine located in Rajasthan**. It is owned by Hindustan Copper.

The Kendadih Mine is an underground **Copper** mine located in **Jharkhand**. It is owned by Hindustan Copper.

Source: Class XII: Indian people and economy: Chapter-Minerals and Energy Resources.

<https://ncert.nic.in/textbook/pdf/jess105.pdf>

Q.43) With reference to the lead and zinc, consider the following statements:

1. The lead and zinc can never occur together in an ore.
2. India lacks self-sufficiency in zinc production but has excess production of lead.
3. In India, Rajasthan is endowed with the largest amount of lead and zinc reserves.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 3 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

Lead is a soft, heavy, toxic and highly malleable metal. It is bluish white when freshly cut, but later turns into dull grey. Zinc is a silvery blue-grey metal with a relatively low melting and boiling point.

Statement 1 is incorrect: Both lead & zinc are found to occur together in an ore along with other metals, such as, silver and cadmium. Hence the statement is incorrect.

Statement 2 is incorrect: In India, there is a **short supply of lead** because of the **high demand for lead in the country due to thriving electronic industries and electronic vehicles** e.g., 74% of the lead produced by the world is consumed by the Lead Acid Battery Sector. On the other hand, India has self-sufficiency in respect of zinc. **Hence the statement is incorrect.**

Statement 3 is correct: Rajasthan is endowed with **the largest reserves of lead-zinc ore** accounting to **89.44%**, followed by **Andhra Pradesh (3.03%), Madhya Pradesh (1.98%), Bihar (1.52%)** and **Maharashtra (1.24%)**. Lead-Zinc ore can also be found in Gujarat, Meghalaya, Odisha, Sikkim, Tamil Nadu, Uttarakhand and West Bengal.

Source: https://ibm.gov.in/writereaddata/files/10142020122001Lead_Zinc_2019_AR.pdf

Q.44) With reference to the Tertiary and Gondwana coal, consider the following statements:

1. The Gondwana coals are found in the sedimentary rocks while the tertiary coals are found in the igneous rocks.
2. Tertiary coal has higher sulphur content than the Gondwana coal.
3. Singrauli coal mines is one of the major producers of Tertiary coal in India.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) b

Exp) Option b is the correct answer.

Coal is formed due the compression of plant material over millions of years. It can be classified into **Gondwana, and Tertiary coals** based on the age of formation i.e., **Gondwana Coals are 200 million years old and Tertiary Coal is about 55 million years old.**

Statement 1 is incorrect: Both the coals are found in the sedimentary rocks and the difference lies in its age, Gondwana Coals are 200 million years old and Tertiary Coal is about 55 million years old.

Coal is an organic sedimentary rock that forms from the accumulation and preservation of plant materials, usually in a swamp environment.

Statement 2 is correct: Tertiary coals are **inferior** to Gondwanan coals. Tertiary coal is **lower in carbon content and higher amount of Sulphur** in comparison to Gondwana coals.

Statement 3 is incorrect: Singrauli Coalfield is spread across the districts of **Singrauli and Son Bhadra** in the Indian states of **Madhya Pradesh and Uttar Pradesh** respectively. It is one of the major producers of **Gondwana coals in India, not tertiary coal.**

Source: <https://ncert.nic.in/textbook/pdf/jess105.pdf>

Q.45) With reference to the Kilonava and Supernova explosions, consider the following statements:

1. Kilonava occurs as a result of the merger of stars, whereas Supernovae occur as a result of the death of stars.
2. Generally, the Kilonava explosion has a shorter time span than the Supernova explosion.
3. Both Kilonava explosion and Supernova explosion can be observed using a ground-based telescope.

Which of the statements given above is/are correct?

- a) 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Gamma Ray Bursts (GRBs) are massive but extremely bright, high-energy short gamma radiations which get released when massive stars collapse or die in the Universe. The Kilonava and Supernova explosions are a kind of GRBs.

Statement 1 is correct: Kilonava occurs as a result of the **merger of neutron stars or any binary system.** On the other hand, **supernovae occur as a result of the death of stars** as the star runs out of nuclear fuel,

some of its mass flows into its core which cannot withstand its own gravitational force. It ultimately leads to the giant explosion of star known as **supernova**.

Statement 2 is correct: When the two blackholes or neutron stars merge, it leads to release of **short GRBs** known as **Kilonova** which last for less than 2 seconds. On the other hand, when **very massive stars die**, the event results in the release of **long GRBs** known as **Supernova which lasts for more than two seconds**.

Statement 3 is correct: Both of these phenomena can be observed using the ground-based telescope. For instance, India's largest optical telescope – the 3.6 metres Devasthal Optical Telescope (DOT) – operated by Aryabhata Research Institute of Observational Sciences (ARIES), Nainital observed this phenomenon recently.

Source:

<https://indianexpress.com/article/technology/science/a-binary-merger-just-outside-our-milky-way-links-long-grb-with-kilonovae-8312136/>

Q.46) Consider the following statements regarding Natural Gas in India:

1. In India, Natural Gas is found mainly in the Northern states of Punjab and Haryana.
2. Fertilizer sector is the largest consumer of the Natural Gas in India.
3. Limited private sector investment is the major constraint in the production of Natural gas in India.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 3 only
- c) 2 and 3 only
- d) 1 and 2 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: Natural gas is a fossil energy source that is formed deep beneath the earth's surface. Natural gas contains methane, carbon dioxide, and water vapor, etc. **Natural gas is found with petroleum deposits. In India, major natural gas reserves are located in the Mumbai High, Krishna Godavari basin, Cambay basin, Tripura and Assam.**

Statement 2 is correct: The fertiliser sector is the largest consumer of natural gas today accounting for about 30 percent of consumption. The power sector which was expected to be the largest consumer of gas has fallen to third place accounting for only about 15 percent of consumption in 2021-22.

Statement 3 is correct: The challenges faced by the Natural gas production in India are ageing wells which have become less productive over time. **Private sector investment in the production of natural gas is low.** Currently, only two private entities and two public entities dominate the production of natural gas.

(Statement 2)

Q.47) Consider the following statements regarding the Technopolies:

1. It is a society with a concentration of technology-based businesses.
2. They have massive assembly structures, factories, and storage areas.
3. White Collar workers generally outnumber Blue-collar workers in the technopolies.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2, and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is correct: Technopolies is a society with a concentration of technology-based businesses. There is an emphasis on technology. They are high-tech industries that are regionally concentrated, self-sustained, and highly specialized. Silicon Valley near San Francisco and Silicon Forest near Seattle are examples of technopolies.

Statement 2 is incorrect: Neatly spaced, low, modern, dispersed, office-plant-lab buildings are the chief characteristics of the technopolies. **Technopolies do not have massive assembly structures, factories, and storage areas as in traditional industries.**

Statement 3 is correct: In the technopolies, White-collar (Professional) workers make up a large share of the total workforce. These highly skilled specialists greatly outnumber the Blue-collar (actual production) workers.

Source: <https://ncert.nic.in/textbook/pdf/legy106.pdf>

Q.48) Consider the following statements regarding World Happiness Report:

1. It is released by the World Health Organization (WHO).
2. Social support and Generosity are among the parameters used in the report.
3. Each country in the report is compared against a hypothetical nation which has the happiest people in world.
4. India has steadily improved her rankings in last 5 World Happiness reports from 2018 to 2022.

Which of the statements given above is/are correct?

- a) 2 and 4 only
- b) 1, 2, and 3 only
- c) 2 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: The World Happiness Report is a publication of the **Sustainable Development Solutions Network (not the WHO)**, powered by the Gallup World Poll data. It is published since 2012.

Statement 2 is correct: The report ranks 150 countries based on several parameters:

- 1) Real GDP per capita
- 2) Social support
- 3) Healthy life expectancy
- 4) Freedom to make life choices.
- 5) Generosity
- 6) Perception of corruption

Statement 3 is incorrect: In the report, each country is compared against a hypothetical nation called Dystopia. It is an imaginary country that has the world's least-happy people (not the happiest people). Its purpose is to have a benchmark against which all countries can be favourably compared in terms of each of the key variables. no country performs more poorly than Dystopia.

Statement 4 is incorrect: In the World Happiness Report, 2022, India saw a marginal improvement in its ranking, jumping three spots to 136, from 139 a year ago. But there is no steady improvement in her rankings from 2018 to 2022 reports i.e., last five years. India's rankings were 133th in 2018, 140th in 2019, 144th in 2020, 139th in 2021 and 136th in 2022 in World Happiness Reports.

Knowledge Base:

World Happiness Report, 2022: The year 2022 marks the 10th anniversary of the report.

- 1) Finland has been named the world's happiest country for the fifth year followed by Denmark, Iceland, Switzerland, and the Netherlands.
- 2) The biggest gains in happiness have taken place in Serbia, Bulgaria, and Romania.
- 3) Afghanistan was ranked as the unhappiest nation, followed by Lebanon, Zimbabwe, Rwanda, and Botswana, respectively.

Source: <https://worldhappiness.report/ed/2022/>
<https://worldhappiness.report/faq/>

Q.49) Often in the news, we come across terms like 'sweet crude oil' and 'sour crude oil'. In this context, which of the following statements are correct?

1. Brent crude oil is the example of sweet crude oil while Dubai crude oil is the example of sour crude oil.
2. The sweetness or sourness of the crude depends mainly on the amount of hydrogen present in the crude oil.
3. Sweet crude oil is found in the North Sea of Europe whereas sour crude oil is majorly found in Gulf of Mexico.
4. Sour crude oil is easier to refine and safer to extract than sweet crude oil.

Select the correct answer using the code given below:

- a) 1, 2 and 3 only
- b) 2 and 4 only
- c) 1 and 3 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

Crude oil is a black liquid found in geological formations. It is a fossil fuel, which means it is formed from dead organisms that are buried under intense heat and pressure. But not all crudes are alike.

Statement 1 is correct: Brent crude oil is the example of sweet crude oil while Dubai crude oil is the example of sour crude oil.

Statement 2 is incorrect: Crude oil is defined as "sour" if its sulfur content exceeds 0.5%, or if it does not meet the required thresholds for hydrogen sulfide and carbon dioxide levels. Sweet crude, on the other hand, is defined by the New York Mercantile Exchange (NYMEX) as petroleum with sulfur levels below 0.42%. **Thus, sulfur content is the main criterion for defining crude sweet or sour.**

Statement 3 is correct: Major locations where sweet crude is found include the **Appalachian Basin in Eastern North America, Western Texas, the Bakken Formation of North Dakota and Saskatchewan, the North Sea of Europe, North Africa, Australia, and the Far East including Indonesia.**

Sour crude is more common in **the Gulf of Mexico, Mexico, South America, and Canada.** Crude produced by **OPEC Member Nations** also tends to be relatively sour, with an average sulfur content of 1.77%.

Statement 4 is incorrect: Sweet crude is easier to refine and safer to extract and transport than sour crude. Because sulfur is corrosive, light crude also causes less damage to refineries and thus results in lower maintenance costs over time. Due to all these factors, sweet crude commands up to a \$15 dollar premium per barrel over sour.

Source:

<https://www.investopedia.com/terms/s/sourcrude.asp#:~:text=Crude%20oil%20is%20defined%20as,with%20sulfur%20levels%20below%200.42%25.>

<https://www.petroleum.co.uk/sweet-vs-sour>

Q.50) With reference to 'SWOT Mission', consider the following statements:

1. It is a joint collaboration between National Aeronautics and Space Administration (NASA) and Indian Space Research Organization (ISRO).
2. The objective of the mission is to collect data regarding the defunct human-made objects in space.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) d

Exp) Option d is the correct answer.

Recently, National Aeronautics and Space Administration (NASA) has launched the Surface Water and Ocean Topography (SWOT) satellite from Southern California by SpaceX Falcon 9 rocket.

Statement 1 is incorrect: Surface Water and Ocean Topography (SWOT) Mission is collaboration between **NASA and the French space agency** Centre National d'Etudes Spatiales (CNES), with contributions from the Canadian Space Agency (CSA) and the UK Space Agency.

Statement 2 is incorrect: The objective of the mission is to make the **first global survey of the Earth's surface water**; to observe the fine details of the ocean surface topography and to measure how terrestrial surface water bodies change over time.

Source: NASA set to launch first global water survey satellite -ForumIAS Blog

Overview | Mission – NASA SWOT

Q.1) Regarding the Indus Valley Civilization, consider the following statements:

1. It was predominantly a secular civilization and the religious element, though present, did not dominate the scene.
2. During this period, cotton was used for manufacturing textiles in India.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct. Indus Valley Civilization was predominantly a secular civilization. **There were no temples. There were no religious structures of any kind except the Great Bath.**

However, religion was a part of the Harappan life. The chief male deity was Pasupati, (proto-Siva) represented in seals as sitting in a yogic posture with three faces and two horns. He is surrounded by four animals (elephant, tiger, rhino, and buffalo each facing a different direction). Two deer appear on his feet. The chief female deity was the Mother Goddess represented in terracotta figurines. In latter times, Linga worship was prevalent. Trees and animals were also worshipped by the Harappans. They believed in ghosts and evil forces and used amulets as protection against them.

Statement 2 is correct. **A piece of woven cotton has been recovered from Mohenjo-Daro. Weavers wove cloth of cotton and wool. Spindle whorls were used for spinning.**

During this period, the main crops grown were wheat and barley besides sesame, mustard and **cotton**. Cotton was used for making textiles. Main exports were several agricultural products such as wheat, barely, peas, oil seeds and a variety of finished products including **cotton goods**, pottery, beads, terracotta figures and ivory products.

Source: UPSC 2011

Q.2) Which among the following describe the contemporary culture of people of the Indus Valley Civilization (IVC) and the Mesopotamia?

1. The writing system was well developed in IVC, but was absent in Mesopotamia.
2. Social stratification is seen in both Mesopotamia and IVC.

Select the correct answer using the codes given below:

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

Being one of the well-developed civilizations, both Mesopotamia and Indus valley Civilization were culturally very rich and there are lot of evidences that throw light on the then contemporary culture.

Statement 1 is incorrect: The **Indus Script is the writing system developed by the Indus Valley Civilization** and it is the earliest form of writing known in the Indian subcontinent. **Cuneiform is a method of Ancient Mesopotamian writing that was used to write different languages** in the ancient period. Writing was invented multiple times in different places in the world. One of the earliest written scripts is cuneiform, which first developed in ancient Mesopotamia between 3400 and 3100 BCE.

Statement 2 is correct: There is evidence that **social stratification was present in both IVC and Mesopotamia**. Some scholars point to varying house sizes and varied heights of structures in IVC to suggest that different social classes occupied different levels in the cities. Mesopotamia's social hierarchy too can be divided into royalty, upper class, middle class, and lower class.

Source: Old NCERT History Class 11th- RS Sharma- Chapter-6

Q.3) Which among the following is **incorrect** about the features of the Indian Mesolithic Age?

- The use of bow and arrow was not found during this period.
- A shift from big animal hunting to small animal hunting and fishing can be observed.
- Domestication of animals and horticulture started in this period.
- Small stone tools, called Microliths, can be seen in usage.

Ans) a

Exp) Option a is the correct answer.

Mesolithic or Middle Stone Age falls roughly from **10000 B.C. to 6000 B.C.** It was the transitional phase between the Paleolithic Age and Neolithic Age.

Options a is incorrect and Options b and c are correct: The hunting-gathering pattern of life continued during the Mesolithic period. However, there seems to have been **a shift from big animal hunting to small animal hunting and fishing**. The **use of bow and arrow also began during this period**. Also, there began a tendency to settle for longer periods in an area. Therefore, **the domestication of animals, horticulture, and primitive cultivation started**. Animal bones are found in these sites and these include dog, deer, boar, and ostrich.

Option d is correct: **Tiny Stone tools are found to be used during Mesolithic period. They are called microliths.**

Source: Class 11th History Chapter-2 Tamil Nadu Board

Q.4) Which among the following is considered as the earliest known evidence of a mother goddess shrine in India?

- Fire altars of Kalibangan
- Site of Surkotada
- Dhaulti Elephant
- Stone at Baghor Site

Ans) d

Exp) Option d is the correct answer.

Option a is incorrect: At **Kalibangan, fire altars have been discovered**, similar to those found at Lothal. It is argued that they serve a ritualistic one. These **altars suggest fire worship. However, they are not the earliest evidence of a shrine** as they belong to Harappan period.

Option b is incorrect: **Surkotada** is an archaeological site located in Kutch of Gujarat. It **belongs to the Indus Valley civilization (IVC)**. It is **famous for being a port city** not for evidence of Shrine.

Option c is incorrect: **Dhaulti Elephant is associated with much later Mauryan period** and it is also not of the nature of a Shrine.

Option d is correct: **Baghor site has been interpreted as the earliest mother goddess shrine in the Indian subcontinent**. It is about **11000 years old**. This is a particular stone, which has three concentric triangular striations etched into it. This stone, containing three triangles embedded in one another, is decorated with different colors and striking patterns. The local tribes in the area even till today pray to the same kind of

triangular stones. They call it 'Mai,' or, 'Mother Goddess.' This was found near Sidhi district of Madhya Pradesh.

Source: Class 11th History Chapter-2 Tamil Nadu Board

https://www.researchgate.net/figure/A-modern-shrine-at-Baghor-containing-similar-stones-courtesy-Department-of-Ancient_fig9_308724210

Q.5) Which of the following can be considered as the advantages of promoting Cactus Cultivation?

1. It may help in reducing the crude oil imports of India.
2. It is an animal feeder crop thus helps in alleviating a shortage of animal feed in severe droughts.
3. It can be used as a natural fence to prevent stray animals from entering fields.

Select the correct answer using the code given below:

- a) 1 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Cactus, often referred to as the “**green gold**” of the desert, has the potential to change the lives of farmers and contribute to the rural economy. India is looking to replicate available global models to commercially grow cactus on degraded land, eyeing its multiple uses as **biofuel, food, fodder and biofertilizer**.

Statement 1 is correct: Cactus can be used as a source of biofuel, which is a renewable energy source made from plant matter or other organic material. The government is committed to **reducing fuel imports through biofuel production** and it believes that cactus cultivation can help to achieve these goals.

Statement 2 is correct: Cactus can be used as **animal feed**, especially for livestock in arid or semi-arid regions where other types of feed may not be readily available. Thus, it can alleviate a shortage of animal feed in severe droughts.

Statement 3 is correct: Cactus can be used as a **natural fence to prevent stray animals from entering fields**. Additionally, it can be used as a **source of bio-fertilizer**, which is a type of organic fertiliser made from plant or animal matter. Thus, it can help to improve soil health and increase crop yields.

Q.6) Consider the following statements with reference to the Chalcolithic period in India:

1. Both Copper and bronze were used in the Chalcolithic period.
2. The remains of Camel have been found from this period.
3. Both wheat and rice were produced during this period.
4. People worshipped the Mother Goddess during this period.

Which of the above given statements are correct?

- a) 1 and 4 only
- b) 2 and 4 only
- c) 1, 2, and 3 only
- d) 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct answer.

With the end of the Neolithic Age, several cultures started using metal, mostly copper and low-grade bronze. The **culture based on the use of copper and stone tools was termed as Chalcolithic** meaning stone-copper Phase.

Statement 1 and 2 are correct: The new technology of smelting metal ore and crafting metal artifacts is an important development in human civilization during Chalcolithic period. But the use of stone tools was not given up. **Copper and bronze were widely used in the Chalcolithic period.** People travelled for a long distance to obtain metal ores. **People of Chalcolithic period domesticated several animals. Remains of Cows, Sheep, goats, pigs, buffaloes as well as camel have been found.** Some remains are also found belonging to either horse or wild ass. These remains are found in Rajasthan, Madhya Pradesh and Maharashtra.

Statement 3 is correct: People of the **Chalcolithic period grew rice, wheat, Bajra and several lentils such as Masur, black gram, green gram and grass pea.** Most of these grains have been found at sites near Navdatoli situated on the banks of Narmada River

Statement 4 is correct: Terracota figures of women suggest that the chalcolithic people venerated the mother goddess. Some unbaked nude clay figurines too were used for worship. A figure of mother goddess similar to that found in Western Asia has been found in Inamgaon, Maharashtra.

Source: Old NCERT Class 11th- RS Sharma- Chapter-4

Q.7) Consider the following statements with reference to Indus Valley Civilization (IVC):

1. The period of the IVC saw the use of iron implements for agriculture.
2. Tin and copper used in Bronze-making were locally available in abundance.
3. People of Harappa did not use implements of stones as they were proficient with metal tools.

Which of the above given statements is/are correct?

- a) 1 and 3 only
- b) 2 only
- c) 1 and 2 only
- d) None of the above

Ans) d

Exp) Option d is the correct answer.

Indus Valley Civilization (IVC) was among one of the largest civilizations in ancient era.

Statement 1 is incorrect: The Harappan civilisation belongs to the Bronze Age civilisation and Harappans knew how to make copper bronze tools. Although they produced bronze implements, they needed various kinds of tools for agriculture and craft production. The Harappans used chert blades, copper objects, and bone and ivory tools. **They did not have the knowledge of iron.**

Statement 2 is incorrect: Bronze is made using tin and copper. **Both of these metals were not easily available in Indus valley and had to be imported from other parts of the country or other regions.** Copper was obtained from Khetri Mines of Rajasthan and tin too was imported from other regions.

Statement 3 is incorrect: Though the people of Harappa were proficient with the usage of the metals, **they did not give up the usage of implements of stones** and created many tools out of stone. These are widely found in various IVC sites.

Source: Old NCERT History Class 11th- RS Sharma- Chapter-6

Q.8) The sites of Gudiya Caves, Bori and Hunasagi Valley are prominently associated with which of the following periods in Indian History?

- a) Paleolithic Age
- b) Vedic Age
- c) Chalcolithic Age
- d) Harappan Age

Ans) a

Exp) Option a is the correct answer.

Gudiya Caves are rock shelters in South India and known for prehistoric stone tools and culture. They were first identified by British geologist Robert Bruce Foote. This **paleolithic site is situated in the Thiruvallur district, Tamil Nadu.**

Bori is a town located in Pune district, Maharashtra. It is known for the discovery of some ancient human artefacts. This **site is considered to be one of the earliest lower paleolithic sites in India.**

The **Hunasagi Valley** is in Yadgir district in Karnataka. Its importance lies in the fact that it is the location of a number of **early Paleolithic sites.** A large number of stone tools and weapons have been discovered from this area which suggests that it was habitat as well as a factory for making equipment during the Paleolithic age.

Source: Class 11th History Chapter-2 Tamil Nadu Board

Q.9) Consider the following statements with reference to Mesolithic and Neolithic people in India:

1. The Neolithic people in India lived in houses mostly built by burnt bricks.
2. The Neolithic people cultivated Ragi and Horsegram.
3. The Mesolithic people in India also used tools made from bones.
4. The burial of dead along with artifacts such as shells were seen in Mesolithic Age.

Which of the above given statements are correct?

- a) 2 and 4 only
- b) 1 and 3 only
- c) 2, 3 and 4 only
- d) 1, 2 and 4 only

Ans) c

Exp) Option c is the correct answer.

The **Neolithic Age, which means New Stone Age,** was the last and third part of the Stone Age. In India, it spanned from around **7,000 B.C. to 1,000 B.C.** On the other hand, **Mesolithic or Middle Stone Age** falls roughly from **10000 B.C. to 6000 B.C.**

Statement 1 is incorrect: The Neolithic Age is mainly characterized by the development of settled agriculture and the use of tools and weapons made of polished stones. Neolithic people began a sedentary lifestyle in India and they were also the **first to use houses of unburnt bricks (or mud bricks)** such

as **Mehargarh town** which is considered as the first Neolithic settlement in India. The evidence of **burnt bricks found first around 3600 BC belonging to the early Harappan age.**

Statement 2 and 3 are correct: Neolithic people were the **first to practice settled agriculture in India** and produced various crops such as **Ragi and horse gram**, rice and wheat. In fact, the cultivation of plants and domestication of animals led to the emergence of village communities based on sedentary life. **Wheel pottery was invented in India around 5000 BC** i.e. during the middle Neolithic period but it was not widely used. The traditional method of handmade pottery continued and hence during Neolithic times **both wheels made and handmade potteries were used.** Artifacts of bone and deer antlers in a large morphological variety have been unearthed in many Mesolithic settlements. **Bone and antler tools were widely used by the Mesolithic people.**

Statement 4 is correct: Animal bones are found in Mesolithic sites and these include dog, deer, boar and ostrich. Occasionally, **burials of the dead along with some microliths and shells seem to have been practiced in this age** as well.

Source: Class 11th History Chapter-2 Tamil Nadu Board and Old NCERT- RS Sharma- Chapter-4

Q.10) With reference to the National Commission for Protection of Child Rights (NCPCR), consider the following statements:

1. It was established under the Juvenile Justice (Care and Protection of Children) Act.
2. Its role includes monitoring the implementations of the provisions mentioned in the United Nations Convention on the Rights of the Child.
3. Its definition of 'child' includes all children below the age of eighteen years.
4. It developed a portal called 'GHAR' to monitor the restoration and repatriation of children.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 only
- c) 2 and 4 only
- d) 2, 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

Statement 1 is incorrect: The National Commission for Protection of Child Rights (NCPCR) was set up as a **statutory body in March 2007 under the Commissions for Protection of Child Rights (CPCR) Act, 2005.**

Statement 2 is correct: The Commission is mandated under section 13 of CPCR Act, 2005 to ensure that all Laws, Policies, Programmes, and Administrative Mechanisms are in consonance with the Child Rights. These child rights are as **enshrined in the Constitution of India and the United Nations Convention on the Rights of the Child.**

Statement 3 is correct: As per the definition of **children by the commission it includes all children below the age of 18.** It looks after the matters related to deprivation and violation of child rights, non-implementation of laws providing for protection and development of children etc,

Statement 4 is correct: The NCPCR has developed and **launched The GHAR (GO Home and Re-Unite) portal to digitally monitor and track the restoration and repatriation of children.** One of the features of this scheme is digital tracking and monitoring of children who are in the Juvenile Justice system and have to be repatriated to another Country/State/District.

Q.11) The “Dharma” and “Rita” depict a central Idea of ancient Vedic civilization of India. In this context, consider the following statements:

1. Dharma was a conception of obligations and of the discharge of one’s duties to oneself and to others.
2. Rita was the fundamental moral law governing the functioning of the universe and all it contained.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct. Dharma is one of the four components of the Purushartha i.e., the aims of life. It signifies the conception of obligations and of the discharge of one’s duties to oneself and to others. It signifies behaviors that are considered to be in accord with Rita, the order that makes life and universe possible. It includes duties, rights, laws, conduct, virtues and "right way of living".

Statement 2 is correct. Rita, in the Vedic religion, was the principle law or natural order which regulates and coordinates the operation of the universe and everything within it. Rita is ultimately responsible for the proper functioning of the natural, moral and sacrificial orders.

Source) UPSC 2011

Q.12) Consider the following statements with reference to urban architecture and house planning during the Indus Valley Civilization:

1. There was a large-scale use of burnt bricks in construction.
2. An underground drainage system connecting houses to the street drains was present.
3. Circular Brick platforms were seen near granaries.
4. Two-roomed barracks have been found.
5. The houses had wells for water usage.

Which of the above-given statements are correct?

- a) 1, 4 and 5 only
- b) 2, 3 and 4 only
- c) 1, 3, 4 and 5 only
- d) 1, 2, 3, 4 and 5

Ans) d

Exp) Option d is the correct answer.

The Harappan culture is distinguished by its system of urban and house planning.

Statement 1 is correct: There was a large-scale use of burnt bricks in almost all kinds of constructions including houses, granaries, bathhouse etc.

Statement 2 and 3 are correct: One of the remarkable features of IVC was the **underground drainage system connecting all houses to the street drains which were covered by stone slabs** or bricks. There is also seen creation of large granaries in these sites. And **various circular brick platforms can be seen close to these granaries** in IVC sites.

Statement 4 is correct: There is **evidence of threshing the grains** of Wheat and barley near granaries in IVC sites and **creation of two roomed barracks, which were there probably to house labourers.**

Statement 5 is correct: There was not much furniture in IVC, but the homes had wells for water and bathrooms with pipes that carried waste into the main drains. Some even had toilets, which were the first in the world. Cleanliness was important to the Indus Valley people.

Source: Old NCERT History Class 11th- RS Sharma- Chapter-6

Q.13) Consider the following statements with reference to the Neolithic Cultures of Northeastern parts of India:

1. Use of Cord-impressed Pottery is one of the key features of these cultures.
2. These cultures are also known for the practice of rice cultivation.
3. They are known for their high-rise burial mounds.

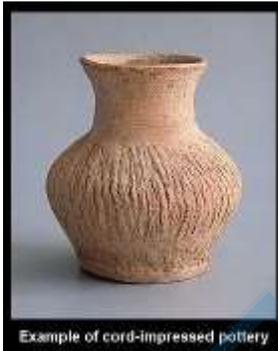

Which of the above given statements is/are correct?

- a) 2 only
- b) 2 and 3 only
- c) 1 and 2 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 and 2 are correct: Cord-marked pottery or cord-impressed pottery is an early form of a simple earthenware pottery **made in several sites of the neolithic cultures of Northeastern parts** of India. Neolithic cultures of Northeastern India are **also known for their rice cultivation and usage of shouldered celt**. These sites are found in Assam, Arunachal Pradesh and other northeastern states as well.

Statement 3 is incorrect: There is **no evidence of neolithic cultures in Northeastern India to practice the making of high-rise burial mounds** as such.

Source: Old NCERT History Class 11th- RS Sharma- Chapter-4

Q.14) Consider the following statements with reference to the economic life during the period of Indus Valley Civilization (IVC):

1. As it occurred after the Chalcolithic Age, Harappans are known to use metallic money.
2. Certain Harappan sites were specialized in the production of specific craft materials.
3. Harappan peoples had trade relations with the people of Mesopotamia.
4. Ivory and timber were exported from Indus Valley Civilization.

Which of the above given statements is/are correct?

- a) 1, 3 and 4 only
- b) 2 only
- c) 2, 3 and 4 only
- d) 1, 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

There was a great progress in Harappan Age in all spheres of economic activity such as agriculture, industry and crafts and trade.

Statement 1 is incorrect: Harappans are not known to use metallic money. We have no idea about their currency. Most probably they carried out their exchanges through barter.

Statement 2 is correct: Certain Harappan sites specialised in the production of certain craft materials. The following table presents the major centres of craft production.

Material	Site or Source
Shell	Nageshwar and Balakot
Lapis lazuli	Shortughai
Carnelian	Lothal
Steatite	South Rajasthan
Copper	Rajasthan and Oman

Statement 3 is correct: People in Harappan Age practiced navigation on the coast of Arabian Sea. There are several evidences that people from IVC practiced commerce with the people living near the Tigris and Euphrates. Many Harappan seals have also been discovered in Mesopotamia. The Mesopotamia records refer to trade links with Meluha, which was the ancient name given to the region of Indus Valley. The Mesopotamian texts refer to two intermediate trading stations between Mesopotamia and Meluha, namely Dilmun and Makan. Dilmun have been identified with probably being what is known as Bahrain currently.

Statement 4 is correct: Trade between Indus Valley and Mesopotamia appears skewed in IVC's favour. IVC exported gold jewelry, Ivory seals & boxes, Timber, Cotton textiles, Copper & bronze fish-hooks, Carnelian & precious stone beads, Live chicken, Shell & bone inlays, and even Water buffaloes.

Source: Old NCERT History Class 11th- RS Sharma- Chapter-6

Q.15) In the context of Indian polity, which of the following are the benefits enjoyed by a party if it is given the status of 'National Party'?

1. Once granted, the status cannot be revoked by the Election Commission of India.
2. They are eligible to get dedicated broadcasts on state owned television and radio stations.
3. They are allotted a symbol exclusively reserved for its use throughout the country.

Select the correct answer using the code given below:

- a) 1 and 3 only
- b) 2 and 3 only
- c) 2 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

A political party becomes eligible to be recognised as a national party if it fulfils any of the three conditions laid down by the Election commission of India (ECI). The status of national parties grants them certain advantages.

Statement 1 is incorrect: The national party status is not permanent in nature. The ECI has laid down the technical criterion for a party to be recognised as a national party. A party may gain or lose national party status from time to time, depending on the fulfilment of the certain conditions. For instance, ECI following

the last Lok Sabha election issued a show cause notice to three national parties asking them why their national party status should not be withdrawn.

Statement 2 is correct: The national party status also makes the party eligible to get a free electoral list, political broadcast in state owned television and radio stations.

Statement 3 is correct: A National party is entitled to a pan India symbol for its candidates contesting from across the country. This is critical for political parties since a large section of voters in the country are illiterate and depend on symbols to identify the party they want to vote for.

Source: <https://indianexpress.com/article/india/india-others/what-does-national-party-status-mean/>

Lakshmikanth - Political Dynamics

Q.16) Consider the following statements with reference to religious practices of Indus Valley Civilization:

1. People of Indus Valley Civilization are known to worship trees.
2. There is a prevalence of phallus worship in the Indus Valley Civilization.
3. Amulet wearing is common during this period which is believed to be used for warding off evil forces.
4. Indus Valley people were familiar with the practice of yoga.

Which of the above given statements are correct?

- a) 1 and 3 only
- b) 2 and 4 only
- c) 1, 2 and 3 only
- d) 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct answer.

From the seals, terracotta figurines and copper tablets we get an idea on the religious life of the Harappans.

Statement 1 and 2 are correct: People of Indus Valley Civilization are known to worship trees and animals. A plant growing out of the embryo of women is seen in one figurine, representing significance of the plants and trees. The picture of a god is represented on a seal in the midst of branch of Pipal. **There is also a prevalence of phallus worship in the Indus Valley Civilization.** Numerous symbols of phallus and female sex organs made of stone have been found in Harappa, which were probably meant for worship.

Statement 3 is correct: Amulet wearing was very common during Harappan period. Harappans believed that they can be used for warding off evil forces and ghosts.

Statement 4 is correct: The beginnings of Yoga were developed by the Indus-Sarasvati civilization in Northern India over 5,000 years ago. Yogic postures can clearly be seen in many seals that have been found in IVC.

Source: Old NCERT History Class 11th- RS Sharma- Chapter-6

Q.17) Who among the following were the contemporaries of Vardhamana Mahavira?

1. Purana Kassapa
2. Makkhali Gosala
3. Ajita Kesakambalin
4. Bindusara
5. Parshvanatha

Select the correct answer using the code given below:

- a) 1, 2 and 3 only
- b) 1, 2, 3 and 5 only

- c) 2, 4 and 5 only
d) 3 and 4 only

Ans) a

Exp) Option a is the correct answer.

Option 1 is correct: Purana Kassapa was an Indian ascetic teacher who lived around the 6th century BCE and was a contemporary of Mahavira and the Buddha.

Option 2 is correct: Makkhali Gosala was considered as the greatest of the Ajivika sect. He was a contemporary of Mahavira, the last and 24th Tirthankara of Jainism.

Option 3 is correct: Ajita Kesakambali was considered to be a forerunner to the Charvaka school. He was a contemporary of the Buddha and Mahavira. The doctrines of the Lokayata school were considerably drawn from Ajita's teachings.

Option 4 is incorrect: Bindusara (who rule between 297 – 273 BCE) was the second Mauryan emperor of India. He was the son of the Chandragupta Maurya and the father of its most famous ruler Ashoka. Ajivika philosophy reached its zenith during his rule. He was not the contemporary of Mahavira.

Option 5 is incorrect: Parshvanatha was the 23rd of 24 Tirthankaras (supreme preachers of dharma) of Jainism. Parshvanatha was born 273 years before Mahavira. He was the spiritual successor of 22nd tirthankara Neminatha. He is popularly seen as a propagator and reviver of Jainism.

Source: 11th TN SCERT - Chapter-Rise of Territorial Kingdoms and New Religious Sects

Q.18) Which among the following can be considered as reason(s) for Mesolithic settlements to be found near hilly areas or hilly river valley areas?

1. These settlements depended upon chips of stone for their tools.
2. These regions had absence of the wild animals.
3. Such areas were easy for transport of material via river streams on boats for trading.

Select the correct answer using the code given below:

- a) 1 only
b) 3 only
c) 1 and 3 only
d) 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

Most of the evidence of settlements of Neolithic and Mesolithic people have been found nearby hills.

Statement 1 is correct: The Neolithic and Mesolithic people did not live far away from the hilly areas. They habited mainly the hilly river valleys, rock shelters, and the slopes of the hills since they were entirely dependent on weapons and tools made from stone and stone chips. They inhabited the northern spurs of the Vindhyas, Kashmir, South India, Eastern India, Meghalaya (the north-eastern frontier of India), and Mirzapur and Allahabad districts of Uttar Pradesh.

Statement 2 is incorrect: There is no specific reason of hilly regions and hilly river valleys providing protection from animals to the people of Mesolithic and Neolithic settlements. Also, absence of animals is also an exaggerated statement.

Statement 3 is incorrect: People of Mesolithic settlements were not advanced enough to transport material from one place to another via river streams on boats. Thus, this is logically incorrect.

Source: Class 11th History Chapter-2 Tamil Nadu Board and Old NCERT Class 11th- RS Sharma- Chapter-4

Q.19) During the 6th century BCE, Northern India underwent a remarkable intellectual awakening. In this context, which among the following were the reasons for the growth of new religions during this period?

1. The gap between economic status and social recognition pushed some to question the existing social structure.
2. Absence of equality between Kshatriyas and Brahmanas caused animosity between them.
3. The declining trend of territorial identities made people to associate themselves with Buddhism and Jainism in distant areas.
4. Ritual rigidity advocated by Upanishads pushed many people to adopt heterodox religions.

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 1, 2 and 4 only
- c) 1, 2 and 3 only
- d) 2, 3 and 4 only

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: With urbanization and expansion of trade, new classes of merchants and bankers sought higher social status appropriate to their economic status. Their discontent over discrimination meted out to them by Hindu religion made them to join new religion. For instance, a large number of Vaishyas joined Jainism.

Statement 2 is correct: The Kshatriyas resisted the dominance of Brahmanas and they didn't like the discriminatory treatment meted out to them by Brahmanas. The Kshatriyas were denied a staged life of ashramas, a privilege permitted only to Brahmins in the Vedic texts. Thus, many kings started thinking about converting their religion.

Statement 3 is incorrect: The emergence of territorial identities accelerated the process of socio-political and economic changes. The elite class protesting the varna system began to move towards Magadha where the heterodox religions such as Buddhism and Jainism were blossoming.

Statement 4 is incorrect: It is Vedic religion that advocated ritual extremity. Upanishads were born in response against such rituals. It preferred meditation and introspection to the extravagant sacrifices of Vedic scriptures. However, its ideas were even more abstract than the rituals themselves and hence, people who needed a new, unambiguous, simple thought or belief systems started adopting heterodox religion such as Buddhism and Jainism which preached largely in simple terms and common language.

Q.20) With reference to the recently adopted 'Singapore Declaration', consider the following statements:

1. It was adopted and enacted by the World Economic Forum.
2. It aims to address challenges associated with labour markets.
3. It asked countries to promote equal pay for equal work for male and female.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 and 3 only
- c) 2 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

International Labour Organization (ILO) is the **only tripartite U.N. agency, since 1919**. It brings together **governments, employers and workers** of 187 member States, to set labour standards, develop policies and devise programmes promoting decent work for all women and men.

Statement 1 is incorrect: The Singapore declaration was adopted at the 17th Asia and the Pacific Regional Meeting of the International Labour Organisation (APRM of ILO). The Meeting set **ten-point priorities of national action** called **Singapore declaration** for the member countries to deal with the issue of dwindling wages of **workers, inflation and unemployment**.

Statement 2 is correct: The Singapore Declaration was aimed at addressing the labour market changes in a country. It said that **social dialogue** is essential to address labour market challenges and finding solutions in crisis situations such as the COVID-19 pandemic, natural disasters, and economic uncertainty.

Statement 3 is correct: Singapore declaration called for closing gender gaps in the world of work through measures that **increase women's labour force participation, promote equal pay for work of equal value, balance work and responsibilities, and promote women's leadership**.

Source: <https://www.thehindu.com/news/national/promote-freedom-of-association-do-not-curb-workers-rights-ilo-declaration/article66243782.ece>

Q.21) With reference to the religious history of India, consider the following statements:

1. Sautrantika and Sammitiya were the sects of Jainism.
2. Sarvastivadin held the view that, constituents of phenomena existed forever in a latent form.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect. Sautrantika and Sammitiya were the early **sects of Buddhism**. The Sautrāntikas held the Buddhist sutras are central to their views, over and above the ideas presented in the Abhidharma literature. Sammitiya is an ancient Buddhist School that believed that though an individual does not exist independently from the five skandhas, or components, he is at the same time something greater than the mere sum of his parts.

Statement 2 is correct. The Sarvāstivādin was one of the early Buddhist schools established around the reign of Asoka. It was particularly known as an Abhidharma tradition, with a unique set of seven Abhidharma works. Sarvastivadin held that the constituents of phenomena were not wholly momentary, but existed forever in a latent form. It believes that all things exist, and exist continuously, in the past and the future as well as in the present.

Source) UPSC 2017

Q.22) With reference to 'Tribal Polity during Rigvedic period', consider the following pairs:

Functionaries	Functions
1. Purohita	Advising the Ruler
2. Spasa	Driver of the King's Chariot

SFG 2023 | LEVEL 1 | Test #30 – Solutions | ForumIAS

3. Vrajapati In charge of
 pasture land
4. Gramini Collection of Tax

How many pairs given above are correctly matched?

- a) Only one pair
b) Only two pairs
c) Only three pairs
d) All four pairs

Ans) b

Exp) Option b is the correct answer.

The administrative machinery of the Aryans in the Rig Vedic period functioned with the tribal chief, for his successful leadership in war, at the Centre. He was called Rajan. It seems that in the Rig Vedic period, the king's post had become hereditary. However, the Rajan was a kind of chief and did not exercise unlimited power, having to reckon with the tribal organizations.

Pair 1 is correctly matched: In the day-to-day administration, the king was assisted by a few functionaries. The most important of these seems to have been the Purohita. The **Purohita assisted and advised the chief on various matters**. The two priests who played a major role in Rig Vedic times were Vasishtha and Vishvamitra.

Pair 2 is incorrectly matched: The Rajan held the **Spies called Spasa** to keep an eye on the conduct of the people. The Rig Veda, the most influential 'document' in the Vedic canon, contains references to spies, or 'spasa', being used by the god Varuna, even enunciating on their features such as wisdom and courage.

Pair 3 is correctly matched: In a Vedic grama, the **duty to manage pastoral land was of a Vrajapati**, who also led the battles. Both Gramini and Vrajapati were either same person or equivalent grama level heads.

Pair 4 is incorrectly matched: During Rig-Vedic era, the basic unit of power lied within a patriarchal family (Kula). The head of the family was a Kulapa. A group of such families called grama, which was **controlled by a village headman Gramini**. The groups of the villages belonged to a clan (Vis) and many clans made a community called Jana.

There is **no official mention of Gramini being a collector of taxes**. The people offered to the chief what is called bali. It was just a voluntary contribution made by the ordinary tribesmen on special occasions.

Q.23) With reference to 'Economy during Early Vedic period', consider the following statements:

1. There was no concept of private property based on land-ownership.
2. The coinage system was extensively developed with the circulation of silver made punch-marked coins.

Which of the statements given above is/are correct?

- a) 1 only
b) 2 only
c) Both 1 and 2
d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

The early Vedic Aryans were mainly pastoralists. Cattle rearing was their main occupation.

Statement 1 is correct: In Early Vedic society, people were pastorals and cattle were the main index of wealth. Land ownership was not prevalent at that time. There was **no concept of private property based on land-ownership**

Statement 2 is incorrect: Even though Early Vedic society was based on pastoralism, people in Early Vedic society were engaged in many economic activities like hunting, carpentry, tanning, weaving, chariot-making, metal smeltery. **The products of these activities were exchanged through barter due to underdevelopment of coinage or currency system.** Cows were the most favored medium of exchange.

Q.24) With reference to ‘Harappan Sculpture’, consider the following statements:

1. The Bearded Priest statue found in Mohenjo-Daro was made of bronze metal.
2. The Dancing Girl sculpture represents a ‘tribhanga’ posture.
3. The Terracotta figurine of mother goddess have been found in Harappan sites.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

Sculptures such as Dancing girl, bearded man, human torso, musical instruments, elephants, Shiva and Nandi are the notable sculptures of the Harappan civilization.

Statement 1 is incorrect: Bearded Priest is found in **Mohenjo-Daro and made of Steatite (not bronze)**. It is the figure of a bearded man, draped in a shawl with trefoil patterns. The eyes are elongated, and half closed as in meditation.

Bearded Priest

Statement 2 is correct: The Dancing Girl is the world’s oldest bronze sculpture. Found in Mohenjo-Daro, this four-inch figure depicts a naked girl wearing only ornaments, which include bangles in the left arm, and amulet and bracelet on the right arm. She stands in a **‘tribhanga’ dancing posture with the right hand on her hip.**

Dancing Girl

Statement 3 is correct: The Mother Goddess figures is made up of **terracotta (fire baked clay)** have been found in many Indus sites, which highlights its importance. It is a crude figure of a standing female adorned with necklaces hanging over prominent breasts. She wears a loincloth and a girdle. She also wears a fan-shaped headgear. The facial features are also shown very crudely and lacks finesse.

Mother Goddess figures

Q.25) With reference to the global economy, consider the following pairs:

Terms	Meaning/Related to
1. Petrodollar	US Dollars used to pay for the purchasing of crude oil.
2. Price Cap Coalition	Coalition led by the Organisation for Economic Co-operation and Development to regulate the prices of COVID-19 Vaccines.

3. Petromoneda a Crypto currency
launched by the
government of
Venezuela.

How many pairs given above is/are correctly matched?

- a) only one pair
- b) only two pairs
- c) All three pairs
- d) None of the pairs

Ans) b

Exp) Option b is the correct answer.

Pair 1 is correct: Petrodollars are oil export revenues denominated in U.S. dollars. Petrodollars are not a distinct currency; they are simply U.S. dollars accepted as payment by an oil exporter. Oil exporters prefer the U.S. dollar because it is the pre-eminent global currency for global investments because of the high rate of return of US Dollars.

Pair 2 is incorrect: The "Price Cap Coalition" comprises the EU, G7 and Australia has recently introduced legislation and guidance intended to maintain the supply of Russian oil to world markets whilst at the same time reducing Russia's earnings from its oil exports. It came up with the Price Cap Scheme to fix the maximum price ceiling limit on Russian oil to reduce Russia's earning from oil exports.

Pair 3 is correct: Petro or Petromoneda is a cryptocurrency launched by the government of Venezuela to circumvent international sanctions against it and revive the country's flailing economy. It is supposedly backed by a portion of Venezuela's massive oil reserves. While it was launched with great publicity, the Petro has not lived up to its hype, and critics and observers have questioned its validity.

Q.26) How did the Vedic Civilization differ from the Harappan Civilization?

- 1. The Harappa Civilization was an urban culture, while the Vedic Civilization was the rural based culture.
- 2. Unlike Harappan civilization, the people of the Vedic civilization were completely ignorant of the use of the iron.
- 3. In the Indus civilization, trade as well as industries were the main sources of economy, whereas Vedic Economy was mainly based on agriculture.

Select the correct answer using the codes given below:

- a) 1 and 2 only
- b) 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

The Harappa culture is the earliest known culture of the Indian subcontinent of the kind now called “urban” (or centred on large municipalities), and the largest of the four ancient civilizations, which also included Egypt, Mesopotamia, and China. A few centuries after the decline of the Harappan civilization, a new culture flourished in the same region and gradually spread across the Ganga-Yamuna plains. This culture came to be known as the Vedic culture. There were significant differences between this culture and the culture that preceded it.

Statement 1 is correct: The **Harappa Civilization culture was the town/urban culture** with trade as the main occupation, while the **Aryan culture was the rural culture with agriculture** as the main occupation. The significant difference between the material life of the people of the Arya and Harappan cultures lies not in the use of metal, but in the almost complete absence of towns in the Rig Veda era.

Statement 2 is incorrect: According to the information based on available sources, the people of the **Indus Valley civilization were completely ignorant of the use of the iron**. The people of the Vedic age knew the use of various metals. They used gold and copper in the beginning but later on also used silver, iron and bronze. The **Harappa Civilization was the main bronze culture** in the use of various metals. They also used copper.

Statement 3 is correct: In the Indus civilization **trade, internal and external, crafts as well as industries were the main sources of economy**, Vedic Economy was based upon **agriculture**. In the field of social level, the social life of the Harappa culture people was happy and prosperous and they lived a life of luxury and opulence, while the social life of the people of Vedic culture was simple and their life was based on holiness. The main food of the people of Harappa Civilization was wheat and fish, while the main food of the people of Vedic culture was barley and rice.

Q.27) In the context of Vedic age, the term ‘Pani’ refers to-

- a) Agricultural herdsmen
- b) Class of merchants
- c) Head of the Village Unit
- d) Tax Collector Agent

Ans) b

Exp) Option b is the correct answer.

Pani is basically a **community of tradesmen or class of merchants** often travelling to distant lands for international trade referred to in Vedic literature. Merchants in the Vedic period prayed and offered oblations to seek divine grace for success in trade.

These commercial people believed in a materialistic philosophy of life. The Panis, who were the enemies of the Vedic people, are stated in the Rigveda to have hidden their wealth, mostly cows, in the mountains and forests. The term Pani came to be associated with merchants and wealth in the subsequent ages.

Mostly these traders and merchants were the Asuras or Dasyus and for trade moved in all directions including foreign countries. The international trade was confined to a certain section of Dasyu society called the Panis.

Q.28) Consider the following description of an Indus Valley Civilization site:

“It is situated on the now dried-up Ghaggar bank. It shows evidences of both the Early Harappan and Mature Harappan cultures. Copper axes, terracotta bangles and carnelian have been found. Existence of Kot Dijian pottery is also reported from this site. Evidences about the use of plough for agricultural purposes are also found.”

Which one of the following Indus Valley sites is depicted in the above paragraph?

- a) Kalibangan
- b) Dholavira
- c) Lothal
- d) Banawali

Ans) a

Exp) Option a is the correct answer.

Situated in north Rajasthan on the now dried-up Ghaggar bank, Kalibangan shows evidences of both the Early Harappan and mature Harappan cultures. During its Early Harappan period, people lived in houses made of mud bricks of standard sizes. The township was Fortified with a 3 - 4 metre-thick wall. Copper axes, terracotta bangles shell, carnelian etc. have been found. Existence of Kot Dijian pottery is also reported. Evidences about the use of plough for agricultural purposes are found.

Old NCERT History Class 11th- RS Sharma- Chapter-6

Q.29) With reference to ‘Rig Vedic Society’, consider the following statements:

1. In Rig Vedic society, oral instruction was one of the methods of teaching.
2. There are no references to beggars and wage-earners in the Rigveda.
3. There are evidences of widow remarriage in the Rig-Veda.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

The Vedic society was a tribal society, in which social relations based on kingship ties were predominant. In the society, even the rajas (kings), the Purohit (priests), the artisans etc. were parts of the clan networks.

Statement 1 is correct: The methods of teaching generally practiced during Rig Vedic period were mainly Maukhik (oral) and other method was based on Chintan (thinking and reflection). In the oral method the students were to memorize the mantras (Vedic Hymns) and Richayas (Versus of Rigveda) in order that there might not be changed wrongly and they might remain preserved in their original forms. Under the oral methods these prosodic were thoroughly taught on which Vedic Richayas happened to be based.

Statement 2 is correct: Various occupational groups such as those of weavers, smiths, carpenters, leather workers, chariot-makers, priests etc. are mentioned in Rig Veda. The chariot-makers occupied special social status. There are **no references to beggars, wage-earners or wages in the Rigveda**. However, society was economically stratified, and we do find references to rich people possessing chariots, cattle, etc. and making generous gifts of them.

Statement 3 is correct: Despite of the patriarchal character of the family, the position of women was much better in the Rig Vedic period than in later times. There are also **evidences of widow remarriage in the Rig-Veda**. Girls were normally married off after puberty (between the age of 16 and 17). Unmarried girls

SFG 2023 | LEVEL 1 | Test #30 – Solutions | 

grew up in the home of their parents. Some unmarried woman like Visvavara and Apala offered sacrifices on their own.

Q.30) With reference to the “India Inequality Report 2022: Digital Divide”, consider the following statements:

1. It has been prepared and released by the Ministry of Information and Broadcasting.
2. More than two-third of the population in both rural as well as urban areas uses internet.
3. Among Indian states, Maharashtra has the highest internet penetration and Bihar has the lowest internet penetration.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 3 only
- c) 2 and 3 only
- d) 1 only

Ans) b

Exp) Option b is the correct answer.

Oxfam has released a report titled ‘India Inequality Report 2022: Digital Divide’. The report highlights the extent of the digital divide in India and its impact on essential services such as **education, health and financial inclusion**.

Statement 1 is incorrect: The report titled ‘India Inequality Report 2022: Digital Divide’ has been released **by the Oxfam India**.

Statement 2 is incorrect: According to **India Inequality Report 2022: Digital Divide** released by Oxfam, only **31% of the rural population uses the Internet compared to 67% of their urban counterparts**. Also, the report highlights that **61% of men-owned mobile phones in 2021 compared to just 31% of women**.

Statement 3 is correct: Among states, **Maharashtra has the highest internet penetration**, followed by Goa and Kerala, while **Bihar has the lowest**, followed by Chhattisgarh and Jharkhand.

Q.31) Which one of the following ancient towns is well-known for its elaborate system of water harvesting and management by building a series of dams and channelizing water into connected reservoirs?

- a) Dholavira
- b) Kalibangan
- c) Rakhigarhi
- d) Ropar

Ans) a

Exp) Option a is the correct answer.

The ancient city of Dholavira is one of the most remarkable and well-preserved urban settlements in South Asia dating from the 3rd to mid-2nd millennium BCE (Before Common Era). Discovered in 1968, the site is set apart by its unique characteristics, such as its **water management system**, multi-layered defensive

mechanisms, extensive use of stone in construction and special burial structures. It has a complex system for **collecting and storing rain water within several reservoirs**. Planners in the ancient city of Dholavira had conceptualised an amazing system of **drains, dams and tanks** to manage water.

UPSC 2021

Q.32) The great events of the life of the Buddha were represented by different symbols. In this context, consider the following pairs:

Events of Buddha's life	Symbols
1. Death of Buddha	Stupa
2. Great Renunciation	Bull
3. Birth of Buddha	Throne
4. First sermon	Wheel
5. Enlightenment	Bodhi tree

How many pairs are correctly matched?

- Only two pairs
- Only three pairs
- Only four pairs
- Only five pairs

Ans) b

Exp) Option b is the correct answer.

Option 1 is correct: Mahaparinirvana i.e the death of Buddha is represented by the symbol **Stupa**. Stupa is a Buddhist commemorative monument that usually contains **sacred relics associated with the Buddha or other saintly persons**.

Option 2 is incorrect: Mahabhinishkramana i.e the Great Renunciation is represented by the symbol Horse (not Bull). It is also called as Great Departure that marks the departure of Gautama Buddha from his palace at Kapilavastu to live a life as an ascetic

Option 3 is incorrect: The birth of Buddha is marked by a symbol of **Lotus and bull**. The lotus is said to have bloomed at the exact moment of the Buddha's birth, and is a reminder of the potential for enlightenment that exists within all beings

Option 4 is correct: Dhammachakra Pravartan i.e, Buddha's first sermon at Sarnath in Benaras (present day Varanasi in U.P) is represented by the symbol of the **wheel**.

Option 5 is correct: The symbol of the enlightenment of the Buddha (Nirvana) is the bodhi tree, under which the Buddha is said to have attained enlightenment.

Q.33) With reference to 'Slaves in Rig Vedic period', consider the following statements:

1. Both men and women captured in war were treated as slaves.
2. Most of the slaves were engaged in agricultural production activities.
3. Women slaves were given as gifts to priests for domestic purposes.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) d

Exp) Option d is the correct answer.

Slavery was a common occurrence during the Vedic age and slaves were treated as property, where they did not possess rights, power, autonomy or honour and were relegated to a very demeaning level.

Statement 1 is correct: The term Dasa came to mean as slave. Slaves were **women and men who were often captured in war**. They were treated as the property of their owners, who could make them do whatever work they wanted.

Statement 2 is incorrect: In Vedic period, Dasa and Dasis were used to address slaves, but it has been made clear that they **didn't engage in agricultural production-related activities** and were solely occupied with working in the household. Female slaves were often used for sexual purposes as well, while they were given as gifts.

Statement 3 is correct: The dasas and the dasyus conquered by the Aryans, were treated as slaves. Slaves and mainly women slaves **meant for domestic purposes**, were given as gifts to priests and Rajans.

https://epgp.inflibnet.ac.in/epgpdata/uploads/epgp_content/S000829IC/P001497/M015108/ET/14600121395ET.pdf

Q.34) Which of the following statements correctly portrays the characteristic features of Early Vedic Period?

1. Temples were used for religious worship.
2. Matriarchal nature of social setup was prevalent
3. The norm of Monogamy was generally practiced.
4. Society was economically stratified.
5. Women had a right to choose their partners.

Select the correct answer using the codes given below:

- a) 1, 2 and 3 only
- b) 2, 3 and 4 only
- c) 3, 4 and 5 only
- d) 1, 3, 4 and 5 only

Ans) c

Exp) Option c is the correct answer.

The Early Vedic period is said to have begun around the second millennium BCE. Following the fall of the Indus Valley Civilization about 1900 BCE, tribes of Indo-Aryan peoples moved into north-western India and began to settle in the northern Indus Valley.

Statement 1 is incorrect: In the Early Vedic period, **there was no temple**. There were no any evidences of the presence of temples in the Vedic period. Only they practiced primitive animism, form of practicing worship of nature. The temple was not a Vedic institution. Its origin was intertwined with the evolution of pooja, a form of idol worship.

Statement 2 is incorrect: Rig Vedic Society was **patriarchal**. The birth of a son was the common desire of the people. The importance given to the male members is reflected in the hymns, where the desire for a son is a constant prayer. Even though society was patriarchal, women had also important position in it.

Statement 3 is correct: In Early Vedic period, women relished a reputable position, as they were allowed to attend Samitis and Sabhas. Many of the women present there were poets (Lopamudra, Ghosa, Apala, and Viswavara). There was no practice of child marriage. **Monogamy was a norm, but polygamy was found** among noble families and royalty.

Statement 4 is correct: Various occupational groups such as those of weavers, smith, carpenters, leather workers, chariot makers, priests etc. were present in Early Rig Vedic period mentioned. The chariot makers occupied a special social status. There are no references to beggars, wage-earners or wages in the Rigveda. However, **society was economically stratified**, and we do find references to rich people possessing chariots, cattle, etc. and making generous gifts of them.

Statement 5 is correct: Even though society was patriarchal, **women had also important position in it**. They were educated and they had access to the assemblies. There' are also instances of women who composed hymns. **They had a right to choose their partners**, and could marry late. However, women were always thought to be dependent on their fathers, brothers or husbands. Education was imparted orally, but the tradition of education was not very well developed in this period.

Q.35) In the context of India, consider the following statements with respect to Exit Polls:

1. It is usually conducted before the beginning of voting in a constituency.
2. The Representation of the People's Act, 1951 imposes certain restrictions on exit polls.
3. It can be conducted only by designated public authorities.
4. It was conducted for the first time in India during the first Lok Sabha elections.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 and 4 only
- c) 2 and 3 only
- d) 2 only

Ans) d

Exp) Option d is the correct answer.

Exit-poll means an opinion survey inspecting how electors have voted at an election. It generally involves **asking citizens about their voting preferences on Election Day itself**.

Statement 1 is incorrect: The exit polls are **conducted after the election voting**. It refers to survey done on people who have **just exited voting booths** and it **inspects how electors have voted at an election**. They are different from **opinion polls or pre-poll surveys which are conducted before the elections**. Pre-poll surveys reflect public preference before an election.

Statement 2 is correct: Section 126(A) of the Representation of the People Act, 1951, states that no person shall **conduct any exit poll and publish or publicise its results** through the print or electronic media, during such period as the **Election Commission of India (ECI) may notify in this regard.**

Statement 3 is incorrect: It can be conducted by private organisations too. A number of organisations, often in tie-ups with media organisations conduct the exit polls in India.

Statement 4 is incorrect: The first exit polls in India were conducted during the second Lok Sabha election. In 1957, during the 2nd Lok Sabha elections, the Indian Institute of Public Opinion conducted an exit poll.

Q.36) With reference to the comparison between the Early Vedic Period and the Later Vedic Period, consider the following statements:

1. In the Early Vedic period, cattle rearing was the main occupation, whereas agriculture became the main occupation in Later Vedic period.
2. Unlike Early Vedic Period, the voluntary tribute was the only source of income for the King in Later Vedic period.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

The Vedic Age was between 1500 BC and 600 BC. This is the next major civilization that occurred in ancient India after the decline of the Indus Valley Civilization by 1400 BC. The Vedic age itself is divided into the Early Vedic Period (1500 – 1000 BCE) and Later Vedic Period (1000 – 600 BCE).

Statement 1 is correct: In the early Vedic period, **Pastoral economy i.e., cattle rearing was the main occupation.** Shifting type of agriculture was prevalent. The measure of wealth was cattle and wealthy man was called Gomat. Whereas, in the **Later Vedic age, Agriculture had become the main occupation for the livelihood.**

Statement 2 is incorrect: In the early Vedic age, there was **no any regular revenue system.** Only **voluntary tribute** was the single source of income for the head of community i.e., King. Gift exchanged on group gathering was also important source for the economy. Whereas, in the Later Vedic age, **collection of taxes and tribute was made mandatory as the source of income** for the head of community and were done by Sangrihitri. Vaishyas were the tribute paying community in later Vedic times.

Q.37) With reference to the Vedic Age in general, the term 'Yava', 'Godhuma' and 'Vrihi' refers to-

- a) Tribal leaders of villages of Early Vedic age
- b) Different types of religious customs
- c) Various cereals mentioned in Vedic text.

d) Natural gods worshipped in Vedic age

Ans) c

Exp) Option c is the correct answer.

The Vedic Age was between 1500 BC and 600 BC. It occurred after the decline of the Indus Valley Civilization by 1400 BC. The Vedas were composed in this period and this gives this age the name. The Vedas are also the chief source of information about this era.

Option c is correct: Yava (Barley), godhuma (wheat), Ikshu (sugarcane) and vrihi (rice) are the terms used for different cereals in the Vedic texts. There are also several references to agricultural operations such as sowing, ploughing, reaping, and threshing in different Vedic texts.

Source: NCERT - old and new and TN SCERT

Q.38) With reference to the Magadh Empire, consider the following statements:

1. The capital of Magadh Empire was Rajgir during the reign of Bimbisara.
2. Ajatasatru established matrimonial alliance with Vaishali for the safety of Northern frontier of Magadha empire.
3. The first standing army of India was created in Magadha empire by Ajatasatru.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 2 only
- d) 1 and 3 only

Ans) a

Exp) Option a is the correct answer.

The Magadha Empire encompasses the rule of three dynasties over time – Haryanka Dynasty, Shishunaga Dynasty, and Nanda Dynasty. The timeline of the Magadha Empire is estimated to be from **684 BCE to 320 BCE**.

Statement 1 is correct: Bimbisara established the first capital of Magadha at **Rajagriha or Rajgir**. He ran a well administered kingdom, and Magadha prospered under him. Rajagriha was **surrounded by five hills and proved to be impenetrable**. It not only enjoyed a strategic location, but also lay in the vicinity of iron-encrusted outcrops. The capital of Magadh Empire shifted to Pataliputra during the reign of Ajatashatru.

Statement 2 is incorrect: Bimbisara married Chellana, a princess of the Licchavi family of Vaisali. This matrimonial alliance secured for him the safety of the northern frontier. With political foresight he realised the importance of establishing dynastic relations through marriage with the royal house of Kosala. Whereas, **Ajatshatru didn't established alliance but fought against Kosala and Vaisali.**

Statement 3 is incorrect: The **first standing army of India was created in Maghadha by the ruler Bimbisara (Not Ajatshatru)**. The reign of Ajatasatru was remarkable for his military conquests. He fought against Kosala and Vaisali. He won a great success against a formidable confederacy led by the Lichchavis of Vaisali. This had increased his power and prestige.

Q.39) With reference to Ancient Indian history, consider the following pairs:

Mahajanapadas	Cities
	Included
1. Anga	Ayodhya
2. Kosala	Champa

3. Vatsa Kausambi
4. Matsya Viratnagara

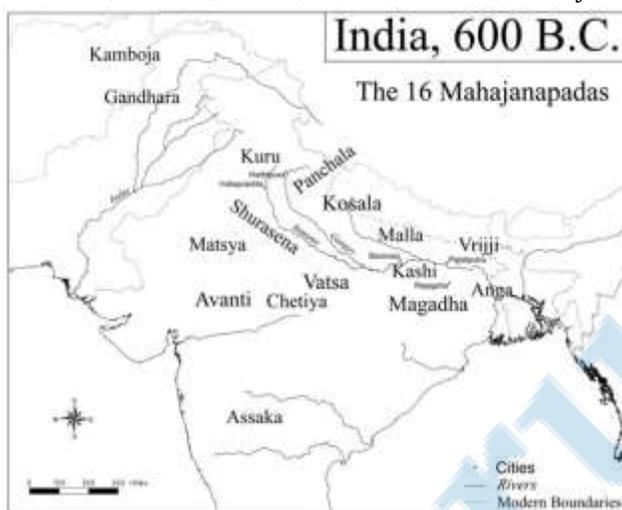

Which of the pairs given above are correctly matched?

- a) 1 and 2 only
b) 1 and 4 only
c) 2 and 3 only
d) 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

In the beginning of the **6th century B.C.**, the northern India consisted of a large number of independent kingdoms. The **Buddhist literature Anguttara Nikaya** gives a list of sixteen great kingdoms called '**Sixteen Mahajanapadas**'. They were Anga, Magadha, Kasi, Kosala, Vajji, Malla, Chedi, Vatsa, Kuru, Panchala, Matsya, Surasena, Assaka, Avanti, Gandhara and Kambhoja.

Pair 1 is incorrectly matched: Anga comprised the districts of Bhagalpur and Monghyr in Bihar. It may have extended northwards to the river Kosi and included some parts of the district of Purnea. It was located to the east of Magadha and west of the Rajamahar hills. **Champa was the capital of Anga.** It was located on the confluence of the rivers Champa and the Ganga. **Whereas, Ayodhya** was ruled under the **Janpadas of Kosala.**

Pair 2 is incorrectly matched: The Mahajanapada of **Kosala** was bounded on the west by the river Gomati. Kosala became a prosperous Kingdom having three big cities under its control i.e., **Ayodhya, Saketa and Sravasti.** Kosala also annexed the Kingdom of Kashi in its territory. The Kings of Kosala favoured both Brahmanism and Buddhism. In the succeeding phases Kosala proved to be one of the most formidable adversaries of the emergent Magadhan empire.

Pair 3 is correctly matched: **Vatsa** with its capital at Kausambi was one of the most powerful principalities of the sixth century B.C. Kausambi has been identified with modern Kosam or the river Yamuna near Allahabad. This means that the Vatsas were settled around **modern Allahabad.** The puranas say that the descendant of the Pandavas, Nichaksu shifted his capital to Kausambi after Hastinapur had been washed away by floods.

Pair 4 is correctly matched: The **Matsyas** were located in the **Jaipur-Bharatpur-Alwar region of Rajasthan.** Their capital was at Viratnagara famed as the hiding place of the Pandavas. This region was more suitable for cattle rearing. Some of the most famous edicts of the King Ashoka have been found in Bairat (Jaipur district), the ancient Virat.

Q.40) In the context of India, which of the following statements are correct with respect to the Heat Waves?

1. As per the Indian Meteorological Department, a Heat wave can be declared in a hilly region only if the maximum temperature is above 40 Degree Celsius.
2. Urbanisation is one of the causes of heat waves in India.
3. Absence of moisture in the upper atmosphere is one of the favourable conditions for occurrence of heat waves.
4. Heat dome is one of the climate engineering solutions to mitigate the effects of heat waves.

Select the correct answer using the code given below:

- a) 1, 2 and 3 only
- b) 2, 3 and 4 only
- c) 2 and 3 only
- d) 1 and 4 only

Ans) c

Exp) Option c is the correct answer.

A heat wave is a period of **abnormally hot weather** and can occur with or without high humidity. They have potential to cover a large area, exposing a high number of people to **hazardous heat**.

Statement 1 is incorrect: According to IMD, Heat wave is considered if maximum temperature of a station reaches at least 40 degrees Celsius or more for Plains and **at least 30 degrees Celsius or more for Hilly regions**. There are also other criteria:

A) Based on **Departure from Normal** - Heat Wave exists if the departure from normal is **4.5 degree C to 6.4 degree Celsius**.

B) Based on **Actual Maximum Temperature**- Heat Wave exists if the actual maximum temperature exceeds or equals **45 degrees Celsius**.

Statement 2 is correct: The urban centres are full of **concrete structures** that **enhance the occurrence** of heat waves. The materials used to build cities like asphalt, concrete, bricks and other supplies and the darker colours used to paint the buildings **absorb and retain short-wave radiation from the sun**.

Statement 3 is correct: Absence of moisture in the upper atmosphere is one of the favourable conditions for heat waves as the presence of moisture restricts the temperature rise. Other favourable conditions are absence of clouds in the sky, Prevalence of hot dry air over a region and large amplitude anti-cyclonic flow over the region.

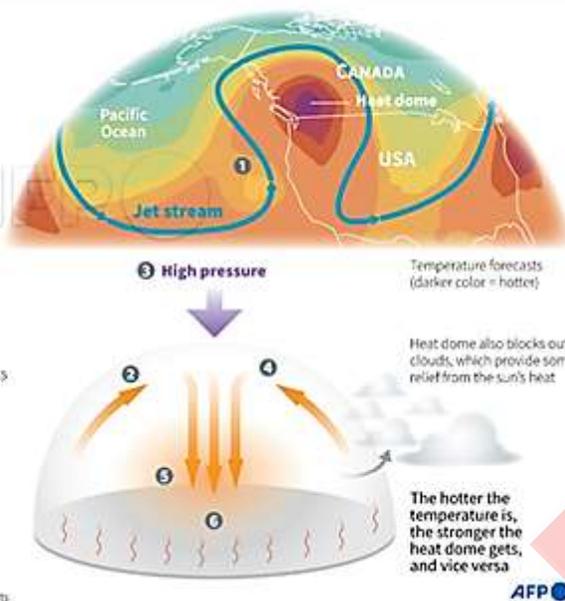

Statement 4 is incorrect: Heat dome is one of the effects of heat waves. A Heat Dome is created when an area of high pressure stays over the same area for days or even weeks, **trapping very warm air underneath**, like a lid on a pot.

The 'heat dome'

Occurs when the atmosphere traps hot ocean air like a lid or cap

- 1 In summer, the **jet stream** (which moves the air) shifts northward
- 2 **Hot** and stagnant air **expands** upwards
- 3 Strong and **high-pressure** atmospheric conditions combine with influences from La Niña act like a dome or cap
- 4 In a process known as **convection**, hot air attempts to escape but high pressure pushes it back down
- 5 Under the dome, the air **sinks and compresses**, releasing more heat
- 6 As winds move the hot air east, the jet stream traps the air where it sinks, resulting in **heat waves**

Source: NOAA/US/Canada media, experts

Source: https://internal.imd.gov.in/section/nhac/dynamic/FAQ_heat_wave.pdf
<https://indianexpress.com/article/explained/india-heatwaves-and-the-role-humidity-plays-in-making-them-deadly-7907102/>

Q.41) Consider the following pairs:

Historical Place	Well Known for
1. Burzahom	Rock cut shrines
2. Chandra-Ketugarh	Terracotta art
3. Ganeshwar	Copper artefacts

Which of the pairs given above is/are correctly matched?

- a) 1 only
- b) 1 and 2
- c) 3 only
- d) 2 and 3

Ans) d

Exp) Option d is the correct answer.

Pair 1 is incorrectly matched. It can be eliminated as Burzahom site (Jammu and Kashmir) is a Neolithic site. Rock cut shrines were not found in Neolithic period.

Pair 2 is correctly matched Chandraketugah is a site in West Bengal near Kolkata. According to historians, the place dates back to before or around 3rd century BC. The place has always generated curiosity among the archaeologists and various excavations have taken place here and a number of **terracotta artworks** has been unearthed.

Pair 3 is correctly matched. Ganeshwar is a famous site in Khetri belt in Rajasthan. Ganeshwar complex sites have yielded more than 5000 **copper objects**, with some typical Harappan types like thin blades, arrow-heads etc.

Q.42) Which of the following were the reasons behind the success of Magadh Kingdom during the Mahajanapadas period?

1. Magadh used elephants on a large scale in the wars to get an edge over other kingdoms.
2. The capital of Magadh was surrounded by hills that made their fortress difficult to penetrate.
3. Accessibility to the iron mining areas ensured better weapons in warfare for the Magadh Kingdom.

Select the correct answer using the codes given below:

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Magadha empire was most powerful among of all the sixteen kingdoms of North India during the Mahajanapadas period. It can be identified with the modern districts of Patna, Gaya, Nalanda and parts of Shahabad in the present-day state of Bihar.

Statement 1 is correct: Magadha was one of the few which used **elephants on a large scale in the wars and thus had an edge over others**. Elephants had an advantage over horses and chariots, because they could be used to march across marshy lands and areas which had no roads or other means of transport. Magadh had an easy access to supply of the elephants.

Statement 2 is correct: The capital of Magadha, Rajagriha (Girivraja) was **surrounded by five hills which proved it difficult to be penetrate**.

Statement 3 is correct: One of the factors that contributed to the rise of Magadha empire was the availability of minerals, which resulted in the introduction of iron tools especially for warfare. **The iron ores in the hills near Rajgir and copper and iron deposits near Gaya added to its natural assets.** The ready availability of the rich iron ores in the neighborhood of the capital enabled the Magadha kings to make themselves equipped with effective weapons. On the other, the effective iron weapons were not easily available to their rivals.

Tamil Nadu NCERT – Chap 5 (The rise of MAGADHA AND ALEXANDER'S INVASION)

Q.43) Which of the following statements are correct with respect to the impact of Iranian invasion of India during 6th century B.C.?

1. It led to the introduction of Satrap system of administration in North-western India.
2. It led to the introduction of Kharosthi script in North-western India.
3. Mauryan architecture was influenced by the Iranian architecture.
4. The void left due to retreat of Iranian invaders from North-western India were filled immediately by Chandragupta Maurya.

Select the correct answer using the code given below:

- a) 1, 2 and 3 only
- b) 1, 3 and 4 only
- c) 2 and 3 only

d) 1, 2, 3 and 4

Ans) a

Exp) Option a is the correct answer.

Option 1 is correct: A satrap was a governor of the provinces of the Achaemenid Empires and it was introduced by Iranians in Indian provinces. Later it was developed by the Sakas ruling in North western and western parts of India. Satraps collected taxes and was the supreme judicial authority and he was also responsible for internal security and raised and maintained an army.

Option 2 is correct: Iranian scribes brought into India the new form of writing known as Kharosthi script. It was written from right to left like the Arabic. Some Ashokan Inscriptions in North-western India were written in this script.

Option 3 is correct: The monument of the Ashokan pillar, especially the bell-shaped capital, is inspired from the Iranian architecture. Iranian influence can also be traced in the preamble of Ashokan edicts and in the words used by it. For instance, the Ashokan scribe used the word lipi for the Iranian word dipi.

Option 4 is incorrect: Alexander defeated the Persian King Darius III in the Battle of Arbela (330 BC) and he filled the void left by the Iranians in North-western India. The Macedonian invasion (Alexander invasion) took place between 326-325 BCE during Nanda's reign and his retreat from North-western India was filled by Chandragupta Maurya's. Chandragupta Maurya acquired North-western India in 301 BCE by defeating Seleucus who was one of Alexander's generals. Retreat of Iranians from North-western India was filled by Alexander.

Source: Ancient India by R.S. Sharma: Chapter - Iranian and Macedonian invasion of India

Q.44) With reference to the society in the Age of Buddha, consider the following statements:

1. Buddha's action of frequently visiting the assembly of Shudras played a major role in improving the social conditions of Shudras.
2. The Dharmasutras enacted during Buddha's age were silent about the practice of interest-bearing lending.
3. Women belonging to the Brahmana and Kshatriya Varnas were allowed to receive Upanayana.

Which of the above given statements is/are correct?

- a) 1 only
- b) 1 and 3 only
- c) 2 only
- d) None of the above

Ans) d

Exp) Option d is the correct answer.

Statement 1 is incorrect: There is no evidence that suggests that Buddha visited the assembly of Shudras. Although they were admitted to the new religious order such as Buddhism and Jainism, their general position remained low. The Varna system placed shudras in the lower rank. All kinds of disabilities were imposed on the shudras.

Statement 2 is incorrect: The Dharmasutras, the Brahmanical law scriptures, condemned interest-bearing lending. They criticized the Vaishyas who lent money to expand trade and commerce.

Statement 3 is incorrect: No women irrespective of their varnas could be invested with Upanayana. Upanayana usually marks a boy's acceptance into the life of a spiritual student (brahmacharya) and as a member of the religious community. During this ceremony, the young receive the sacred thread which he wears across his chest from the left shoulder to the waist.

Source: Ancient India by R.S. Sharma: Chapter - State and Varna society in the Age of Buddha

Q.45) With reference to Asiatic Lions, consider the following statements:

1. Asiatic Lion has a longitudinal fold of skin running along its belly, which is usually absent in African Lions.
2. They are listed in the Schedule II of the Wildlife (Protection) Act of 1972.
3. The habitat of Asiatic lion is presently restricted to India.
4. Software SIMBA has been developed for the identification of Asiatic Lion.

Which of the statements given above are correct?

- a) 1 and 3 only
- b) 2 and 3 only
- c) 1, 3 and 4 only
- d) 1 and 4 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: Asiatic lions are **slightly smaller than African lions**. In contrast to African lion, the most striking morphological character, which is always seen in Asiatic lions is a longitudinal fold of skin running along its belly.

Statement 2 is incorrect: The Asiatic Lions listed in **Schedule I of Wildlife (Protection) Act 1972, in Appendix I of CITES and as Endangered on IUCN Red List**. The Schedule I covers endangered species. These species need rigorous protection and therefore, the harshest penalties for violation of the law are under this Schedule. Species under this Schedule are prohibited to be hunted throughout India, except under threat to human life.

Statement 3 is correct: The Asiatic Lion is a member of the Panthera Leo subspecies that is **restricted to India**. Its previous habitats consisted of West Asia and the Middle East before it became extinct in these regions. **In India**, Asiatic lions were once distributed to the state of West Bengal in east and Rewa in Madhya Pradesh, in central India. At present **Gir National Park and Wildlife Sanctuary is the only abode of the Asiatic lion**.

Statement 4 is correct: The forest department of Gujarat has developed new software named **SIMBA (Software with Intelligent Marking Based Identification) of Asiatic lions** is Artificial Intelligence (AI)-based software developed to identify Asiatic lions individually. The software has been developed by Hyderabad-based “Telio labs”. SIMBA works with a deep machine learning technique to distinguish unique whisker marks to identify Asiatic lions individually.

Eight Asiatic lions test positive for coronavirus in Hyderabad zoo - The Hindu

Q.46) With reference to the ‘Harappan Script’, consider the following statements:

1. The Harappan script was written mostly from right to left direction.
2. Most of the inscriptions of the Harappan script are extremely long and have used non-recurring symbols.
3. At present, there is no known bilingual inscription to help decipher the Harappan script.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) d

Exp) Option d is the correct answer.

The Harappan Script is the writing system developed by the Indus Valley Civilization and it is the earliest form of writing known in the Indian subcontinent. Examples of Indus writing has been found on seals and

seal impressions, pottery, bronze tools, stoneware bangles, bones, shells, ladles, ivory and on small tablets made of steatite, bronze and copper.

Statement 1 is correct: Indus script was generally written **from right to left**, however, some exceptions wherein the script is written left to right or in a boustrophedon mode are also known. Although the script is undeciphered, the **writing direction has been deduced from external evidence**, such as instances of the symbols being compressed on the left side as if the writer is running out of space at the end of the row. In the case of seals, which create a mirror image impression on the clay or ceramic on which the seal is affixed, the impression of the seal is read from right to left, as is this case with inscriptions in other cases

Statement 2 is incorrect: The Indus script, also known as the Harappan script, is a corpus of symbols produced by the Indus Valley civilization. **Most inscriptions** containing these symbols are **extremely short**, making it difficult to judge whether or not these symbols constituted a writing system used to record as yet unidentified language(s) of the Indus Valley civilization.

Thousands of inscriptions are known from some 60 excavation sites of Harappan period: **most of them are short**, the average length is five signs and none of them is longer than 26 signs. Also, the reoccurrence of symbols is generally absent. So, it has become extremely hard to decipher the Harappan language/script.

Statement 3 is correct: The seals used by the Harappans carried some form of writing. This script is still a mystery to us because we cannot read it. So far, the other forgotten scripts like those of ancient Egypt could be read again because scholars found some inscriptions written in the forgotten script followed by some of its forms in a known script. **We have not discovered any bilingual inscription in Harappa so far.** Thus, we do not know what language the Harappans spoke and what they wrote. **No bilingual texts have been found** so far and its connection with Indian writing systems (e.g., Brahmi, Devanagari and Bengali script) is uncertain. This is the main reason why the Indus Valley Civilization is one of the least known of the important early civilizations of antiquity.

https://www.worldhistory.org/Indus_Script/

Q.47) With reference to the various sects of ancient India, consider the following statements:

1. Unlike Jainism, Ajivika did not believe in the ‘Doctrine of Determinism’.
2. Unlike Buddhism, Jainism completely denied the existence of soul.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) d

Exp) Option d is the correct answer.

Statement 1 is incorrect: Ajivikas believed in the **doctrine of determinism**. **According to this doctrine**, affairs of the entire universe were predetermined including an individual’s fate, to the last detail. The doctrine barred personal efforts to change or accelerate improvement toward one’s spiritual destiny.

Statement 2 is incorrect: **Jainism does believe in the soul**. It believes that the soul exists forever, even after it has left the body. Each soul is always independent and the soul is responsible for what it does. The soul experiences the consequences of its actions and the soul can become liberated from the cycle of birth and death.

Source: 11th TN SCERT - Chapter-Rise of Territorial Kingdoms and New Religious Sects

Q.48) 'Yogacara' is associated with which of the following heterodox sects?

- a) Buddhism
- b) Jainism
- c) Hinduism
- d) Ajivikas

Ans) a

Exp) Option a is the correct answer.

The **Yogacara and Madhyamaka** were the two principal schools of **Mahayana Buddhism in India**. The Doctrine of **universal emptiness of inherent natures (svabhava-sunyata)** is the hallmark of the Madhyamaka school. The Madhyamaka school believes that all **things are empty of inherent natures**. The **Yogacara school combined** earlier Buddhist practice of **analysing mental processes with the Madhyamik notion of emptiness**. This is also called as Vijnanavada and proposes that the reality perceived by Humans doesn't exist and that only thing that exists is the Consciousness.

Source: <https://egyankosh.ac.in/bitstream/123456789/34656/1/Unit-3.pdf>

Q.49) Consider the following statements

1. It is the birthplace of eleventh tirthankara Shreyansanath.
2. It is also an important Buddhist site.
3. The Bodhisattva statue in this area mentions Kushana ruler Kanishka.
4. It is located on the confluence of Ganga and Gomti river.

Which of the following regions is described in the above given statements?

- a) Mathura
- b) Sarnath
- c) Pataliputra
- d) Shravasti

Ans) b

Exp) Option b is the correct answer.

Shreyansanath was the eleventh Jain Tirthankara and he was born to King Vishnu and Queen Vishna at **Simhapuri in Sarnath** in the Ikshvaku dynasty.

Sarnath is an important Buddhist site, it is here that Buddha gave his first sermon. The deer park in Sarnath is where Gautama Buddha gave his **first sermon**. In addition, the **Dhamek Stupa**, a massive stupa is situated in Sarnath.

The inscription on the **Bala Bodhisattva statue** situated in **Sarnath** states that **Kanishka** who ruled from his capital in Mathura had **several satraps** (provinces) under his commands in order to rule his vast territory.

Sarnath is a place located 10 kilometers north-east of Varanasi near the **confluence of the river Ganga and Gomti**

Source: <https://whc.unesco.org/en/tentativelists/1096/>

Q.50) “It is a dryland crop and relies on rainfall for irrigation. It is not a native crop of India though it is mainly grown in southern part of India. The crop is grown for the nut which is used in the production of products such as pan masala and gutka. Currently, its cultivators are facing an unfair challenge as imports of cheaper varieties from Bhutan have dragged down the price of the product”.

Which of the following crop varieties is described in the above given paragraph?

- Catechu
- Arecanut
- Tobacco
- Poppy seeds

Ans) b

Exp) Option b is the correct answer.

Areca nut is a tropical crop generally **known as the betel nut**. It is a palm tree species under the family of *Arecaceae*. It is not a native crop of India. It is generally believed to be native to Malaysia or Philippines where it is grown in many varieties.

- It is considered as a commercial crop at the national level and dry fruit at the international level. Indonesia is the top exporter of Arecanut and Thailand is the top importer. Various compounds present in the nut, including arecoline contribute to histologic changes in the oral mucosa. It is known to be a major risk factor for cancers of the mouth and esophagus.

- Arecanut, also known as betel nut or supari, is an important crop in India and is grown mainly in the states of Karnataka, Kerala, Tamil Nadu, and Andhra Pradesh. The crop is grown for the nut which is used in the production of betel nut products such as pan masala, gutka, and Mawa.

- The country's Arecanut farmers are faced with an unfair challenge as imports of cheaper varieties, especially from Bhutan, flooded the domestic markets and dragged down the price of the product after the central government relaxed import restrictions.
- In Karnataka, about 35-40 per cent of the crop has been affected in 2022. In September this year, the central government allowed the import of 17,000 tonnes of green (fresh) arecanut from Bhutan without a minimum import price (MIP).

Knowledge Base:

- In India there are two varieties of areca nut, also called **supari in Hindi language**. One is the white variety and the other is the red variety. Karnataka produces about 80% of the arecanut in the country, followed by Kerala and Assam. 'Sirsi Supari' (Both White and Red variety) a variety of the Arecanut, grown in Uttara Kannada has also received the Geographic Indication (GI) tag. It has a unique taste due to differences in chemical composition.

Source: Arecanut - JournalsOfIndia

Arecanut gets its first GI tag for 'Sirsi Supari' (thehindu.com)

Q.1) With reference to the guilds (Shreni) of ancient India that played a very important role in the country's economy, which of the following statements is/are correct?

1. Every guild was registered with the central authority of the State and the king was the chief administrative authority on them.
2. The wages, rules of work, standards and prices were fixed by the guild.
3. The guild had judicial powers over its own members.

Select the correct answer using the codes given below:

- a) 1 and 2 only
- b) 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect. Guilds were not under the control of the State and the king was not the chief administrative authority on them. They framed their own rules of membership and professional code of conduct, which even kings were supposed to accept and respect.

Statement 2 is correct. The wages, rules of work, standards and prices were fixed by the guild itself.

Statement 3 is correct. Guilds could try their members for offence in accordance with their own customs and usages, which came to acquire almost the status of law. A guild member had to abide by both guild and state laws. Guilds had their own laws, based on customs and usage, regarding organization, and had considerable power over guild members.

Source) UPSC Prelims 2012

Q.2) With reference to Gupta administration, consider the following statements:

1. The political authority was highly concentrated in the hands of the king.
2. The district administration was under the charge of 'Rajukas',
3. Traders have to pay a commercial tax called 'Sulka' to trade in the Gupta Kingdom.

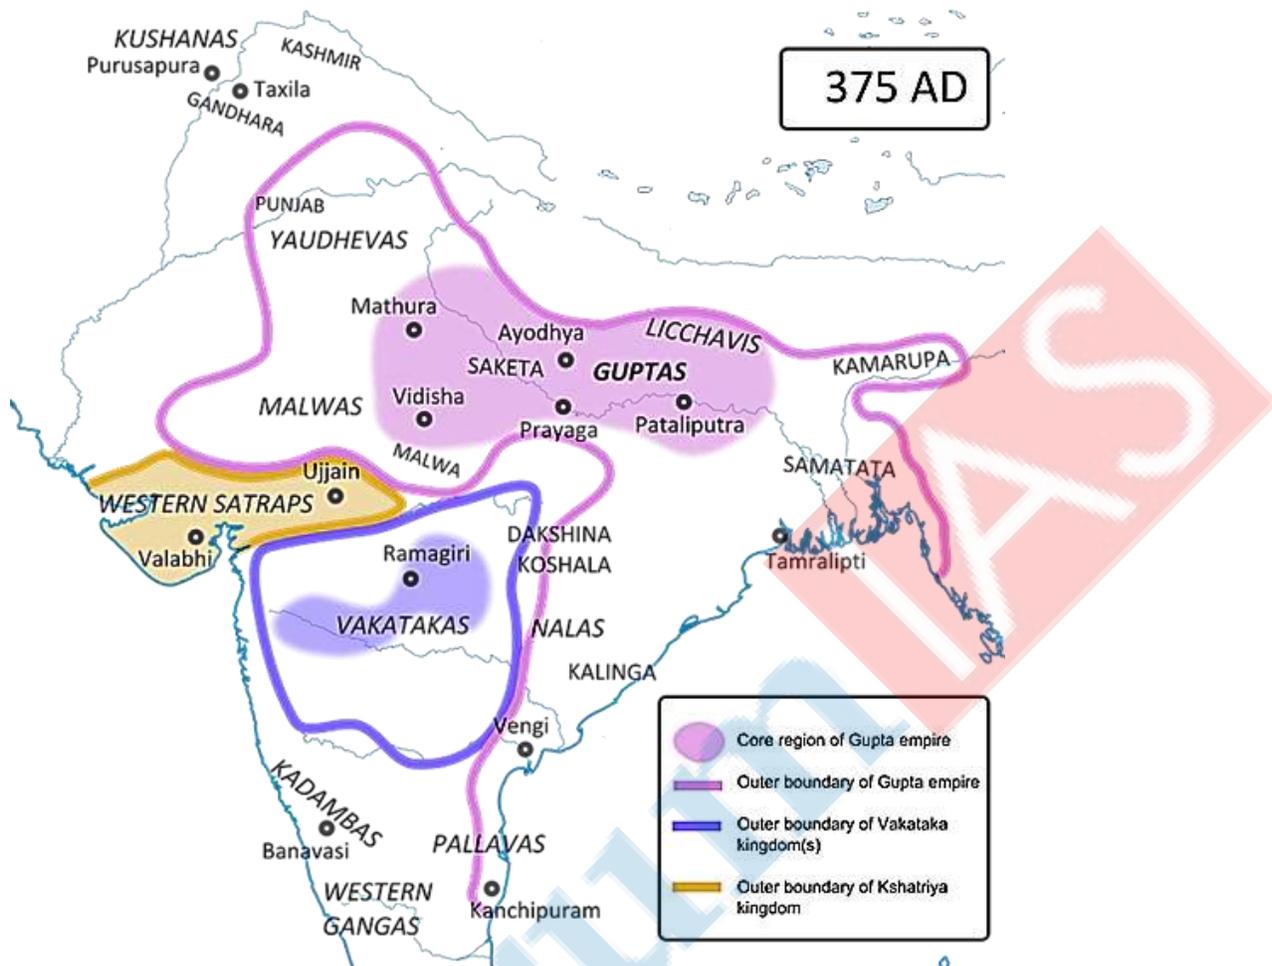

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

The administrative system during the Gupta dynasty was found more or less similar to that of the Mauryan Empire. The dynasty gave more importance to administrative decentralization and helped the rulers to systematically control their territories.

Statement 1 is incorrect. The Gupta administration was decentralized in nature and contained many feudatories like local kings and smaller chiefs, who ruled over large parts of their empire. These lesser rulers adorned their names with titles like raja and maharaja.

Statement 2 is incorrect. The Mauryan district administration was in the charge of 'Rajukas', whose position and functions are similar to today's district collectors. He was assisted by 'Yuktas' or subordinate officials. Whereas the Gupta Empire was divided into divisions called 'Bhukti' and each Bhukti was placed under the administrative charge of an 'Uparika.' The Bhuktis were divided into districts or Vishayas and each Vishaya was under a Vishayapati.

Statement 3 is correct. The Gupta kings levied a certain commercial tax called Sulka. The organization of traders had to pay this tax, the non-payment of which resulted in cancellation of the right to trade and a fine amounting to eight times of the original Sulka.

Q.3) With reference to the Indo-Greek rule in India, consider the following statements:

1. The Indo-Greeks coins used bilingual inscriptions.
2. They introduced Hellenistic art features that gave rise to Gandhara school of art.
3. The Indo-Greeks introduced the use of caps, helmets, and boots for the first time in India.

Which of the above statements are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

After the death of Alexander in 323 BCE, many Greeks came to settle on the north-western borders of India with Bactria (presently in the northern part of Afghanistan, the area lying to the south of the Oxus River and to the north-west of the Hindu Kush mountains).

Statement 1 is correct. The Indo-Greek coins circulated both to the north and south of Hindukush region with several unique features. One of the major features of Indo Greek coins was the **use of bilingual inscription on their coins**. The Indo-Greek Coins has bilingual inscriptions in **Greek and Kharoshthi** with the royal portraits on the **obverse and images of Greek deities** such as Zeus, Apollo, and Athena) on the reverse along with the name and title of the king. They may **also include Indian religious symbols** on one side of the coins.

Statement 2 is correct. The Indo-Greeks introduced new features of **Hellenistic art** which gave rise to **Gandhara school of art** in the north-west frontier of India. It was not purely Greek, but rather it was the outcome of the intermingling and influence of both Indian and central Asian contacts. Example of such art is the **Besnagar Pillar inscription of Heliodorus**.

Statement 3 is incorrect. The **Shaka's and Kushana's** who were well known for their **military knowledge and equipment**, introduced the **use of caps, helmets and boots to the warrior classes in India**. They also introduced the use of turbans, tunics, trousers, long heavy coats and long boots for all other sections of society also.

Ancient and Medieval India by Poonam Dalal Dahiya (ch-Political and cultural development)

Q.4) Which of the following scholars were patronized by the Kushana ruler Kanishka?

- 1. Vasumitra
- 2. Bhavabhuti
- 3. Asvaghosha
- 4. Nagarjuna
- 5. Gunadhya

Select the correct answer using the code given below.

- a) 1, 2, 3 and 5 only
- b) 1, 3 and 4 only
- c) 2 and 4 only
- d) 1, 2, 3, 4 and 5

Ans) b

Exp) Option b is the correct answer.

Kanishka was the most important ruler of the Kushana dynasty. He patronized **Buddhism** and is known for propagating the **Mahayana form of Buddhism** especially in China.

Option 1, 3 and 4 are correct. Kanishka Patronized Buddhist scholars like **Vasumitra** (wrote Mahavibhasa), **Asvaghosha** (wrote hagiographic Buddhacharita), **Agesilaus** (Greek engineer), **Charaka** (known as father of Ayurveda (wrote Charaksamhita and Sasruta), **Mathara** (minister) and **Nagarjuna**.

Option 2 and 5 are incorrect. **Bhavabhuti** was patronized by **Yasovarman of Kannauj** and **Gunadhya** was patronized by **Satvahana king Hala**.

McGraw Hill publication General studies by Rakesh Diwedi-2nd edition(pg-1.31)

Q.5) With reference to ‘Standing Deposit Facility’, consider the following statements:

1. It is a facility of Reserve Bank of India for absorbing excess liquidity from the banking sector.
2. It does not have any mandatory requirement of providing collateral for deposition of funds.
3. The eligible participants can place deposits with the Reserve Bank of India only for a minimum period of one year.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) b

Exp) Option b is the correct answer.

The Standing Deposit Facility (SDF) is a **monetary policy tool** used by central banks to manage short-term interest rates and liquidity in the banking system. It **allows commercial banks to deposit their excess funds with the central bank**. Standing Deposit Facility (SDF) was introduced in 2018 by Reserve Bank of India by amending Section 17 of the RBI Act.

Statement 1 is correct: Standing Deposit Facility (SDF) is an **additional tool for absorbing liquidity without any collateral**. By removing the binding collateral constraint on the RBI, the SDF strengthens the operating framework of monetary policy. The SDF was **suggested in 2014** by a committee headed by Urjit Patel.

Statement 2 is correct: SDF becomes an additional tool for absorbing liquidity **without any collateral**. Standing Deposit Facility (SDF) allows banks to park their excess funds without taking any collateral from the central bank. By removing the binding collateral constraint on the RBI, the SDF strengthens the operating framework of monetary policy. The SDF is also a financial stability tool in addition to its role in liquidity management.

Statement 3 is incorrect: Eligible participants can place **deposits with the RBI on an overnight basis at the fixed rate**. However, the RBI retains the flexibility to absorb liquidity for longer tenors under the SDF with appropriate pricing, as and when the need arises.

Q.6) Which of the following is the correct description of the terms ‘Kshaharatas’ and ‘Kardamakas’?

- a) Coins of Satavahana rulers
- b) Dynasties of Saka-Kshatrapa rulers
- c) Taxes levied by Gupta Rulers
- d) Titles of Mayuran Rulers

Ans) b

Exp) Option b is the correct answer.

The Kshaharatas and Kardamakas are **two important dynasties/lines of Kshatrapa rulers** who were Indo-Scythian (Saka) rulers of the western and central part of India.

Kshaharatas dynasty- The prominent rulers of this dynasty are-**Bhumaka and Nahapana**. Another name, **Aghudaka or Abhedaka** is also known from coins, who also bears the family name Kshaharata on his coins. Bhumaka seems to have originally owed **allegiance to Kanishka**. His coins with legends in **Brahmi and Kharosthi** have been found in coastal Gujarat; some also could be traced in Malwa and Ajmer area. Bhumaka was immediately succeeded by Nahapana as his copper coins were of the same type as issued by Bhumaka.

Kardamaka dynasty- The Kardamakas dynasty rulers are another line of the **Shaka kshatrapas** who ruled western India after the Kshaharatas dynasty came to an end. The prominent rulers of this dynasty are- **Chashtana, Founder of the Kardamaka dynasty and Rudradaman I**, the most important ruler of the Kardamaka family. During his reign the Saka power experienced a major expansion.

Ancient and medieval india by Poonam Dalal(ch-7 POLITICAL AND CULTURAL DEVELOPMENTS DURING c. 200 BCE–300 CE)

Q.7) With reference to social structure during the rule of Satavahana Dynasty, consider the following statements:

1. Satavahana rulers were the supporters of four-fold varna division of society.
2. Only the kings, and not the Queens were allowed to perform the Vedic sacrifices.
3. Satavahana rulers gave tax free land grants only to brahmanas, and not to Buddhist monks.

Which of the statements given above are **incorrect**?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Early Satavahanas were identified with Andhras, they were probably a local Deccan tribe who were gradually Brahmanised.

Statement 1 is correct: The Satavahana kings (such as Gautamiputra Satkarni) claimed to be Brahmins. **They considered it their primary duty to uphold the varna system, that is, the four-fold division of social structure determined by varnas.**

Statement 2 is incorrect: **Kings and queens both performed the Vedic sacrifices.** Nanaghat inscription of Queen Nayanika, the widowed queen of Satakarni, mentions that queen performed Vedic sacrifices. They worshipped Vaishnava gods such as Krishna and Vasudeva.

Statement 3 is incorrect: They made liberal sacrificial fees to the Brahmanas, **they also promoted Buddhism by granting land to Buddhist monks, especially to Mahayana Buddhists.**

Source: Poonam Dalal Dahiya, chapter 7

Q.8) With reference to the impact of contacts between Central Asia and India on religion, art & Architecture during 200 BC to 300 CE, consider the following statements:

1. It led to the introduction of canal irrigation in India.
2. The use of burnt bricks for flooring and roofing was introduced in India.
3. It led to the introduction of use of the curtains in the Indian theatre.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

The rulers coming from outside including the central Asian countries between 200 BC to 300 CE known as Shaka-Kushana phase introduced various new elements to trade and agriculture, to administrative organization, to art and literature, sculpture and pottery, science and technology, and to Indian society.

Statement 1 is incorrect. Tughlaks were **first to introduce canal irrigation in India.** Barani in **tarikh-i-Firozshahi** tells us that Ghiasuddin Tughlaq was the first ruler to undertake construction of canals.

Statement 2 is correct. The rulers of central Asia introduced several material elements in the already existing techniques of Indian architecture. The Saka-Kushana phase is demonstrative of an advance in building activities. They introduced the **use of burnt bricks and tiles for both flooring and roofing.** The period is also marked by the construction of brick walls. Brick wells may also have been introduced during this period.

Statement 3 is correct. The foreign rulers were patrons of Indian art and drama. The Greeks contributed to the development of the Indian theatre by **introducing the use of the curtain**, which was called **yavanika** as an imperative element of theatre that plays an important role in the scenic representation of theatre. The word javanika or yavanika for curtain even finds place in the *Natyashastra* by Bharata.

Q.9) With reference to the post-Mauryan art and culture, consider the following statements:

1. The Shunga rulers introduced the idea of decorated gateways in Buddhist stupas.
2. During this period, the prayer halls or Chaityas were developed in rock caves.
3. The Lomas Rishi cave is an example of man-made cave built during the post-Mauryan period.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

The collapse of the Mauryan rule in 187 BCE paved the way for the emergence of several powers in the Indian subcontinent. The period from the decline of the Mauryas to the rise of the Guptas (2nd century BCE to 3rd century CE) is known in Indian history as the post- Mauryan period.

Statement 1 is correct. Stupas were the burial mounds where the ashes of the dead were kept. In Post-Mauryan period, the size of stupas became larger and more decorative with the use of Stone in place of wood and brick as used during the Mauryan and Vedic period. The **Shunga dynasty** introduced the idea of '**torans**' i.e., **a beautifully decorated gateways to the stupas** that were intricately carved with figures and patterns and were evidence of Hellenistic influence. **Examples: Bharhut stupa in Madhya Pradesh.**

Statement 2 is correct. The rock-cut cave architecture emerged during Mauryan Period where it was used as viharas (living quarters) only. In Post-Mauryan period, the rock-cut caves **developed Chaityas or the prayer halls along with the viharas.**

Statement 3 is incorrect. The **Lomas Rishi Cave** is a man-made cave in Bihar built during **Ashoka Period** as a part of sacred architecture of Ajivika Sect. The **Udayagiri and Khandagiri caves of Orissa** is an example of post-Mauryan caves that are both natural and man-made built by **kharavela rulers.**

Q.10) Which of the following risks/ concerns are likely associated with the privatization of public sector banks (PSBs) in India?

1. Risk of formation of monopolies
2. Reduction in inclusivity of banking services
3. Short-term focus on maximizing profit
4. Lack of transparency and accountability
5. Loss of Employment

Select the correct answer using the codes given below:

- a) 1, 2 and 3 only
- b) 1, 3, 4 and 5 only
- c) 3 and 4 only
- d) 1, 2, 3, 4 and 5

Ans) d

Exp) Option d is the correct answer.

The Government has fast-paced the privatization of PSBs (Public Sector Banks). Recently NITI Aayog released its last round of consolidation plans. In that, the NITI Aayog listed 6 banks for the privatization plan. The privatization of public sector banks (PSBs) refers to the process of selling government-owned shares in these banks to private investors. This process is often controversial and is associated with a number of concerns, including:

1) Risk of Monopolies: One of the concerns associated with the privatization of public sector banks is that it may lead to the formation of monopolies or oligopolies. This is because private banks, particularly large ones, have more resources and financial capabilities than smaller banks, which can lead to the consolidation of the banking sector. This can result in reduced competition, leading to higher prices and fewer choices for consumers, and also the possibility of decreased innovation and service quality. **Hence, Option 1 is correct.**

2) Reduced access to banking services: Another concern is that privatization could lead to reduced access to banking services for certain groups, such as low-income households and rural communities. The Private Sector focused on profit motive might restrict the credit to rural, agricultural, women, poor sections of society, etc. Thus, after Privatized PSBs the remaining PSBs have to take care of all of such credits. This might stress the remaining PSBs also. **Hence, Option 2 is correct.**

3) Short term focus: Private investors may have a short-term focus on maximizing profits and returns which may not align with long-term development goals of the country. **Hence, Option 3 is correct.**

4) Lack of transparency and accountability: Private banks are not subject to the same level of transparency and accountability as public banks, which could lead to a lack of oversight and a greater risk of fraud and financial mismanagement. **Hence, Option 4 is correct.**

5) Job losses: Privatization of PSBs could also lead to job losses, as private investors may seek to reduce costs by cutting staff. This could have a negative impact on local economies and on the livelihoods of those who lose their jobs. **Hence, Option 5 is correct.**

Source: <https://blog.forumias.com/privatization-of-psbpublic-sector-banks-explained-pointwise/>

Q.11) With reference to forced labour (Vishti) in India during the Gupta period, which one of the following statements is correct?

- It was considered a source of income for the State, a sort of tax paid by the people.
- It was totally absent in the Madhya Pradesh and Kathiawar regions of the Gupta Empire.
- The forced labourer was entitled to weekly wages.
- The eldest son of the labourer was sent as the forced labourer.

Ans) a

Exp) Option a is the correct answer.

In the Gupta period Vishti or forced labour became a source of state income and was looked upon as a sort of taxation paid by the people. So, it finds frequent mention along with other taxes in the Gupta inscriptions. The donees were not only provided with land and villages along with right to various taxes, they were also given the right to forced labour. This shows that forced labour was probably more common than in the earlier period.

Most of the inscriptions referring to Vishti come from Madhya Pradesh and Kathiawar regions may suggest this practice was more prevalent in these areas.

Q.12) With reference to Sunga Dynasty, consider the following statements:

- Sungas followed Brahmanism and performed Ashvamedha yajna.
- Sungas encouraged the growth of Sanskrit language.
- Buddhist art received patronage from Sunga rulers.

Which of the statements given above is/are correct?

- 1 and 2 only
- 2 only
- 1 and 3 only
- 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

The founder of the Sunga dynasty was Pushyamitra Sunga, who was the commander-in-chief under the Mauryas. He assassinated the last Mauryan ruler and usurped the throne in 180 BCE. This is corroborated by Bana, the court poet of Harshavardhana of Kannauj. Sunga rule in India according to the Puranas lasted for 112 years. Magadha was the nucleus of the kingdom.

Statement 1 is correct: In the cultural sphere, the Sungas revived and followed Brahmanism and horse sacrifice. After Ashoka's Dhamma and Buddhism, the Sungas are known for having reverted to Brahmanical orthodoxy. Pushyamitra was a staunch follower of Brahmanism. In the Ayodhya inscription of Dhanadeva, Pushyamitra Sunga is credited with the performance of two Asvamedha sacrifices. Buddhist sources claim that he persecuted the Buddhists.

Statement 2 is correct: Sungas promoted the growth of Vaishnavism and the Sanskrit language.

Statement 3 is correct: Sunga rulers patronised buddhist art. Buddhist sources although refer Pushyamitra sunga as a persecutor of Buddhism, but there is enough evidence to show that he patronised Buddhist art. During his reign the Buddhist monuments at Bharhut and Sanchi were renovated and further improved.

Q.13) With reference to Satavahanas, consider the following statements:

1. Large amount of gold coins were issued during Satavahana period.
2. During Satavahanas period, Guilds also functioned as banks.
3. State imposed great degree of control on crafts and industry.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Satavahanas were the native successor of Mauryas in Deccan and in central India. In puranas they were also identified as Andhras. According to the scholars, they ruled from late 2nd century BCE till early 3rd century BCE. From epigraphic evidence, it was found that the most remarkable feature of economic life was, however, proliferation of crafts and expanding trade.

Statement 1 is incorrect: Satavahanas did not issue large quantity of gold coins. They issued mostly coins of lead which is found in the deccan region. They also issue potin, copper and bronze money.

Statement 2 is correct: During this period guilds(srenis) began to function as banks and also helped in public welfare activities. Guilds were a special feature of trade and industry in the Satavahana period. The srenis fixed rules of work, as well as the quality of the finished product and its price. It was done in order to safeguard both the artisan and the customer. Almost every industrial activity and major profession were organized under their respective guilds.

Statement 3 is incorrect: Under Satavahanas period there was less state control on craft and industry except viewing them as major revenue earners. This becomes evident from the imposition of levies on

craftsmen (karukara) in an inscription from Karle. As there were tremendous growth of crafts and industries in this period, so naturally a tax on the craftsmen earned huge revenue for the royal treasury.

Q.14) With reference to Sakas, consider the following statements:

1. They ruled over a large region extending from Afghanistan to Kalinga region of India.
2. They introduced Satrap system of government in India.
3. The first ever lengthy inscription in chaste Sanskrit was issued under a Saka ruler.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

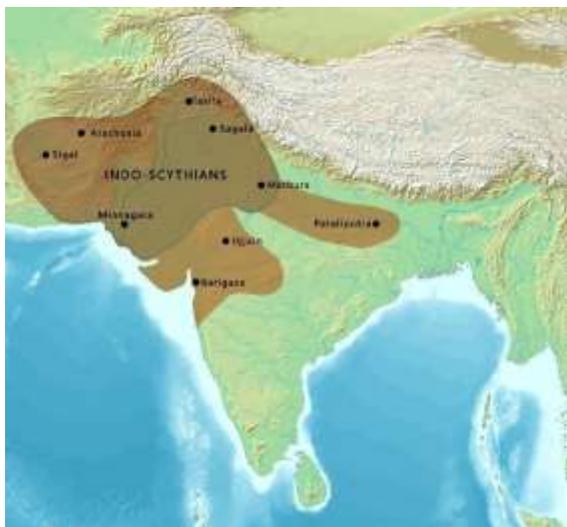

Ans) b

Exp) Option b is the correct answer.

Indo-Scythians also called Sakas were a group of nomadic Iranian peoples of Scythian origin. They migrated from Central Asia southward into modern day Pakistan and Northwestern India from the middle of the 2nd century BCE to the 4th century CE. The first Saka King in India was Maues or Moga, who established Saka power in Gandhara.

Statement 1 is incorrect: Sakas ruled over the region of northern, western and north- western region.

One branch is believed to have settled in Afghanistan. Another line of the Sakas settled in Punjab with Taxila as the capital. There was another that ruled from Mathura. A fourth branch was that which established itself in Western and Central India from where they continued their rule till about the fourth century A.D.

Statement 2 is correct: The Sakas along with the Parthians introduced the Satrap system of government. Under this system the kingdom was divided into provinces each under a military governor called Mahakshatrapa or great Satrap. Governors with lower status were called Kshatrapas or Satraps. These governors issued their own inscriptions and minted their own coins. This is indicative of a more independent status than was otherwise normal in an administrative set-up.

Statement 3 is correct: Rudradaman of Saka dynasty issued first ever lengthy inscription to be written in Sanskrit. All other inscriptions in this country were issued in Prakrit. It is evident that Rudradaman patronized Sanskrit.

Q.15) With reference to the recently introduced Scale Based Regulation for Non-Banking Financial Companies (NBFCs) by the Reserve Bank of India, consider the following statements:

1. It classified the NBFC into four layers based on their size, activity and risk.
2. The NBFCs classified under the higher layer will have lesser regulation compliance in comparison to NBFCs in lower layers.
3. Its scope extends to cover both deposit taking and non-deposit taking NBFCs.
4. Currently, the government owned NBFCs cannot be placed in the highest layer.

Which of statements given above is/are correct?

- a) 1 and 2 only
- b) 1 and 4 only
- c) 3 only
- d) 1, 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

Over the years, the NBFC sector has grown in terms of size, complexity, and interconnectedness within the financial sector. Hence there is a **need to align the regulatory framework for NBFCs keeping in view their changing risk profile.**

Statement 1 is correct: Scale Based Regulation for Non-Banking Financial Companies (NBFCs) shall comprise **four layers based on their size, activity, and perceived riskiness.** NBFCs in the lowest layer shall be known as **NBFC - Base Layer (NBFC-BL).** NBFCs in the middle layer and upper layer shall be known as

NBFC - Middle Layer (NBFC-ML) and NBFC - Upper Layer (NBFC-UL) respectively. The Top Layer is ideally expected to be empty and will be known as NBFC - Top Layer (NBFC-TL).

Statement 2 is incorrect: Higher the layer, higher the regulation. RBI stated that the Upper Layer shall comprise of those NBFCs which are specifically identified by RBI as warranting enhanced regulatory requirement based on a set of parameters. Also, RBI can move the NBFCs from Upper layer to Top layer if it is of the view that particular NBFCs may pose potential systemic risk.

Statement 3 is correct: Scale Based Regulation for Non-Banking Financial Companies (NBFCs) covers both deposit taking and non-deposit taking NBFCs. It also covers the NBFCs undertaking following activities NBFCs undertaking the following activities (i) Standalone Primary Dealers (SPDs), (ii) Infrastructure Debt Fund - Non-Banking Financial Companies (IDF-NBFCs), (iii) Core Investment Companies (CICs), (iv) Housing Finance Companies (HFCs) and (v) Infrastructure Finance Companies (NBFC-IFCs).

Statement 4 is correct: Government owned NBFCs shall be placed in the Base Layer or Middle Layer as the case may be. Currently they will not be placed in the Upper Layer.

Source: <https://www.rbi.org.in/Scripts/NotificationUser.aspx?Id=12179&Mode=0>

Q.16) Which of the following is the correct description of 'Hora Shastra'?

- It is a major ancient Indian text concerning code of conduct for men and women in society.
- It is a book containing rules regarding performance, acting, gesture and stage direction.
- It deals with the study of Vedic astrology.
- It is one of the oldest grammar rule books for Sanskrit language.

Ans) c

Exp) Option c is the correct answer.

Option a is incorrect: Manusmriti or laws of manu is a rule book containing role of men and women in society and their interaction in social plane.

Option b is incorrect: Natyasastra by Bharata contains the rules regarding performance, acting, gesture and stage direction.

Option c is correct: Horashastra deals with the study of Vedic astrology. Post-Mauryan Indian astronomy and astrology has a huge Greek influence. The term 'Hora Shastra' used for astrology in Sanskrit was derived from the Greek term 'horoscope'.

Option d is incorrect: Panini's Ashtadhyayi contains the rules of grammar for Sanskrit language. It dated around 500 BCE.

Indian art and culture by Nitin Singhania, chapter on Indian Literature.

Q.17) "He was an Indo-Greek ruler. He administered a large territory in the North-western regions of the Indian Subcontinent with his capital at Sagala. He was a patron of the Buddhist religion and was converted to Buddhism by Nagasena."

Which of the following rulers is mentioned in the above paragraph?

- Menander
- Demetrius
- Hermias
- Apollodotus

Ans) a

Exp) Option a is the correct answer.

Menander was the Indo-Greek king who was patron of the Buddhist religion. He wrote one of the most important Buddhist works called **the Milinda-panha** (“**The Questions of Milinda**”) which was written in Pali. He was converted to **Buddhism by Nagasena**, who also was mentioned in his work. The kingdom of Menander in the Indian subcontinent extended from the Kabul River valley in the west to the Ravi River in the east and from the Swat River valley (in modern Pakistan) in the north to Arachosia (the Kandahar region) in Afghanistan in the south. He even made his attempts to capture Pataliputra but was stopped by the army of Vasumitra (the grandson of Pushyamitra Sunga).

Source: <https://www.britannica.com/biography/Menander-Indo-Greek-king>

Q.18) Which of the following is correct with respect to the Judicial administration during the Mauryan empire?

- Capital punishments were totally absent during the Mauryan time.
- The Dharmasthiya courts deals with criminal matters only.
- The Kantakasodhana courts relied on spies for information about anti-social activities.
- Ashoka tried to establish rule of law based on Varna system.

Ans) c

Exp) Option c is the correct answer.

Justice was administered through courts which were established in all the major towns. Two types of courts were prevalent during this time.

Option a is incorrect: During the Mauryan period, punishments for crimes were usually quite severe. Punishments for offences and crimes ranged from fines to **mutilation of limbs, or even capital punishment**.

Option b is incorrect: The **dharmasthiya courts** mostly dealt with **civil law** relating to marriage, inheritance and other aspects of civil life. The courts were presided over by three judges well-versed in sacred laws and three amatyas (secretaries).

Option c is correct: The main purpose of **kantakasodhana** courts was to clear the society of **anti-social elements and various types of crimes**, and it functioned more like the modern police, and relied on a **network of spies** for information about such anti-social activities.

Option d is incorrect: Pillar Edict IV contains Ashoka's claim that he had introduced **samata in judicial procedure**. According to some interpretations this meant that he had established a **uniform rule of law, abolishing varna distinctions in punishments**.

 Class XI; TN SCERT - Pg no 57

Q.19) With reference to Megasthenes account of the Mauryan empire, which of the following statements are correct?

1. Inter-caste marriages were common.
2. Bulk of the population was engaged in agriculture.
3. Indians used to borrow and lend money on interest.
4. There was no concept of slavery in India.

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 2 and 4 only
- c) 2 and 3 only
- d) 1 and 4 only

Ans) b

Exp) Option b is the correct answer.

Megasthenes was a Seleukidian envoy who visited the Mauryan capital Pataliputra during the **reign of Chandragupta Maurya**. His account, **Indica**, presents the picture of India (especially northern India) under Chandragupta Maurya.

Statement 1 is incorrect: Megasthenes noted that the **occupations were hereditary in nature and intermarriage between groups was not allowed** – two features crucial to the functioning of the **caste system**.

Statement 2 is correct: Megasthenes noted that **cultivators were the most numerous of all groups**. Clearly, the **bulk of the population was engaged in agriculture**. He noted soldiers as the second largest group in terms of numbers.

Statement 3 is incorrect: Megasthenes noted that **Indians did not borrow or lend money on interest**. However, many historians dispute this claim since money-lending was known and practiced from early times.

Statement 4 is correct: Megasthenes stated that there is **no concept of slavery in India**. However, evidence suggests that there are some situations that led to enslavement – **a person could be a slave either by birth, by voluntary selling themselves, by being captured in war, or as a result of judicial punishment**.

Q.20) In the context of Indian economy, consider the following statements with respect to the Digital Banking Units (DBUs):

1. It is a mobile unit of banks established to improve the outreach of banks.
2. It can be established by the payment banks.
3. It will facilitate the acceptance and disbursement of physical cash at their counters.
4. Both the physical security and cyber security of the DBUs should be ensured by banks owning DBUs.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2, 3 and 4 only
- d) 4 only

Ans) d

Exp) Option d is the correct answer.

As part of the Union budget speech for 2022-23, the finance minister announced setting up the 75 DBUs in 75 districts to commemorate our country's 75 years of independence.

Statement 1 is incorrect: Digital Banking Units (DBUs) is a **specialised fixed unit** housing **certain minimum digital infrastructure** for delivering **digital banking products and services as well as servicing existing financial products & services digitally** in both self-service and assisted mode.

Statement 2 is incorrect: RBI's guidelines state that **Scheduled Commercial Banks (other than Regional Rural Banks, Payment Banks and Local Area Banks)** with past digital banking experience are **permitted to open DBUs**, unless otherwise specifically restricted, without having the need to take permission from RBI in each case.

Statement 3 is incorrect: **DBUs allow** cash withdrawal/deposit only through ATM/Cash Deposit Machines respectively and **no physical cash acceptance/disbursal across counters**. Other services include opening of savings account, balance-check, print passbook, transfer of funds, loan applications, application for credit / debit cards, view statement of account, pay taxes, pay bills.

Statement 4 is correct: In addition to ensuring **physical security** of the infrastructure of the DBU, adequate safeguards for **cyber security** of the DBUs will have to be ensured by the banks.

Q.21) Which one of the following books of ancient India has the love story of the son of the founder of Sunga dynasty?

- Swapnavasavadatta
- Malavikagnimitra
- Meghadoota
- Ratnavali

Ans) b

Exp) Option b is the correct answer.

The Malavikagnimitra is a Sanskrit play by Kalidas. The play tells the love story of Agnimitra, the Shunga Emperor. He falls in love with the picture of an exiled servant girl named Malavika.

Source: UPSC 2016

Q.22) With reference to the Ashokan inscriptions, consider the following statements:

- Minor Rock Edict I mentions that Ashoka was a devotee of Buddhism.
- Ashokan inscriptions were devoid of Greek and Aramaic script.
- The Ashokan inscription mentions the region of Kerala as Keralaputho.
- Ashoka's edict mentioning the military conquest of Kalinga is the only recorded military expedition of the Mauryans.

Which of the statements given above are correct?

- 1 and 2 only
- 1, 3 and 4 only
- 2 and 3 only
- 1 and 4 only

Ans) b

Exp) Option b is the correct answer.

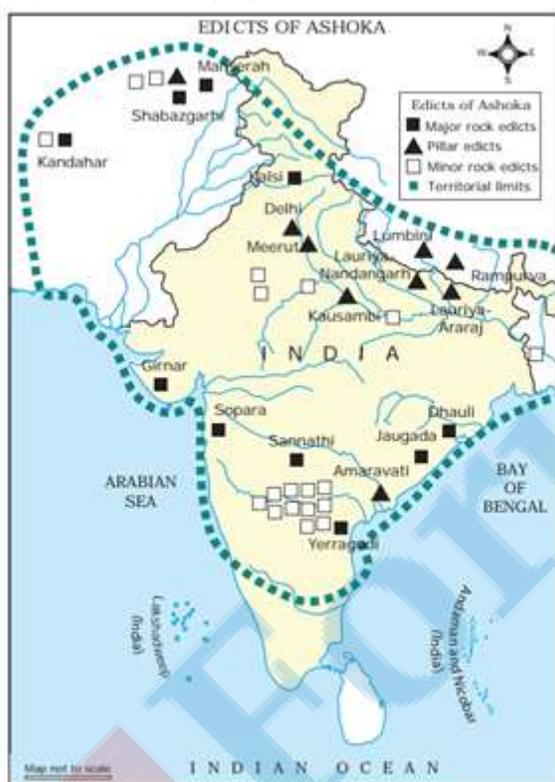

Statement 1 is correct: The Ashokan inscriptions can be divided into two categories. The smaller group of these inscriptions reveal that the **king was a follower of Buddhism and were addressed**.

to the Buddhist Church or the Sangha. For instance, **Minor Rock Edict I** mentions that he has been a lay devotee of Buddhism for two and a half years.

Statement 2 is incorrect: The Ashokan edicts are written in the **Prakrit language and Brahmi script**, and occasionally in the **Kharosthi script** (in the north-western parts of the subcontinent) There are a few inscriptions in **Greek and Aramaic** as well. In fact, a **bilingual Greek-Aramaic inscription** was found at **Shar-i-Kuna near Kandahar** in south-east Afghanistan and another one in **Taxila**.

Statement 3 is correct: The second and thirteenth Ashokan stone inscription mentions **Kerala as Keralaputho (meaning KeralaPuthra)**. The second inscription noted that hospitals for humans and animals were established in the **neighbouring regions ruled by the Cholas, Pandyas, Satyaputra, Keralaputra and the Thambapanni (Sri Lanka)**.

Statement 4 is correct: **Ashoka's Major Rock Edict 13** is the only recorded military expedition of the Mauryans. It mentions Ashoka's **military conquest of Kalinga** and the disastrous consequences of conquest of territory by war.

Class XI : TN SCERT Pg no 53,54

Q.23) With reference to the principles of Ashoka's Dhamma, consider the following statements:

1. It advocated for the abolition of the practise of slavery.
2. It promoted non-violence towards animals.
3. It asked people to show generosity towards both brahmanas and sramanas.
4. It encouraged welfare activities like digging of wells.

Which of the statements given above are correct?

- a) 1 and 3 only
- b) 2 and 4 only
- c) 3 and 4 only
- d) 2, 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

The principles of Dhamma were so formulated in a manner that is acceptable to people belonging to **different communities and followers of any religious sect**. Dhamma was not given any formal definition or structure.

Statement 1 is incorrect: Ashoka's Dhamma **did not advocate for the abolition of slavery**. His Dhamma asked people to show **consideration towards slaves and servants** (thus not condemning slavery). Thus, Ashoka's Dhamma in fact recognised the practise of slavery.

Statement 2 is correct: Dhamma stressed on **prohibition of animal sacrifices** and festive gatherings and avoiding expensive and meaningless ceremonies and rituals. It also **promoted consideration and non-violence to animals** and courtesy to relations and liberality to Brahmins.

Statement 3 is correct: Ashoka's Dhamma stressed on tolerance of different religious sects in an attempt to create a sense of harmony. Hence it asked people to show **generosity towards brahmanas and sramanas**.

Statement 4 is correct: The policy of Dhamma also included certain **welfare measures like planting of trees, digging of wells**, etc.

Q.24) With reference to Polity and administration of Satavahanas, consider the following statements:

1. The office of provincial minister called Amatya was hereditary in nature.
2. None of the Feudatories of Satavahana rulers were given the right to issue coins.
3. Skandhvaras referred to the military camp during Satavahana rule.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

The Satavahanas were represented as the upholder of dharma. Most kings were represented as possessors of supernatural powers and of qualities, of mythical heroes such as Rama, Arjuna, Bhima, and so on. The Satavahanas retained some of the administrative units of Ashokan times.

Statement 1 is incorrect: The high-est official in a province was 'Amatya' or minister. His **office was not hereditary**. Men of proven ability were appointed to this office.

Statement 2 is incorrect: The Satavahana kingdom had three grades of feudatories:

- 1) Raja
- 2) Mahabhoja
- 3) Senapati

Only the feudatories of Raja category were given the right to strike/issue a coin.

Statement 3 is correct: **Skandhvaras is a kind of military camp in Satavahana reign**. Satavahanas maintained diversified and large armies. Their territorial expansion was based on their military might. Apart

from infantry, the Satavahanas possessed cavalry, chariots and elephant forces. The army commander was styled Maha Senapati. The military character of the Satavahanas is evident with the use of terms like kataka and skandhavaras in their inscriptions, which denote military camps and settlements attached to a particular king and also served as administrative centres.

Knowledge Base: few features of satavahana kingdom:

- The kingdom was divided into subdivisions called aharas or rashtras, meaning districts.
- Officers called amatyas/mahamatras who were ministers or advisors of the king. But, unlike Mauryan times, certain military, and feudal traits are found in the administration of the Satavahanas.
- The lowest level of administration was a grama (village), which was under the charge of a gaulmika (village headman). He was also the head of a military regiment consisting of nine chariots, nine elephants, 25 horses and 45-foot soldiers.

Q.25) With reference to the Indian economy in 2021-22, consider the following statements:

1. Service sector accounts for more than half of India's Gross Domestic Product (GDP).
2. Share of India's services exports in the global services exports is more than ten percent.
3. In terms of value, the share of service exports to India's total exports is greater than the share of merchandise exports.
4. Software services is the largest contributor to India's service exports.

Which of the statements given above are correct?

- a) 1,2 and 4 only
- b) 1 and 3 only
- c) 1 and 4 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

India's trade and external sector had a significant impact on the GDP growth as well as expansion in per capita income. India's merchandise exports were at US\$ 231.88 billion and India's imports totalled US\$ 380.34 billion.

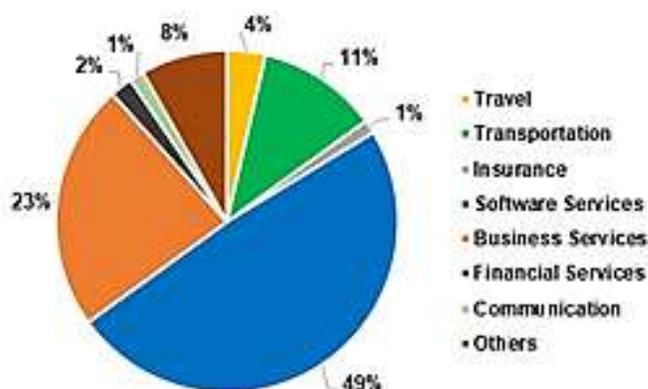

Statement 1 is correct: During the year 2021-22, Services Sector contributed over 50% to India's GDP, highlighted the Economic Survey.

Statement 2 is incorrect: India's commercial services exports share in the global services market is **around 4% in 2021**. According to World Trade Organisation estimates India's **services export market share improved** from 3% in 2010 to 3.5% in 2019 and 4% in 2020 and 2021.

Statement 3 is incorrect: In terms of value, the **share of merchandise exports (3,01,058.33 crore) to India's total exports is greater** than the share of service exports **(1,07,030.99 crores) in the year 2021-22**.

Statement 4 is correct: In 2021-22, **Software services is the largest contributor to the share of India's service exports**. It is followed by the business services, communication in the same order.

India's industry-wise share of total services sector exports

Q.26) With reference to Kautilya's Arthashastra, consider the following statements:

1. It provides for water cess which varies from one fifth of the produce to one third of the produce.
2. It refers to 'Samaharta' as the highest officer in charge of collection of revenue in the Mauryan empire.
3. It mentions "Sita" as land that was gifted to Brahmanas.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 1 only
- c) 2 and 3 only
- d) 2 only

Ans) a

Exp) Option a is the correct answer.

Kautilya's Arthashastra is a **theoretical treatise, prescribing** how a state **ought** to be ruled by the King **rather than describing** an actual state.

Statement 1 is correct: The State's role in the provision of irrigation was crucial for a strong agricultural set up. **The Arthashastra mentions a water cess** which amounted to a fifth, a fourth or a third of the produce.

Statement 2 is correct: Arthashastra describes the **highest officer in charge** of collecting revenue as the **Samaharta. Samaharta, Collector of General of revenue** was also in charge of exchequer. He was a present-day Minister of **finance**. He had to supervise all the provinces, fortified towns, mines, forests, trade routes and others, which were the sources of revenue.

Statement 3 is incorrect: Arthashastra mentions **Sita as crown land** which was **held by the ruler and designated as his own land (svabhumi)**. These crown lands were cultivated under the supervision of the State, by sharecroppers or tenant cultivators who paid a tax, or even by wage labor. In the Arthashastra, a **Sitadhyaksa** or superintendent of agriculture is mentioned who probably supervised the **cultivation of sita lands**.

Q.27) With reference to Gupta period, consider the following statements:

1. Feudalism as a system of administration was first introduced by the Gupta rulers.
2. The Gupta period witnessed proliferation of castes.
3. Nalanda university was established during this period.

Which of the statements given above is/are correct?

- a) 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

After the decline of the Mauryan empire, the Gupta kingdom emerged as a great power and achieved the political unification of a large part of the Indian subcontinent.

Statement 1 is incorrect: Feudalism was practiced by the Satavahanas in the Deccan, long before the Guptas. However, it **took root during the Gupta period**. Feudalism gained currency because of Gupta's practice of granting fiscal and administrative concessions to priests and administrators.

Statement 2 is correct: The period witnessed **proliferation of castes**. With the extension of brahmanical culture in distant and different areas, **a large number of tribals** were assimilated in the brahmanical social structure of varna system fold, as were some foreigners such as the Hunas. While the foreigners and tribal heads were included as **kshatriyas**, the ordinary tribals were given the status of **shudras**. As a result, **every foreigner and tribe became a part of caste Hindu**.

Statement 3 is correct: Nalanda and Taxila were the important universities during the Gupta period. **Nalanda University was established by Kumaragupta I** in the 5th century and it was situated in the present-day Bihar. Other important universities during this period were **Ujjain, Vikramshila and Vallabhi**. Thus, during Gupta times, **education flourished**.

Q.28) Which of the following can be the correct reasons for the Gupta Period being known as the Golden age of India?

1. Many great epics like Ramayana and Mahabharata were completed during this period.
2. The art of mural painting flourished during this period.
3. Increased production of Secular literature during this period.
4. The structural temples were built in Northern India for the first time during this period.

Select the correct answer using the code given below:

- a) 1, 2 and 3 only
- b) 2, 3 and 4 only
- c) 1 and 3 only
- d) 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct answer.

The Gupta period in ancient India has been called the **Golden Age of India** because the period saw many achievements in the **field of arts, science, and literature**.

Statement 1 is correct: A huge body of religious and secular literature was compiled in this period. The two great epics, the Ramayana and the Mahabharata were finally completed during the Gupta times.

Statement 2 is correct: The mural paintings of this period are found at **Ajanta, Bagh, Badami** and other places. The finest piece of art of mural painting is **Ajanta cave paintings** and most of them belong to the Gupta period. They have been marked by their brilliant colours which have not faded even after 14 centuries.

Statement 3 is correct: The growth of secular literature in the Gupta period was significant. Some of the greatest poets lived during this period. For instance, **nine jewels or Navratna named as Amarasimha, Dhanvantari, Ghatakarapara, Kalidasa, Kshapanaka, Shanku, Varahamihira, Varuchi, Vetala- Bhatta** adorned the court of **Chandragupta II**. Some of the famous secular works of **Kalidasha are Meghadutam, Abhijnanashakuntalam, Raghuvamsha, Kumarasambhava and Ritusamhara**.

Statement 4 is correct: It is for the first time in the Gupta period that the temples in the form of structures were constructed in north India. These temples were made in the architectural style known as **Nagara. Bhitargaon in Kanpur** and the other of stone at **Deogarh in Uttar Pradesh** are two such temples.

Q.29) Which of the following literary sources give information about the Mauryan empire in India?

- 1. Parishishtaparvan
- 2. Mudrarakshasa
- 3. Devichandraguptam
- 4. Divyadana

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 3 only
- c) 1, 2 and 4 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

Mauryan period has a greater number and more diverse type of primary sources as compared to the earlier periods. Apart from **Megasthenes' Indica and Kautilya's Arthashastra** there were some other literary sources.

Option 1 is correct: The **Parishishtaparvan** is a 12th-century Sanskrit mahakavya by **Hemachandra** which details the histories of the earliest **Jain teachers**. It largely covers the period between 480-200 BCE and follows the growth of the kingdom of Magadha and the establishment of the Maurya Empire.

Option 2 is correct: The **Mudrarakshasa** is a Sanskrit play written by **Vishakhadatta** that **narrates the ascent of the king Chandragupta Maurya to power in India**. Vishakhadatta was **believed to be a contemporary of Chandragupta II**, and lived in the late 4th century to early 5th century. However, this claim was disputed by some scholars.

Option 3 is incorrect: **Devichandraguptam** is a Sanskrit play written by **Vishakhadatta**. It is a play about the **early life of Gupta King Chandragupta II** and it depicts a story of Gupta King **Ramagupta** who decides to surrender his queen **Dhruvadevi** to a **Shaka invader** but his **younger brother Chandragupta** enters the enemy camp **disguised as queen** and kills the enemy. In the climax of the play, Chandragupta dethrones Ramagupta and marries Dhruvadevi.

Option 4 is correct: The Buddhist text **Divyavadana** speaks of a revolt in **Taxila during Bindusara's region**. Bindusara (reign 297 – c. 273 BCE) was a **second Mauryan ruler, father of emperor Ashoka**. According to Divyavadana the subjects of Taxila were dissatisfied with rogue administrators.

Q.30) With reference to the Foreign Direct Investment (FDI) in India, consider the following statements:

1. During the financial year 2021, India emerged as the largest recipient of foreign direct investment in the world.
2. The FDI inflows into India has steadily increased during the last two decades.
3. Gujarat and Tamil Nadu received more than half of the total FDI received by India in the last two decades.
4. The Government of India allowed 100% FDI in the defence sector through the government route.

Which of the statement/s given above is/are **incorrect**?

- a) 2 only
- b) 2, 3 and 4 only
- c) 1 and 4 only
- d) 1, 2 and 3 only

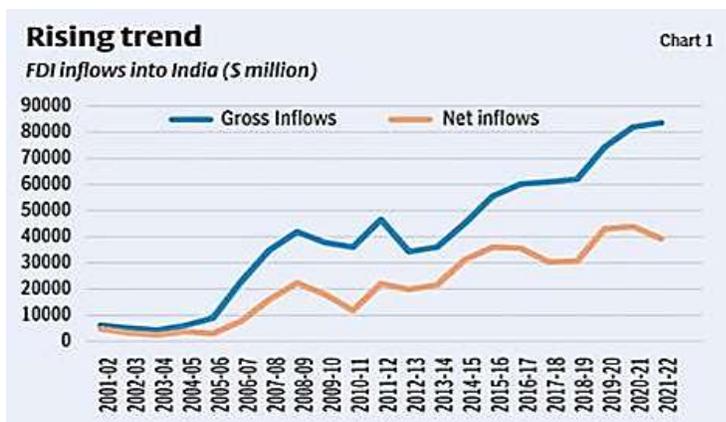

Ans) d

Exp) Option d is the correct answer.

A foreign direct investment is an investment in the form of a **controlling ownership** in a business or in productive assets such as **factories in one country by an entity based in another country**. In 2022, India's cumulative FDI inflow stood at **US\$ 871.01 billion**.

Statement 1 is incorrect: According to the United National Conference on Trade and Development (UNCTAD)'s **World Investment Report 2022**, **India was ranked seventh** among the world's major FDI recipients. **The United States (\$367 billion) is the top** recipient of FDI followed by **China (\$181 billion)** and Hong Kong (\$141 billion).

Statement 2 is incorrect: **The FDI inflows into India since 2000 were not steadily increasing** instead it fluctuated. However, it was increased twenty times from 2000-01 to 2021-22 i.e., from **4,029 crores in 2000 to 84,835 crores in 2022**.

Statement 3 is incorrect: Since the year 2000, **Maharashtra (28%) and Karnataka (23%) received more than half of total FDI inflows in the country.** These states were followed by **Gujarat (18%), Delhi (13%) and Tamil Nādu (5%).**

Statement 4 is correct: **The Government of India increased FDI in the defence sector by increasing it to 74% through the automatic route and 100% through the government route.** Also, the government is coming up with a liberalised and transparent policy in many other sectors to attract FDIs in India.

Q.31) With reference to the scholars/litterateurs of ancient India, consider the following statements:

1. Panini is associated with Pushyamitra.
2. Amarasimha is associated with Harshavardhana.
3. Kalidasa is associated with Chandra Gupta-II.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Amarasimha and Kalidasa were one of the Navratnas in the court of Chandra Gupta-II. Panini was a revered scholar belonging to 5th – 6th Century, whereas Pushyamitra Shunga reigned in 2nd BCE.

Source) UPSC 2020

Q.32) One of the major events of Ashoka's reign was the convening of the Third Buddhist Council in Pataliputra. In this context, consider the following statements:

1. The council witnessed the first major division within Buddhism.
2. Following this council, Buddhism for the first time began to spread in South India.
3. The council decided to send missions outside India to propagate Buddhism.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

There were **four Buddhist councils held during the ancient period**. The first one was held around 483 BC under the patronage of **King Ajatashatru** of the Haryanka Dynasty under Magadha Empire. The 2nd, 3rd and 4th Buddhist councils were held around **383 BCE, 250 BCE, and 72 CE** respectively.

Statement 1 is incorrect: The **second council** held at **Vaishali** marked the **first open division in Buddhism**, which came to be divided into 18 sub-sects. It was called to settle a dispute regarding the **relaxed rules of discipline followed by the monks of Vaishali**.

Statement 2 is correct: During the early phase of Buddhism, the monks and lay disciples were **forbidden to travel beyond Majjhimadesa also known as Madhyadesa region**, mainly comprising modern day Bihar. Thus, the religion was limited to Bihar and during **2nd Buddhist council it reached till the area of Ujjain**. It was **only after the third Buddhist council that Buddhism began spreading to South India, Kashmir and outside India**.

Statement 3 is correct: An important outcome of this council was the decision to expand the reach of Buddhism to other parts of the region and **to send missions outside India to convert people to the religion**. Buddhism thus became a **proselytizing religion and missionaries** were sent to other countries. **Ashoka sent his two children, Mahinda and Sanghamitta, to Sri Lanka to propagate Buddhism**. Missionaries had been sent to **Egypt and Greece** to propagate Buddhism.

Knowledge Base: **Majjhimadesa** was the **region which was traveled over by Buddha**, comprising mainly modern Bihar. All the important cities of the region such as Sravasti, Kapilvastu, Lumbini, Kusinagara, Pava, Vaishali and Rajagriha emerged as powerful centers of the sect.

Paccantima janapada region was said to be a region inhabited by **milakkhas or barbarians**. This region was the area outlying **Majjhimadesa, possibly tribal areas** such as the forested regions of the Vindhyas **Monks and lay disciplines were forbidden to travel to this area**.

Source: <https://egyankosh.ac.in/bitstream/123456789/22239/5/Unit-7.pdf>

Q.33) Consider the following pairs regarding the various Inscriptions from ancient India:

Post-inscription	Mauryan	Description
1. Hathigumpha inscription		It mentions the defeat of Harshavardhana by Pulakeshin II.
2. Girnar rock inscription		It mentions the restoration work of Sudarshan Lake undertaken by Rudradaman I.
3. Naneghat inscription		Established by queen Nayanika mentioning the earliest record of Satvahana rulers.

Which of the pairs given above are correctly matched?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

After the decline of Mauryan empire in 2nd century BC, small dynasties sprang up in various parts of India. Like Shungas, Kanvas and Shakas in the north and Satvahanas, Ikshvakus and Vakatakas in southern and western India. Kings and queens of these dynasties established various inscriptions.

Pair 1 is incorrect: The Hathigumpha Inscription is located in Udayagiri and Khandagiri caves in Odisha, India. Dated between 2nd-century BCE and 1st-century CE, it was inscribed by the king Kharavela of Kalinga kingdom. **The Hathigumpha inscription is like the history of Kharvela as a king, a conqueror, a patron of culture and a champion of Jainism.** It consists of seventeen lines in Prakrit language in Brahmi script.

Whereas the Aihole inscription mentions the defeat of Harshavardhana by Pulkeshin II.

Pair 2 is correct: The Girnar/Junagarh inscription mentions the repair of Sudarshan Lake carried out by Rudradaman I in the Kathiawar region. The Girnar rock inscription of Rudradaman, also known as the Junagadh Rock inscription. It is located near Girnar hill near Junagadh, Gujarat, India. The Junagadh rock contains inscriptions of Ashoka (one of fourteen of the Major Rock Edicts of Ashoka), Rudradaman I and Skandagupta.

Pair 3 is correct: Nanaghat inscription of Queen Nayanika, the widowed queen of Satavahana mentions the earliest record of Satavahana rulers. It also mentions that queen performed Vedic sacrifices. The Nanaghat inscriptions along with the Nasik inscription are the principal sources for specific information on the Satavahana kingdom.

Source: <https://www.livehistoryindia.com/story/monuments/girnar-rock-inscriptions>

Indian art and culture by Nitin Singhania, chapter 1, pg 1.28

Q.34) With reference to coins issued by Indo-Greek rulers in India, consider the following statements:

1. Most of the Indo-Greek coins circulated in India were made of gold.
2. The Indo-Greek coins in India followed the Attic (Greek) weight standard.
3. Indian religious motifs were inscribed on Indo-Greek coins circulated in India.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 3 only
- c) 1 and 3 only
- d) 2 and 3 only

Ans) b

Exp) Option b is the correct answer.

The Indo-Greeks were the first to issue gold coins in India (which increased in number under the Kushanas). The coins of the Shakas, Parthians and the Kshatrapas followed the basic features of Indo-Greek coinage, including the bilingual and bi-script legends. Indo-Greek coins had aesthetic excellence, of precise economic value and provides useful information on emerging religious sects and cults (specially Shaiva and Bhagavata sects) that were prominent in that area. Coinage **was also adjusted to region and requirement.**

Statement 1 is incorrect: The Indo-Greeks were the first to introduce gold coins in India but these coins were not very large in numbers. Most of the coins circulated by Indo-Greeks in India were made of silver and copper (and not gold).

Statement 2 is incorrect: Indo-Greek coins distributed in India followed an Indian weight standard (not Attic or Greek standard) and they had bilingual inscriptions in Greek and Kharosthi. Coins circulated by Indo-Greeks out of the Indian subcontinent (north of the Hindukush) followed the Attic weight standard and had Greek legends.

Statement 3 is correct: Coins circulated in Indian subcontinent had Royal portrait on the obverse side, but the motifs on the reverse included religious symbols that were Indian rather than Greek in inspiration.

Source: Poonam Dalal Dahiya chapter 7

Q.35) With reference to 'Virtual Digital Assets', consider the following statements:

1. Virtual Digital Assets means any information, code, number or token generated through cryptographic means.
2. In India, an income from the transfer of Virtual Digital Assets has been made taxable.
3. Short-term holding of less than one year of virtual digital assets has been exempted from any tax.
4. The gifting of virtual digital assets among Indian residents has been disallowed.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2, 3 and 4 only
- c) 1, 3 and 4 only
- d) 3 and 4 only

Ans) a

Exp) Option a is the correct answer.

The finance minister in her Budget 2022 speech announced a 30% tax on income from virtual digital assets (particularly aiming at Cryptocurrencies). In addition to this, it was also proposed to levy a Tax Deduction at Source (TDS) on payments made in relation to the transfer of virtual digital assets at 1% above a monetary threshold.

Statement 1 is correct: The Finance Bill, 2022 has for the first time provided a definition for crypto assets. According to the definition, **any information or code or number or token generated through cryptographic means** or otherwise providing a digital representation of value exchanged with or without consideration that can be transferred, stored, or traded electronically can be defined as "virtual digital assets".

In layman's terms, it basically means **cryptocurrencies, DeFi (decentralized finance) and non-fungible tokens (NFTs)**. Prima facie, excludes digital gold, central bank digital currency (CBDC) or any other traditional digital assets, and hence aimed at specifically taxing cryptocurrencies.

Statement 2 is correct: A new taxation framework for VDAs was introduced in the Finance Bill 2022 to provide for taxation and withholding of tax pertaining to VDAs. It states that Effective from 1 April 2022 onwards, **any income from transfer of VDAs is taxable** at the rate of 30% (plus surcharge and cess).

Statement 3 is incorrect: Government will be taxing the profits which are made during transactions of such private created assets or virtual digital assets at 30%. This will be done regardless of **any long-term or short-term holding** by the investor.

Statement 4 is incorrect: The gifting of **virtual digital assets is allowed in India**. The gifting of virtual digital assets has been proposed to be taxed in the hands of the recipient i.e. In the event of gifting of VDAs, the **tax payment would be made by the recipient**.

Source: <https://www.pwc.in/tax-knowledge-hub/taxation-framework-of-virtual-digital-assets.html>

<https://blog.forumias.com/cryptocurrency-tax-budget-2022-unveils-norms-for-virtual-digital-assets/>

Q.36) With reference to Indian Society during Mauryan period, consider the following statements:

1. Women were employed as spies but they were denied any combatant role.
2. The minimum marriageable age was fixed at 16 for girls and 18 for boys.
3. Widows could not inherit their deceased husband's properties, if she was childless.
4. A female slave could not be beaten or abused by her master.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 3 and 4 only
- c) 3 only
- d) 1, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

The role of women in Mauryan society is of some significance. Their role in society was fixed in a way that would preserve the **tradition of patriarchy**.

Statement 1 is incorrect: Women played a combatant role in the Mauryan empire. During the Mauryan period, the **King's bodyguard** was known to consist of **Women archers** who also accompanied him on **hunts**. Additionally, women too were employed by the State as **spies**.

Statement 2 is incorrect: The marriage age for women was fixed at 12 and for boys it was 16. Kautilya's **Arthshastra** stated that bearing a child was one of the important duties of a married women. Thus, a daughter had to be married off as soon as she attained puberty. For girls, the age of puberty was twelve and for boys it was sixteen.

Statement 3 is correct: During Mauryan times, a widow could not inherit her deceased husband's properties if she was childless. If she had a son, then they can inherit their husband's property and if she was childless, such property would be inherited by her in-laws to maintain her.

Statement 4 is correct: During Mauryan times, the female slaves were subject to special legal protection. A female slave cannot be beaten or abused by her master. If the abused woman was a nurse, a cook, a maid or an agricultural worker, she would be freed. Also, the bonded female labourer and the slave as well as their children were **freed from bondage if they gave birth to their master's children**.

Q.37) With reference to the trade during Mauryan period, consider the following statements:

1. All the guilds were exempted from paying taxes to the states.
2. There was a widespread use of metallic money for transactions.
3. Mauryans established sea-trade links with Burma and the Malay peninsula.
4. Indigo, ivory, pearls and perfumes were some of the items exported by Mauryans.

Which of the statements given above are correct?

- a) 2 and 4 only
- b) 2, 3 and 4 only
- c) 1 and 3 only
- d) 1, 2, 3 and 4

Ans) b

Exp) Option b is the correct answer.

The expansion of commerce and trade enabled the Mauryans to augment their resources and revenue. The security and peace provided by the stable Mauryan empire facilitated trade and commerce during this period.

Statement 1 is incorrect: The artisans during the Mauryan period were organized along **guild lines**. The **State exempted certain artisans** like armorers, shipbuilders and stone builders because they rendered **compulsory labour services to the State**. **Other artisans like spinners, weavers, miners etc. were taxed.**

Statement 2 is correct: Although the use of coinage had been prevalent since 6th century BCE, but due to **development of commerce and trade** during Mauryan time there was a **widespread use of metallic money for transactions in cash.**

Statement 3 is correct: The art of Overseas trade by ships was known to the Mauryan empire. **Sea-borne trade was carried on with Burma and the Malay Archipelago, and with Sri Lanka.** The ships, however, were probably quite small.

Statement 4 is correct: The establishment of friendly relations with the Greeks under the Mauryan kings like Bindusara and Ashoka improved its external trade relations. **Indigo, ivory, tortoiseshell, pearls and perfumes and rare woods** were all **exported** by Mauryans.

Class XI TN SCERT: Pg no (60,61)

Q.38) With reference to the Mauryan administration, consider the following statements:

1. The King could not override the decisions of the council of ministers in any circumstance.
2. The administrative structure was highly centralised leaving no scope for autonomy in villages.
3. The city administration was very elaborate and well planned in the Mauryan empire.
4. Each province was usually under the governance of a prince or a member of the royal family.

Which of the statements given above are correct?

- a) 1 and 4 only
- b) 2 and 3 only
- c) 3 and 4 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

The Mauryan empire was a vast territorial entity. Various levels of administration were required to govern it well. The Arthashastra, Greek accounts and Ashokan inscriptions give us a good idea about the administrative system of the Mauryan empire.

Statement 1 is incorrect: The primary role of the Council was **advisory** in nature. **The king's decision was final in all respects.** The Arthashastra and even Ashokan edicts mention a **Mantri parishad (council of ministers)**. Arthashastra mentions that the state cannot function without the assistance of the council of ministers.

Statement 2 is incorrect: **The villages enjoyed a certain degree of autonomy in administering their affairs.** The local people appointed as **officials in the village were called Gramikas**. Then, there was **Gopa and Sthanika** – two types of officers, acting as **intermediaries** between the district and village level administrative units. Despite the presence of such officials, the villages enjoyed a certain degree of autonomy in administering their affairs.

Statement 3 is correct: **The city administration in the Mauryan empire is very elaborate.** For instance, the city **council was divided into six sub-councils or committees** and each committee had five members. Thus, the city administration was elaborate and well planned.

Statement 4 is correct: The Mauryan Empire was divided into **four provinces, each governed by the Kumara (head of the province)**, who were usually royal princes.

Q.39) With reference to the contacts between Central Asia and India during 200 BC to 300 CE, consider the following statements:

1. The trade between Central Asia and India led to the emergence of the old Silk Route.
2. The Indo-Greeks introduced the practice of military governorship in administration.
3. The use of blue glaze on pottery was introduced in India by Sakas and Kushans.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

The impact of Central Asian political domination over northern and north western parts of India by rulers coming from outside led to the development of trade, technology, art forms etc.

Statement 1 is correct. The movement of foreigners into India established firmly the basis of regular trade contact between Central Asia and India. Trade contacts with Afghanistan were already existing but now Central Asia also opened up to trade with new routes. One of these routes became famous as the **old Silk Route**. Traders of different ethnic origins established trading stations and colonies from which the merchants operated. Examples of such places are Kashgar, Yarkand, Khotan, Miran, etc.

Statement 2 is correct. The Indo-Greeks also introduced the **practice of military governorship** and the governors were called **strategos/satraps**. They were important for maintaining the power of the rulers over the indigenous people and for blocking invasions from the north west.

Statement 3 is incorrect. The **red pottery techniques** were widely used in Central Asia, and were replicated in the Indian Subcontinent too. The typical pottery of this period was red ware, both plain and polished with medium to fine fabric. Whereas the **use of blue glaze on pottery** is an imported technique, first developed by **Mongol artisans who combined Chinese glazing technology** with Persian decorative arts. This technique travelled east to India with early Turkic conquests in the **14th century**. During its infancy, it was used to make tiles to decorate mosques, tombs and palaces in Central Asia.

Q.40) With reference to 'Payments Vision 2025', consider the following statements:

1. It is a policy document released by Department of Financial Services under the Ministry of Finance.
2. The theme of the document is titled as 'E-Payments for Everyone, Everywhere, Every time (4Es)'.
3. It has proposed for enabling geotagging of digital payment infrastructure and transactions in India.
4. It provides a framework to de-regulate all the significant intermediaries in the payment's ecosystem.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1, 3 and 4 only
- d) 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

Recently, **Reserve Bank of India (RBI) has released the “Payments Vision 2025”**. It has been providing strategic direction and implementation plan for structured development of the payment and settlement systems in India.

Statement 1 is incorrect: The policy document of ‘Payments Vision 2025’ is **released by Reserve Bank of India (Not by Department of Financial Services)**. The activities to be taken up by the RBI till 2025 have been captured across five anchor goal posts: 1) Integrity, 2) Inclusion, 3) Innovation, 4) Institutionalization and 5) Internationalization.

Statement 2 is correct: The theme of Payment Vision 2025 is **E-Payments for Everyone, Everywhere, Every time (4 Es)**. It aims to provide every user with Safe, Secure, Fast, Convenient, Accessible, and Affordable e-payment options (6 Attributes).

Statement 3 is correct: The RBI document has proposed enabling **geotagging of digital payment infrastructure and transactions** and revisiting guidelines for prepaid payment instruments (PPIs), including closed system PPIs.

Statement 4 is incorrect: RBI also proposed a framework for **regulation (not de-regulation) of all significant intermediaries in the payment’s ecosystem** and link credit cards and credit components of banking products to UPI. At present, RBI has issued instructions for regulating the activities of online Payment Aggregators, while providing baseline technology-related recommendations to Payment Gateways (PGs). The need to bring all significant payment intermediaries, including offline PAs, under **direct regulation of RBI** should be considered according to Vision document.

Q.41) With reference to the history of India, the terms ‘kulyavapa’ and ‘dronavapa’ denote

- a) measurement of land
- b) coins of different monetary value
- c) classification of urban land
- d) religious rituals

Ans) a

Exp) Option a is the correct answer.

Option a is correct: These are different terms for measuring land during the Gupta period. The Kulyavapa, Dronavapa, Adhavapa are the terms related to land measurements mainly mentioned in the copper plate inscriptions of Gupta era that were found in Bengal. Kulyavapa land must have been equal to around 160 bighas of land. A Dronavapa must be 16-20 bighas and Adhvapa which appears to be the smallest must be around 4-5 bighas of land.

Source) UPSC 2020

Q.42) With reference to the period of Mauryan dynasty in ancient India, the towns Tamralipti, Bharuch and Sopara were well known as:

- a) Provinces during Mauryan empire
- b) Ports handling foreign trade

- c) Important Buddhist pilgrimage centres
d) Important sites of Ashokan pillar inscriptions

Ans) b

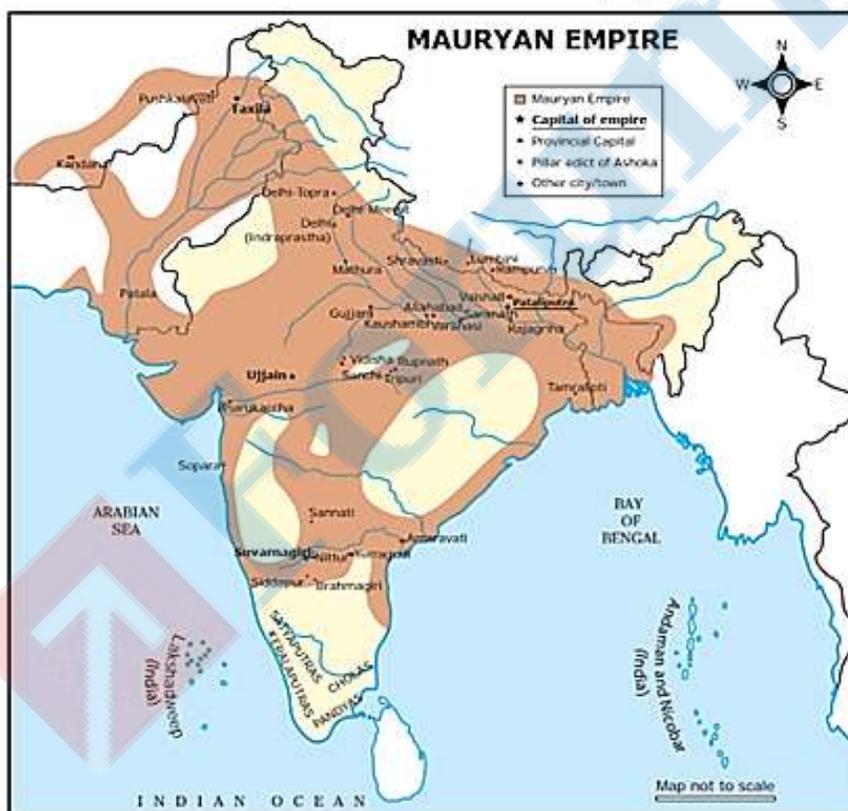

Exp) Option b is the correct answer.

Option a is incorrect: The Mauryan empire was divided into four provinces based at **Suvarnagiri (near Kurnool in Andhra Pradesh), Ujjain (Avanti, Malwa), Taxila in the northwest, and Tosali in Odisha** in the south-east.

Option b is correct: During the Mauryan period, **maritime trade** was carried on mainly along the coast. The ports along the west coast were probably those of **Bharuch at the mouth of the river Narmada** and **Sopara near present day Bombay**. In the east, **Tamralipti or present day Tamluk** provided an important outlet for ships sailing to Burma.

Option c is incorrect: During Maurya and post-Mauryan period, **Buddhism gained popularity** and emerged as a stronghold of the sect. Some of the important Buddhist pilgrimage centers are **Sanchi, Sarnath and Bharhut**.

Option d is incorrect: Some of the important sites of Ashokan inscriptions are those of Delhi Mirat, Allahabad, Lauriya-Nandangarh, Rampurva (with lion capital), Delhi-Topara, **Sankisya, Sanchi and Sarnath**. While major rock edicts can be found at Sopara however, **Tamralipti and Bharuch are not considered as important sites of Ashokan inscriptions**.

Class XI TN SCERT: Chapter - Emergence of State and Empire

Q.43) With reference to the Mauryan dynasty in India, consider the following pairs:

Officers	Functions
1. Rajukas	Supervising the palace workers
2. Mahamatas	Judicial officers
3. Chikitsakah	Revenue collection
4. Yuktas	Medical officer

How many of the pairs given above is/are correctly matched?

- Only one pair
- Only two pairs
- Only three pairs
- All the four pairs

Ans) a

Exp) Option a is the correct answer.

Option 1 is incorrect: Rajukas were judicial officers. They are appointed in both urban and rural areas, whose judicial functions are often combined with assessment of revenue.

Option 2 is correct: Ashoka established a post named Mahamatas who was judicial officer. Mahamatas were provided with judicial responsibilities within the city according to Ashoka's inscriptions. The edicts urge the **mahamatas to be impartial** and ensure that people are not imprisoned or punished without sufficient evidence.

Option 3 is incorrect: Arthashastra references to medicine men of various kinds and ordinary physicians (Chikitsakah), midwives (garbhavyadhi) etc.

Option 4 is incorrect: The Yukta was a junior officer entrusted with the task of survey and assessment of land and **revenue collection**. They were subordinates of **Rajuka and Pradhesika, officials at the district level.**

Source: <https://egyankosh.ac.in/bitstream/123456789/64794/1/Unit16.pdf>

Q.44) "This inscription is composed by Harisena in Sanskrit and it talks about the military achievements of a particular king. It also mentions that the neighbouring states of this particular king agreed to pay tributes and taxes to him. Additionally, it mentions that this king received tributes even from many kings of southeast Asia."

Identify the inscription and the King from the options given below:

- Allahabad pillar inscription and Chandragupta II
- Mehrauli Iron Pillar inscription and Chandragupta II
- Allahabad pillar inscription and Samudragupta
- Mehrauli Iron Pillar inscription and Samudragupta

Ans) c

Exp) Option c is the correct answer.

Allahabad pillar Inscription is written by Harisena in Sanskrit. It mentions about the personality and military achievements of Samudragupta in 33 lines. According to the Allahabad inscription, **neighbouring five frontier kingdoms** of Samudragupta had agreed to **pay tribute and taxes to Samudragupta** and obey his orders without any fight. The inscription adds that Samudragupta also **received tributes from many kings of south - east Asia.**

The Mehrauli iron pillar inscription in Delhi mentions the King Chandra who has been identified by scholars as **Chandragupta II**. According to this inscription **Chandra** crossed the Sindhu region of seven

rivers and **defeated Valhikas (identified with Bactria)** and it also mentions **Chandragupta II's victory over enemies from Vanga (Bengal)**.

Q.45) Consider the following statements regarding the City Gas Distribution (CGD) Network:

1. It is intended to supply both Piped Natural Gas (PNG) and Compressed Natural Gas (CNG).
2. CGD is under the regulatory authority of Petroleum and Natural Gas Regulatory Board.
3. The Ministry of Labour and Employment has granted 'Public Utility status' to CGD network.
4. It is designed to meet the supply needs of both domestic and industrial customers.

Which of the statements given above are correct?

- a) 1, 2, and 3 only
- b) 2, 3 and 4 only
- c) 1 and 4 only
- d) 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct answer.

Statements 1 and 4 are correct: City Gas Distribution (CGD) networks are an interconnected system of underground Natural Gas pipelines **for supplying Piped Natural Gas (PNG) and Compressed Natural Gas (CNG) to domestic-commercial and industrial customers.**

Statement 2 is correct. The Government has established **Petroleum & Natural Gas Regulatory Board (PNGRB) under the PNGRB Act, 2006 which is the statutory authority** to grant authorization for the development of City Gas Distribution (CGD) network. **CGD is under the regulatory authority of Petroleum and Natural Gas Regulatory Board.**

Statement 3 is correct: Public Utility Status is granted to CGD Projects by Ministry of Labour and Employment.

Q.46) Which of the following is the correct chronological order of kings belonging to the Gupta dynasty in ancient India?

1. Skandagupta
2. Chandragupta I
3. Srigupta
4. Vishnugupta

Select the correct answer using the code given below:

- a) 1-4-3-2
- b) 2-3-1-4
- c) 3-1-2-4
- d) 3-2-1-4

Ans) d

Exp) Option d is the correct answer.

After the decline of the Kushanas, north India witnessed the rise of the Gupta dynasty. The rulers of this dynasty were able to establish a vast empire that included almost the entire north India.

Option 3: Srigupta (240–280 CE) was the the first ruler of the Gupta Empire who was succeeded by his son Ghatotkacha (280–319 CE). Both Sri Gupta and Ghatotkacha are mentioned as Maharajas in inscriptions.

Option 2: Ghatotkacha was succeeded by his son **Chandragupta I (319 to 335 CE)** and he is considered to be the **first great king of the Gupta Empire**. Chandragupta, I held the title of maharajadhiraja (great king over other kings).

Option 1: Skandagupta was considered as the last great king of the Gupta dynasty. He successfully **defended an attack by the Huns**, but the recurrence of Huns' invasion **strained his empire's coffers**. The Gupta Empire declined after the death of Skanda Gupta in 467 CE.

Option 4: Vishnugupta was the **last recognised king of the Gupta line** who reigned from **540 to 550 CE**.
Source: Class XI; TN SCERT Chapter - The Guptas

Q.47) With reference to the coins during Gupta and Mauryan dynasty in ancient India, consider the following statements:

1. The Guptas issued a larger number of gold coins in comparison to the Mauryans.
2. Unlike Mauryan coins, the coins of Gupta period bore the image of its King.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Coins played an important role in the history of economic development of the country and it is also an indicator of the empire's economic strength.

Statement 1 is correct: The Guptas issued many gold coins called **dinaras** but comparatively few silver and copper coins. **Mauryans** on the other hand issued a **large number of silver coins** and fewer gold coins.

Statement 2 is correct: The Gupta coins carry the depictions of the activities of the rulers. Gold coins issued by **Samudragupta show him playing the veena**. But in **Mauryan coins king's image was absent**, for instance its punch marked coins carried a symbol of peacock, hill and the crescent.

Samudragupta playing the vina

Class XI TN SCERT: Chapter - The Guptas

Q.48) In the context of Gupta period in India, consider the following statements:

1. The Gupta empire, under Samudragupta, exercised direct control over the regions up to Tamil Nādu in South India.

2. Vakataka King Rudrasena II was the contemporary of Gupta ruler Chandragupta II.

3. The Hun invasion weakened the Gupta empire in the country.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 2 and 3 only
- d) 3 only

Ans) c

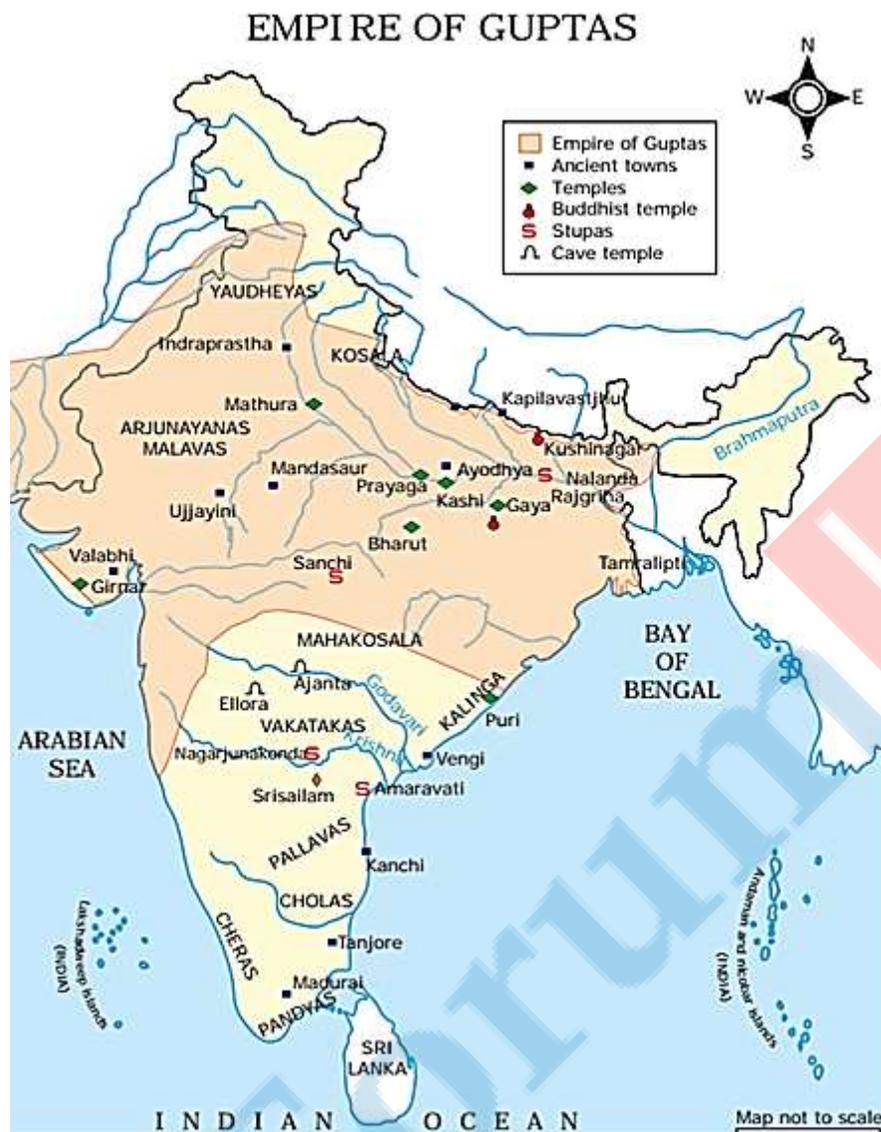

Exp) Option c is the correct answer.

Statement 1 is incorrect: The Gupta empire under Samudragupta did not extend beyond central India.

Although **Samudragupta successfully campaigned in the South Indian states** (up to the region of Kanchi near Chennai) he **did not annex this kingdom**. Rather he made them recognize his **suzerainty** and pay him tributes and presents because he thought that it was difficult to keep them under control and subservience once he returned to his capital in the north.

Statement 2 is correct: Rudrasena II, the important ruler of **Vakataka dynasty** was a **contemporary of Chandragupta II, the Gupta ruler**. Rudrasena II was married to **Prabhavati Gupta**, the daughter of Chandragupta II.

Statement 3 is correct: During Skandagupta's reign, the Huns invaded northwest India but were restricted. But in the sixth century, they occupied Malwa, Gujarat, Punjab and Gandhara. The **Hun invasion weakened the Gupta hold in the country**.

https://nios.ac.in/media/documents/SrSec315NEW/315_History_Eng/315_History_Eng_Lesson7.pdf

Q.49) In ancient India, the Mauryan empire and the Gupta empire brought a greater political unification in the country and their impact on society, literacy and religion too was significant. In this context, consider the following statements:

1. While Buddhism was prominent under the Mauryans, Hinduism gained importance under the Guptas.
2. The system of slavery during Gupta times is more elaborate than the Mauryan times.
3. Sanskrit was popularised more during Gupta times than the Mauryan times.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Statement 1 is correct: The sect of **Buddhism** flourished under the patronage of the great Mauryan ruler **Ashoka** and even afterwards. But after the establishment of **Gupta empire** and their inclination towards **Vaishnavism during early phase and Shaivism during the later phase** brought **Hinduism to the forefront** which led to **loss of royal patronage to Buddhism** and as a result it **declined during Gupta times** compared to its status during Mauryan times.

Statement 2 is correct: **The system of slavery is more elaborate during Gupta period. Narada Smritis, the law book of Gupta times mentions fifteen types of slaves.** They were mainly domestic servants employed in cleaning and sweeping. The prisoners of war, debt bondsmen, born of a slave woman were all considered slaves. According to Kautilya's **Arthashastra** (the Mauryan time text) there are **nine types of slavery**.

Statement 3 is correct: **Sanskrit** as a language witnessed **great growth during the Gupta period**. The Gupta rulers announced **Sanskrit as their official language** and they patronised the **Sanskrit poets**. But **Mauryan rulers used Prakrit languages (common man's language)** to communicate with masses, an example being the number of Ashokan inscriptions in Prakrit language.

https://nios.ac.in/media/documents/SrSec315NEW/315_History_Eng/315_History_Eng_Lesson7.pdf

Q.50) Consider the following statements regarding the Financial Services Institutions Bureau (FSIB):

1. The Bureau will select and appoint the chiefs of Public Sector Banks and Public Insurance Companies.
2. The Bureau has replaced the Bank Board Bureau.
3. FSIB is always headed by a Deputy Governor of Reserve Bank of India.

Which of the statements given above is/are correct?

- a) 2 only
- b) 1 and 3 only
- c) 1 and 2 only
- d) 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

Statement 1 is incorrect: **Financial Services Institutions Bureau (FSIB) does not appoint but instead recommends the names of chiefs of Public Sector Bank (PSB) and Insurance Companies to the Government.** It will make recommendations for the appointment of Whole Time Director (WTD) and Non-Executive Chairman (NEC) in Public Sector Bank, Insurance Companies, and Financial Institutions.

Statement 2 is correct: Financial Services Institutions Bureau (FSIB) was proposed by the Department of Financial service, Ministry of Finance. **Financial Services Institutions Bureau (FSIB) replaced the Banks Board Bureau (BBB).**

Statement 3 is incorrect: **FSIB would be headed by a chairman, a central government nominee.** The board would comprise the Secretaries of the DFS, the chairman of IRDAI, and a deputy governor of the RBI. Additionally, it will have three part-time members who are experts in banking and three more from the insurance sector.

Knowledge Base:

The functions of FSIB are as follows: It advises the Government on the desired management structure at the Board level for PSBs, FIs and PSIs. FSIB advises the government on a suitable performance appraisal system for whole-time directors and non-executive chairman of the state-run financial services institutions. **FSIB will advise Government on matters relating to transfer and termination of the chiefs of PSB and Insurance companies.** It will build a data bank relating to the performance of public-sector

banks (PSBs), FIs and insurance companies. It will advise the government on “formulation and enforcement of a code of conduct and ethics for whole-time directors” in these institutions. The FSIB will even help these state-run banks, FIs and insurers in developing business strategies and capital raising plans, etc.

Q.1) Which one of the following was a very important seaport in the Kakatiya kingdom?

- a) Kakinada
- b) Motupalli
- c) Machilipatnam
- d) Nelluru

Ans) b

Exp) Option b is the correct answer.

Motupalli port thrived as an international port in the Kakatiya kingdom. It is located in Krishna district of Andhra Pradesh.

Knowledge Base: A 15th Century inscription, issued by the Vijayanagara Emperor Deva Raya – II was unearthed in Motupalli in 2021.

Source: UPSC CSE 2017

Q.2) Consider the following statements regarding the ruler Harshvardhana:

1. He was converted to Buddhism by Hiuen Tsang.
2. He abolished the dowry system in his kingdom.
3. According to Fa-Hien there was widespread poverty and famines in his rule.

Which of the above statements are correct?

- a) 1 and 3 only
- b) 1 only
- c) 2 and 3 only
- d) 2 only

Ans) b

Exp) option b is the correct answer.

Statement 1 is correct: In his early life, Harsha was a devout Saiva but later he became an ardent Hinayana Buddhist. **Hiuen Tsang converted him to Mahayana Buddhism.** Harsha prohibited the use of animal food in his kingdom and punished those who kill any living being.

Statement 2 is incorrect: The **dowry system was prevalent** in Harsha's empire. Widow remarriage was not permitted, especially among higher castes. The practice of Dowry and Sati became prevalent.

Statement 3 is incorrect: The famous Chinese pilgrim, Fa-Hien visited India during the reign of Chandragupta II (Much before the reign of Harsha). Out of his nine years of stay in India, he spent six years in the Gupta Empire. He characterizes the Gupta administration as mild and benevolent. He did not write anything related to Harshvardhan's rule.

Q.3) Consider the following statements:

1. He ruled from the Chalukyan capital of Badami.
2. He defeated the army of Harsha in 618-619 AD.
3. He obtained titles of Bhattarka and Maharajadhiraja.

Above statements are referring to which of the following rulers?

- a) Narasimhavarman II
- b) Kirtivarman I
- c) Mangalesha
- d) Pulakesin II

Ans) d

Exp) option d is the correct answer.

Option a is incorrect: Narasimhavarman II or Narasimha Varma II (r. 700 - 729 CE), popularly known as Rajasimha Pallava, was a ruler of the Pallava kingdom.

Option b is incorrect: Kirttivarman I was a ruler of the Chalukya dynasty of Vatapi (present-day Badami) in India. He ruled parts of present-day Karnataka, Goa, Maharashtra and Andhra Pradesh. He expanded the Chalukya kingdom by defeating the Nalas, the Kadambas, the Alupas, and the Gangas of Talakad.

Option c is incorrect: Mangalesha was a king of the Chalukya dynasty of Vatapi in Karnataka, India. He succeeded his brother Kirttivarman I on the throne, and ruled a kingdom that stretched from southern Gujarat in north to Bellary-Kurnool region in the south, in the western part of the Deccan region.

Option d is correct: Pulakesin II (609-642 AD) was one of the greatest rulers of the Chalukya dynasty, He ruled from the Chalukyan capital of Badami. He defeated Harshavardhana in the year 618 A.D. Researchers claim to have fixed the date by decoding the copper plate. The battle occurred between 612 AD and 634 A.D, as per the new discovery the victory of Pulikeshi might have taken place exactly in the winter of 618-19 AD. The titles of Pulakeshin II include **Bhattarka and Maharajadhiraja** (King of Great Kings).

Source: <https://ncert.nic.in/ncerts/l/fess111.pdf>

<https://www.thehindu.com/news/national/%E2%80%98Pulakeshin%E2%80%99s-victory-over-Harsha-was-in-618-AD%E2%80%99/article14255348.ece>

Q.4) Consider the following statements regarding Pallavas:

1. The Kanchi Kailasanatha Temple at Kanchipuram was constructed during the reign of Pallavas.
2. Pallava king Narasimhavarman defeated the Chalukyas.
3. Pallava king Mahendravarman I built a five-celled cave temple at Pallavaram.

Which of the above statement are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) option d is the correct answer.

Statement 1 is correct: The **Kanchi Kailasanathar Temple** at Kanchipuram are famous temples that were constructed during the **reign of Pallavas**. Kailasanathar Temple was built by the Pallavas during 650 AD-705 AD. Kailasanathar Temple is a Shiva Kanchi, which is one among the three Kanchis in Kancheepuram, the other two being the Vishnu Kanchi and the Jain Kanchi.

Statement 2 is correct: In 642, **Narasimhavarman I** sent his force to capture and **destroy Vatapi**, which was the capital of **Chalukyas**. In this battle, Pulakeshin II loses his life. After the victory, Narasimhavarman I constructed a temple devoted to Maliikarjuna, commemorating his victory in Vatapi.

Statement 3 is correct: Mahendravarman I (Reign: 600 AD – 630 AD) **introduced new style of rock-cut temple architecture**. He introduced a new technique in the temple architecture. He carved out temples from huge rocks without using bricks, wood and mortar. **For example, he built the five-celled cave temple at Pallavaram.**

Tamil Nadu state board.

Q.5) With reference to ‘Deep Ocean Mission (DOM)’, consider the following statements:

1. Ministry of Water Resources is the nodal ministry for implementing the mission.
2. The objective of the mission is to develop technologies for mining of deep-sea resources.
3. Under the mission, a submarine will be developed to carry people to a depth of 6000 meters in the ocean.
4. One of the expected outcomes of the missions is provision of clean drinking water for people.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1, 3 and 4 only
- d) 2, 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

With a view to explore deep ocean for resources and develop deep sea technologies for sustainable use of ocean resources, **Cabinet Committee on Economic Affairs (CCEA) approved the proposal of Ministry of Earth Sciences (MoES) on “Deep Ocean Mission”** at an estimated cost of Rs. 4077.0 crore for a period of five years to be implemented in a phase-wise manner. The estimated cost for the **first phase for the three years (2021-2024)** would be Rs.2823.4 crore.

Statement 1 is incorrect: Deep Ocean Mission will be a mission mode project to support the **Blue Economy Initiatives** of the Government of India. **Ministry of Earth Sciences (MoES) will be the nodal Ministry** implementing this multi-institutional ambitious mission. Indian Space Research Organisation (ISRO) is one of the collaborators of the Ministry of Earth Sciences for implementation of Deep Ocean Mission (DOM).

Statement 2 is correct: The major objectives of the Deep Ocean Mission are development of **technologies for deep sea mining, underwater vehicles and underwater robotics**. It will also focus on development of ocean climate change advisory services; technological innovations for exploration and conservation of Deepsea biodiversity.

Statement 3 is correct: Under the mission, ‘Samudrayaan Mission’ is aimed to **develop a self-propelled manned submersible to carry three human beings to a water depth of 6,000 meters** in the ocean with a suite of scientific sensors and tools for deep ocean exploration. It has an endurance of 12 hours of operational period and 96 hours in case of emergency.

Statement 4 is correct: One of the major objectives of the mission is to **provide clean drinking water and explore the avenues of desalination of water** as well as extracting minerals from the ocean belt

Q.6) Consider the following statements with reference to the Kingdom of Pandyas during Sangam Age?

1. Vanji was the capital city of the kingdom of Pandyas.
2. The Pandyan Kings patronized Tamil Sangams.
3. Karikalan, is considered as the greatest Pandyan King of the Sangam age.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: Vanji was the capital of the Cheras (not Pandyas). The Pandyas ruled from the capital city of Madurai. Korkai was their main port, located near the confluence of Thampraparani with the Bay of Bengal. It was famous for pearl fishery and chank diving. Korkai is referred to in the Periplus as Kolkoi.

Statement 2 is correct: The Pandyan kings patronized the Tamil Sangams and facilitated the compilation of the Sangam poems.

Statement 3 is incorrect: Karikalan, son of Ilanjetchenni, is portrayed as the greatest Chola King (not Pandya king) of the Sangam age. Pattinappalai gives a vivid account of his reign. Karikalan's foremost military achievement was the defeat of the Cheras and Pandyas, supported by as many as eleven Velir chieftains at Venni.

Q.7) Consider the following statements regarding kadambas dynasty:

1. Kadamba was an ancient royal dynasty of Bihar.
2. They find mention in the Tamil Sangam literature.
3. They severely criticized the Vedic practices followed by their contemporary dynasties.

Which of the above statement(s) is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) option b is the correct answer.

Statement 1 is incorrect: Kadamba (345 – 525 CE) was an ancient **royal dynasty of Karnataka** that ruled northern Karnataka and the Konkan from Banavasi in the present-day Uttara Kannada district.

Statement 2 is correct: The Kadambas' find mention in the Tamil Sangam literature as totemic worshipers of the Kadambu tree and the Hindu god Subramanya, a popular deity in South India.

Statement 3 is incorrect: They followed the Vedic practices. Mayura sharma, the founder, was a Brahmin by birth, but his heirs changed their surname to Varma to signify their Kshatriya rank. **The horse sacrifice (Ashwamedha) was carried out by several Kadamba monarchs**, such as Krishna Varman. Their Talagunda inscription begins with a prayer to Lord Shiva.

Knowledge Base: The Kadambas were an ancient Karnataka royal dynasty that controlled northern Karnataka and the Konkan from Banavasi in the present-day Uttara Kannada district. Mayurasharma established the kingdom in about 345, and it later showed its capacity to grow to imperial dimensions. The dynasty then ruled as a feudatory of the bigger Kannada empires, the Chalukya and Rashtrakuta empires, for about 500 years, during which time they expanded into Goa and Hanagal.

Q.8) Consider the following statement regarding the Gurjara-Pratihara dynasty:

1. They offered successful resistance to the Arabs during the time of Nagabhata I.
2. There is a detailed description of mantriparishad or ministers in the inscriptions of this period.
3. Caste system was prevalent in India during the Gurjara-Pratihara period.
4. Teli-ka-Mandir in Gwalior fort is the oldest surviving large-scale Pratihara work.

Which of the above statement are correct?

- a) 1, 2 and 3 only
- b) 2, 3 and 4 only
- c) 1, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: The Gurjara-Pratiharas came to prominence in the second quarter of the 8th century, when they offered **successful resistance to the Arabs** during the time of **Nagabhata I**.

Statement 2 is incorrect: In the Gurjara-Pratihara history, kings occupied the highest position in the state and had enormous powers, kings adopted big titles such as 'Parmeshwara', 'Maharajadhiraja', 'Parambhatarak'. However, there is no reference to mantriparishad or ministers in the inscriptions of that period.

Statement 3 is correct: The **caste system was prevalent** in India during the Gurjara-Pratihara period and the reference to all four varnas of the Vedic period is found in the inscription as well. The inscription refers to the Brahmans as Vipra and several Prakrit words are used for Kshatriyas. The people of each caste were divided into different classes.

Statement 4 is correct: The Gurjara-Pratihara rulers were great patrons of arts, architecture, and literature. The most important groups of architectural works related to early Pratiharas can be found at Osian in the heart of Gurjara and at great fort of Chittor. They had also reached north-central India. The extraordinary **Teli-ka-Mandir in Gwalior fort is the oldest surviving large-scale Pratihara work**.

Q.9) Consider the following pairs:

Types of Villages	Description
1. Ur	General assembly of the local residents
2. Sabha	Assembly of Brahmana landholders
3. Nagaram	Associations of traders

Which of the above pair is/are correct?

- a) 1 and 3 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Pair 1 is correct. Ur: The general **assembly of the local residents** of non-Brahmadeya villages (or Vellanvagai villages). It is believed that members of the assembly were less than ten. Ur is generally a settlement of peasants.

Pair 1 is correct. Sabha: Two inscriptions belonging to the period of Parantaka I found at Uttaramerur provide details about the formation and functioning of Sabhas. The Sabha was an **assembly of Brahmans/adult male members** in the agraharas which enjoyed a large measure of autonomy.

Pair 3 is correct. Nagaram: Nagaram was an assembly of merchants, traders and artisans.

<https://ncert.nic.in/textbook/pdf/fess109.pdf>

Q.10) Consider the following pairs:

Places in news	Description
1. Matua Islands	It is the uninhabited volcanic island forming part of Indonesian archipelago.
2. Darwaza Gas Crater	It is located in Karakum desert, Turkmenistan and was burning since last 5 decades.
3. Mount Aso Volcano	It is the largest active volcano in Japan.
4. Mauna Loa	It is the world's largest active volcano on the Earth, recently erupted in Hawaii.

Which of the pairs given above are correctly matched?

- a) 1 and 2 only
- b) 2, 3 and 4 only
- c) 1, 2 and 3 only
- d) 2 and 4 only

Ans) b

Exp) Option b is the correct answer.

Pair 1 is incorrect: Matua Islands is an uninhabited volcanic island located in **Kuril Islands chain in the Sea of Okhotsk**. Recently, Russian military has deployed its defense missile system on this island. **Russia and Japan have disputes over Kuril Islands.**

Pair 2 is correct: Darwaza Crater is located in **Karakum desert, Turkmenistan**. The crater is burning for 5 decades and hence, also called as **'gateway to hell'**. Recently, Turkmenistan President has asked experts to find ways to extinguish the fire.

Pair 3 is correct: Mount Aso Volcano is the largest **active volcano in Japan** and located on the islands of **Kyushu**. It is a **composite volcano**.

Pair 4 is correct: Mauna Loa is an **active shield volcano** and considered as the **largest volcano on the Earth**, dwarfed only by Tamu Massif. **Tamu Massif is a seamount** in the Pacific Ocean. Mauna Loa has **been recently erupted in 2022**.

Knowledge Base:

Other volcanoes in news:

Volcano	Location
Fuego Volcano	Guatemala
Hunga Tonga-Hunga Ha'apai	Part of Tongan Archipelago, Pacific Ocean
Fagradalsfjall volcano	Iceland
Mount Anak Krakatau	Indonesia
Shiveluch Volcano	Russia (Kamchatka Peninsula)
Mount Semeru	Indonesia
Mount Etna	Italy

Q.11) The Chinese traveller Yuan Chwang (Hiuen Tsang) who visited India recorded the general conditions and culture of India at that time. In this context, which of the following statements is/are correct?

1. The roads and river-routes were completely immune from robbery.
2. As regards punishment for offences, ordeals by fire, water and poison were the instruments for determining the innocence or guilt of a person.
3. The tradesmen had to pay duties at ferries and barrier stations.

Select the correct answer using the codes given below.

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Yuan Chwang was a Chinese Buddhist monk and traveller who travelled across India for 17 years.

Statement 1 is incorrect: Yuan Chwang has mentioned in his journal that he was robbed and the thugs had decided to sacrifice him, but he was saved by a hurricane.

Statement 2 is correct: The punishment for social offences according to the traveller's account were to cut off the nose or an ear or a hand. Minor offences were dealt with fines. And to determine guilt or innocence ordeals by fire water and poison were the instruments which were used.

Statement 3 is correct: Yuan Chwang also mentioned that tax was collected from the tradesman at ferries and barrier stations.

Source: UPSC CSE 2013

Q.12) The post Gupta period witnessed a rise of a large number of regional kingdoms in ancient India. In this context, consider the following pairs:

Kingdom	Region where they ruled
---------	-------------------------

1. Maukharis Uttar Pradesh
2. Gaudas Gujarat
3. Kamarupa Assam
4. Maitrakas Bengal

How many pair/s is/are correctly matched?

- a) Only one pair
- b) Only two pairs
- c) Only three pairs
- d) All the four pairs

Ans) b

Exp) Option b is the correct answer.

The Guptas with their seat of power in Uttar Pradesh and Bihar ruled over Northern and Western India from 4th century CE to late 6th century CE with its zenith, from 319 to 467 CE. With its **disintegration the Northern India again split up into several kingdoms.**

Option 1 is correct: The Maukhari dynasty controlled the vast plains of Ganga-Yamuna doab (modern Uttar Pradesh) from their capital at Kannauj. They earlier served as vassals of the Guptas and later of Harsha's Vardhana dynasty. The Maukharis established their independence during the 6th century A.D. Around 606 CE, a large area of their empire was reconquered by the later Guptas. According to Hieun-Tsang, the territory may have been lost to King Shashanka of the Gauda Kingdom, who declared independence circa 600 AD.

Option 2 is incorrect: The Gauda Kingdom or Shashankas ruled over the region of Bengal (modern-day West Bengal and Bangladesh). They are the enemies of Pushyabuti of Thanesar. Shashanka, the Gauda ruler treacherously murdered Rajavardhana, brother of Harshavardhana.

Option 3 is correct: Kamarupa ruled over the region of modern-day Assam from its capital at Pragiyatisha (modern Gauhati). Bhaskaravarman, king of Kamarupa dynasty made political alliances with Harshavardhana of Thanesar, against the alliance of the Gauda and East Malwa.

Option 4 is incorrect: The Maitraka dynasty ruled western India (modern Gujarat) from approximately 475 to 776 A.D from their capital at Vallabhi. It was founded by Bhatarka, who was a military governor of Saurashtra under Gupta Empire, who had established himself as the independent around 475 CE.

Q.13) With reference to the ancient history of India, consider the following inscriptions:

1. Banskhera inscription
2. Madhuban inscription.
3. Nalanda inscription.
4. Sonpat inscription.

Which of the following is common between all these above inscriptions?

- a) All these inscriptions mention about King Pulakeshin II
- b) All these inscriptions mention about King Harsha.
- c) All these inscriptions mention about King Bhaskaravarman.
- d) All these inscriptions mention Gupta king Kumaragupta I.

Ans) b

Exp) Option b is the correct answer.

Statement 1: Banskhera copper plate inscription is situated in the Shahjahanpur district of Uttar Pradesh. An inscription dated AD 628 was found here in 1894. The inscription says that Harsha had granted Markatsagar village to two brahmins-Balachandra and Bhattaswami. This also speaks of the victory of Rajyavardhana over the Malwa king Devagupta.

Statement 2: The Madhuban copper plate inscription in Azamgarh district of Uttar Pradesh and it is dated AD 631. It mentions the grant of Somkunda village to Brahmanas by Harsha.

Statement 3 and 4: The Nalanda and Sonpat are two seals of Harsha that have been found in Nalanda (Bihar) and Sonpat (Haryana). The Nalanda seal is made of clay, while the Sonpat clay is made of copper. These seals contain the names of all the kings, from Rajyavardhana I to Harshavardhana, of the Vardhana dynasty. It is the Sonpat seal which gives Harshavardhana as the full name of Harsha.

Source: Class XI: TN SCERT Chapter - Harsha and Rise of Regional Kingdoms

Q.14) This court poet authored the first formal biography of a King in ancient India. He also authored a romantic novel in Sanskrit called Kadambari. Who among the following are the king and the author mentioned here?

- a) Sandhyakar Nandi and Ramapala
- b) Vikramaditya VI and Bilhana

- c) Harshavardhana and Banabhatta
d) Hemachandra and Kumarapala

Ans) c

Exp) Option c is the correct answer.

The above-mentioned phrase talks about the **Harshacharitra written by Banabhatta**. This book gives an account of Harshavardhana's rise to power. It inspired **new genre of literature**, the rulers like **Ramapala** of Bengal and Bihar, **Vikramaditya VI** of the Western Chalukya dynasty, **Kumarapala** of the Chalukya dynasty of Gujarat appear as the central characters of the charitakavya like **Ramacharita, Vikramankadevacharita and Kumarapalacharita respectively**.

Option a is incorrect: Sandhyakar Nandi is a court poet of pala ruler Ramapala. He composed **Ramacharitam**, a biography of a Pala ruler Ramapala. It describes how forest chiefs were brought into their alliance through lavish gifts by Ramapala. **It was written after Harshacharitra.**

Option b is incorrect: Bilhana is a court poet of Vikramaditya VI of the Western Chalukya dynasty. He composed **Vikramankadevacharita** .

Option c is correct: Banabhatta also known as Bana is a court poet of Harshavardhana. He is an author of **Harshacharita, a biography of Indian emperor Harsha**. It is considered as the **first formal biography of a king**. It inaugurated a new literary genre in India. Bana also authored a romantic sanskrit novel called **Kadambari**.

Option d is incorrect: Hemachandra composed the Kumarapala charitra. Kumarapala (1143 – 1172 CE) was an Indian king from the Chaulukya (Solanki) dynasty of Gujarat. He ruled present-day Gujarat.

Source: <https://www.britannica.com/biography/Bana-Indian-writer>

Q.15) Consider the following pairs:

Biodiversity Heritage Site (BHS)	State
1. Hajong Tortoise Lake	Arunachal Pradesh
2. Borjuli Wild Rice Site	Assam
3. Chabimura	Odisha
4. Amarkantak	Madhya Pradesh
5. Arittapatti	Tamil Nadu

How many of the pairs given above is/are correctly matched?

- a) Only two pair
b) Only three pairs
c) Only four pairs
d) All five pairs

Ans) c

Exp) Option c is the correct answer.

Recently, new Biodiversity Heritage Sites (BHS) have been notified under the provisions of **Biodiversity Act, 2002**. **A total of 36 BHS**, including the recent additions, have been notified so far.

Pair 1 is incorrect: Hajong Tortoise Lake is located in Dima Hasao, Assam.

Pair 2 is correct: Borjuli Wild Rice Site is located in Sonitpur, Assam.

SFG 2023 | LEVEL 1 | Test #32 – Solutions |

Pair 3 is incorrect: Chabimura is located on Gomati, Tripura.

Pair 4 is correct: Amarkantak is located in Anuppur, Madhya Pradesh.

Pair 5 is correct: Arittapatti is located in Madurai, Tamil Nadu.

Details of the new BHS:

BHS	Location	Important Points
Debbari/ Chabimura	Gomati, Tripura	1) River forest ecosystem with rich flora and fauna 2) Unique habitat for threatened plant species like dhup tree and cane resources
Betlingshib and its surroundings	North District, Tripura	1) Betlingshib is the highest peak of Tripura (Jampui Hills) 2) Vegetation is totally unique as compared to mainland Tripura. This is due to change in altitude, topography and climate. 3) Also known for agro-ecosystem model
Amarkantak	Anuppur, Madhya Pradesh	1) Located on Maikal range which connects Vindhya and Satpura mountain ranges 2) Origin of 3 major rivers- Narmada River, Son River and Johila river
Hajong Tortoise Lake	Dima Hasao, Assam	1) It is natural habitat of 'Black Softshell Turtle'. (IUCN Status: Critically Endangered) 2) Other species: Chinese pangolin, Clouded Leopard, Asiatic Black Bear, Fishing Cat, Sambar, Western Hoolock Gibbon, Wreathed Hornbill etc.
Borjuli Wild Rice Site	Sonitpur, Assam	1) Unique due to population richness of Oryza Rufipogon species of wild rice 2) This species possesses genes for disease and pest resistance, tolerance to submergence and salinity 3) It is also tolerant to flooding and acidic soils 4) Rufipogon is photosensitive and flowers during short days during November and December.
Arittapatti	Madurai, Tamil Nadu	1) 3 flagship raptor species- Laggar Falcon, Shaheen Falcon and Bonelli's Eagle 2) Others- Indian Pangolin Python and Slender Loris
Mahendragiri Hills	Gajapati, Odisha	1) This site has several micro climatic conditions like tropical shola, semi-evergreen, moist deciduous etc. 2) Represents 40% of the reported flora of Odisha. 3) Site of ancient temples of- Kunti, Bhima, Arjuna and Yudhishtir.

Knowledge Base:

About Biodiversity Heritage Sites (BHS):

- 1) Under **Section 37 of Biological Diversity Act, 2002**, BHS are **declared by state governments**, in consultation with local bodies.
- 2) **State Government in consultation with Central Government may frame rules** for management and conservation of BHS.

- 3) The creation of BHS **may not put any restriction on prevailing practices** and usages of local communities, other than those voluntarily decided by them.
- 4) **Terrestrial, coastal, inland and marine ecosystems**- all comprising rich biodiversity can be declared as BHS.

Source: <http://nbaindia.org/content/106/29/1/bhs.html>

<http://nbaindia.org/uploaded/ut/Final%20BHS%20guidelines%20approved%20in%20the%2019th%20Authority.pdf>

Q.16) With reference to the Vardhana dynasty in ancient India, consider the following statements:

1. It was established by King Prabhakarvardhana.
2. King Harshavardhana of this dynasty shifted its capital from Thanesar to Kanauj.
3. Its empire under Harshavardhana extended up to river Kaveri in the south.

Which of the statement/s given above is/are correct?

- a) 1 and 3 only
- b) 2 only
- c) 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

A variety of sources such as **Harshacharita**, accounts of **Hiuen-tsang** and some **inscriptions and coins** inform us about the rise of the family of **Pushyabhutis (also known as the Vardhana dynasty)** which first ruled from **Thaneshwar** in Haryana and later from **Kanauj** in Uttar Pradesh.

Statement 1 is incorrect: Prabhakarvardhana was the fourth king (thus he is not a founder). He established **matrimonial relations with the Maukharis** by marrying his daughter Rajyasri with Grahavarman. **Banabhatta states that the founder king of this dynasty at Thaneshwar was Pushyabhuti** and that the family was known as Pushyabhuti vamsha.

Statement 2 is correct: Harsha ascended the throne in 606 CE. He belonged to the Pushyabhuti dynasty based around Thanesar (modern Ambala in Punjab). As Thanesar was too close to the **threats from the northwest. Harsha shifted his capital from Thanesar to Kanauj in Uttar Pradesh.**

Statement 3 is incorrect: The kingdoms of Harsha and Pulakesin II touched on the border of the river Narmada. From the account of Huien Tsang it appears that **Harsha took the initiative to extend its empire to the south of river Narmada but could not achieve any success against Pulakesin II.**

Source: Class XI: TN SCERT Chapter - Harsha and Rise of Regional Kingdoms

Q.17) In context of the cultural history of India, which among the following plays/books are said to have been written by the King Harshavardhana?

1. Kavirajamarga
2. Nagananda
3. Priyadarsika
4. Rathnavali
5. Mathavilasa Prahasana

Select the correct answer using the code given below:

- a) 1,3 and 5 only
- b) 1,2 and 4 only
- c) 2,3 and 4 only
- d) 2 and 5 only

Ans) c

Exp) Option c is the correct answer.

Various rulers from ancient India had authored some of the famous literary works produced in that time. It had a major impact on the development of art and literature in ancient India.

Option 1 is incorrect: Amoghavarsha I was the greatest emperor of the Rashtrakuta dynasty. He was the author of **Prasnottaramalika**, a Sanskrit work and **Kavirajamarga**, the earliest **Kannada work** on poetics.

Option 2, 3 and 4 is correct: Harsha patronized literary and cultural activities. He was gifted liberally for the promotion of art and education. He himself is considered as a renowned writer and he is the author of **Priyadarsika, Rathnavali and Nagananda**.

Option 5 is incorrect: Mahendravarman I (600–630 CE) was a **Pallava emperor** and he owned a title of **Chitrakarpuli** owing to his literary prowess. He composed **Mathavilasa Prahasana in Sanskrit**. These work in Sanskrit set the standard for Sanskrit literature in south India.

Source: Class XI: TN SCERT Chapter - Harsha and Rise of Regional Kingdoms

Q.18) With reference to the ancient king Harshavardhana, consider the following statements:

1. The Buddhist council convened by him at Kannauj resulted in the emergence of Mahayana sect of Buddhism.

2. Harsha ruled according to the ideals laid down in the Dharmashastras.

Which of the statement(s) given above is/are correct?

a) 1 only

b) 2 only

c) Both 1 and 2

d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

The Chinese pilgrim Hieun Tsang visited India during the reign of Harsha. His accounts were one of the major sources to deduce Harsha's religious orientation and policy.

Statement 1 is incorrect: The fourth Buddhist Council held under the patronage of **Kanishka in Kashmir in 72 AD** gave birth to the **Mahayana sect of Buddhism**. **Harshavardhana** subscribed to the **Mahayana school of thought**.

Statement 2 is correct: Harsha ruled according to the ideals laid down in the Dharmashastras. Dharmasastras is a genre of **Sanskrit texts on law and conduct** and refers to the treatises (sastras) on dharma.

Q.19) With reference to Harsha's relation with China, consider the following statements:

1. The Chinese army under Tai Tsung unsuccessfully tried to invade India during Harsha's reign.

2. Harsha in alliance with Kamarupa ruler penetrated the Chinese defence and prisoned some Chinese soldiers.

3. After Harsha's death, Tai Tsung occupied part of Harsha's empire.

Which of the following statement/s given above is/are **incorrect**?

a) 1 and 2 only

b) 1 and 3 only

c) 2 only

d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Statement 1 is incorrect: Harsha had friendly relations with China. The contemporary T'ang emperor, **Tai Tsung**, sent an embassy to his court in 643 and again in 647 CE.

Statement 2 is incorrect: Harsha had a cordial relation with China. Thus, there was no tension between China and Harsha, let alone attacking the Chinese army in alliance with Kamarupa ruler.

Statement 3 is incorrect: The Chinese ambassador rushed to Nepal and Assam to raise a force on learning that the throne was usurped by an undeserving king. Later, **the king who had usurped the throne was taken to China as a prisoner.**

Q.20) Consider the following statements with reference to the term 'Fujiwhara Effect', that has been seen in news recently:

1. In meteorology, the 'Fujiwhara effect' applies to the interaction of two extra-tropical cyclones.
2. The Fujiwhara effect ends up in reducing the impact of the cyclones that interact with each other.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) d

Exp) Option d is the correct answer.

Recently in 2022, **super typhoon Hinnamnor, the strongest tropical cyclone of the year, was hurtling towards Taiwan from the western Pacific Ocean.** In recent years, several storms have come close to **undergoing the Fujiwhara Effect.**

Statement 1 is incorrect: The Fujiwhara Effect is any interaction between tropical storms (not extra-tropical cyclones) formed around the same time in the same ocean region with their centers or eyes at a distance of less than 1,400 km, with intensity that could vary between a depression (wind speed under 63 km per hour) and a super typhoon (wind speed over 209 km per hour). In general, **two tropical cyclones may start to affect each other when the distance between them is around 12 latitude degrees (about 1350 kilometres).** When this occurs, the tropical cyclones will rotate around one another in a counter-clockwise direction (in Northern Hemisphere) about their geometric centre.

Statement 2 is incorrect: The Fujiwhara effect can turn two cyclones into one mega cyclone. The **interaction could lead to changes in the track and intensity of either or both storms' systems. In rare cases, the two systems could merge,** especially when they are of similar size and intensity, to form a bigger storm.

Source: <https://www.downtoearth.org.in/news/world/perfect-storm-what-is-the-fujiwhara-effect--85337>

<https://www.hko.gov.hk/en/education/tropical-cyclone/tracking/00160-what-is-fujiwhara-effect.html>

Q.21) With reference to the history of India, consider the following pairs:

Famous Place	Present State
1. Bhilsa	Madhya Pradesh
2. Dwarasamudra	Maharashtra
3. Girinagar	Gujarat

4. Sthanesvara Uttar Pradesh

Which of the pairs given above are correctly matched?

- a) 1 and 3 only
- b) 1 and 4 only
- c) 2 and 3 only
- d) 2 and 4 only

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: As a general of Sultan Jalaluddin, Alauddin Khalji raided the Paramara city of Bhilsa in 1293 CE. He damaged the city's Hindu temples, and looted a large amount of wealth. It was renamed Vidisha in 1956 and lies in the state of Madhya Pradesh.

Statement 2 is incorrect: Halebidu (which used to be called Dorasamudra or Dwarasamudra) is a town located in Hassan District, Karnataka, India. Halebidu was the regal capital of the Hoysala Empire in the 12th century.

Statement 3 is correct: Girnar, also known as Girinagar ('city-on-the-hill') or Revatak Parvata, is a group of mountains in the Junagadh District of Gujarat, India.

Statement 4 is incorrect: Thanesar (sometimes called Thanesar and, archaically, Sthanishvara) is a historic town and an important Hindu pilgrimage centre on the banks of the Saraswati River in the state of Haryana.

Source: UPSC CSE 2020

Q.22) In context of the administration during Harsha's period, consider the following statements:

1. There was a clear separation of military and civil departments.
2. Compared to Gupta times, punishments for offences were less severe in nature.
3. The council of ministers played an important role in the selection of king.
4. Each Vishaya (district) was divided into several tehsils called Pathakas.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 4 only
- c) 3 only
- d) 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

The administration is the backbone of any empire. As such, Harsha to sustain his vast empire and to govern his territory and people, organized administration in the following ways.

Statement 1 is incorrect: During Harsha's time **civil and military departments were not clearly separate**. As a result, some of the top civil officers functioned in the capacity of military officers also.

Statement 2 is incorrect: **Punishments for offences were more severe than that of the Gupta age**. Banishment and the cutting of limbs of the body were the usual punishments. Life imprisonment was the punishment for the violations of the laws and for plotting against the king.

Statement 3 is correct: The emperor was assisted by a **council of ministers (Mantri Parishad)** in his duties. The council played an **important role in the selection of the king** as well as framing the **foreign policy** of the empire. According to **Bhandi**, a cousin of Rajyavardhana, **Harsha's accession to the throne was approved by the parishad**.

Statement 4 is correct: The empire was divided into several **provinces called Bhuktis**. Each Bhukti was divided into several **districts called Vishayas**. Each vishaya was further divided into several **Tehsils called Pathakas** which in turn was divided into several villages for the administrative purposes.

Source: Class XI: TN SCERT Chapter - Harsha and Rise of Regional Kingdoms (pg no 108)

http://sdeuoc.ac.in/sites/default/files/sde_videos/History_of_Early_India_stdy_mtrl_BA_hstry_III_sem_on30oct2015.pdf (pg no 78)

Q.23) With reference to the Harsha's empire in ancient India, consider the following pairs:

Officials	Functions
1. Avanti	Minister of Finance
2. Mimamsakas	Judicial officer
3. Banu	Record keeper

How many pairs is/are correctly matched?

- only one pair
- only two pairs
- All three pairs
- None of the above

Ans) b

Exp) Option b is the correct answer.

Harsha gave importance to the administration. He divided the various administrative functions of an empire and vested each person with specific roles and responsibilities.

Option 1 is incorrect: Avanti was the **Minister of war and foreign relations** during the Harsha empire.

Option 2 is correct: Harsha appointed **Mimamsakas to dispense justice** in his empire.

Option 3 is correct: Banu is a **Record keeper** in Harsha's empire.

Source: Class XI: TN SCERT Chapter - Harsha and Rise of Regional Kingdoms

Q.24) With reference to the revenue administration of Harsha empire, consider the following statements:

- Bali was the largest source of revenue.
 - Bhaga was the tax paid in kind and Hiranya was the tax paid in cash.
 - Uparikara is a form of tribute paid by the peasants to the officials of the empire.
- Which of the statement/s given above is/are correct?

- 1 and 3 only
- 2 and 3 only
- 3 only
- 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: Bali appears to be a ferry tax during the Harsh's rule. Compared to Bhaga (the land tax) the proportion of Bali was very minimal. Hence, Bali was not the largest source of tax revenue.

According to Huen-Tsang, **royal land had four parts**. One part was spent on **religious activities and government works**. Second was spent over **public works and officials**. The third part was spent to provide **reward and salaries to the scholars** and the fourth was spent on **donation and meritorious acts**.

Statement 2 is correct: Bhaga, Hiranya and Bali were the three kinds of tax collected during Harsha's reign.

Bhaga was the land tax paid in kind which is 1/6th of the produce. **Hiranya was the tax** paid by farmers and merchants in **cash**.

SFG 2023 | LEVEL 1 | Test #32 – Solutions | ForumIAS

Statement 3 is correct: Uparikara is a **tribute paid by the peasants to the divisional officer called Uparika.**

The main source of income for Harsha's empire was Udranga (land-tax).

Source: Class XI: TN SCERT Chapter - Harsha and Rise of Regional Kingdoms

Q.25) Consider the following rivers and their respective location:

River	Location
1. Thamirabarani River	Andhra Pradesh and Telangana
2. Sukapaika River	Jammu and Kashmir
3. Bhogdoi River	Assam and Nagaland
4. Lukha River	Meghalaya

Which of the above-given pairs is/are correctly matched?

- a) 2 only
- b) 1, 2 and 3 only
- c) 2 and 4 only
- d) 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

Pair 1 is incorrect: The **Thamiraparani river is the only perennial (continuous flow of water) river in Tamil Nadu.** This is the **shortest river in the state, the Thamirabarani starts in Pothigai hills of the Western Ghats in the Ambasamudram taluk, flows through Tirunelveli and Thoothukudi districts and empties at Korkai into the Gulf of Mannar (Bay of Bengal).** It thus originates and ends in the same state.

Pair 2 is incorrect: **Sukapaika is one of the several distributaries of the mighty Mahanadi River in Odisha.** It **branches away from the Mahanadi at Ayatpur village in Cuttack district and flows for about 40 kilometres (km) before rejoining its parent river at Tarapur** in the same district. Sukapaika river is an important system of the Mahanadi to control floodwater and maintain the flow in the river as well as the Bay of Bengal.

Pair 3 is correct: **Bhogdoi river originates from Mokokchung in Nagaland** where it is also known as Tsujenyong nullah and is the south bank tributary of the river Brahmaputra. **It is an inter-state river (flowing between Assam and Nagaland) and joins Dhansiri river** near its confluence with Brahmaputra.

Pair 4 is correct: **The Lukha river is located in the southern part of east Jaintia Hills of Meghalaya where most of Meghalaya's rat-hole coal mines are located.** It has become a victim of the unsustainable large-scale mining of coal and limestone, allegedly responsible for the pollution that turns the river its surreal winter hue. **It receives water from the Lunar River (Wah Lunar) and small streams draining from the Narpuh Reserve Forest** and the undulating hills of the area while flowing down.

Q.26) With reference to the Imperial Cholas, consider the following statements:

1. They were one of the dynasties ruling South India during the Sangam Age.
2. They extended Indian rule over Ceylon.
3. Their founder was a former feudatory of the Chalukyas.

Which of the statements given above is/ are correct?

- a) 1 only
- b) 2 only
- c) 3 only
- d) 2 and 3 only

Ans) b

Exp) Option b is the correct answer.

The Imperial Cholas were one of the regional dynasties ruling areas of South India in the 10th century CE. Under them, various illustrious rulers like Aditya Chola, Parantaka I, Rajaraja I, Rajendra Chola, etc contributed immensely to growth of trade, economic prosperity, as well as development of Arts –such as architecture, Temple building (golden period of Dravidian style temples), Bronze sculpting, as well as Literature (Tamil & Sanskrit).

Statement 1 is incorrect: The Imperial Cholas refer to the royal dynasty ruling over South India, especially the region then known as Tondaimandalam (southern portions of modern-day Andhra Pradesh and northern regions of modern-day Tamil Nadu) between the 10th and 12th centuries CE. They were a surviving branch of the Cholas, a tribe that used to rule a part of South India during the Sangam Age (300 BCE - 300 CE). The Sangam Age occurred much before the existence of the Imperial Cholas. **Hence this statement is incorrect.**

Statement 2 is correct: The Imperial Cholas were named so because like the Imperial empires of Europe, which extended their rule over other countries and their people, the Cholas of the 10th century also conquered foreign lands, ruling them, drawing their resources and spreading Indian culture in those lands. These lands included Ceylon (Sri Lanka), and countries around the Malay Peninsula - like Java, Sumatra, Bali, Cambodia, etc. Hence this statement is **correct**.

Statement 3 is incorrect: The Imperial Cholas were former feudatories of the Pallavas, not the Chalukyas. **Hence this statement is incorrect.**

It was the Pallavas, not the Chalukyas who occupied Tondaimandalam. One of the Imperial Chola dynasty's early rulers, Aditya (son of founder Vijaylaya), defeated Aparajita of the Pallava dynasty, thus ending them and their rule in Tondaimandalam, as he annexed the area under his direct rule.

Source: Tamil Nadu Board SCERT Class 11th, Ch-13, Pg- 141

Q.27) 'He was one of the most illustrious rulers of the Imperial Chola dynasty. He defeated the combined armies of his enemies - the Pandyas and Ceylon at the famous Battle of Vellore. He assumed the title of Maduraikonda. The Western Ganga's, Kodumbalur chiefs and the ruler of Kerala were his political allies. The famous Uttaramerur inscriptions have also been attributed to his reign. He is credited with providing the golden roof for the vimana of the Nataraja Temple at Chidambaram.

Which of the following rulers from the Chola empire is being described in the above paragraph?

- a) Rajaraja I
- b) Kulottunga I
- c) Rajendra I
- d) Parantaka I

Ans) d

Exp) Option d is the correct answer.

The Imperial Cholas were one of the regional dynasties ruling areas of South India in the 10th century CE. Under them, various illustrious rulers like Aditya Chola, Parantaka I, Rajaraja I, Rajendra Chola, etc contributed immensely to growth of trade, economic prosperity, as well as development of Arts -such architecture, Temple building (golden period of Dravidian style temples), Bronze sculpting, as well as Literature (Tamil & Sanskrit).

Option a is incorrect: Arumolivarman Chola, also famously known as Rajaraja I, was one of the greatest rulers of the Chola dynasty. He led military campaigns not only against the Pandyas at Madurai and Ceylon, but also Maldives, the Sailendra empire in Malaya peninsula, etc. However he is credited with building the Brihadeswara Temple and not the Nataraja temple at Chidambaram. Nor do the Uttaramerur inscriptions belong to his reign. Hence this option is **incorrect**.

Option b is incorrect: Kulottunga I was the last important ruler of the Imperial Chola dynasty. He ruled much later (1070 - 1122 CE) than the Uttaramerur inscriptions (920 CE approx). He did not undertake military campaigns against countries in South East Asia. Hence this option is **incorrect**.

He is credited with uniting the Chalukyas of Vengi with the Cholas. He was also given the title of Shungam-tavirtta (abolisher of taxes) as he abolished land taxes in drought years providing much needed relief to the people.

Option c is incorrect: Rajendra I was the son of Rajaraja I. He too undertook extensive military campaigns under Ceylon, the Chera & Pandyas, whose empires he annexed into the Chola empire, Western Chalukyas, and even Mahipala I of Pala dynasty in the north. After this victory, he took the title of Gangaikondachola (not Maduraikonda). Also, the Uttaramerur inscriptions do not belong to his reign. Hence this option is **incorrect**.

Option d is correct: Parantaka I was one of the most illustrious rulers from the early days of the Imperial Chola dynasty. He was the son of Aditya I Chola. He reigned from 907 to 953 CE, and hence the famous Uttaramerur inscriptions, which give details about the system of local governance in villages of Chola empire (dating to approx 920 CE) belong to his reign. He captured Madurai by defeating Pandyas, the long-time enemies of the Chola and assumed the titles Maduraikonda (capturer of Madurai) & Madurantaka (destroyer of Madurai). His reign was marked by 2 important battles

- 1) Battle of Vellore: wherein he defeated an alliance of his enemies - the Pandya king and the king of Ceylon (Sri Lanka)
- 2) Battle of Takkolam: wherein he was defeated by the Rashtrakuta king, Krishna III in 949 CE.

He was a great builder of temples and is credited with providing the golden roof for the vimana of the Nataraja Temple at Chidambaram (a Dravidian style Temple). Hence this option is **correct**.

Ancient and Medieval Indian History by Poonam Dalal Dahiya, Ch-9, Pg-9.34, 9.35, 9.36, 9.37

Q.28) With reference to the reign of Rajaraja I, consider the following statements:

1. He led a naval expedition against the Sailendra empire in Malaya Peninsula.
2. He is credited with the construction of the Brihadisvara temple.
3. He was given the title of Pandita Chola.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

The Imperial Cholas were one of the regional dynasties ruling areas of South India in the 10th century CE. Under them, various illustrious rulers like Aditya Chola, Parantaka I, Rajaraja I, Rajendra Chola, etc contributed immensely to growth of trade, economic prosperity, as well as development of Arts -such architecture, Temple building (golden period of Dravidian style temples), Bronze sculpting, as well as Literature (Tamil & Sanskrit).

Statement 1 is correct: Rajaraja I's predecessors were mostly focused on establishing and consolidating Chola power in Tondaimandalam (a historic region spreading from south areas of modern-day Andhra to northern areas of modern-day Tamil Nadu). It was Rajaraja I who started undertaking ambitious and large-scale expansionist military expeditions overseas against Chola neighbours.

- 1) He started a campaign against Ceylon, which was completed by his son Rajendra I Chola.
- 2) He conquered the Maldives islands.
- 3) He led a naval expedition against the Sailendra empire in Malaya Peninsula (Java, Bali, Sumatra, etc). It must be noted that it was his son, Rajendra I, who led the expedition against the Sri Vijaya empire in SouthEast Asia.

Hence this statement is correct.

Statement 2 is correct: Rajaraja I was a great Shiva devotee. He built the Brihadisvara temple in Thanjavur dedicated to Lord Shiva. It is one of the biggest temples of South India, and one of the best examples of the Dravidian style of temple architecture. It is famous for its Vimana, which is one of the tallest in all of South India. It is also known as the Dakshina Meru, and has been included in UNESCO's World heritage Site List. This temple is also known as Rajarajeswaram Temple, alluding to the person responsible for its construction (Rajaraja I). Hence this statement is correct.

This must not be confused with the Shore Temple at Mahabalipuram that was built by Narsimhavarman II of the Pallava dynasty.

Statement 3 is incorrect: It was Rajendra I Chola, not his father Rajaraja I Chola, who was given the title of Pandita Chola. Hence this statement is incorrect.

He was given this title as Rajendra I Chola was a great patron of learning.

Source: Tamil Nadu Board SCERT, Class 11th, Ch-11, pg-126,127;

Ancient & Medieval Indian History by Poonam Dalal Dahiya, Ch-9, Pg-9.17, 9,34 to 9.37

Q.29) With reference to the political developments in South India during the Early Medieval Period, consider the following statements:

1. The Pandyas took the place of Cholas after their decline.
2. The Later Chalukyas were replaced by the Kalabhra dynasty.

Which of the statements given above is/ are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

The Early Medieval Period starting from the 7th century CE, saw a number regional empires in South India.

Statement 1 is correct: The Imperial Chola empire collapsed in the 13th century CE. The political vacuum created by their collapse was filled by their longtime enemies - the Pandyas in the deep South. In the Andhra region, the Cholas were succeeded by the Hoysalas. **Hence this statement is correct.**

Statement 2 is incorrect: The Western Chalukyas ruled over an extensive area in the Deccan for about two centuries after which the Rashtrakutas became powerful. The family of Western Chalukyas had its offshoots like the Eastern Chalukyas of Vengi and the Chalukyas of Kalyani. These offshoots of the Chalukyas (known

as Eastern Chalukyas/ Later Chalukyas) were finally replaced by the Kakatiya dynasty in the 12th century CE in the eastern Deccan region comprising eastern parts of modern-day Karnataka, Andhra Pradesh and Telangana. In the Western Deccan region (from Narmada in North to Tungabhadra in South), the Later Chalukyas were succeeded by the Yadava (also called the Seuna/ Sevuna) dynasty in the 12th century CE. The Kalabhra dynasty ruled over regions of the deep South between the 3rd and 6th centuries CE (after the ancient Sangam Age), and came before and not after the Chalukyas. **Hence this statement is incorrect.** The Kalabhra dynasty was replaced by the Chalukyas and the Pallavas.

Ancient & early Medieval India by Upinder Singh, Ch-, Pg-

Q.30) Which of the following pair of countries have been in news for dispute over the Aegean Sea recently?

- Italy and Greece
- Albania and Bulgaria
- Italy and Turkey
- Turkey and Greece

Ans) d

Exp) Option d is the correct answer.

Greece and Turkey have been regional adversaries on a host of issues concerning the Aegean Sea since the 1970s, both asserting rival claims over their borders in the Sea.

The Aegean Sea, spanning over two lakh square kilometers, is an arm of the Mediterranean Sea. It is located in the East Mediterranean Basin with the Greek peninsula to its west and Anatolia (consisting of the Asian side of Turkey) to its east. There are more than a thousand islands in the Aegean Sea, almost all Greek, and some within two kilometers of mainland Turkey or the Turkish west coast.

The Lausanne Treaty of 1923 defined the boundaries of Turkey and Greece, and several islands, islets and other major territories in the Aegean Sea beyond three miles from the Turkish coast were ceded to Greece, with the exception of three groups of islands.

Presently, Turkey claims a territorial sea of six nautical miles and has not exercised its claim over the 12 nautical miles from its coast in the Aegean Sea. **Hence, option d is the correct.**

Knowledge Base:

The Aegean is connected through the straits of the Dardanelles, the Sea of Marmara, and the Bosphorus to the Black Sea, while the island of Crete can be taken as marking its boundary on the south. It is also considered the cradle of two of the great early civilizations, those of Crete and Greece, from which much of modern Western culture is derived.

Q.31) Consider the following events in the history of India:

1. Rise of Pratiharas under King Bhoja
2. Establishment of Pallava power under Mahendravarman-I
3. Establishment of Chola power by Parantaka-I
4. Pala dynasty founded by Gopala

What is the correct chronological order of the above events, starting from the earliest time?

- a) 2 - 1 - 4 - 3
- b) 3 - 1 - 4 - 2
- c) 2 - 4 - 1 - 3
- d) 3 - 4 - 1 - 2

Ans) c

Exp) Option c is the correct answer.

600-630 CE: Mahendravarman - I

750-770 CE: Foundation of Pala Dynasty in Bihar and Bengal region

836-885 CE: Rise of Pratiharas under King Mihir Bhoja

907-955 CE: Reign of Parantaka-I

Source: UPSC CSE 2020

Q.32) With reference to Early Medieval History of South India, who were Samantas?

- a) Wandering ascetics who renounced the world to seek truth.
- b) Superintendent of pearl fisheries.
- c) Higher officials in the Chola administration.
- d) Semi-independent local chiefs.

Ans) d

Exp) Option d is the correct answer.

Option a is incorrect: Ascetics who gave up worldly life to live a simple life, seeking truth were known as Sramana (not Samanta) in Ancient India. Hence this option is incorrect.

This term was broadly applied to monks and renunciants who followed non-orthodox, non-Brahmanical religious philosophies like Jainism, Buddhism, Ajivikas, etc.

Option b is incorrect: The superintendent of pearl fisheries in the Mauryan administration was known as Kalatika (not Samanta). Hence this option is **incorrect**.

Statement c is incorrect: The Higher officials in the Imperial Chola administration, especially those in the king's court in the capital were termed Perudan (not Samanta). Hence this option is **incorrect**.

Statement d is correct: The term 'samanta' originally meant 'neighbour' and referred to the independent ruler of an adjacent territory. But by the end of Gupta rule and by sixth century a new meaning of the term was adopted. 'Samanta' implied a subjected but reinstated tributary prince of a realm. They were semi-independent local chiefs. The rise of the 'samantas' was a distinctive feature of the growth of medieval realms.

Q.33) With reference to the history of South India, consider the following pairs:

Term	Description
1. Muttaiyal	Obligatory labour services to be provided to state officials
2. Paraicheri	Socially segregated groups considered ritually impure.
3. Nettal	brokerage fee levied on middlemen of the trade.

How many of the pairs given above are correctly matched?

- Only one pair
- Only two pairs
- All the three pairs
- None of the above

Ans) b

Exp) Option b is the correct answer.

Pair 1 is correct: **Muttaiyal** referred to the labour services that the villagers were obligated to provide (compulsory unpaid labour) to the state officials in the Imperial Chola empire. Hence this option pairing is **correct**.

Pair 2 is incorrect: **Paraicheri** referred to the residential quarters of agricultural labours (not a section of society) during the reign of the Imperial Cholas. Hence this pair is incorrect.

The social group of people who were socially and spatially segregated because they were considered ritually impure (something like the Antyaja/ Untouchable in North Indian society), were known as **Paraiyar**.

Pair 3 is incorrect: **Nettal** referred to a form of compulsory/ unpaid/ forced labour prevalent in the society/ economy of the Imperial Cholas. It is similar to muttaiyal.

Taragu was the brokerage fee levied on middlemen of all trade. Hence this pair is incorrect.

A class of small cultivators during the Imperial Chola times was termed as Vellalars/ Gaudas in the Imperial Chola empire.

Source: Ancient & Medieval Indian History by Poonam Dalal Dahiya, Ch-9, Pg-9.42

Q.34) With reference to the administration under the Imperial Cholas, consider the following statements:

1. Udankottam was the assembly of elders in the villages.
2. In the central administration, higher officials were known as Peruntaram and lower officials were known as Siruntaram.
3. The officials were paid salaries strictly in cash.

Which of the statements given above is/ are correct?

- a) 1 and 2 only
- b) 1 only
- c) 2 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

The Imperial Cholas were one of the regional dynasties ruling areas of South India in the 10th century CE. Under them, various illustrious rulers like Aditya Chola, Parantaka I, Rajaraja I, Rajendra Chola, etc contributed immensely to growth of trade, economic prosperity, as well as development of Arts -such architecture, Temple building (golden period of Dravidian style temples), Bronze sculpting, as well as Literature (Tamil & Sanskrit). It was one of the biggest empires of South India and had a very detailed administrative machinery.

Statement 1 is correct: In Chola administration, king was the most important person, and **there was a Council of a minister called Udankottam** to advise him. The lowest unit of administration was the village. They combined to form a nadu. A valanadu comprised of a few nadus. Taniyur was a separate village or settlement site. Above valanadu there was mandalam which was equivalent to a province.

Statement 2 is correct: In the central government of the Chola Empire, the higher officials were known as Peruntaram, while the lower officials were known as Siruntaram.

Statement 3 is incorrect: The officials were paid salaries by awarding grants of revenue-bearing lands, which they could collect and keep for themselves. They were not paid salaries in cash strictly. Hence this statement is **incorrect**.

Ancient & Medieval Indian History by Poonam Dalal Dahiya, Ch-9, Pg-9.39

Q.35) Which of the following best describes the term Triple Dip La Nina, recently in news?

- a) It is the event when La Nina occurs thrice in a given year.
- b) It is a situation where the La Niña period extends for up to three consecutive winters.
- c) It is the event when La Nina, positive Indian Ocean Dipole and Southern Oscillations happen simultaneously.
- d) It is the event when La Nina is followed by an El Nino event for three years continuously.

Ans) b

Exp) Option b is the correct answer.

La Nina means cooler-than-normal ocean temperatures in the eastern Pacific Ocean near the equator. El Niño and La Niña episodes typically last for about nine months to a year. They usually develop in the March-June period, and are the strongest during winter (November-January in the northern hemisphere), before weakening or dissipating by March or April of next year. Occasionally, however, they continue for much longer periods.

Option b is correct: 'Triple Dip' La Niña is a period where the La Niña period **extends for up to three consecutive winters**. For instance, La Niña phenomenon started building up in September 2020 and will continue for another six months. The ongoing La Niña phase of the equatorial Pacific Ocean has just been

predicted to persist for at least another six months, making it one of the longest ever La Niña episodes in recorded history.

Q.36) With reference to the administration in villages in the Imperial Chola empire, consider the following statements:

1. There was no interference of the king in the village administration.
2. Women were not allowed to be a part of the village administration.
3. All members of the village assemblies were landowning Brahmins.

Which of the statements given above is/ are correct?

- a) 1 and 2 only
- b) 2 only
- c) 2 and 3 only
- d) None of the above

Ans) d

Exp) Option d is the correct answer.

Statement 1 is incorrect: There was a very close relationship between the village assemblies which looked after local governance and the King's court. Hence this statement is incorrect.

The Uttaramerur inscription from the reign of Parantaka I mention in explicit detail, how the decisions of the assemblies were made only in the presence of an official specially deputed by the King. Another inscription from Thanjavur details how rajaraja I gave direct orders to the village assembly to perform various types of services in the Brihadeswara temple. Hence it is clear that although the village administration was carried out on a day-to-day basis by local self-governing assemblies with wide powers, they were still very much under the overall central control of the Chola king.

Statement 2 is incorrect: Although the society and polity were patriarchal by and large, women were not banned from being a part of the village administration. Hence this statement is incorrect.

For example, a 902 CE inscription states that the village of Bharangiyur was headed by the wife of a man named Bittayya. Another inscription from 1055 CE states that a woman named Chandiyabbe was the Aguvandi, i.e., the village chieftain and another woman named Jakkiyabbe was her mantraki (counsellor).

Statement 3 is incorrect: The decision making, especially in local matters was done by local corporate bodies of the settlement (both in villages and towns). There were many types of assemblies in the Chola polity. All of them did not have the same type of membership. Hence this statement is incorrect.

In the Brahmadeya villages, the assemblies, known as the Sabha, was constituted of Brahmins, but other factors such as property ownership, family antecedents, learning, good conduct, etc too had a bearing on who would be a part of these assemblies. On the other hand, in the non brahmadeya villages, often known as Vellanvagai villages, the assemblies were known as Ur. Its members included the tax paying landowners of the village, most of whom were non-Brahmins.

Ancient Indian History by Upinder Singh, Ch-10, Pg-592, 593

Q.37) With reference to the social conditions during the time of the Imperial Cholas, consider the following statements:

1. Unlike north, residential quarters in Chola settlements were not segregated based on caste.
2. Compared to its contemporary North Indian societies, conditions of the Shudra Varna were much better in the Chola society.
3. The Chola society had a twofold caste division based on profession.

4. There was no practise of untouchability in the Chola society.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 4 only
- c) 2 and 3 only
- d) 2 and 4 only

Ans) c

Exp) Option c is the correct answer.

The Imperial Cholas were one of the regional dynasties ruling areas of South India in the 10th century CE. Under them, various illustrious rulers like Aditya Chola, Parantaka I, Rajaraja I, Rajendra Chola, etc contributed immensely to growth of trade, economic prosperity, as well as development of Arts –such architecture, Temple building (golden period of Dravidian style temples), Bronze sculpting, as well as Literature (Tamil & Sanskrit).

Statement 1 is incorrect: Much like the contemporary North Indian society, in Chola society too, there were hierarchies and distinctions based on castes, which were closely linked to the professions of people. So, people of a profession lived together in a residential quarter that was separate and demarcated from the residential quarter of another caste/ professional group. For example, in a non-brahmadeya village settlement, Ur (which was the basic unit of settlement in Chola times),

- Ur nattam: was the residential quarter of landowning farmers.
- Kammancheri: was the residential quarter of the artisans.
- Paraicheri: was the residential quarter of the agricultural labourers.

Hence this statement is incorrect, as all groups of society did not live together undemarcated from each other in the same residential area.

Statement 2 is correct: The Shudras in the Chola society were identified with the Vellalas. The vellalas were land holders and practised agriculture and were economically much more well off than the Shudras in North Indian society. Their economic strength gave them a better say in social matters and improved their social standing. Thus, they were not subject to much of the issues that the Shudras in North Indian society had to endure. Hence this statement is correct.

Statement 3 is correct: Other than the concept of Varna division that became a part of South Indian society as well, the Chola society had a unique supra-caste dichotomy, over and above the regular Varna divisions. The society was divided into two caste groups.

- 1) Idangai: left hand caste groupings. Consisted mainly of artisanal and trading groups.
- 2) Valangai: right hand caste groupings. Consisted mainly of agricultural groups.

Hence this statement is correct.

Statement 4 is incorrect: The social evil of Untouchability existed in Chola society as well. Hence this statement is incorrect.

While the untouchables were known as Antyaja/ Chandalas in North Indian society, they were known as Paraiyar in Chola society. They were segregated spatially (did not live with the rest of the population) as well as socially (interactions of other social groups with them were limited).

Ancient & Medieval Indian History by Poonam Dalal Dahiya, Ch-9, Pg-9.41, 9.42;

Ancient Indian History by Upinder Singh, Ch-10, Pg-592

Q.38) With reference to the external relations of the Imperial Cholas, consider the following statements:

1. The Cholas were the first to introduce Indian culture and Hinduism to the Malay Archipelago.
2. Throughout their history, Sailendra dynasty of Malay peninsula had cordial relations with the Chola empire.
3. China was the only Asian country not on friendly terms with the Cholas.

Which of the statements given above is/ are **incorrect**?

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

The Imperial Cholas were one of the regional dynasties ruling areas of South India in the 10th century CE. Various illustrious rulers of this dynasty contributed immensely to growth of trade, economic prosperity, as well as development of Arts –such architecture, Temple building (golden period of Dravidian style temples), Bronze sculpting, as well as Literature (Tamil & Sanskrit). This empire had well established external relations, especially of trade and commerce with nations of Southeast Asia. The Cholas also led many military expeditions to conquer these regions as well.

Statement 1 is incorrect: Indians had been in touch with South East Asia since the 5th century CE, when many Indians began colonising countries of the Indochina (Laos, Vietnam, Cambodia, Thailand, etc) and the Malay Archipelago (Java, Sumatra, Bali, etc). They settled as traders and in time some of them conquered these territories starting their own dynasties like the Kamboja, Sri Vijaya and the Shailendra dynasty, etc. These were responsible for introducing Indian culture (languages like Sanskrit, literature like Mahabharat, Ramayana, etc, religious philosophies such as Shaivism/ Vaishnavism? Buddhism, etc). So Indian culture had been introduced in these regions before the military expeditions and conquest by the Cholas. **Hence this statement is incorrect.**

Statement 2 is incorrect: The Sailendra dynasty ruled the Malay peninsula, notably the islands of Java. They were Mahayana Buddhists and built the famous UNESCO World Heritage Site of Borobudur. They had cordial relations with the Imperial Cholas. In fact, despite being an ardent Shaivite, Rajendra I Chola allowed them to build a Buddhist monastery in Nagapattinam and at his insistence, Rajendra I even endowed a village to this monastery for its upkeep. However, it must be noted that later on, as the Sailendra dynasty was ruling the Sri Vijaya empire, they came into conflict with the Cholas, as Rajendra I successfully led a military expedition to conquer the Malay peninsula under the Sri Vijaya kingdom. **Hence this statement is incorrect.**

Statement 3 is incorrect: The Cholas had maintained friendly relations with the Chinese from the very start. Hence this statement is incorrect.

The main focus of Chola's relations with China was trade and commerce. In fact, Rajaraja I and his son Rajendra I both waged wars against the Sailendra dynasty of Malay peninsula in order to claim naval supremacy so that any and all hindrances to Indian traders in trade with China could be removed and trade could be expanded. Both these rulers as well as Kulottunga I sent ambassadors representing Chola interests to the court of the Chinese emperor, often with tributes such as glassware, brocades, ivory and rhinoceros' horns.

Source: Ancient & Medieval Indian History by Poonam Dalal Dahiya, Ch-9, Pg-9.36, 9.37, 9.46, 9.47

Q.39) The term 'Muvendar' is often mentioned in the Sangam Literature. Which of the following best describes the term Muvendar?

- a) They were the crowned kings of Chola, Pandya and Chera kingdoms of Sangam era.

- b) They were high-ranked officials in the Chola kingdom during Sangam era.
 c) Muvendar were the titles given to the poets in the Sangam era.
 d) This is the term used for a class of people who belonged to the lower strata of society during Sangam era.

Ans) a

Exp) Option a is the correct answer.

Option 1 is correct: Muvendars were the 'crowned kings'. The Cheras, Cholas and Pandyas were the Muvendars or three major kings, who controlled large territories and ruled independently. Muvendar was the most powerful political authority in contemporary Tamizhakam. Next to them was the political authority of velir. The main concern of all the three ruling groups—Cheras, Cholas, and Pandyas was the subordination of velir chiefs who were next in importance. Muvendar had several such subjugated chiefs as their subordinates serving them in plunder raids.

Q.40) With reference to 'Sammed Shikharji' recently in news, consider the following statements:

1. It is located on the Parasnath hill in Jharkhand.
2. Recently, it has been declared an intangible cultural heritage site by UNESCO.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

Sammed Shikharji is a Jain pilgrimage site located in Jharkhand. The Jain community has been protesting lately to overturn a state government decision declaring it as a tourist spot.

Statement 1 is correct: Sammed Shikharji is located on the Parasnath hill in the Giridih district of Jharkhand. 'Parasnath' comes from 'Parshvanatha', the 23rd Jain tirthankara who attained moksha here.

Statement 2 is incorrect: Sammed Shikharji has not been declared an intangible cultural heritage. The Jain community does not want the place to turn into an eco-tourism spot because it is considered to be the biggest pilgrimage site by both the Digambaras and the Svetambaras. It is believed that it is the place where 20 of the 24 Jain tirthankaras, who are Jain spiritual leaders, along with many other monks attained 'moksha' or salvation after meditating.

Note: Parasnath hill is the highest mountain in the state of Jharkhand.

Knowledge Base: According to beliefs of the Jain community, Shikharji is ranked with Ashtapad, Girnar, Dilwara Temples of Mount Abu and Shatrunjaya as the 'Svetambara Pancha Tirth' or the five principal pilgrimage shrines.

Q.41) In the context of the history of India, consider the following pairs:

Term	Description
1. Eripatti	Land, revenue from which was set apart for the maintenance of the village tank
2. Taniyurs	Villages donated to a single Brahmin or a group of Brahmins
3. Ghatikas	Colleges generally attached to the temples

Which of the pairs given above is/are correctly matched?

- a) 1 and 2 only
- b) 3 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) d

Exp) Option d is the correct answer.

Pair 1 is correctly matched: Eripatti was a special category of land known in South India. This land was donated by individuals, revenue from which was set apart for the maintenance of the village tank.

Pair 2 is incorrectly matched: Taniyur is a term related to the administration of the Chola Empire (850-1200 AD-). Under this, all the villages were the same as an autonomous unit. Each village together formed a nadu (local area). Many village associations under Nadu were called Kurrams. Taniyur or Tankurram were Kurrams formed in large cities.

Pair 3 is correctly matched: A Ghatika was a centre of learning including religion and was small in size. It is a college generally attached to the temples.

Source: UPSC CSE 2016

Q.42) Consider the following pairs regarding the major ports in the kingdom of Chola, Chera, and Pandyas during Sangam age:

Kingdom	-	Major Port
1. Chola	-	Puhar
2. Chera	-	Uraiyur
3. Pandya	-	Korkai

Which of the pairs given above are correctly matched?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2, and 3

Ans) b

Exp) Option b is the correct answer.

The three principal chiefdoms of the Sangam age i.e., the Cheras, Cholas, and Pandyas had their strongholds both in the interior as well as on the sea coast. The major seaports of the three kingdoms are mentioned below:

Statement 1 is correct: The Cholas had the Uraiyur port on Cauvery River and Puhar on the coromandel coast as their strongholds. Uraiyur was also the capital of Cholas. Puhar was also known as Kaveripattanam.

Statement 2 is incorrect: The Cheras had Karur port in the interior and Muchiris the well-known ancient port, on their west coast. Uraiyur port belonged to Cholas. **So, the statement is incorrect.**

Statement 3 is correct: The Pandyan kingdom was also known for its pearl fisheries. The Pandyas had Madurai, Korkai, Kayal, and periyapattanam as their major ports. Korkai was famous for the pearls and pearl fishing.

Poonam dalal dhaiya history

Q.43) Consider the following pairs regarding the different types of chiefdoms in the Sangam age:

Chief	Description
1. Vendar	They were Headmans of the villages.
2. Velir	They were mostly the chiefs of hill areas.
3. Kizhar	They were the biggest chief who controlled Vendar and Velir.

Which of the pairs given above is/are correct?

- 1 and 2 only
- 2 only
- 1 only
- 1 and 3 only

Ans) b

Exp) Option b is the correct answer.

During the Sangam age, there were several chiefdoms of clans, some big and others very small. The relatively larger chiefdoms were born out of conquests and the subjugation of smaller ones. There were three different kinds of chiefdoms in Tamilazam. They were of the kizhar, velir and vendar categories of chiefs.

Pair 1 is incorrect: Vendar are the biggest category of all the chieftains (not the village headman). These chiefs had control over peoples of larger areas. **They had several lesser chiefs like velir and kizhar under their service and paying tributes to them.** An example of vendar is the Muvendar.

Pair 2 is correct: The velir or bigger chiefs were mostly hill chieftains, though they controlled lowlands too. The hill chief were mostly hunter chiefs, vetar-koman or kuravar-koman or nedu vettuvan. Vetar, kuravar and vettuvar were the major clansmen of the hills dominated by the velir.

Pair 3 is incorrect: The Kizhar or little chiefs were headmen of small villages (Ur) (not the biggest chiefs), generally bound by kinship. They are referred to by being prefixed with the name of their respective villages, an example being Arnkantur-kizhar. They were subjugated by the bigger chiefs and had to serve them in their campaigns.

Source: <https://egyankosh.ac.in/bitstream/123456789/20157/1/Unit-28.pdf>

Q.44) Consider the following statements with reference to society during Sangam age:

1. Early Sangam people were primarily pastoralists.
2. Women were generally associated with household works and did not participate in other major economic activities.
3. The practice of Sati was prevalent in Sangam society.
4. The concept of Varna was unknown to the people of the Sangam age.

Which of the statements given above are correct?

- a) 2 and 3 only
- b) 1, 3 and 4 only
- c) 1 and 3 only
- d) 2, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

The Sangam age refers to that period in the early history of south India when large numbers of poems in Tamil were composed by a number of authors. The term Sangam refers to an assembly or “meeting together” of Tamil poets.

Statement 1 is correct: The narrative and didactic texts of Sangam literature suggest several stages of social evolution. **They show that the early Sangam people were primarily pastoralists.**

Statement 2 is incorrect: Women were actively engaged in economic production. Women are described as **engaged in various economic activities such as paddy plantation, cattle rearing, basket-making, spinning, etc.**

Statement 3 is correct: The cruel practice of Sati was also prevalent in Tamil society, and it was known as TIPPAYADAL. But it was not obligatory as there are references to widows present in society. However, their position was miserable as they were prohibited to decorate themselves or participate in any form of amusement.

Statement 4 is incorrect: The Concept of Varna was known to the people of Sangam age. Though the concept of varna was known, social classes in the Sangam period were not marked by higher or lower rankings as in north India. For example, Brahmins were present in the society and they performed Vedic ceremonies and sacrifices and also acted as advisers to the chief but they enjoyed no special privileges compared to North India.

Old NCERT-CH18-The dawn of history in deep south

Q.45) Consider the following pairs of Elephant reserves and their respective location in India:

Elephant Reserves : Location

1. Singphan : Nagaland
2. Agsthyamalai : Kerala
3. Dandeli : Odisha
4. Lemru : Chhattisgarh

How many of the above given pairs are correctly matched?

- a) Only one pair
- b) Only two pairs
- c) Only three pairs
- d) All the four pairs

Ans) b

Exp) Option b is the correct answer.

The Indian elephant occurs in the central and southern Western Ghats, North-east India, eastern India and northern India and in some parts of southern peninsular India. **It is included in Schedule I of the Indian Wildlife (Protection) Act, 1972 and in Appendix I of the Convention on International Trade in Endangered Species of Flora and Fauna (CITES).** It occurs in 16 of the 28 states in the country. **Project Elephant was launched by the Government of India in the year 1992.** There are total of 33 elephant reserves in India.

Pair 1 is correct: The Singphan Elephant Reserve is located in Mon district of Nagaland and spreads over an area of 5825 acres (2357 hac). It is strategically located in contiguity with the Abhaypur Reserve Forest of Assam. The creation of reserve will give better protection and conservation of elephants in the state.

Pair 2 is incorrect: Recently, the Government of India has announced the notification of one more Elephant Reserve (ER) Agasthiyamalai in Tamil Nadu during a programme in the Periyar Wildlife Sanctuary in Kerala. **Agasthiyamalai is Tamil Nadu's 5th Elephant Reserve and also a Biosphere Reserve.**

Pair 3 is incorrect: Along with neighboring Anshi National Park (339.87 square kilometres (83,980 acres), the sanctuary was declared part of the Anshi Dandeli Tiger Reserve in 2006. **Karnataka state government has officially notified the Dandeli Elephant Reserve under Project Elephant on 4 June 2015.** The elephant reserve is spread over 2,321 km², including 475 km² as core and the remaining as buffer areas.

Pair 4 is correct: Recently, the Chhattisgarh government has proposed to reduce the area of Lemru Elephant Reserve from 1,995 sq km to 450 sq km. The reserve is located in the Korba district of Chhattisgarh. The reserve is aiming at reducing human-animal conflict and destruction of property in addition to providing a permanent habitat to the elephants. Earlier, the state government notified the reserve (Conservation Reserve) in October 2020 under Section 36A of the Wild Life (Protection) Act, 1972 (WLPA).

Q.46) Consider the following statements with reference to the Economy in Sangam period:

1. This period saw flourishing trade with the Rome due to discovery of monsoon.
2. During this period, the barter system of exchange was followed due to complete absence of coins.
3. Umanar were salt merchants who traveled in bullock carts along with their families for trade activities.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

The people were engaged in various economic activities such as agriculture, crafts, and trade. Paddy was the most important crop. It formed the main part of people's diet and also served as a medium of barter exchange for inland trade.

Statement 1 is correct: The most important feature of the Sangam economy was flourishing trade with the Roman world. It is confirmed by the recovery of a large number of Roman gold coins in south India. **The discovery of monsoons and the use of a land and sea route between Indian coasts and the western**

world was the main reason for the growth of this trade. Commodities from Tamilakam had a great demand in Rome. Black pepper, cardamom, pearls and gemstones, especially Beryl which was mined from sites in Kodumanal, Padiyur and Vaniyampadi, were highly sought after in Rome.

Statement 2 is incorrect: In trade, barter system was much in vogue (very popular), **though coins were also in use.** Roman coins circulated as bullion.

Statement 3 is correct: Salt merchants called Umanars, traveled in bullock carts along with their families for trade activities.

https://nios.ac.in/media/documents/SrSec315NEW/History_Module1.pdf

Q.47) Which of the statements is/are correct with reference to religious beliefs and practices during Sangam age?

1. This period witnessed conflict and animosity between north Indian and south Indian religious traditions.
2. Sangam Literature Paripadal has references to Vishnu, Shiva, and Durga.
3. Local people during Sangam Age worshipped a deity called Murugan.

Select the correct option using the code given below:

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

The evidence for the movement of Brahmins and the performance of Vedic ritual practices is found in the Sangam texts. But the varnashrama ideology was yet to take root in the Tamil region.

Statement 1 is incorrect: In the field of religion, **Sangam period witnessed a close and peaceful interaction between north Indian and south Indian traditions (not the conflict and animosity).** The evidence for the movement of Brahmins and the performance of Vedic ritual practices is found in the Sangam texts. There are also references to the presence of Buddhists and Jains in Tamil region.

Statement 2 is correct: The Paripatal the eighth anthology contains some poems that deal with chiefly four deities - Vishnu, Shiva, Durga, and Murugan.

Statement 3 is correct: The local people, particularly those of the hills, worshipped a deity called Murugan, which in northern India come to be identified with Kartikeya, a war god.

Source: TN SCERT-CH5-evolution of society in south India

https://nios.ac.in/media/documents/SrSec315NEW/History_Module1.pdf

Q.48) Consider the following statements regarding the Kalabhra kingdom:

1. Kalabhra brought an end to the rule of the Pallavas in South India.
2. The rulers of Kalabhra were patrons of the Jain and Buddhist religions.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

The period between the Sangam Age and the Pallava-Pandya period, roughly between c. 300 CE and 600 CE, is known as the age of Kalabhras in the history of Tamizhagam.

Statement 1 is correct: The Kalabhras brought an end to the rule of the Pallavas, likewise, the Kalabhras became the cause for the decline of the early Pandyas. The period of the rule of Kalabhras is called an interregnum or 'dark age' by earlier historians.

Statement 2 is correct: The rulers of the Kalabhras kingdom were patrons of the Jain and Buddhist religions. The recent interpretation of the period takes it as a period of transition leading to enlarged state societies under the Pallavas ruling over northern Tamilnadu and the Pandyas in the south from the sixth century onwards. To start with, the rulers of these new states were patrons of the Jain and Buddhist religions and gradually they came under the spell of the orthodox Vedic-Puranic religion emerging in the form of the Bhakti cults of Saivism and Vaishnavism. But the influence of Jain and Buddhist religions on the general society was so strong as to evoke much aversion from the Bhakti saints.

Source: Pg 91, ch 5, TN SCERT.

Q.49) In Tamil poetry, there is a description of five ecological-zones or Tinai. In this context, consider the following statements:

1. Kurinji is a hill area, dominated by hunting and gathering activities.
2. Palai is the pastoral tract, where the major activity was animal rearing.
3. Mullai is an arid area.
4. Neytal is the seacoast, dominated by fishing.

Which of the statements given above are correct?

- a) 2 and 4 only
- b) 1, 2, and 3 only
- c) 1 and 4 only
- d) 1, 2, 3, and 4

Ans) c

Exp) Option c is the correct answer.

The ancient Tamils had divided the Tamil country into five distinct ecological zones, with each zone having its own characteristics. Each zone with its distinct characteristics is called Tinai. The five ecozones are kurinji, palai, mullai, marutam, and neytal. People from each ecozone went out interacting with the peoples of the other ecozone and entered into barter of goods. The five ecozones are:

Marutam are the wetland or riverine zone, where the people pursue plough agriculture. Indra was the god of this region.

Statement 1 is correct: The Kurinji landscape was the mountainous or hill zone. The people who lived in this zone are called kuravan. Hunting and gathering was the main occupation here. Muruga was the God of Kurinji.

Statement 2 is incorrect: Palai was the dry, semi-arid zone. As such there is no desert land in the ancient Tamil country, the landscapes of Kurinji and Mullai, during the dry climate or in the time of rain failure, became parched and resulted in the formation of Palai land. Korravai was the goddess of this region.

Statement 3 is incorrect: Mullai was the pastoral zone. Pastoralists lived in this region and animal husbandry was the main occupation. Vishnu was the God of this region

Statement 4 is correct: The Neytal was the coastal zone. The people who lived here were known as Paratavars. Varuana was the God of this region. Fishing and salt mining were the main occupations.

Q.50) With reference to ‘National Hydrology Project’, consider the following statements:

1. It is Central Sector scheme sponsored by Ministry of Jal Shakti with financial aid from the World Bank.
2. The primary objective of the project is to ensure the integrated development of rainfed areas using the watershed approach.
3. The initiative of ‘Glacial Lake Atlas of Ganga River Basin’ is one of the components under the National Hydrology Project.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) d

Exp) Option d is the correct answer.

The National Hydrology Project (NHP) of India is a government-run project that aims to improve the understanding and management of water resources in the country. National Hydrology Project was **started in 2016** as a Central Sector Scheme with **100% grant to implementing agencies** on pan India basis.

Statement 1 is correct: The National Hydrology Project (NHP) is **Central Sector scheme sponsored by Ministry of Jal Shakti**, Department of Water Resources, River Development and Ganga Rejuvenation, Govt. of India **with financial aid from the World Bank**.

Statement 2 is incorrect: The objective of the project is to improve the **extent and accessibility of water resources information** and strengthen institutional capacity to enable improved water resources planning and management across India. It aims to create a **centralized database of hydrological information**, including data on precipitation, streamflow, and groundwater levels.

It is **Pradhan Mantri Krishi Sinchai Yojana** that aims ensure the **integrated development of rainfed areas using the watershed approach**.

Statement 3 is correct: **Glacial Lake Atlas of Ganga River Basin** is a project that aims to create a **comprehensive atlas of glacial lakes in the Ganges River basin** in India and Nepal, which will help to **identify potential hazards associated with glacial lake outburst floods (GLOFs)** and to develop strategies for managing these hazards. It is an **initiative under National Hydrology Project (NHP)** is a step forward for facilitating the acquisition of reliable information and putting the same in the public domain.

SFG 2023 | LEVEL 1 | Test #33 – Solutions | ForumIAS

Q.1) In Medieval India, the designations ‘Mahattara’ and ‘Pattakila’ were used for

- a) military officers
- b) village headmen
- c) specialists in Vedic rituals
- d) chiefs of craft guilds

Ans) b

Exp) Option b is the correct answer.

The designations ‘Mahattara’ and ‘Pattakila’ were used for Village headmen. Mahattara refers to “representatives of towns or villages” and was a title used in the administration during the rule of the Silahara dynasty (765-1215 AD.) Patṭakila also refers to village headman.

Q.2) With reference to the administration of Alauddin Khalji, consider the following statements:

1. He encouraged inter-race and inter-group marriages among the nobles.
2. He conducted his administration strictly according to the rules and orders of the Shariat.
3. He was one of the first Sultans of Delhi who ordered the measurement of land.
4. He introduced the system called ‘Itlaq’ for paying his soldiers.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 1, 3 and 4 only
- c) 3 only
- d) 2 and 4 only

Ans) c

Exp) Option c is the correct answer.

Allauddin Khalji’s policy of vast annexation of territories was followed by **extensive administrative reforms** aimed at stabilising the government.

Statement 1 is incorrect: Alauddin Khalji thought **social intercourse among the nobles and inter marriages** between them as one of the reasons for **rebellion against the empire**. So, **the nobles were ordered not to have social gatherings or inter-marriages** without his permission. He was harsh against nobles, who dared to oppose him.

Statement 2 is incorrect: Alauddin maintained that **the government and administration were affairs quite independent of the rules and orders of the Shariat**. He was the Sultan of strong will and he distinctly **asserted his authority** over the ulama (interpreter of Shariat).

Statement 3 is correct: Alauddin Khalji took important steps in the land revenue administration. He was the first Sultan of Delhi who ordered for the measurement of land. Even the big landlords could not escape from paying land tax. **Land revenue was collected in cash** in order to enable the Sultan to pay the soldiers in cash. His land revenue reforms provided a basis for the future reforms of Sher Shah and Akbar.

Statement 4 is incorrect: **Feroz Tughluq** gave up the practice of paying his royal soldiers in cash: instead, he gave them a **paper called Itlaq – a sort of draft** on whose strength they could claim their salary from the Sultan’s revenue officers.

Q.3) With reference to the history of India, which of the following dynasties primarily ruled over/from the territory of Kashmir?

1. Karkota Dynasty
2. Yashaskara Dynasty
3. Haryanka dynasty
4. Utpala Dynasty

Select the correct answer using the code given below:

- a) 1 and 3 only
- b) 2 and 4 only
- c) 1, 2 and 4 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is correct answer.

Much of the history of Kashmir is deduced from the legendary and historical chronicle Rajatarangini (which means ‘the river of kings’). It was probably written in 12th century CE in Sanskrit by a Kashmiri Brahmana called Kalhana.

Option 1 is correct: In early 7th century, the Karkota dynasty rulers established their rule in Kashmir.

The dynasty marked the rise of Kashmir as a power in Central Asia and Northern India. The Karkota dynasty (c. 625–855 CE) was founded by Durlabhvardhana during the lifetime of the Pushyabhuti king, Harshavardhana. The Karkota emperors were primarily Hindu, who have been known for building spectacular Hindu temples in their capital, Parihaspur.

Option 2 is correct: Yashaskara dynasty belongs to the kingdom of Kashmir. It was established after the **Utpala dynasty**. It was ruled by Queen Didda (c.958 – 1003 CE).

Option 3 is incorrect: The Haryanka dynasty was the third ruling dynasty of Magadha, an empire of ancient India, which succeeded the Pradyota dynasty and Barhadratha dynasty.

Option 4 is correct: From the 8th to 10th century CE, the Kashmir region was ruled over by the Hindu Utpala dynasty. The kingdom was established by Avanti Varman, ending the rule of the Karkota dynasty in 855 CE.

Q.4) With reference to the various taxes imposed during the reign of Firoz Shah Tughlaq, consider the following pairs:

Taxes	Description
1. Kharaj	Religious tax on non-Muslims
2. Haqq-i-sharb	Tax on war booty
3. Zakat	Tax on property

How many pairs given above is/are correctly matched?

- a) Only one pair
- b) Only two pairs
- c) All three pairs
- d) None of the pairs

Ans) a

Exp) Option a is the correct answer.

Firoz Shah Tughlaq was the third ruler of the Tughlaq dynasty that ruled over Delhi from 1320 to 1412 AD. He was in power from 1351 to 1388 AD. **Kharaj, Zakat, Khums, Jajiya** were some of the taxes imposed during his reign.

Pair 1 is incorrect: Kharaj was the **land tax equal to one-tenth of the produce of the land.**

Pair 2 is incorrect: **Haqq-i-sharb** was a **water tax or irrigation tax.** It was taken from those cultivators who irrigated their land from the water supplied from the canals constructed by the state.

Khams was the tax imposed on the booty captured during wars.

Pair 3 is correct: Zakat was a **property tax imposed on the wealthy Muslims.** It is of the rate of **two and a half per cent tax on property of Muslims.**

Q.5) With reference to Shankaracharya, consider the following statements:

1. He is credited with establishing Advaita Vedanta school of philosophy.
2. He had authored the book 'Vivekachudamani'.
3. Badrinath Temple of Uttarakhand is believed to be established by Shankaracharya.
4. King Harshavardhan was one of his contemporaries.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 1 and 3 only
- c) 2 and 4 only
- d) 1, 2, 3 and 4

Ans) a

Exp) Option a is the correct answer.

Adi Shankara is said to have born in Kaladi village on the bank of the Periyar, the largest river in Kerala. His travels took him from the southernmost tip of the country to Kashmir in the north, Gujarat in the west and Odisha in the east. He was engaged in ebbing spiritual scholars everywhere, preaching his beliefs, establishing 'mathas' to take his teachings forward.

Statement 1 is correct: **Adi Shankaracharya propounded the philosophy of Advaita Vedanta.** It articulates a philosophical position of radical non dualism, a revisionary worldview which it derived from the ancient Upanishadic texts. According to the philosophy, the whole world is a manifestation of the one and only God (brahman) and all diversity we see is delusion (maya) as the result of ignorance (avidya).

Statement 2 is correct: **He authored the book Vivekachudamani.** It spells out the qualifications required in a student of Vedanta.

Statement 3 is correct: **Adi Shankara is believed to have established the Badrinath temple in the 8th century.** This vaishnavite temple is one of the Char Dhams (four important pilgrimages) in Uttarakhand. The temple is located in the Garhwal Himalayas and on the banks of the Alaknanda River.

Statement 4 is incorrect: Adi Shankaracharya was born around 788 A.D. whereas Harsha ruled from 606 to 647 A.D.

SFG 2023 | LEVEL 1 | Test #33 – Solutions | ForumIAS

Q.6) “He was one of the important rulers of the Kalachuri dynasty. He made the Kalachuris one of the important political powers in India. He assumed the proud title of Trikingadhipati (the Lord of Trikinga). Some historians believe that an important factor in his success was the fact that his kingdom escaped the devastating raids of Sultan Mahmud of Ghazni.”

The ruler described in the above paragraph is:

- a) King Bhoja
- b) Nannuka
- c) Nagabhata
- d) Gangeya-deva

Ans) d

Exp) Option d is the correct answer.

The state of Chedi was situated between the Narmada and Godavari rivers, and was ruled by the Kalachuri dynasty. Like the Chandellas, the Kalachuris of Chedi (also known as the Kalachuris of Tripuri) were formerly subordinate to the Pratiharas, but around the middle of the 10th century CE, they asserted their independence. They ruled the historical Chedi region (also known as Dahala-mandala) with their capital at Tripuri, near modern Jabalpur, MP.

Option a is incorrect. King Bhoja was an important ruler from the Paramara dynasty.

Option b is incorrect. Nannuka (831-845 CE) was the founder of the Chandela dynasty, which ruled in the Jejakabhukti region (Bundelkhand in Madhya Pradesh).

Option c is incorrect. Nagabhata I (730 – 760 CE) was the founder of the imperial Gurjara Pratihara dynasty.

Option d is correct. Gangeya-deva (1015–41 CE) was one of the most important rulers of the Kalachuri dynasty, who, due to his military genius, made the Chedis one of the greatest political powers in India at the time. As a token of his great victory, he assumed the proud title of Trikingadhipati (the Lord of Trikinga). He also assumed the title of Vikramaditya. Some historians believe that an important factor in his success was the fact that his kingdom escaped the devastating raids of Sultan Mahmud of Ghazni, which affected most of the other great powers to its north and north-west. **Hence, option d is correct.**

Q.7) With respect to the Solanki Rajputs of Gujarat, which of the following statements is/are correct regarding Bhima I?

1. He defeated Qutab-ud-din Aibak and stopped his expansion into Gujarat.
2. He built the Sun Temple in Modhera.
3. He built the famous Rani-Ki-Vav in Patan.

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 2 and 3 only

Ans) b

Exp) Option b is the correct answer.

The Solanki Rajputs are also known as the Chalukya family of Gujarat, which was different from the earlier Chalukyan dynasty of Badami. It ruled parts of Gujarat and Kathiawar between 10th century AD and 13th century AD.

Option 1 is incorrect: Qutab-ud-din Aibak (1150 – 1210 CE) was the contemporary of Bhima II (1178–1240 CE). He was not the contemporary of Bhima I (1022–1064 CE).

Option 2 is correct: Bhima I built the Sun temple of Modhera (Mehsana, Gujarat). Modhera Sun Temple was built in 1026–27 CE. This historical complex contains a huge kund known as the Ramakund, built in rectangular shape containing 108 shrines to various gods and demi-gods.

Option 3 is incorrect: Bhima-I's wife Udaymati built the Rani-ki vav (Queen's step well) in his memory, which is on the list of UNESCO's World Heritage Sites. This stepwell situated in the town of Patan in Gujarat, India. It is located on the banks of the Saraswati River.

Source: NCERT+ tamil nadu board+ poonam dalal dhaiya ch 19

Q.8) In the context of Medieval Indian history, consider the following statements:

1. The Solanki Dynasty of Gujarat were the feudatories of the Chalukyas of Badami.
2. The Eastern Chalukyas mainly ruled over the areas of Bengal and Northeastern India.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) d

Exp) Option d is the correct answer.

Statement 1 is incorrect: The Solanki Rajputs are also known as the Chalukya family of Gujarat, was different from the earlier Chalukyan dynasty of Badami. The Solanki Rajputs ruled parts of Gujarat and Kathiawar between 10th century AD and 13th century AD. Bhima I (c. 1022 – 1064 CE) was the Grandson of Mulraja (founder of Solanki Dynasty) and the next important ruler after Mularaja.

Statement 2 is incorrect: The Eastern Chalukyas did not rule in Odisha/ Bengal or parts of Northeastern India. There were three distinct Chalukya dynasties in Deccan Region.

- 1) Badami Chalukyas: The earliest Chalukyas with their capital at Badami (Vatapi) in Karnataka. They ruled from mid-6th They declined after the death of their greatest king, Pulakesin II in 642 AD.
- 2) **Eastern Chalukyas: Emerged after the death of Pulakesin II in Eastern Deccan with capital at Vengi. They ruled till the 11th century.**
- 3) Western Chalukyas: Descendants of the Badami Chalukyas, they emerged in the late 10th century and ruled from Kalyani (modern-day Basavakanlyan).

Source: NCERT+ tamil nadu board+ poonam dalal dhaiya ch 19

Q.9) Consider the following statements with respect to the battles fought by Muhammad Ghori in India:

1. He defeated Prithviraj Chauhan, the ruler of Delhi, in the first Battle of Tarain.
2. He defeated Jaichandra, the ruler of Kannauj, in the Battle of Chandawar.

Which of the above statements is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is correct answer.

Muhammad Ghori (c.1173–1206 CE) was the Real founder of the Islamic empire in India. The battles of Tarain and Chandwar laid the foundations of Turkish rule in Northern India.

Statement 1 is incorrect: Muhammad Ghori was defeated by Prithivaraja Chauhan, a Rajput ruler in the areas surrounding Delhi, in the first battle fought at Tarain (c.1191 CE). Ghori's army was defeated badly

SFG 2023 | LEVEL 1 | Test #33 – Solutions | 

and he narrowly escaped death. Prithviraj conquered Bhatinda. However, in 1192 CE, Muhammad Ghori defeated Prithviraj Chauhan in the Second Battle of Tarain, and subsequently executed him.

Statement 2 is correct: In the Battle of Chandwar (c.1194 CE), Ghori defeated Jaichandra- the ruler of Kannauj (Gahadavalas Dynasty). After this invasion, Qutab- ud-din Aibak was made the viceroy of Muhammad Ghori.

Source: NCERT+ tamil nadu board+ poonam dalal dhaiya ch 19

Q.10) With reference to Karakattam dance, consider the following statements:

1. It is mostly famous in regions of Karnataka and Andhra Pradesh.
2. It is primarily performed at the time of Onam to celebrate harvest.
3. In this dance, the performer balances a pot on their head.
4. The dance sometimes involves the incorporation of various acrobatics skills.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 2, 3 and 4 only
- c) 3 and 4 only
- d) 1, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Karakattam is a form of folk dance performed by both men and women.

Statement 1 is incorrect: Karakattam is mostly famous in Tamil Nadu, it's performed in different parts of Kerala as well.

Statement 2 is incorrect: It is performed at festivals, conferences, roadshows and primarily at Mariamman festivals. It is one of the many creative traditions that owe their existence to Mariamman, the rain goddess. The performances start from the month of December and go on till May. Onam is mainly celebrated between month of August and September.

Statement 3 is correct: Both men and women perform the dance on the muddy ground. **The performers balance a pot on their head.** Three tiers of flower arrangements of different colours sit on top of a container filled to the brim with either water, rice, or soil. All of this is balanced on the head of a Karakattam dancer while he or she dances.

Statement 4 is correct: The dance form has undergone radical change and adaptation in recent years. Earlier, it was performed in temples or Aatta karagam which was pure entertainment. **Now, lot of acrobatic skills and circus-like acts are incorporated into the dance.** For instance, while balancing the pot on their heads through intricate steps and body or arm movements also dance on a rolling block of wood or up and down a ladder.

Q.11) Who among the following Mughal Emperors Shifted emphasis from illustrated manuscripts to album and individual portrait?

- a) Humayun
- b) Akbar
- c) Jahangir
- d) Shah Jahan

Ans) c

Exp) Option c is the correct answer.

Akbar, believed to be suffering from dyslexia, laid great emphasis on illustration of manuscripts. **It was Jahangir who shifted emphasis from illustrated manuscripts to album and individual portrait.** Portrait reached great heights during Jahangir's reign. He particularly encouraged paintings depicting events of his own life, individual portraits, and studies of birds, flowers and animals.

Q.12) With reference to the Lodhi Dynasty of Delhi Sultanate, consider the following statements:

1. It was the first Afghan dynasty of Delhi sultanate.
2. Lodhi rulers removed the Jaziya tax on non-Muslims.
3. Sikandar Lodhi provided irrigation facilities to the peasantry.
4. The city of Agra was founded during Lodhi rule.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2, 3 and 4 only
- c) 1 and 4 only
- d) 1, 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

The Lodhis (1451-1526) were the last ruling family of the Sultanate period. Three rulers of Lodhi dynasty were Bahlul Lodhi(founder), Sikander Lodhi and Ibrahim Lodhi. In 1526, Babur marched against Delhi and defeated and killed Ibrahim Lodhi in the first Battle of Panipat.

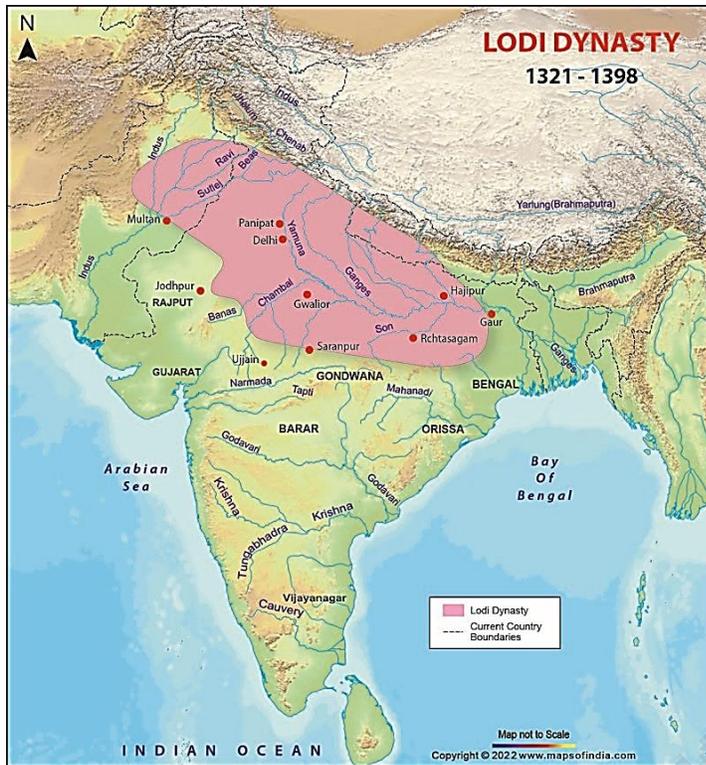

Statement 1 is correct: Lodhis were the first Afghan rulers of Delhi sultanate. They were earlier ruling over Sirhind at the time of sayyids.

Statement 2 is incorrect: Sikander Lodhi re-imposed Jaziya on non-Muslims. He showed little tolerance towards the non-Muslims. He destroyed many Hindu temples and imposed many restrictions on the Hindus.

Statement 3 is correct: Sikandar Lodi (1489-1517) was the greatest of the three Lodi sovereigns. He was a good administrator. Roads were laid and **many irrigational facilities were provided for the benefit of the peasantry.**

Statement 4 is correct: Sultan Sikandar Lodi of the Delhi Sultanate, founded Agra in the year 1504.

Q.13) Arrange the following dynasties of Delhi Sultanate according to the extent of time they rule, in ascending order.

1. Tughlaq dynasty
2. Mamluk dynasty
3. Khalji dynasty
4. Sayyid dynasty
5. Lodhi dynasty

Which of the options given below is correct?

- a) 1 - 2 - 3 - 4 - 5
- b) 3 - 5 - 4 - 2 - 1
- c) 3 - 4 - 5 - 2 - 1
- d) 5 - 4 - 3 - 2 - 1

Ans) c

Exp) Option c is the correct answer.

Invasions by Mahmud of Ghazni and Mohd. Ghori into India ultimately resulted in the establishment of the Delhi Sultanate (1206-1526). Five unrelated heterogeneous dynasties ruled over the Delhi Sultanate sequentially: the Mamluk dynasty (1206-1290), the Khalji dynasty (1290-1320), the Tughlaq dynasty (1320-1414), the Sayyid dynasty (1414-1451), and the Lodi dynasty (1451-1526).

Option 3: Then Jalaluddin Khalji (Firoz) laid the foundation of the **Khalji dynasty**. Khalji dynasty ruled from 1290- 1320 CE. Hence, ruling for the smallest period of **30 years** among other dynasties of Delhi Sultanate.

Option 4: After them, **sayyid dynasty** was established and they ruled from 1414-1451 CE., constituting small period of **37 years** of ruling.

SFG 2023 | LEVEL 1 | Test #33 – Solutions | ForumIAS

Option 5: Lodhis were the last rulers of Delhi sultanate which came to power under Bahlol lodhi in 1451 and by 1526 the dynasty came to end with first battle of Panipat. With them, Delhi sultanate also came to end. They ruled for **75 years**.

Option 2: First was **Mameluk/Ilbari/ slave dynasty**, established by Qutub-ud-din Aibak. They ruled from 1206 – 1290 CE. i.e. for **84 years**.

Option 1: After Khaljis, **Tughlaq dynasty** rose under Ghiyasuddin Tughlaq. Tughlaqs ruled for the longest period of **94 years** from 1320 – 1413 CE.

Source: poonam dalal dhaiya ch 11

Q.14) With reference to music and literature of Delhi Sultanate, consider the following statements:

1. Persian language was first introduced in India during the period of Delhi Sultanate.
2. There was a significant decline in composition of Sanskrit literature during the rule of Delhi sultanate.
3. Musical instruments like sarangi and rabab were introduced during this period.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

The Delhi Sultanate rule was significant in India as it resulted in far-reaching changes in the Indian society, administration and cultural life.

Statement 1 is incorrect: Persian language was introduced in India during **the period of Ghaznavi rule in the Punjab in 11th century**. Persian literature written in India before the establishment of the Delhi sultanate adopted literary forms and imagery which were prevalent in Iran. It was after the establishment of the Delhi Sultanate that Indian influence began to exert itself on Persian works written in India. Amir Khusrau created a new style of Persian which came to be known as **sabaq-i Hindi** or the Indian style.

Statement 2 is incorrect: **During Delhi sultanate period, there was no quantitative decline in the production of Sanskrit literary work.** Sanskrit lost the patronage of the new Persian speaking ruling class but the Sultanate did not interfere with the independent production of Sanskrit literary works. The introduction of paper during the Sultanate period gave impetus to the literary activity of reproduction and dissemination of already existing Sanskrit texts such as the Ramayana and the Mahabharata.

Statement 3 is correct: New musical instruments such as **the sarangi and the rabab were introduced during Delhi Sultanate period.** Amir Khusrau also introduced many new ragas such as Ghora and Sanam. He evolved a new style of light music known as qawwalis by blending the Hindu and Iranian systems.

Q.15) With reference to the history of India, the term ‘Angadiaz’ best reflects which of the following?

- a) A place of theological discussions.
- b) A person who transfers money from one state to another.
- c) A trading community.
- d) A Guild of money lenders.

Ans) b

Exp) Option b is the correct answer.

SFG 2023 | LEVEL 1 | Test #33 – Solutions | ForumIAS

The Angadia system is a system in the country where traders send cash generally from one state to another through a person called Angadia.

Option a is incorrect: This is Ibadat Khana. In 1575, Akbar built a hall called Ibadat Khana or the Hall of Prayer at his new capital, Fatehpur Sikri. To this he called selected theologians, mystics and those of his courtiers and nobles who were known for their scholarship and intellectual attainments. Akbar discussed religious and spiritual topics with them.

Option b is correct: Angadia stands for courier. **Angadia is responsible for transferring money in cash from one state to another** for which they charge a **nominal fee**. It is largely used in the jewellery business and prevalent in the Mumbai – Surat area as they are the most popular route as they are two ends of the diamond trade. Generally, it is the Gujarati, Marwari and Malbari community that are involved in the business.

Option c is incorrect: Trading communities are communities largely engaged in trading activities for their livelihood. **Chettiars, Marwaris and Banjaras** were the principal trading groups of India.

Option d is incorrect: A guild is an association of artisans or merchants or any other people with similar interests or pursuits. A moneylender is a person or group who typically offers small personal loans at high rates of interest.

Q.16) With reference to the Indian society during Mughal empire, consider the following statements:

1. The practice of forced labour was not at all witnessed, because of influence of Bhakti movement.
2. Women from both Hindu and Muslim community enjoyed limited rights of inheritance.
3. Only the people of Central Asian and Iranian origin constituted Mughal noble class.
4. Mughal administration refrained from interfering in indigenous practices such as Sati.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 4 only
- c) 2 only
- d) 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

The Mughal Empire was an empire that controlled much of India between the 16th and 19th centuries. Its impact on Indian society is manifold.

Statement 1 is incorrect: Despite the **popular Bhakti movement** raising the banner of revolt against discrimination, the deprived and disadvantaged classes, who were **landless peasants, were subject to forced labour**. The caste system remained a dominant institution in the society. Castes at lower levels were subject to much repression.

Statement 2 is correct: **Under Mughal rule, both the Hindu women and Muslim women had only limited right of inheritance.** Though they had the right to inherit property, it was **not equal to the share of the male members** of the family.

Statement 3 is incorrect: Under Mughal rule, **Afghans, Indian Muslims (shaikhzadas), Rajputs and Marathas also obtained the status of nobility.** It is estimated that during the reign of Akbar over 15% of the nobility consisted of Rajputs. However, **most of the nobles came from Central Asia and Iran.**

Statement 4 is incorrect: Mughal administration **discouraged the practice of sati** that was prevalent among communities of the higher caste. For instance, Emperor Humayun took a bold step against sati and tried to eradicate it. Akbar also endeavoured to prevent forceful “Sati” in his kingdom.

Q.17) Which of the following statements are correct regarding Dara Shikoh?

1. He translated the Sanskrit epic Mahabharata into Persian.
2. He authored Safinat-ul-Awliya, a book that documents the life of prophet and his family.
3. He believed in the concept of 'One Reality and One God'.

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Dara Shikoh was the son of Shah Jahan. Dara Shikoh was killed on the orders of his brother Aurangzeb in 1659 after losing the war of succession.

Statement 1 is incorrect: Dara Shikoh translated the Upanishads into Persian in 1657 and this work entitled SIRR-I-AKBAR (the Great Secret).

The Razmnama (Book of War) is a Persian translation of the epic Mahabharata, commissioned by the Mughal Emperor Akbar.

Statement 2 is correct: He authored Safinat-ul-Awliya, a concise document detailing the lives of the Prophet and his family, the Caliphs and of saints belonging to the five major Sufi orders, then popular in India.

Statement 3 is correct: His works Majma-ul-Bahrain and SIRR-i-AKBAR are devoted to the cause of establishing connections between Hinduism and Islam.

He stated that the foundation of the two religions is the same i.e the belief of **One Reality and One God.**

Q.18) Consider the following pairs:

Terms used in Description

Delhi

Sultanate

- | | |
|-------------|---|
| 1. Mameluks | It refers to an officer of slave origin. |
| 2. Masahat | It refers to various types of spies employed by the King. |
| 3. Muhtasib | It refers to the Officers who monitors the conduct of people. |
| 4. Fawazil | It refers to the treasurer of Delhi Sultanate. |

Which of the above given pairs are correctly matched?

- a) One pair only
- b) Two pairs only
- c) Three pairs only
- d) All four pairs

Ans) b

Exp) Option b is the correct answer.

Delhi Sultanate led to the evolution of a powerful and efficient administrative system. At its zenith, the Delhi Sultanate controlled almost the entire country as far south as Madurai.

Pair 1 is correct: Mamluks are slave officers. Originally, a Mamluk was a slave soldier of slave origin who gradually became a powerful military class in various Muslim societies.

The Mamluk dynasty was founded in India by Qutub-ud-Din Aibak who was slave general of Muhammad Ghori. It was the first dynasty of Delhi Sultanate.

Pair 2 is incorrect: The term Masahat was used for the measurement of land during sultanate period.

Pair 3 is correct: Muhtasib were the officers who kept strict **watch over conduct of people**. His role was to ensure the general observance of rules of morality among the people.

Pair 4 is incorrect: Fawazil was excess amount paid to the exchequer by the Iqtidars. Whereas the treasurer of Delhi sultanate was referred as **Khazin**.

Source: Poonam Dalal Dahiya, chapter 11

Q.19) With reference to social structure under Delhi Sultanate, consider the following statements:

1. Large number of Hindu nobles were given high positions in the court of Delhi Sultanate.
2. Turkish women seems to have enjoyed more freedom as compared to women of indigenous communities of India.
3. Slaves during sultanate period were allowed to own personal property.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

The role of Delhi Sultanate was significant in India as it resulted in far-reaching changes in the Indian society, administration and cultural life.

Statement 1 is incorrect: The Muslim nobles occupied high offices and **very rarely the Hindu nobles were given high position in the government**. The Hindus were considered zimmi or protected people, for which they were forced to pay a tax called Jaziya.

Statement 2 is correct: Turkish women under the Sultanate seem to have enjoyed a relative measure of freedom than the women in many indigenous communities. It was because most of the local communities were ridden with several social injunctions for women.

Statement 3 is correct: Slaves were allowed to marry and can own some personal property under Delhi sultanate. Condition of slaves was better than the domestic servant. The master of slave was obliged to provide him food and shelter, while a free person may starve to death.

Q.20) In the recently concluded G20 summit in Indonesia, the Prime Minister of India's gift to various leaders represented India's cultural traditions. In this context, consider the following pairs:

India's traditions	Description
1. Patan Patola	Double ikat woven sari from Gujarat.
2. Kangra paintings	Love scenes of Krishna is an important theme of this painting.
3. Mata Ni Pachedi	Wooden carving technique.
4. Pithora paintings	Mural paintings practised only by women

How many pairs above is/are correctly matched?

- only one pair
- only two pairs
- only three pairs
- All four pairs

Ans) b

Exp) Option b is the correct answer.

At the G20 summit, Prime Minister Narendra Modi gifted paintings, silver bowls, and artwork to world leaders. The summit was held in Nusa Dua, Bali, Indonesia in November 2022.

Pair 1 is correct: Patola is a double ikat woven sari, usually made from silk, made in Patan, Gujarat, India. They are **very expensive**, once worn only by those belonging to royal and aristocratic families. Patola-weaving is a **closely guarded family tradition** and it is taught **only to the sons**. These are highly valued in Indonesia, and became part of the local weaving tradition there.

Pair 2 is correct: After the decline of the Mughal empire, many artists trained in the Mughal style migrated to the **Kangra region in Himachal Pradesh** as they got patronage by Raja Govardhan Singh in 1774. Kangra school of painting belongs to the category of Miniature painting and **love scenes of Krishna was a very prominent theme** of this school.

Pair 3 is incorrect: Mata ni pachedi is not a wood carving technique rather it is a free hand painting in the textiles. The original creators of **Mata ni Pachedi** (literal meaning - behind the Mother Goddess) are the **Vaghari nomads** who lived along the edges of the Sabarmati River in **Gujarat**. These textiles are sacred, **wall art pieces that are used as a backdrop for shrines**. The designs are made using hand block prints and freehand painting.

Pair 4 is incorrect: Pithora paintings are wall murals created as offerings to Pithora, the God of food grains. They are **only painted by men** commonly in the Chhotaudepur area of **Gujarat**. These simple paintings are traditionally done to **seek blessings** before a special occasion such as a wedding, the birth of a child or a festival.

Q.21) Which one of the following foreign travellers elaborately discussed about diamonds and diamond mines of India?

- a) Francois Bernier
- b) Jean-Baptiste Tavernier
- c) Jean de Thevenot
- d) Abbe Barthelemy Carre

Ans) b

Exp) Option b is the correct answer.

“French jeweller Jean-Baptiste Tavernier travelled to India at least six times. He was particularly fascinated with the trading conditions in India. Tavernier is best known for his 1666 discovery or purchase of the 116-carat Tavernier Blue diamond. Being a diamond merchant, **he was particularly interested in diamonds and visited various diamond mines in India, especially those of the Deccan.**

Q.22) With reference to the problems faced by Babur after his victory in first Battle of Panipat, consider the following statements:

1. Some commanders and nobles of Babur wanted to return to Central Asia.
2. Rajput rulers were forming confederacy against the rule of Mughal.
3. Afghans were regrouping to claim their lost territories.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

The First Battle of Panipat (c.1526 CE) was fought between Ibrahim Lodhi and Babur. Ibrahim Lodhi was defeated and Babur was not only able to take control of Delhi and Agra but also got the rich treasure of Lodhis. Victory at Panipat provided Babur a firm ground to consolidate his conquests but at the same time he was faced with new problems.

Statement 1 is correct: The nobles and commanders of Babur were eager to return to Central Asia. They were not ready for a long campaign in India. As they did not like the climate of India and felt alienated culturally. Babur was able to convince his companions and nobles to stay back and help in consolidating the conquered territories. The nobles who were not inclined towards staying back were given leave to go back to Kabul.

Statement 2 is correct: The Rajput rulers were rallying around under the leadership of Rana Sanga and wanted to expel the Mughal forces. Rana expected Babur to return to Kabul and leave him free to establish his hegemony at least over Rajputana. Babur's decision to stay back must have given a big jolt to Rana's ambitions.

Statement 3 is correct: Afghan had surrendered Delhi, but they were still powerful force in eastern parts of UP, Bihar, and Bengal. They were **re-grouping to reclaim their lost territories.**

Knowledge Base: Battles fought by Babur to secure Mughal rule.

- 1) **Battle of Khanwa** (c.1527 CE, near Fatehpur Sikri): It was fought between Babur and Rana Sanga of Mewar and his allies. Rana Sanga was defeated and Babur's position in the Delhi–Agra region was secured.

SFG 2023 | LEVEL 1 | Test #33 – Solutions | ForumIAS

- 2) **Battle of Chanderi** (c.1528 CE): This battle was fought between Babur and Medini Rai, the Rajput ruler of Malwa.
- 3) **Battle of Ghagra** (near Bihar, c.1529 CE): This battle was fought between Babur and Mahmud Lodhi (brother of Ibrahim Lodhi, head of the Afghan chiefs, with the support of Nusrat Shah of Bengal). Although Babur compelled the Bengal and the Afghan armies to retreat, he could not win a decisive victory.

Source: Poonam Dalal Dahiya, chapter 13, the Mughals

Q.23) With reference to the administration under Delhi Sultanate, consider the following statements:

1. In Delhi Sultanate, a Pargana was headed by the Muqti.
2. The Governors of provinces were called Shiqdars.
3. There was a uniform taxation system for agricultural produce throughout the Sultanate.

Which of the statements given above are **incorrect**?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

As the State under Delhi sultanate became more settled and efforts were made for greater centralization, provincial administration also underwent a change.

Statement 1 is incorrect: Pargana comprised of a **number of villages** and was **headed** by the **Amil**. The provinces under the Delhi Sultanate were called iqtas. They were initially under the control of the nobles. But the governors of the provinces were called the muqtis or walis. They were to maintain law and order and collect the land revenue.

Statement 2 is incorrect: **The governors of the provinces were called the muqtis or walis.** The provinces were divided into shiqs, which was under the control of the shiqdar.

Statement 3 is incorrect: The agricultural produce of the entire sultanate was not uniform. As a result, the **taxation system** and demand were **different for different parts** of the sultanate depending on the yield of different areas.

<https://egyankosh.ac.in/bitstream/123456789/22078/1/Unit-19.pdf>

Q.24) With reference to the Sher Shah Suri, consider the following statements:

1. Sher Shah issued a coin of silver which was termed the Rupiya.
2. Sher Shah revived Alauddin's Chehra and Dagh system.
3. Sher Shah's empire was divided into 'Sarkars'.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

The rule by Sher Shah Suri lasted for only five years (c.1540–1545 CE). He organised a brilliant administrative system which served as inspiration to not only the Mughal administration but to the British too.

SFG 2023 | LEVEL 1 | Test #33 – Solutions | ForumIAS

Statement 1 is correct: Sher Shah issued a coin of silver which was termed the Rupiya. This weighed 178 grains and was the precursor of the modern rupee. It remained largely unchanged till the early 20th Century. Together with the silver Rupiya were issued gold coins called the Mohur weighing 169 grains and copper coins called Dam.

Statement 2 is correct: The military administration of Sher Shah was efficiently reorganized and he revived **Alauddin's Chehra and Dagh system**.

Statement 3 is correct: Sher Shah's empire was divided into forty-seven sarkars. Chief Shiqdar (law and order) and Chief Munsif (judge) were the two officers in charge of the administration in each sarkar. Each sarkar was divided into several parganas. Shiqdar (military officer), Amin (land revenue), Fotedar (treasurer) Karkuns (accountants) were in charge of the administration of each pargana. There were also many administrative units called Iqtas.

Q.25) With reference to Naval power of the Maratha empire, consider the following statements:

1. Vijaydurg, Sindhudurg and Kolaba were the naval forts built by Maratha emperor Shivaji.
2. Shivaji's naval fleet was mainly manned by Koli, a seafaring tribe of Malabar coast.
3. The Maratha navy could never succeed against the naval force of European powers.
4. Kanhoji Angria was a famous Maratha naval commander during Shivaji's time.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 4 only
- c) 2 and 4 only
- d) 1,2 and 3 only

Ans) a

Exp) Option a is the correct answer.

Prime Minister Narendra Modi unveiled the Indian Navy's new flag at the commissioning of INS Vikrant in Kochi. The new Naval Ensign bears the seal of Chhatrapati Shivaji Maharaj and it replaced the one that carried the Saint George's Cross with the Tricolour in the canton.

Statement 1 is correct: Shivaji ordered the construction of the **naval fort, the Vijaydurg** in 1653. Between 1653 and 1680, Shivaji built more **naval forts such as Sindhudurg and Kolaba**. Many of the forts remained unconquered and were used by the Marathas for strategic purposes, to keep a watch on enemies approaching via the seas.

Statement 2 is correct: After the conquest of Konkan, Shivaji built a strong navy and his fleet was equipped with ghurabs (gunboats) and gallivats (row boats). Shivaji's naval fleet was **mainly manned by the Koli sea-faring tribe of Malabar coast**.

Statement 3 is incorrect: The **combined forces of the English and the Portuguese** launched an offensive against Marathas in December 1721. But the Maratha naval commander **Kanhoji beat them through both war and diplomacy**.

Statement 4 is incorrect: Shivaji (1630-1680) is not a contemporary of Kanhoji Angria (1669-1729). He was a famous naval commander under the Maratha ruler, Rajaram. Rajaram appointed Kanhoji Angria as the commander of the navy in 1698 and gave him the title of Sarkhel. Kanhoji Angria compelled the foreign traders to buy a pass or a licence issued by him to enter the Indian waters.

Q.26) With reference to administrative system under Mughal emperor Akbar, consider the following statements:

1. Wazir was the principal advisor to the ruler.
2. Zamindar was the hereditary owner of all land which comes under his zamindari.
3. Advance loans were provided to needy peasants under his rule.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 only
- c) 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

The Mughals retained many features of the administrative system of the Sultanate and Sher Shah Suri's administration. The administration was highly centralized.

Statement 1 is incorrect: During Akbar's rule, the head of the revenue department continued to be wazir, **but he was no longer the principal adviser to the ruler.** But he remained an expert in revenue affairs having title of diwan or diwan-i-ala. The diwan used to inspect all transaction and payments in all departments and supervised the provincial diwans.

Statement 2 is incorrect: **Zamindar was not the owner of all the lands comprising his zamindari.** The peasants who cultivated the land could not be dispossessed if they were paying the land revenue. Thus, the zamindars and the peasants had their own hereditary rights in land.

Statement 3 is correct: **Needy peasants were awarded advance loans called Taccavi.** Akbar was deeply interested in the improvement and extension of cultivation. As per Akbar, Amil (revenue officers) were advised to advance taccavi loans to the peasants for seeds, implements, animals, etc., in times of need and to recover them in easy instalments.

Source: Poonam Dalal Dahiya, chapter 13

Q.27) With reference to the Mansabdari system of the Mughal empire in India, consider the following statements:

1. It was introduced by the Mughal emperor Akbar.
2. A Mansab was given only to the nobles from Muslim community.
3. Mansabdars had to maintain a stipulated quota of cavalry.

Which of the statements given above is/are correct?

- a) 1, 2 and 3
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1 only

Ans) c

Exp) Option c is the correct answer.

The Mansabdari system was an administrative system of the Mughal Empire that **combined civil and military functions of the empire.** The system determined the rank and status of a government official and military generals.

SFG 2023 | LEVEL 1 | Test #33 – Solutions | ForumIAS

Statement 1 is correct: The Mansabdari System is a systematic and centralised system of administration which contributed to the success of the empire and it was **introduced by Akbar**. The **nobles, civil and military officials combined into one single service** with each officer receiving the **title of Mansabdar**.

Statement 2 is incorrect: Mansab was given to nobles from all communities. **It was given to Mughals, Pathans, Rajputs and Shaikhzadas (Indian Muslims)**. Akbar wanted to fight the problems of parochialism and tribalism in his army by encouraging the intermixing of the different communities in his administration and army.

Statement 3 is correct: **Mansabdars** was expected to **maintain his army and administration of jagir, out of his own personal revenue**. The **salary of a Mansabdar was fixed in cash but was paid by assigning him a jagir**. In addition to meeting his personal expenses, the mansabdar had to maintain out of his salary a stipulated quota of horses, elephants, camels, mules and carts.

Source: Class XI old NCERT: Medieval India (pg no 148)

Q.28) With reference to the Jagirdari system of Mughal Empire, consider the following pairs:

Types of Jagir	Description/Feature
1. Tankhwa Jagirs	Hereditary and non-transferable
2. Watan Jagirs	Allotted to local zamindars
3. Mashrut Jagirs	Jagirs given to a person on certain conditions
4. Al-tamgha Jagirs	Given under the reign of Jahangir

How many pairs above are correctly matched?

- a) only one pair
- b) only two pairs
- c) only three pairs
- d) All four pairs

Ans) c

Exp) Option c is the correct answer.

Jagir is a land allotted by the Mughal empire to the Mansabdars from which he could collect money in place of his salary. Jagir was assigned to mansabdars according to their rank. There were generally four types of jagirs.

Option 1 is incorrect: Tankhwa Jagirs were given in lieu of pay. Tankhwa jagirs are transferable every three or four years.

Option 2 is correct: Jagirs which were assigned to zamindars (chieftains) in their homelands were called watan jagirs. Watan jagirs remained hereditary and non-transferable. Sometimes watan jagir was converted into khalisa for a certain period as Aurangzeb did in case of Jodhpur in 1679.

Option 3 is correct: Jagirs given to a person on certain conditions were called mashrut jagirs. Ijaradari was a practice in which jagirs were leased out to troops for their maintenance by the small Jagirdars. In the seventeenth century the practice of Ijaradari was extensive.

Jagirs which involved no obligation of service and were independent of rank were called inam jagirs.

Option 4 is correct: Al-tamgha jagir was given to Muslim nobles in their family towns or place of birth. It was given by Jahangir and was different from watan jagir as Al-tamgha jagir were given to nobles in their hometown and watan jagir were given to local zamindars in their hometown.

SFG 2023 | LEVEL 1 | Test #33 – Solutions | 

Q.29) With reference to the Paramara Dynasty of Malwa, consider the following statements:

1. The early Paramara rulers were feudatories of the Rashtrakutas.
2. The Paramara rulers are infamous for the persecution of Jains.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

The Paramaras of Malwa were originally based in the Mount Abu area of Rajasthan. There are several branches of this dynasty, though the main branch ruled at Malwa, with its capital at Dhara (modern Dhar, MP).

Statement 1 is correct: The c. 949 CE Harsola copper-plates issued by the Paramara king, Siyaka II, establish that **the early Paramara rulers were feudatories of the Rashtrakutas** of Manyakheta.

Statement 2 is incorrect: The Paramaras were well-known for their patronage to poets and scholars and Bhoja (c.1010–1055 CE), a Paramara ruler, was himself a renowned scholar. Most of the Paramara kings were Shaivites and built several Shiva temples, although **they also patronized Jain scholars**.

Source: NCERT+ tamil nadu board+ poonam dalal dhaiya ch 19

Q.30) With reference to Saint Tukaram, consider the following statements:

1. He is a contemporary of the saint Dnyaneshwar.
2. He accepted both men and women as his disciple.
3. He is credited with starting the Wari pilgrimage
4. He authored devotional poetry called Abhanga.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 4 only
- c) 2, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

Tukaram was either born in the year 1598 or 1608 **in a village named Dehu, near Pune in Maharashtra.**

Statement 1 is incorrect: Saint Dnyaneshwar (1275–1296), was a 13th-century Indian Marathi saint **whereas Tukaram is a 16th century Marathi saint.** Saint Tukaram in his work **Abhanga**, refers to the earlier Bhakti **Saints Namdev, Dnyaneshwar, Kabir and Eknath** as who had a **primary influence** on his spiritual development.

Statement 2 is correct: **Tukaram accepted disciples and devotees without discriminating gender.** One of his **celebrated devotees** was **Bahina Bai, a Brahmin woman**, who faced anger and abuse of her husband when she chose Bhakti Marga and Tukaram as her guru. He was also against the caste-based society and religious rituals.

Statement 3 is correct: **Sant Tukaram is credited with starting the Wari pilgrimage. Wari pilgrimage is a yatra to Pandharpur, Maharashtra, to honour Vithoba (avatar of Vishnu).** It involves carrying the paduka (**footwear**) of a saint in a palki (palanquin) most notably of **Dnyaneshwar and Tukaram**, from their respective shrines to **Pandharpur**. Many pilgrims join this procession on foot.

SFG 2023 | LEVEL 1 | Test #33 – Solutions | 

Statement 4 is correct: Tukaram authored a devotional poetry called Abhanga. Abhanga is a form of devotional poetry sung in praise of the Hindu god Vitthal, also known as **Vithoba**. Abhangas are **sung during pilgrimage to the temples of Pandharpur**, by the devotees.

Knowledge Base: **Sant Tukaram and his work are central to the Warkari sect spread across Maharashtra.** Warkari is a religious movement within the bhakti spiritual tradition of Hinduism and practised in the state of Maharashtra. Warkari is a Marathi term which means **one who performs the Wari**.

Q.31) Consider the following statements:

1. In the revenue administration of Delhi Sultanate, the in-charge of revenue collection was known as 'Amil'.
2. The Iqta system of Sultans of Delhi was an ancient indigenous institution.
3. The office of 'Mir Bakshi' came into existence during the reign of Khalji Sultans of Delhi.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct. In the revenue administration of Delhi Sultanate, the in-charge of revenue collection was known as 'Amil'.

Statement 2 is incorrect. Iqta system was not an ancient indigenous Indian institution. In India, it was started during the rule of Delhi sultanates itself. Under Iqta System, the land of the empire was divided into several large and small tracts called Iqta and assigned these Iqtas to his soldiers, officers and nobles.

Statement 3 is incorrect. Mir Bakshi was Head of the military department. The office of 'Mir Bakshi' came into existence during the reign of Mughals.

Q.32) Who among the following were considered as one of the Akbar's 'Navaratnas'?

1. Abul Fazl
2. Tansen
3. Faizi
4. Basawan
5. Raja Man Singh

Select the correct answer using the code given below:

- a) 1, 2 and 5 only
- b) 1, 2, 3 and 5 only
- c) 3 and 4 only
- d) 2, 3 and 5 only

Ans) b

Exp) Option b is the correct answer.

SFG 2023 | LEVEL 1 | Test #33 – Solutions | 

The navaratnas or nine gems of the Akbar court were **Abu'l-Fazl, Abdul Rahim Khan-I-Khana, Birbal, Mulla Do-Piyaza, Faizi, Raja Man Singh, Raja Todar Mal, Fakir Aziao-Din and Tansen.**

Option 1 is correct: Abul Fazal patronised by Akbar compiled the history of Akbar in Akbar Nama and described Mughal administration in his work Ain-i-Akbari.

Option 2 is correct: **Tansen was one among the Navarathnas of Akbar's court.** Tansen was credited with composing many ragas, **was patronised by Akbar** along with 35 other musicians. Tansen was **awarded the title of Mian (meaning learned man) by Mughal emperor Akbar** in recognition of his talent.

Option 3 is correct: **Faizi was one among the navaratnas of Akbars court.** The Mahabharata was translated under the supervision of **Abul Faizi**, brother of Abul Fazal and a **court poet of Akbar.** One of his most well-known books is **Tabashir al-Subh**, a collection of poems.

Option 4 is incorrect: **Though Basawan and Daswant were famous painters of Akbar's court, they are not considered as navaratnas.**

Option 5 is correct: Man Singh I also known as Mirza **Raja Man Singh** was the **Rajput Raja of Amer.** He was the most **powerful and trusted general of the Mughal emperor Akbar**, who was **one among the Navaratnas, or the nine gems** of the royal court of Akbar.

Class XI: TN SCERT Chapter - The Mughal Empire

Q.33) With reference to Mughal empire under Jahangir, consider the following statements:

1. Mewar region in Rajputana remained out of his empire.
2. Jahangir successfully captured Qandahar from the Persians.
3. Sir Thomas Roe successfully secured Jahangir's consent to establish an English factory at Surat.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 and 3 only
- c) 3 only
- d) 1 and 2 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: **Mewar region in Rajputana remained out of Mughal empire during Akbar's time.** It was brought **under the Mughal empire by Jahangir** following a military campaign led by his son Prince Khurram (later to become Emperor Shah Jahan) against Rana Amar Singh. They concluded a **treaty whereby Rana Amar Singh could rule his kingdom after accepting the suzerainty of Jahangir.**

Statement 2 is incorrect: **Qandahar** became a region of **conflict between the Persians and Mughals.** After **Akbar's death**, the Persians under Shah Abbas I in 1620 requested Jahangir to hand over Qandahar to him but the latter **declined** to do so. **In 1622, after an attack, Qandahar was captured by the Persians.** The struggle to capture Qandahar continued till Aurangzeb's reign but Mughals got little success

Statement 3 is correct: **Sir Tomas Roe visited India during Jahangir's reign.** He visited Jahangir court and he successfully **secured a consent** of the emperor for establishing a **British factory at Surat.**

Source: Class XI: TN SCERT - The Mughals

Q.34) The term 'Zawabit' was popular during the reign of Mughal emperor Aurangzeb. Which of the following statements rightly reflects the meaning of Zawabit?

- a) One of the categories of land which was cultivated every year.
- b) A tax levied on the lands over and above the original rent.
- c) A Persian religious festival celebrated during the reign of Aurangzeb.
- d) The state laws formulated by the monarch.

Ans) d

Exp) Option d is the correct answer.

Aurangzeb (1658–1707) ascended the throne in 1658 and he ruled India for over 50 years. The Mughal empire started disintegrating after the end of his reign.

Option a is incorrect: Polaj referred to one of the categories of land which was cultivated every year.

Option b is incorrect: Abwab is a tax levied on the lands over and above the original rent. Aurangzeb had discontinued the practice of levying abwab.

Option c is incorrect: Navroz festival is the Persian festival celebrated. Aurangzeb abolished it, because those nine days of festival was utilised by the Mughal nobility to prey upon the females of the lower classes with impunity.

Option d is correct: Barni categorized laws into two kinds, the Shariat and the Zawabit. While the Shariat meant the teachings and practices of the Prophet and of the Caliphs, the Zawabit were the **state laws formulated by the monarch** in consultation with the nobility in the changed circumstances to cater to the new requirements which the Shariat was unable to fulfil. But he cautioned simultaneously that the lawmakers must take into account the practices of the past and contemporary socio-political conditions while formulating the laws. The Zawabit, he said, must be in the spirit of the Shariat.

Old mediaeval India NCERT Class XI: (pg. no 213,214)

Q.35) The Archaeological Survey of India recently excavated a site in Mayiladumparai in Tamil Nadu. What is the significance of this site?

- It is the oldest iron age site currently found in India.
- It is the oldest agricultural site currently found in India.
- It is the first iron age site recently found in South India.
- It is the oldest Buddhist site currently found in Tamil Nadu.

Ans) a

Exp) Option a is the correct answer.

Option a is correct: Radiocarbon dating of excavations from **Mayiladumparai in Krishnagiri district of Tamil Nadu had confirmed that iron was in use in Tamil Nadu as early as 2172 BCE or 4,200 years ago, making it the oldest iron age site currently found in India.** The excavations have led to three major findings that the Iron Age in Tamil Nadu has been identified as early as 2172 BCE; the late Neolithic phase has been identified before 2200 BCE; and that black-red pottery was introduced in the late Neolithic phase itself and not in the Iron Age.

Option b is incorrect: Mehrgarh is known to be the oldest agricultural site in the Indian subcontinent. This is a site which is located near the Bolan Pass, Baluchistan. At this site about seven cultural layers were found, of which the earliest three were Neolithic. The first Neolithic phase in Mehrgarh showed the evidence of tools such as polished stone tools, microliths and bone tools. There was no pottery at this stage.

Option c is incorrect: Mayiladumparai is **not the first iron site found in south India.** The other Iron Age sites in South India are Hallur, Karnataka and Adichanallur.

Option d is incorrect: It is not the oldest Buddhist site currently found in Tamil Nadu.

SFG 2023 | LEVEL 1 | Test #33 – Solutions | 

Q.36) With reference to the Guilds during the Mughal Empire in India, consider the following statements:

1. The maintenance of law and order in towns was vested in the Guilds by the King.
2. The rules governing the day-to-day administration of Guilds was generally framed by the guilds themselves.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

Guild is a society or organisation of people with common interests or an association of merchants. It played a major role in facilitating economic activities during the Mughal empire.

Statement 1 is incorrect: The maintenance of law and order and providing peace and security were **the responsibility of the kotwal and his staff** in the towns. It is important for a better business environment. The guild role was mainly restricted to engaging in trade and other economic activities.

Statement 2 is correct: The rules and laws governing the **day-to-day business were generally framed by the guilds (business community) itself**. Merchants had their own guilds and organisations which framed rules. For example, Mahajans in Gujarat area resolved a dispute among the merchants and generally their decisions were respected by all.

Source: <https://egyankosh.ac.in/bitstream/123456789/20252/1/Unit-24.pdf>

Q.37) With reference to the Deccan policy of Aurangzeb, consider the following statements:

1. It was motivated by the policy of containing the growing influence of Marathas.
2. Aurangzeb formed an alliance with Bijapur Sultanate to defeat the Marathas.
3. Aurangzeb's campaign in the Deccan strengthened his empire's financial position.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) a

Exp) Option a is the correct answer.

Aurangzeb conducted several military campaigns to extend the frontiers of the Mughal empire. The deccan policy of Aurangzeb is his **military campaign into the deccan region of India**.

Statement 1 is correct: The Deccan policy of Aurangzeb was motivated by the **policy of containing the growing influence of the Marathas**. The Marathas under Shivaji were a threat to Aurangzeb.

Statement 2 is incorrect: **The Bijapur sultanate were attacked by Aurangzeb during his Deccan campaign**. Bijapur sultanate formed **alliance with Marathas to oppose Mughals** under Aurangzeb. The **rebellious attitude of Bijapur sultanate** in Deccan, is one of the reasons for Aurangzeb's deccan campaign. The Mughal force under Aurangzeb defeated the combined force of Bijapur, Golconda and Maratha.

Statement 3 is incorrect: Aurangzeb had **depleted the military and financial resources** of his empire by fighting a long war in the Deccan region. This along with other financial problems such as the Jagirdari crisis **strained the empire's exchequer**.

SFG 2023 | LEVEL 1 | Test #33 – Solutions | ForumIAS

Q.38) With reference to Raziya Sultan, the female emperor of Delhi Sultanate, consider the following statements:

1. She appointed non-Turkish nobles in important posts.
2. She tried to win over the support of religious leaders by covering her face with Purdah while dispensing her administrative works.
3. Ibn Battuta visited India during her reign.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 3 only
- c) 3 only
- d) 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

Raziya was the only daughter among the four children of Iltutmish, the third ruler of Delhi Sultanate. Iltutmish nominated Razia as his successor after the death of his most capable son, Prince Nasiruddin Mahmud. After some struggle, **Raziya ascended the throne in 1236 CE.**

Statement 1 is correct: Raziya appointed non-Turkish nobles to important posts to curb the power of Turkish nobility. Raziya elevated **Jamaluddin Yakut, an Abyssinian slave, to the office of Amir-i Akhur (commander of the cavalry)**, this created animosity amongst the Turkish nobles who began to conspire to overthrow her.

Statement 2 is incorrect: Raziya also gave up the purdah (veil) which she realised was an impediment for effective handling of administrative affairs and discarding the traditional female attire. **she adopted the male wardrobe.**

Statement 3 is incorrect: Ibn Battuta (1304 -1369) was not even a contemporary of Raiza Sultana. He was a scholar and explorer who travelled extensively in the lands of Afro-Eurasia, largely in the Muslim world. **He came to India in AD 1333** through Hindu Kush Mountain and **reached Delhi during the reign of Muhammad Bin Tughlaq.** He had given the description of the death of Raiza Sultana.

Q.39) With reference to the trade activities during Mughal Period, consider the following pairs:

Terms : Meaning

1. Sarrafs : Traders of gold and silver
2. Dallals : Bankers
3. Chettis : Landless Peasantry
4. Hundi : A bill of exchange

How many pairs above are correctly matched?

- a) only one pair
- b) only two pairs
- c) only three pairs
- d) All four pairs

Ans) b

Exp) Option b is the correct answer.

The political integration of the country under the Mughal empire along with efficient maintenance of law and order **ensured brisk trade and commerce.**

Option 1 is correct: Sarrafs performed three distinct functions - **as money-changers, bankers and traders of gold, silver and jewellery**. Sarrafs was also a part of the Mughal **mint establishment**. Every mint had a sarraf who would fix the purity of bullion. He also verified the purity of coins after minting.

Option 2 is incorrect: **Dallals (brokers)** worked as **middlemen** in various commercial activities and transactions. Merchants from **foreign lands and distant regions were heavily dependent on them**. They are specialised mercantile professional trading groups that seem to have been active in the wake of the Turkish conquest of North India

Option 3 is incorrect: **Chettis were the trading community in India**. In different regions of the country various merchants' groups and castes operated. **Prominent Indian merchant groups were the baniyas, bohras, khattris, chettis, komattis**.

Option 4 is correct: **Hundi or bills of exchange** became an important form of money transaction during the Mughal period. Hundi was a **paper document promising payment of money after a period of time at a certain place**

Source: <https://egyankosh.ac.in/bitstream/123456789/20252/1/Unit-24.pdf>

Q.40) Consider the following statements regarding the social reforms initiated by Rajarshi Shahu Maharaj:

1. He established Deccan Rayat Association, which sought political rights for non-Brahmins.
2. He patronized the Satya Shodhak Samaj, formed by Phule.
3. He initiated a compulsory free primary education for all in his state.
4. He reserved 50% government jobs for lower castes in his princely state of Kolhapur.

Which of the statements given above are correct?

- a) 2, 3, and 4 only
- b) 1, 2, and 4 only
- c) 2 and 3 only
- d) 1, 2, 3, and 4

Ans) d

Exp) Option d is the correct answer.

Rajarshi Shahu Maharaj was first Maharaja of the princely state of Kolhapur. He was also known as Rajarshi Shahu. He was considered a true democrat and social reformer. He occupied the throne of Kolhapur for 28 years, from 1894 to 1922, and during this period he initiated numerous social reforms in his empire.

Statement 1 is correct: Shahu Maharaj **established the Deccan Rayat Association** in Nipani during 1916. The association sought to **secure political rights for non-Brahmins** and invite their equal participation in politics.

Statement 2 is correct: Shahu Maharaj was influenced by the works of Jyotiba Phule, and he **patronized the Satya Shodhak Samaj, formed by Phule**.

Statement 3 is correct: He also initiated a **compulsory free primary education** for all in his state. Shahu Maharaj established hostels and he established the Miss Clarke Boarding School for the socially quarantined segments of the community. He introduced several scholarships for the poor but meritorious students from backward castes.

Statement 4 is correct: On July 26, 1902, **Shahu Maharaj gave a historic order to reserve 50% government jobs for lower castes in his princely state of Kolhapur**. This was one of the earliest instances of reservation for lower castes as a matter of state policy.

Q.41) Consider the following:

The arrival of Babur into India led to the

1. Introduction of gunpowder in the subcontinent
2. Introduction of the arch and dome in the region's architecture
3. Establishment of Timurid dynasty in the region

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect. Gunpowder technology is believed to have arrived in India by the mid-14th century, but could have been introduced much earlier by the Mongols, who had conquered both China and some borderlands of India, perhaps as early as the mid-13th century.

Statement 2 is incorrect. The establishment of Delhi Sultanates led to the introduction of Muslim style of construction in India which was based on arches, vaults and domes, on columns and pyramidal towers or slender spires, called trabeated.

Statement 3 is correct. Babur was the founder of the Mughal Empire. The name Mughal derives from Mongol. They referred to themselves as Timurids, as descendants of the Turkish ruler Timur on the paternal side.

Q.42) Which of the following factors helped Kanauj become an important center in the politics of early medieval North India?

1. Kanauj was secure as it was surrounded by hills from all sides.
2. Kanauj was surrounded by a large agrarian expanse to make plenty of land-grants.
3. Kanauj was well-connected by routes towards east and towards south.

Select the correct answer using the code given below.

- a) 1 only
- b) 1 and 2 only
- c) 3 only
- d) 2 and 3 only

Ans) d

Exp) Option d is the correct answer.

Kanauj, earlier known as Kanyakubja or Mahodaya, situated in the Kanauj district of present Uttar Pradesh assumed a lot of significance in the politics of early medieval north India.

Statement 1 is incorrect: Located in the fertile plains of the Ganga-Yamuna doab, Kanauj stood on an elevated area that could be easily fortified. Thus, even though it was situated in plains, due to its favourable location, it could be easily fortified and was secure.

Statement 2 is correct: Besides, Kanauj was rooted in a large agrarian expanse in the western Ganges plains. Land-grants could be made in plenty from this area. Naturally, the area attracted many brahmanas who settled here and for subsequent centuries the brahmanas of Kanauj came to be widely esteemed in the royal courts throughout the country.

SFG 2023 | LEVEL 1 | Test #33 – Solutions | 

Statement 3 is correct: Kanauj was also well-connected by routes going towards east into the Ganges plains as well as with those going to south.

Due to all these factors, it rose to power and became an important nodal point in north. With this development we see a shift of focus from Pataliputra in south Bihar to Kanauj. The latter also came to constitute a central theme in the politics of post-Gupta north India.

NCERT History, Satish Chandra, Class 11

Q.43) With reference to the various dynasties of Delhi Sultanate, consider the following pairs:

Dynasty : Founded by

1. Sayyid dynasty : Khizr Khan
2. Tughlaq dynasty : Balban
3. Khalji dynasty : Alauddin Khalji

How many pairs above are correctly matched?

- a) Only one pair
- b) Only two pairs
- c) All three pairs
- d) None of the pairs

Ans) a

Exp) Option a is the correct answer.

The Delhi Sultanate which reigned India from 1206–1526 A.D has five different dynasties (a) **Slave Dynasty (1206–1290)** (b) **Khalji Dynasty (1290–1320)** (c) **Tughlaq Dynasty (1320–1414)** (d) **Sayyid Dynasty (1414– 1451)** and (e) **Lodi Dynasty (1451–1526)**.

Pair 1 is correct: The Sayyid dynasty was the fourth dynasty of the Delhi Sultanate, with four rulers ruling from 1414 to 1451. **It was founded by Khizr Khan**, a former governor of Multan. It succeeded the Tughlaq dynasty and ruled the sultanate as a vassal of the Timurid Empire, until they were displaced by the Lodi dynasty.

Pair 2 is incorrect: The Tughlaq dynasty was founded by Ghazi Malik. He assumed the throne under the title of Ghiyath al-Din Tughluq.

Ghiyas ud din Balban was the ninth sultan of the Mamluk dynasty of Delhi.

Pair 3 is incorrect: Jalal-ud-din Khalji (1290–1296) was the founder of Khalji dynasty. He marched out against the **Mongol hordes and successfully halted their entry into India in 1292.** **Ala-ud-din Khalji (1296–1316) succeeded Jalal-ud-din khalji and he took a large number of Mongols as prisoners**, when Mongols ravaged the Delhi region. But the Mongol menace continued and the last major Mongol incursion took place in 1307–08.

Q.44) With reference to the system of Turkan-i-Chihalgani, consider the following statements:

1. They were primarily employed as bodyguards of the King.
2. Raziya Sultana founded this system to increase her personal security.
3. Before becoming Sultan, Balban was one of the members of this group.

Which of the statements given above is/are **incorrect**?

- a) 1 and 2 only
- b) 2 only

- c) 2 and 3 only
d) 1 and 3 only

Ans) a

Exp) Option a is the correct answer.

Shams-ud-din Iltutmish (1210-36) was a slave of Qutb-Uddin Aibak. He invented **Turkan-i-Chihalgani (a group of 'forty' Turkish slave officers)**. Iltutmish intended to use these slaves' expertise, courage, commitment, and loyalty for the **consolidation of his empire**.

Statement 1 is incorrect: These slave officers possessed excellent qualities to administer the territories and were **appointed as governor of the provinces by Iltutmish**. For example, **Malik Izzuddin Kabir Khan Ayaz**, the most prominent among a group of 40 slave officers, was appointed as an **iqtdar of Sunam and Raziya appointed him at Lahore and also gave iqta of Multan**.

Statement 2 is incorrect: Shams-ud-din Iltutmish invented Turkan-i-Chihalgani (a group of 'forty' Turkish slave officers). **Raziya Sultana (1236-1240) was daughter of Iltutmish**, who ascended the throne after a **lot of hurdles put up by the Turkish nobles**. **Raziya** realized the increasing power of the Turkish slaves, **attempted to offset them by creating a parallel counter-nobility**. This attempt brought her in direct conflict with the Turkish slave officers.

Statement 3 is correct: Ulugh Khan also known as Balban Kishlu Khan was the most ambitious of the group of Forty. He was the commander of the Shivalikh territories in the North-West, **He seized the throne as Sultan Ghiyas ud-din Balban in 1266**. This group was **finally eliminated by Balban**.

Source: <https://egyankosh.ac.in/bitstream/123456789/73300/1/Unit-3.pdf>

Q.45) Recently one of the state governments has sent a proposal to the Archaeological Survey of India (ASI) to get Cyclopean wall, an ancient structure, to be listed in the UNESCO World Heritage Site. In this context, which option best describe the term Cyclopean Wall?

- It is the remains of the Bridge known as Ram Setu or Adam's bridge.
- It is an ancient wall built to protect coastal regions of Odisha from the cyclonic effect.
- It is stone wall which encircles the ancient city of Rajgir.
- It is the remains of ancient boundary wall of Vijayanagar empire.

Ans) c

Exp) Option c is the correct answer.

Bihar government has sent a proposal to the Archaeological Survey of India (ASI) to get Cyclopean wall, a more than 2,500 years old structure at Rajgir, listed in the UNESCO World Heritage Site. **The Cyclopean Wall of Rajgir is a 40 km long wall of stone which encircled the ancient city of Rajgir to protect it from external enemies and invaders, built before 3rd century BC**. The wall is among the oldest examples of cyclopean masonry in the world. It is believed to have been built in the pre-Mauryan era.

Source: <https://indianexpress.com/article/cities/patna/bihar-unesco-heritage-tag-cyclopean-wall-7871141/>

Q.46) With reference to the practice of Sijada and Paibos during Delhi Sultanate, consider the following statements:

- It was introduced by Sultan Balban.
- Sijada was a kind of royal sermon given by Sultan.
- Paibos were the coins with the inscription of Sultan's name in it.

Which of the statements given above is/are correct?

- 1 only

- b) 1 and 3 only
- c) 2 only
- d) 1 and 2 only

Ans) a

Exp) Option a is the correct answer.

In order to impress the people with the strength and awe of his government, Balban maintained a magnificent court. He refused to laugh and joke in the court, and even gave up drinking wine so that no one may see him in a non-serious mood.

Statement 1 is correct: Sultan Balban introduced the ceremony of **sijada (prostration) and paibos (kissing of the monarch's feet)** in the court to exalt his position.

Statements 2 and 3 are incorrect: The **khutba** was the **formal sermon** following the congregational prayer on Fridays wherein the name of the Sultan was mentioned as the **head of the community**. Coinage was the ruler's prerogative and **rulers name were inscribed on the coins (Sikka)**.

The practice of Sijada and Paibos is a kind of ceremony invented by Balban to raise his power and prestige. Sijada means prostration and Paibos means kissing of the monarch's feet.

Q.47) Who among the following were referred to as the “New Musalman” during the Khalji dynasty?

- a) Indians who converted to Islam
- b) The Abyssinian slaves who recently converted to Islam
- c) Mongols who converted to Islam
- d) Non-Turkish free-born foreigners

Ans) c

Exp) Option c is the correct answer.

During the rule of Khaljis and Tughlaqs the doors of nobility were opened to people of diverse backgrounds and it was no longer the preserve of the Turks only.

Option a and b is incorrect: Alauddin Khalji, to erode the power of the older Turkish nobility brought in new groups such as the **Mongols, Indians and Abyssinians into the noble class. They were not known as New Musalman (muslims).**

Option c is correct: The **Mongols who converted to Islam were called as New Musalmans during the Khalji dynasty.** The Mongols were **defeated by Jalaluddin Khalji** near Balban's frontier line of Tabarhind, Sunam. The demoralised Mongols agreed to a truce and about 4000 Mongols were **converted to Islam and settled near Delhi.**

Option d is incorrect: The **Tajik were the non-Turkish free-born foreigners** of high lineage, largely Persians. They were **not known as New Musalman (muslims).**

Source: <https://egyankosh.ac.in/bitstream/123456789/73300/1/Unit-3.pdf>

Q.48) He created a department of agriculture named Diwan-i-Kohi and he issued loans to farmers. He also introduced a token currency and ordered that it should be accepted as equivalent to the silver coin. Identify this King from the options given below.

- a) Ghiyasuddin Tughlaq
- b) Muhammad Bin Tughlaq
- c) Firuz Shah Tughlaq
- d) Nasiruddin Muhammad Shah

Ans) b

Exp) Option b is the correct answer.

Option a is incorrect: Ghiyath al-Din Tughlaq was the Sultan of Delhi from 1320 to 1325. He was the **first sultan of the Tughlaq dynasty**. He founded the city of Tughlakabad. He **died in 1325** when a pavilion built in his honour collapsed.

Option b is correct: Muhammad Bin Tughlaq (1325-1351) was an innovator. He established a **separate department (Diwan-i- Kohi) to take care of agriculture** and **loans were advanced to farmers** for purchase of cattle, seeds and digging of wells but to no avail.

He introduced a **token currency**. **But** the Government could not prevent people from forging the fake coins and soon the fake coins flooded the markets. Thus, the Sultan was forced to withdraw the token currency.

Option c is incorrect: Firuz Shah Tughlaq (1351-1388) reintroduced the system of hereditary appointments to offices which was discouraged by Alauddin Khalji and he established a separate government department named Diwan i Bandagani to look after the welfare of slaves.

Option d is incorrect: **Nasir-Uddin Muhammad Shah (1394-1412) was the last Tughlaq ruler**, whose reign witnessed the **invasion of Timur from Central Asia**. On hearing the news of arrival of Timur, Sultan Nasir-ud-din fled Delhi and then the **Sayyid and Lodi dynasties ruled Delhi from 1414 to 1526**.

Class XI: TN SCERT – Advent of Arabs and Turks

Q.49) With respect to the history of Medieval India, which among the following are the major contributions of Tomara dynasty?

1. They constructed waterworks in the Delhi area.
2. They installed the famous 'iron pillar' in Mehrauli.
3. They started exclusive colleges for female education.

Select the correct answer using the code given below:

- a) 1 only
- b) 1 and 2 only
- c) 3 only
- d) 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

The Tomara dynasty ruled the Hariyana (Haryana) country with their capital at Dhillika (Delhi) and they are believed to be a feudatory of the Pratiharas.

Option 1 is correct: **The Tomaras were associated with the construction of the earliest surviving waterworks in the Delhi area**. Anangapala II was the founder of the citadel of Lal Kot in the Mehrauli area and also built a tank known as the Anang Tal. Similarly, the famous Suraj Kund reservoir (near Faridabad, Haryana) is said to have been commissioned by a Tomara king named Surajpala.

Option 2 is incorrect: The iron pillar at Mehrauli carries an 11th century inscription which refers to one of the most famous kings of the Tomara dynasty. **However, the Tomars did not install that iron pillar**. The iron pillar of Delhi is a structure 7.21 metres high that was constructed by Chandragupta II. The Pillar is famous for its non-rusted state, despite being made of 99% iron, and having been constructed in the 5th century CE.

Option 3 is incorrect: The Tomaras did not start any colleges for female education. They had a very short rule in the Delhi Area. They often had conflicts with the Chahamanas of Shakambhari, and later, their rule was followed by that of the Chahamanas.

Q.50) Which of the following describes the term ‘Narasingapettai Nagaswaram’, which was recently in news?

- a) It is a hand-made classical wind music instrument of Tamil Nadu.
- b) It is a milk product mainly made in Andhra Pradesh.
- c) It is an intricately carved brass work of Karnataka.
- d) It is a special variety of rice grown only in Tamil Nadu.

Ans) a

Exp) Option a is the correct answer.

Option a is correct: The Narasingapettai Nagaswaram has earned the Geographical Indication (GI) tag under 'musical instruments of class 15'. **Narasinghapettai nagaswaram is a classical wind music instrument that is traditionally made in a village near Kumbakonam, Tamil Nadu.** The unique feature of the nagaswaram is its production process, which is handmade. It is made of wood and metal. The major portion of the ‘Narasinghapettai nagaswaram’ is made from the Aacha (*Hardwickia binata*) tree. The instrument has also been accorded a high status as a ‘Mangala Vadyam’ and is played in religious ceremonies, auspicious occasions, and classical concerts.

SFG 2023 | LEVEL 1 | Test #34 – Solutions | 

Q.1) Regarding the taxation system of Krishna Deva, the ruler of Vijayanagar, consider the following statements:

1. The tax rate on land was fixed depending on the quality of the land.
2. Private owners of workshops paid an industries tax.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: Land revenue known as Sista, was the principal source of income of the Vijayanagar State. It had an efficient system of land revenue administration. To meet the heavy burden of the State and solve the problem of obtaining men and money to withstand its enemies, the Vijayanagar emperors including Krishna Deva gave up the traditional rate of assessments at one-sixth of the produce and increased it to some extent. Krishna Deva's land revenue system was based on the **“principle of differential taxation”, that is, levied taxes according to the relative fertility or quality of the lands. For this he conducted the survey of land in his empire and then decided the taxes according to the fertility of land.** Besides the land taxes, the ryots had to pay other kinds of taxes like grazing tax, marriage tax etc.

Statement 2 is correct: Besides land-tax, many professional and industrial taxes were also imposed. These were on **shopkeepers**, farm-servants, shepherds, **washermen, potters, shoemakers, barbers**, prostitutes, musicians, Manufacturers and craftsmen, etc. There was also tax on property. Other source of income of the State were the revenue from customs duties; tolls on roads, revenue from gardening and plantations; and taxes levied on dealers in goods of common consumption. Taxes were paid both in cash and kind.

Q.2) In the Bahamani Kingdom, the term 'Tarafdars' refers to which of the following?

- a) Agricultural landholder
- b) Provincial Governor
- c) Head of water supply in districts
- d) Head of prisons

Ans) b

Exp) Option b is the correct answer.

Bahmani kingdom was a Muslim state of the Deccan in southern India. It was founded by Alauddin Hasan Bahman Shah (c.1347–58 CE). He divided the Bahmani kingdom into four divisions or provinces. His son Muhammad called these provinces Tarafs, each placed under a Tarafdar. Thus, **Tarafdar was the governor of provinces in Bahmani kingdom.**

Later Gawan divided the kingdom into eight tarafs or provinces, each governed by a Tarafdar.

<https://ncert.nic.in/textbook/pdf/lehs203.pdf>

Q.3) Consider the following statements with reference to the Bahamani Kingdom:

1. It was founded by Hoshang Shah.
2. They had regular confrontations with the Vijayanagar kingdom over the Marathwada region.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: Bahmani Kingdom was a Muslim state of the Deccan in Southern India during the medieval era in Indian History. It was **founded by Alauddin Hasan Bahman Shah** (in 1347), also known as **Hasan Gangu**, revolting against the Delhi Sultanate of Muhammad bin Tughlaq. **Hoshang Shah** (1406–1435) was the first formally appointed **Sultan of the Malwa Sultanate** of Central India.

Statement 2 is correct: There were constant conflicts between the Vijayanagar kingdom and the Bahmani Sultanate as their interests clashed in three separate and distinct areas:

- 1) **Over the control of the Raichur doab**
- 2) **The Krishna–Godavari basin**
- 3) **Over the Marathwada region**

Source: <https://ncert.nic.in/textbook/pdf/lehs203.pdf>

<https://drive.google.com/file/d/1MYLv9dLMp9tKbDutru3KlON7FmDLFOMf/view>

Q.4) With respect to the socio-economic life during the Vijayanagar empire, consider the following statements:

1. The temples took active part in both internal and overseas trade.
2. Large number of women were employed in the royal palaces as dancers.
3. The kings of Vijayanagar empire were generally tolerant towards people from other religions.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

The period of the Vijayanagar Empire is considered an age of prosperity in South India in the 14th century CE. The Vijayanagar Empire had a strict caste system, or a strict cultural hierarchy, with community representatives for each caste, from lowest to highest.

Statement 1 is correct: During Vijayanagar Empire, the temples were rich and also took **active part in both internal and overseas trade. For example, Temples purchased local goods to perform ritual services. They made loans to individuals and village assemblies for economic purposes.** The loans were made in exchange for lands, the proceeds of which went to the temples.

Statement 2 is correct: According to Portuguese traveler **Nuniz**, a **large number of women were employed in the royal palaces as dancers**, domestic servants, and palanquin bearers. Sahagaman, i.e., the practice of Sati was honoured.

Statement 3 is correct: All the kings of Vijayanagar empire were **tolerant towards people from other religions**. Portuguese writer **Barbosa** referred to the religious freedom enjoyed by everyone. **Muslims were employed in the administration** and they were freely allowed to build mosques and worship.

Source: <https://ncert.nic.in/textbook/pdf/lehs203.pdf>

Q.5) Which of the following statements are correct with respect to “The Joint Comprehensive Plan of Action (JCPOA)” frequently seen in news?

- a) It is a set of sanctions brought against Russia by North Atlantic Treaty Organisation (NATO).
- b) It puts restrictions on Iran’s Nuclear program.
- c) It aims to curb harmful subsidies given to the unregulated fishing sector by a country.
- d) It is an implementation plan to achieve climate goals adopted under the Paris climate change conference.

Ans) b

Exp) Option b is the correct answer.

Option a is incorrect: The North Atlantic Treaty Organization (NATO) is an **intergovernmental military alliance** between 30 member states – **28 European countries** and **two North American countries (United States of America and Canada)**. NATO had deployed troops along Eastern Europe and economic sanctions on Russia to deter Russian aggression against Ukraine. The Joint Comprehensive Plan of Action (JCPOA)” is not related to these sanctions.

Option b is correct: Recently, the **US imposed sanctions against** a Mumbai based petrochemical company, **Tibalaji Petrochem Pvt Ltd.** as it was accused of selling Iranian petroleum products.

It is the **first Indian entity to face the US designation under unilateral sanctions passed in 2018-19**, after the US walked out of the **Joint Comprehensive Plan of Action (JCPOA)**. The **Joint Comprehensive Plan of Action (JCPOA)** commonly known as the **Iran nuclear deal** is an agreement on the Iranian nuclear program reached in 2015, **between Iran and the P5 countries (China, France, Russia, United Kingdom, United States) plus Germany together with the European Union**. The main motive of this agreement is **to prevent Iran from producing nuclear weapons**. However, in 2018 the **Trump administration unilaterally pulled the U.S. out of this agreement**. Recently, **The U.S. and Iran have also exchanged their stands indirectly** via the European Union for a “final draft” on re-joining the JCPOA.

Option c is incorrect: In 2022, the 12th Ministerial Conference of the **World Trade Organization (WTO)** was held in **Geneva, Switzerland**. This conference (**and not JCPOA**) agreed to **setting limits on harmful fishing subsidies**. Also, the conference agreed to give a **temporary waiver on Covid-19 vaccines**.

Option d is incorrect: **Sharm el-Sheikh Implementation Plan (and not JCPOA)** adopted at Conference of Parties (COP27) is an implementation plan to **achieve climate goals adopted under the Paris climate change conference**. It highlights that a global transformation to a low-carbon economy is expected to require investments of at least US\$ 4-6 trillion a year

Q.6) He was a Persian merchant. Under his guidance the Bahmani kingdom reached its peak. He waged successful wars against Vijayanagar, Orissa, and the sea pirates on the Arabian sea. He built a Madarsa at Bidar in Persian architectural style.

The above paragraph describes which among the following official of the Bahamani Kingdom?

- Alauddin Hassan Gangu Bahaman Shah
- Mohammad Gawan
- Ahmad Shah I Wali
- Firuz Shah

Ans) b

Exp) Option b is the correct answer.

Option b is correct: The Bahmani kingdom reached its peak under the guidance of Prime minister **Muhammad Gawan**. He was a Persian merchant. He was well-versed in Islamic theology, Persian Language, and Mathematics. He was also a poet and a prose writer. He was also a military genius. He waged **successful wars against Vijayanagar**, Orissa, and the sea pirates on the Arabian sea. He **built a Madarsa at Bidar** in Persian architectural style.

Option a is incorrect: Alauddin Hassan Gangu Bahaman Shah:

- Alauddin Hassan Gangu Bahaman Shah was the founder of the Bahamani sultanate in the year 1347 AD.
- Rivalry with Vijayanagar kingdom over the fertile region of Raichur doab started from his period and continued till the last of Bahaman rule.
- He had frequent conflicts with the Warangal state, the Reddy kingdoms of Rajahmundry and Kondavidu. Bahman Shah emerged victorious in all these expeditions and assumed the title of Second Alexander on his coins.
- Mohammed, I succeeded Bahman Shah.

Option c is incorrect: Ahmad Shah I Wali (1422-1436)

- He was called “Wali” (saint) because of his association with the famous Sufi saint Gesu Daraz (of the Chisty order).
- He continued the struggle for domination of the eastern seaboard of southern India (Krishna Godavari delta region).
- He annexed Warangal and killed the ruler as revenge, thus eastern coast came under their control.
- He shifted the capital to Bidar and campaigned towards Malwa, Gondwana, and Konkan.

Option d is incorrect: Firuz shah Bahmani (1397-1422)

- He was well-read in religious sciences and wanted to make the Deccan the cultural center of India.
- When the Delhi sultanate declined, the learned people migrated to the Deccan making it the center of learning.
- He inducted many Hindus into his administration.
- Built an astronomical observatory at Daulatabad.
- He founded Firozabad, a few kilometers south of Gulbarga.
- Ports of Chaul and Dabhol attracted trading ships from the Persian Gulf and Red Sea trading in horses and luxury goods came in from the Arab world.

<https://ncert.nic.in/textbook/pdf/gess109.pdf>

Q.7) Consider the following statements regarding Indian Antarctic Act, 2022:

- The Act is applicable on a citizen of India as well a citizen of any other country.
- According to the act, no permit is required to collect sample of mineral resources from Antarctic for the purposes of scientific research.
- Commercial fishing in Antarctica is allowed only after obtaining permit from the appropriate authority.

Which of the statement(s) given above is/ are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 only
- d) 3 only

Ans) b

Exp) Option b is the correct answer.

Recently, Indian Antarctic Act, 2022 has been passed. Its key objectives include having India's **own national measures** for protecting Antarctic environment, ensuring **de-militarization** of the region, getting rid of **mining** or illegal activities, management of growing Antarctic **tourism** and sustainable development of **fisheries**.

Statement 1 is correct: The Indian Antarctic Act, 2022 is applicable on **Indian citizens, citizens of foreign countries** and a **vessel or aircraft** registered in India or outside India. It is also applicable on a company, body corporate, corporation, partnership firm, joint venture, an association of persons or any other **entity incorporated, established or registered as such under any law in force in India**.

Statement 2 is incorrect: In general, drilling, dredging, excavating, collecting samples etc. of mineral resources is **not allowed**. However, **permission can be granted** for these activities for the purposes of **scientific research or construction, repair and maintenance of an Indian station or any other structure**. Hence, permit is required.

Statement 3 is correct. Any person who intends to go to Antarctica for the purpose of **commercial fishing shall apply for a permit** to the appropriate authority.

Other regulated and prohibited activities:

Regulated Activities- 'Permit' is required	Absolute Prohibition
1) Indian expedition to Antarctica	1) Nuclear explosion or disposal of radioactive waste material
2) Indian station in Antarctica	2) Introducing non-sterile soil
3) Permit for vessel and aircraft entering Antarctica.	3) Damage, destroy or remove any historic site or monument or any of its part
4) Permit for mineral resource activities.	4) Discharge of certain specified products or substances.
5) Permit for introducing non-native animals and plants into Antarctica.	5) Other specified activities
6) Permit for introducing microscopic organisms.	
7) Permit for discharge into sea.	
8) Permit for waste disposal.	
9) Permit to enter protected areas.	
10) Special permit for commercial fishing in Antarctica	
11) Other specified activities	

Knowledge Base:

Other important provisions of the Act:

- 1) **Background:** To give effect to the provisions of **Antarctic Treaty**, the **Protocol on Environment Protection (Madrid Protocol)** to the Antarctic Treaty and to the **Convention on the Conservation of Antarctic Marine Living Resources**. **India acceded to Antarctic Treaty system in 1983.**
- 2) Central Government shall establish a **Committee on Antarctic Governance and Environmental Protection**. This committee shall be chaired by the **Secretary, Ministry of Earth Sciences**.
- 3) This committee shall establish a **waste classification system and waste management plans**.

Important Facts about Antarctica

- 1) It is the southernmost continent, fifth largest in area and contains the geographic South Pole.
- 2) It is mostly uninhabited, except approximately 40 permanent stations established by several countries.
Maitri and Bharti are India's research stations on the continent.
- 3) Native species of animals include **mites, nematodes, penguins, seals and tardigrades** etc. Vegetation occurs, mostly, in the form of **lichens and moss**.

Q.8) Consider the following statements with reference to Vijayanagar Empire:

1. The kings claimed to rule on behalf of the God Virupaksha.
2. Rulers used the title of “Hindu Suratrana”.
3. The royal orders were usually signed in Kannada script.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct Answer.

According to tradition and epigraphic evidence two brothers, Harihara and Bukka, founded the Vijayanagara Empire in 1336. This empire included within its fluctuating frontiers peoples who spoke different languages and followed different religious traditions

Statement 1 and 3 are correct: The Vijayanagara kings claimed to rule on behalf of the god Virupaksha. All royal orders were signed “Shri Virupaksha”, usually in the Kannada script.

Statement 2 is correct: Rulers also indicated their close links with the gods by using the title “Hindu Suratrana”. This was a Sanskritisation of the Arabic term Sultan, meaning king, so it literally meant Hindu Sultan.

Source: <https://ncert.nic.in/textbook/pdf/lehs203.pdf>

<https://drive.google.com/file/d/1MYLv9dLMp9tKbDutru3KlON7FmDLFOMf/view>

Q.9) Consider the following terms of the Vijayanagara Kingdom:

Term	Meaning
1. Pettai	Commercial Centres
2. Adaippam	Accountant
3. Kariya-karta	Executive Agent

Which of the above-given pairs are correctly matched?

- a) 2 and 3 only
- b) 1 and 2 only
- c) 1 and 3 only
- d) 1, 2, and 3

Ans) c

Exp) Option c is the correct Answer.

The king was the ultimate authority in the Vijayanagara kingdom. He was also the supreme commander of the army. He was assisted by several high-ranking officers. The chief minister was known as the mahapradhani.

Pair 1 is correct: Chiefs controlled production within their Nayaktanam territories by creating **commercial centers (pettai)** and markets, encouraging the settlement of cultivators and artisans with tax concessions, creating and maintaining irrigation facilities, etc.

Pair 2 is incorrect and 3 is correct: The chief minister was known as the mahapradhani. **The Chief Minister led** a number of lower-ranking officers, like Dalavay (commander), Vassal (guard of the palace), Rayasam (secretary/ accountant), **Adaippam (personal attendant), and Kariya-Karta (executive agents).**

Knowledge Base: The Pradhan was either a royal member or a military officer not related to the royal family. The pradhan had his own revenue accountants and military to assist in his administration. Within each rajya, there were smaller administrative divisions like Nadu, sima, sthala, kampana, etc. The lowest unit was of course the village. The rajyas lost their administrative and revenue status under the Tuluva dynasty due to the development of the Nayak system under Krishnadevaraya.

Source: TNSCERT: Medieval: Bahmani and vijayanagara kingdom

Q.10) With reference to Davos summit 2022 of World Economic Forum, consider the following statements:

1. A new initiative called 'Defining and Building the Metaverse' was launched in this summit.
2. India announced the Mission LiFE programme for the first time in this summit to fight climate change.
3. One health initiative was proposed by India in this summit to prevent another Covid-19 like pandemic in the future.

Which of the statement/s given above is/are correct?

- a) 1 and 2 only
- b) 1 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Davos summit 2022 was convened by the World Economic Forum (WEF). The World Economic Forum (WEF) is a **Swiss non-profit foundation** established in 1971, based in Geneva, Switzerland.

Statement 1 is correct: World Economic Forum in its 2022 summit at Davos announced a new initiative called Defining and Building the Metaverse. This initiative brings together key stakeholders to build an economically viable, interoperable, safe, and inclusive of metaverse. Different research suggests that the metaverse is expected to grow into an \$800 billion market by 2024.

Statement 2 is incorrect: Indian launched a Mission LiFE at the COP26 summit in Glasgow in 2021. In the Davos summit Indian Prime Minister urged that **Lifestyle for Environment (LiFE) is useful for fighting climate challenges** and he also urged the world to launch a **people's movement with "3 Ps" – "Pro Planet People"** to bring behavioural change among people to fight climate change.

Statement 3 is incorrect: The World Health Organisation formed a One Health Initiative to integrate work on human, animal and environmental health across the Organization. The **Indian Prime Minister highlighted India's role as pharma producer** during Covid times and he **asserted that India followed a vision of One Earth, One Health** which saved crores of lives by giving essential medicines and vaccines to many countries. Thus, **one health Initiative was not proposed by India.**

Q.11) In medieval India, the term “Fanam” referred to:

- Clothing
- Coins
- Ornaments
- Weapons

Ans) b

Exp) Option b is the correct answer.

Option b is correct: The Fanam coins were the regular unit of currency in medieval Travancore and appear to have been extensively used for trading in the region of South India. The words Fanam and Panam literally mean money and are still used as a synonym for wealth in Kerala in the native language of Malayalam.

<https://blog.forumias.com/question/in-medieval-india-the-term-fanam-referred-to/>

<http://www.columbia.edu/itc/mealac/pritchett/00glossarydata/terms/fanam/fanam.html>

Q.12) Consider the following statement regarding the Nayaka (Nayakar) system of the Vijayanagar empire:

- Foreign traveller Fernao Nuniz says that the Nayaks were compelled to keep certain number of military forces to serve the king.
- The Nayakas used a part of revenue collected by them for the maintenance of irrigation works.
- It was similar to the Iqta system practiced by the Delhi Sultanate.
- Ultimately, the Nayaka system became one of the reasons for collapse of central imperial structure of Vijayanagar.

Which of the above statement are correct?

- 1, 3 and 4 only
- 2 and 4 only
- 1, 2 and 3 only
- 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct Answer.

Among those who exercised power in the Vijayanagar empire were military chiefs who usually controlled forts and had armed supporters. These chiefs often moved from one area to another, and in many cases were accompanied by peasants looking for fertile land on which to settle. These chiefs were known as **Nayakas**.

Statement 1 is correct: Nuniz says that the Vijayanagar kingdom at that time was divided between more than two hundred captains (his translation for Nayak) and they were compelled in turn to keep certain number of military forces (horses and foot soldiers) to serve the king in times of need: they were also

required to pay certain amount of the revenue to the king in particular times of a year, like during the nine-day Maha Navami festival.

Statement 2 is correct: Some of the revenue collected by the Nyaka was also used for the maintenance of temples and irrigation works.

Statement 3 is correct: Nayaka or Nayakar system is similar to the iqta system practiced by the Delhi Sultanate at that time. But in the Vijayanagar kingdom, the regular assignment of revenue-yielding territory in return for military service is clearly found only from about 1500 or a little earlier.

Statement 4 is correct: The Nayakas sent tribute to the king annually and personally appeared in the royal court with gifts to express their loyalty. Kings occasionally asserted their control over them by transferring them from one place to another. **However, during the course of the seventeenth century, many of these nayakas established independent kingdoms. This hastened the collapse of the central imperial structure.**

<https://ncert.nic.in/textbook/pdf/lehs203.pdf>

Q.13) Which of the following statements are correct with respect to Saint Kabir and Guru Nanak?

- While Guru Nanak was opposed to idol worship, Kabir supported it.
- Both Kabir and Guru Nanak preached in Hindi language.
- While Kabir preached non-violence, Guru Nanak preached a militant form of struggle against social oppression.
- The teachings of both of them are mentioned in holy book of Sikhs, the 'Guru Granth Sahib'.

Ans) d

Exp) Option d is the correct answer.

Saint Kabir Das (1440-1518) was a very renowned saint, poet and social reformer of India who lived during the 15th century. **Guru Nanak (1469-1539) was the founder and first Guru of Sikhism**, was born in the year 1469, in the village of Talwandi which is located in the Punjab.

Option a is incorrect: Both Kabir and Guru Nanak were against the practise of idol worship. Guru Nanak held that instead of putting our faith in the almighty who is **omnipresent** we are putting our faith in some statue. **Kabir worshipped the Nirguna (without form) God** whom he calls by several names such as Rama, Allah, Hari, Sain, Sahib, etc.

Option b is incorrect: The Bhakti movement promoted the growth of vernacular language and literature in different parts of the country. Kabir, Nanak and Chaitanya preached in their respective vernacular tongues – **Kabir in Hindi, Nanak in Gurmukhi** and Chaitanya in Bengali. So subsequent Bhakti literatures were compiled in these languages and many Muslim writers also translated Sanskrit works into regional languages.

Option c is incorrect: Both Kabir and Guru Nanak subscribed to the idea of nonviolence. However, Sikhism under its **sixth Guru Hargobind began its transformation from a peaceful community to warrior community.**

Option d is correct: The Guru Granth Sahib incorporates the teachings of both Kabir and Guru Nanak. It incorporates the writings of many Bhakti poets and Sufi saints such as **Ramananda, Namadeva, Kabir and Sheikh Farid.** While **Adi Granth is the teachings of Guru Nanak.**

<https://egyankosh.ac.in/bitstream/123456789/84764/1/Unit-4.pdf>

<https://www.egyankosh.ac.in/bitstream/123456789/20200/1/Unit-29.pdf>

Q.14) With reference to the characteristics of Sufism, consider the following statements:

1. They failed to communicate with the local masses due to over emphasis on the Persian language.
2. Some Sufis adopted yogic practices as one of the means to establish a link with God.
3. Sufism was restricted solely in Northern India during the period of Delhi Sultanate.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 only
- c) 3 only
- d) 2 and 3 only

Ans) b

Exp) Option b is the correct answer.

The Sufis are Muslim saints who aim at establishing direct communion between God and man through personal experience of mystery which lies within Islam. They did it through **ascetic exercises, contemplation, renunciation and self-denial**. By the 12th century, Sufism had become an influential aspect of Islamic social life as it extended over almost the entire Muslim community.

Statement 1 is incorrect: Sufi saints **used local languages to spread their message** among masses in India. They translated many **Persian Sufi verses in the local language called Hindavi** and these are considered as the earliest examples of translations of this kind. So, they focused on local languages to connect with the masses and did not focus on Persian language.

Statement 2 is correct: Some Sufis accepted **yoga breathing exercise as one of the means of their devotional path**. For example, **Shaikh Nizamuddin Auliya**, the greatest Sufi saint of the 14th century, in his khanqah, had many conversations with the **Nathpanthi yogi visitors and he adopted many yoga breathing exercises and** was called a Sidh (perfect) by the yogis.

Statement 3 is incorrect: Sufism reached **parts of Deccan region during the period of Delhi sultanate**. **Shaikh Burhanuddin Gharib** (1340 AD) who was one of those Sufis who were **forced by Sultan Muhammed Tughlaq to migrate to the Deccan**. He made **Daulatabad** centre of his activities and introduced the **Chishti order** there.

Source: <https://egyankosh.ac.in/bitstream/123456789/73316/1/Unit-15.pdf>

Q.15) With reference to the Bucharest Nine (B9), consider the following statements:

1. It is a group of nine countries that signed a collective defence treaty with Russia.
2. The group is formed to collectively oppose the eastward expansion of NATO.

Which of the statement/s given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) d

Exp) Option d is the correct answer.

The **Bucharest Nine (B9) is a group of nine NATO countries** in Eastern Europe that became part of the US-led military alliance after the end of the Cold War. Member countries of Bucharest Nine are **Romania, Poland, Hungary, Bulgaria, the Czech Republic, Slovakia, Estonia, Latvia, and Lithuania**.

Statement 1 is incorrect: All members of the Bucharest Nine are **part of the European Union (EU) and North Atlantic Treaty Organisation (NATO)**. The B9 countries have been **critical of President Vladimir**

Putin's aggression against Ukraine since 2014, when Russia annexed the Crimean Peninsula. Hence B9 are not allies of Russia.

Statement 2 is incorrect: Recently, the Bucharest Nine (B 9) rejected the Russian claim about the eastward “expansion” of North-Atlantic Treaty Alliance organisation (NATO). They underlined that NATO is not an organisation that “expanded” to the east”, rather, these countries as the independent European states have decided on their own to go west i.e., to align with United States of America and NATO.

Q.16) Who among the following Bhakti saints were contemporaries of the Maratha King Shivaji?

1. Tukaram
2. Saint Ramdas
3. Chaitanya
4. Jana bai
5. Eknath

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 1, 2 and 3 only
- c) 1, 2 and 4 only
- d) 1, 2 and 5 only

Ans) a

Exp) Option a is the correct answer.

Shivaji (1627–1680) was born in Shivneri near Junnar and a member of the **Bhonsle Maratha clan**. **Shivaji began his military career at the age of nineteen**. In **1646**, he captured the fortress of Torna from the Sultan of Bijapur.

Option 1 is correct: Tukaram was born in 1608 in a village near Poona, Maharashtra. He was a contemporary of Maratha King Shivaji (1627–80) and saint Ramdas. He wrote and **sung devotional songs in praise of his favourite deity Lord Vithoba of Pandharpur**. He **rejected Vedic sacrifices, ceremonies, pilgrimages, idol worship, etc.** He spread the message of equality and brotherhood. He tried to foster Hindu-Muslim Unity.

Option 2 is correct: Saint Ramdas (AD 1608 - c. 1681), also known as Samarth Ramdas was an Indian Hindu saint, philosopher, poet, writer and spiritual master. He was a devotee of the Hindu deities Rama and Hanuman. **Ramdas was regarded by Shivaji as his guru.**

Option 3 is incorrect: Chaitanya (1485–1533) is not a contemporary of Shivaji. Chaitanya was a devotee of Lord Krishna and he started a **revivalist movement which tried to show Krishna as superior to all gods**. He **popularised the practice of group devotional singing accompanied by ecstatic dancing**. His movement became **popular in Bengal and Orissa**.

Option 4 is incorrect. Jana Bai belonged to 13th – 14th century (thus not contemporary of Shivaji). She was a follower of Namdev and a shudra poetess of Ganga Kheda who composed more than 350 poems (abhangas).

Option 5 is incorrect. Eknath belonged to 1533- 1599 AD (thus not contemporary of Shivaji). Sant Eknath of Paithan on the other hand was known for his Chatuhshloki Bhagvat, Eknathi Bhagvat, Bhavarth Ramayan and Rakmini Svayamvar

SFG 2023 | LEVEL 1 | Test #34 – Solutions |

Q.17) Consider the following statements regarding India-UN Development Partnership Fund?

1. The 'Fund' is established by United Nations (UN) to support India's progress towards Sustainable Development Goals (SDGs).
2. The fund is also aimed to promote multilateralism and shared prosperity in the global South.
2. UNICEF, UNESCO and WHO are the implementing partners of the Fund.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

The year 2022 marks the 5th anniversary of India-UN Development Partnership Fund.

Statement 1 is incorrect: The fund was **established (in 2017), supported and led by the Government of India** and implemented in collaboration with the UN Systems.

Its key objectives are:

- 1) Promote **multilateralism and shared prosperity** in global South. (**South-South Cooperation**)
- 2) The Fund **supports Southern-owned and -led, demand-driven and transformational sustainable development** projects across the developing world, with a focus on **least developed countries and Small Island developing States**.
- 3) Its thematic reach spans all 17 Sustainable Development Goals (SDGs).
- 4) **The Government of India has committed USD150 million over 10 years to the India-UN Fund.**

Statement 2 is correct: One of the key objectives of the fund is to **promote multilateralism and shared prosperity in the global South**.

Statement 3 is correct: **UNICEF, UNESCO and WHO** are among the implementing partners of the Fund. The fund has 12 UN entities as implementing partners:

12 UN entities as implementing partners

Q.18) Which of the following was the main reason for Ahmad Shah Abdali's' invasion into India which resulted in the third battle of Panipat?

- He wanted to establish a powerful Afghan kingdom in India.
- He wanted to avenge the expulsion of his agent from Delhi by the Marathas.
- The governor of Jullundhar Adina Beg Khan invited Abdali to invade Punjab.
- He wanted to avenge the Mughal empire's attempt to capture Punjab which was earlier ceded to him by Mughals.

Ans) b

Exp) Option b is the correct answer.

Ahmad Shah Abdali also known as Ahmad Shah Durrani who was elected the **successor of Nadir Shah** after the latter's death in 1747, invaded India several times between 1748 and 1767.

Option a is incorrect: Nadir Shah had only one aim – loot and scoot. The Afghans under Ahmed Shah Abdali had a mixed approach. They desired to rule only the areas adjoining their homeland and east of Indus focussed on revenue collection and loot. Ahmad Shah Abdali repeatedly invaded India however **he did not establish a kingdom in India and even they could not retain the Punjab which they lost to the Sikhs chiefs.**

Option b is correct: In 1757, Abdali captured Delhi and he appointed the Rohila chief, **Najib-ud-Daula, as Mir Bakhshi of the empire**, who was to act as personal **supreme agent of Abdali**. In 1758, **Najib-ud-Daula was expelled from Delhi by the Maratha chief, Raghunath Rao**, who also captured Punjab. **In 1759, Ahmad Shah Abdali returned to India to take revenge on the Marathas** and the result was the third **Battle of Panipat in 1761**, in which Abdali defeated the Marathas.

Option c is incorrect: Adina Mirza Beg Khan was a Punjabi General and administrator who served as the last governor of Punjab of the Mughal Empire. **Threatened by Jahan Khan (he was the guardian of Abdalis 11-year-old son who was the governor of Lahore), Adina Beg invited the Marathas** to invade Punjab. A combined army of Marathas, Adina and the Sikhs first captured Sirhind in 1758, and then raced to capture Lahore, thus Afghans were chased beyond the Indus.

Option d is incorrect: Ahmad Shah Abdali continuously harassed the Mughals who tried to buy peace in **1751-52 by ceding Punjab to him**. However, Abdali wanted to avenge **Marathas** because they **under their chief, Raghunath Rao captured Punjab**.

Q.19) With reference to the Nizam Ul Mulk, the founder of Hyderabad state during the later phase of Mughal empire, consider the following statements:

1. He never openly declared his independence from the Mughal empire.
2. He reorganised the state finances by transferring large amounts of jagir lands into Khalisa land.
3. He followed a policy of religious tolerance towards Hindus.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 only
- c) 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

In 1724 Nizam ul Mulk established autonomous rule over the Deccan region and started what came to be known as the Asaf Jahi dynasty. Subsequent rulers retained the title Nizam ul-Mulk and were referred to as Nizams of Hyderabad.

Statement 1 is correct: Nizam ul Mulk never openly declared his independence from the Mughal empire but in practice he acted like an independent ruler. He waged wars and concluded peace without any reference to the empire in Delhi.

Statement 2 is incorrect: It is Murshi Quli khan, a ruler of Bengal who transformed the large amount of jagir land into Khalisa land and introduced the system of revenue farming in Bengal. Nizam ul Mulk continued to offer jagirs and he tried to get rid of corruption from the revenue system.

Statement 3 is correct: He followed a policy of religious tolerance towards Hindus. For example, a Hindu Puran Chand was his Dewan. He tried to consolidate his power by establishing an orderly administration in his state.

Q.20) With reference to various disputed island across the world, consider the following pairs:

Islands	Disputed region between
1. Kuril Island	Japan and Russia
2. Islas Malvinas	France and Argentina
3. Spratly Island	South Korea and Vietnam
4. Senkaku Island	China and North Korea

How many pair/s given above is/are correctly matched?

- a) only one pair
- b) only two pairs
- c) only three pairs
- d) All the four pairs

Ans) a

Exp) Option a is the correct answer.

Pair 1 is correct: Kuril Island is subject to dispute between Russia and Japan. While Russia claims this region as theirs which they mention as South Kuril Islands, Japan calls it their region and named it as

Northern territories. **Currently the region is controlled by Russia** and Japan claims such region is illegally occupied by Russia.,

Pair 2 is incorrect: The claims over Islas Malvinas also known as Falkland Island have been laid by the United Kingdom and Argentina. It is located in the south Atlantic Ocean.

Pair 3 is incorrect: Spratly islands are a disputed island in the South China Sea. It lies off the coasts of the Philippines, Malaysia, and Vietnam. Presently most of the islands' region is controlled by China and other countries in the region including Vietnam dispute China's claim over this region. South Korea is not included in this dispute.

Pair 4 is incorrect: Senkaku islands is a region of dispute between China and Japan (not North Korea).

The Senkaku Islands are a group of uninhabited islands in the East China Sea, currently administered by Japan. However recently **China is trying to extend its influence over this region in conflict with Japan.**

Q.21) Banjaras during the medieval period of Indian history were generally:

- a) agriculturists
- b) warriors
- c) weavers
- d) Traders

Ans) d

Exp) Option d is the correct answer.

Option d is correct: The two major business communities in medieval India were the Banjaras (long-distance transporters) and Baniyas (village and town merchants). **Banjaras during medieval period trading groups that moved from one place to another in buying and selling goods.** The Banjaras combined pastoralism and the carrying trade. Their role in Indian agrarian commerce was extremely important. The basis for the trade and, indeed, for the existence of the Banjaras lay in conditions of inland transport. Goods were carried on boats and carts, and by camels and bullocks. They could travel with their herds over long distances. They had to move in large groups for safety, and were kept together by strong clan ties and subordination to headmen

Q.22) With reference to the Maratha administration in medieval India, the Sarkarkuns were:

- a) type of revenue settlements
- b) the revenue collectors
- c) the head of the prant
- d) the resident cultivators with hereditary rights of occupancy

Ans) c

Exp) Option c is the correct answer.

Option a is incorrect: Under Marathas, **the tankha is a type of revenue settlement.** It is a permanent standard assessment for each village.

Option b is incorrect: The revenue collectors were commonly designated as **kamavisdars or mamlatdars.**

Option c is correct: - The Maratha government divided their kingdom into three Prants and appointed an officer to head the prant known as sarkarkun, He was the officer of the level of the council of ministers of Chhatrapati Shivaji.

Option d is incorrect: Under the Maratha empire, there were two types of tenants first one is a **Mirasdars** a resident cultivator with **hereditary rights of occupancy** and a second one is **Uparis**, a temporary cultivator.

Q.23) Consider the following statements with reference to the socio-economic conditions during the 18th century Maratha reign:

1. Widow remarriage was quite common among non-brahmins of Maratha region.
2. The trade activity faced a setback owing to frequent wars.
3. The evil of dowry was relatively less pronounced in the region of Maharashtra compared to Rajput states and Bengal.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Option 1 is correct: During this period of 18th century, the Widows belonging to higher castes were not allowed to remarry, though in some regions and in some castes it was common. For example, among the **non-brahmins of Maharashtra region (Maratha region), Jats and people of hill region of North, widow remarriage was quite common.**

Option 2 is correct: The trade activity during this period faced a setback owing the frequent wars and struggle between the different rulers. For instance, **Nadir Shah and Ahmad Shah Abdali invasion, Third Battle of Panipat** all disrupted the trade activities both within and outside the country.

Option 3 is correct: The evil of dowry was more pronounced in the region of Rajput states and Bengal. However, in the **region of Maharashtra it was curbed to the extent by the efforts of Peshwas of Marathas.**

Q.24) Several foreign travellers from Persia and Europe visited the city of Vijayanagar in the fifteenth and sixteenth centuries. In this context, arrange the following foreign travellers in chronological order of their visit to the Kingdom?

1. Domingo Paes.
2. Duarte Barbosa.
3. Fernao Nunez.
4. Abdur Razzaq.

Select the correct answer using the code given below:

- a) 1 - 4 - 3 - 2
- b) 4 - 2 - 1 - 3
- c) 2 - 3 - 4 - 1
- d) 4 - 3 - 2 - 1

Ans) b

Exp) Option b is the correct answer.

The correct Chronological order is **Abdur Razzaq -- Duarte Barbosa -- Domingo Paes -- Fernao Nunez**. Several foreign travellers from Persia and Europe visited the city of Vijayanagar in the fifteenth and sixteenth centuries. They were impressed with the city and gave their accounts on administration, layout, bazaars, temples, and palaces. Some of the travellers who travelled to Vijayanagar are as follows:

4) Abdur Razzaq visited the city in **1443**. He was an ambassador of Shah Rukh, the Timurid dynasty ruler of Persia.

2) Duarte Barbosa made an account of Vijayanagar during the period **1504 A.D to 1514 A.D**.

1) Domingo Paes was a contemporary of **Krishnadevaraya (1509–29)**. His account is dated around **1520–22 A.D**. According to Paes, Vijayanagar was as large as Rome and the best-provided city of the world.

3) Fernao Nunez was a contemporary of **Achyutadevaraya's period (1529–42)**. His account is dated around **1535–37 A.D**. He explains the rise of Vijayanagar and its foundation, reference to Muhammad bin Tughlaq, and the establishment of the city of Vijayanagar.

Source: <https://egyankosh.ac.in/bitstream/123456789/44425/1/Unit-20.pdf>

Q.25) With reference to the Investment Incentive Agreement (IIA), consider the following statements:

1. It is an initiative started by 'Invest India' agency to promote foreign direct investment into the country.
2. Development Finance Corporation of the United States of America is closely associated with this agreement.
3. The agreement may provide financial support required for renewable energy in India.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Recently, the Investment Incentive Agreement was signed between the Government of the **United States of America** and the Government of **India**.

Statement 1 is incorrect: Investment initiative Agreement is an initiative of the United States of America and Government of India to secure adequate investment support for India. Thus, it is not an initiative of **Invest India** which is a **National Investment Promotion and Facilitation Agency** working in the area of investment.

Statement 2 is correct: This Agreement is the legal requirement for Developmental Finance Corporation (DFC) of USA to continue providing investment support in India. DFC or their predecessor agencies have been active in India **since 1974** and have so far provided investment support worth \$5.8 billion. Hence this **agreement and DFC have close association.**

Statement 3 is correct: Under the DFC programs, the US provides fiscal support to emerging economies for healthcare, renewable energy, clean energy, thus it can increase the financial support required for renewable energy in India. Also, it provides fiscal support to infrastructure, and technology in lower-income and middle-income countries.

Q.26) Which of the following are the possible reasons for the disintegration of the Bahmani kingdom?

1. Lack of definite law of succession.
2. Clash of interests between Indian and foreign Muslim nobles in Bahmani Kingdom.
3. Policy of war and enmity towards their neighboring states.
4. Mahmud Gawan's execution proved to be disastrous for Kingdom
5. Defeat of Bahmani sultanate in the battle of Talikota.

Select the correct answer using the code given below:

- a) 2, 3 and 4 only
- b) 2, 3, 4 and 5 only
- c) 1, 2, 3 and 4 only
- d) 1, 3, 4 and 5 only

Ans) c

Exp) Option c is the correct answer.

The Bahmani Kingdom made its appearance on the political horizon of Deccan due to the revolts towards the end of the reign of Muhammad bin Tughlaq. The reasons that led to the disintegration of Bahmani kingdom are as follows:

Statement 1 is correct: In Bahmani Kingdom, there was a lack of definite law of succession. After the death of a ruler, there were several claimants to the throne. There were tussles for rulership. This proved to be one of the reasons for the disintegration of the kingdom.

Statement 2 is correct: The Bahmani Kingdom was founded by Muslim Amirs who had come from Persia and Turkey and settled in India. The **original inhabitants of the Deccan who had embraced Islam wanted an equal share in administration. Thus, there was a clash of interest between Indian Muslims and foreign Muslims, which eventually led to the disintegration of empire.**

Statement 3 is correct: The Bahmani Sultans had a defective foreign policy. **They followed a policy of war and enmity towards all their neighboring states** like Malwa, Khandesh, Gujarat, Telangana, Vijayanagar, etc., which proved to be one of the causes for the disintegration of the Bahmani kingdom.

Statement 4 is correct: Mahmud Gawan was the Prime minister under the rule of the Bahmani sultanate. Under the sultanate there were two types of noblemen, The Deccanis (people of the local origin) and the Afaqis (people of foreign origin). There were conflicts and arguments between the two groups all the time. Mahmud was an Afaqi, hence he had to face many challenges. In a web of plots that were made to dishonor him by the Deccanis, the nobles forged important documents from him. When the incident was reported to the sultan, he ordered him to be executed in April 1481 under the influence of alcohol. **Mahmud Gawan's execution** proved to be disastrous for the Sultanate. Several of the **foreign nobles** who were considered the strongest pillars of the state **began to leave for their provinces, which degraded the administration processes and became one of the reasons for disintegration of the Sultanate.**

Statement 5 is incorrect: Bahmani kingdom was already disintegrated at the time of the battle of talikota. The battle was fought between the successor states of the Bahmani kingdom (Bijapur, Ahmadnagar, Bidar, and Golconda) on one side and the Vijayanagar kingdom on the other side. Vijayanagar was badly defeated in the battle of Talikota or Rakshashi-Tangadi in 1565.

Source: TN SCERT-CH 12- Bahmani and Vijayanagar kingdom;

Q.27) Sarrafs were among the important personality in the history of medieval India. In this context, which option best describes the term, Sarrafs?

- a) They were the horse merchants in Vijayanagar Empire.
- b) The maintenance of law and order was the responsibility of the Sarrafs.
- c) They were the peasants, who owned large areas of agricultural land.
- d) They performed three distinct functions as money changers, bankers, and as traders.

Ans) d

Exp) Option d is the correct answer.

Sarrafs are the personnel who played a significant role in the trade and economy of the state. **They performed three distinct functions: (1) as money-changers; (2) as bankers, and (3) as traders of gold, silver, and jewellery.** As money changers, they were considered as experts in judging the metallic purity of coins as well as their weight. They also determined their current exchange rate. They act as bankers to make remittances of money and issue letters of exchange. They would receive deposits and give loans on interest. They used to issue bills of exchange or hundis.

Options a is incorrect: Local communities of horse merchants were known as kudirai chettis (not the Sarrafs) in Vijayanagar empire.

Option b and c are incorrect: The maintenance of law and order and providing peace and security were important for a better business environment. This was the responsibility of the kotwal and his staff in the towns. **Sarrafs were not peasants.**

Source: <https://egyankosh.ac.in/bitstream/123456789/20252/1/Unit-24.pdf>

Q.28) Which of the following statements is/are correct regarding the Vakataka rulers?

1. Many of the caves of Ajanta were built by individual donations from wealthy patrons connected to the Vakataka kings.
2. Copper plate land grants were issued at a large scale by the Vakataka rulers.

Select the correct answer using the code given below:

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

The Maharashtra plateau soon came to be dominated by the Vakatakas. They began as minor kings from the middle of the 3rd century CE, but rapidly gained power and extended their sway over most of Maharashtra and adjoining parts of Madhya Pradesh.

Statement 1 is correct: The first caves at Ajanta were made between the 2nd century BCE and 1st century CE. The Early caves at Ajanta were made through donations made by upasakas, monks, traders, and ordinary people. **The second phase is dated to the 5th century CE. The caves were made through individual donations from wealthy patrons connected to the Vakataka kings. There are twenty-five caves made in this period.**

Statement 2 is correct: The practice of granting lands to Brahmanas started in India, it became common during the Gupta/Vakataka period. Their charities were inscribed on copper plates or stones. **Many Copper plate land grants were issued by the Vakataka rulers during their rule.**

Q.29) Consider the following statements with reference to the Vakataka kingdom:

1. Vakataka rulers claimed to be of Brahmana origin.
2. The Vakatakas succeeded Mauryas in the Maharashtra plateau region.
3. They had close political ties and matrimonial relations with the Guptas.

4. Pravarasena-I was the most famous Vakataka ruler, who alone had the title of Samrat among Vakatakas. Which of the statements given above are correct?

- a) 2, 3, and 4 only
- b) 1 and 2 only
- c) 1, 3, and 4 only
- d) 1, 2, and 3 only

Ans) c

Exp) Option c is the correct answer.

The Vakatakas were a major ruling family of the period from the mid-3rd century to the 5th century CE.

Statement 1 is correct: The Ajanta cave inscription of Harisena claims Brahmana origins for the Vakatakas and the founder Vindhyaśakti is called a dvija. The Vakatakas, who, according to K.M. Shrimali had a 'tribal' origin, also seem to be Bhargavangirasa Brahmanas of the Visnuvridha gotra.

Statement 2 is incorrect: After the decline of Satavahanas, the political control of Deccan under one dynasty came to an end. Several kingdoms arose in different regions as successors of the Satavahanas. The **Maharashtra plateau soon came to be dominated by the Vakatakas**. They began as minor kings from the last quarter of the 3rd century CE, but rapidly gained power and extended their sway over most of Maharashtra and adjoining parts of Madhya Pradesh.

Statement 3 is correct: The Vakatakas were a major ruling family of the period from the fourth to the sixth centuries AD, who were directly influenced by the changing political configuration in north India under the Guptas. **They not only had close political ties and matrimonial relations with the Guptas but also for the first time introduced Gupta political structures in peninsular India.**

Statement 4 is correct: There were two lines of Vakataka kings ruling in different areas. The main line ruled from eastern Maharashtra (the Vidarbha region), while a collateral branch called the Basin branch of Vakatakas ruled in southern Maharashtra. **The most famous Vakataka king was Pravarasena-I of the main line, who alone had the title of Samrat among the Vakatakas**. He performed several Vedic sacrifices and issued many land grants to brahmanas.

Q.30) With reference to the recently signed Australia-India water security initiative (AIWASI), consider the following statements:

- 1. It is a part of Australia's South Asia Water Security Initiative (SAWASI).
- 2. It aims to create at least 100 water secure cities by 2030.
- 3. It proposes to implement stormwater treatment and reuse systems to improve water security.
- 4. It also aims to provide safe and adequate drinking water through individual household tap connections to all households in rural India.

Which of the statements given above are correct?

- a) 1, 2 and 4 only
- b) 1 and 3 only
- c) 1, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) b

Exp) Option b is the correct answer.

Recently, India and Australia signed an initiative called **Australia India water Security initiative (AIWASI)**.

Statement 1 is correct: Australia India water Security initiative (AIWASI) is a part of South Asia Water Security Initiative (SAWASI) of Department of Foreign Affairs and Trade (DFAT), Australia. It aims at strengthening South Asian city-level water governance by (a) **supporting governments** to provide **urban water services** and (b) **improving water security** for disadvantaged communities in India and Pakistan.

Statement 2 is incorrect: There is a component of the project known as **AIWASI CDP (Community level Demonstration Project)**. Its goal is to improve **water security for** two disadvantaged communities in India by implementing pilot **Water Sensitive Urban Design (WSUD) solutions** through participatory engagement and joint accountability mechanisms. There is **not any defined goal of achieving at least 100 water secure cities under this initiative**.

Statement 3 is correct: **Water Sensitive Urban Design (WSUD) solutions** proposes to **improve water security by stormwater treatment and reuse systems**, decentralised nature-based sewage, community-based rainwater harvesting, groundwater recharge systems, and innovative circular solutions at WASH stations etc.

Statement 4 is incorrect: Providing safe and adequate drinking water through individual household tap connections to all households in rural India is **an aim of the Jal Jeevan mission (not an aim of AIWASI)**. Jal Jeevan mission aims to provide **safe and adequate drinking water** through individual household tap connections by 2024 to **all households in rural India**. On the other hand, the scope of the AIWASI initiative largely restricts to Cities.

Q.31) Consider the following Bhakti Saints:

1. Dadu Dayal
2. Guru Nanak
3. Tyagaraja

Who among the above was/were preaching when the Lodi dynasty fell and Babur took over?

- a) 1 and 3 only
- b) 2 only
- c) 2 and 3 only
- d) 1 and 2 only

Ans) b

Exp) Option b is the correct answer.

The Lodhi dynasty fell in 1526 when Ibrahim Lodhi was defeated by Babur at Battle. of Panipat.

Option 1 is incorrect: Dadu Dayal was a religious reformer from Gujarat, born in 1544.

Option 2 is correct: Guru Nanak (1469-1539) was preaching when Battle of Panipat took place i.e., when Babur took over by defeating Lodhi dynasty in first battle of Panipat.

Option 3 is incorrect: Tyagaraja, a renowned composer of Carnatic Music was born in 1767.

Source: UPSC PRELIMS 2013

Q.32) Consider the following statements regarding the Maratha Confederacy:

1. It was started by Peshwa Madhavrao I.
2. The regions under confederacy was to be ruled in the name of Peshwa.

3. The death of Madhavrao I in 1772 weakened the control of the Peshwas over the confederacy.

Which of the statements given above are **incorrect**?

- 1 and 2 only
- 1 and 3 only
- 2 and 3 only
- 1, 2, and 3

Ans) a

Exp) Option a is the correct answer.

Statement 1 is incorrect: Bajirao I (1720-40) had started a confederacy of prominent Maratha chiefs to manage the rapidly expanding Maratha power, and to some extent appease the kshatriya section of the Marathas as Peshwas were brahmins.

Statement 2 is incorrect: Under the arrangement of the Maratha confederacy, each prominent family under the chief was assigned a sphere of influence which he was supposed to conquer and rule. **It was to be ruled in the name of the Maratha king and not in the name of Peshwa.** The Maratha families which emerged prominent were (i) the Gaekwad of Baroda, (ii) the Bhonsle of Nagpur, (iii) the Holkars of Indore, (iv) the Sindhias of Gwalior, and (v) the Peshwa of Poona.

Statement 3 is correct: The confederacy, under Bajirao I to Madhavrao I worked cordially but the Third Battle of Panipat (1761) changed everything. **The defeat at Panipat and later the death of the young Peshwa, Madhavrao I, in 1772, weakened the control of the Peshwas over the confederacy.** Thus, in the second half of the 18th century C.E., the control of Peshwa was weakened over the confederacy.

Source: Pg 101, ch 5, Spectrum.

Q.33) Consider the following statements regarding the Treaty of Salbai:

- This treaty was the outcome of Second Anglo-Maratha war.
- Under this Treaty, the region of Salsette was to be given to Marathas.
- It provided maintenance allowance to Raghunath Rao, which was to be paid by Peshwa.

Which of the statements given above is/are correct?

- 1 and 2 only
- 3 only
- 2 and 3 only
- 1, 2, and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: Treaty of Salbai was signed in May 1782 which ended the First Anglo-Maratha war (not the second Anglo-Maratha war). Mahadji Sindhia was to be the mutual guarantor for the proper observance of the terms of the treaty. The treaty guaranteed peace between the two sides for twenty years.

Statement 2 is incorrect: Under Treaty of Salbai, the region of Salsette was to continue in the possession of the English. The territory conquered since the Treaty of Purandhar (1776) including Bassein was to be restored to the Marathas. The English should enjoy the privileges at trade as before. The Peshwa and the English should undertake that their several allies should remain at peace with one another.

Statement 3 is correct: The main provisions of the Treaty of Salbai are as follows:

- The English retained the areas of Salsette and Bharuch,
- Raghunath Rao was pensioned off and the pension/maintenance allowance to him was to be provided by Peshwa.

(3) Madhavrao was acknowledged as rightful Peshwa by British. etc.

SFG 2023 | LEVEL 1 | Test #34 – Solutions | ForumIAS

Q.34) Consider the following statements regarding the military setup of the Maratha Empire:

1. There was absence of Navy in Maratha military administration.
2. Sarnobat was the chief of infantry in Maratha army.
3. During the rule of Shivaji Maharaj, the soldiers were paid in cash.
4. Muslim soldiers were not recruited in the Maratha army.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1, 2, and 3 only
- c) 3 and 4 only
- d) 2 and 3 only

Ans) d

Exp) Option d is the correct answer.

Statements 1 is incorrect: After the conquest of Konkan Shivaji built a strong navy. His fleet was equipped with ghurabs (gunboats) and gallivats (row boats with 2 masts and 40-50 oars). His fleet was mainly manned by the Koli tribe of Malabar coast. Robert Orme mentions 57 fleets of Shivaji under the command of Admiral Dariya Sarang and Mai Naik Bhandari. Daulat Khan was another admiral of Shivaji's navy. So, the Navy was not absent in Maratha Military.

Statement 2 is correct: There were two main divisions of the army of Shivaji Maharaj: infantry and cavalry. In the infantry there were officers such as the Havildar, Jumledar, etc. **The chief of the infantry was called Sarnobat.** He was the highest officer in the infantry.

Statement 3 is correct: **During the rule of Shivaji Maharaj, the soldiers were paid in cash.** The transformation of the small guerrilla bands into a professional standing army of the Maratha state required more cash at the disposal of the treasury to feed and supply the huge army.

Statement 4 is incorrect: **Muslim soldiers were recruited in the Maratha army.** The hill-forts in the Deccan states were controlled by the Marathas though the forts of more importance were manned by Muslim qiladars. Many Muslim generals served the Maratha kingdom.

Q.35) With reference to Partners in Blue Pacific (PBP), consider the following statements:

1. It has been launched by the Group of Seven (G7) countries to enhance cooperation with small island nations of pacific region.
2. India is a member of this initiative.
3. It aims to enhance cooperation in the areas of climate crisis, connectivity and transportation.

Which of the statement/s given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Partnership in Blue Pacific is a five-nation **informal mechanism to support Pacific islands** and to boost diplomatic, economic ties in the region. It aims to elevate Pacific regionalism and forge stronger ties with the Pacific Islands countries.

Statement 1 is incorrect: **Partners in Blue Pacific (PBP)** was launched by the **USA, Australia, New Zealand, Japan and the United Kingdom** to counter China's influence in the pacific region. Amid China's aggressive

push to increase its Pacific sphere of influence, the US and its allies have launched this initiative for **securing effective and efficient cooperation with the region's small island nations.**

On the other hand, **G7 announced "Partnership for Global Infrastructure and Investment (PGII)" to rival China's Belt and Road Initiative** by promising to raise \$600 billion to fund development projects in low and middle-income countries.

Statement 2 is incorrect: India is not a member of this initiative. Before launching the PBP, the US and its partners started the **Indo-Pacific Economic Framework for Prosperity (IPEF) a trade-boosting play** in the region with **13 nations- i.e.,** Australia, Brunei, India, Indonesia, Japan, Malaysia, New Zealand, the Philippines, Singapore, South Korea, Thailand, Fiji and Vietnam. So, India is a part of IPEF but not of the PBP.

Statement 3 is correct: This initiative aims to **enhance cooperation between countries in the area of climate crisis, connectivity and transportation,** maritime security and protection, health, prosperity, and education.

Q.36) Which of the following are the reasons for the defeat of Marathas in the third battle of Panipat?

1. The Marathas could not find allies in the northern India.
2. The Marathas used Guerilla method of warfare in the plains of Panipat, which proved to be disastrous.
3. Marathas fought a defensive war as they were depended too much on the artillery.

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2, and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is correct: The Marathas could not find allies among the northern powers, as they had already alienated from the Nawab of Oudh, the Sikh and Jat chiefs, and gained the distrust of the Rajputs. Whereas, Abdali formed alliance with Najib-ud-Daulah of Rohilkhand and Shuja-ud-Daulah of Oudh.

Statement 2 is incorrect: The Marathas did not use their guerrilla method of warfare. The Terrain of the Panipat was very much different from the Hills and forts of Maharashtra, therefore they could not use their Guerrilla technique and used the conventional war method which proved to be fatal for them.

Statement 3 is correct: Marathas depended too much on the artillery under Ibrahim Gardi and therefore, fought a defensive battle due to less mobility of heavy artillery system. Abdali had better cavalry than the Marathas and he got benefitted by fast mobility of cavalry.

Source: Pg 70, CH 15, volume II, TN SCERT

Q.37) Consider the following statements regarding the Taxation system under the Maratha empire:

1. 'Patdam' was a tax imposed on industrial units during the reign of Peshwas.
 2. Chauth was imposed on neighbouring states to protect their territory from being invaded by Marathas.
- Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: 'Patdam' was a tax imposed on the remarriages of widows (not the tax on industrial units) during the reign of Peshwas in Maratha empire.

Statement 2 is correct: The Marathas claimed Chauth (i.e., 1/4th of the total revenue) from the neighboring chieftains whose territories did not form part of their homeland/swarajya. **Chauth** was a kind of tax that the neighbouring kingdoms have to pay to protect their territory from being invaded and conquered by Marathas.

Q.38) With reference to the relation between Maratha and Mughal Empire, consider the following statements:

1. The Twenty-Seven Years War was a set of wars fought between the Mughal Empire and the Maratha Empire.
2. The Mughals under Jaisingh defeated Marathas in the Battle of Purandar.
3. The Ahadnama between Mughals and Maratha gave Marathas the right to collect taxes from northwest provinces.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

The Mughal-Maratha relations can be divided into four phases: (i) 1615-1664; (ii) 1664-1667; (iii) 1667-1680 and (iv) 1680-1707.

Statement 1 is correct. The **Mughal-Maratha Wars**, sometimes referred to as a whole as the **Deccan War, the Maratha War of Independence, or the Twenty-Seven Years' War** were a set of wars fought between the Mughal Empire and the Maratha Empire from **1680 to 1707**. This war was begun in 1680 by the Mughal Emperor Aurangzeb's invasion of the Maratha enclave in Bijapur, which was established by the Maratha leader Shivaji. After the death of Aurangzeb, Marathas defeated the Mughals in Delhi and Bhopal, and extended their empire up to Peshawar by 1758.

Statement 2 is correct. The **Battle of Purandar** was fought between the Mughal Empire and Maratha Empire in **1665**. The Mughal Emperor, Aurangzeb, sent his generals **Dilir Khan and Jai Singh** to besiege Shivaji's fortress at Purandar. **They succeeded in defeating Shivaji at Purandar (1665)**. Jai Singh proposed for the Mughal-Maratha alliance. By the resultant treaty of Purandar (1665), Shivaji surrendered 23 out of 35 forts, worth annual income of 4 lakhs in the Nizam Shahi territory and 12 others to forts including Rajgarh each yielding 1 lakh Hunns annually.

Statement 3 is correct. The **treaty of protection** was signed between Mughal king (through Safar Jung) and Marathas at Kannauj and is popularly known as **Ahadnama**, which gave Marathas the right to collect taxes from northwest provinces like Multan and Sindh and gave them the Subhedari of provinces like Agra and Ajmer.

Q.39) With reference to the administrative System of Shivaji, consider the following statements:

1. He used 'Kathi' system of land measurement for revenue assessment in his kingdom.
2. The offices of Ashta Pradhan appointed by Shivaji were made non-hereditary in nature.
3. He replaced the Jagirdari System with the Ryotwari System in his empire.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2, and 3

Ans) d

Exp) Option d is the correct answer.

Shivaji Bhonsle, also known as Chhatrapati Shivaji Maharaj, was an Indian warrior king and a member of the Bhonsle Maratha clan. His valor and great administrative skills, Shivaji carved out an enclave from the declining Adilshahi sultanate of Bijapur that eventually became the genesis of the Maratha Empire.

Statement 1 is correct: Shivaji's revenue system was based on the Kathi system of Malik Amber (regent of the Nizamshahi dynasty of Ahmednagar from 1607 to 1626). According to this system, every piece of land was measured by Kathi (Rod or measuring stick) for the assessment of revenue. The length of this kathi was five cubits and five closed fists. The Kathi was later called Shivkathi after Shivaji.

Statement 2 is correct. The Shivaji administration was divided into eight departments headed by ministers who are called 'Ashta pradhan'. The eight ministers were- Peshwa, Sari-Naubat, Majumdar, Waqai navis, Surnavis or Chitnis, Dabir, Nyayadhish, Pandit Rao. Under Shivaji these offices were **neither hereditary nor permanent**. They held the office at the pleasure of the king. They were also frequently transferred.

Statement 3 is correct. Shivaji's success lay in his ability to mobilize the peasants in his area. He **abolished the Jagirdari system and replaced it with a land revenue system similar to the Ryotwari system** and established direct contact with the peasants thus freeing them from exploitation. (Jagirdari system is a form of land tenancy developed in India during the early 13th century in which the collection of the revenues of an estate and the power of governing it were bestowed on an official of the state whereas in Ryotwari System the peasants or cultivators were regarded as the owners of the land).

Knowledge Base:

The Ashtapradhan was not a creation of Shivaji. Many of these officers like Peshwa, Majumdar, Waqai navis, Dabir and Surnavis had existed under the Deccani rulers also. All the members of the Ashta pradhan except Pandit Rao and Nyayadhish were asked to lead military campaigns.

The functions of the Ashtapradhan were-

- 1) Peshwa-looked after the finances and general administration.
- 2) Sari-Naubat- was the Senapati.
- 3) Majumdar-looked after the accounts.
- 4) Waqai-navis-looked after the intelligence, post and household affairs.
- 5) Surnavis or Chitnis-looked after official correspondence
- 6) Dabir-looked after foreign affairs
- 7) Nyayadhish-looked after justice.
- 8) Pandit Rao-looked after ecclesiastical affairs.

Q.40) With reference to the Group of Twenty (G20) organisation, consider the following statements:

1. The theme of upcoming G20 summit “Vasudhaiva Kutumbakam” has been taken from Maha Upanishad.
2. ‘Sherpas’ are governors of the central bank representing particular countries in the G20 summit.
3. G20 in association with World Bank has launched Stolen asset recovery (StAR) initiative to put an end to safe havens for corrupt funds.

Which of the statement/s given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 1 and 3 only
- d) 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

The Group of Twenty (G20) comprises **19 countries** (Argentina, Australia, Brazil, Canada, China, France, Germany, India, Indonesia, Italy, Japan, Republic of Korea, Mexico, Russia, Saudi Arabia, South Africa, Türkiye, United Kingdom and United States) and **the European Union**.

The G20 members represent around 85% of the global GDP, over 75% of the global trade, and about two-thirds of the world population.

Statement 1 is correct: The theme of India’s G20 Presidency - Vasudhaiva Kutumbakam or One Earth· One Family · One Future - is drawn from the Maha Upanishad. Essentially, the theme affirms the **value of all life** - human, animal, plant, and microorganisms and their interconnectedness.

Statement 2 is incorrect: The G20 consists of two parallel tracks: the Finance Track and the Sherpa Track. The Sherpa side is coordinated by the **Sherpas who are personal emissaries of the Leaders. Finance Track is led by Finance Ministers and Central Bank Governors** of the member countries.

Statement 3 is incorrect: Stolen asset recovery (StAR) was launched by the **World Bank and the United Nations Office on Drugs and Crime (UNODC) (not by G20)** to facilitate the return of stolen assets and put an end to safe havens for corrupt funds. **G20 also works in the area of anti-corruption and Anti-Corruption Working Group (ACWG)** established in 2010 and it reports to G20 Leaders on anti-corruption.

Q.41) Who of the following founded a new city on the south bank of a tributary to river Krishna and undertook to rule his new kingdom as the agent of a deity to whom all the land south of the river Krishna was supposed to belong?

- a) Amoghavarsha I
- b) Ballala II
- c) Harihara I
- d) Prataparudra II

Ans) c

Exp) Option c is the correct answer.

Harihara-I was the founder the Vijaynagara city and the Vijayanagara Empire in 1336. According to tradition and epigraphic evidence two brothers, Harihara (Harihara-I) and Bukka, founded the Vijayanagar Empire in 1336 in fertile area of Tungabhadra (A tributary of Krishna River) Doab.

Source: UPSC PRELIMS 2015

Q.42) Which of the following factors are responsible for the rise of Marathas in the 16th and 17th centuries?

1. Inspirational influence of religious and social leaders
2. Stable political condition of the South India
3. Geographical Location of the kingdom and its physical features
4. Easily defensible rock forts

Select the correct answer using the code given below:

- a) 1, 2 and 3 only
- b) 3 and 4 only
- c) 1, 3 and 4 only
- d) 1, 2 and 4 only

Ans) c

Exp) Option c is the correct answer.

The rise of the Marathas in the seventeenth century is an important and fascinating event in the history of India. There were several factors that led to the rise of the Maratha Kingdom.

Statement 1 is correct. Several prominent leaders in the religious and social fields of Maharashtra like Tuka Ram, Ram Das, Vaman Pandit and Eknath, inspired the people to unite by preaching faith and Bhakti in one God and by condemning the caste system which had divided the society. Hence the **inspirational influence of religious and social leaders** became a reason for the rise of the Maratha empire.

Statement 2 is incorrect. The Muslim kingdoms in the South were in the process of disintegration. The political situation was quite favourable for the rise of the Marathas. Hence the **Unstable political condition of the South** gave the Maratha rulers the opportunity to rise.

Statement 3 is correct. The location of Maharashtra and its physical features helped in the rise of Maratha power. The large part of Maratha land is a plateau where the Marathas had to struggle hard for their existence. This made the Marathas courageous and hard working. Hence the **geographical conditions** favoured the rise of the Maratha empire.

Statement 4 is correct. The broken ranges of the hills provided natural forts and the people were inspired to regard these forts as their mother—the seats of their protection. Hence the **ready-made and easily defensible rock forts** became an edge for the Maratha empire to lead on.

Q.43) Arrange the following historical battles in correct chronological order:

1. Battle of Sangamner
2. Battle of Sinhgad (Sinhgad)
3. Battle of Kalyan
4. Battle of Pratapgad

Select the correct option using the codes given below.

- a) 1-4-2-3
- b) 4-2-3-1
- c) 1-2-3-4

d) 4-2-1-3

Ans) d

Exp) Option d is the correct answer.

The correct chronological order in which battles were fought in- **Battle of Pratapgad, Battle of Sinhgad, Battle of Sangamner and Battle of Kalyan, i.e., 4-2-1-3.**

Option 4: The Battle of Pratapgad was fought on **November 10, 1659**, at the fort of Pratapgad near the town of Satara, Maharashtra between the forces of the Maratha king Chhatrapati **Shivaji Maharaj and the Adil-Shahi general Afzal Khan**. The battle turned out major defeat for Afzal Khan and was Maratha's first major victory against the Mughals that led to the final establishment of the Maratha Empire.

Option 2: The Battle of Sinhgad was fought on **4 February, 1670** on the fort of Sinhgad near the city of Pune, Maharashtra, between **Tanaji Malusare**, a commander of Maratha ruler Shivaji Maharaj and **Udaybhan Rathod**, fort keeper under Jai Singh I who was a Mughal Army Chief. In this battle Tanaji Malusare died and Shivaji Maharaj renamed the fort of Kondhana as Sinhgad **Fort (Lion's Fort) in his remembrance.**

Option 1: The Battle of Sangamner was fought between the Mughal Empire and Maratha Empire in **1679**. This was the **last battle in which the Maratha King Shivaji fought.**

Option 3: The Battle of Kalyan was fought **between 1682 and 1683** in which **Bahadur Khan** of the Mughal Empire defeated the Maratha army and took over Kalyan, on the northeast of Bombay.

Q.44) Which of the following is/are the literary works of Krishnadevaraya?

1. Rasamanjari
2. Mitakshara
3. Amuktamalyada

Select the correct answer using the code given below.

- a) 1 and 2 only
- b) 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

One of the most important rulers of the Vijayanagar states was Krishnadevaraya, who belonged to the **Tuluva dynasty**. He was given titles of Kannada Rajya Rama Ramana, Moorurayaraganda and Andhra Bhoja. His reign is described often as the **Golden Age of Telugu Literature**, equal patronage was also given to Kannada, Tamil, and Sanskrit authors and writers. Many Telugu, Sanskrit, Kannada and Tamil poets enjoyed the patronage of the emperor.

Options 1 and 3 are correct: Sri Krishnadevaraya **wrote the Amukta Malyada in Telugu**, also known by the name **Vishnuchitteeyam**, in which he beautifully describes the pangs of separation suffered by Andal (one of the twelve bhakti era alvars) for her lover Lord Vishnu.

Jambavati Kalyanam, Madalasa Charita, Satyavadu Parinnya and **Rasamanjari** are his Sanskrit works.

Option 2 is incorrect: **Mitakshara** is a commentary on the law book of Yajnavalkya by **Viganeshawara**.

<https://www.newworldencyclopedia.org/entry/Krishnadevaraya>

Q.45) With reference to the India's bilateral military exercise with various countries, consider the following pairs:

Military exercises	Partner countries of India
1. Yudh Abhyas	The United States of America
2. Harimau Shakti	France
3. Dharma Guardian	Nepal
4. Surya Kiran	Indonesia

How many pairs given above is/are correctly matched?

- only one pair
- only two pairs
- only three pairs
- All the four pairs

Ans) a

Exp) Option a is the correct answer.

Pair 1 is correct: Yudh Abhyas is a bilateral military exercise between India and USA. Recently **China expressed its concern** over this India-U.S. joint military exercise held in Uttarakhand, about 100 km from the Line of Actual Control (LAC), a borderline between India and China.

Pair 2 is incorrect: Harimau Shakti is India-Malaysia joint military exercise. It is an annual training event between the Indian Army and the Malaysian Army being held **since 2012** and in 2022 it was held in **Pulai, Kluang, Malaysia.**

Pair 3 is incorrect: Dharma Guardian is an India and Japan joint military exercise. In 2022 it was held in Belagavi, Karnataka. The training programmes of this exercise included counterterrorism, forestry and urban reconnaissance security operations.

Pair 4 is incorrect: Surya Kiran is a joint military exercise between India and Nepal. It is conducted annually between India and Nepal to enhance interoperability in jungle warfare & counter-terrorism operations in mountainous terrains.

Q.46) With reference to the Bengal Rulers during 18th century, consider the following statements:

- Murshid Quli Khan was the last governor of Bengal appointed by the Mughal emperor.
- Alivardi Khan provided the right to mint coins to the East India Company.
- Shujauddin lost the battle of Plassey in the hands of East India Company.

Which of the following statements is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

The rise of Bengal as an independent autonomous state in the first half of eighteenth century was the establishment of practically independent and hereditary authority by the governor and subordination of all offices within the region to the governor showed the emergence of an independent focus of authority in Bengal.

Statement 1 is correct. Murshid Quli Khan was the last governor of Bengal appointed by the Mughal emperor. He, however, never did sever his formal connections with the Mughals and continued to send the annual Bengal revenue to Delhi regularly. But within his own domain **he acted as an autonomous ruler and in a true dynastic fashion named his daughter's son Sarfraz Khan as his successor.**

Statement 2 is incorrect. Alivardi Khan was the Bengal nawab during the early eighteenth century when the conflict between the Company and the nawabs of Bengal was intensified. He accused the Company of depriving the Bengal government of huge amounts by refusing to pay taxes and trying to humiliate the nawab and his officials. He **refused to grant** the Company concessions, demanded large tributes for the Company's right to trade, **denied it any right to mint coins**, and stopped it from extending its fortifications.

Statement 3 is incorrect. Siraj-ud-daula (not Shujauddin) was a nawab of Bengal who lost the battle of Plassey in hands of East India Company in 1757.

Q.47) With reference to the Socio-Political system of Sikhs, consider the following statements:

1. The Sikhs organized themselves into numerous small and highly mobile groups known as 'Jathas'.
2. The larger regional confederacies of Sikhs under the leadership of various local chiefs were known as 'Misls'.
3. The Rakhi system in Sikhs is a form of ritual purification undertaken by water that is stirred with a double-edged sword.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 2 only

Ans) a

Exp) Option a is the correct answer.

The Sikh movement in the course of the 18th century changed from a religious to a political movement and was directed mainly against the Mughal imperial authority.

Statement 1 is correct. Guru Gobind Singh's death in the early 18th century was followed by a peasant revolt by the Guru's follower, Banda Bahadur. This was a very tough time for the Mughal authority to retain its hold over the province. After Banda's execution in 1715, the **Sikhs organized themselves into numerous small and highly mobile bands, called Jathas** and posed a serious challenge to the Mughal imperial authority.

Statement 2 is correct. In the second half of the 18th century the numerous small Sikh groups had regrouped themselves into **12 larger regional confederacies or Misls** under the leadership of various local chiefs. These Misls were based originally on the **principle of equality**, wherein each member had an equal say in deciding the affairs of the respective Misls and electing the Chief and other officers of the organization.

Statement 3 is incorrect. The Sikh leaders introduced a system called ‘**Rakhi**’ to offer protection to cultivators on the **payment of a tax of 20 percent** of the produce. The protection to cultivators was provided against all outsiders including the Mughal officers, after levying only 1/5th of the produce in return for that protection.

A system of ritual purification of the followers of **Guru Nanak to the ninth Guru Tegh Bahadur** by giving them **Charan-Amrit** (water touched by the Guru’s toe) to drink, whereas Guru Gobind Singh, the tenth and the last Guru, changed this system of purification to **Kande-da-Pahul** (water stirred with double edged sword).

Q.48) With reference to Tipu Sultan, consider the following statements:

1. He is known for introducing the first of its kind iron tubed rockets in India.
2. He formed a revolutionary republican organization ‘Jacobin Club’ of Mysore.
3. He introduced the Risala system in the military of Mysore.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

During the second half of the eighteenth century, the first Muslim rulers of Mysore–Haider ‘Ali (1720–82) and his son Tipu Sultan (1750–99)–were amongst the first South Asian rulers to unleash a process of administrative, socio-economic and military proto modernisation.

Statement 1 is correct. Following the invention of gunpowder, the Chinese and Europeans had tested rockets using bamboo tubes. As they lacked the range and stability required for long-range weapons, they were soon replaced by cannons. **However, in late 1700s Tipu experimented by replacing bamboo tubes with iron tubes.** Mysore rockets, developed and deployed by Tipu Sultan’s army during the Anglo-Mysore wars, was one of the first weaponised metal rockets. The British, who suffered heavy losses because of these rockets, were quick to learn and adopt them into their arsenal.

Statement 2 is correct. The Jacobin Club of Mysore was a radical political club in Mysore and **is said to be one of the first revolutionary republican organizations of India.** It was founded in 1794 by Tipu Sultan, with the support of French revolutionary officers. He planted a Liberty Tree and declared himself “Citizen Tipu”.

Statement 3 is incorrect. **Haider Ali** introduced the ‘**Risala**’ system in the military. Every Risala would consist of a fixed number of troops, horsemen and ammunition. An arrangement similar to the present

concept of battalion. Military commanders to these troops will be appointed by Haider Ali himself. The Risala system was **inspired by the European way of organizing the army.**

Q.49) With reference to the foreign military expeditions of the Imperial cholas, consider the following statements:

1. Rajaraja I brought parts of Sri Lanka under the direct control of Cholas.
2. The Cholas under Rajendra I annexed the regions of Southeast Asia.
3. They could never conquer Maldives.

Which of the statement/s given above is/are correct?

- a) 1 only
- b) 2 only
- c) 1 and 2 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

The period of **later Cholas or Imperial Cholas** began with **Vijayalaya (850–871 CE)** conquering the Kaveri delta from Mutharaiyars. He built the **city of Thanjavur and established the Chola kingdom in 850 A.D.**

Statement 1 is correct: The military victory of **Raja Raja I over Sri Lanka** led to its northern and eastern portions coming under the **direct control of the Chola authority** and they called it **Mummudi-Cholamandalam**. The Chola official appointed in Sri Lanka built **the Rajarajesvara temple in Mahatitta in Sri Lanka**.

Statement 2 is correct: **Rajendra Cholan launched a successful naval operation against Sumatran kingdom of Sri Vijaya and Kedah** (known as Kadaram in Tamil) is a state of **Malaysia**, located in the northwestern part of Malaysian Peninsula. Because of this expedition he is known as **Kadaram Kondan (conqueror of Kedah)**.

Statement 3 is incorrect: **Raja Raja I** engaged in naval expeditions and **emerged victorious in the West Coast too. He conquered Maldives**, lying off the western coast of India, in the Indian Ocean

Source: Class XI: TN SCERT – Later Cholas and Pandyas.

Q.50) Which of the following countries share land borders with Russia?

1. Sweden
2. Kazakhstan
3. Turkey
4. Uzbekistan
5. North Korea

Select the correct answer using the code given below:

- a) 2, 3 and 5 only
- b) 2 and 3 only
- c) 1, 4 and 5 only
- d) 2 and 5 only

Ans) d

Exp) Option d is the correct answer.

Option 1 is incorrect: Sweden has no land border with Russia. Sweden shares its major border line with the Baltic Sea and **Finland (which shares borders with Russia)** to its east. To its west lies the country **Norway** (which shares land borders with Russia).

Option 2 is correct: Kazakhstan shares land borders with Russia. Kazakhstan lies to the south of Russia. Other countries lying south of Russia are China, Georgia, Azerbaijan.

Option 3 is incorrect: Turkey does not share a border with Russia. Between Russia and Turkey lies the country Georgia and Black Sea.

Option 4 is incorrect: Uzbekistan does not share land borders with Russia. To the north of Uzbekistan lies Kazakshatan. **Aral Sea** is located in between **Uzbekistan and Kazakhstan**.

Option 5 is correct: North Korea shares a land border with Russia. The terrestrial boundary between Russia and North Korea runs along the **thalweg of the Tumen River** and its estuary.

Q.1) The Nagara, the Dravida and the Vesara are the:

- three main racial groups of the Indian subcontinent
- three main linguistic divisions into which the languages of India can be classified
- three main styles of Indian temple architecture
- three main musical Gharanas prevalent in India

Ans) c

Exp) Option c is the correct answer.

Three main styles of **temple architecture** are the Nagara or the Northern style, the Dravida or the Southern style and the Vesara or Mixed style.

Source: UPSC 2012

Q.2) With reference to the art and archaeological history of India, the construction of which of the following began the earliest?

- Sultanganj Buddha statue
- Pandav-leni caves at Nashik
- Ravana shaking Mount Kailash at Ellora caves
- Boar incarnation at Udayagiri caves

Ans) b

Exp) Option b is the correct answer.

Option a is incorrect: The **Sultanganj Buddha** belongs to 500 AD to 700 AD. It is one of the largest Buddha sculptures found in India. It is the finest example of **Sarnath School of Sculpture** and belongs to the **Gupta – Pala transitional period (500 AD to 700 AD)**.

Option b is correct: **Pandav-leni caves** were developed around the 1st century A.D. and belong to the **Hinayana period** and later, the idols of Buddha were also carved inside these caves representing influence of Mahayana Buddhism. These caves are located on the Trirasmii hill at the outskirts of Nashik city. Most of the caves have the magnificent idols of **Buddha and the popular Jain Tirthankaras**.

Option c is incorrect: The depiction of **Ravana Shaking Mount Kailash** is depicted in **Ellora caves**. It was developed during the **reign of Rashtrakuta rulers in 7th century A.D.** Ellora is a famous cave located in the Aurangabad district of Maharashtra, India. It is one of the UNESCO World Heritage Sites in India.

Option d is incorrect: **Udayagiri caves** is located in **Vidisha, Madhya Pradesh** and it was developed in early **5th century AD** under the patronage of **Chandragupta II**. These cave hosts the **sculpture of Varaha or Boar incarnation of the Vishnu dated to 5th century AD**.

Q.3) With reference to Pottery work in ancient India, consider the following statements:

- Earliest evidence of pottery in India was found from the Chalcolithic period.
- Painted Grey Ware pottery is associated with the Vedic period.
- Northern Black Polished Ware is linked with beginning of second urbanization in India.

Which of the statements given above is/are correct?

- 1 and 2 only
- 2 and 3 only
- 3 only
- 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Pottery has been known as the 'Lyric of handicrafts. Making objects out of clay has been one of the earliest crafts begun by man.

Statement 1 is incorrect: The earliest evidence of pottery appeared in Mesolithic **period and not chalcolithic period in India**. The remnants show that the art of clay pottery making was highly developed in 6000 B.C.

Statement 2 is correct: Painted Grey Ware pottery, which is typically grey in colour and was related to Vedic period (1500-600 B.C.). It is characterized by a style of fine, grey pottery painted with geometric patterns in black. The PGW culture is associated with village and town settlements, domesticated horses and ivory-working.

Statement 3 is correct: Northern Black Polished Ware or NBPW phase marked the beginning of the second urbanization in India. Second urbanization means the emergence of sixteen Mahajanapadas from Janapadas in the period of 500 to 600 B.C. in the Indian subcontinent. This period saw agricultural improvements in middle of Gangetic plains.

Q.4) Consider the following pairs with reference to the wooden crafts in different parts of India:

Wooden craft	Description
1. Khatamband	It is a method to manufacture idols and products related to religious purposes.
2. Sikki Grass craft	It is used to make ornaments, boxes and the containers.
3. Khunda	It is a wooden staff used for walking as well as a weapon.
4. Sankheda	It is a teakwood furniture having abstract designs and floral paintings drawn over it.

How many of the pairs given above are correctly matched?

- a) One pair only
- b) Two pairs only
- c) Three pairs only
- d) All four pairs

Ans) c

Exp) Option c is the correct answer.

Pair 1 is incorrect: Khatamband is an art of making ceiling, by fitting small pieces of wood (preferably walnut or deodar wood) into each other in geometrical patterns. The process is not done through machines but is painstakingly hand crafted and that too without using any nails. It has been given geographical indication tag. Whereas Santalum, Sandal woodcarving Karnataka is mainly used to manufacture idols and products related to religious purposes.

Pair 2 is correct: Sikki Grass craft of Bihar is used to make ornaments, boxes and the containers to store rice, grains and lentils, etc.

Pair 3 is correct: Khunda Bamboo staves are made in Punjab. It is used as an essential part of Bhangra dance. This iron tipped staves serve the purpose of a walking aid and weapon.

Pair 4 is correct: Sankheda Furnitures are made in Gujarat. It is made of 100 percent seasoned teak wood. It has Abstract designs and floral paintings drawn on wooden furniture with bright shades of gold, silver, maroon, green, vermilion and brown. It has been given Geographical Indication (GI) tag.

Q.5) Consider the following statements regarding the International Liquid Mirror Telescope:

1. It is the world's first liquid mirror telescope commissioned for astronomy.
2. It is a joint initiative of NASA and ISRO.
3. The telescope uses low melting alloys of gallium as the reflective liquid.
4. It is a stationary telescope and does not revolve around a particular object like Earth or the Sun.

Which of the statements given above is/ are correct?

- a) 1, 2 and 3 only
- b) 1 and 4 only
- c) 3 and 4 only
- d) 1 only

Ans) b

Exp) Option b is the correct answer.

The International Liquid Mirror Telescope is **commissioned at Devasthal, Uttarakhand** aims to identify transient or variable objects **like supernovae, gravitational lenses, space debris, and asteroids**. It is, also, **India's first liquid telescope and the largest in Asia**.

Statement 1 is correct: The International Liquid Mirror Telescope (ILMT) has been **commissioned exclusively for the astronomy**. It is the **world's first telescope** of this purpose. Other previous liquid telescopes were built to track satellites or for military purposes.

Statement 2 is incorrect: The telescope is located in at the Devasthal Observatory campus of **Aryabhata Research Institute of Observational Sciences (ARIES)**, an autonomous institute under the Department of Science and Technology (DST), Govt. of India. ILMT project results from a **collaboration between Aryabhata Research Institute of Observational Sciences (ARIES, India), the Institute of Astrophysics and Geophysics (Liege University), the Canadian Astronomical Institutes, University of Montreal, University of Toronto, York University, University of British Columbia and Victoria University**. Hence, the given statement is incorrect.

Statement 3 is incorrect: The instrument has a 4-meter diameter rotating mirror made up of thin film of **liquid mercury** to collect and focus light. Gallium can also be used as a reflective material, but in ILMT, mercury has been used.

Statement 4 is correct: This telescope does not revolve around any particular object like Earth or the Sun. It is **stationary** and located at an altitude of 2450 meters at the Devasthal Observatory campus of Aryabhata Research Institute of Observational Sciences (ARIES).

Q.6) Which of the following are the architectural features first introduced by the Mughals in India?

1. Use of double domes in buildings.
2. Use of minars around the Mosques.
3. Use of Pietra Dura
4. Use of grey sandstone
5. Use of Charbagh style in buildings.

Select the correct answer using the code given below:

- a) 1, 3 and 5 only
- b) 1 and 5 only
- c) 3 and 5 only
- d) 2, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

The Mughals were great patrons of art and architecture. Under them, architecture regained its place of importance, as new buildings were built with great vision and artistic inspiration.

Option 1 is incorrect: One important feature of architecture during this Lodhi period was the **introduction of double domes**. It consisted of a hollow dome inside the top dome.

Fig. 1.43: Qutub minar and Alai Darwaza, Delhi

Fig.1.44: Double dome architecture

Option 2 is incorrect: The Slave dynasty which remained in power from 1206 to 1290 A.D. introduced the use of minars around the mosques and the mausoleums. E.g., Qutub Minar.

Option 3 is correct: The art of Pietra Dura, as it was called in Italy, was brought to India in the 17th century by the Mughal emperor Shah Jahan. He commissioned the Taj Mahal and brought experts from Persia, introducing the art of inlay carving and use of semi-precious stone in marble for the first time.

Option 4 is incorrect: Grey Sandstone was in use since ancient period. Gandhar School of Sculpture used Grey Sandstone.

Option 5 is correct: The Charbagh style was introduced by the Mughals to India. Charbagh or Chahar Bagh is a garden divided by walkways or flowing water into **four smaller parts**. It was used extensively in India after the **arrival of the Mughals in India**. For example, the **Taj mahal built by Shah Jahan used this layout**.

Q.7) With reference to the Khajuraho Group of temples, consider the following statements:

1. It was built by the rulers of the Chalukya dynasty.
2. It is located in the Malwa plateau region of Madhya Pradesh.
3. These temples belong to both Hindu and Jain religions.
4. Chaturbhuj Temple here does not have any erotic sculpture.

Which of the statements given above are correct?

- a) 1 and 4 only
- b) 1, 2 and 3 only
- c) 3 and 4 only
- d) 2, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

The Khajuraho group of temples feature Nagara-style architectural symbols. They are best known for the erotic sculptures that adorn the temple walls.

Statement 1 is incorrect: The temples at Khajuraho were built by the **Chandela dynasty**, which reached its zenith between **950 and 1050 AD**. These Temples got the status of UNESCO's World Heritage Sites in 1986.

Statement 2 is incorrect: The temple site is situated in the **Bundelkhand region** of Madhya Pradesh. Khajuraho is in the **Chhatarpur district** of Madhya Pradesh. The temples are famous for their Nagara-style architectural symbolism.

Statement 3 is correct: These temples belong to **two different religions – Hinduism and Jainism**. These temples were built on relatively high platforms and currently, only about 20 temples remain.

Statement 4 is correct: Khajuraho temple are famous for their erotic sculptures. However, **Chaturbhuj Temple is the only temple in Khajuraho that does not have a single erotic sculpture**. The **sculpture of Lord Vishnu** that seems as if the god is about to step out and bless his devotees is a notable sculpture of this temple.

Q.8) With reference to the cultural history of India, the terms Sandhara, Nirandhara and Sarvatobhadra refers to:

- Sects of Buddhism
- Type of shrines in temples
- The religious ceremonies hosted by king
- Songs composed by Bhakti poets

Ans) b

Exp) Option b is the correct answer.

Option a is incorrect: The religion of Buddhism can be broken down into **three major sects**. They are **Theravada Buddhism, Mahayana Buddhism, and Vajrayana Buddhism**. There are many subsects of Buddhism within these major sects.

Option b is correct: **During the ancient period**, each temple had a principal image of a god. The shrines of the temples were of three kinds– **sandhara type-** a temple **without pradikshinapatha**, **nirandhara type-** a temple **with pradakshinapatha** and **sarvatobhadra-** a temple which can be **accessed from all sides**.

Option c is incorrect: During ancient and medieval times, the **Kings** in India perform many **religious rituals to enhance their legitimacy**. One such example is **Ashvamedha** (horse sacrifice).

Option d is incorrect: The **Bhakti movement** sought to bring religious reforms to all sections of society by adopting the **method of devotion to achieve salvation**. Bhakti literature includes the writings of the Alvars and Nayanars.

Source: <https://ncert.nic.in/textbook/pdf/kefa106.pdf> (pg no 69)

Q.9) With reference to the Buddhist architecture in India, consider the following statements:

1. Chaitya is a place of worship while Vihara is the dwelling place of the monks.
2. Stupas were constructed solely by the Kings whereas Viharas were constructed solely by the monks.
3. Adholoka Maha Chaitya was recently unearthed in the region of Karnataka.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Due to the popularity of Buddhism and Jainism, stupas and viharas were constructed on a large scale in ancient India.

Statement 1 is correct: Vihara is a dwelling place where the Buddhist monks resided and meditated whereas **chaitya refers to a shrine or prayer hall** in the Buddhism.

Statement 2 is incorrect: Both the Stupas and Viharas were constructed by the Kings, common people and monks. There are many **inscriptions** which show that the stupas were built by **persons other than kings such as traders and artisans' categories** like stone carvers, goldsmiths, stone-polishers, carpenters.

Statement 3 is correct: Archaeological Survey of India (ASI) recently excavated **Adholoka Maha Chaitya** on the bank of **Bhima River near Kanaganahalli in Kalaburagi district, Karnataka**. It is believed to have been developed in three constructional phases – **Maurya, Early Satavahana and Later Satavahana periods stretching from 3rd Century B.C. to 3rd Century A.D.**

Q.10) Consider the following statements regarding Web 3.0:

1. It gives control over data ownership and data monetization to the users.
2. Sending a bitcoin directly to another person is an example of Web 3.0.
3. Telangana Government has officially launched the Web 3.0 Regulatory Sandbox.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Web 3.0 is the third generation of the world wide web. It is characterized by **decentralization, trustlessness, permission-lessness, ubiquity, connectivity, machine learning and artificial intelligence**.

Statement 1 is correct: Web 3.0 operates on the principle of decentralization. This means **no permission is needed from a central authority to post anything** on the web. It has no central controlling node and also no single point of failure. In other words, Web 2.0 apps like YouTube, Meta etc. are owned by their parent company which also acts as a central node. Web 3.0 facilitates **complete user-to-user interaction with no interference of the platform**. Thus, Web 3.0 allows users control, own and even monetize their own data. This encourages individuals to decide how they want to collect, store and sell their data.

Statement 2 is correct: Web 3.0 operates on the principle of trust lessness- which means interactions and transactions can take place between two parties **without any need for a trusted third party**. Hence, sending a bitcoin directly to another person- not via an online exchange or wallet stored on a centralized server-is an example of Web 3.0.

Statement 3 is correct: **Telangana Government has officially launched Web 3.0 regulatory sandbox** to allow local and international firms or innovators to test their products in a 'live' environment. Innovations that can be tested include new products, services, solutions, business models, and even policies. It will also help regulators to identify the regulatory barriers to beneficial innovation.

Knowledge Base: Key differences between Web 1.0, Web 2.0 and Web 3.0:

THREE STAGES OF INTERNET CONSUMPTION

	Web1	Web2	Web3
Time period*	1990-2005	2005-till date	2021 -
Where data is stored	Server's file system	On-premise/Cloud	Blockchain, distributed across multiple networks
Examples	Static web pages	User generated content like Social media, and web applications like e-commerce etc...	NFTs, cryptocurrency transaction
Who owns data	Companies running the webpages	Companies that host application, cloud service providers	No one owns the data
Transacting	No transaction possible	Payment gateways for currency transactions	Transaction happens using crypto tokens

Q.11) With reference to the history of Indian rock-cut architecture, consider the following statements:

1. The caves at Badami are the oldest surviving rock-cut caves in India.
2. The Barabar rock-cut caves were originally made for Ajivikas by Emperor Chandragupta Maurya.
3. At Ellora, caves were made for different faiths.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Statements 1 and 2 are incorrect. Not Badami, **Barabar** caves are the oldest surviving rock-cut caves in India.

Barabar caves were built by King Ashoka and not Chandragupta Maurya. These caves were used by ascetics from Ajivika sect.

Statement 3 is correct. Unlike Ajanta, Ellora caves were made for different faiths. Buddhist, Jain and Hindu mythology are represented at Ellora caves.

Source: UPSC 2013

Q.12) In this sun temple, during the summer solstice, the sun rays fall directly above the temple at noon casting no shadow. This Sun Temple is located exactly on the Tropic of Cancer. This ensures that, on equinoxes, the first rays of the sun always fall at the deity's feet in the inner sanctum.

Which of the following sun temples best reflects the features mentioned above?

- Sun Temple of Modhera
- Konark Sun Temple
- Sri Surya Pahar in Assam
- The Sun temple of Gwalior

Ans) a

Exp) Option a is the correct answer.

A Solar or Sun temple is a building or structure **dedicated to worshipping the Sun God, Surya**. It is also referred to as the Surya Mandir in India.

Option a is correct: The **Sun Temple of Modhera** is a Hindu temple dedicated to the solar deity **Surya** located in **Gujarat**. The sanctum sanctorum is designed in a way that the first rays of rising **sun lit up the image of Surya during solar equinox days**. On **summer solstice day**, the sun shines **directly above the temple at noon casting no shadow**. **This Sun Temple is located exactly on the Tropic of Cancer**. This ensures that, on equinoxes, the first rays of the sun always fall at the deity's feet in the inner sanctum.

Option b is incorrect: **Konark Sun Temple** is a Hindu temple dedicated to the Hindu Sun God **Surya** located in Puri district, **Odisha**. The temple is oriented towards the east so that the **first rays of the sunrise strike the main entrance**.

Option c is incorrect: **Sri Surya Pahar** is a Hindu temple dedicated to the Hindu Sun God Surya located in Goalpara, **Assam**. It is an archaeological site situated at the **banks of river Brahmaputra**.

Option d is incorrect: **The Sun temple, Gwalior** is a Hindu temple dedicated to the solar deity Surya located in **Morar, Madhya Pradesh**. These sun Temple takes its **inspiration from the famous Konark Sun Temple in Orissa**.

Q.13) Consider the following statements:

- Soft soapstone was the main building material.
- Shrines are laid in the shape of a star.
- Roofs of the temples were never sloping or slanting.

4. Temples were built on a highly raised platform.

Which of the above are the features of the Hoysala temple architecture?

- a) 1, 2 and 3 only
- b) 1, 2 and 4 only
- c) 3 and 4 only
- d) 2 and 4 only

Ans) b

Exp) Option b is the correct answer.

In the region of **Karnataka near Mysore**, the temples built under the **Hoysala rulers** (1050-1300 A.D) developed a distinct style of their own known as the **Hoysala School of art**. Its prominent seats being Belur, Halebid and Sringeri.

Option 1 is correct: In the temples of Hoysala dynasty, soft soap stone (Chorite schist) was the main building material.

Option 2 is correct: Unlike the crucified ground plan (plan that resembles the crucifixion cross) of the **Panchayatan style**, the **Hoysala school of architecture laid shrines in the shape of an intricately designed star**. This was known as the **Stellate plan**.

Option 3 is incorrect: In Hoysala architecture, roofs slope inwards to converge at the top.

Fig. 1.35: Chennakesava temple, Somnathpur

Option 4 is correct: The temples were **built on an upraised platform known as Jagati**, which was about **one metre high**.

Q.14) With reference to the various sculptures of Indus Valley Civilisation, consider the following pairs:

Sculptures	Found in
1. Bronze statue of Dancing girl	Harappa
2. Pasupathi seal	Mohenjo-daro
3. Terracotta figure of horse	Lothal
4. Large wooden sign board	Dholavira

How many pairs given above are correctly matched?

- a) only one pair
- b) only two pairs
- c) only three pairs
- d) All the four pairs

Ans) c

Exp) Option c is the correct answer.

The Indus Valley Civilisation, also known as the Harappan Civilisation was a **Bronze Age civilisation**.

Pair 1 is incorrect: The sculptures found in the Harappa were **stone symbols of lingam**, mother goddess figure, wheat and barley in wooden mortar and **the sculpture of a dog chasing a deer in bronze metal**, and a red sandstone male torso. Harappa is in **present Pakistan on the bank of River Ravi**.

Bronze style of dancing girl was found at Mohenjo-Daro.

Pair 2 is correct: The sculptures found in the Mohenjo Daro were the sculpture of a bearded **priest**, **the famous bronze statue of the Dancing Girl and the Pashupati seal**. Mohenjo-Daro is in present-day Pakistan on the bank of River Indus.

Pair 3 is correct: **The terracotta figures of horse and ship** were found in the **Lothal, Gujarat**. It is an important site for **naval trade and it had a Dockyard**. Practice of burial of cremated remains, rice husk, fire altars, painted jar, instruments for measuring 45-, 90- and 180-degree angles were founded here.

Pair 4 is correct: **Dholavira in Gujarat** had a **large wooden signboard** just outside the north entrance to the citadel. There are 10 symbols in the panel and it is considered one of the longest Indus inscriptions. Also, it has a **giant water reservoir**, unique water harnessing system, stadium, dams and embankments.

Source: Nitin Singhania: Chapter -Indian architecture

Q.15) Consider the following paragraph:

“This process involves transplantation, implantation or infusion of live cells, tissues or organs from non-human animal source into a human recipient. Since decades, doctors attempted transplants of kidneys, hearts, and livers from baboons and chimpanzees (humans’ closest genetic relatives) into people. But the organs failed within weeks, if not days, due to rejection or infection. In 2022, first successful transplantation of a pig heart into human heart was performed. The patient had died two months after the experiment”.

Which of the following options correctly describes the above transplantation process?

- a) Autotransplantation
- b) Allotransplantation
- c) Isotransplantation
- d) Xenotransplantation

Ans) d

Exp) Option d is the current answer.

Globally, there is an acute shortage of organs to treat diseases related to heart, lungs, liver, kidneys etc. Experiments are being conducted to transplant animal cells, tissues, organs etc. into humans. In 2022, first successful transplantation of a pig heart into a human was carried out. The patient died after two months.

Option a is incorrect: **Autotransplantation** is the transplantation of organ, tissues or particular proteins from one part of the body to another of the same person.

Option b is incorrect: **Allotransplantation** is the transplantation of cells, tissues or organs from a genetically non-identifiable donor of the same species. This is also known as allograft, allogeneic transplant or homograft.

Option c is incorrect: **Isotransplantation is also known as syngeneic transplantation**. In this process, cells, tissues or organs are transferred between genetically identical animals or people. For example, transfer of organ between identical twins.

Option d is correct: **Xenotransplantation** is known as the process of transplanting non-human cells, tissues or organs into human beings. **In 2022, a pig heart has been successfully transplanted into a human being**. There are certain hurdles like **transmission of endogenous viruses or other porcine diseases** into the recipient. There are high chances of **organ rejection**.

Pig organs are generally preferred, as these animals are anatomically and physiologically similar to humans, can be subject to strict veterinary control and are genetically modifiable to reduce the risk of immune rejection.

Q.16) With reference to the Yaksha/Yakshini sculpture, consider the following statements:

1. Yaksha and Yakshini statues can be found only in the sitting position.
2. The Yaksha/Yakshini sculpture of Mauryan period had round face and shiny surface.
3. The Yaksha/Yakshini sculpture were related to Hinduism, Buddhism and Jainism.
4. The Didarganj Yakshini belongs to the period of Gautama Buddha.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 1 and 4 only
- c) 2 and 3 only
- d) 2, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Yaksha and Yakshi were two of the important sculptures of the ancient period. They were related to all three religions – Jainism, Hinduism, and Buddhism.

Statement 1 is incorrect: During the Mauryan period, these monumental sculptures of Yaksha/Yakshini are mostly in the **standing position**. Large statues of Yakshas and Yakshini's are found at many places like Patna, Vidisha and Mathura.

Statement 2 is correct: One of the distinguishing elements in all these images of Mauryan Period is their polished surface. The depiction of faces is in full round with pronounced cheeks and physiognomic detail.

Statement 3 is correct: Yaksha and Yakshi were objects of worship of all the three religions – Jainism, Hinduism and Buddhism. The earliest mention of Yakshini can be found in **Silappadikaram, a Tamil text**. Similarly, all of the Jain tirthankaras were associated with a Yakshi.

Statement 4 is incorrect: The Didarganj Yakshini is one of the **finest examples of very early Indian stone statues**. It used to be dated to the **3rd century BCE**, as it has the fine **Mauryan polish associated with Mauryan art**. The Didarganj Yakshi now is in the Bihar Museum in Patna.

Q.17) With reference to craft traditions of India, consider the following pairs:

Types of pottery : Region

1. Khurja pottery : Gujarat
2. Longpi pottery : Manipur
3. Khavda pottery : Uttar Pradesh
4. Dal Gate pottery : Jammu and Kashmir

How many pairs given above are correctly matched?

- a) only one pair
- b) only two pairs
- c) only three pairs
- d) All the four pairs

Ans) b

Exp) Option b is the correct answer.

Pottery is among the most important living craft traditions of India, especially rural India. This art provides livelihood to many of the people in rural areas.

Pair 1 is incorrect: Khurja pottery is traditional Indian pottery manufactured in **Khurja of the Bulandshahr district in Uttar Pradesh**. Khurja is one of the **oldest centres for glazed pottery in India**. The pottery was made using clay **churning, moulding, colouring and followed by glazing**.

Pair 2 is correct: Longpi pottery originated in the Longpi villages of Ukhrul district of Manipur. It was made from **black serpentine stone and a form of clay** which is found only in this area, the classic black exterior with **bamboo woven around handles** give it a unique identity.

Pair 3 is incorrect: The Khavda pottery originated in the village of Kahavda, Rann of Kutch of Gujarat. It was made using a **special mud** which was procured from near a lake. The beautiful ochre/gerua shades give this art form an earthy feel with painted symmetric black and white designs.

Pair 4 is correct: Dal Gate pottery also known as Glazed pottery is unique to Kashmir. The items are made in the normal manner using **clay**. They are given a **glazed finish**. Usually strong shades such as **blue, yellow, green and brown are used**.

Q.18) With reference to the Nataraja sculpture, consider the following statements:

1. It represents Shiva as the creator, preserver, and destroyer of the universe.
2. Among other things, the sculpture symbolises the path of salvation.
3. The snake in this sculpture represents the ignorance and ego of an individual.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

An important piece of Chola sculpture was the **sculpture of Nataraja in the Tandava dance posture**. Though the **earliest known Nataraja sculpture** had been excavated at **Ravana phadi cave at Aihole**, was made during the **early Chalukya rule**, the sculpture reached its **peak under the Cholas**.

Statement 1 is correct: Nataraja is a depiction of the Hindu god Shiva in his form as the cosmic dance. It combines in a single image, the Shiva's role as **creator, preserver, and destroyer of the universe and conveys the Indian conception of the never-ending cycle of time.**

Statement 2 is correct: The **lower left hand which points towards the upraised foot indicates the path of salvation.** The lower right hand is raised in the gesture of Abhay mudra signifying benediction and reassuring the devotee to not be afraid.

Statement 3 is incorrect: The snake symbolises the kundalini power, which if aroused, one can attain true consciousness. Kundalini power is believed to reside in the human spine in the dormant stage. **The figure of a small dwarf symbolises ignorance and the ego of an individual.**

Source: Nitin Singhania - Indian Architecture

Q.19) With reference to Sarit Sarak, consider the following statements:

1. It is an armed martial art using sword and spear.
2. It is one of the main aspects of Manipuri martial art Huyen Langlon.
3. It is practiced by the Meitei people of Manipur.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Sarit Sarak is martial art of Manipur. Its origin can be traced back to 17th century.

Statement 1 is incorrect: Sarita sarak is an unarmed art form that uses hand-to-hand combat. It is different from other martial art forms. As when compared to any other existing art form of the same school, it is quite flawless for its offensive and evasive action.

Statement 2 is correct: Thang Ta and Sarit Sarak are two of the main aspects of the Manipuri martial art form of Huyen langlon. Thang-ta is an armed martial art whereas Sarit Sarak is an unarmed combat.

Statement 3 is correct: Sarit Sarak has been created by the Meitei people of Manipur. It was in 17th century when Manipuri kings used it to fight the British king for sometimes. Britishers put a ban on it when they captured this region. However post-independence it resurfaced.

Source: Nitin Singhania, chapter on Martial Art in India

Q.20) Which of the following options correctly describes the term 'zombie viruses', recently seen in the news?

- a) It is a potentially infectious pathogen.
- b) It is a cyber-attack made on the power grid.
- c) It is a weapon of mass destruction allegedly used in Russia-Ukraine war.
- d) It is a recent mutation in SARS Covid-19 virus.

Ans) a

Exp) Option a is the correct answer.

Option a is correct: 'Zombie viruses describes a virus that is **frozen in ice and therefore dormant.** Zombie viruses have **been dormant for many years** due to being trapped inside the ice and have **come to life after the ice melted.** European researchers have found 13 zombie viruses from the Siberian permafrost. One of the viruses is named as **Pandoravirus Yedoma** after the mythological character Pandora.

Due to **climate change, permafrost thawing** is releasing organic matter, which also consists of viruses as well as cellular microbes. These viruses **are potentially infectious** and hence, pose danger to the human health.

Source: <https://blog.forumias.com/zombie-virus-see-50000-years-old-virus-found-in-siberia/>

Q.21) What is/are common to the two historical places known as Ajanta and Mahabalipuram?

1. Both were built in the same period.
2. Both belong to the same religious denomination.
3. Both have rock-cut monuments

Select the correct answer using the code given below.

- a) 1 and 2 only
- b) 3 only
- c) 1 and 3 only
- d) None of the statements given above is correct

Ans) b

Exp) Option b is the correct answer.

Statements 1 and 2 both are incorrect. Ajanta caves date from the 2nd century BCE to about 480 or 650 CE.

Most of the monuments at Mahabalipuram are attributed to 7th century.

The caves at Ajanta are dedicated to Buddhist religion. While, the temples at Mahabalipuram belong to Hindu religion.

Statement 3 is correct. The Caves in Ajanta are **approximately 30 rock-cut** Buddhist cave monuments dating from the 2nd century BCE to about 480 CE.

Mahabalipuram group of monuments there consists of **rock-cut cave temples**, monolithic temples, bas-relief sculptures, and structural temples as well as the excavated remains of temples.

Source: UPSC 2016

Q.22) With reference to the contributions of Brahmagupta, consider the following statements:

1. He described the use of negative numbers in his book 'Brahmasputa Siddhantika'.
2. The cyclic method of solving algebraic equation was introduced by him.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

Brahmagupta (7th century AD) wrote book named Brahmasputa Siddhanta. His contribution holds a unique position in the history of Indian mathematics.

Statement 1 is correct: In his book called Brahmasputa Siddhantika, he described the use of negative numbers and described them as debts and positive numbers as fortune.

Statement 2 is incorrect: The cyclic method to solve algebraic equations was introduced by Bhaskaracharya in his book Lilavati. Brahmasputa Siddhanta by Brahmagupta contained first clear description of Quadratic formula.

Knowledge Base:

Theorems given by Brahmagupta resulted in the calculation of circum-radius of a triangle and lengths of the diagonals of a cyclic quadrilateral, construction of a rational cyclic quadrilateral and integer solutions to a single second-degree equation were ground breaking.

Source: <https://egyankosh.ac.in/bitstream/123456789/67726/1/Unit-16.pdf>

Q.23) With reference to Martial arts in India, consider the following statements:

1. Kirip is an indigenous form of Sword fighting that is popular in Rajasthan.
2. Thoda martial art relies on archery skills of players.
3. Kalaripayattu was banned during British rule in India.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Martial art means 'art associated with the waging war.' India is a land of diverse culture and ethnicities. Wide variety of martial arts have been developed since the ancient times.

Statement 1 is incorrect: Kirip is an indigenous form of wrestling quite popular with the Nicobarese tribe. In this sport, before the bout begins, wrestlers grip each other from behind with their hands, and this grip is not to be slackened till the very end of the competition. The wrestler, using various parts of the body, including the leg, tries to thrust the opponent to the ground. If a contestant's back touches the ground, he is declared the loser.

Statement 2 is correct: Thoda martial art originated in the state of Himachal Pradesh. The sport demands excellent expertise in archery. The main weapons needed for Thoda are bows and arrows. It takes place during Baisakhi every year.

Statement 3 is correct: Art forms like Kalaripayattu and Silambam were banned during the British rule. The ban on Kalaripayattu was due to fear of revolution. It resulted in sudden decline of Kalaripayattu. In the late 20th century, the practice of kalarippayattu resurfaced. It gradually gained popularity as part of promoting traditional art forms in South India.

Source: Nitin Singhania, chapter on Martial arts in India

Q.24) Which of the following architectural features can be found in the Ellora Caves?

1. The 24 feet long sculpture representing Buddha in a reclining form.
2. The sculpture of the seated Buddha with Bodhi tree in his background.
3. The sculpture of the Jain leader Bahubali.
4. The sculptures associated with Tantric Buddhism.

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 3 and 4 only
- c) 2, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

Ellora caves had been built around 600–1000 AD by various guilds from Vidarbha, Karnataka and Tamil Nadu. Hence, the caves reflect a natural diversity in terms of theme and architectural styles. It is a **group of 34 caves – 17 Brahmanical, 12 Buddhist and 5 Jain.**

Statement 1 is incorrect: Reclining Buddha is located in the Ajanta caves. It is a popular iconographic depiction in Buddhism and is meant to show that all beings have the potential to be awakened and be released from the cycle of death and rebirth. **Cave No. 26 of Ajanta cave** contains a **24-foot-long and nine-foot-tall sculpture** of the Reclining Buddha, believed to have been carved in the 5th century AD. **Statement 2 is correct:** Cave number 10 is a Buddhist Chaitya cave known as **Vishwakarma cave.** Here is the sculpture of a high **seated Buddha in Vyakhyana mudra (teaching posture) with a large Bodhi tree at his back.**

Statement 3 is correct: At Cave 32, **Gomateswara (also known as Bahubali)** was represented with creeping plants twining themselves round his limbs, snakes coming out of ant-hills at his feet, his hair falling over his shoulders and attended by worshippers. He is the **son of the first Tirthankara, Rishabhanatha (Adinatha).**

Statement 4 is correct: The Ellora cave **represents the idea of vajrayana and tantric form of Buddhism** by hosting **sculptures of numerous tantric buddhist goddess in the cave number 12.**

Nitin Singhania- Indian Architecture

Q.25) Consider the following statements regarding ‘Open Radio Access Network’ (Open RAN):

1. ‘Radio Access Network’ is used to connect individual wireless devices with other parts of the network.
2. Open RAN does not require antennas to transmit signals.
3. Open RAN is expected to increase telecom operator’s network deployment costs.

Which of the statements given above is/ are correct?

- a) 1 only
- b) 1 and 2 only
- c) 1 and 3 only
- d) 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

The Open RAN technology is considered as **critical to the 5G deployment.** The concept aims to provide **more open radio access network architecture.**

Statement 1 is correct: The Radio Access Network (RAN) provides the critical technology to connect users, including mobile phones or enterprises, to the mobile network over radio waves. In other words, **this technology uses cellular radio connections to link individual devices to the other parts of the network.** **A RAN with open interoperable interfaces is known as Open RAN.**

Statement 2 is incorrect: Similar to traditional RAN architecture, Open RAN will also require use of antennas. **These antennas transmit and receive signals to and from our smartphones** or other compatible devices. The **signal is then digitized in the RAN-base station and connected to the network.**

Statement 3 is incorrect: Open RAN would **reduce a telecom operator’s network deployment cost** as it is **interoperable with other networks such as 4G.** It is also **scalable, agile** and best of networks with improved network performance using **artificial intelligence and machine learning.**

SFG 2023 | LEVEL 1 | Test #35 – Solutions | ForumIAS

Source: https://www.business-standard.com/podcast/technology/what-is-open-radio-access-network-open-ran-122051100101_1.html
<https://www.ericsson.com/en/openness-innovation/open-ran-explained>

Q.26) Rang Mahal cave has beautiful murals on the walls of the portico. This includes paintings of Bodhisattva Padmapani and Mushroom paintings. It is situated in which of the following ancient caves?

- Elephanta caves
- Bagh caves
- Ellora caves
- Udaigiri khandgiri caves

Ans) b

Exp) Option b is the correct answer.

Option a is incorrect. The Elephanta Caves located near Mumbai are dominated by the Shaivite faith. It is contemporary with Ellora, and its sculptures show slenderness in the body, with stark light and dark effects. Elephanta caves are known locally as Gharapuri Caves, these were constructed about mid-5th to 6th centuries AD.

Option b is correct. The Bagh Caves, consisting of Buddhist mural paintings, are located 97 km from Dhar district of Madhya Pradesh. These rock-cut cave monuments are not natural but carved over a period of time during the ancient India mostly during the Satvahana period. Bagh caves consists of 5 caves. Most significant of the five caves is Cave No. 4, commonly known as the Rang Mahal, meaning the Palace of Colours, where paintings on the wall and ceilings are still visible. This includes paintings of Bodhisattva Padmapani and Mushroom paintings.

Option c is incorrect. Ellora caves are a group of 34 caves – 17 Brahmanical, 12 Buddhist and 5 Jain. These set of caves were developed during the period between 5th and 11th centuries AD (newer as compared to Ajanta Caves) by various guilds from Vidarbha, Karnataka and Tamil Nadu. Hence, the caves reflect a natural diversity in terms of theme and architectural styles.

Option d is incorrect. The rock-cut cave tradition in Odisha is represented by Udaigiri-Khandagiri caves in the vicinity of Bhubaneswar. These caves are scattered and have inscriptions of Kharavela Jain kings. According to the inscriptions, the caves were meant for Jain monks.

There are numerous single-cell excavations. Some have been carved in huge independent boulders and given the shape of animals. The big caves include a cave with a pillared veranda with cells at the back. The upper part of the cells is decorated with a series of chaitya arches and narratives that still continue in the folklores of the region.

Q.27) An Indian text called 'Sharangdhar Samhita' mainly deals with:

- Ayurveda
- Astrology
- Chariot making
- Sculpture

Ans) a

Exp) Option a is the correct answer.

Acharya Sarangdhara has written popular treatise on **ayurvedic medicine** in the 13th century with name Sharangdhara Samhita. It originated from the concept of simplification of ayurvedic treatises. This Samhita primarily focuses on pharmacology and pharmaceutical methods in Ayurveda. Sharangadhara Samhita has total of 32 chapters having 2600 verses divided in 3 parts.

The speciality of book includes the detailed classification of diseases. The Samhita emphasised on the use of opium in medicines and for urine examination in laboratories.

Source: Nitin Singhania, Science and Technology through the ages.

<https://www.easyayurveda.com/2016/11/02/sharangdhara-samhita/amp/>

Q.28) With reference to the development of chemistry in India, consider the following statements:

1. 'Rasaratnakara' by Nagarjuna contains the method of preparing chemical compounds.
2. Portuguese were the first to introduce the process of paper making in India.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

In India, Chemistry was called Rasayan Shastra, Rasatantra, Rasa Vidya and Rasakriya, all of which means science of liquids. Chemical laboratories were called Rasakriya Shala and a chemist was referred to as rasadanya.

Statement 1 is correct: Rasaratnakara is a book on chemistry written by Nagarjuna. It mainly deals with preparation of chemical compounds like compounds of mercury. The book also emphasised on the survey of metallurgy and alchemy.

Statement 2 is incorrect: Paper making was not first introduced in India by the Portuguese. In India, the first paper industry was developed in Kashmir, established by Sultan Zainul Abedin (Shahi Khan) of Kashmir in 1417-67 AD. It first replaced birch-bark and later palm-leaf. Hence, the use of paper begun in the medieval period. Kashmir, Patna, Murshidabad, Ahmedabad, Aurangabad, Mysore, etc. were well known centres of paper production. The process of paper making was almost same throughout the nation.

Q.29) With reference to the origin of chess, consider the following statements:

1. The game of chess was spread from India to other parts of the world.
2. Chess is mentioned in the Harshacharita written by Banabhatta.
3. The original chess game was played on 64 squares board.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Chess is a game of strategy made up of different elements played on a chequered board. The game was known as "Chaturanga" in India, meaning four bodies. It was played with counters and Aksha (dice).

Statement 1 is correct: The game of chess (Chaturang in India) was first introduced in Persia from India (known as Shatranj). Later, when Persia was conquered by the Arabs, the game quickly spread all over the Middle East and then to Europe. The game travelled to Persia from India, and there have been references to the game as early as 600 A.D in a Persian manuscript. Persia is from where the Arabs took it to the Islamic world. The game became 'Chatrang' in Persian and 'Shatranj' in Arabic.

Statement 2 is correct: The mention of chess is there in the **Harshacharita composed by Banabhatta (a biography of Indian Emperor Harsha - 606 to 647 BCE) in Sanskrit**. There was a reference to the ashatapada board used in Chaturanga i.e., predecessor of chess.

Statement 3 is correct: The original game was played on **64 squares board called ashtapada**. With a king board piece and pieces of four other types, corresponding to the corps of the ancient Indian army – an elephant, a horse, a chariot, or ship and four footmen.

Knowledge Base:

Chaturanga finds its mention in the famous epic Mahabharata where this game was played between Kauravas and the Pandavas.

Q.30) Consider the following statements regarding the 'base editing' technology:

1. It is a method of converting or altering a DNA base by creating double-stranded breaks.
2. It can be used only to edit DNA bases and not the RNA bases.
3. This technique generates lesser undesired editing by-products than the CRISPR-mediated genome editing methods.

Which of the statements given above is/ are **incorrect**?

- a) 2 only
- b) 1 and 2 only
- c) 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: Base editing is a newer genome editing approach that uses components from CRISPR systems together with other enzymes to **directly install point mutations into cellular DNA or RNA**. This technique **does not require making double-stranded DNA breaks (DSBs)**.

Statement 2 is incorrect: The base editing technology can be used to alter base pair of both- DNA and the RNA.

Statement 3 is correct: Base editing is a method of directly converting one DNA base to another **without the need for double-stranded breaks**. But **CRISPR-mediated genome editing** uses the CRISPR-Cas9 system to **create double-stranded breaks (DSBs) in the DNA**. **These breaks are then repaired by the cell's own repair mechanisms**, leading to the insertion or deletion of specific base pairs. DSBs created by nucleases such as Cas9 result in **indels, translocations, and rearrangements that are considered as undesirable by-products**. **Since base editors (in base editing) do not normally create DSBs, they minimize the formation of DSB-associated by-products**.

Source: <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6535181/>

Q.31) With reference to the cultural history of India, consider the following statements:

1. White marble was used in making Buland Darwaza and Khankah at Fatehpur Sikri.
2. Red Sandstone and marble were used in making Bara Imambara and Rumi Darwaza in Lucknow.

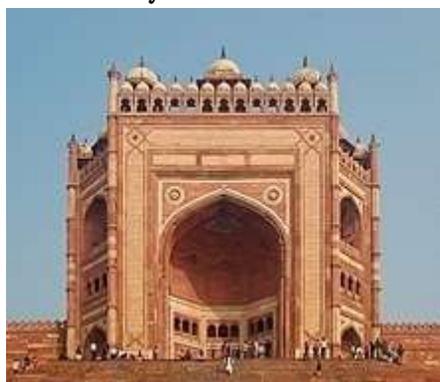

Which of the following statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) d

Exp) Option d is the correct answer.

Statement 1 is incorrect. Buland Darwaza or the "Door of Victory", was built in 1602 A.D. by Mughal emperor Akbar to commemorate his victory over Gujarat. The Buland Darwaza is made of **red and buff sandstone**, decorated by **black marble**.

Buland Darwaza

Statement 2 is incorrect. Bara Imambara, also known as Asfi Imambara is an imambara complex in Lucknow, India built by Asaf-ud-Daula, Nawab of Awadh in 1784. **Brick and lime were used in construction of Bara Imambara and Rumi Darwaza.** The roof of Imambara is made up from the rice husk which makes this Imambara a unique building. Rumi Darwaza massive gate is situated between Bara Imambara and Chota Imambara.

Rumi Darwaza

Source: UPSC 2018

Q.32) According to Charak, which of the following are the 'Doshas' on which the proper functioning of a human body depends?

1. Pitta

2. Kapha
3. Blood
4. Vata
5. Marrow

Select the correct answer using the code given below:

- a) 1, 2 and 3 only
- b) 2, 4 and 5 only
- c) 1, 2 and 4 only
- d) 3, 4 and 5 only

Ans) c

Exp) Option c is the correct answer.

Option 1, 2 and 4 are correct: While Charaka studied all parts of medicine, including the logic and philosophy underlying the Indian medical system. He placed a **specific focus on illness diagnosis and regarded Ayurveda as a holistic system** of health care that addressed both preventative and curative elements. He also elaborated on topics such as foetal production and development, physiology of the human body and function and malfunction of the body. In Charak Samhita, extensive note on digestion, metabolism and immune system is written.

According to Charaka, a body works because it has three doshas or principles: movement (Vata), transformation (Pitta), and lubrication and stability (Kapha). These doshas correspond to the Western categorization of wind, bile, and phlegm. **They are created when dhatus (blood, flesh, and marrow) interact with the food consumed.** They can lead to diseases if these doshas are in disequilibrium state. However, for the same amount of food consumed, one body creates dosha in a different amount than another. That is why one body differs from another.

Option 3 and 5 are incorrect: According to Charaka, blood, flesh and marrow are the dhatus which create the Doshas by interacting with the food consumed. Hence these are not the Doshas in themselves but they create the Doshas in human body.

Source: Nitin Singhania, chapter on science and technology

Q.33) Consider the following pairs regarding cloth printing in India:

Fabric Printing	Description/Features
1. Ajrakh	It is a block-printed textile that uses resist-dyeing technique.
2. Thigma	It is a tie resist printing that uses natural substances to colour the cloth.
3. Dabu	It is a mud resist hand block printing technique done on cotton fabric.
4. Paagadu Bandhu	It is a tie and dye technique of Andhra Pradesh

How many pairs given above are correct?

- a) One pair only
- b) Two pairs only
- c) Three pairs only
- d) All four pairs.

Ans) d

Exp) Option d is the correct answer.

There are various types of handicraft techniques that are used on cloth like weaving and printing.

Pair 1 is correct: Ajrakh is a block-printed textile that includes resist-dyeing technique using natural dyes, including indigo and madder. It is done mainly by Khatri Community in Kutch region. Traditionally, Ajrakh is the name of a block printed cloth with deep crimson red and indigo blue background. It bears symmetrical patterns with interspersed unprinted sparkling white motifs. It is a Portrait painting mainly themed around lord Krishna on a cloth or a paper.

Resist dyeing is a method of colouring yarn or fabric in order to create a pattern by resisting certain areas, so that only the unblocked areas receive colours. Resist materials including thread, wax, rice or mud paste are used in this dyeing process based on the patterns.

Pair 2 is correct: Thigma is tie resist printing based in Jammu and Kashmir. It uses natural ingredients to colour the woollen cloth such as soot is used for grey and apple bars and onion peels for brown.

Pair 3 is correct: Dabu is an ancient mud resist hand block printing technique used on cotton fabric. It is done in Chittorgarh area of Rajasthan. Mud resist is a textile printing technique with mud and indigo dye. The process is completed in three steps:

I)Printing the cloth with mud

II)Dipping the cloth in indigo

III)Finally washing off the mud to reveal the printed design on the textile.

Pair 4 is correct: Paagadu Bandhu is a tie and dye method done in Andhra Pradesh. It is also known by an Indonesian name Ikat. In this tie- dye process, the fabric is woven first, resist bindings are then applied to the fabric which is then dyed. **Dhalapathar Parida and fabric is handcrafted by Rangani Community of Odisha.**

Source: Nitin Singhania, Indian Handi crafts

<https://indianculture.gov.in/textiles-and-fabrics-of-india/type-of-textile/dyeing>

Q.34) With reference to the evolution of rock cut architecture in India, consider the following statements:

1. Rock-cut Cave architecture became popular during Mauryan Period.
2. Painting on the walls of the Cave became popular during the reign of Guptas.
3. Kailash temple at Ellora is the earliest example of rock-cut temple in India.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

The emergence and decay of great empires and the confluence of different cultures and styles, etc. are all reflected in the **evolution of Indian rock cut architecture.**

Statement 1 is correct: Under the **influence of Buddhism, the rock-cut cave architecture became popular** during the Mauryan period. These caves were generally used as **viharas i.e., living quarters by the Buddhist monks.** The caves during Mauryan period were marked by a **highly polished finish of the interior walls and decorative gateways.**

Statement 2 is correct: During the Gupta period, the use of **mural paintings on the walls of the caves** became **popular.** Some of the finest examples of **mural paintings** can be found in the caves of **Ajanta.** The caves were developed in the period between **200 B.C. to 650 A.D.**

Statement 3 is incorrect: In Mahabalipuram, Ratha temples or Pancha Ratha were built around 7th century AD, during the reign of Pallava ruler Mahendravarman. It was the earliest rock-cut temple in India. Under him, the temples were known as mandapas.

The Kailash temple is the largest of the rock-cut Hindu temples at the Ellora Caves, Maharashtra. It was built in 8 century A.D.

Source: Nitin Singhania: Chapter-Indian Art and Architecture

Q.35) Which one of the following statements is **not correct** regarding ‘Gravitational lensing’?

- It is a phenomenon that reflects the light coming from distant objects of the universe to Earth.
- It was predicted to exist by Albert Einstein’s General Theory of Relativity.
- It provides for investigating the development of structure in the universe and the expansion of the universe.
- It can be used to detect exoplanets and other celestial bodies that are not directly observable.

Ans) a

Exp) Option a is the correct answer.

Recently, NASA’s Hubble Space Telescope has discovered the farthest star ever seen to date. They have nicknamed that star as “Earendel”. This discovery of the most distant star was made possible by a phenomenon known as ‘gravitational lensing’.

Statement a is incorrect: A gravitational lens can occur when a huge amount of matter, like a cluster of galaxies, creates a gravitational field that **distorts and magnifies the light from distant galaxies that are behind it but in the same line of sight**. The effect is like looking through a giant magnifying glass. The main effect of gravitational lensing is that it bends the light from a distant source, which can cause the object to appear distorted or magnified. **It does not reflect the light from distant objects.**

Statement b is correct: The phenomenon of gravitational lensing was **predicted to exist by Albert Einstein’s General Theory of Relativity in the early 20th century**, and it was later observed in the 1920s. The theory of general relativity predicts that massive objects will bend the path of light, and this effect is known as gravitational lensing.

Statement c is correct: Gravitational lensing can be used to study the distribution of matter in the universe, including dark matter, which cannot be directly observed. By observing the distortion caused by a massive object, scientists can infer the **distribution of dark matter in the object and study the properties of distant galaxies and quasars**. This can give insight into the development of structure in the universe and how it has expanded over time.

Statement d is correct: One of the types of **gravitational lensing is microlensing**, which occurs when the lensing object is a single star or a binary star system. In this case, the light from a **background star is bent as it passes through the gravitational field of the lensing object**, causing the background star to appear brighter for a short period of time. This effect is known as a microlensing event, and can **be used to detect exoplanets and other celestial bodies that are not directly observable**. This is because the presence of a planet or other celestial body around a star can cause a small deviation in the microlensing event, which can be detected and used to infer the presence of the celestial body.

Source: <https://blog.forumias.com/nasas-hubble-discovers-farthest-star-detected-till-date-earendel/>

Q.36) With reference to Silambam, consider the following statements:

- It is majorly practised in Tamil Nadu.
- Use of any other weapon except wooden staff is forbidden in Silambam.

3. This martial art is also practised outside India.

Which of the statements given above is/are correct?

- a) 1, 2 and 3
- b) 3 only
- c) 1 only
- d) 1 and 3 only

Ans) d

Exp) Option d is the correct answer.

Silambam is an Indian martial art originating in South India in the Indian subcontinent. It is a kind of staff fencing used for both mock fighting and self-defense.

Statement 1 is correct: Silambam stick fencing is a modern and scientific martial art of Tamil Nadu.

Kings ruled in Tamil Nadu like Pandya, Chola and Chera had promoted during their reign. This was one of the highly organized and popular games of the state since the first century A.D.

Statement 2 is incorrect: The use of weapon in Silambam is not limited to wooden staff only. Silambam uses long staff and various kinds of **swords, knives and lances**.

Some of the most popular ways of Silambam are mentioned as follows -

- 1) Long Stick Guru Vanakkam - Here, the fighters use one-inch width bamboo stick as a weapon with a height up to their eyebrow level.
- 2) Double Short Stick - In this form, two different short sticks, each being 3 feet are used to hit or block the opponent.
- 3) **Chopper Knife** - The fighters in this form defend themselves with the aid of a chopper knife.

Statement 3 is correct: Silambam travelled to Malaysia where it is a famous sport apart from being a mode of self-defence. It is also practised by Tamil community of Sri Lanka and Malaysia.

Q.37) “It is a form of wrestling, native to the people of Mizoram in India. It is said to have originated in the village of Dungtlang in 18th century. It involves very strict rules prohibiting kicking, stepping out of the circle and even bending of the knees.” The martial art mentioned here is:

- a) Naban
- b) Mukna
- c) Inbuan
- d) Gatta Gusthti

Ans) c

Exp) Option c is the correct answer.

Inbuan is a form of wrestling native to the people of Mizoram in India. Inbuan is said to have originated in the village of Dungtlang in 1750.

Option a is incorrect: Naban is a traditional martial art of Myanmar. It involves seizing and holding the opponent. Many techniques of Naban martial art, is now adopted by various other fighting styles. Naban is especially popular among the Kachin and Chin tribes that have Himalayan origins.

Option b is incorrect: Mukna is a form of folk wrestling from the north-east Indian state of Manipur. Holding the opponent's neck, hair, ear or legs with the hands is not permitted. Any strikes are also considered fouls. Anyone who touches the ground with any part of their body besides the feet is declared the loser.

Option c is correct: Inbuan is a form of wrestling native to the people of Mizoram in India. Inbuan is said to have originated in the village of Dungle in 1750. It was recognized as a sport after the Mizo people migrated from Burma to the Lushai Hills. Inbuan involves very **strict rules prohibiting kicking, stepping out of the circle and even bending of the knees**. The matches are held in three rounds each of 30–60 seconds of duration, the match generally continues till a wrestler either breaks a rule or is lifted off his feet.

Option d is incorrect: Gatta gusthi is a form of wrestling **practiced in Kerala**. It is competed inside an open ring on the ground, usually on a beach, known as godha. Wrestlers are called phayalvans. Gatta gusthi was popular in the state until the arrival of freestyle wrestling and karate in late 1960s. Its freestyle form is known simply as gusthi.

Q.38) With reference to Indian Handicrafts, which of the following is the correct description of 'Tikuli'?

- It refers to a saree having embroidery with chariot and elephant motifs.
- It is a type of metal embroidery which uses gold, silver or copper wires.
- It refers to a particular type of decorative glass beads.
- It is a kind of floor design consisting of geometric shapes.

Ans) c

Exp) Option c is the correct answer.

Tikuli refers to the decorative glass bead manufactured in Patna, Bihar.

Option a is incorrect: Ilkal saree a traditional form of sari which is worn in Karnataka state. Ilkal saris are woven using cotton warp on the body and art silk warp for border. It involves use of Kasuti embroidery with chariot and elephant as common motifs.

Option b is incorrect: Zardozi is an embroidery of Uttar Pradesh. It uses gold, silver or copper wire with silver or golden polish and silk threads.

Option c is correct: Tikuli is a decorative glass bead which is made from broken glass. The craftsmen first melt the broken glass and then give it shape and design. Patna and Harihans cities are very famous for manufacturing of this craft. The chief markets of Tikuli are Banaras, Patna and Calcutta. This craft has been lost due to industrialisation. However, it is still worn by the santhal tribes of Bihar.

Option d is incorrect: Mandana is a kind of floor design of Rajasthan and Madhya Pradesh. The floor design consisting of geometric shapes like squares, hexagons, triangles and circles. For preparing mandana, ground is cleaned with cowdung and on several occasions finished with crimson red.

Source: Nitin Singhania, chapter on Indian Handicrafts.

Q.39) With reference to Ikat, consider the following statements:

- Earliest reference to the Ikat fabrics can be found in the Ajanta Cave paintings.
- Jaipur is the most important centre of Ikat work in India.
- It is a type of tie and dye technique.

Which of the statements given above are correct?

- 1 and 2 only
- 2 and 3 only
- 1 and 3 only
- 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: The ikat fabric's earliest mention in history is in the Ajanta cave paintings (6th-century A.D.) The designs and patterns closely resembling Ikat are seen on the dresses of the females portrayed in the murals of Ajanta.

It is a **yarn resist technique wherein the yarns are tie-dyed**, and on weaving, a pattern is created on the surface of the fabric.

Statement 2 is incorrect: **Telangana, Odisha, Gujarat and Andhra Pradesh** are the major centres of the Ikat work. The ikat of each region known by different names can be identified from the motifs and the patterns achieved by weaving the tie-dyed yarns.

Statement 3 is correct: The Ikat is a dyeing technique where fabric is tied and then dyed. In this method the resist dyeing on yarn is repeatedly applied before the cloth is woven.

Source: Nitin Singhania, chapter on Indian Handicrafts

<https://yehaindia.com/tie-dye-techniques-in-india-bandhani-ikat-lehariya/>

Q.40) With reference to 'Next-Gen Launch Vehicle (NGLV)', consider the following statements:

1. It is being developed to replace Polar Satellite Launch Vehicle.
2. It is featured semi-cryogenic propulsion with refined kerosene as fuel and liquid oxygen (LOX) as an oxidizer.
3. It will be used to take three Indian astronauts to the Earth's low earth orbit under the Gaganyaan mission.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 3 only

Ans) b

Exp) Option b is the correct answer.

Recently, addressing a three-day Engineers conclave 2022, the ISRO chairman has announced to launch Next-Gen Launch Vehicle (NGLV), which is-going to replace operational systems like the Polar Satellite Launch Vehicle (PSLV).

Statement 1 is correct: Next-Gen Launch Vehicle (NGLV) will replace the **Polar Satellite Launch Vehicle (PSLV) launch vehicle** and aimed to be more efficient than other launch vehicles of ISRO. Polar Satellite Launch Vehicle (PSLV) is the third generation launch vehicle of India. It is the first Indian launch vehicle to be equipped with liquid stages.

Statement 2 is correct: NGLV is aimed at a **cost-efficient, three-stage to orbit, reusable heavy-lift vehicle** with a payload capability of ten tonnes to Geostationary Transfer Orbit (GTO). It is featured with **semi-cryogenic propulsion (refined kerosene as fuel with liquid oxygen (LOX) as oxidizer)** for the booster stages which is cheaper and efficient.

Statement 3 is incorrect: The Gaganyaan mission will be ISRO's first manned space mission and will take three Indian astronauts, including a woman, on board the **Geosynchronous Satellite Launch Vehicle (GSLV) Mk III** to the Earth's low earth orbit.

Source: <https://www.thehindu.com/sci-tech/science/isros-next-gen-launch-vehicle-may-assume-pslvs-role/article66005152.ece>

<https://www.thehindu.com/news/national/isro-eyes-next-generation-launch-vehicle-for-heavier-payloads/article66073553.ece>

Q.41) Which one of the following statements is correct?

- Ajanta Caves lie in the gorge of Waghora river.
- Sanchi Stupa lies in the gorge of Chambal River.
- Pandu-lena Cave Shrines lie in the gorge of Narmada River.
- Amaravati Stupa lies in the gorge of Godavari River.

Ans) a

Exp) Option a is the correct answer.

Option a is correct. The rock-cut caves of **Ajanta** lie in **Waghora river valley** near Ajanta village in the Aurangabad district of Maharashtra.

Option b is incorrect. **Sanchi** lies in an upland plateau region just west of the **Betwa** River.

Option c is incorrect. **Pandu-lena caves** is ancient rock-cut sculptures complex located at **Gomai** River.

Option d is incorrect. **Amravati** stupa is located in the gorges of **Krishna River**.

Source: UPSC 2021

Q.42) With reference to Ivory Crafting in India, consider the following statements:

- During Harappan period, ivory objects were mainly the items of import.
- Rig Veda do not have any mention of ivory objects.
- There was a significant decline in the ivory craft during Mughal Period.

Which of the statements given above is/are **incorrect**?

- 1 only
- 2 and 3 only
- 1 and 3 only
- 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Ivory carving has been prevalent in India since the Vedic period.

Statement 1 is incorrect: During the Harappan period, ivory and objects made of ivory like ivory dice, etc. were exported from India to Turkmenistan, Afghanistan, and parts of Persian Gulf. This has been proved by the recent excavations.

Statement 2 is correct: There are **no reference to ivory in the Vedic literature** (The Vedic literature consists of four Vedas, namely Rig Veda, Sama Veda, Yajur Veda, and Atharva Veda). However, epics like Mahabharata and Ramayana have several references to ivory.

Statement 3 is incorrect: During Mughal rule, many ivory artifacts were being used and no such decline is observed. For example, combs, dagger's handles and in other ornaments, ivory has been used.

Source: Nitin Singhania, Indian Handicrafts

<https://egyankosh.ac.in/bitstream/123456789/16909/1/Unit-23.pdf>

Q.43) With reference to the features of the Vijayanagar Temple Architecture, consider the following statements:

- Absence of the use or construction of pillars
- Building of more than one mandaps in each temple.
- Multiple gopurams in the temple.
- Water tanks, called Pushkaranis, were attached to the temple.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1, 3 and 4 only
- c) 2 and 3 only
- d) 2, 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

The rulers of the **Vijayanagara Empire (1335-1565 AD)** were great patrons of art and architecture with capital at Hampi (Karnataka). They combined the features of Chola, Hoysalas, Pandyas, Chalukyas architectural styles.

Statement 1 is incorrect: Vijayanagar temple had monolithic rock pillars. Odisha School of temple architecture were developed in different parts of the Kalinga empire. In these, there was no use of pillars; instead, they used Iron girders to support the roof.

Statement 2 is correct: One of the unique features of Vijayanagar temple architecture is building of more than one mandaps were built in each temple. The central mandap came to be known as kalyan mandap.

Statement 3 is correct: The notable feature of Vijayanagar temples is of multiple gopurams in its temple. Gopurams, which were previously present on the front side of the temple, were now built on all the sides.

Statement 4 is correct: Pushkaranis are sacred water tanks attached to temples of Vijayanagar period. For example, most of the large temples in Hampi has a tank attached to it. Also, Vittala Temple, Virupaksha Temple of Vijayanagar empire have water tanks associated with it.

Knowledge Base:

The features of the Vijayanagara temples were

- 1) The walls of the temples were highly decorated with carvings and geometrical patterns.
- 2) Monolithic rock pillars
- 3) Generally, temple pillars have a mythical creature Yali (Horse) engraved in them
- 4) Temple complex is enclosed by boundaries and the enclosing walls were larger
- 5) More than one mandapas were built in each temple. The central mandap came to be known as kalyan mandap.
- 6) The concept of secular buildings inside the temple premises was also introduced during this period.

Source: Nitin Singhanai: Chapter - Indian Architecture

<https://hampi.in/pushkarani>

Q.44) With reference to the art and archaeological history of India, consider the following pairs:

Caves	Known for
1. Ajanta	The Mahaparinirvana sculpture of Buddha
2. Elephanta	The sculpture of Trimurti
3. Badami	The mural paintings of Jain tirthankara
4. Barabar	The Hathigumpha Inscriptions of King Kharavela

How many pairs above are correctly matched?

- a) Only one pair
- b) Only two pairs
- c) Only three pairs

d) All four pairs

Ans) c

Exp) Option c is the correct answer.

Pair 1 is correct: All 29 caves in Ajanta are Buddhist caves. Some prominent **sculptures** of Ajanta Caves are: **Mahaparinirvana of Buddha** in Cave.no 26 and **Naga king and his consort in Cave.no 19**. Also, the **painting of Bodhisattva Padmapani** is one of the most famous and oft-illustrated paintings at Ajanta caves.

Pair 2 is correct: Trimurti also known as **Sadashiva and Maheshmurti is in the Elephanta Caves**. It is located in Western India on Elephanta Island and it was constructed during the mid-5th to 6th centuries AD. The 7-meter-high masterpiece “**Sadashiva**” dominates the entrance to **Cave 1**. The sculpture represents **three aspects of Shiva: the Creator, the Preserver, and the Destroyer**.

Pair 3 is correct: The mural paintings in **Badami caves** were completed during the period of **King Mangalishwara, son of Pulakesin I, the chalukya ruler**. The **Cave number 4 has a mural painting of Adinatha, the Jain tirthankara**. It also houses the earliest surviving mural painting of Hindus largely inspired from the puranas, the most being the paintings of **Shiva and Parvathi**.

Pair 4 is incorrect: The **Hathigumpha Inscription is found in the Udayagiri Khandagiri Caves, Odisha**. The **Barabar caves** in Gaya district Bihar, hosts the **Vadathika Cave Inscription** or the **Nagarjuni Hill Cave Inscription of Anantavarman**. The inscription is notable for including **symbols for Om in Gupta era**.

Nitin Singhania: Chapter-Indian Architecture

Q.45) Which of the following were the reasons for end of Mangalyaan Mission, that was announced recently by Indian Space Research Organization (ISRO)?

1. Damage to the critical communication instruments by solar flare impact
2. Drain of Satellite battery due to longer eclipse period
3. Satellite's propulsion system ran out of fuel
4. Destabilization of the satellite due to gravitational pull of the Sun.

Select the correct answer using the codes given below:

- a) 1 only
- b) 2 and 3 only
- c) 1, 2 and 4 only
- d) 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

Recently, Indian Space Research Organization (ISRO) confirmed that the **Mars Orbiter craft has lost communication and is non-recoverable and the Mangalyaan mission** has attained end-of-life. Despite being designed for a life-span of six months as a technology demonstrator, the Mars Orbiter Mission (MOM) has lived for about eight years in the Martian orbit.

Statement 2 and 3 is correct: The reason for the end of MOM mission can be attributed to:

- 1) **Propellant (fuel) exhaustion** the desired altitude pointing could not be achieved for sustained power generation and it lost communication from the ground station.
- 2) Recently there were **back-to-back eclipses** including one that **lasted seven-and-half hours** because that satellite has consumed all the propellant on board. As the satellite battery is designed to handle **eclipse duration of only about one hour and 40 minutes**, a longer eclipse would drain the battery beyond the safe limit.

Statement 1 and 4 are incorrect: The damage to the critical communication instruments by solar flare impact and destabilization of the satellite due to gravitational pull of the Sun were not the reason for the end of Mars Orbiter Mission.

Source: <https://timesofindia.indiatimes.com/home/science/mars-orbiter-craft-non-recoverable-mangalyaan-mission-over-confirms-isro/articleshow/94627138.cms>

Q.46) With reference to the potteries found in the ancient India, consider the following statements:

1. There was no evidence of pottery throughout the Neolithic age.
2. There was no evidence of wheel made pottery in the Indus Valley Civilization
3. The pottery of the Mauryan times was characterised by black paint and highly lustrous finish.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 and 3 only
- c) 3 only
- d) 1 and 2 only

Ans) c

Exp) Option c is the correct answer.

Potteries being the popular art practised by common people in ancient time, serves as one of the most important sources to study the history of India.

Statement 1 is incorrect: Pottery was found to be used in the Neolithic Period.

Statement 2 is incorrect: Most of the pottery that have been found in Indus valley civilization are very fine wheel-made wares, with a very few being handmade. The pottery found at the Indus valley civilisation are broadly classified into two kinds- **plain pottery and painted pottery**. The painted pottery is also known as **Red and Black pottery**.

Statement 3 is correct: Pottery of the **Mauryan period** were **characterised by the black paint and highly lustrous finish (shiny)** and were generally used as luxury items. These potteries were associated with the **Mahajanapada and Mauryan periods**.

Source: Class XI: TN SCERT- Early India: Te Chalcolithic, Megalithic, Iron Age and Vedic Cultures

Q.47) With reference to the Mathura and Gandhara school of sculpture, consider the following statements:

1. Mathura school was developed indigenously while Gandhara school was influenced by the Greeks.
2. The sculptures of Mathura school were made using red sandstone while the Gandhara school used white marbles only.
3. Both the Mathura and Gandhara schools were influenced by Buddhism, Jainism and Hinduism.
4. Both Mathura and Gandhara school were patronised by Kushana rulers.

Which of the statements given above are **incorrect**?

- a) 1 and 4 only
- b) 2 and 3 only
- c) 2, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) b

Exp) Option b is the correct answer.

After the **decline of the Mauryan Empire in the 2nd century BC**, small dynasties sprang up in various parts of India. Under them, different schools of sculpture emerged and the **art of sculpture reached its climax in the post-Mauryan period.**

Statement 1 is correct: Gandhara school developed on the **North West Frontier**, in the modern-day area of **Kandahar**, the **heavy influence of Greek or Hellenistic Sculpture** is visible. Hence it is also known as Indo Greek art. Whereas the **Mathura school of art** being developed in the Mathura region was **developed indigenously** and not influenced by external cultures.

Statement 2 is incorrect: The **Gandhara School used bluish-grey sandstone** in its early phase and mud and **stucco** in later phase. The sculptures of **Mathura School** were made using spotted **red sandstone**. The **white marbles were actually used by the Amaravati School** prevalent in Andhra Pradesh region.

Statement 3 is incorrect: The **Gandhara school was mainly influenced by Buddhism** whereas **Mathura school** was influenced by the three major religions at that time - **Buddhism, Hinduism and Jainism.**

Statement 4 is correct: Both **Mathura and Gandhara schools were patronised by Kushana rulers.** **Kanishka** was the greatest emperor of the Kushan dynasty, under whose reign the empire reached its zenith he ruled from 127–150 A.D.

Q.48) With reference to the temple architecture of Pallava Dynasty in medieval India, consider the following statements:

1. Pallava rulers built both rock cut temples and structural temples.
2. The temples built by them were devoid of any sculptures.
3. Shore temple at Mahabalipuram was built using granites.
4. The art of Gopuram reached its climax under the Pallavas.

Which of the statements given above are correct?

- a) 1 and 3 only
- b) 1, 3 and 4 only
- c) 2 and 4 only
- d) 1, 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

Dravidian style of temple architecture was started during the pallava dynasty and reached its zenith under Cholas. The temples developed during the Pallava dynasty reflected the stylistic taste of the **individual rulers** and can be classified into **four stages namely Mahendra group, Narasimha group, Rajasimha group and Nandivarman group.**

Statement 1 is correct: Under the **Pallavas both rock cut and structural temples were developed.** Under **Mahendravarman**, temples built were basically **rock-cut temples**. Another Pallava ruler **Rajsimhavarman** started the **development of real structural temples** in place of rock-cut temples.

The **Kailasanatha temple in Kanchi** was considered the best examples of **Pallava structural temples.**

Statement 2 is incorrect: The Pallavas had also aided in the **advancement of sculpture.** Beautiful sculptures adorn the walls of their temples. The sculpture at Mamallapuram depicting the "**Descent of Ganges or the Penance of Arjuna**" was considered as one of the Indian masterpieces.

Statement 3 is correct: The Pallava King "**Narasimhavarman II (RajaSimha)** the successor of Mahendravarman I, built Shore temple in Mahabalipuram (Mamallapuram) **out of granite.** It was considered a good example of the **first phase of structural temples constructed in the Dravidian style of architecture.**

Statement 4 is incorrect: The art of gopuram reached its climax in the Nayaka style of architecture which was prominent in the region of Madurai. The Meenakshi temple in Madurai has the tallest gopuram in the world.

Q.49) With reference to the temple architecture in Eastern India, consider the following statements:

1. Unlike the Dravidian temples, temples in Odisha did not have boundary walls.
2. The Ahom style prevalent in Assam is a result of the confluence of architectural style of Burma and Palas.
3. Unlike in the Odisha style, the temples in Bengal region did not have tall curving shikhara.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 2 only
- d) 3 only

Ans) c

Exp) Option c is the correct answer.

Eastern Indian temples include those found in the **NorthEast, Bengal and Odisha**. Each of these three areas produced distinct types of temples.

Statement 1 is incorrect: Odisha temples usually have boundary walls. For instance, the **Sun temple at Konark, Odisha** is set on a high base and is surrounded by huge boundary walls. Its walls were covered in extensive, detailed ornamental carving.

Statement 2 is correct: In Assam a unique regional style emerged during the 12th and 14th centuries. **The Ahom style** prevalent in Assam is a result of **combination of the Tai style** (which arrived with the **Tais from upper Burma**) and the prevalent **Pala style of Bengal**.

Statement 3 is incorrect: The **Pala and Sena School of Architecture were prevalent in the Bengal region** under the reign of Palas and Sena respectively between **9th-13th century A.D.** Similar to the Odisha School, **the temples of this region had a tall, curving shikhara crowned by a large amalaka.**

Source: <https://ncert.nic.in/textbook/pdf/kefa106.pdf>

Q.50) With reference to 'Cordy Gold Nanoparticles', sometimes mentioned in the news, consider the following statements:

1. It is derived from the synthesis of bacteria and gold salts.
2. It is used for faster drug delivery in human body.
3. It can be effective in treating certain kind of cancer.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

Recently, scientists from four Indian institutions, including Bodoland University, have developed Cordy Gold Nanoparticles (Cor-AuNPs), which can make drug delivery in the human body faster and surer.

Statement 1 is incorrect: Cordy Gold Nanoparticles (Cor-AuNPs) are derived from the **synthesis of the extracts of Cordyceps Mlitaris and Gold Salts**. Cordyceps militaris is a **high value parasitic fungus**, lab-grown at the Department of Biotechnology's Technology Incubation Centre (TIC) in Bodoland University. Wild Cordyceps mushroom are found in the eastern Himalayan belt. Gold salts are ionic chemical compounds of gold generally used in medicine.

Cordy Gold Nanoparticles (Cor-AuNPs)

Statement 2 is correct: Cordyceps militaris, called super mushroom because of its tremendous medicinal properties, adds bioactive components to the synthesis of gold nanoparticles **for better penetration in the cells of human body leading to faster and effective drug delivery**.

Statement 3 is correct: Cordyceps-gold nanoparticles (Cordy-AuNPs) have been found to have antimicrobial, antioxidant, anti-inflammatory and anti-cancer properties. Gold nanoparticles plays vital role in the development of the **anticancer drugs**. The gold nanoparticles with C. Militaris is proved to be an efficient chemotherapeutic drug against the hepatocellular carcinoma (Liver Cancer) cells.

Source: <https://www.thehindu.com/sci-tech/science/gold-gets-nano-boost-from-super-mushroom-for-better-drug-delivery/article66090620.ece#:~:text=Photo%3A%20Special%20Arrangement%2C%20Assam's%20Bodoland%20University%20is%20part%20of%20collaborative%20research%20on%20a,supe r%20mushroom%20for%20greater%20efficacy.>

<https://pubmed.ncbi.nlm.nih.gov/31304798/>

Q.1) How do you distinguish between Kuchipudi and Bharatnatyam dances?

1. Dancers occasionally speaking dialogues is found in Kuchipudi dance but not in Bharatnatyam.
2. Dancing on the brass plate by keeping the feet on its edges is a feature of Bharatnatyam but Kuchipudi dance does not have such a form of movements.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct. Kuchipudi is unique among the Indian classical dance styles. It uses fast rhythmic footwork and sculpturesque body movements. Stylised mime, using hand gestures and subtle facial expression, is combined with more realistic acting, **occasionally including dialogues spoken by the dancers.**

Bharatanatyam is one of the oldest forms of classical dance that originated in Tamil Nadu. Bharatnatyam dance is known to be ekaharya, where one dancer takes on many roles in a single performance. In this dance, dancers do not speak dialogues.

Statement 2 is incorrect. The "Tarangam" is a unique feature of Kuchipudi. In this, a dancer dances on the edge of a brass plate, matching to the rhythm of music. Sometimes, dancers also balance a pot of water on the head. Tarangam is not a feature of Bharatanatyam.

Source: UPSC 2012

Q.2) In the context of classical musical traditions of India, which of the following statements is/are correct with respect to the distinction between Hindustani and Carnatic music?

1. Unlike Hindustani music, the Gharana system is generally absent in Carnatic music.
2. Khyal is a sub style of Hindustani music whereas Tarana is a sub style of Carnatic music.
3. Hindustani music uses flute and violin, but its usage is absent in Carnatic music.

Select the correct answer using the code given below:

- a) 1 only
- b) 1 and 3 only
- c) 1 and 2 only
- d) 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

There are two major traditions of Indian classical music. They are Carnatic music, a style associated with South India, and Hindustani music, a style associated with North India.

Statement 1 is correct: Hindustani Classical Music training and learning has its roots in the teacher-student parampara or guru-shishya tradition. A gharana comes into being when a consistent style and method of music singing or playing musical instruments is passed on from one generation to another over 3 or more generations. While some gharanas are formed directly by the father – son, others may be formulated when a teacher passes on his or her training & style of music to a valuable and talented student.

List of Hindustani Classical Music Gharanas, India:

Etawa Gharana, Jaipur Gharana, Banaras Gharana, Gwalior Gharana, Delhi Gharana, Indore Gharana, Patiala Gharana, Agra Gharana, Kirana Gharana, Rampur Sahaswan Gharana, Bhendi Bazar Gharana, Mewati Gharana, Dhrupad Gharana **etc.**

On the other hand, Carnatic Music created by Purandardasa has a fixed structure, and it doesn't give such flexibility as you can see in the Hindustani music, so there are no innovations are there and they seldom allowed & thus did not lead to creation of specific gharanas.

Statement 2 is incorrect: Both Khyal and Tarana are sub-styles of Hindustani music. Khyal is usually the short songs ranging from two to eight lines and its origin was attributed to Amir Khusrau. In Tarana style the rhythm plays a very crucial role and it consists mainly of melody, usually short, repeated many times, with variation and elaboration at the performer's discretion.

Statement 3 is incorrect: One of the similarities between Hindustani and Classical music is that they **both use Flute and Violin.** Other Major Instruments used in Hindustani music are **Tabla, Sarangi, Sitar and Santoor** whereas **Veena, Mridangam and Mandolin were used in Carnatic music.**

Source: Nitin Singhania- Chapter 5 Indian Music

Q.3) With reference to practice of 'Buta Kola', consider the following statements:

1. It is a ritual dance performance in which local spirits or deities are worshipped.
2. It is performed by both men and women.
3. It is generally performed in paddy fields after the winter crops have been harvested.
4. Some of the Buta Kola rituals involve walking on a bed of hot coal.

Which of the statements given above are correct?

- a) 2 and 3 only
- b) 1, 2 and 4 only
- c) 1 and 4 only
- d) 1, 3 and 4 only

Ans) c

Exp) Answer c is the correct answer.

Buta kola is a very popular art practised in Tulu Nādu region of Karnataka. The face is painted, wrapped in a Siri made of coconut feathers, and danced invoking the deity. The Divine Dancer gives justice to human beings and resolves disputes through the Word of God.

Statement 1 is correct: Bhootaradhana or Deity/spirit worship is very popular in Tulunadu region of coastal Karnataka. A ritual called nema or kola or Bhootakola is performed for ghosts/spirits/gods. Conducting Bhootakola/kola/nema has its own rules. The face is painted, wrapped in a Siri made of coconut feathers, and danced invoking the deity. The Divine Dancer gives justice to human beings and resolves disputes through the Word of God. Deity worship is the fundamental religious belief of the Tulu race.

Statement 2 is incorrect: Buta Kola is not performed by women. It is performed by male who is feared and respected in the community and is believed to give answers to people's problems on behalf of the god.

Statement 3 is incorrect: Yakshagana involves dancing to the beat of drums in open space usually in the village paddy fields after the winter crop has been harvested. On the other hand, **Buta kola is not performed specifically in paddy fields nor after winter harvest.**

Statement 4 is correct: Some of the Bhootada Kola rituals involve walking on a bed of hot coal. Drums and music give company to the dancing and pooja rituals. By praying together during Bhootada Kola, the community seeks God's blessing, prosperity and riddance of various problems of the community.

<https://karnatakaturism.org/destinations/yakshagana/>

Q.4) Which of the following correctly describes the Katakamukha Hasta Mudra?

- a) A hand gesture denoting great levels of fear.
- b) A hand gesture denoting the crescent moon in Lord Shiva's hair.

- c) A hand gesture denoting firmness.
d) A hand gesture symbolising the symbol “Om”.

Ans) d

Exp) Option d is the correct answer.

Hastas / Mudras (hand gestures) are primarily classified as 28 Asamyuta Hastas (one-hand gesture) and 24 Samyuta Hastas (two-hand gestures). Each of the hastas can be used to denote various thoughts, ideas and objects. There are various slokas (verses) from the ancient texts that enumerate the usage of the hastas. These are called Viniyoga Slokas. Apart from the suggested viniyogas, the dancer may innovate, if found necessary, to convey the appropriate message to the audience.

Option a is incorrect: An Asamyuta Hasta Mudra (hand gesture) denoting great levels of fear is the Sandansh mudra (not the Katakamukha Mudra). Hence this option is incorrect.

This mudra is made with one hand by keeping all the fingers spread slightly whilst remaining inwards and then repeatedly opening and shutting the fingers. Apart from great fear, this mudra is also used to denote sacrifice, wound, etc.

Option b is incorrect: An Asamyuta Hasta Mudra denoting the crescent in Lord Shiva's hair is known as Chandrakala Mudra (not the Katakamukha Mudra). Hence this option is incorrect.

In this mudra, the thumb and the index finger are separated and outstretched from the rest of the fingers which are folded together towards the palm.

Option c is incorrect: An Asamyuta Hasta Mudra denoting firmness is known as the Mushti Mudra (not the Katakamukha Mudra). Hence this option is incorrect.

In this Mudra, all four fingers are joined to form a fist and the thumb is placed on top. It also denotes steadiness, courage, and grasping of objects.

Option d is correct: Mudra denoting the symbol “Om” is the Katakamukha Hasta Mudra. This Mudra is made by joining the index and middle finger with the thumb with the ring and the small fingers separated and outstretched. It also denotes plucking flowers, making of garlands, necklace, etc.

Q.5) With reference to the SVAMITVA scheme, consider the following statements:

1. It is a collaborative effort of the Ministry of Rural Development and State Revenue Departments.
2. It's main aim is to provide pucca houses to all eligible families.
3. It is fully financed by the Central Government.
4. It is being implemented in the aspirational districts exclusively.

Which of the statements given above is/ are correct?

- a) 1 only
- b) 3 only
- c) 1, 2 and 4 only
- d) 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

SVAMITVA (Survey of villages and mapping with improvised technology in village areas) scheme is a new initiative of the Ministry of Panchayati Raj. It aims to provide rural people with the right to document their residential properties so that they can use their property for economic purposes.

Statement 1 is incorrect: The SVAMITVA scheme is a collaborative effort between the Ministry of Panchayati Raj, the state Revenue Departments, Survey of India and the state Panchayati Raj Departments. The Ministry of Rural Development is not involved in this scheme. **Hence this statement is incorrect.**

Statement 2 is incorrect: The main aim of the SVAMITVA scheme is to provide clear proof of ownership of property and land record cards to the owners of lands as well as all house owners in rural inhabited areas. The government scheme focussed on providing pucca houses to all rural families is PM Awas Yojana (Grameen), not the SVAMITVA yojana. **Hence this statement is incorrect.**

Statement 3 is correct: The SVAMITVA scheme is a Central Sector scheme. This means that all the expenses incurred in the implementation of this scheme are borne exclusively, 100% by the Central government. **Hence this statement is correct.**

Remember that any scheme specified as a Centrally Sponsored Scheme generally has a component which is financed by the state government of respective states.

Statement 4 is incorrect: The SVAMITVA scheme is being implemented in all the 600+ districts, throughout the country, not exclusively in the Aspirational districts. **Hence this statement is incorrect.**

The scheme will cover about 6.62 lakh villages in the country.

Knowledge Base:

- 1) The survey of land parcels will be done using Drone technology.
- 2) Some other subsidiary goals of the scheme:
 - a. To bring financial stability to the citizens in rural India by enabling them to use their property as a financial asset for taking loans and other financial benefits.
 - b. Creation of accurate land records for rural planning.
 - c. Determination of property tax, which would accrue to the GPs directly in States where it is devolved or else, add to the State exchequer.
 - d. Creation of survey infrastructure and GIS maps that can be leveraged by any department for their use.
 - e. To support in preparation of better-quality Gram Panchayat Development Plan (GPDP) by making use of GIS maps.

f. To reduce property related disputes and legal cases

Various Stages in SVAMITVA Scheme & its Glimpses

Q.6) “It is one of the classical dances of India from the South Indian region. It was patronised by the Vijayanagar and Golconda rulers. It was mostly performed in the village temples by groups of travelling actors. The dance recitals are often based on stories from Bhagavata Purana. Some elements of this dance form are the Tarangam and the Jal Chitra Nrityam.”

Which of the following options best matches the description given above?

- Mohiniattam
- Sattriya
- Odissi
- Kuchipudi

Ans) d

Exp) Option d is the correct answer.

Option a is incorrect: Mohiniattam is a classical dance of Kerala and was patronised by the ruling dynasty of erstwhile kingdom of Travancore, not Vijayanagar or Golconda. The Lasya aspect of the dance is dominant and hence it is performed mainly by female performers not male performers. Hence this option is **not correct**.

Option b is incorrect: Sattriya is a classical dance form from the state of Assam in the north east and not South India. Hence this option is **not correct**.

Option c is incorrect: Odissi is a classical dance from the state of Odisha. It was patronised by Jain king Kharavela, not the Vijayanagara rulers. Hence this option is **not correct**.

Option d is correct: Kuchipudi is a south Indian classical dance form that emerged in the Andhra region (in the Kuchipudi village in Krishna district), where it was first patronised by the Vijayanagara rulers, and later by those in Golconda. With the advent of Vaishnavism during the Bhakti movement of 16th century CE, this art form began to be practised almost exclusively by male Brahmins who were called Bhagvathalus. The dance recitals are often based on stories from Bhagavata Purana, but often have secular themes, especially Sringar Ras. Hence this option is **correct**.

Knowledge Base:

Other features of Kuchipudi:

- 1) Both Tandav and Lasya components have equal dominance in this dance form.
- 2) The dance may also take the role of the singer, thus making it a dance-drama performance.
- 3) The recital is accompanied by Carnatic music - Violin and Mridangam being the chief instruments.
- 4) Some important solo elements:
 - a. Manduka Shabdham: story of a frog.
 - b. Taranagam: dancer performs with their feet on edge of a brass plate while balancing a pot of water or a set of diyas on head.
 - c. Jala Chitra Nrityam: Dancer draws pictures on the floor with his/ her toes while dancing.

Q.7) Recently, 'Gamosa' got Geographical Indication tag. Regarding 'Gamosa', consider the following statements:

1. It is a handwoven cotton piece of cloth traditionally offered to elders as a mark of respect.
2. It is traditionally manufactured by the indigenous people of Raigadh district of Maharashtra.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

India having a diverse culture is home to various arts and crafts mastered by many generations over the years. Recently, **Gamosa of Assam, Tandur Redgram of Telangana, RaktseyKarpoo Apricot of Ladakh, Alibag White Onion of Maharashtra** etc. have been given the coveted GI Tags.

Statement 1 is correct: Gamosa, a handwoven rectangular cotton piece of cloth with red borders and different designs and motifs, is traditionally offered to elders and guests as a mark of respect and honour by Assamese. Gamosa is a symbol of cultural identity of Assam.

Gamosa

Statements 2 is incorrect: The Gamosa or Gamusa is Body wipes or Towel, an article of significance for the indigenous people of **Assam, India** (not from Maharashtra).

Assamese gamosa receives the GI tag (indiatimes.com)

Q.8) “This great epic of Tamil literature was written around 2nd century A.D. It is a story of miscarriage of justice done to Kannagi at the court of Pandyan dynasty and subsequent revenge taken on kingdom. It is also a moralistic discourse abounding Jain themes and ideas.” This is a description of the book:

- Tolkappiyam
- Kundalakesi
- Manimekalai
- Silappadikaram

Ans) d

Exp) Option d is the correct answer.

Tamil literature follows the history of Tamil Nadu, closely following the social, economic, political and cultural trends of various periods. The early Tamil literature, dated before 300 BCE, constitutes the Sangam literature. Post-Sangam Period lasted from 200 to 600 CE. This age saw the composition of five great epics in Tamil namely:

- 1) Silappadikaram
- 2) Manimekalai
- 3) Jivaka Chintamani
- 4) Valaiyapati
- 5) Kundalakesi

Option a is incorrect: **Tolkappiyam** is the most ancient and existing Tamil grammar text and the oldest extant long work of Tamil literature. Some in the Tamil tradition place the text in the mythical second sangam, variously in 1st millennium BCE or earlier.

Option b is incorrect: **Kundalakesi**, is a Tamil Buddhist epic written by Nathakuthanaar. The epic is a story about love, marriage, getting tired with the married partner, murder and then discovering religion.

Option c is incorrect: **Manimekalai** is a sequel to the earliest Tamil epic Silappadikaram.

Manimekalai is written around 6th century CE. The title Manimekalai is also the name of the daughter of Kovalan and Madhavi, who becomes a Buddhist nun.

Option d is correct: Ilango Adigal’s **Silappadikaram** is considered one of the greatest epics of Tamil literature and was written in **2nd century AD**. It revolves around Kannagi, who having lost her husband to a miscarriage of justice at the court of the Pandyan Dynasty, wreaks her revenge on his kingdom. The

SFG 2023 | LEVEL 1 | Test #36 – Solutions | ForumIAS

Silappatikaran contains Jain themes and the ideas like the idea of Sallekhana, and the presence of Kuvanti the Jain Sadhavi who is a spiritual preceptor/ religious adviser.

Q.9) With reference to the musical instrument named Cymbals, consider the following statements:

1. It belongs to the Solid type of musical instruments.
2. It is widely used in the Sattriya dance.
3. Its origin can be traced back to the Indus valley civilisation.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Statement 1 is correct: Cymbal, is a solid type musical instrument made of metal and cloth. Cymbals are generally used in pairs; it consists of thin round plates. The most popular examples of Cymbals are Manjira, Jaltarang, Kanchtarang, Jhanj, Khartal, etc.

Statement 2 is correct: Drum, Cymbals (Manjira) and Flute are major musical instruments of Sattriya dance. Sattriya dance in its modern form was introduced by the Vaishnava saint Shankaradeva in the 15th century A.D in Assam. It is a devotional dance and narrates mythological stories of Lord Vishnu.

Statement 3 is correct: The Manjira is a small brass cymbal that is generally used in temples. Archaeological excavations have dated Manjira to be as old as the Harappan civilisation. The function of these instruments is to keep rhythm and time with the song that is being sung.

Q.10) What is the objective of the National Mission on Natural Farming, seen in the news recently?

- a) To augment the supply chain and marketing mechanisms of organic produce.
- b) To promote the usage of High Yielding Variety seeds in the production of crops and vegetables.
- c) To promote local varieties of fruits and vegetables.
- d) To promote chemical free farming methods using local resources and traditional farming.

Ans) d

Exp) Option d is the correct answer.

The **National Mission on Natural Farming (NMNF)** is an initiative of the Ministry of Agriculture to promote sustainable and eco-friendly farming methods using local resources and traditional knowledge while not using any chemical inputs - be it hybrid seeds, or chemical fertilisers, or chemical pesticides, etc.

Natural Farming is considered as an agroecology based diversified farming system which integrates crops, trees and livestock with functional biodiversity. It is largely based on on-farm biomass recycling with major stress on biomass mulching, use of on-farm cow dung-urine formulations; maintaining soil aeration and exclusion of all synthetic chemical inputs. Natural farming is expected to reduce dependency on purchased inputs. It is considered as a cost-effective farming practice with scope for increasing employment and rural development.

The objective of the NMNF is to implement self-sustainable and self-generating natural farming systems for freedom from purchased inputs with the aim to cut down on cost of cultivation, enhance farmers income and ensure resource conservation and safe & healthy soils, environment and food.

Knowledge Base:

Proposed actions under the NMNF:

- 1) Creating institutional capacities for documentation and dissemination of best practices.
- 2) Making practising farmers as partners in promotion strategy.
- 3) Ensuring capacity building and continuous hand holding.
- 4) Promoting alternative systems of farming for freedom from external purchased inputs, cost reduction and thereby increasing income of farmers.
- 5) Popularising integrated agriculture-animal husbandry models based on desi cow and local resources.
- 6) Collecting, validating and documenting Natural Farming practices being practised in various parts of the country and to encourage participatory research with farmers on further up scaling.
- 7) Undertaking activities for awareness creation, capacity building, promotion and demonstration of Natural Farming.
- 8) Creating standards, certification procedure and branding for Natural Farming products for national and international markets.

Benefits of Natural Farming

Q.11) In the context of cultural history of India, a pose in dance and dramatics called ‘Tribhanga’ has been a favourite of Indian artists from ancient times till today.

Which one of the following statements best describes this pose?

- a) One leg is bent and the body is slightly but oppositely curved at waist and neck.
- b) Facial expressions, hand gestures and make-up are combined to symbolize certain epic or historic characters.

SFG 2023 | LEVEL 1 | Test #36 – Solutions | ForumIAS

- c) Movements of body, face and hands are used to express oneself or to tell a story.
 d) A little smile, slightly curved waist and certain hand gestures are emphasized to express the feelings of love or eroticism.

Ans) a

Exp) Option a is the correct answer.

Tribhanga is a 'triple-bend position' where the body bends in one direction at the knees, the other direction at the hips and then the other again at the shoulders and neck. Along with 'chowk', it is one of the basic postures of Indian classical dance 'Odissi'.

Source: UPSC 2013

Q.12) With reference to the development of substyles of Hindustani classical music, consider the following statements:

1. Sufism played a major role in the development and spread of Ghazal.
2. Compositions of Thumri are usually romantic or devotional in nature.
3. Tappa is originated from the folk songs of camel riders of Punjab.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Statement 1 is correct: The Ghazal as a poetic form originated in Persia in the tenth century. Later Ghazal developed as a **sub style of Hindustani classical music**, which was influenced by Sufism. **Sufi mystics** (a person who believes attaining insights into mysteries transcending ordinary human knowledge) **played a major role in spreading Ghazal music in India and South Asia during the 12th century.**

Statement 2 is correct: **Thumri** a sub style of Hindustani classical music was **adopted by the Bhakti saints to connect with gods.** Compositions of Thumri are either **romantic or devotional in nature and the main theme being the girl's love for Krishna.** It was usually sung in a female voice. The thumri is very lyrical in its structure and presentation. Thumri is a love song and hence the textual beauty is very important. This is closely coordinated with the musical rendition. And keeping in mind its mood a thumri is usually set to ragas like Khamaj, Kaphi, Bhairavi and so on and the musical grammar is not strictly adhered to.

Statement 3 is correct: **Tappa, a substyle of Hindustani classical music** originated from the **folk songs of the camel riders of Punjab** known as 'dhapa', which was transformed into the Hindi Tappa. It gained legitimacy and popularity under the **Mughal emperor Muhammad Shah.**

Q.13) Which of the following theatre forms of India have been included in UNESCO'S representative list of intangible cultural heritage of humanity?

1. Koodiyattam
2. Karyala
3. Mudi yettu
4. Ramman
5. Bhand Pather

Select the correct answer using the code given below:

- a) 1, 2 and 4 only
- b) 2, 3 and 5 only
- c) 1, 3 and 4 only
- d) 2, 3, 4 and 5 only

Ans) c

Exp) Option c is the correct answer.

Option 1 is correct: Koodiyattam is a traditional performing art form from the **Indian state of Kerala**. It combines elements of ancient Sanskrit theatre with Koothu, an ancient performing art from the Sangam era. Kutiyattam (Koodiyattam), which dates back around 2000 years, has been **designated by UNESCO** as a 'Masterpiece of Oral and Intangible Heritage of Humanity'.

Option 2 is incorrect: Karyala is popular in **districts of Himachal**, Karyala is an impromptu folk theatre that **does not need any stage**. It is mostly performed during Diwali and is usually performed by a person for the deity. This theatre is a fusion of drama, versification, music, and dance. It is **not included in UNESCO'S** representative list of intangible cultural heritage of humanity.

Option 3 is correct: Mudi yettu is a **traditional ritual theatre** and folk-dance drama from **Kerala** based on the mythological tale of a battle between the goddess Kali and the demon Darika. It is a community ritual in which the entire village participates. It depicts the mythological storey of the Goddess Kali and the demon Darika in battle. It was included in the **UNESCO'S List** of Intangible Cultural Heritage in 2010.

Option 4 is correct: Ramman is an **Indian religious event and ritual theatre** that takes place in the Garhwal area. It is a Hindu community celebration held in the Saloor Dungra hamlet in the Painkhanda Valley in **Uttarakhand's Chamoli district**. It was included in **UNESCO'S List** of Intangible Cultural Heritage in 2009.

Option 5 is incorrect: Bhand Pather (Kashmir) is an **age-old folk theatre** having its origins in Kashmir. It is commonly held in open spaces and performed along with musical instruments like the surnai, nagada, and dhol. It is **not included in UNESCO'S representative list** of intangible cultural heritage of humanity.

Source: Browse the Lists of Intangible Cultural Heritage and the Register of good safeguarding practices - intangible heritage - Culture Sector - UNESCO

Q.14) Which of the following statements best describes the role of Vidushak and Sutradhar in ancient Sanskrit theatres/plays?

1. Vidushaka is the one who questions the prevailing social norms through satire.
2. Sutradhar is primarily responsible for costumes and makeup of the artists and the actors.

Select the correct answer using the code given below:

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

Theatre in India began as a narrative art form, which encompassed a concoction of music, dance and acting. Recitation, dance and music were integral parts of theatre. Characters in Sanskrit plays were important. They were broadly classified into three kinds which are Nayaka (Hero or the Protagonist), Nayika (Heroine) and the Vidusaka (Clown).

SFG 2023 | LEVEL 1 | Test #36 – Solutions | 

Statement 1 is correct: Vidusaka (Clown), the comic character plays a vital role in the plays. He is the noble and good-hearted, often a friend of hero. He **questions the prevailing social norms through satire**. The vidushaka is one who challenges social norms. He provides comic relief while simultaneously prodding us to actually think.

Statement 2 is incorrect: In Indian theatre, Sutradhar is the **narrator who narrates the play and sings verses**. The Sutradhar, is the **stage manager and director**, who enters the stage with his assistants. The time and place of the play was announced by the Sutradhar. He also gave a brief introduction of the playwright. For example, in Mahabharata, the Sutradhar of the story is Lord Krishna.

Nitin Singhania - Indian Art and Culture for Civil Services

Q.15) With reference to the India Infrastructure Project Development Fund (IIPDF), consider the following statements:

1. It aims to support development of bankable Public Private Partnership (PPP) infra projects.
2. It is created in the Department of Financial Services.
3. It has an initial corpus of 100 crores.
4. It will provide an upfront payment of 30% of project cost to the private partner in the PPP project.

Which of the statements given above are correct?

- a) 1, 2 and 4 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

The India Infrastructure Project Development Fund (IIPDF) is a scheme designed to promote infrastructure development through Public Private Partnership (PPP).

Statement 1 is correct: The IIPDF scheme will try to promote infra projects by aiding the process of project report creation for finding various bankable and credit worthy PPP infra projects. Hence this statement is correct.

In order to improve the success rate, as well as reduce overhead costs in PPP projects many activities such as feasibility study, consultancy on technical aspects, etc need to be undertaken that are time and money consuming. So, this fund will cover such costs to select PPP projects on which the government must focus and invest.

Statement 2 is incorrect: The IIPDF has been placed under the Department of Economic Affairs (not Financial Services) of the Union Ministry of Finance. Hence this statement is **incorrect**.

Statement 3 is correct: The IIPDF has been designed as a revolving fund, with an initial corpus of Rs 100 Crore. Hence this statement is correct.

The initial corpus will be provided out of the budget for the Union Ministry of Finance. Thereafter it would be supplemented, should it become necessary, through budgetary support by the Ministry of Finance from time to time. As the IIPDF matures, funding from the multilateral and bilateral agencies could become available. Other interested agency(ies), as approved by DEA, including the bilateral agencies, will be permitted to join the IIPDF. Agents with conflict of interest will not be allowed to contribute to the fund.

Statement 4 is incorrect: The IIPDF will be providing costs for initial project report development work subject to certain maximum limits to the Sponsoring Authorities within the Central and State governments. This fund shall not be providing any financial assistance to the concessionaire (private partner) in the PPP. Hence this statement is **incorrect**.

Q.16) Which of the following theatre forms find mention in the Sangam literature?

1. Mudiyettu
2. Koodiyattam
3. Theyyam
4. Yakshagana

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1, 2 and 3 only
- d) 2, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

Traditional art forms reflect the ideals of the society, its determination to survive, its ethos. The traditional folk theatre reflects the various aspects of the local lifestyle including social norms, beliefs and customs. Folk theatre had rural roots and the rustic flavour was reflected in the dramatic style involved.

Option 1 is incorrect: A traditional ritual theatre, Mudiyettu, is a folk dance and drama performed in the State of Kerala. It depicts the mythological tale of a battle between Goddess Kali and demon Darika. The dance is performed in the village temples, called Bhagavati Kavus, after the harvesting season usually between February and May. It is **not mentioned in the Sangam literature.**

Mudiyettu

Option 2 is correct: Koodiyattam is a combined dance drama **from Kerala** conducted by the Chakyars (a sub-caste among Hindus) who play the male role traditionally. The women of the Ambalavasi Nambiar caste play the female roles. They are mainly enacted inside the temples and the theme is based on Hindu mythology. It is a combination of ancient Sanskrit theatre with elements of Koothu, **an ancient performing art from the Sangam era.** It is officially recognised by UNESCO as a Masterpiece of the Oral and Intangible Heritage of Humanity. **It is mentioned in the Sangam literature.**

Koodiyattam

Option 3 is correct: Theyyams are performed in Kerala. It is similar to a practice in Karnataka, called Bhuta Kola. It is an open theatre and is performed in front of the local temples to mainly honour the spirit of the ancestors besides gods. Themes of Vaishnavism, Shaktism and Shaivism are now common. The actors wear elaborate headgear and colourful costumes. **It is mentioned in the Sangam literature.**

Theyyam

Option 4 is incorrect: Yakshagana is perhaps the oldest theatre traditions, which is prevalent till date in Karnataka and parts of Kerala. It originated in the royal courts of the Vijayanagara empire and was performed by a particular community known as Jakkula Varu. It is mentioned **in the Sanskrit literature (not Sangam literature).**

Q.17) With reference to Indian Puppetry, consider the following pairs:

Puppetry - States

1. Bommalattam - Kerala
2. Ravanachhaya - Odisha
3. Pavakoothu - Andhra Pradesh
4. Putul Nautch - West Bengal

Which of the pairs given above are correct?

- a) 1 and 3 only
- b) 1 and 4 only
- c) 2 and 3 only
- d) 2 and 4 only

Ans) d

Exp) Option d is the correct answer.

Puppetry is one of the ancient forms of entertainment. The element of a puppet being controlled by a master makes it a captivating experience. This form of entertainment gives unrestricted freedom to the artist in design, colour and movement making it one of the most ingenious inventions of mankind.

Pair 1 is incorrectly matched: Bommalattam is the Puppets from **Tamil Nadu**, known as Bommalattam combine the techniques of **both rod and string puppets**. They are made of wood and the strings for manipulation are tied to an iron ring which the puppeteer wears like a crown on his head. The Bommalattam puppets are the largest, heaviest and the most articulate of all traditional Indian marionettes.

Fig. 8.5 : Bommalattam

Pair 2 is correctly matched: Ravanachhaya is the most theatrical shadow puppetry and is a popular form of entertainment in the **Odisha** region. The puppets are made of deer skin and depict bold and dramatic postures. They do not have any joints attached to them, making it a more complex art. Use of non-human puppets such as trees and animals is common. The Ravanachhaya artists are extremely well trained in their art creating a lyrical and sensitive theatrical narration.

Fig. 8.7: Ravanchhaya

Pair 3 is incorrectly matched: Pavakoothu is the traditional glove puppet played in the **Kerala**. It came into existence during the 18th century due to the influence of Kathakali, the famous classical dance-drama of Kerala, on puppet performances. In Pavakoothu, the height of a puppet varies from one foot to two feet. The head and the arms are carved of wood and joined together with thick cloth, cut and stitched into a small bag. The theme for Glove puppet plays in Kerala is based on the episodes from either the Ramayana or the Mahabharata.

Pavakotthu

Pair 4 is correctly matched: Putul Nautch is the traditional **rod puppet form West Bengal**. They are carved from wood and follow the various artistic styles of a particular region. In Nadia district of West Bengal, rod-puppets used to be of human size like the Bunraku puppets of Japan. This form is now almost extinct. The Bengal rod-puppets, which survive are about 3 to 4 feet in height and are costumed like the actors of Jatra, a traditional theatre form prevalent in the State. These puppets have mostly three joints. The heads, supported by the main rod, is joined at the neck and both hands attached to rods are joined at the shoulders.

Q.18) With reference to Geographical Indication (GI) Tags, consider the following statements:

1. In India, GI Tags are exclusively governed under the Indian Patents and Designs Act, 1970.
2. GI tag to any product is issued by the Ministry of Culture.
3. It is covered under Paris Convention for the Protection of Industrial Property.
4. GI Tags prevent its use by a third party whose product does not conform to the applicable standards.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 3 and 4 only
- c) 1 and 3 only
- d) 2, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

Geographical Indication (GI) is an indication used to identify goods having special characteristics originating from a definite geographical territory. It is primarily an agricultural, natural or a manufactured product mainly on handicrafts and industrial goods.

Statement 1 is incorrect: Geographical Indication (GI) tags is **enacted by the Geographical Indications of Goods (Registration and Protection) Act, 1999**. Whereas, the provisions of **the Patents Act, 1970** with regard to certificates of the validity of a patent, and to the remedy in case of groundless threats of legal proceedings by a patentee shall apply in the case of registered designs in like manner.

Statement 2 is incorrect: Geographical Indication (GI) tag is issued by the Geographical Indication Registry under the **Department of Industry Promotion and Internal Trade, Ministry of Commerce and Industry** (not from Ministry of Culture). The tag provided by the ministry is valid for the **ten years**.

Statement 3 is correct: Geographical indications are covered as an element of IPRs under Articles 1 (2) and 10 of the **Paris Convention for the Protection of Industrial Property**. They are also covered under Articles 22 to 24 of the Trade Related Aspects of Intellectual Property Rights (TRIPS) Agreement, which was part of the Agreements concluding the Uruguay Round of GATT negotiations.

Statement is 4 correct: A geographical indication **prevent its use by a third party whose product does not conform to the applicable standards**. For example, in the jurisdictions in which the Darjeeling geographical indication is protected, producers of Darjeeling tea can exclude use of the term “Darjeeling” for tea not grown in their tea gardens or not produced according to the standards set out in the code of practice for the geographical indication.

SFG 2023 | LEVEL 1 | Test #36 – Solutions | 

Q.19) It is a ritualistic dance form of Kerala. It is performed to honour the spirit of the ancestors and gods. The actors wear crowned masks and colourful costumes. The form is-

- a) Theyyam
- b) Terukkuttu
- c) Pagati Veshala
- d) Bayalata

Ans) a

Exp) Option a is the correct answer.

Theyyam is one of the famous Indian ritualistic Dance Forms **performed in Kolathunadu, Kerala**. It is a ceremonial dance along with music played by instruments like Chenda, Elathalam, Kurumkuzal and Veekkuchenda. It talks about the beliefs of the ancient tribals, who gave importance to the worship of heroes and the **spirits of their ancestors**. Performers of theyyam wear heavy make-up and adorn flamboyant costumes. There are different patterns of facial makeup. Theyyam is characterised by the use of elaborate, crowned masks that represent particular deities. The colours used for theyyam is extracted from Nature like Chayilyam, Karimazhi, Aripodi and Maniyola.

Q.20) Consider the following statements about the Telecom Technology Development Fund scheme:

1. It aims to fund research & development in rural-specific communication technology applications.
2. The scheme aims to promote indigenous manufacturing.
3. One of the objectives under the scheme is the creation of Intellectual Property.

Which of the above given statements is/are correct?

- a) 1 and 2 only
- b) 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Universal Service Obligation Fund (USOF), a body under the Department of Telecommunications, officially launched **Telecom Technology Development Fund (TTDF) Scheme on October 01st, 2022.**

Statement 1 correct: Telecom Technology Development Fund (TTDF) aims to fund R&D in rural-specific communication technology applications and form synergies among academia, start-ups, research institutes, and the industry to build and develop the telecom ecosystem.

Statement 2 and 3 are correct: The TTDF Scheme also aims to promote technology ownership and indigenous manufacturing, create a culture of technology co-innovation, reduce imports, boost export opportunities and **creation of Intellectual Property**.

Q.21) With reference to Manipuri Sankirtana, consider the following statements:

1. It is a song and dance performance.
2. Cymbals are the only musical instruments used in the performance.
3. It is performed to narrate the life and deeds of Lord Krishna.

Which of the statements given above is/are correct?

- a) 1, 2 and 3
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1 only

Ans) b

Exp) Option b is the correct answer.

Statement 1 is correct. Sankirtana involves ritual singing, drumming and dancing performed in the temples and domestic spaces.

Statement 2 is incorrect. Drums and shankha are also used in Sankirtana performances.

Statement 3 is correct. Sankirtana performers narrate the lives and deeds of Krishna.

Sankirtana inscribed on the UNESCO Representative List of the Intangible Cultural Heritage of Humanity.

Q.22) With reference to folk theatres, consider the following pairs:

Folk theatres - Famous in States

1. Ramlila - Uttar Pradesh
2. Swang - Haryana
3. Bhaona - Gujarat
4. Yakshagana - Karnataka

Which of the pairs given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1, 2 and 4 only
- d) 2, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

The Folk traditional folk theatre reflects the various aspects of the local lifestyle including social norms, beliefs and custom. Folk theatre had rural roots and the rustic flavour that was reflected in the dramatic style involved.

Pair 1 is correctly matched: Ramlila is a popular folk theatre in the region of Uttar Pradesh, it is an enactment of Ramayana using songs, dances and dialogues, mainly during the period before Dussehra. Generally performed by males, the role of Sita is also done by male actors. The play is staged annually over 10 or more successive nights, during the auspicious period of “Sharad Navartras”.

SFG 2023 | LEVEL 1 | Test #36 – Solutions | ForumIAS

Pair 2 is correctly matched: Swangs are popular source of entertainment in the region of Rajasthan and Haryana. They are mainly musical dramas, sung through verses, accompanied by the music of ektara, harmonium, sarangi, dholak and khartal. It also involves mimicry accompanied by dialogue.

Pair 3 is incorrectly matched: Bhaona is a folk theatre of Assam, especially the Majuli Island. The idea is to spread religious and moral messages to people through entertainment and drama. It is a presentation of Ankia Naat and Vaishnavite themes are common. Sutrardhar (Narrator) narrates the play and sings verses from holy texts. Songs and music are also a part of it. This folk theatre was created by Sankardeva in early 16th century.

Pair 4 is correctly matched: Yakshagana is perhaps the oldest theatre traditions, which is prevalent till date in **Karnataka and parts of Kerala**. It originated in the royal courts of the Vijayanagara empire and was performed by a particular community known as Jakkula Varu. Originally, it was largely a descriptive dance-drama enacted by a single artist. Later forms adopted further variations and became a typical dance drama. It is strongly influenced by Vaishnava Bhakti Movement.

Q.23) Which of the following statements are correct about the 'Bharat Ratna' award?

1. The recommendations for Bharat Ratna awards are made by the Prime Minister to the President.
2. It can be awarded only up to three people in a year.
3. Both Indian citizens and non-Indians are eligible for these awards.
4. The award cannot be used as a prefix or suffix of the receiver's name.

Select the correct answer using the code given below.

- a) 1 and 4 only
- b) 1, 2 and 3 only
- c) 1, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct answer.

'Bharat Ratna' is the highest civilian Award of the country that was instituted in the year 1954. Any person without distinction of race, occupation, position or sex is eligible for these awards.

Statement 1 is correct. The recommendations for Bharat Ratna are made by the **Prime Minister** himself to the **President**.

Statement 2 is correct. The number of Bharat Ratna annual awards is restricted to a **maximum of three in a particular year**. The Award **does not carry** any monetary grant.

Statement 3 is correct. The Bharat Ratna can be **awarded to both Indian citizens and non-Indians** for their exceptional service/performance of the highest order in any field of human endeavour as there is no written rule against the same. **Mother Teresa**, a naturalised Indian citizen was conferred with the award in 1980. Non-Indians, **Khan Abdul Ghaffar Khan** and **Nelson Mandela** have also been awarded with the Bharat Ratna.

Statement 4 is correct. As per **Article 18(1) of the Indian Constitution**, awardees of Bharat Ratna cannot use 'Bharat Ratna' as a **prefix or suffix** to their name. However, they can add 'Awarded Bharat Ratna by the President' or 'Recipient of Bharat Ratna Award' in their biodata, visiting card, letter head, etc.

Knowledge Base:

Physical Features of Award: -

- 1) The physical award is designed in the shape of a peepal leaf with 'Bharat Ratna' inscribed in Devanagiri script under a sunburst figure.

SFG 2023 | LEVEL 1 | Test #36 – Solutions | ForumIAS

- 2) The reverse side of the award figurine features 'Satyameva Jayate' written in Hindi under an inscription of the state emblem.
- 3) The emblem, the sun and the rim of the Bharat Ratna award are made of platinum while the inscriptions are in burnished bronze.

Q.24) With reference to the recently celebrated Putul Utsav, consider the following statements:

1. It was recently celebrated to mark the contribution of the overseas Indian community towards the development of India.
2. It was organised by Ministry of External affairs.
3. To mark India's 75 years of Independence, tales of India's struggle for freedom had been retold in this event.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 2 only
- d) 3 only

Ans) d

Exp) Option d is the correct answer.

Statement 1 and 2 are incorrect: Sangeet Natak Akademi, New Delhi an **autonomous body under the Ministry of Culture** organized Putul Utsav, a puppet festival to mark World Puppetry Day on 21st March 2022. With India celebrating 75 years of independence, the theme of the festival was Azadi Ke Rang, Putul Ke Sang in keeping with the spirit of Azadi ka Amrit Mahotsav. In this gala event, tales of India's struggle for freedom were retold through the medium of puppets. The festival commenced on the 21st of March, 2022 was celebrated by various events in five different cities - Varanasi (Uttar Pradesh), Hyderabad (Telangana), Angul district (Odisha), New Delhi, and Agartala (Tripura).

Pravasi Bhartiya Divas is a celebrated to mark the **contribution of the overseas Indian community** towards the development of India.

Statement 3 is correct: With India celebrating 75 years of independence, **tales of India's struggle for freedom had been retold through the medium of puppets in the Putul Utsav event.** The theme of the festival is **Azadi Ke Rang, Putul Ke Sang** in keeping with the spirit of Azadi ka Amrit Mahotsav.

Q.25) Consider the following pairs of the initiatives and their area of work:

Initiatives	Area of Work
1. Yuva 2.0	Mentoring of Authors
2. SAMRIDH Scheme	Rehabilitation of sanitation workers
3. NAMASTE Scheme	Support to Start-ups
4. BioCare Scheme	Empowering women scientists

How many pairs given above are matched correctly?

- a) One pair only
- b) Two pairs only
- c) Three pairs only

d) All four pairs

Ans) b

Exp) Option b is the correct answer.

Pair 1 is correct: The Prime Minister's Scheme for Mentoring Young Authors, known as YUVA 2.0 (Young, Upcoming and Versatile Authors), was launched by the Department of Higher Education of the Ministry of Education on October 2. In order to promote India and Indian literature abroad, it is an **author mentoring programme for young and aspiring writers** who are under 30 years old. YUVA 2.0 aims to artistically and ingeniously emphasize the viewpoints of the younger generation of authors.

Pair 2 is incorrect: The main objective of the MeitY (Ministry of Electronics and Information Technology) SAMRIDH scheme is to provide **funding support to startups** so that they can become successful. Through this scheme, not only funding support but also skill sets will be provided to the entrepreneurs. SAMRIDH stands for Startup Accelerator of MeitY for Product Innovation, Development and Growth.

Pair 3 is incorrect: NAMASTE stands for National Action for Mechanized Sanitation Ecosystem. NAMASTE is a Central Sector Scheme of the Ministry of Social Justice and Empowerment (MoSJE) as a joint initiative of the MoSJE and the Ministry of Housing and Urban Affairs (MoHUA). NAMASTE envisages the **safety and dignity of sanitation workers in urban India** by creating an enabling ecosystem that recognizes sanitation workers as one of the key contributors to the operations and maintenance of sanitation infrastructure.

Pair 4 is correct: Biotechnology Career Advancement and Re-orientation Programme (BioCARE) is a mission programme of the department for empowering **women scientists** of India. The programme is mainly for Career Development of employed/ unemployed women Scientists upto 45 years of age for whom it is the first extramural research grant.

Q.26) With reference to the tradition of puppetry in India, consider the following pairs:

Name of Puppetry : Type of Puppetry

1. Tholu Bommalata : String puppet
2. Pavakoothu : Glove puppet
3. Kundhei : Shadow puppet
4. Yampuri : Rod puppet

How many of the pairs given above are correctly matched?

- a) Only one pair
- b) Only two pairs
- c) Only three pairs
- d) All four pairs

Ans) b

Exp) Option b is the correct answer.

The art of puppetry has been a theatre tradition in India since time immemorial. It is used as a tool for communication, education, and recreation. India has four kinds of traditionally puppetry, these are **String, Shadow, Rod, and Hand puppets**.

Pair 1 is incorrect: Tholu Bommalata is the shadow puppet play of Andhra Pradesh. These Puppets are **coloured on both sides**. Hence, these puppets throw coloured shadows on the screen. The theme of the

SFG 2023 | LEVEL 1 | Test #36 – Solutions | ForumIAS

puppet plays is drawn from the Ramayana, Mahabharata and Puranas. On the other hand, **Bommalattam puppet play in Tamilnadu combines the techniques of both rod and string puppets.**

Pair 2 is correct: Pavakoothu is a traditional **glove puppet play** in **Kerala**. It came into existence during the 18th century due to the **influence of Kathakali**, the famous classical dance-drama of Kerala, on puppet performances. In Pavakoothu, the height of a puppet varies from one foot to two feet. The head and the arms are **carved of wood and joined together with thick cloth, cut and stitched into a small bag.**

Pair 3 is incorrect: Kundhei is the **string puppet play prevalent in Odisha**. Made of light wood, these puppets have **no legs but wear long flowing skirts**. They have more joints and are, therefore, more versatile, articulate and easy to manipulate

Pair 4 is correct: Yampuri is a **traditional Rod puppet play in Bihar**. These puppets are made of wood. Unlike the traditional Rod puppets of West Bengal and Orissa, these **puppets are in one piece and have no joints**. As these puppets have no joints, the manipulation is different from other Rod puppets and requires greater dexterity.

Q.27) With reference to various products that received Geographical Identification (GI) tags, consider the following pairs:

Products	States/Union territories
1. Tandur Redgram	Telangana
2. Raktsey Karpo Apricot	Ladakh
3. Alibag White Onion	Maharashtra
4. Mithila Makhana	Bihar
5. Kangra tea	West Bengal

Which of the pairs given above are correct?

- a) 1, 2 and 3 only
- b) 1, 2, 3 and 4 only
- c) 4 and 5 only
- d) 1, 2, 3, 4 and 5

Ans) b

Exp) Option b is the correct answer.

India having a diverse culture is home to various arts and crafts mastered by many generations over the years. Recently in December 2022, **Gamosa of Assam, Tandur Redgram of Telangana, Raktsey Karpo Apricot of Ladakh, Alibag White Onion of Maharashtra** etc. have been given the coveted GI Tags.

Pair 1 is correctly matched: Tandur red gram is a local variety of pigeon pea which is mainly grown in the rainfed tract of the Tandur and nearby regions of **Telangana**. It contains about 22-24% protein, which is almost three times that of the protein content in cereals.

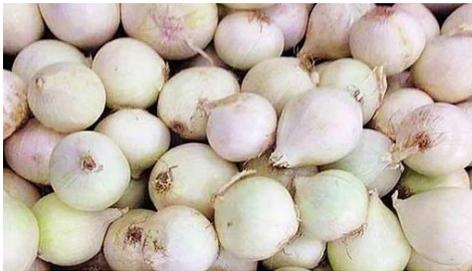

Tandur Red gram

Pair 2 is correctly matched: Raktsey Karpo, from family of **apricot**, packed with vitamins and low on calories is rich in sorbitol – a natural glucose substitute that can be consumed by diabetics. It is grown **in Ladakh, and locally known as ‘Chuli’**. The native apricot genotypes of Ladakh possess unique characteristics, such as high TSS (Total dissolved solids) content, late and extended flowering and fruit maturity, and white seed stone phenotype.

Raktsey Karpo

Pair 3 is correctly matched: Alibagh White onion is known for its unique sweet taste, no-tear factor, and medicinal properties. It grows in **Raigadh district of Maharashtra**. They are an excellent source of antioxidants that contain more than 25 different types of flavonoids which lowers the risk of developing chronic diseases like diabetes, cancer, and heart disease.

Alibagh White onion

Pair 4 is correctly matched: Mithila Makhana or Makhan (botanical name: *Euryale ferox* Salisb.) is a special variety of aquatic fox nut cultivated in **Mithila region of Bihar and Nepal**. Makhana contains protein and fiber, along with micronutrients like calcium, magnesium, iron, and phosphorus.

Makhana

Pair 5 is incorrectly matched: Kangra tea is a tea from the **Kangra district in Himachal Pradesh, India**. Both black tea and green tea have been produced in the Kangra Valley since the mid-19th century. Kangra tea is known for its unique color and flavor. While the black tea has a sweet lingering after taste, the green tea has a delicate woody aroma.

Q.28) With reference to languages in India, consider the following pairs:

Indian language **Mainly spoken in the region of**

1. Tulu language Kerala
2. Kokborok Andhra Pradesh
3. Birhor Chota Nagpur region
4. Kharia Odisha

How many of the pairs given above are correct?

- a) One pair only
- b) Two pairs only
- c) Three pairs only
- d) All four pairs

Ans) c

Exp) Option c is the correct answer.

The 2011 linguistic census accounts for 121 mother tongues, including 22 languages listed in the 8th Schedule of the Constitution. Hindi is the most widely spoken, 43.6% of the population, declaring it as their mother tongue. The next highest is Bengali, mother tongue for 9.7 crores (8%).

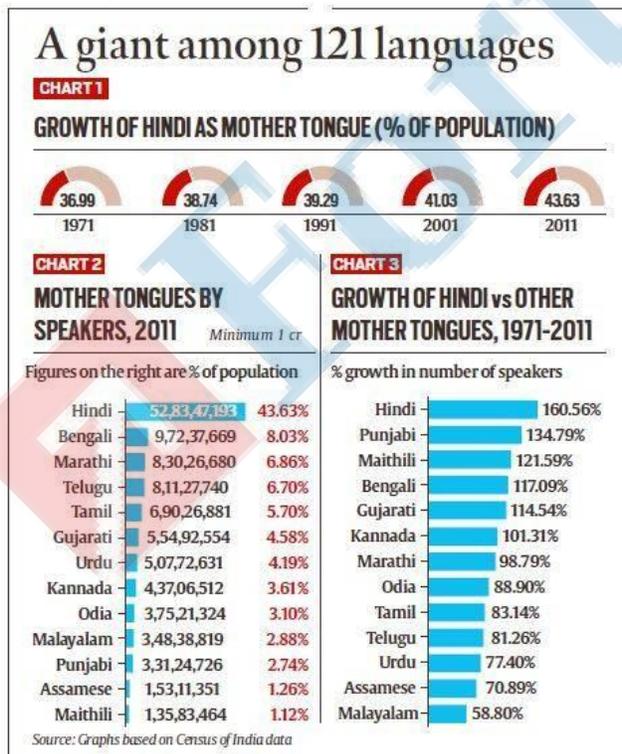

Pair 1 is correct: Tulu is a Dravidian language spoken mainly in two coastal districts Dakshina Kannada and Udupi of **Karnataka** and Kasaragod district of **Kerala**. As per the 2011 Census report, there are 18,46,427 Tulu-speaking people in India.

Pair 2 is incorrect: Kokborok was first recognised as an official language of Tripura in 1979.

Pair 3 is correct: Birhor language is spoken by Birhor tribe in Chota Nagpur region. UNESCO has categorised Birhor as the critically endangered language, with only 2000 speakers left.

Pair 4 is correct: Kharia is a Munda language spoken mainly in Jharkhand, Odisha, Chhattisgarh.

Q.29) With reference to music traditions in India, consider the following statements:

1. All the seven notes of the music can be found in the Sama Veda.
2. The classical music text Sangeet Ratnakara defined ragas from both North India and South India.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Music in India began as an integral part of socio-religious life and India has had a long tradition of musical ingenuity. It is as old as human civilisation and earlier reference to music can be found in the Vedas.

Statement 1 is correct: The Sama Veda mentions all the seven notes (svaras) of music. They were – Krushta, Prathama, Dvitiya, Tritiya, Chaturtha, Mandra and Atisvarya. They are comparable to the Laukik Svaras Ma, Ga, Re, Sa, Dha, Ni, Pa respectively.

S. No.	Sama Vedic Svāra	Laukik Svāra
1.	Krushta	Ma
2.	Prathama	Ga
3.	Dvitiya	Re
4.	Tritiya	Sa
5.	Chaturtha	Dha
6.	Mandra	Ni
7.	Atisvarya	Pa

Statement 2 is correct: Melodies of Indian music are based on ragas (in southern India, ragam). Like a scale, the raga is a list of the notes that are used in a particular piece of music. Raga is a set of Svaras. The classic text on music **Sangeet Ratnakara was written by Sarangadeva**, a 13th century musicologist. This book **defined about 264 ragas including some from the North Indian and the South Indian region.** Its greatest contribution was to identify and **describe the various microtones and classify them into different categories.**

SFG 2023 | LEVEL 1 | Test #36 – Solutions | ForumIAS

Q.30) Consider the following statements with reference to the SMILE-75 initiative launched in India:

1. The initiative is intended for persons who are engaged in the act of begging.
2. The Ministry of Social Justice & Empowerment will provide funding for the initiative.
3. Medical facilities and skill development provisions are covered under this scheme.
4. Its exclusive focus would be on rural areas of the country.

Which of the above-given statements are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 1, 2, and 3 only
- d) 2, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

SMILE stands for Support for Marginalized Individuals for Livelihood and Enterprise. Under the “SMILE-75” Initiative, 75 Municipal Corporations will undertake comprehensive rehabilitation of persons engaged in the act of begging in the spirit of Azadi ka Amrit Mahotsav.

Statement 1 and 2 are correct: The Government of India has formulated a comprehensive scheme of SMILE (Support for Marginalized Individuals for Livelihood and Enterprise) **to address the persisting problem of destitution and beggary. It will cover several comprehensive welfare measures for persons who are engaged in the act of begging.** The Ministry of Social Justice & Empowerment has also allocated a total budget of Rs.100 crore for the SMILE project for coming years till 2025-26.

Statement 3 is correct: The scheme will focus extensively on **rehabilitation, provision of medical facilities, counselling, awareness, education, skill development, economic linkages** and convergence with other Government welfare programmes etc.

Statement 4 is incorrect: Municipal Corporations in municipal areas (not rural), in collaboration with NGOs and other stakeholders will work towards the scheme. One of the key objectives is to make cities/town and municipal areas begging-free.

Source: <https://pib.gov.in/PressReleasePage.aspx?PRID=1850579>

Q.31) With reference to Dhrupad, one of the major traditions of India that has been kept alive for centuries, which of the following statements are correct?

1. Dhrupad originated and developed in the Rajput kingdoms during the Mughal period.
2. Dhrupad is primarily a devotional and spiritual music.
3. Dhrupad Alap uses Sanskrit syllables from Mantras.

Select the correct answer using the codes given below:

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1, 2 and 3
- d) None of the above is correct

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect. Dhrupad claims the distinction of being the oldest form of Indian Classical music heard today, its origin can be traced back to the chanting of Vedic hymns and mantras. It is said to be a form of the Gandharva Veda, the Vedic science of music, which is a branch of Sama Veda. The Sama Veda was chanted with the help of melody and rhythm called Samgana. Gradually this developed into other vocal styles called ‘Chhanda’ and ‘Prabandha’ with introduction of verse and meter. The fusion of these two elements led to the emergence of Dhrupad.

SFG 2023 | LEVEL 1 | Test #36 – Solutions | 

The birth of Dhrupad as we know it today coincided with the Bhakti movement (particularly that of the Vallabh Sampradaya) and consequently was more devotional in nature. It was rendered in temples facing the Divinity full of devotion and Bhaav, this was the genesis of what became known as Haveli Dhrupad/Sangeet.

Statement 2 and 3 both are correct. Dhrupad is primarily a spiritual and devotional music and it uses Sanskrit syllables from mantras.

Dhrupad is the oldest surviving classical style of Hindustani (or North Indian) vocal music. Origin of Dhrupad can be traced to the Vedas.

Q.32) With reference to the Sangeet Natak Academy, consider the following statements:

1. It is a statutory body under the Ministry of Culture.
2. It offers financial support to institutions engaged in training in the fields of music, dance and drama.
3. It grants an award known as ‘Ustad Bismillah Khan Yuva Puraskar’ in the fields of music, dance and drama.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Sangeet Natak Akademi, the apex body in the field of performing arts in the country, was set up in 1953. It is India's national academy for music, dance and drama.

Statement 1 is incorrect: Though Sangeeth Natak academy is an **autonomous body under the Ministry of Culture, it is not a statutory body.** It was created by a resolution of the Government of India with Dr P.V. Rajamannar as its first Chairman.

Statement 2 is correct: The Academy formulated the **scheme of Financial Assistance to Cultural Institutions** to promote arts in India. The scheme's aim is to **provide financial support to institutions engaged in training in the fields of music, dance drama**, etc. and to encourage production of **new plays and ballets, etc.**

Statement 3 is correct: Young outstanding practitioners up to the **age of 40 years will be eligible** to be considered for the **Ustad Bismillah Khan Yuva Puraskar** award. The Sangeet Natak Akademi instituted this award since 2006 to recognise **talent in the fields of music, dance and drama.**

Ntin Singhania- Chapter 5.32 Indian music

Q.33) “This folk music is practised in Nagaland region of North-eastern India. The songs related to this music are generally known as ‘Songs about self’. It has two types. The first type of songs is composed and sung by the old people of Nagaland to glorify the deeds of their youthful days. The second type of the songs are created and sung by both the young and old generations which includes various aspects of life experiences related to both the generations.”

Which of the following folk music is best described in the above given paragraph?

- a) Hekialeu
- b) Khongjom Parva
- c) Bhakha
- d) Bihu

Ans) a

Exp) Option a is the correct answer.

Folk music is the music of the common people, as opposed to the established classical music. It began as a traditional genre, associated with the folklore of the region

Option a is correct: The Hekialeu folk music is practised in Nagaland region of North-eastern India. The songs related to this music are generally known as 'Songs about self.' The **Hekialeu has two variations.** While one type of **Hekialeu is sung only by the old people** of Nagaland state, the other one is sung by **both the old and young generation** of the state. Hekialeu song of old people in Nagaland involves the description of interesting events that took place in their youthful days. The second type of the songs are created and sung by both the young and old generations which includes various aspects of life experiences related to both the generations.

Option b is incorrect: **Khongjom Parva is a folk music from the state of Manipur.** It is a popular ballad genre which is a musical narration of the **battle of Khongjom fought** between the British army and the Manipuri resistance forces in 1891.

Option c is incorrect: The **Bhakha folk music** is popular in the **Jammu region.** Bhakha is sung by the **villagers when harvesting is done.** It is the regional music with most melodic and harmonious elements. It is sung to the accompaniment of instruments like **harmonium.**

Option d is incorrect: **Bihu songs** are the most distinctive type of **folk songs of Assam.** **Bihu songs are blessings for a happy new year and the dance is associated with an ancient fertility cult.** It is Bihu time when an opportunity is there for marriageable young men and women to exchange their feelings and even to choose their partners.

Q.34) With reference to National Gopal Ratna Award, consider the following statements:

1. It is the highest National Award given to young children for their contribution in the field of science & technology.
2. The award is given by the Ministry of Science and Technology.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) d

Exp) Option d is the correct answer.

The Rashtriya Gokul Mission (RGM) has started National Gopal Ratna Award during 2022 under three categories. It was conferred on the occasion of National Milk Day (26th Nov, 2022).

Statement 1 is incorrect. National Gopal Ratna Award is one of the highest National Awards in the **field of livestock and dairy sector.** The Award is given in three categories- Best Dairy Farmer Rearing Indigenous Cattle and buffalo Breeds, Best Artificial Insemination Technician and Best Dairy Cooperative, Milk Producer Company, Dairy Farmer Producer Organization.

SFG 2023 | LEVEL 1 | Test #36 – Solutions | 

Statement 2 is incorrect. The National Gopal Ratna Award is given to selected persons by the **Ministry of Animal Husbandry, Dairying and Fisheries, Government of India** for their excellent work in animal husbandry and livestock development.

Source: <https://pib.gov.in/PressReleaseIframePage.aspx?PRID=1854108>

Q.35) With reference to Prime Minister SVANidhi scheme, consider the following statements:

1. The scheme is fully funded by the Ministry of Housing and Urban Affairs.
2. Possession of identity cards issued by Urban Local bodies is mandatory to avail benefits under this scheme.
3. The Reserve Bank of India (RBI) fixes the interest rate for loans disbursed by all financial institutions under this scheme.
4. The scheme offers collateral free loans to Urban Street Vendors.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 3 and 4 only
- c) 1 and 4 only
- d) 1, 2 and 4 only

Ans) c

Exp) Option c is the correct answer.

The **PM Street Vendor's AtmaNirbhar Nidhi (PM SVANidhi)** was launched by the **Ministry of Housing and Urban Affairs** and this scheme targets to benefit over 50 lakh Street Vendors.

Statement 1 is correct: The scheme is a **Central Sector Scheme i.e., fully funded by the Ministry of Housing and Urban Affairs**. The scheme aims to open up new opportunities to this street vendor and enable them to move up the economic ladder.

Statement 2 is incorrect: Possession of identity card issued by ULBs is not mandatory to avail benefits under this scheme. The Scheme is available even to those who have been **identified in the survey but have not been issued Certificate of Vending / Identity Card**.

Statement 3 is incorrect: RBI does not regulate the interest rate for Scheduled Commercial Banks, Regional Rural Banks (RRBs), Small Finance Banks (SFBs), Cooperative Banks SHG Banks. For them the rates will be as per their **prevailing rates of interest**. On the other hand, the **RBI regulates the interest rate** of loans disbursed by Non-Banking Financial Companies (**NBFCs**), NBFC-Microfinance Institutions (**NBFC-MFIs**), under this scheme.

Statement 4 is correct: The scheme provides Collateral free loan for street vendors. Working Capital (WC) loans of up to 10,000rs with tenure of 1 year will be given to street vendors without demanding any collaterals from borrowers. On timely or early repayment, the vendors will be eligible for the next cycle of working capital loan with an enhanced limit.

Q.36) With reference to the folk-dance traditions of India, consider the following pairs:

- | Folk dance | - Region |
|-------------------|-----------------|
| 1. Oyilattam | - Tamil Nādu |
| 2. Koli | - Odisha |

SFG 2023 | LEVEL 1 | Test #36 – Solutions | ForumIAS

3. Changsang - Nagaland
 4. Dalkhai - Maharashtra

How many of the pairs given above are correctly matched?

- a) only one pair
 b) only two pairs
 c) only three pairs
 d) All four pairs

Ans) b

Exp) Option b is the correct answer.

Unlike Classical dances, the folk-dance forms are generally spontaneous, **crude and performed by the masses without any formal training.**

Pair 1 is correct: Oyilattam is a folk dance with origins in the Madurai region of Tamil Nadu. The dance has its origins in southern regions of Tamil Nadu. The dance involves persons standing in a row and performing rhythmic steps with coloured kerchiefs in the hand. Thavil is a musical instrument used in this art.

Pair 2 is incorrect: Koli is a popular folk dance of Maharashtra and Goa. It reflects the rhythm of the sea waves.

Pair 3 is correct: Changsang is traditional folk dance **performed by the Chang Naga tribe of Nagaland. It's performed in praise of the birthplace of mankind and earth.** It is performed in the month of July during naknyulum festival.

Pair 4 is incorrect: Dalkhai is a folk dance performed in Odisha. It was mostly performed during the festival of Dussehra in Odisha. It was performed by the **Binjhal, Kuda, Mirdha, Sama and other tribes of Western Odisha.** Musical instruments used are **Dhol, nishan, muhuri, tamki, and tasa.** Events from Ramayana and Mahabharata, stories of Lord Krishna, etc are main themes of this dance.

Q.37) With reference to Buddhist and Jain literature, consider the following statements:

1. Visuddhimagga is a treatise on Theravada doctrine.
2. Buddhist text Abhidharmamoksha is written in Sanskrit language.
3. Kalpa Sutra contains the biographies of Jain Tirthankars.
4. Jain literature is mostly written in Pali.

Which of the statements given above are correct?

- a) 1 and 4 only
 b) 2 and 3 only
 c) 1, 2 and 3 only
 d) 1, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

During the post-Vedic period, Buddhist and Jain literature gained prominence as they were mostly written in language spoken by people. Buddhist literature is written in Pali language and can be divided into canonical and non-canonical work. Jain literature can also be divided into two categories; Canonical or religious texts called Jain Agamas or Agam and non-canonical literary works.

Statement 1 is correct: Visuddhimagga **is a text on Theravada doctrine.** It is written by Buddhagosh. 'Visuddhimagga' means 'The way of purification'. It contains discussion on various teachings of Buddha.

SFG 2023 | LEVEL 1 | Test #36 – Solutions | ForumIAS

Statement 2 is correct: Abhidharmamoksha is written in Sanskrit. It has been authored by Vasubandhu and is widely respected text. It contains discussion on Abhidharma.

Statement 3 is correct: Kalpa Sutra contains biographies of Jain Tirthankars , written by Bhadrabahu (3rd century BC). Kalpasutra mentions nine Ganas and 11 Ganadharas of Mahavira. Bhadrabahu is mentioned as prime Ganadhara of Mahavira. Bhadrabahu was the pioneer of the Digambara sect. He also wrote the sacred Uvasaggaharam Stotra.

Statement 4 is incorrect: Jain literature is written in Prakrit and Ardha Magadhi. Jain monks wrote in many other languages depending on the era, region and the patrons who supported them. They wrote in Tamil during the Sangam Age in south India. They also wrote in Sanskrit, Shauraseni, Gujarati, and Marathi.
Source: Nitin Singhania, Indian literature

Q.38) With reference to Akbarnama, consider the following statements:

1. It was written by Ustad Mansur on the order of Akbar's son Jahangir.
2. It mentions the Akbar's differences with Muslim orthodoxy.
3. It was originally written in Persian language.

Which of the statements given above is/are correct?

- a) 1 only
- b) 3 only
- c) 1 and 3 only
- d) 2 and 3 only

Ans) b

Exp) Option b is the correct answer.

Akbarnama is the official chronicle of the reign of Akbar, (1556–1605). It was commissioned by Akbar himself and written by his court historian and biographer, Abul Fazl.

Statement 1 is incorrect: The Akbarnama, which translates to Book of Akbar, was the official chronicle of the reign of Akbar, the third Mughal Emperor. It was commissioned by Akbar himself and written by his court historian and biographer, Abu'l-Fazl.

Statement 2 is incorrect: Abul Fazal avoided writing controversial issues related to Akbar's reign in Akbarnama. Hence, he did not mention Akbar's differences with the Muslim orthodoxy in Akbarnama. Abdul Qadir Badauni accounts the religious discussions held in Akbar's Ibadat Khana. He recorded the origin of Akbar's differences with the Muslim orthodoxy that led to religious controversies in his book.

Statement 3 is correct: Akbarnama was written in Persian language. It was the literary language of the Mughal court.

Knowledge Base: Akbarnama contains three volumes:

- 1) The first volume of Akbarnama deals with the birth of Akbar, the history of Timur's family and the reigns of Babur and Humayun and the Suri sultans of Delhi.
- 2) The second volume describes the detailed history of the reign of Akbar till 1602 and records the events during Akbar's reign.
- 3) The third volume, called the Ain-i-Akbari, describes the administrative system of the Empire.

Source: <https://egyankosh.ac.in/bitstream/123456789/44446/1/Unit-10.pdf>

Q.39) With reference to Classical languages of India, consider the following statements:

1. The criteria for declaring classical language includes high antiquity of its texts over a period of 1500–2000 years.
2. Odia is included in the category of classical languages.
3. Only Parliament can accord the classical language status to any Indian language.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 3 only

Ans) a

Exp) Option a is the correct answer.

In 2004, the government of India undertook an initiative to grant classical language status to languages. At present, six languages namely Tamil, Sanskrit, Malayalam, Telugu, Kannada and Odia have been given classical language status.

Statement 1 is correct: According to the Ministry of Culture, the guidelines for declaring a language as 'Classical' are:

- (1) **High antiquity of its recorded history over a period of 1500-2000 years.**
- (2) A body of ancient literature which is considered a valuable heritage by generations of speakers
- (3) The literary tradition be original and not borrowed extensively from any other language.
- (4) The classical language and literature being distinct from modern, there may also be a discontinuity between the classical language and its later forms or its offshoots.

Statement 2 is correct: Odia is the sixth Indian language to be designated a classical language in 2014.

Statement 3 is incorrect: Only Central government decides on the status of classical language. In 2004 it was decided by the Indian Government to proclaim Indian Languages meeting certain requirements as Classical Language.

Source: <https://indianexpress.com/article/explained/explained-how-is-a-language-declared-classical-in-india-what-benefits-it-enjoys-6216415/>

Q.40) With reference to the Government schemes, consider the following pairs:

Schemes	Features
1. Shrestha scheme	Residential school for Scheduled Tribes
2. PACER scheme	To promote scientific research in Polar areas.
3. PM Employment Generation Programme	All individuals above 18 years of age are eligible under this scheme.
4. Design Linked Incentive Scheme	To promote semiconductor production in the country

How many pairs above are correctly matched?

- a) only one pair
- b) only two pairs
- c) only three pairs
- d) All four pairs

Ans) c

Exp) Option c is the correct answer.

Pair 1 is incorrect: SHRESHTA (Residential Education for Students in High Schools in Targeted Areas) provides seats for the meritorious students belonging to Schedules Caste (SC) boys and girls (not for

Scheduled tribes) in the best **private residential schools** in the country. Every year, it is expected that about (3000) students would be selected for admission in Class 9 and Class 11 under this scheme.

Pair 2 is correct: Polar Science and Cryosphere Research (**PACER**) is being implemented by the **Ministry of Earth Sciences**. It has **four sub- schemes** under it, namely, the Antarctic Program, Indian Arctic Program, Indian Southern Ocean Program and Cryosphere and Climate Program. The scheme aims to ensure the **country's strategic and scientific interests in the Polar Region and the surrounding oceans**.

Pair 3 is correct: Prime Minister Employment Generation Programme (**PMEGP**) is being implemented by **Khadi and Village Industries Commission (KVIC)**. **Only new projects are considered for sanction under PMEGP**. Any individual, **above 18 years of age** can apply for this scheme. At least VIII standard pass for projects costing above **Rs.10 lakh in the manufacturing sector and above Rs. 5 lakhs in the business / service sector**.

Pair 4 is correct: **Ministry of Electronics and Information technology** announced the **Design Linked Incentive (DLI) Scheme**. The scheme **aims to promote semiconductor production in the country** by offering **financial incentives as well as design infrastructure support** across various stages of development and deployment of semiconductor design. **Centre for Development of Advanced Computing (CDAC)** is a nodal agency of this scheme and CDAC is an **autonomous scientific society** operating under the Ministry of Electronics and Information Technology.

Q.41) With reference to culture history of India, consider the following statements:

1. Most of the Tyagaraja Kritis are devotional songs in praise of Lord Krishna.
2. Tyagaraja created several new ragas.
3. Annamacharya and Tyagaraja are contemporaries.
4. Annamacharya kirtnas are devotional songs in praise of Lord Venkateshwara.

Which of the statement is given above are correct?

- a) 1 and 3 only
- b) 2 and 4 only
- c) 1, 2 and 3
- d) 2, 3 and 4

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect. Tyagaraja composed thousands of devotional compositions in praise of Lord Ram, not Lord Krishna.

Statement 2 is correct. Tyagaraja adopted composing in new ragas as one of the aims of his musical career. The (approximately) 700 known kritis of Tyagaraja feature 212 ragas; 121 of these ragas have only one kriti in them. He was the first to compose kritis in "about 66 ragas". His enthusiasm for such ragas can be seen from the fact that even among the last few kritis that he is believed to have composed, three are in new ragas: Vagadeeswari (paramatmudu), Ganavaridhi (daya juchutakidira) and Manohari (paritapamu ganiyadina).

Statement 3 is incorrect. Annamacharya was a 15th Century Hindu saint, he composed songs in praise of Lord Venkateshwara. Tyagaraja was born in 1767.

SFG 2023 | LEVEL 1 | Test #36 – Solutions | ForumIAS

Statement 4 is correct. Annamacharya composed 32,000 keertanas (devotional songs) in praise of Lord Venkateswara.

Source: UPSC 2018

Q.42) With reference to Vedangas, consider the following statements:

1. Nirukta Vedanga consists of explanations for usage of various Vedic terms.
2. Kalpa Vedanga contains procedural codes to perform Vedic sacrifices.
3. Chanda Vedanga deals with grammar of Vedic language.
4. Siksa Vedanga establishes rules for correct chanting of Vedic hymns.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 3 and 4 only
- c) 1, 2 and 4 only
- d) 1, 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

Vedic literature consists of auxiliary texts known as Vedangas (limbs of the Vedas). They are designed to help in the correct pronunciation of the terms, right interpretation of texts, and employment of the proper mantras during the course of sacrifices, rituals, and ceremonies. The Vedangas are six in number namely Siksha, Chhanda, Vyakarana, Nirukta, Jyotisha and Kalpa.

Statement 1 is correct: Nirukta provides the reasons for usage of the Vedic terms particularly those that are archaic and have ancient uses with unclear meaning. This auxiliary discipline has focused on linguistic analysis to help establish the proper meaning of the words.

Statement 2 is correct. Kalpa Vedanga contains procedural codes of the performance of sacrifices. Kalpas are in the form of sutras (a sutra is a distinctive feature of spiritual and philosophical composition). Hence, this field focused on standardizing procedures for Vedic rituals, rites of passage rituals associated with major life events such as birth, wedding and death in family, as well as discussing the personal conduct and proper duties of an individual in different stages of his life.

Statement 3 is incorrect: Chandas deals with science of prosody. Meaning it deals with poetic rhythms or rhythmic patterns of Vedic hymns. Hence, this discipline has focused on the rhythmic structures. **Vyakarana Vedanga** lays down the grammar of the Vedic language.

Statement 4 is correct: Siksa Vedanga deals with the science of proper articulation and pronunciation of varnas (letters) and words. **It lays down the rules for the correct chanting of Vedic hymns.**

Q.43) With reference to Indian literature, consider the following statements:

1. Value of pi (π) is given in the book Sulbasutra.
2. Charak Samhita deals with the use of medicinal plants and herbs.
3. Brihat Samhita mentions the relation of earthquake with undersea activities.
4. Yukti Kalpa Taru lays down various techniques used in ship building.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 2 and 4 only
- c) 1, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct answer.

Various Indian literature has been composed throughout the ages in ancient and Medieval India which deals with development of science, astrology, mathematics etc. hence, India carries a rich legacy of scientific ideas.

Statement 1 is correct: The earliest book on mathematics was **Sulbasutra** written by **Baudhayana in the 6th century B.C.** It contains various significant mathematical formulae. It includes the **value of pi (π) to a considerable degree of precision** and a concept similar to Pythagoras Theorem. The sequences associated with primitive Pythagorean triples were named Baudhayana sequences.

Statement 2 is correct: Charak Samhita mainly deals with **use of medicinal plants and herbs.** Hence, mainly dealing with Ayurveda. In Charak Samhita, extensive note on digestion, metabolism and immune system is written. His book has more emphasis on prevention rather than cure.

Statement 3 is correct: Brihat Samhita was written by Varahamihira. He has propounded the earth cloud theory. **He related earthquake to the influence of plants, behaviour of animals, underground water, undersea activities and the unusual cloud formation.** He also made contributions in Astrology or Jyotish shastra. Varahamihira lived in the Gupta period and was among the nine gems in the court of Vikramaditya.

Statement 4 is correct: Yukti Kalpa Taru is a treatise in Sanskrit which deals with the various **techniques used in ship building** during ancient times.

Nitin Singhania, Science and Technology through the ages.

Q.44) Arrange the following gallantry awards in India in the correct order of precedence.

1. Param Vir Chakra
2. Shaurya Chakra
3. Mahavir Chakra
4. Vir Chakra

Select the correct answer from the code given below.

- a) 1-3-4-2
- b) 3-1-2-4
- c) 1-3-2-4
- d) 4-1-3-2

Ans) a

Exp) Option a is the correct answer.

The correct Order of precedence of the gallantry awards are the Param Vir Chakra, the Ashoka Chakra, the Mahavir Chakra, the Kirti Chakra, the Vir Chakra and the Shaurya Chakra.

Gallantry Awards are instituted by the Government of India to honour the acts of bravery and sacrifice of the officers/personnel of the **Armed Forces, other lawfully constituted Forces and civilians.** These gallantry awards are **announced twice in a year** - first on the occasion of the **Republic Day** and then on the occasion of the **Independence Day.**

Gallantry Awards are classified into two Categories-Gallantry in the Face of Enemy, and Gallantry Other than in the Face of Enemy

First Category of Gallantry Awards Comprises of the following Awards-

- 1) Param Vir Chakra (PVC)
- 2) Mahavir Chakra (MVC)
- 3) Vir Chakra

Second Category of Gallantry Awards Comprises of the following Awards-

- 1) Ashok Chakra
- 2) Kirti Chakra
- 3) Shaurya Chakra

Q.45) With reference to Revamped Distribution Sector Reform Scheme (RDSS), consider the following statements:

1. The scheme is introduced as a sub-scheme under Integrated Power Development Scheme.
2. The scheme provides for annual appraisal of performance of power distribution companies (DISCOMs).
3. Under the scheme, agricultural connections would be covered only through Feeder Meters.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 2 only
- d) 1 and 3 only

Ans) b

Exp) Option b is the correct answer.

The Revamped Distribution Sector Scheme (RDSS) aims at improving the operational efficiencies and financial sustainability of DISCOMs. The Scheme is a grant-based programme. The Scheme would be available till the year 2025-26

Statement 1 is incorrect: RDSS will be introduced as an umbrella scheme merging all the existing power sector reforms. Schemes like Integrated Power Development Scheme, DDU Gram Jyoti Yojana, and Pradhan Mantri Sahaj Bijli Har Ghar Yojana will be merged in this scheme. **Hence the statement is incorrect** as RDSS is not a sub-scheme under Integrated Power Development Scheme.

Statement 2 is correct: The Scheme provides for **annual appraisal of the DISCOM performance** against predefined criteria of AT&C losses, infrastructure upgrade performance, consumer services, hours of supply, etc. DISCOMs must score a minimum of 60% of marks and clear a minimum bar in respect to certain parameters to be able to be eligible for funding against the Scheme in that year.

Statement 3 is correct: Under the scheme, agricultural connections would be covered only through Feeder Meters. The feeder meter is connected to segregated feeder lines. **It helps to improve load pattern in case of agricultural loads.** As through segregated feeder, power supply to agriculture is controlled. It fulfils the requirement of a daily six-to-eight-hour reliable supply, depending on the season. It also decreases the burden of high rated power purchase during the peak hours of DISCOMs. This feature was included due to the scattered nature of agricultural connections and their remoteness from the habitations.

Source: <https://pib.gov.in/PressReleasePage.aspx?PRID=1731473>

Q.46) With reference to the comparisons between the art forms of Sattriya and Manipuri, consider the following statements:

1. While Sattriya has components of storytelling, Manipuri is more focused on rhythmic dance moves.
2. The themes of both Sattriya and Manipuri are influenced by Vaishnavism.
3. While Nagabhandha is a characteristic feature of Sattriya, it is absent in Manipuri.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

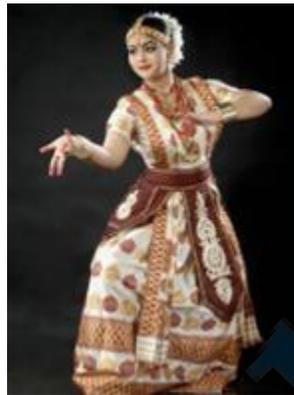

Ans) a

Exp) Option a is the correct answer.

India has a rich cultural heritage with a tradition in dance, drama and music going back to over two millennia. In modern times, there are 8 types of classical dances that are recognized in India. Two of them are - Manipuri and Sattriya, both from the North Eastern region. They were both developed especially during the Bhakti period of 16-17th centuries CE.

Manipuri Dance

Sattriya Dance

Statement 1 is correct: Sattriya is a classical dance introduced by Bhakti saint Sri Sankaradeva, as an accompaniment to the Ankiya Nat (one act plays) **depicting incidents from Lord Krishna's life**. So, it includes features like songs, music and dance as well as gestures and **postures to explain the narration (story telling)**. This is because the main aim of these performances was to inspire people to lead moral lives by **narrating didactic mythological incidents** to people in an easy-to-understand manner.

On the other hand, Manipuri is a dance that has components of **both Tandava & its feminine counterpart, the Lasya, with a heavier focus on the latter**. Manipuri involves very **fluid and light footwork**, wherein there is no thumping or hard contact between the dancers' feet and the ground (unlike Odissi) and there is very little to no dramatic components or narration. The focus is on light airy dance movements. Hence this statement is correct.

Statement 2 is correct: Sattriya was a dance form introduced by the 15th century Vaishnavite saint, Sri Sankaradeva. The **main themes** of this dance form were taken from mythological stories, especially the incidents from the life of **Lord Krishna** (an incarnation of Lord Vishnu, hence related to **Vaishnavism**). On the other hand, though the mythological origins of Manipuri dance were believed to have been the Tandava and Lasya performed by Lord Shiva and his consort, Goddess Parvati as well as the Gandharvas, in the valleys of Manipur, in modern times, the themes of **Manipuri dance** especially **include** the Raas Leela stories from **Lord Krishna's (Vishnu's incarnation)** life. Hence this statement is correct as the themes of both the dance forms are centred on the Vaishnavite Bhakti tradition.

Statement 3 is incorrect: Nagabhandha refers to a mudra (posture) which is a characteristic **feature of the Manipuri classical dance**. In this posture, the body is connected through curves in the shape of figure '8'.

Q.47) The terms ‘Suladi, Svarajati and Javali’ are generally used in the context of:

- musical forms or compositions in Carnatic music.
- names of folk dances of India.
- instruments used in Hindustani music.
- names of Gharanas in Indian tradition of classical music.

Ans) a

Exp) Option a is the correct answer.

Suladi, Svarajati, and Javali are musical forms or compositions in Carnatic music.

Suladi

The Suladis are of a higher standard than the gitam (the simplest type of composition). The Suladi is a talamalika, the sections being in different talas. The theme is devotional. Purandaradasa has composed many Suladis.

Svarajati

This is learnt after a course in gitams. The theme is either devotional, heroic or amorous. It originated as a dance form with jatis. But later, Syama Sastri, one among the Musical Trinity, composed svarajatis without jatis, which are brilliant concert pieces, noted for their musical value.

Javali

A javali is a composition belonging to the sphere of light classical music. Sung both in concert programmes and dance concerts, the javalis are popular because of the attractive melodies in which they are composed. This form resembles the Thumris of Hindustani Music.

Source: <http://cctindia.gov.in/carnaticclassicalmusic.php>

Q.48) With reference to Smriti literature, consider the following statements:

- Manusmriti is the oldest literary work among the smriti texts.
- As per Narada smriti, the immovable property should be part of women’s ‘stridhan’.

Which of the statements given above is/are correct?

- 1 only
- 2 only
- Both 1 and 2
- Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Smriti literature represent what was recorded by the sages in their own words of what they heard from the deity. The early smritis were termed as dharma sutras. The principles of law are mostly covered under this part.

Statement 1 is correct: Manusmriti is the oldest smriti work. In this smriti, Manu recognizes the divine power of the kings to enforce law through danda or punishment. He gave importance to custom as a source of dharma. In his writings, he was harsh towards women and sudras.

Statement 2 is correct: Smritikars has provided for the woman’s separate property and distinct and separate rules for its succession. Later, Narada smriti expanded the scope of stridhana which also included

immovable property obtained by both a married woman or a maiden in the house of her husband or the father (saudayika).

Knowledge Base:

The rights of most Hindu women were governed by the Mitakshara or Dayabhaga systems of law. The smritikars assigned a special category of property to women they termed as stridhana.

- 1) Under the Dayabhaga system, stridhana was restricted to gifts and movables.
- 2) Under the Mitakshara School, various Smritikars starting from Gautam Dharamasutra to Manu and Vishnu provided for the woman's separate property and distinct and separate rules for its succession

Q.49) With reference to Muthuswami Dikshitar - an exponent of the South Indian Carnatic music, consider the following statements:

1. He is one of the members of the famous trinity of Carnatic music.
2. His compositions are noted for their elaborate and poetic descriptions of Hindu gods and temples.
3. All of his compositions are written only in the Kannada language.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Muthuswami Dikshitar was an exponent of the South Indian Carnatic music genre.

Statement 1 is correct.

The Trinity of Carnatic music, also known as The Three Jewels of Carnatic music, refer to the outstanding trio of composer-musicians of Carnatic music in the 18th century. **It consists of Saint Tyagaraja, Muthuswami Dikshitar and Syama Sastri.**

Statement 2 is correct.

His compositions are noted for their elaborate and poetic descriptions of Hindu gods and temples. And for capturing the essence of the raga forms through the vainika (veena) style that emphasises gamakas. He emphasised on use of Gamaka (ornamentation). His signature name was Guru- guha which is also his mudra. He was also a Veena player.

Statement 3 is incorrect.

His compositions are predominantly in Sanskrit and he has also composed some of his Kritis in Manipravalam (a mixture of Sanskrit and Tamil).

Most compositions are in Sanskrit and relates to Hindu gods and temples.

Q.50) “This scheme was launched by the Ministry of Women and Child Development. The scheme aims to support children through Non-Institutional Care and it also tries to rope in private assistance to uplift the children's welfare. Protection of Children from Sexual Offences (POCSO) Act, 2012 provides the basic framework for implementation of this Mission.”

Which of the following is referred to in the above given paragraph?

- a) Swadhar Greh.
- b) Samarthy scheme.

- c) Mission Vatsalya.
d) KanyaShree Prakalpa

Ans) c

Exp) Option c is the correct answer.

Option a is incorrect: The Ministry of Women and Child Development implements Swadhar Greh Scheme. It is a Centrally Sponsored Scheme **for women** who are victims of difficult circumstances. The scheme provides women with **institutional support for rehabilitation** so that they could lead their life with dignity.

Option b is incorrect: Samarthya scheme is a sub scheme of Mission Shakti of **Ministry of Women and Child Development**. The objective of the scheme is to **empower women**.

Option c is correct: Mission Vatsalya is the scheme being implemented by the Ministry of Women and Child Development. The scheme supports the children through **Non-Institutional Care** and they **try to rope in private assistance** from the public to provide assistance to children in difficult circumstances. Provisions of **the Protection of Children from Sexual Offences (POCSO) Act, 2012** along with The Juvenile Justice (Care and Protection of Children) Act, 2015 **provides the basic framework** for implementation of the Mission.

Option d is incorrect: Kanyashree Prakalpa is a West Bengal government initiative that seeks to improve the **status and wellbeing of girls**, especially girls belonging to socio-economically disadvantaged families through **Conditional Cash Transfers**. The scheme aims to incentivize girls to continue in education for a longer period of time thereby **disincentivizing marriage till at least the age of 18**.

Q.1) Consider the following historical places:

1. Ajanta Caves
2. Lepakshi Temple
3. Sanchi Stupa

Which of the above places is/are also known for mural paintings?

- a) 1 only
- b) 1 and 2 only
- c) 1, 2 and 3
- d) None

Ans) b

Exp) Option b is the correct answer.

Ajanta caves have some of the oldest mural paintings in the world. Some are Bodhisattva Padmapani, King Janaka of Videha sitting in the palace with his wife, the Painting of Persian Ambassador etc.

Lepakshi Temple is renowned for being one of the best repositories of mural paintings of the Vijayanagara kings. The Veerabhadra temple at Lepakshi is known for its architecture and mural painting.

There are no mural paintings at Sanchi Stupa.

Source: UPSC 2013

Q.2) With reference to the Prehistoric paintings of India, consider the following statements:

1. One of the paintings at Lakhudiyar caves depicts hand-linked dancing human figures.
2. The largest number of paintings found in the Bhimbetka caves belong to the Mesolithic period.
3. V.S. Wakankar made the first discovery of rock paintings in India.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

The period before the development of script is called the prehistoric times and also referred to as the Stone Age. This can be classified into the **Palaeolithic Period, Mesolithic Period and Neolithic Period.**

Paintings were the oldest art forms practised by human beings to express themselves, using the **cave walls as their canvas.**

Statement 1 is correct: The rock shelters on banks of the River Suyal at **Lakhudiyar (literally means one lakh caves) in the Almora district of Uttarakhand.** The **paintings** here can be divided into three categories: man, animal and geometric patterns in white, black and red ochre. **One of the interesting scenes depicted here is of hand-linked dancing human figures.**

Statement 2 is correct: The **largest number of paintings found in Bhimbetka caves belong to the Mesolithic period.** During this period the themes multiply but the **paintings are smaller in size.** Hunting scenes predominated. The drawings and paintings in Bhimbetka cave can be categorised into seven historical periods including **Upper Palaeolithic, Mesolithic and Chalcolithic period.**

Statement 3 is incorrect: The **first discovery of rock paintings was made in India in 1867–68** by an archaeologist, **Archibold Carlleyle**, twelve years before the discovery of Altamira in Spain. **The caves of Bhimbetka were discovered in 1957–58** by eminent archaeologist **V.S. Wakankar.**

Q.3) Which among the following saints belong to the ‘Saguna’ school of Bhakti movement?

1. Dadu Dayal
2. Chaitanya Mahaprabhu
3. Ramanuja
4. Guru Nanak
5. Shankardev

Select the correct answer using the code given below:

- a) 2 and 3 only
- b) 1, 3 and 4 only
- c) 2, 3 and 5 only
- d) 1, 2 and 4 only

Ans) c

Exp) Option c is the correct answer.

The **Bhakti saints were divided into two schools Saguna and Nirguna** depending on the way they imagined God.

Option 1 and 4 are incorrect: One school of thought imagined **God as formless with no attributes or quality. This school of thought is the Nirguna School.** They are more focused on acquiring knowledge. They **rejected the scriptures and condemned every form of idol worship.** The prominent figures of this school of thought were **Kabir, Guru Nanak and Dadu Dayal.**

Option 2, 3, and 5 are correct: The **Saguna School thought of God as having a definite form, quality, and positive attributes and God manifests himself in incarnations such as Rama and Krishna.** His spirit is to be found in the idols and images worshipped at home and in temples. **The Saguna School emphasizes love and devotion.** They accept the spiritual authority of the Vedas and the need for a human Guru as a mediator between God and his devotee. **Ramanuja, Ramananda, and Chaitanya Mahaprabhu belonged to this school of thought. Shankardev was the saint one who popularized Vaishnavism in Assam.** He started the Ekasarana movement (Neo-Vaishnavite movement). He believed in the worship of ‘Ekasarana’ (One God) in the form of Krishna. He also called Krishna by different names like Hari, Narayan and Rama.

Source: Indian Art and Culture by Nitin Singhania, Appendix -2 Bhakti and Sufi Movement

Q.4) Which of the following statements is/are correct regarding the influence of Indian culture in foreign countries?

1. Buddha statue found in Dong Duong; Indonesia have resemblance with Amravati sculptures.
2. Angkor wat temple of Cambodia is a Shaiva temple.
3. Influence of Indian architecture also spread to European countries.

Select the correct answer using the code given below:

- a) 2 and 3 only
- b) 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

The Science of Architecture and Civil Construction was known in Ancient India as Sthapatya-Shastra. Indian techniques of art and architecture spread both westwards and eastwards.

Statement 1 is correct: In Indonesia, the famous 108-metre-high statue of Buddha at Dong Duong closely resembles the Amravati sculptures. The presence of curly hair indicates Indian origin. Because in Cambodia people have straight hair.

Statement 2 is incorrect: Angkor Wat in Cambodia is known to be the abode of Vishnu, that is, Vaikunthadhama. Cambodia has huge monuments and temple of Indian style constructed. Other Cambodian temples are decorated with sculptural representations of Shiva, Vishnu.

Statement 3 is correct: Indian art also influenced Europe Christian Basilicas having similarities with the Buddhist Stupas. Their mosaics seem to have borrowed ideas from the Buddhist chaityas.

Source: Nitin Singhania, chapter on Indian culture abroad.

Q.5) The terms First Information Report (FIR) and Zero FIR are often in news. In this context, consider the following statements:

1. First Information Report (FIR) is not defined either in the Indian Penal Code or Criminal Procedure Code.
 2. FIR can be filed only for non-cognizable offences.
 3. Zero FIR can be filed in any police station and same can be later transferred to appropriate police station.
 4. Concept of a zero FIR was introduced on the recommendation of the Justice Verma Committee in 2012.
- Which of the statements given above are correct?

- a) 1, 2, and 3 only
- b) 1, 3, and 4 only
- c) 2 and 4 only
- d) 1, 2, and 4 only

Ans) b

Exp) Option b is the correct answer.

Statement 1 is correct: The term first information report (FIR) is not defined in the Indian Penal Code (IPC), Code of Criminal Procedure (CrPC), 1973, or in any other law, but in police regulations or rules, information recorded under Section 154 of CrPC is known as First Information Report (FIR).

Statement 2 is incorrect: First Information Report (FIR) can be defined as a written document prepared by the police once they receive information about the commission of a cognizable crime. It is generally a complaint lodged with the police by the victim of a cognizable offence or by someone on his/her behalf. Anyone can report the commission of a cognizable offence either orally or in writing. FIR should be given in writing or orally to the head of the police station. The police don't have any legal authority to record an FIR (First Information Report) regarding any non-cognizable offence, unless they have obtained permission from the magistrate for it.

In case of non-cognizable offence, the person will have to approach the officer in charge, who shall further enter such information in his book (as prescribed by the state government). The police officer can start the investigation only after the magistrate gives the order under sec155(3) of Code of Criminal Procedure.

Statement 3 is correct: Unlike an FIR, which is restricted by jurisdiction, a zero FIR can be filed in any police station, regardless of whether the offence was committed under the jurisdiction of that particular police station. Whereas FIRs have serial numbers assigned to them, zero FIRs are assigned the number '0'. Hence the name. Once a zero FIR is transferred, the police station with the appropriate jurisdiction assigns it a serial number, thereby converting it into a regular FIR.

Statement 4 is correct: The concept of a zero FIR is relatively new. It was introduced on the recommendation of the Justice Verma Committee in the aftermath of the Nirbhaya gang rape case in 2012. It puts a legal obligation on police to take quick action and prevent them from using the excuse of absence of jurisdiction.

Knowledge Base:

Cognizable Offence: A cognizable offence is one in which the police may arrest a person without warrant.

Non-cognizable Offence: A non-cognizable offence is an offence in which a police officer has no authority to arrest without warrant.

Q.6) 'Gold fanams' and 'Pagoda coins' were issued by which one of the following dynasties?

- Vijayanagara Empire
- Mughal Dynasty
- Chola Dynasty
- Rajput Dynasty

Ans) a

Exp) Option a is the correct answer.

The Vijayanagara Empire (14th–17th century) issued large quantities of gold coins; other metals used in their coinage were pure silver and copper. **Pagodas**—were gold coins of higher denomination—having figure of running warrior along with dagger symbol. **Gold fanams**—were fractional units. There were also **Silver taras**—fractional units, and **Copper coins** for day-to-day transactions.

Pagodas

Gold Fanams

Option b is incorrect: The standard gold coin of the Mughals was the **Mohur** of about 170 to 175 grains. Akbar issued both round and square coins. In 1579, he issued gold coins called 'Ilahi coins' to propagate his new religious creed 'Din-i-Illahi'. Jahangir showed the legend in a couplet in the coins. In some of his coins, he added the name of his beloved wife Noorjahan. The most famous of his coins had images of Zodiac signs.

Fig. 34.16: Akbar's Ilahi Coin

Fig. 34.17: Akbar's Coin with a Crescent and Star

Option c is incorrect: The coins of the **Chola King Raja Raja I** had the standing king on one side and seated goddess on the other side with inscriptions generally in Sanskrit. Rajendra I's coins had the legend 'Sri Rajendra' or 'Gangaikonda Chola' inscribed with the emblems of tiger and fish. The coins of the Pallava dynasty had the figure of a lion.

Fig. 24.9: Coin by Raja Raja I of Chola dynasty

Option d is incorrect: The coins issued by the **Rajput dynasties (11th–12th century AD)** were **mostly of gold, copper or billon (an alloy of silver and copper) but very rarely silver**. There were two types of Rajput coinage. One type showed the ‘name of the king in Sanskrit on one side and a goddess on the other side’. The Chandelas of Bundelkhand, the Tomars of Ajmer and Delhi and of the Rathores of Kannauj were of this type.

Q.7) With reference to the Indian National Trust for Art and Cultural Heritage (INTACH), consider the following statements:

1. It is a non-profit charitable organisation registered under the Societies Registration Act, 1860.
2. The chairperson of the Archaeological Survey of India (ASI) is an ex-officio member of this body.
3. Its work extends to conserving both tangible and intangible cultural heritage of India.
4. It was granted a special consultative status by the United Nations Economic & Social Council (UN-ECOSOC).

Which of the statements given above are correct?

- a) 1 and 4 only
- b) 3 and 4 only
- c) 1, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

The **Indian National Trust for Art and Cultural Heritage (INTACH)** was founded in 1984 with the vision to spearhead **heritage awareness and conservation in India**.

Statement 1 is correct: It is a Non-Governmental Organisation. The Indian National Trust for Art and Cultural Heritage (INTACH) is a **non-profit charitable organisation** registered under the Societies Registration Act, 1860.

Statement 2 is incorrect: There is no such provision. The **Chairman** and the members of the Governing Council are **elected through postal ballot system by its General Body** from amongst the members having voting rights.

Statement 3 is correct: INTACH works in the area of conservation of both tangible and intangible heritage. Since its inception in 1984, INTACH has pioneered the conservation and protection of India's natural and cultural heritage and is today the largest membership organisation in the country dedicated to conservation.

Statement 4 is correct: In 2007, United Nations Economic & Social Council (UN-ECOSOC) granted INTACH special consultative status. Consultative status is granted by UN ECOSOC upon recommendation of the ECOSOC Committee on NGOs,

Q.8) With reference to the mural paintings of Kerala, consider the following statements:

1. The scenes from Hindu mythology and epics are the main themes of Kerala mural paintings.
2. In temples, these paintings are mostly depicted on the ceilings rather than outer walls.
3. All the surviving mural paintings are now restricted solely to the temples.
4. These paintings represent the features from Kathakali.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 2 and 4 only
- c) 1 and 4 only
- d) 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

The paintings on the walls or a solid structure are referred to as Mural paintings. These have existed in India since ancient times and can be dated between 10th century BC and 10th century AD.

Statement 1 is correct: The Kerala mural paintings **generally portray life size characters** and they depict scenes from epics and puranas, particularly the Ramayana and the Mahabharata.

Statement 2 is incorrect: These paintings are **mostly depicted on the outer walls of the temples**, the reason being that they easily catch the attention of devotees. The paintings differ in each temple as their themes depend on incidents and anecdotes which revolve around the principal deity installed in a temple.

Statement 3 is incorrect: **Some of the mural paintings can be found outside the temples too.**

Mattancherry Palace at Cochin is one of the major mural painting sites of Kerala, which is not a temple. It was built around **A.D.1555 by the Portuguese** and presented to Vira Kerala Varma since then it acted as a **royal house**. Apart from this, mural paintings can be found at Padmanabhapuram **and Krishnapuram Palaces**. Mural paintings are found in temples- Padmanabhaswamy Temple at Trivandrum and Vadakkunnathan temple at Thrissur.

Statement 4 is correct: Mural paintings in Kerala **have the vibrant expression of Kathakali features**. For instance, the figures in **Mattancherry Palace** indicate a **strong influence of Kathakali, the traditional dance of Kerala**. Figures in this palace with a distinctive type of anatomy of **squat** and robust type of figures, **rich ornamentation** resembles the **Kathakali makeup**.

Q.9) With reference to various sects associated with Shaivism, consider the following statements:

1. Veershaivism rejects the authority of the Vedas.
2. Aghoris aim to attain salvation from the cycle of reincarnation.
3. Siddhars were associated with medicinal practices.
4. Nathpanthis worship Shiva in the Bhairav form.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 3 and 4 only
- c) 1 and 2 only
- d) 1, 2, 3 and 4

Ans) a

Exp) Option a is the correct answer.

Shaivism considers Shiva as the Supreme Lord. Shaivism traces its origin before Vaishnavism in 2nd millennium BCE in the form of the Vedic deity Rudra.

Statement 1 is correct: Lingayatism or Veershaivism is a distinct Shaivite tradition which believes in monotheism through worship. It is centered around Lord Shiva in the form of Linga. **It rejects the authority of the Vedas and the caste system.** The tradition was established in the 12th century AD by Basavanna.

Statement 2 is correct: Aghoris are the devotees of Shiva manifested as Bhairava and are monists who seek **salvation from the cycle of reincarnation.** It is done through sadhana in cremation grounds. They indulge in extreme, **tamasic ritual practices.** They practise Aghor yoga.

Statement 3 is correct: Siddhars or Siddhas were saints, doctors, alchemists and mystics all in one from Tamil Nadu. **Siddhars developed the native Siddha medicine system.** They attain spiritual perfection through special secret rasayanas to perfect their bodies.

Statement 4 is incorrect: Nathpanthis also known as Siddha Siddhanta adhere to the teachings of Gorakhnath and Matsyendranath **and worship Adinath,** a form of Shiva. **They use the technique of Hatha Yoga** to transform one's body into a state of awakened self's identity with absolute reality. The monks never stay in the same place for long and are floating group of wanderers.

Knowledge Base:

Q.10) Consider the following statements regarding the provisions of Tribunals Reforms (Rationalisation and Conditions of Service) Act, 2021:

1. A person below the age of 40 years can be appointed as the chairperson or member of a tribunal.
2. The act fixed the term of office for the Chairperson and members of a Tribunal to six years.
3. The search-cum-selection committee has been authorized to remove any member or chairperson from office.

Which of the statements given above is/are correct?

- a) 2 only
- b) 3 only
- c) 1 and 2 only
- d) None of the above

Ans) d

Exp) Option d is the correct answer.

The Tribunals Reforms (Rationalisation and Conditions of Service) Ordinance, 2021 was replaced by the Tribunals Reforms (Rationalisation and Conditions of Service) Act, 2021.

Statement 1 is incorrect: According to the Tribunal Reforms Act, 2021, **a person who has not completed the age of fifty years shall not be eligible for appointment as a Chairperson or Member of the tribunal.**

Statement 2 is incorrect: **The act provides for the terms of member and chairperson.** The **Chairperson** of a Tribunal shall hold office for a **term of four years or till he attains the age of seventy years,** whichever is earlier; the **Member of a Tribunal** shall hold office for a **term of four years or till he attains the age of sixty-seven years,** whichever is earlier.

Statement 3 is incorrect: According to the act, **Central Government on the recommendation of the search-cum-selection Committee, can remove from office any Chairperson or a Member,** who– (a) has been adjudged as **an insolvent;** or (b) has been **convicted of an offence** which involves moral turpitude; or (c) has become **physically or mentally incapable** of acting as such Chairperson or Member; or (d) has **acquired such financial or other interest** as is likely to affect prejudicially his functions as such Chairperson or Member; or (e) has so **abused his position** as to render his continuance in office prejudicial to the public interest.

Knowledge Base:

Salient features of the Tribunal Reforms Act, 2021:

- 1) **Search-cum-selection committees:** The Chairperson and Members of the **Tribunals** will be appointed by the central government on the recommendation of a **Search-cum-Selection Committee**. **State administrative tribunals** will have **separate search-cum-selection committees**.
- 2) The central government must decide on the recommendations of selection committees within three months of the date of the recommendation.
- 3) The act provide for **uniform pay and rules** for the search and selection committees across tribunals.

Q.12) With reference to Coins of Ancient and Medieval history, consider the following statements:

1. Tiger and Peacock were the important symbol in the coins of Pandyan dynasty.
2. The inscriptions on the gold and silver coins of Pandyan dynasty were in Sanskrit language.
3. The Chola kings prohibited any image of the monarch on coins.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 3 only
- c) 2 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

The word Coin is derived from the Latin word Cuneus and it is believed that the first recorded use of coins was in China and Greece around 700 BC and in India in the 6th century BC. The study of coins and medallions is known as Numismatics.

Statement 1 is incorrect: The coins issued by Pandyan dynasty were square shaped with an image of elephant in the early period. Later, **fish became a very important symbol in the coins**. Whereas, the cholas coins were inscribed with the emblems of tiger and fish.

Pandyan Coins

Statement 2 is correct: The Inscriptions of Pandyan dynasty made on the **gold and silver coins was in the Sanskrit language whereas the inscriptions made on the copper coins were in Tamil Language.** Whereas, the inscriptions on the Chola coins were mainly in the Sanskrit language.

Cholas Coins

Statement 3 is incorrect: The coins of the Chola King Raja Raja I had **the standing king on one side and seated goddess on the other side with inscriptions generally in Sanskrit.** Rajendra I's coins had the legend 'Sri Rajendra' or 'Gangaikonda Chola' inscribed with the emblems of tiger and fish. Whereas, the kings of Gandhara or Sindh of Rajput Dynasty introduced the silver coins that had a seated bull on one side and a horseman on the other.

Q.13) With reference to the painting traditions of India, consider the following pairs:

Paintings	Features/Surface used
1. Madhubani painting	Made on Paper
2. Pattachitra painting	Made on Cloth
3. Patua painting	Made on Scroll

How many pairs above are correctly matched?

- Only one pair
- Only two pairs
- All three pairs
- None of the pairs

Ans) c

Exp) Option c is the correct answer.

Pair 1 is correct: Madhubani Paintings (also called Mithila paintings) traditionally were painted on **walls** using rice paste and vegetable colours on a base of cow dung and mud. With time, the base changed to **handmade paper, clothes.** It was traditionally done by the women of villages around Madhubani town in Bihar.

Pair 2 is correct: Pattachitra paintings use cloth as its base. It is a traditional painting of **Odisha**, the name Pattachitra comes from a Sanskrit word patta, which means canvas/cloth and chitra means picture. The themes of these paintings are inspired from Jagannath and Vaishnava cult,

Pair 3 is correct: Patua paintings are done on pats or scrolls. It is practised in the **region of Bengal** and it started out as a village tradition by **painters telling auspicious stories of Gods and Goddesses.**

Source: Nitin Singhania-Indian Paintings

Q.14) The main theme of this painting comes from Buddhism and it was traditionally made by Buddhist monks. It is made on the base of cotton canvas with paints made from natural sources. The colours used in this painting represent different emotions of humans. Which of the following paintings best reflects this?

- Kalamkari painting
- Thangkas painting
- Warli painting
- Pithora painting

Ans) b

Exp) Option b is the correct answer.

Option a is incorrect: While the base of **Kalamkari painting** is **cotton fabric** and the colours used are derived from vegetable dyes, the **main themes** of this painting come from **Hindu mythology**. It is practised mainly in the region of Andhra Pradesh and images are drawn free hand.

Option b is correct: The main theme of **thangka painting** comes from **Buddhism**. It was traditionally made by **Buddhist monks on the base of cotton canvas** with paints made from natural sources. The colours used in this painting represent different emotions of humans. For instance, **red** stands for intensity of **passion**, **golden is for life or birth**, **white is for serenity**. The painting shows the **life of Buddha** from his birth to his enlightenment.

Option c is incorrect: **Warli painting** are done on the surface of walls and these paintings have close resemblance to the mural paintings of **Bhimbetka** in Madhya Pradesh. Warlis are indigenous people that occupy mainly the **Gujarat-Maharashtra border**.

Option d is incorrect: **Pithora paintings** are painted in the walls of the houses to bring peace and prosperity. They are drawn on special family-occasions as a ritual. It was practised in the **regions of Gujarat and Madhya Pradesh by some tribal communities.**

Q.15) With reference to 'Resignation conditions of All India Services officers', consider the following statements:

- All-India Service officer should submit his/her resignation to the President of India as a formal intimation in writing.
- Central government of India can permit an All-India Service officer to withdraw his/her resignation in the public interest.

Which of the statements given above is/are correct?

- 1 only
- 2 only
- Both 1 and 2
- Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

Recently, IAS officer Shah Faesal, who resigned in 2019, has been **reinstated by the central government**. The first Kashmiri to top the Civil Services Examination (2010 batch), Faesal's resignation, in January 2019, had not been accepted by the government pending investigation into some of his posts on social media.

Statement 1 is incorrect: The resignation of an officer of any of the three All-India Services – IAS, the Indian Police Service (IPS) and Indian Forest Service – is governed by Rules 5(1) and 5(1)(A) of the All-India Services (Death-cum-Retirement Benefits) Rules, 1958.

- 1) An officer serving in a cadre (state) must **submit his/her resignation to the chief secretary of the state**.
- 2) An officer who is on central deputation is required to **submit his/her resignation to the secretary of the concerned Ministry or Department**.

Statement 2 is correct: Rule 5(1A) (i) of the amended **All India Services (Death-cum-Retirement Benefits) Rules, 1958** says the central government can **permit an officer to withdraw his/her resignation “in the public interest”**.

The resignation will be deemed to have been automatically withdrawn, if an officer who has submitted his/her resignation sends an intimation in writing withdrawing it before its acceptance by the competent authority.

Q.16) With reference to the spread of Buddhism, consider the following statements:

1. During the time of Ashoka, Buddhist missionaries were sent outside India.
2. Sangamitra carried a Buddhist mission to Korea through East Pacific Ocean.

Which of the statements given above are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

Buddhism is one of the major religions of the world that originated from the Indian subcontinent and has now spread to large parts of South-east Asia. It originated as a Sramana movement in the 5th century BCE. The traditions, beliefs and practices in Buddhism are attributed to Buddha. It gradually spread throughout Asia via the Silk Road.

Statement 1 is correct: Asoka had organised the third Buddhist council under the presidency of famous monk Moggaliputta Tissa at Pataliputra. In this council it was decided to dispatch missionaries to different countries for the propagation of the sect. As a result, the missions were sent to the land of Yavanas, Gandhara, Kashmir and Himalayan regions in the North, to Aparantaka and Maharattha in West, to Vanavasi and Mysore to South and to Ceylon and Suvarnabhumi (Malay and Sumatra) further southwards. **Asoka sent his son Mahendra and daughter Sanghamitra to Ceylon.**

Statement 2 is incorrect: Buddhism had spread to Korea through China. In 352 A.D. **Sundo was the first Buddhist Monk who entered Korea**, carrying a Buddha image and sutras. Out of devotion to wisdom, Buddhist texts were printed by the Koreans in six thousand volumes. Whereas **Sanghamitra carried a Buddhist mission to Ceylon.**

Q.17) Which of the following are the features of the Apabhramsa school of painting?

1. These paintings were made both on palm leaves and papers.
2. It traces its origin to the region of Bengal and Assam.
3. The proponents of Vaishnava school used and patronised these paintings.
4. This school of painting was famous for its depiction of life stories of Jain tirthankaras.

Select the correct answer using the code given below:

- a) 1 and 4 only
- b) 1, 3 and 4 only
- c) 2 and 3 only
- d) 1, 2, 3 and 4

Ans) b

Exp) Option b is the correct answer.

The art of miniature painting developed between the 8th and 12th centuries in India. This kind of painting can be attributed to the eastern and western regions and they are Pala School of Art and Apabhramsa School of Art respectively.

Statement 1 is correct: In the **early Jain phase, the Apabhramsa paintings were made on Palm leaf** but in the **later period** they were made on **paper**. The colours used in the paintings had symbolic meaning and they usually used red, yellow and ochre. In the later phase, they used bright and gold colours.

Statement 2 is incorrect: Apabhramsa School of Art was the **predominant school of painting in western India** during 11th to 15th century. It traces its origin to **Gujarat and Mewar region in Rajasthan**.

Statement 3 is correct: The **most common themes** of these paintings were **Jain** and in the **later period** the **Vaishnava School used and patronised them**. They brought in the concept of **Gita Govinda and secular love** into these paintings.

Statement 4 is correct: Kalpasutra from the 15th century were **the most famous paintings of this school**. **Kalpasutra is a Jain ancient text containing the biographies of the last two Jain Tirthankaras, Parshvanath and Mahavira**. Also, the **first tirthankara Adinath (RishabhDev)** and **Neminath** are two other Tirthankaras briefly mentioned in the text, with Adinath depicted in some of the illustrations.

Q.18) In the context of paintings during the Mughal empire in India, consider the following statements:

1. Decorated margins around the paintings was one of the trends developed by Humayun.
2. The Indian influence on Mughal paintings started during the reign of Jahangir.
3. Shah Jahan discouraged the use of charcoal in painting.
4. During Aurangzeb's period, many regional schools of painting emerged.

Which of the statements given above are correct?

- a) 1 and 4 only
- b) 2 and 3 only
- c) 3 and 4 only
- d) 1, 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

The paintings made in the Mughal period had a distinctive style as they were drawing from Persian sources. The **focus shifted from depicting the god to glorifying the ruler and showing his life**. They focused on hunting scenes, historical events and other court related paintings.

Statement 1 is incorrect: One of the unique trends that developed during **Jahangir reign** was of **decorated margins around the paintings** that were sometimes as elaborate as the paintings themselves. The **Mughal paintings reached its zenith in the period of Jahangir.**

Statement 2 is incorrect: **The Indian influence in the Mughal painting started from Akbar rule itself, predecessor and father of Jahangir.** Akbar recognised the beauty of those Indian artists who had worked for previous rulers and invited them to work in his **tasvir khana (formal artistic studio).**

Statement 3 is correct: Shah Jahan **discouraged the use of charcoal in paintings** and **encouraged** the artists to draw using a **pencil**. He was inspired by the European style of painting and he also ordered an increase in the use of **gold and silver** in the paintings.

Statement 4 is correct: Aurangzeb **did not encourage painting** and as a result, a large number of Mughal court painters started **migrating to the provincial courts** in Rajasthan, etc. thus, many regional schools of painting emerged.

Q.19) With reference to different Boddhisatvas under Buddhism, consider the following statements:

1. Avalokitesvara is often depicted as a female.
2. Maitreya is considered to be future Buddha who will appear on Earth.
3. Boddhisatvas of Manjusri, and Samantabhadra are part of Shakyamuni trinity.
4. Boddhisatva Skanda regarded as a devoted guardian of Buddhist monasteries.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2, 3 and 4 only
- c) 1, 2 and 4 only
- d) 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct answer.

The Mahayana Buddhism introduced the idea of deity into this religion. The **popular form of theism of Mahayana was the doctrine of Boddhisattva** (one whose nature is pervaded by bodi). According to this doctrine, through the history of human being a large number of noble men tread the path of Buddha and all of them had to follow the stages of Boddhisattva before they could attain the status of Buddha. However, some stopped at the Boddhisattva stage (and did not take up the final step to achieve the status Buddha to help those who are in need.

Statement 1 is correct: **Avalokitesvara is depicted as a female** also and is said to incarnate in his holiness the Dalai Lama. She is one of the three protective deities around Buddha. She is described as holding Lotus flower and is also known as Padmapani. The painting can be found at Ajanta Caves. The bodhisattva of compassion, the listener of the world's cries who uses skillful means to come to their aid. She appears unofficially in Theravada Buddhism in Cambodia under the name Lokeshvara.

Statement 2 is correct: **Maitreya is a future Buddha** who will **appear in future on Earth to achieve complete enlightenment**, and teach the pure dharma. Laughing Buddha is said to be an incarnation of Maitreya.

Statement 3 is correct: Samantabhadra with the Buddha and Manjusri, forms the Shakyamuni trinity in Buddhism. He is associated with practice and meditation.

Statement 4 is correct: Skanda is associated with guardian of viharas and the Buddhist teachings. He is **regarded as a devoted guardian of Buddhist monasteries** who protects the teachings of Buddhism.

Knowledge Base:

Other known Boddhisatvas are:

- 1) Vajrapani contemplated to manifest all the powers of Buddha.
- 2) Manjusri is a male Bodhisattva and is associated with wisdom
- 3) Ksitigarbha is He is depicted a Buddhist monk and took vow not to achieve Buddhahood till the hell is completely emptied.
- 4) Akasagarbha is associated with element of space.
- 5) Tara is associated only with Vajrayana Buddhism
- 6) Vasudhara is associated with wealth, prosperity, and abundance. Popular in Nepal
- 7) Sitatapatra is contemplated as a protector against supernatural danger.

Q.20) With reference to ‘Inter-Operable Criminal Justice System Project’, consider the following statements:

1. It is the project of Ministry of Electronics & Information Technology and Ministry of Justice in collaboration with Niti Aayog.
2. It is a platform for enabling integration of the main IT system used for the delivery of Criminal Justice in India.
3. The implementing agency of the project is National Crime Records Bureau (NCRB).

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

The government of India has recently approved the implementation of the Inter-Operable Criminal Justice System (ICJS) project during the period 2022-23 to 2025-26.

Statement 1 is incorrect: Inter-operable Criminal Justice System (ICJS) Project is **central sector scheme with Ministry of Home Affairs as a nodal ministry.**

Under Phase-I of the project, individual IT systems have been implemented and stabilized, and also search of records have been enabled on these systems.

Under Phase-II, the system is being built on the principle of ‘one data one entry’ whereby data is entered only once in one pillar and the same is then available in all other pillars without the need to re-enter the data in each pillar.

Statement 2 is correct: Inter-operable Criminal Justice System (ICJS) Project is a national platform for enabling integration of the **main IT system used for the delivery of Criminal Justice in the country.**

Five Pillars of the Project: 1) Police (Crime and Criminal Tracking and Network Systems), 2) e-Forensics for Forensic Labs 3) e-Courts for Courts 4) e-Prosecution for Public Prosecutors and, 5) e-Prisons for Prisons.

Statement 3 is correct: **National Crime Records Bureau (NCRB)** will be responsible for the implementation of the Inter-Operable Criminal Justice System (ICJS) project **in association with the National Informatics Center (NIC).**

Q.21) Lord Buddha’s image is sometimes shown with the hand gesture called ‘Bhumisparsha Mudra’. It symbolizes

- a) Buddha’s calling of the Earth to watch over Mara and to prevent Mara from disturbing his meditation.
- b) Buddha’s calling of the Earth to witness his purity and chastity despite the temptations of Mara.

- c) Buddha's reminder to his followers that they all arise from the Earth and finally dissolve into the Earth, and thus this life is transitory.
- d) Both the statements a and b are correct in this context.

Ans) b

Exp) Option b is the correct answer.

Option b is correct: 'Bhumisparsha Mudra' signifies the **state of enlightenment after meditating under the bodhi tree for four weeks and withstanding all the temptations put before him by Mara, the god of evil**. It signifies-Buddha's calling of the Earth to watch over Mara and to prevent Mara from disturbing his meditation and Buddha's calling of the Earth to witness his purity and chastity despite the temptations of Mara.

Source: UPSC 2012

Q.22) It is a Jain festival celebrated for eight days in the month of Bhadrapada by the Svetambara sect. In this festival, meditation is practiced by the devotees. The festival ends with the celebration of Kshamavani (forgiveness day). The festival described in the above paragraph is-

- Paryushan
- Gyana Panchami
- Maun-Agiyara
- Navapad Oli

Ans) a

Exp) Option a is the correct answer.

Jainism is an ancient religion that is rooted in the philosophy that teaches the way to liberation and a path to spiritual purity and enlightenment through disciplined nonviolence to all living creatures.

Option a is correct: The **Paryushana** is celebrated for **eight days in the month of Bhadrapada (August/September) by the Svetambara sect**. The Digambara sect celebrates the festival for ten days. The devotees are asked to perform Pratikraman or the meditation kriya. The **festival ends with the celebration of Kshamavani (forgiveness day)**. Forgiveness is asked by saying "Micchami Dukkadam" to others. It means for **oneself to seek forgiveness**, if someone's been hurt knowingly or unknowingly by them.

Option b is incorrect: **Gyana Panchami** is celebrated on the fifth day of Kartika. It is considered knowledge day. On this day Holy Scriptures are displayed and worshipped under Jainism. Whereas The Paryushana is celebrated for eight days in the month of Bhadrapada (August/September).

Option c is incorrect: **Maun-Agiyara** is related with first Jain Tirthankara Rishabhdev who undertook a fasting of 13 months and 13 days continuously. His fasting came to an end on third day of the bright fortnight of Vaishakh month of Jain Calendar. Whereas, the Paryushana refers for oneself to seek forgiveness, if someone's been hurt knowingly or unknowingly by them.

Option d is incorrect: **Navpad oli** is a period of semi-fasting. During this period, Jains take only one meal a day of very plain food. It comes twice a year during March/April and September/October. Whereas, the Paryushana is celebrated for eight days in the month of Bhadrapada (August/September) and it refers for oneself to seek forgiveness, if someone's been hurt knowingly or unknowingly by them.

Q.23) Which of the following 'Schools of Philosophy' are included in Shada Darshana?

- Mimamsa
- Lokayata
- Samkhya
- Buddhism

5. Vedanta

Select the correct answer using the code given below:

- a) 1, 2 and 3 only
- b) 2, 3 and 4 only
- c) 1, 3 and 5 only
- d) 3, 4 and 5 only

Ans) c

Exp) Option c is the correct answer.

Philosophy is a belief accepted as authoritative by some group or school. The six Philosophical system of Indian philosophy is known as the **Shada Darshan**. It is a part of Orthodox school which **believed that Vedas were the supreme** revealed scriptures that hold the secrets to salvation and **did not question the authenticity of the Vedas**.

Option 1 is correct: Mimansa was attributed by 'Jaimini'. The literal meaning of 'Mimansa' is 'critical examination' or 'solution of a problem by reflection'. It **considers Veda as eternal and unchanging**. According to this philosophy, the world has always existed and is without beginning or end. It explains the Dharma as a 'virtue', 'morality' or 'duty'. It is the part of the Shada Darshan.

Option 2 is incorrect: 'Lokayata' believe for a keen attachment to the physical and material world (loka). They argued for a complete disregard of any world beyond this world that was inhabited by a person. They **denied the existence of any supernatural** or divine agent like 'veda' who could regulate our conduct on earth. **Hence, they are not part of Shada Darshan**.

Option 3 is correct: Samkhya is one of the oldest Indian philosophies. The term 'Samkhaya' means "to reckon, count, enumerate, calculate, deliberate, reason, reasoning by numeric enumeration, relating to number, rational. It was propounded by an eminent, great sage Kapila. It is a system of dualistic realism. It recognised two ultimate eternal realities i.e., 'Purusha (Spirit)' and 'Prakriti (Nature)'. It is the **part of Shad Darshan**.

Option 4 is incorrect: Buddhism is based upon the teachings, life experiences of its founder Siddhartha Gautam. Buddha asked his followers to avoid the two extremes of indulgence in worldly pleasure and the practice of strict abstinence and asceticism. They **do not believe in the originality of the Vedas**. They also do not belong to Shada Darshan.

Option 5 is correct: Vedanta school upholds the philosophies of life as elaborated in the Upanishads. The philosophy propounds that Brahm is the reality of life and everything else is unreal or Maya. The atma or the consciousness of self is similar to the brahm. This argument equalizes atma and brahm and if a person attains the knowledge of the self, he would automatically understand brahm and would achieve salvation. It is **part of the Shada Darshan**.

Q.24) With reference to Samkhya School of thought, consider the following statements:

1. New Samkhya view argued that the presence of any divine agency was not necessary for the creation of the Universe.
2. Original Samkhya view argued that the world owed its existence to nature or Prakriti.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

Samkhya is the **oldest school of philosophy** and was founded by **Kapil Muni** who is supposed to have written the Samkhya Sutra. The word ‘Samkhya’ or ‘Sankhya’ literally means ‘count. Samkhya view is divided into Original Samkhya view and New Smakhya View.

Statement 1 is incorrect: Original Smakhya View which is considered to be view of **around 1st century AD**, believed that the **presence of any divine agency was not necessary** for the creation of the Universe. **Whereas, New Smakhya view** which emerged during 4th century AD, argued that along with the element of nature, Purusha or **spirit was necessary for the creation of the Universe**. This view is considered to be more spiritual school than Original Samkhya view.

Statement 2 is correct: Original Smakhya view argued that the **world owed its existence to nature or Prakriti**. This view is considered to be a materialistic school of philosophy. Whereas, New Smakhya view argued that the coming together of nature and spiritual elements created the world. Unlike Original Samkhya view, New Samkhya view propounded a spiritual view of the creation of the Universe.

Q.25) With reference to ‘Global Declaration on the Future of Internet’, consider the following statements:

1. It is an initiative led by United Nations Secretary-General.
2. It aims towards a vision of single interconnected communications system for all of humanity.
3. India and China are not the signatory of this declaration.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 3 only

Ans) c

Exp) Option c is the correct answer.

Recently, the United States and 60 other partner countries signed a political declaration called the “Declaration for the Future of the Internet”.

Statement 1 is incorrect: Global Declaration on the Future of Internet is an **initiative led by United States of America (USA) and not by United Nations Secretary-General**. As per the declaration, Internet must reinforce core democratic principles, fundamental freedoms and human rights as reflected in the Universal Declaration of Human Rights.

Statement 2 is correct: The vision of the declaration is to champion a **single interconnected communications system for all of humanity** amid surging state-sponsored or condoned malicious behavior and to advance a positive vision for the Internet and digital technologies. These principles are **not legally binding** but should rather be used as a reference for public policymakers as well as citizens, businesses and civil society organizations.

Statement 3 is correct: **India, China and Russia are not among the 60 countries that have signed a global declaration** to keep the Internet open, free, and neutral. The countries that have signed the declaration include the US, European Union, United Kingdom, Canada and France. Called the ‘Declaration for the Future of the Internet’, the document is an agreement to prevent digital authoritarianism.

Q.26) With reference to the Sufi movement, consider the following statements:

1. Unlike Bhakti saints, Sufis never enrolled disciples or appointed a successor.
2. Qalandars, Madaris, Malangs, and Haidaris were all different forms of Sufiism.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: Institutionally, the Sufis began to organise communities around the hospice or khanqah (Persian) controlled by a teaching master known as shaikh (in Arabic), pir or murshid (in Persian). They **enrolled disciples (murids) and appointed a successor (khalifa)**. They established rules for spiritual conduct and interaction between inmates as well as between laypersons and the master.

Statement 2 is correct: Some mystics-initiated movements based on a radical interpretation of Sufi ideals. Many scorned the khanqah and took to mendicancy and observed celibacy. They ignored rituals and observed extreme forms of asceticism. **They were known by different names – Qalandars, Madaris, Malangs, Haidaris, etc.** Because of their deliberate defiance of the shari'a they were often referred to as be-shari'a, in contrast to the ba-shari'a sufis who complied with it.

Art and culture, Nitin Singhania

Q.27) With reference to Yoga School, consider the following pairs:

Yogic Ways - Its meanings

1. Pratyahara - Withdrawal of senses
2. Dharana - Fixing the mind
3. Samadhi - Merging of mind and object
4. Yama - Practicing self-control

How many pairs given above is/are correctly matched?

- a) Only one pair
- b) Only two pairs
- c) Only three pairs
- d) All four pairs

Ans) d

Exp) Option d is the correct answer.

The Yoga argues that human being can achieve salvation by combining meditation and physical application of yogic techniques. The Yoga school favours many techniques as they help humans to control their mind, body and sensory organs.

Pair 1 is correctly matched: Pratyahara (Choosing an object or Sense withdrawal) changes state of mind so that we become so absorbed in what it is we're focussing on, such that the **things outside of ourselves no longer bother us and we're able to meditate without becoming easily distracted**. The phrase 'sense withdrawal' could conjure up images of the ability to actually switch our senses 'off' through concentration.

Pair 2 is correctly matched: Dharana means 'focused concentration' or 'fixing the mind'. Dharana and Pratyahara are essential parts of the same aspect. In order to focus on something, the senses must withdraw so that all attention is put on that point of concentration, and in order to draw our senses in, we must focus and concentrate intently.

Pair 3 is correctly matched: Samadhi (Merging the mind and Body; Bliss or Enlightenment) is the final step of the journey of Patanjali's Yoga Sutras. After re-organising relationships with the outside world and our own inner world, process came to the finale of bliss. 'Sama' meaning 'same' or 'equal', and 'dhi' meaning 'to see'. It's called **realisation because it's about realising the very life that lies in front of us.**

Pair 4 is correctly matched: Yama, refers to vows, disciplines or practices that are primarily **concerned with the world around us,** and our interaction with it. With practicing Yama, we practice for the self-control. There are five Yamas: **Ahimsa (non-violence), Satya (truthfulness), Asteya (non-stealing), Brahmacharya (right use of energy), and Aparigraha (non-greed or non-hoarding).** Whereas, sense withdrawal is associated with Pratyahara.

The 8 Limbs of Yoga explained - Eckhart Yoga

Q.28) Consider the following pairs:

Festivals	Significance
1. Maghi	Birth of the 10th Sikh Guru
2. Holla Mohalla	Beginning of annual Langar
3. Vaishakhi	New Year of Sikhs
4. Lohri	Beginning of harvest season

Which of the above-mentioned pairs is/are correctly matched?

- a) 2, 3 and 4 only
- b) 3 and 4 only
- c) 1, 2 and 3 only
- d) 4 only

Ans) b

Exp) Option b is the correct answer.

Sikhism was founded in the Punjab by Guru Nanak in the 15th Century CE and is a monotheistic religion. All 10 human Gurus, Sikhs believe, were inhabited by a single spirit. Upon the death of the 10th Guru Gobind Singh, the spirit of the eternal Guru transferred itself to the sacred scripture of Sikhism, Guru Granth Sahib.

Pair 1 is incorrect – Prakash Utsav is celebrated on the birthday of 10th Sikh guru Guru Gobind Singh.

Maghi is the seasonal gathering of the Sikhs and it is celebrated annually. It is celebrated in Muktsar in the **memory of forty Sikh martyrs (Chalis Mukte)** who fought with the Mughals. The 10th Guru Govind Singh died while fighting with Wazir khan, the Mughal emperor in 1705. The Sikhs take a procession to the site of this Sikh – Muslim War and take a bath in the sacred water of Muktsar. It is celebrated on 14th of January every year.

Pair 2 is incorrect – Hola Mohalla or Hola Mahalla or simply Hola is a Sikh festival that takes place on the first of the lunar month of Chet which usually falls in **March**. This, by a tradition established by Guru Gobind Singh, follows the Hindu festival of Holi by one day. Hola is the masculine form of the feminine sounding Holi. **It was for mock battles and military exercises followed by kirtan and other poetry competitions. It is also known as “Sikh Olympics”** for the events and competitions of horse riding, sword man-ship, etc.

Pair 3 is correct – Vaisakhi is a religious festival celebrated on **13th or 14th April** every year. **This festival is the celebration of Sikh new year and birthday of Khalsa Panth.** This is the spring harvest festival for the

Sikhs. Gurudwaras are decorated and hold kirtans. Sikhs take a bath in the sacred river, visit temples, meet friends and party over festive foods.

Pair 4 is correct - Lohri celebrations mark the beginning of the harvest season. It is celebrated to offer thanks for making a bounteous harvest possible. Lohri night traditionally falls on the longest night of the year known as the winter solstice. Lohri festival indicates that the biting cold of the winter is ending and happy sunny days are arriving. Lohri celebrates fertility and the spark of life. It also signifies the **victory of light over the darkness.**

Source: <https://www.allaboutsikhs.com/sikh-way-of-life/sikh-festivals/the-sikh-festivals/>
<https://theguibordcenter.org/faiths/sikhism/sikh-festivals-and-observances/>

Q.29) Consider the following statements with reference to the Ajivika and Ajnana traditions of Shramana schools:

1. Ajivikas believed in the existence of the soul.
2. Ajivikas rejected the authority of Vedas.
3. Ajnanas was one of the branches of Jainism.
4. Ajnanas generally believed that it is impossible to attain knowledge about nature.

Which of the statements given above are correct?

- a) 2 and 3 only
- b) 1 and 2 only
- c) 1, 2 and 4 only
- d) 1, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

The word **Shramana** means one who performs acts of austerity and ascetic. Shramanic religions are considered **Nastika** or a **Heterodox school of philosophy**. Ajivikas and Ajnana traditions belong to Shramanic thought.

Statements 1 and 2 are correct: Ajivika school was founded by Makkhali Gosala in 5th century BC. The school revolves around the Niyati (Fate) doctrine of absolute determinism. It believes that there is no free will and that whatever has happened, is happening or will happen is entirely pre-ordained or pre-decided and is based on cosmic principles. Hence there was no use of Karma. **They also rejected the authority of Vedas like Buddhism and Jainism.** However, they believed in the existence of soul (atman) in every living being like Jainism. **But they believed existence of soul in material form whereas Jainism propounds formless soul.**

Statement 3 is incorrect: Ajnana school was a major rival of Jainism and Buddhism and not a branch of Jainism.

Statement 4 is correct: The Ajnana sect believed in radical skepticism. The **school believed that it is impossible to attain knowledge about nature.** Even if it is possible, it is useless for attaining salvation. They specialized in refutation and were considered ignorant. They believed that “Ignorance is Best”.

Q.30) Consider the following statements:

1. The subject of ‘telephones and other like forms of communication’ forms the part of concurrent list under 7th Schedule of Indian Constitution.
2. The provisions related to Phone tapping in India are governed by The Indian Telegraph Act, 1885.

3. Phone tapping can be done by the Centre or state agency for preventing incitement to the commission of an offence.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

Recently, a Shiv Sena leader has claimed that the Centre is protecting IPS officer Rashmi Shukla, now posted with the CRPF. She's facing an FIR in Mumbai and is being probed for allegedly tapping the phones of Rajya Sabha MP Raut and NCP leader Eknath Khadse in 2019, when she was heading the State Intelligence Department in Maharashtra.

Statement 1 is incorrect: The subject of 'Posts and telegraphs; **telephones**, wireless, broadcasting and **other like forms of communication**' are included under **Union list of 7th Schedule** of Indian Constitution.

Statement 2 is correct: Phone tapping in India is governed by **The Indian Telegraph Act, 1885**. Phone tapping is **authorized by Rule 419A of the Indian Telegraph (Amendment) Rules, 2007**.

In the case of the Central Government: The order can be issued by an order made by the Secretary to the Government of India in the Ministry of Home Affairs. In the case of a State Government: By the Secretary to the State Government in-charge of the Home Department.

Statement 3 is correct: As per the Section 5(2) of Indian Telegraph Act, 1885 "on the occurrence of any public emergency, or in the interest of the public safety", **phone tapping can be done by the Centre or states if they are satisfied it is necessary in the interest** of "public safety", "sovereignty and integrity of India, the security of the State, friendly relations with foreign States or public order or **for preventing incitement to the commission of an offence**".

Q.31) With reference to the cultural history of medieval India, consider the following statements:

1. Siddhas (Sittars) of Tamil region were monotheistic and condemned idolatry.
2. Lingayats of Kannada region questioned the theory of rebirth and rejected the caste hierarchy.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct. Siddhas believe in oneness of the transcendental being in the world as well as **charity towards men and roundly condemned idolatry**.

Statement 2 is correct. The **Lingayats led by Basavana, challenged the idea of caste and the "pollution" attributed to certain groups by Brahmanas**. They also questioned the theory of rebirth.

Source: UPSC 2016

Q.32) Consider the following pair of religious beliefs and the region they are usually associated with:

Belief	Region
1. Sarnaism	Region around Chota Nagpur Plateau
2. Sanamahism	Laddakh region
4. Ayyavazhi	Southern India

Which of the above-given pairs is/are matched correctly?

- 3 only
- 1 and 3 only
- 2 and 3 only
- 1 and 2 only

Ans) b

Exp) option c is the correct answer.

Apart from all major religions, there are several local religious beliefs that are found across Indian subcontinents.

Pair 1 is correct: Sarnaism is a religious belief based on worship at Sarna, the sacred groves in the Chota Nagpur Plateau region in the states of Jharkhand, Chhattisgarh and Odisha. According to local belief, a Gram deoti or village deity resides in the sarna, where sacrifice is offered twice a year. After Ms. Droupadi Murmu, India's first tribal President, and Jharkhand's former governor, was sworn into office, the tribes following Sarnaism had rekindled hopes to fructify their long-standing demand to be enumerated as a distinct community under the nationwide census. They are also demanding to be recognized as a separate religion.

Pair 2 is incorrect: Sanamahism or Meiteism or Lainingthouism, is an ethnic religion of the Meitei people of Manipur, Northeast India. It is a polytheistic religion and is named after God Lainingthou Sanamahi, one of the most important deities of the Meitei faith.

Pair 3 is correct: Ayyavazhi is a henotheistic belief that originated in South India. Though generally regarded as the renaissance of Hinduism, it is sometimes cited as an independent monistic belief by several newspapers, government reports, and academic researchers. It is a Hindu sect because it's Vaishnava in theology wherein Ayya Vaikundar is an avatar of Narayana.

Q.33) Consider the following statements with reference to the art of Utensil making among the Thatheras of Punjab:

- They are known for their intricate work on silver and aluminum ware utensils.
- Their utensils are recommended for medicinal purposes in several Ayurveda texts.
- It was patronized by Maharaja Ranjit Singh during his rule.

Which of the above-given statements is/are correct?

- 1 only
- 1 and 2 only
- 2 and 3 only
- 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

Traditional **Brass and Copper craft of Utensil making among the Thatheras** of Jandiala Guru in Punjab, was **included in UNESCO Intangible Heritage List in 2014**

Statement 1 is incorrect: The knowledge about this art have been spreading through an oral tradition that is passed on to generations of the ‘**Thathera**’ community. The metals are heated and molded into thin plates with curved shapes. The utensils have functional as well as ritualistic purpose. **Metals used are brass (an alloy of zinc and copper), Kansa or bronze (an alloy of tin and copper) and the Copper.**

Statement 2 is correct: Utensils made of Brass and Copper are recommended for medicinal purposes in several Ayurveda texts.

Statement 3 is correct: Utensil making among the Thatheras was patronized and encouraged by Maharaja Ranjit Singh in the 19th century. The crafts colony was established during the reign of Maharaja Ranjit Singh (1883) the great 19th Century Sikh Monarch, who encouraged skilled metal crafters from Kashmir to settle in the heart of his kingdom in the Punjab. Jandiala Guru became an area of repute due to the skill of the Thatheras. The utensils are of wide variety like those used in household and community kitchens (langar) of Sikh Gurudwaras.

Q.34) With reference to the cultural history of India, the terms Cauka Pitaka, Dighala Pitaka and Yama Pitaka are related to which of the following?

- Types of paintings
- Types of folk music
- Types of Buddhist scriptures
- Types of wooden toys

Ans) a

Exp) Option a is the correct answer.

Option a is correct: The Sanskrit play Vishakhadatta’s Mudrakshaka mentions about numerous **paintings or patas**, such as **isolated framed drawings (Cauka- Pitaka), isolated paintings (Yama- Pitaka) and long scrolls of paintings (Dighala- Pitaka).**

Option b is incorrect: Each state of this country has its own form of music and there are several types of folk music associated with a particular state. **Sohar, Tikir, Nyioga** are some **types of folk music** of India.

Option c is incorrect: The three pitakas are Sutta Pitaka, Vinaya Pitaka and Abhidhamma Pitaka are the **Buddhist scriptures.**

Option d is incorrect: The first evidence for toy carts are found in the Harappan civilisation. **Channapatna Toys & Dolls, Kondapalli Bommall, Kathputlis of Rajasthan and Thanjavur Doll of Tamilnadu** are some types of famous toys in India.

<https://www.nios.ac.in/media/documents/SecIHCour/English/CH.11.pdf>

Q.35) With reference to ‘Parole and furlough in Criminal Justice system’, consider the following statements:

1. Parole is seen as a matter of right for a prisoner whereas furlough is not a matter of right for a prisoner.
2. Parole can be granted in case of short-term imprisonment whereas in furlough it is granted in case of long-term imprisonment.
3. While parole is granted for specific reason, furlough can be granted without any reason.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 3 only

Ans) c

Exp) Option c is the correct answer.

The bench of Dr. DY Chandrachud and BV Nagarathna, JJ has formulated “**broad, general**” principles governing rules for granting parole and furlough, holding that parole and furlough are distinct in nature.

Statement 1 is incorrect: Furlough is seen as a **matter of right for a prisoner**, to be granted periodically irrespective of any reason, and merely to enable the prisoner to retain family and social ties, and to counter the ill-effects of prolonged time spent in prison. **Parole, by contrast, is not seen as a matter of right**, and is given to a prisoner for a specific reason, such as a death in the family or a wedding of a blood relative.

Statement 2 is correct: Both parole and furlough are conditional release. **Parole can be granted in case of short-term imprisonment whereas in furlough it is granted in case of long-term imprisonment.**

Duration of parole extends to one month whereas in the case of furlough it extends to fourteen days maximum.

Statement 3 is correct: Parole is granted for the **prisoner to meet a specific exigency**; furlough may be granted after a stipulated number of years have been **served without any reason**. Parole may be denied to a prisoner even when he makes out a sufficient case, if the competent authority is satisfied that releasing the convict would not be in the interest of society. Parole is often not granted to convicts sentenced to death, or to those who, in the opinion of jail authorities, are likely to flee when released from prison.

Q.36) Which among the following is the benefit of being included in the Representative List of the Intangible Cultural Heritage of Humanity by UNESCO?

- a) It allows for availing loans from the UNESCO for preservation of the cultural heritage included in the list.
- b) It enables the access to the pooled grant fund of the UNESCO for the heritage included in the list.
- c) It allows for the recognition of the Geographical Indication tag worldwide for the heritage included in the list.
- d) It helps to mobilize international cooperation to undertake appropriate safeguarding measures for the heritage included in the list.

Ans) d

Exp) Option d is the correct answer.

The UNESCO List of Intangible Cultural Heritage of humanity is **composed of intangible heritage elements** that concerned communities and States Parties consider, require urgent measures to keep them alive. The importance of intangible cultural heritage is not the cultural manifestation itself but rather the wealth of knowledge and skills that is transmitted through it from one generation to the next. The social and

economic value of this transmission of knowledge is relevant for minority groups and for mainstream social groups within a State, and is as important for developing States as for developed ones.

Option a and b are incorrect: There is no provisions of loans or grants for being in the UNESCO List of the Intangible Cultural Heritage. One can mobilize support of all kinds for the particular heritage but no provision specifically is there regarding to access to any pooled fund or loan from UNSECO.

Option c is incorrect: Geographical Indication tag is given by national government and not by UNESCO. So, the statement is incorrect.

Option d is correct: Inscriptions on this List help to mobilize international cooperation and assistance for stakeholders to undertake appropriate safeguarding measures. The Representative List of the Intangible Cultural Heritage of Humanity is made up of those intangible heritage elements that help demonstrate the diversity of this heritage and raise awareness about its importance.

Source: <https://ich.unesco.org/en/purpose-of-the-lists-00807#>

Q.37) Consider the following statements with reference to the Bhakti saints Nayanars and Alvars:

1. In their hymnal compositions, both sects attempted to demonstrate that their respective gods were superior to the other.
2. The literature of the Alvars or Vaishnava saints are known as 'Tevaram'.
3. The literature of the Nayanars or Saiva saints are known as 'Naalayira Divya Prabhandha'.

Which of the statement(s) given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1 and 2 only

Ans) a

Exp) option a is the correct answer.

The Bhakti movement in South India started with Alvars and Nayanars.

Statement 1 is correct: Characterized by intense emotional devotion and strong desire of mystical union with the god, the hymns emerged as the first concrete expression of religious sectarianism in Tamil. **In both sets of hymnal compositions, the Nayanars and the Alvars condemned each other and attempted to demonstrate through various accounts that their respective gods were superior to the other.**

Statement 2 is incorrect: The Alvars, which literally means "those immersed in God", were Vaishnava poet-saints who sang praises of Vishnu or his avatar Krishna as they travelled from one place to another. They were propagators of Vaishnavism and regarded Vishnu or Krishna as the Supreme being. There were 12 Alvars. **They composed hymns in the praise of Vishnu and his avatars which are compiled in the 'Naalayira Divya Prabandha'.**

Statement 3 is incorrect: Nayanars were originally a group of 63 Tamil saints devoted to Lord Shiva. **The details of the lives and of the saints are described in the work 'Tevaram' which is also called the Dravida Veda.** At the request of the Chola king Raja Raja I, his priest, started collecting the hymns composed by the Nayanars into a series of volume called "Tirumurai".

Indian Art and Culture by Nitin Singhania, Appendix -2 Bhakti and Sufi Movement

Q.38) Consider the following statements with reference to the Virshaiva movement in India:

1. It emerged in the 12th Century AD in Karnataka during the reign of the Kalachuri dynasty.
2. Allamaprabhu and Akkamahadevi are associated with this movement.

Which of the above-given statements is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Lingayatism or Veera Saivism is a **Hindu denomination based on Shaivism**. Initially known as Veerashaivas, since the 12th-century adherents of this faith are known as Lingayat.

Statement 1 is correct: The **Virshaivas are a Shaivite sect in Hinduism that emerged in the 12th Century AD in Karnataka during the reign of Kalachuri dynasty**. They opposed the elaborate rituals prescribed by Hindu priests. They also **rejected the caste system** and various social practices of Hindus.

Statement 2 is correct: **Virshaiva movement was initiated by Basavanna** and was **assisted by Allamaprabhu and Akkamahadevi**. They wanted a more egalitarian society and greater individual freedom. The followers are called Virshaiva (heroes of Shiva) or the Lingayats (wearers of Shivalinga).

Q.39) Consider the following statements regarding the Archaeological Survey of India (ASI):

1. The Ancient Monuments and Archaeological Sites and Remains Act mandates the ASI officials to regularly inspect the monuments to assess their condition.
2. It has the power to issue show cause notice for the removal of encroachments.
3. It recently discovered Varaha sculpture at the Bandhavgarh Tiger Reserve in Madhya Pradesh.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 2 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

The Archaeological Survey of India (ASI) is the premier organisation for archaeological research and protection of the cultural heritage of the nation. The Archaeological Survey of India (ASI) was founded in 1861 by Alexander Cunningham. The Archaeological Survey of India (ASI) is an attached agency of the Ministry of Culture, the Government of India.

Statement 1 is correct: The Ancient Monuments and Archaeological Sites and Remains Act (**AMASR Act**) regulates the preservation of monuments and archaeological sites of national importance. According to this act **ASI officials are supposed to regularly inspect the monuments to assess their condition**.

Statement 2 is correct: Apart from various conservation and preservation operations, ASI officials can issue **show cause notices for the removal of encroachments**, also file police complaints and **communicate to the local administration the need for demolition of encroachments**.

Statement 3 is correct: **ASI recently discovered Varaha sculpture at the Bandhavgarh Tiger Reserve in Madhya Pradesh**. Also, it found Buddhist caves and stupas, Brahmi inscriptions which dates back to the 2nd century, and **Hindu temples from the 9th-11th centuries** at the Bandhavgarh tiger reserve.

<https://www.thehindu.com/news/national/other-states/asi-finds-temples-buddhist-caves-in-bandhavgarh-tiger-reserve/article65947562.ece>

Q.40) Recently adopted ‘Thiruvananthapuram Declaration’, is related to

- Inter-state river water dispute in India
- Political reservations for women in India
- Co-operative relationship between Centre and State in India
- Necessity of Judicial reforms in the country

Ans) b

Exp) Option b is the correct answer.

The first National Women Legislators Conference concluded with the adoption of **Thiruvananthapuram Declaration**. The First National Women Legislators’ Conference-2022 was held in Thiruvananthapuram. The Conference was hosted by the Kerala Legislative Assembly as part of ‘Azadi ka Amrit Mahotsav’.

- The conference adopted the Thiruvananthapuram Declaration. The declaration demanded **immediate steps to ensure the passage of the long-pending Women’s Reservation Bill**, which envisages **33% reservation for women in the Lok Sabha and State legislatures**.
- The declaration highlighted that the bill which has been pending for 26 years is a blot on the democratic values and legislative traditions of the country.

Source: <https://blog.forumias.com/thiruvananthapuram-declaration-seeks-passage-of-reservation-bill/>

<https://www.thehindu.com/news/national/kerala/thiruvananthapuram-declaration-seeks-passage-of-reservation-bill/article65467236.ece>

Q.41) With reference to the cultural history of India, the memorizing of chronicles, dynastic histories and Epic tales was the profession of who of the following?

- Shramana
- Parivraajaka
- Agrahaarika
- Maagadha

Ans) d

Exp) Option d is the correct answer.

Option a is incorrect. Shramanas were those who practiced an ascetic, or strict and self-denying, lifestyle in Pursuit of spiritual liberation.

The Shramana movement gave rise to Jainism and Buddhism.

Option b is incorrect. Parivraajaka an ascetic (of the fourth religious order) who has renounced the world.

Option c is incorrect. Agrahaarika is a land grant to a priest.

Option d is correct. The memorizing of chronicles, dynastic histories, or epic tales was the work of a group of people, the sutas and magadhas.

Source) UPSC 2016

Q.42) Consider the following description of a Bhakti Saint:

He was the founder of Suddhadvaita (Pure Non dualism) and his philosophy is known as ‘Pushti Marg’. This sect was Krishna centered, especially his child manifestation, and is enriched with the use of traditions, music and festivals. He also founded a school called Rudra Sampradaya. He was the author of a number of scholarly works in Sanskrit and Braj Bhasa, the important ones being Subodhini and Siddhant Rahasya.

Which among the following Bhakti Saint has been described in the above given paragraph?

- Nimbarkara
- Vallabhacharya

- c) Madhavacharya
d) Ramanuja

Ans) b

Exp) option b is the correct answer.

The Bhakti movement originated in the Southern parts of India, especially Tamil Nadu between 7th and 12th century; it slowly percolated to the northern belt by the end of 15th century.

Option a is incorrect: Nimbarka was the founder of 'Dvaitadvaita' i.e., dualistic monoism. He wrote **Vedanta-Parijata-Saurabha**, a commentary on Brahmasutras. He was a Radha-Krishna devotee and settled down in Mathura.

Option b is correct: Vallabhacharya (1479-1531 AD was the founder of Suddhadvaita (Pure Non dualism) and his philosophy is known as 'Pushti Marg'. This sect was Krishna centered, especially his child manifestation, and is enriched with the use of traditions, music and festivals. He identified Brahman with Sri Krishna, characterized by Sat (Being), Chit (consciousness) and Ananda (bliss). According to him, salvation is possible through Sneha (deep rooted love for God).

Option c is incorrect: Madhavacharya is the founder of Dvaitavada (i.e., dualism) school of Vedanta. He was a **critic of Adi Shankaracharya's philosophy of Advaitavada** and said that the Atman (individual soul) and Brahman (ultimate reality i.e., Lord Vishnu) are fundamentally different and the individual soul is dependent on the Brahman and can never be identical. According to him, **salvation can be achieved only through the grace of God.** His philosophy of 'dualism' had a profound influence on the Bhakti movement.

Option d is incorrect: Ramanuja was a Tamil Brahmin and one of the most important exponents of Vaishnavism. He travelled to different places to spread his message of love and devotion and finally settled in Srirangam. He **was the founder of 'Vishist Advaita' philosophy** i.e., qualified monoism. According to him, salvation can be attained through Karma, Gyan or Bhakti. He wrote **Sri Bhasya and Gita Bhasya**. His **disciple Ramananda** spread his guru's message in the northern parts of India.

Q.43) It is an Indian school of philosophy which believes in the technique of logical thinking to achieve salvation. The school argues that by using logical tools like inference, hearing and analogy; a human being could verify the truth of a proposition or statement. It also believes that God not only created the Universe but also sustained and destroyed it. It is-

- a) Nyaya School
b) Mimamsa School
c) Charvaka School
d) Vedanta School

Ans) a

Exp) Option a is the correct answer.

Philosophy is a belief accepted as authoritative by some group or school. The six Philosophical system of Indian philosophy is known as the Shada Darshan. It includes Samkhya, Yoga, Nyaya, Veisheshika, Mimamsa and Vedanta.

Option a is correct: Nyaya School of thought was supposed to be founded by Gautama which believes in the **technique of logical thinking to achieve salvation.** They consider the life, death and salvation to be like mysteries that can be solved through logical and analytical thinking. The school argues that by using logical tools like inference, hearing and analogy. **A human being could verify the truth of a proposition or statement. It believes that God not only created the Universe but also sustained and destroyed it.**

Option b is incorrect: Mimansa school is described in the Sutras of Jaimini which focuses on the analysis of the texts of Samhita and Brahmana that are portions of the Vedas. They argue that the Vedas contain the eternal truth and they are the repositories of all knowledge. If one has to **attain religious merit, acquire heaven and salvation, they would have to fulfil all the duties which are prescribed by the Vedas.**

Option c is incorrect: Charvaka School of philosophy is also known as the Lokayat School. Charvaka holds **direct perception, empiricism, and conditional inference** as proper sources of knowledge, embraces philosophical skepticism and rejects ritualism and supernaturalism. There is many similarities between the Nyaya and Lokayata, but **Lokayata doesn't believe in the God or the Vedas. It majorly stresses on the materialism.**

Option d is incorrect: Vedanta is the philosophy evolved in 9th century AD through the philosophical intervention of **Shankaracharya**. He propounds that **Brahm is the reality of life and everything else is unreal or Maya**. The atma or the consciousness of self is similar to the brahm. This argument equalizes atma and brahm and if a person attains the knowledge of the self, he would automatically understand brahm and would achieve salvation.

Source: Nitin Singhania - Indian Art and Culture for Civil Services

Q.44) With reference to Lokayata School of Philosophy, consider the following statements:

1. It denies the existence of God or brahm as supernatural powers.
2. This school allows consuming all earthly goods and indulge in sensual pleasure.
3. They claim that the universe is made of an element known as "ether," which cannot be experienced through senses.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 3 only
- d) 2 and 3 only

Ans) b

Exp) Option b is the correct answer.

Brihaspati laid the foundation stone of Lokayat school of Philosophy and it was supposed to be one of the earliest schools that developed a philosophical theory. The philosophy is old enough to find mention in the Vedas and Brihadarankya Upanishad.

Statement 1 is correct: Lokayat is the type of heterodox schools of Philosophy, which **do not believe in the in the originality of the Vedas and questioned the existence of God**. They argued for a complete disregard of any world beyond this world that was inhabited by a person. They argued against Gods and their representatives on the earth – the priestly class. They argued that a Brahman manufactures false rituals so as to acquire gifts (dakshina) from the followers.

Statement 2 is correct: This school argues that there is **no other world after this one**, hence death is the end of a human being and **pleasure should be the ultimate objective of life**. Hence, they propound the theory of 'eat, drink and make merry'. Man is the centre of all activities and he should enjoy himself as long as he lives. He should consume all earthly goods and indulge in sensual pleasure. This school was the main propounder of the materialistic view to achieve salvation

Statement 3 is incorrect: The lokayat school of philosophy **do not consider 'ether' as one of the five essential elements because it cannot be experienced through the perception**. They believed in anything that could be touched and be experienced by the human senses. **Hence, they say that Universe consists of only four elements: fire, earth, water and air.**

Source: Nitin Singhania - Indian Art and Culture for Civil Services

Q.45) The Election Commission of India can suspend recognition of any party as the National or State party, under which of the following conditions?

1. Posters of any other political party are removed by the political party during campaigning of elections.
2. non-submission of details of the expenditure incurred by the political party during the election.
3. Use of educational institutions for political campaigns and rallies.
4. Initiating the work of a government scheme in the field, whose work order has been announced before the election programme.

Select the correct answer using the code given below:

- a) 1, 3 and 4 only
- b) 1, 2 and 3 only
- c) 2 and 4 only
- d) 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct answer

Para 16A of The Election Symbols (Reservation and Allotment) Order empowers the Election Commission of India to suspend or withdraw recognition of a recognised political party for its failure to observe Model Code of Conduct or follow lawful directions and instructions of the Commission.

Statement 1 is correct: As per the Model code of Conduct, Posters issued by one political party shall not be removed by workers of another party during election campaign. Since it is against the provision Para 16A of The Election Symbols (Reservation and Allotment) Order, it may lead to suspension of recognition of political party.

Statement 2 is correct: In case of 'Common Cause Vs Union of India' the Supreme Court of India issued directions, that the ECI has the authority and can issue directions to the political parties requiring them to submit details of the expenditure incurred by them in elections. Violation of this direction is against the Para 16A of The Election Symbols (Reservation and Allotment) Order and can result in suspension of recognition of a party.

Statement 3 is correct: According to Model Code of Conduct, use of educational institutions including their grounds (whether Govt. aided, Private or Govt.) for political campaigns and rallies is not allowed making it failure to observe the Model Code of Conduct. As a result, ECI could withdraw the recognition of the political party.

Statement 4 is correct: As per Model Code of Conduct, when the scheme is issued before announcement of election, **Work shall not be initiated in respect of which work order has been issued but the work has not started in the field.** Hence starting such a work could bring the suspension of recognition of political party by ECI under Para 16A of The Election Symbols (Reservation and Allotment) Order. But If a work has actually started in the field that can be continued.

Q.46) Consider the following statements with reference to the Vaishnav Saint Ramananda:

1. He was contemporary to the Mamluk Sultan Iltutmish.
2. His verses are found in the Sikh Sacred Scripture 'Adi Granth'.
3. He mostly discussed and composed his teachings in Hindi Language.
4. Saint Ravidas and Kabir were his disciples.

Which of the above given statements are correct?

- a) 1 and 2 only
- b) 1 and 4 only
- c) 2, 3 and 4 only
- d) 1, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Saint **Ramananda** was a great worshipper of Rama and was the **pioneer of Bhakti movement in northern India**.

Statement 1 is incorrect: Ramananda was a **14th-century Vaishnava devotional poet-saint** who lived in northern India's Gangetic basin. His **period was roughly from 1300 CE to 1380 CE**. He **could not have been contemporary of the Mamluk king Iltutmish as he reigned till 1236 CE**.

Statement 2 and 3 are correct: Ramananda was a social reformer and opened the door of Bhaktism to all without any discrimination on the basis of birth, caste, creed or sex. **He composed and discussed his teachings in Hindi**, making religion accessible to the common people. His verses are mentioned in the Adi Granth also.

Statement 4 is correct: Ramananda was the Guru of many poet saints. His disciples included Kabir and Ravidas. Ramananda has been described as the bridge between the Bhakti movement of the South and the North. **Sant-Parampara** (literally, the tradition of bhakti saints) in north India is often credited to **Saint Ramananda**.

Source: Indian Art and Culture by Nitin Singhania, Appendix -2 Bhakti and Sufi Movement
<https://www.encyclopedia.com/international/encyclopedias-almanacs-transcripts-and-maps/ramananda>

Q.47) Consider the following silsilahs which played a significant role in the growth of Sufism:

1. Suhrawardi
2. Qadiri
3. Chishti

What is the correct chronological sequence of the establishment of above orders in India?

- a) 1-2-3
- b) 2-1-3
- c) 1-3-2
- d) 2-3-1

Ans) c

Exp) Option c is the correct answer.

The Sufis came to be organized into orders or 'Silsila (silsilah)'. Ain-I -Akbari mentions a dozen silsilahs. They were divided into 'Be-shara' (against Sharia law) and 'Ba-shara' (in Favour of Sharia law). The Ba-shara Sufis followed the law of Islam (i.e., Sharia) and the Silsila (order) founded by one saint was continued by his disciples.

The Suhrawardi silsilah was a major order of the Sultanate period. **Its founder in India was Shaikh Bahauddin Zakariya (1182-1262).** He made Multan and Sind the centers of his activity. Shaikh Bahauddin Zakariya openly sided with Iltutmish in his conflict against the Multan ruler's (Qubacha's) overthrow. Bahauddin Zakariya received from Iltutmish the title of Shaikh-ul-Islam (Leader of Islam) and endowment. Contrary to the Chishti saints of his time, he followed a worldly policy and built up a large fortune. He accepted state patronage and maintained links with the ruling classes.

The Chishti order which later became the most influential and popular Sufi order in India, originated in Herat and **was introduced in India by Khwaja Moinuddin Chishti (died in 1236)** who was born in Sijistan in c. 1141. He came to India at the time of the Ghori conquest. He finally settled in Ajmer about 1206 and won the respect of both Muslims and non-Muslims.

The Qadiri was the important Sufi order in the Central Islamic countries and was founded in Baghdad by Abdul Qadir Jilani (d. 1166). **It was introduced in India in the late 14th century** and established itself in the Punjab, Sind and the Deccan. The Qadiri had an orthodox orientation and its doctrinal positions were similar to those of the orthodox ulama. The Qadiri Sufis had close relations with the ruling classes of various provincial Sultanates, and accepted state charity.

Hence, option c is the correct answer.

Source: NCERT, Chapter 2, Themes in History Part 2
Art and culture, Nitin Singhania

Q.48) With reference to the coins issued by the Rajput dynasties in general during 11th–12th century AD, consider the following statements:

1. The Rajput dynasties never issued coins made of gold.
2. Like Guptas, they also inscribed the image of goddess Laxmi on their coins.
3. Rajputs never inscribed the name of the king on the coins issued by them.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 3 only
- c) 2 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

Coins of the Rajput Dynasties

Statement 1 is incorrect: The coins issued by the Rajput dynasties (11th–12th century AD) were **mostly of gold, copper or billon** (an alloy of silver and copper) but very rarely silver.

Statement 2 is correct: The gold, the drammas in weight, were first struck by Gangeyadeva Vikramaditya of Dahala of the Kalachuri dynasty. **These coins had the familiar goddess of wealth, Lakshmi on the obverse.** In these coins, the Goddess is shown with four arms than the usual two arms of the Gupta coins.

Statement 3 is incorrect: There were two types of Rajput coinage. **One type showed the 'name of the king in Sanskrit on one side** and a goddess on the other side'. The coins of the Kalachuris, the Chandelas of Bundelkhand, the Tomars of Ajmer and Delhi and of the Rathores of Kannauj were of this type. The kings of Gandhara or Sindh introduced the other type of silver coins that had a seated bull on one side and a horseman on the other.

Art and culture, Nitin Singhania

https://www.forumancientcoins.com/india/pstgupta/pstgup_rajput.html

Q.49) With reference to the Mughal currency system, consider the following statements:

1. Both the silver and copper coins of Mughals were adopted from Sher Shah's currency system.
2. Ilahi coins had the highest denomination among all of the Mughal gold coins.
3. Mohur was the most commonly used coin in commercial transactions.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 3 only
- d) 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

The Mughal currency system may be termed as trimetallic. Coins were of three metals, viz, copper, silver and gold. However, the silver coin was the base of the currency.

The silver coin has a long pre-Mughal history. It was used during Delhi Sultanate for long as tanka. **Sher Shah for the first time standardized the silver coin.** It was called rupaya and had a weight of 178 grains (troy) (troy weight is a British system of weights used for gold, silver and jewels in which 1 pound = 12 ounces = 5760 grains).

Statement 1 is correct: The silver rupee which was an adoption from Sher Shah's currency, was the most famous of all Mughal coins. **The Mughal copper coin was adopted from Sher Shah's dam** which weighed 320 to 330 grains.

Statement 2 is incorrect: Akbar in 1579, issued gold coins called 'Ilahi coins' to propagate his new religious creed 'Din-i-Ilahi'. On this coin, it was written 'God is great, may his glory be glorified'. The value of an Ilahi coin was equal to 10 rupees. **Sahansah was the highest gold coin in terms of denomination.**

Statement 3 is incorrect: The Mughals issued a gold coin called ashrafi or mohur. It weighed 169 grains (troy). **This coin was not commonly used in commercial transactions. It was mainly used for hoarding purposes and also for giving in gift.** The most common coin used for small transactions was the copper dam. The weight of the copper dam was reduced by one third during Aurangzeb's reign presumably because of the shortage of copper.

Q.50) Which of the following agencies are exempted from the application of Right to Information Act, as included under the Second Schedule of the Act?

1. National Technical Research Organization.
2. Office of Chief Justice of India
3. Border Road Development Board
4. Directorate General of Income Tax(vigilance)
5. Narcotics Control Bureau
6. Financial Intelligence Unit India

Select the correct answer using the code given below:

- a) 1, 3, 5 and 6 only
- b) 2, 4, 5 and 6 only
- c) 1, 2, 4 and 5 only
- d) 3, 4 and 6 only

Ans) a

Exp) Option a is the correct answer

There are 22 organizations mentioned under Second Schedule of Right To Information Act, 2005 which are immune from the purview of the Act except the information pertaining to the allegations of corruption and human rights violations.

Option 1 is correct: The National Technical Research Organisation is exempted under RTI act. It is a technical intelligence agency under the National Security Advisor in the Prime Minister's Office, India. It was set up in 2004. It has the same "norms of conduct" as the Intelligence Bureau and the Research and Analysis Wing.

Option 2 is incorrect: As per the Supreme Court has ruling, the office of the Chief Justice of India (CJI) is a public authority under the Right to Information (RTI) Act, 2005. Hence, it has to entertain applications made under RTI act.

Option 3 is correct: The Border Road Development Board is exempted under RTI act. The BRDB was set up in March 1960 as an inter-ministerial body, under the chairmanship of the Prime Minister, to oversee the development of road communications in the border states of the north and north-east. The BRDB was re-constituted in 1985 with the Defence Minister as the chairman.

Option 4 is incorrect: Directorate General of Income Tax(vigilance) is not exempted under RTI act. But Directorate General of Income Tax(Investigation) is the exempted department.

Option 5 is correct: RTI act do not apply on Narcotics Control Bureau. It is an Indian central law enforcement and intelligence agency under the Ministry of Home Affairs, Government of India. The agency is tasked with combating drug trafficking and the use of illegal substances under the provisions of Narcotic Drugs and Psychotropic Substances Act.

Option 6 is correct: Financial Intelligence Unit India is exempted under RTI. It is an organisation under the Department of Revenue, Government of India which collects financial intelligence about offences under the Prevention of Money Laundering Act, 2002.

Source)

<https://cic.gov.in/sites/default/files/EXEMPTED%20ORGANISATIONS%2C%20SECTION%2024%20OF%20RTI%20Act%20by%20%20ASTHA%20KHARE.pdf>

SFG 2023 | LEVEL 1 | Test #38 – Solutions | 

Q.1) The surface of a lake is frozen in severe winter, but the water at its bottom is still liquid. What is the reason?

- a) Ice is a bad conductor of heat.
- b) Since the surface of the lake is at the same temperature as the air, no heat is lost.
- c) The density of water is maximum at 4°C.
- d) None of the statements (a), (b) and (c) given is correct.

Ans) c

Exp) Option c is the correct answer.

Water generally gets denser as it gets colder, and therefore sinks. However, when the water is colder than 4° Celsius (39° Fahrenheit), water begins expanding and becomes less dense. As a result, close to freezing, colder water floats to the top and the warmer water sinks to the bottom. Eventually, the coldest water, which has floated to the top of the lake in wintry conditions, freezes to form a layer of ice. Right when the water freezes to ice, the ice becomes significantly less dense than the water and continues to float on the lake's surface.

Source: UPSC CSE Pre 2011

Q.2) Why does the pendulum clock take more time to complete one oscillation in summer, than in winter?

- a) During summer, the length of the pendulum will increase.
- b) During summer, the weight of the pendulum will increase.
- c) During summer, the length of the pendulum will decrease.
- d) During summer, the wind speed is slower than in winter.

Ans) a

Exp) Option a is the correct answer.

A simple pendulum consists of a small metallic ball or a piece of stone suspended from a rigid stand by a thread. The **to and fro motion of a metallic ball hanging by a thread is considered a one oscillation of a simple pendulum**. The time taken by the pendulum to complete one oscillation is called its time period.

Option a is correct: As the temperature of the atmosphere rises in the summer, the length of the pendulum increases. Therefore, it will oscillate less frequently and throughout the summer the pendulum clock takes more time to complete one oscillation.

Option b is incorrect: The weight of the pendulum will remain the same in summer. Therefore, it is **not the reason** why a pendulum takes more time to complete one oscillation.

Option c is incorrect: The length of the pendulum will decrease in winter. As the length of the pendulum decreases, it takes less time to complete one oscillation in winter than in summer.

Option d is incorrect: Wind speed is usually greater in winter than in summer. Winds tend to be stronger during winter due to the uneven heating of the Earth's surface. However, this is **not the reason why pendulum takes more time to take one oscillation during summer**.

Q.3) A coin is placed on a card over a tumbler. When the card is rapidly flicked with the finger, the coin placed over it falls in the tumbler. Which of the following laws in physics best describes the concept behind the above phenomenon?

- a) Law of conservation of Energy
- b) Law of Inertia
- c) Law of conservation of momentum
- d) Law of Friction

Ans) b

Exp) Option b is the correct answer.

Option a is incorrect: The **law of conservation of energy** states that energy can neither be created nor be destroyed. Although, it may be transformed from one form to another. If you take all forms of energy into account, the total energy of an isolated system always remains constant.

Option b is correct: **Newton's first law of motion (the law of inertia) implies that things cannot start, stop, or change direction all by themselves**, and it requires some force from the outside to cause such a change. This property of massive bodies to resist changes in their state of motion is called **inertia**.

A coin, placed on a card, drop into the tumbler when the card is rapidly flicked with a finger due to inertia of rest of the coin. When the card was at rest on the tumbler, the coin was also at rest. When the card is flicked, a momentary force acts on the card, so it moves away. **But the coin remains stationary due to its inertia of rest and falls down into the tumbler due to the pull of gravity.**

Option c is incorrect: The principle of **conservation of momentum** states that if two objects collide, then the total momentum before and after the collision will be the same if there is no external force acting on the colliding objects.

Option d is incorrect: **Law of Friction** states that the friction of the moving object is proportional and perpendicular to the normal force. Also, the friction experienced by the object is dependent on the nature of the surface it is in contact with.

Source: <https://www.britannica.com/science/Newtons-laws-of-motion>
NCERT Class IX CH-9

Q.4) With reference to 'Colloidal Solutions', consider the following statements:

1. It is a type of mixture in which one substance is fully dissolved in another.
2. The scattering of a light beam by the particles of a colloidal solution is called Tyndall effect.
3. The particles of a Colloidal Solution do not settle down at the bottom of the container.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 2 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: A colloidal solution is a **type of mixture in which one substance is dispersed evenly throughout another substance**. The dispersed substance, called the dispersed phase, is usually present in small particles, typically between 1 and 1000 nanometers in size. The dispersion medium is the substance in which the dispersed phase is found. The dispersed substance, called the **dispersed phase, is not fully dissolved** and can be seen with the naked eye.

Statement 2 is correct: The Tyndall effect, named after the 19th-century scientist John Tyndall, is a phenomenon that **occurs when light scatters through a colloidal solution**. The light is scattered as it passes through the solution, causing the dispersed particles to become visible. This is why colloidal solutions often appear cloudy or opaque.

Statement 3 is correct: Particles of a Colloidal Solutions are **always in a state of motion and never settle down** at the bottom of a container. A colloid is a mixture that has particles ranging between 1 and 1000 nanometers in diameter, yet are still able to **remain evenly distributed throughout the solution**. These are also known as **colloidal dispersions** because the substances remain dispersed and do not settle to the bottom of the container.

Q.5) Consider the following statement regarding Special Purpose Acquisition Companies (SPACs):

1. It is an entity specifically set up with the objective of acquiring a firm in a particular sector.
2. They are essentially shell companies without any active business operations.
3. They are prohibited from raising funds from the public through Initial Public Offering.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 3 only

Ans) b

Exp) Option b is the correct answer.

The Government of India is considering a regulatory framework for Special Purpose Acquisition Companies (SPACs) to lay the ground for the possible listing of Indian companies through this route in the future.

Statement 1 is correct: Special Purpose Acquisition Companies (SPACs) or a Blank-Cheque Company is an **entity specifically set up with the objective of acquiring a firm in a particular sector.**

Statement 2 is correct: Special Purpose Acquisition Companies are **essentially shell companies.** Shell corporations or Shell companies are entities that do not have active business. They are set up to achieve specific business objectives such as reducing tax liabilities, shielding an entity from legal risks, raising capital. A key factor that makes SPACs attractive to investors is the people who sponsor them. Globally, prominent names such as tennis star Serena Williams, Dell CEO have participated in SPACs.

Statement 3 is incorrect: A SPAC aims to **raise money in an Initial Public Offering (IPO)** without any operations or revenues. The money that is **raised from the public is kept in an escrow account** which can be accessed while making the acquisition. If the acquisition is not made within two years of the IPO, the SPAC is delisted and the money is returned to the investors.

Source: Explained: What are SPACs for which a regulatory framework may be in the works -ForumIAS Blog

Q.6) Which one of the following statements best describes the reason behind storage of Sodium in the kerosene oil?

- a) It reduces the melting point of the Sodium
- b) It leads to electroplating on Sodium.
- c) Sodium is a highly reactive metal
- d) It increases the weight of the Sodium

Ans) c

Exp) Option c is the correct answer.

Sodium is a **highly reactive metal that can react with water and oxygen** in the air to form sodium hydroxide and hydrogen gas, which can be highly flammable and dangerous. **To prevent these reactions,** sodium is typically stored in a liquid hydrocarbon such as kerosene.

- 1) Kerosene is an oil product that is immiscible with water, which means it will not mix with water. This property makes it an **effective barrier between the sodium and the water vapor in the air.** Additionally, kerosene is a poor oxidizing agent, which means it does not readily support combustion. This makes it an effective barrier between the sodium and the oxygen in the air, preventing the formation of hydrogen gas.
- 2) The kerosene will help to **reduce the reactivity of the sodium by slowing down the reaction between the metal and the oxygen in the air,** reducing the risk of fire or explosion.

Option a is incorrect: Sodium is a metal with a low melting point, and it will melt at a temperature of 98 °C, storing it in kerosene will **not prevent it from melting nor reduces the melting point of the sodium.**

Option b is incorrect: Storage of Sodium in the kerosene oil does not lead to electroplating on Sodium. Electroplating is the process of plating one metal onto another by hydrolysis.

Option d is incorrect: Storing sodium in **kerosene does not affect the weight of the sodium**, as the weight of the sodium is determined by the atomic mass of the metal.

Source: Class 8- NCERT

Q.7) Generally, curd is not kept in brass and copper vessels. Which of the following is the most probable reason for not keeping curd in brass and copper vessels.?

- Curd contains Lactic acid which can react with copper & brass to produce harmful products.
- Tartaric acid in curd reacts with copper & brass to produce harmful gases.
- Curd primarily contains Acetic acid, which becomes harmful when it reacts with brass and copper.
- Ascorbic acid in the curd reacts with copper & brass to produce toxic compounds.

Ans) a

Exp) Option a is the correct answer.

Option a is correct: Curd is obtained from milk by coagulating milk through a process called curdling. **Curd contains Lactic acid.** When lactic acid in the curd reacts with the metals like Brass and Copper, it causes corrosion and the creation of products that cannot be digested by the human body.

Option b, c, and d are incorrect: **Tartaric Acid** is an organic acid found in **Tamarind and grapes.** **Ascorbic acid** is an antioxidant agent that functions in fighting bacterial infections, in detoxifying reactions, and in the formation of collagen in fibrous tissues. It is found in citrus fruits. **Acetic acid** is also known as ethanoic acid. Acetic acid is a by-product of fermentation and gives **vinegar** its characteristic odour.

Source: Class 10th NCERT

Q.8) Consider the following statements regarding the applications of Nitrogen and its compounds:

- Nitrogen gas can be used for soldering purposes.
- Nitrogen in form of nitrous oxide is used while giving Anaesthetics to the patients.
- Matchstick contains nitrogen in powdery form.
- Nitrogen can be used in steel making process.

Which of the statements given above are correct?

- 1 and 3 only
- 1, 2, and 4 only
- 2 and 4 only
- 1, 2, 3, and 4

Ans) b

Exp) Option b is the correct answer.

Nitrogen (N) is a non-metallic element. It is a colourless, odourless, tasteless gas that is the most plentiful element in Earth's atmosphere and is a constituent of all living matter. It has various applications.

Statement 1 is correct: When electronics are being assembled, **nitrogen gas is used for soldering.** Using nitrogen gas reduces the surface tension to provide a cleaner breakaway from the solder site.

Statement 2 is correct: Almost every major drug class contains some nitrogen gas, even antibiotics. **Nitrogen gas, in the form of nitrous oxide, is also used in anaesthetics.**

Statement 3 is incorrect: Nitrogen gas is not used in Matchstick. The head of safety matches is made of an oxidizing agent such as potassium chlorate, mixed with sulfur, fillers, and glass powder. The side of the box contains red phosphorus, binder, and powdered glass.

Statement 4 is correct: There are various instances when nitrogen can be added to steel during steelmaking such as melting. **Also, by electroplating the stainless steel with nitrogen gas, the finished product is stronger and more resistant to corrosion.**

Knowledge Base: Some of the applications of Nitrogen:

- 1) Nitrogen gas is used to displace oxygen in food packaging. By eliminating the oxygen, the food can last longer.
- 2) In incandescent light bulbs, nitrogen gas is often used as a cheaper alternative to argon. It is used for protection purpose
- 3) Nitrogen gas offers many benefits when used to fill tires, such as giving them a longer life by reducing oxidation. It also improves tire pressure retention to give drivers better gas mileage

Source: <https://www.onsitegas.com/blog/uses-nitrogen-gas/>

<https://www.omega-air.si/news/news/nitrogen-gas-applications>

<https://chem.washington.edu/lecture-demos/match-head-reaction#:~:text=The%20head%20of%20safety%20matches,phosphorus%2C%20binder%20and%20powdered%20glass.>

Q.9) Consider the following statements:

1. Boiling is the 'surface phenomenon' involving change of liquid state to vapour state.
2. The boiling point of a liquid is the temperature at which the vapor pressure of the liquid is less than atmospheric pressure.
3. Evaporation is a 'bulk phenomenon' which involves transition of the liquid particles into gaseous particles.

Which of the statements given above is/are **incorrect**?

- a) 1 only
- b) 2 and 3 only
- c) 2 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Evaporation is a normal process that occurs when the liquid form changes into the gaseous form while causing an increase in the pressure or temperature. Whereas, Boiling is an unnatural process where the liquid gets heated up and vaporized due to continuous heating of the liquid.

Statement 1 is incorrect: The temperature at which a liquid starts boiling at the atmospheric pressure is known as its boiling point. Boiling is a **bulk phenomenon (Not surface phenomenon)**. Particles from the bulk (Not only from the surface) of the liquid gain enough energy to change into the vapour state.

Statement 2 is incorrect: The boiling point of a liquid is the **temperature at which the vapor pressure of the liquid equals the atmospheric pressure**. The vapor pressure is the pressure exerted by the molecules of a substance in the gas phase, in equilibrium with the molecules in the liquid phase. As the temperature of a liquid increases, the kinetic energy of its molecules also increases, and more of the molecules gain enough energy to escape the surface of the liquid and become a gas.

When the vapor pressure of a liquid equals the atmospheric pressure, the liquid starts to boil. At this point, bubbles of vapor form within the liquid and rise to the surface.

Statement 3 is incorrect: Evaporation is a form of vaporisation that happens **on the surface of liquids (not a bulk phenomenon)** and it involves the transition of the liquid particles into the gaseous phase. The liquid

particles will generally escape and enter the surrounding air as a gas when a molecule near the surface consumes enough energy to overcome the vapour pressure.

Source: Chapter_1.pmd (ncert.nic.in)

Q.10) Consider the following statements regarding ‘Open Network for Digital Commerce (ONDC)’:

1. It aims to promote open networks for all aspects of the exchange of goods and services over electronic networks.
2. It has been set up as a private sector-led non-profit organization.
3. Sellers can enter into arrangements with delivery partners in order to sell directly to consumers through the platform.
4. Niti Aayog is the implementing agency of the Open Network for Digital Commerce.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1, 2 and 3 only
- c) 2 and 4 only
- d) 2, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

Statement 1 is correct: Open Network for Digital Commerce (ONDC) is basically a **Unified Payments Interface (UPI) equivalent** but for the e-commerce space. It aims to promote open networks for **all aspects of the exchange of goods and services over digital or electronic networks**.

Statement 2 is correct: Open Network for Digital Commerce (ONDC) has been set up as a **private sector-led non-profit organization**. This has been registered with the **Ministry of Corporate Affairs**.

Statement 3 is correct: Under the system, E-commerce players can focus on the buyers or consumers, without having to focus on sellers. With more sellers, from kiranas to other retailers and service providers on board, the e-tailers will be able to use the platform to increase choice, transparency and trust of consumers. The sellers can also enter into **arrangements with delivery partners and logistics players** to move away from platforms such as Amazon or Flipkart and sell directly to consumers through the platform.

Statement 4 is incorrect: **Quality Council of India (QCI) (not Niti Aayog)** is the implementing agency of Open Network for Digital Commerce. The network will provide access to businesses by increasing its discoverability at a low cost and will cover retail, mobility, hospitality, food delivery, wholesale trade, and tourism. It will support small, traditional retailers while curbing digital monopolies.

ONDC: Govt's e-comm net in talks with companies -ForumIAS Blog

Q.11) An artificial satellite orbiting around the Earth does not fall down. This is so because the attraction of Earth

- a) does not exist at such distance
- b) is neutralized by the attraction of the moon
- c) provides the necessary speed for its steady motion
- d) provides the necessary acceleration for its motion

Ans) d

Exp) Option d is the correct answer.

An artificial satellite orbiting around the Earth does not fall down. This is because the attraction of Earth i.e., gravity provides the necessary acceleration for its motion. Satellites don't fall from the sky because they are orbiting Earth. Even when satellites are thousands of miles away, Earth's gravity still attracts them. Gravity, combined with the satellite's momentum from its launch into space - cause the satellite go into orbit above Earth, instead of falling back down to the ground.

Source: UPSC CSE Pre 2011

Q.12) There are certain substances like Naphthalene and Anthracene which when left uncovered, gets disappear with time. What is the most probable reason for this change?

- They undergo distillation process
- They undergo filtration process
- They undergo centrifugation process
- They undergo sublimation process

Ans) d

Exp) Option d is the correct answer.

Option a is incorrect: Distillation is used for the separation of components of a mixture containing two miscible liquids that boil without decomposition and have sufficient difference in their boiling points.

Option b is incorrect: Heterogeneous mixtures can be separated into their respective constituents by simple physical methods like handpicking, sieving, filtration that we use in our day-to-day life. In Filtration, the suspended solid can be separated from liquid by passing it through pores of membrane called filter.

Option c is incorrect: In centrifugation, the principle is that the denser particles are forced to the bottom and the lighter particles stay at the top when spun rapidly. The solid particles in a liquid are very small and pass through a filter paper. For such particles the filtration technique cannot be used for separation. Such mixtures are separated by centrifugation.

Option d is correct: The process of conversion of solid into gaseous form directly without undergoing any change into liquid form is called sublimation. Thus, Naphthalene and Anthracene undergo sublimation process. The other substances which undergo sublimation are ammonium chloride and camphor.

Source: chapter 2, Class 9th NCERT

Q.13) In which of the following situations does magnets lose their properties?

- On heating the magnet to a high temperature.
- On throwing it down from a great height.
- On hammering it hard with an iron hammer.
- On keeping the different poles of two magnets facing each other.
- On sticking a piece of iron at the end of the magnet.

Select the correct answer using the code given below:

- 1 and 2 only
- 1, 2 and 3 only
- 1, 3 and 4 only
- 2, 3, 4 and 5 only

Ans) b

Exp) Option b is the correct answer.

A magnet is a material or object that produces a **magnetic field**. This magnetic field is a reason why magnets tend to attract objects that have iron content. However, it loses its tendency to attract objects under certain conditions.

Option 1, 2 and 3 is correct: Magnets lose their properties if they are **heated, hammered or dropped from some height**. It tends to lose its properties if it falls from top, be it from buildings or anything else.

Option 4 is incorrect: **Keeping the opposing poles of two magnets facing each other will help in preserving the magnetic properties.** Magnets should be kept in pairs with their unlike poles (North pole and South pole of two magnets facing each other) on the same side to avoid losing the magnetic properties.

Option 5 is incorrect: **Sticking a piece of iron at the end of the magnet will avoid magnet losing its properties.** For instance, at the end of the horse-shoe magnet, one should keep a piece of iron across the poles to save its properties.

Safe storage of magnet to preserve its magnetic properties

Source: Class VI Science NCERT - FUN WITH MAGNETS

Q.14) With reference to 'Litmus Paper', consider the following statements:

1. It is a type of pH indicator that is used to test the acidity or basicity of a solution.
2. It is made from natural dyes extracted from lichens.
3. It can accurately provide the pH value of any solution.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is correct: Litmus paper is a **simple and easy-to-use pH indicator that has** been used for centuries to test **the acidity or basicity of a solution**. When litmus paper is dipped into an acidic solution, the dye in the paper changes color from blue to red. Conversely, when litmus paper is dipped into a basic solution, the dye changes color from red to blue. The paper can also be used to test the pH of a neutral solution, which will not change the color of the paper.

Statement 2 is correct: Litmus paper is made from natural dyes **extracted from lichens**, specifically *Rocella tinctoria* and *Rocella pygmaea*. These **lichens are collected, dried, and ground into a powder**. The powder is then mixed with an alkali solution, such as ammonia, to extract the dye. The dye is then mixed with a binder, such as gum arabic, and applied to paper to create litmus paper. The finished product is a pH indicator paper that changes color based on the acidity or basicity of a solution.

Statement 3 is incorrect: Litmus paper has a **limitation of not showing the accurate pH value** of given solution. Litmus paper only shows whether a material is acidic or basic, while **pH strips specify the pH value (alkaline)**.

Source: Class 7 NCERT

Q.15) Consider the following statements regarding the 'DigiYatra' programme:

1. It is a biometric enabled initiative based on Facial Recognition Technology.
2. It aims to provide paperless travel experience and avoid multiple identity checks at the airports.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: The 'DigiYatra' is a Biometric Enabled Seamless Travel experience (BEST) based on Facial Recognition Technology. It aims to provide paperless and seamless travel experience to the passengers.

Statement 2 is correct: The Government of India's signature DigiYatra programme will facilitate paperless travel and avoid multiple identity checks at the airport enabling seamless and hassle-free travel.

Source: <https://www.livemint.com/news/india/explained-what-is-digiyatra-how-it-will-work-and-other-questions-answered-11660701094885.html>

Q.16) With reference to 'Neutralization Reaction', consider the following statements:

1. It is a chemical reaction in which an acid and a base react to form salt and water.
2. During this reaction, heat energy is usually generated.
3. This reaction within human body helps in preventing acid from damaging the stomach lining.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Statement 1 is correct: A neutralization reaction is a chemical reaction in which an **acid and a base react to form a salt and water**. The general equation for a neutralization reaction is: Acid + Base → Salt + Water

Statement 2 is correct: Heat is produced during a neutralization reaction; thus, known as **exothermic reaction**. The heat energy is generated from the **breaking and forming of chemical bonds**. The amount of heat produced during a neutralization reaction depends on the strength of the acid and base and the amount of each reactant used.

Statement 3 is correct: One of the examples of neutralization reaction in nature is the reaction between **stomach acid (HCl) and sodium bicarbonate (NaHCO₃) in the body**, which helps to neutralize stomach acid and protect the stomach lining:

This reaction **helps to maintain a healthy pH balance in the stomach and prevent acid from damaging the stomach lining.**

Source: Class 7th NCERT

Q.17) When we stop pedalling, the bicycle begins to slow down. This happens due to which of the following reasons?

- a) Action of frictional force on bicycle.
- b) Absence of net external force on bicycle.
- c) Acting of Gravitational force on the bicycle.
- d) Action of elastic force on bicycle.

Ans) a

Exp) Option a is the correct answer.

In physics, a force is an influence that can change the motion of an object. A force can cause an object with mass to change its velocity.

Option a is correct: Frictional Force is the **opposing force when two surfaces come in contact with each other**. When we stop pedalling, the bicycle begins to slow down because of the **friction forces acting opposite to the direction of motion**. In order to keep the bicycle moving, we have to start pedalling again

Option b is incorrect: An object moves with a uniform velocity **when the forces (pushing force and frictional force) acting on the object are balanced and there is no net external force on it**. If an unbalanced force is applied on the object, there will be a change either in its speed or in the direction of its motion.

Thus, without net external force action upon it, the bicycle would continue to move with the velocity it has acquired till then.

Option c is incorrect: The **gravitational force is a force that attracts any two objects** in the universe, whether they have equal masses or not. The gravitational attraction between the earth and the bicycle is a reason why they are in contact with each other. This force is the **reason why bicycles fall down when not in motion**. This is **not the reason why bicycles slow down when we stop pedalling**.

Option d is incorrect: **Elastic force is the ability of an elastic material to resist its change in shape**. Elasticity is the ability of a material to return to its original shape after being stretched or compressed. This property is called elasticity. This is not the reason why bicycle slows down when stop pedalling.

Source: Class IX NCERT - FORCE AND LAWS OF MOTION

Q.18) Carbon dioxide (CO₂) is considered a better fire extinguisher than water to extinguish fire triggered by electrical equipment. Which of the following best describes the reason for this?

- a) Nontoxicity of CO₂ even in high concentration reduces the damage caused to humans trapped in fire.
- b) CO₂ fire extinguishers can extinguish flammable liquid fires, flammable solids, and flammable gases.
- c) CO₂ will cut down the contact between oxygen and burning object as it is heavier than Oxygen.
- d) Compared to water, more amount of CO₂ can be stored in the given space.

Ans) c

Exp) Option c is the correct answer.

The lowest temperature at which a substance catches fire is called its ignition temperature. To extinguish fire, **the ignition temperature of the burning objects must be brought down** using certain materials. The most common materials used to extinguish fire are **water, heavy clothes, gases etc.**,

Option a is incorrect: **CO₂ is a toxic gas and highly suffocating gas**, whose concentration of even 9% in the breathing air would make a person unconscious within minutes,

Option b is incorrect: Co₂ fire extinguishers can extinguish flammable liquid fires but are not suitable for use on flammable solids, and flammable gases.

Option c is correct: CO₂ being heavier than oxygen, covers the fire like a blanket thus the contact between the fuel and oxygen will be cut off and the fire is controlled. Hence for fires involving electrical equipment and inflammable materials like petrol, carbon dioxide (CO₂) is the best extinguisher.

Option d is incorrect: Although it is true that in the given space large amounts of CO₂ can be stored by compressing it, it is not the reason why CO₂ was preferred over water to extinguish fire caused by electrical equipment.

Source: <https://ncert.nic.in/textbook/pdf/hesc106.pdf>

https://www.lhcfp.co.uk/co2_fire_extinguishers.htm#:~:text=Co2%20is%20the%20most%20toxic%20gas%20when%20it%20comes%20to%20human%20health.%20It%20is%20a%20highly%20suffocating%20gas%2C%20whose%20concentration%20of%20even%209%25%20in%20the%20breathing%20air%20would%20make%20a%20person%20unconscious%20within%20minutes%2C%20special%20consideration%20should%20be%20taken%20before%20installing%20in%20confined%20spaces.

Q.19) With reference to ‘Noble gases’, consider the following statements:

1. They do not easily form compounds with other elements.
2. They are less dense than most of the other gases.
3. They are easily soluble in water and other liquids.
4. They cannot conduct electricity and fluorescence.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1, 2 and 4 only
- d) 1 and 3 only

Ans) a

Exp) Option a is the correct answer.

Argon, Helium, Neon, Argon, Krypton, and Xenon are known as Noble Gas. Those gasses are found in the air and are obtained by liquefying them. Radon is the only radioactive out of all. The noble gases are colourless, odourless, tasteless, non-flammable gases.

Statement 1 is correct: Noble gases are comparatively inert in nature. The noble gases **do not easily form compounds with other elements**. The noble gases have a full valence electron outer shell, which makes them chemically inert and less likely to form compounds with other elements.

Statement 2 is correct: Noble Gasses are known as the least reactive Chemical elements. Noble Gases are nearly inert because their atoms have an entire valence electron shell. **Noble gases are less dense than other gases**. Helium is the lightest of the noble gases and is less dense than the other noble gases.

Statement 3 is incorrect: Noble gases are **insoluble in water and most other liquids**, which makes them useful in applications where gases need to be separated from liquids. Because they do not dissolve in liquids, they can be easily separated from liquids by simply allowing the liquid to settle, or by using a separatory funnel. This property makes them useful in applications such as gas chromatography, where they are used as the carrier gas to separate different components of a mixture.

Statement 4 is incorrect: All the Noble Gasses **conduct electricity and fluorescence** which can be needed in many conditions to maintain a constant and safe environment. Noble gases have **high thermal conductivity**, which makes them useful in applications where heat needs to be transferred quickly and efficiently.

Source: Class 9 NCERT

Q.20) Consider the following statements:

1. Indo-Pacific Economic Framework for Prosperity is a U.S.-led economic grouping, with India as one of the members.

2. Investment Incentive Agreement is a pact that was recently signed between India and Japan.

Which of the above given statements is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2 only
- d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: Indo-Pacific Economic Framework for Prosperity (IPEF) is a U.S.-led economic grouping. It is a US-led initiative that aims to strengthen economic partnership among participating countries to enhance resilience, sustainability, inclusiveness, economic growth, fairness, and competitiveness in the Indo-Pacific region. The IPEF was launched with a dozen initial partners who together represent 40% of the world GDP. **India is one of its members.**

Statement 2 is incorrect: Recently, India and the United States signed an Investment Incentive Agreement (IIA) at Tokyo, Japan. This IIA supersedes the Investment Incentive Agreement signed between both the countries in the year 1997. Its **purpose is to keep pace with the additional investment support programmes, offered by the Development Finance Corporation (DFC)**, such as debt, equity investment, investment guaranty, investment insurance or reinsurance, feasibility studies for potential projects and grants. The Agreement is the **legal requirement for DFC**, to continue providing investment support in India. Q.21) Consider the following statements:

- 1. Light is affected by gravity.
- 2. The Universe is constantly expanding.
- 3. Matter warps its surrounding space-time.

Which of the above is/are the prediction/predictions of Albert Einstein's General Theory of Relativity, often discussed in media?

- a) 1 and 2 only
- b) 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Statement 1 is correct. According to Albert Einstein's General Theory of Relativity, Light will be affected the same way as matter is affected by gravity.

Statement 2 is correct. Based on this theory, Hubble found that distant galaxies move away faster than those that are relatively nearby and the universe is indeed expanding.

Statement 3 is correct. According to this theory, gravity is caused by a warping of space and time. Gravity is the curvature of the universe, caused by massive bodies, which determines the path that objects travel.

Source: UPSC CSE Pre 2018

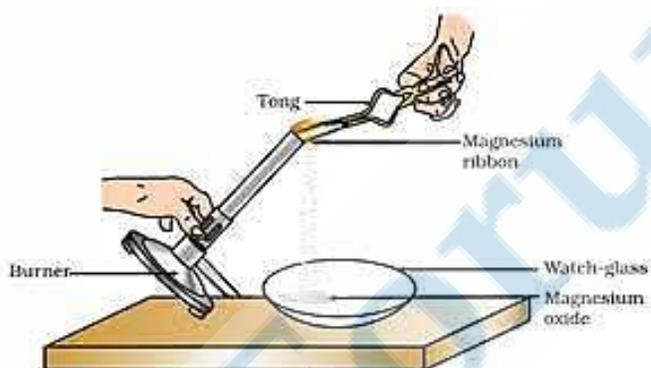

Q.22) Magnesium Ribbon is cleaned with a sand paper before burning it. This is done to-

- make the flame appear more colorful
- increase the heat of the flame of the ribbon
- make the magnesium ignition last longer
- remove the oxide layer formed on its surface

Ans) d

Exp) Option d is the correct answer.

Option d is correct: Magnesium ribbon is rubbed before burning because it comprises a layer of basic magnesium oxide. Magnesium is a reactive metal and when a magnesium ribbon is exposed to air for a long period of time, the oxygen in the air reacts with the magnesium ribbon and gets oxidized into magnesium oxide. Cleaning the surface of the magnesium ribbon will **remove the oxide layer from the surface and thus it will allow the ribbon to burn effectively to get the desired result.**

Option a is incorrect: Cleaning the magnesium ribbon **does not affect the color of the flame**, as the color of the flame is determined by the temperature of the flame and the chemical composition of the material being burned.

Option b is incorrect: Cleaning the magnesium ribbon **does not affect the heat of the flame**, as the heat of the flame is determined by the chemical reaction of the magnesium with the oxygen in the air.

Option c is incorrect: Cleaning the magnesium ribbon **does not affect the duration of the burning process**, as the duration of the burning process is determined by the amount of magnesium present and the rate at which it reacts with the oxygen in the air.

Source: class 10 NCERT

Q.23) Consider the following Assertion and Reason:

Assertion: Unlike rainwater, distilled water does not conduct electricity.

Reason: Unlike rainwater, distilled water does not contain dissolved ions.

Which one of the following is correct in respect of the above statements?

- Both Assertion and Reason are correct and Reason is the correct explanation of Assertion.
- Both Assertion and Reason are correct and Reason is not the correct explanation of Assertion.

- c) Assertion is correct but Reason is incorrect.
d) Assertion is incorrect but Reason is correct.

Ans) a

Exp) Option a is the correct answer.

Both the Assertion and reason are correct and Reason is the correct explanation of Assertion.

Distilled water and rainwater have different properties when it comes to their ability to conduct electricity.

Distilled water is purified water that has had impurities removed through a process of distillation.

During this process, any **dissolved ions** or other conductive materials are **removed**, leaving behind pure water that is not able to conduct electricity. This is because **electricity is conducted through the movement of ions in a solution**, and distilled water contains very few ions.

Rainwater, on the other hand, is naturally occurring water that has not undergone distillation. **Rainwater can contain dissolved ions and other conductive materials**, such as dissolved salts and minerals, that are present in the air or picked up from the ground as the rain falls. These dissolved ions and materials make rainwater a good conductor of electricity.

Source: class 10 NCERT

Q.24) With reference to 'Non-Metals', consider the following statements:

1. The reaction of non-metals with oxygen gives only acidic oxides.
2. Most non-metals do not react with water under normal conditions.
3. All the existing non-metals do not react with acid.
4. Non-metals react with base to form salt and water.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 and 4 only
- c) 4 only
- d) 2, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

Non-metals are a **group of elements that are located on the right side** of the periodic table, typically to the right of the metalloids. They have properties that are different from those of metals, and they typically **do not conduct heat or electricity as well as metals do**. They are characterized by having relatively **low melting and boiling points**, and they are **typically gases or brittle solids at room temperature**.

Statement 1 is incorrect: Some non-metals, such as sulfur and phosphorus, can react with oxygen to form acidic oxides, which means that these oxides will have acidic properties when dissolved in water. However, **not all non-metals that react with oxygen form acidic oxides**. Some non-metals such as carbon and nitrogen, when they react with oxygen, **form neutral oxides** such as **CO₂ and NO₂** respectively, which do not have acidic properties when dissolved in water.

Statement 2 is correct: Most non-metals do not react with water under normal conditions, and when they do, they typically form acidic oxides. An example of this is the reaction of sulfur dioxide (SO₂) and water, which forms sulfuric acid (H₂SO₄), an acidic oxide.

Statement 3 is incorrect: While some non-metals, such as carbon and nitrogen, do not react with acids under normal conditions, other **non-metals such as sulfur, phosphorus and chlorine can react with acids to form various compounds**. For example, sulfur can react with hydrochloric acid (HCl) to form sulfur dioxide (SO₂) and hydrogen chloride (HCl), and phosphorus can react with hydrochloric acid to form phosphoric acid (H₃PO₄) and hydrogen chloride.

Statement 4 is correct: Non-metals react with **base to form Salt and the water**. It does not form hydrogen after reaction. This is known as neutralization reaction, in which an acid and a base react to form water and a salt. For example, carbon dioxide (CO₂) can react with sodium hydroxide (NaOH) to form sodium carbonate (Na₂CO₃) and water (H₂O), sulfur dioxide (SO₂) can react with calcium hydroxide (Ca (OH)₂) to form calcium sulfite (CaSO₃) and water (H₂O).

Source: Class 8 NCERT

Q.25) Consider the following pairs:

Initiatives	Objectives
1. Hydrogen Valley Platform	Optimization of hydrogen demand and supply by onsite generation and utilization
2. Three Material Acceleration Platforms	To develop Methanol-based energy resources with viable technological solutions
3. Integrated Biorefineries Mission	Replacing fossil-based fuels, chemicals and materials with bio-based alternatives.

Which of the pairs given above is/are correctly matched?

- a) 1 only
- b) 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) d

Exp) Option d is the correct answer.

Pair 1 is correctly matched: **Hydrogen Valley Platform** is a global initiative to optimize the **hydrogen demand and supply by onsite generation and utilization**. The platform utilizes renewable resources effectively, and water in excess areas with geographical identity. The Hydrogen Valleys Platform has been prepared for the Fuel Cells and Hydrogen 2 Joint Undertaking. This Joint Undertaking receives support from the European Union's Horizon 2020 research and innovation programme, Hydrogen Europe and Hydrogen Europe Research.

Pair 2 is incorrectly matched: Three Material Acceleration Platforms were launched at the MI Annual Gathering session on 4th April 2022, where new Energy Innovation Collaborations were announced. It has been **set up by the Department of Science and Technology (DST)**. These platforms would **leverage emerging capabilities in next-generation computing, artificial intelligence (AI) and machine learning and robotics** to accelerate the pace of **materials discovery** up to 10 times faster.

Pair 3 is correctly matched: Integrated Biorefineries Mission is **co-Led by India and Netherlands** It aims to **develop and demonstrate innovative solutions to accelerate the commercialization of integrated biorefineries**, with a target of **replacing 10% of fossil-based fuels, chemicals and materials with bio-based alternatives by 2030**.

The mission is a **PPP (Public Private Participation) mode initiative** that unites countries, international organizations, the corporate sector, academic institutions and civil society to accelerate innovation for renewable fuels, chemicals, and materials for a low-carbon future.

Source: <https://blog.forumias.com/union-minister-launches-a-major-futuristic-ppp-mode-initiative-for-clean-energy-with-the-full-launch-of-mission-integrated-biorefineries-to-accelerate-clean-energy-solutions-thro/>

<https://www.fch.europa.eu/news/launch-hydrogen-valley-platform>

Integrated Clean Energy Material Acceleration Platform launched & funding opportunity announced for Hydrogen Valley Platform at MI meeting | Department Of Science & Technology (dst.gov.in)

Q.26) When you cover the surface of the torch with your palm and turn on the torch light in a dark place, you observe light at the other side of your palm, but not clearly. Which of the following properties of your palm is a reason for this phenomenon?

- Transparency of palm
- Opacity of palm
- Translucency of palm
- Reflection of light by palm

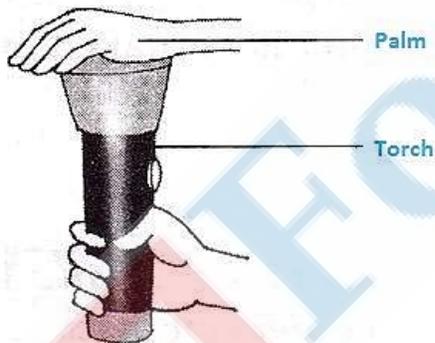

Ans) c

Exp) Option c is the correct answer.

Option a is incorrect: Transparency is the physical property of **allowing light to pass through the material clearly. If the palm is transparent, we can see the light clearly at the other side of our palm.** Glass, water, air and some plastics are examples of transparent materials.

Option b is incorrect: An **Opaque object completely bans the light from passing through** it. It is neither transparent (allowing all light to pass through) nor translucent (allowing some light to pass through). These materials are called opaque. **If the palm was opaque then we cannot see any light at the other side of your palm.** Wood, cardboard and metals, are examples of opaque materials.

Option c is correct: **Translucent materials allow light to pass through it but not clearly.** The palm is translucent; this is why we can see some light at the other side of our palm.

Option d is incorrect: **Reflection is when light bounces off an object.** The object exhibiting reflective properties will send back the light striking its surface. Thus, if the **palm shows reflective properties**, then it **won't allow the light to penetrate its surface resulting in absence of light at the other side of the palm.**

Source: Class VI NCERT Science - SORTING MATERIALS INTO GROUPS

Q.27) With respect to Isotopes and Isobars, consider the following statements:

- Isotopes of an element have different numbers of protons and neutrons in nucleus.
- Isobars are atoms of different elements that have the same atomic number, but different atomic mass.
- Isotopes can be used to study the effects of different types of fertilizers on plant growth.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: Isotopes are atoms of the same element that have the **same number of protons in their nucleus, but a different number of neutrons**. This means they have the same atomic number, but a different atomic mass. For example, carbon-12 and carbon-13 are isotopes of carbon because they have the same number of protons (6) but different numbers of neutrons (6 and 7, respectively).

Statement 2 is incorrect: Isobars are atoms of different elements that have the **same atomic mass**. This means they have different numbers of protons and neutrons, but their total mass is the same. For example, chlorine-35 and sulfur-35 are isobars because they have different numbers of protons (17 and 16, respectively) and neutrons (18 and 19, respectively), but their atomic masses are 35.

Statement 3 is correct: Isotopes can be used to study plant growth and soil fertility. Isotopes are used in soil fertility research is through isotopic analysis. Isotopes can also be **used in the study of irrigation water, to understand the origin of the water** and how it affects the soil and plant growth. Additionally, isotopes can be used to **study the effects of different types of fertilizers on plant growth**, and to understand the mechanisms of nutrient uptake by plants.

Source: Class 9th NCERT

Q.28) With reference to different acids present in food, consider the following pairs:

Food Source	Acids
1. Milk	- Lactic Acid
2. Amla	- Oxalic Acid
3. Grapes	- Tartaric Acid
4. Spinach	- Ascorbic acid

Which of the pairs given above are correctly matched?

- a) 1 and 3 only
- b) 1, 2 and 3 only
- c) 1, 3 and 4 only
- d) 2 and 4 only

Ans) c

Exp) Option c is the correct answer.

Acids present in various food items are the acid that can be eaten. These acids are responsible for the sharpness of the taste of any food.

Pair 1 is correctly matched: Milk contains lactic acid. Lactic acid is an organic acid that is naturally produced in the body during the fermentation of carbohydrates by lactic acid bacteria. It is also found in a variety of fermented foods, including milk and other dairy products.

Pair 2 is incorrectly matched: Oxalic acid is a naturally occurring organic acid found in many plants, including fruits and vegetables such as **rhubarb, spinach, beet greens, and chard**. It is also found in some nuts, such as almonds and peanuts, and in some seeds, such as sesame and poppy seeds. Oxalic acid is a colourless crystal or white powder that is soluble in water and has a sharp, acidic taste. **Amla is rich in citric acid.**

Pair 3 is correctly matched: Tartaric acid is present in the juices of various fruits, particularly in tamarinds, unripe grapes, Pineapples, Potatoes, Carrots and is one of the main acids in wine. Tartaric acid is an extremely versatile acid and it is utilized in a wide range of industries. **Malic acid is also found in the Grapes.**

Pair 4 is correctly matched: Spinach contains several acids, including oxalic acid and ascorbic acid (vitamin C), which can be harmful in large amounts. However, it does not contain other acids like citric acid, acetic acid, lactic acid, or malic acid.

Source: Class-9-SCIENCE

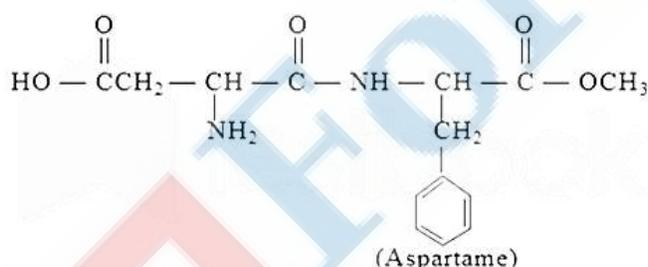

Q.29) Aspartame is an artificial sweetener sold in the market. It consists of amino acids and provides calories like other amino acids. Yet, it is used as a low-calorie sweetening agent in food items. What is the basis of this use?

- Aspartame is as sweet as table sugar, but unlike table sugar, it is not readily oxidized in human body due to lack of requisite enzymes.
- When aspartame is used in food processing, the sweet taste remains, but it becomes resistant to oxidation.
- Aspartame is as sweet as sugar, but after ingestion into the body, it is converted into metabolites that yield no calories.
- Aspartame is several times sweeter than table sugar, hence food items made with small quantities of aspartame yield fewer calories on oxidation.

Ans) d

Exp) Option d is the correct answer.

Statement a is incorrect. Aspartame is several times sweeter than table sugar, hence food items made with small quantities of aspartame yield fewer calories on oxidation. In 1879 Aspartame was discovered and it was found that it is approximately **200 times sweeter than sugar**. It is not readily oxidized in the human body due to a lack of requisite enzymes.

Statement b is incorrect. Aspartame is generally not used in the food processing. When it is heated it breaks down into amino acids and loses its sweetness, so it cannot be used for baked foods. As it becomes unstable at cooking temperature, it is only used in soft drinks and cold foods.

Statement c is incorrect. Aspartame is several times sweeter than table sugar, hence food items made with small quantities of aspartame **yield fewer calories on oxidation**.

Statement d is correct. Aspartame is metabolized by the body into two constituent amino acids and methanol. These hydrolysis products are handled by the body in the same way as aspartic acid, L-Phenylalanine and methanol from other consumed foods. **These components yield no calory and add nothing new to the diet.** We must remember that aspartame intake has various side effects. This mainly because of degradation of aspartame at high temperature. Brain tumor is caused by the aspartame methanol which is a breakdown product.

Source: UPSC 2011

Q.30) Consider the following statements with respect to the India Semiconductor Mission:

1. It provides fiscal support for the development of semiconductor manufacturing facilities in India.
2. Design Linked Incentive Scheme has been launched under this mission.
3. It aims to make India a global hub for electronics manufacturing and design.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Statement 1 is correct: The India Semiconductor Mission (ISM) was launched in 2021 with a total financial outlay of **Rs 76, 000 crore** under the aegis of the **Ministry of Electronics and IT (MeitY)**. It is part of the comprehensive program for the **development of sustainable semiconductor and display ecosystem** in the country. The programme aims to **provide financial support** to companies investing in semiconductors, display manufacturing and design ecosystem.

Statement 2 is correct: Design Linked Incentive (DLI) scheme is one of the four schemes that has been **introduced under India Semiconductor Mission**. The scheme offers **financial incentives, design infrastructure support** across various stages of development and deployment of semiconductor design for Integrated Circuits (ICs), Chipsets, System on Chips (SoCs), Systems & IP Cores and semiconductor linked design.

Other schemes launched under ISM:

- 1) Scheme for setting up of Semiconductor Fabs in India
- 2) Scheme for setting up of Display Fabs in India
- 3) Scheme for setting up of Compound Semiconductors / Silicon Photonics / Sensors Fab and Semiconductor Assembly, Testing, Marking and Packaging (ATMP) / OSAT facilities in India

Statement 3 is correct: The vision of India Semiconductor Mission is to build a vibrant semiconductor and display design and innovation ecosystem to enable **India's emergence as a global hub for electronics manufacturing and design**. The mission will enable a multi-fold growth of Indian semiconductor design industry by providing requisite support in the form of Electronic Design Automation (EDA) tools, foundry services and other suitable mechanisms for early-stage startups. It will also promote and facilitate indigenous Intellectual Property (IP) generation and encourage, enable and incentivize Transfer of Technologies (ToT).

<https://pib.gov.in/PressReleasePage.aspx?PRID=1808676>

Q.31) Consider the following statements:

If there were no phenomenon of capillarity

1. it would be difficult to use a kerosene lamp
2. one would not be able to use a straw to consume a soft drink
3. the blotting paper would fail to function
4. the big trees that we see around would not have grown on the Earth

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 1, 3 and 4 only
- c) 2 and 4 only
- d) 1, 2, 3 and 4

Ans) b

Exp) Option b is the correct answer.

Capillary rise or capillarity is a phenomenon in which liquid 'spontaneously' rises or falls in a narrow space such as a thin tube or in the voids of a porous material. Surface tension is an important factor in the phenomenon of capillarity.

Statement 1 is correct. The oil in the wick of a lamp rises due to the capillary action of threads in the wick. Since the adhesive force between the cloth and kerosene is more compared to cohesive force therefore when a cloth is dipped in the kerosene oil, it rises in the cloth due to the capillary effect which makes it difficult to use a kerosene lamp.

Statement 2 is incorrect. The tendency of a liquid in a capillary tube or absorbent material to rise or fall as a result of surface tension. When a person suck through a straw, the pressure inside the straw decreases and due to the pressure difference the soft drink rises from the straw. Hence, no capillarity action in using a straw to consume the soft drink as we applied additional pressure from the mouth.

Statement 3 is correct. A blotting paper soaks ink by the capillary action of the pores in the blotting paper. The blotting paper is a thin and smooth paper which grants an infant thicker liquid like ink to absorb, so it involves capillary action. That is required for liquids flow that means to dissolve things.

Statement 4 is correct. Capillary action and root pressure can support a column of water some two to three meters high. The water poured into the grassland rises in the uncountable capillaries formed in the stems (Xylem) of plants and trees and reaches the leaves.

UPSC CSE Pre 2012

Q.32) Which of the following statements are correct with respect to Sound?

1. Sound travels faster in cold air than warm air
2. Sound travels faster in solid medium than the gaseous medium.
3. Sound travels faster in dry air than in humid air.
4. Sound travels farther in cold weather than in hot weather.
5. Hitting the source with greater force produces a louder sound.

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 2,4 and 5 only
- c) 2,3,4 and 5 only
- d) 1,2,4 and 5 only

Ans) b

Exp) Option b is the correct answer.

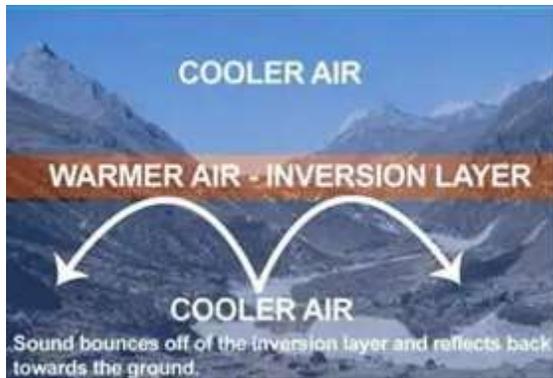

Sound is a form of energy which produces a sensation of hearing in our ears. Sound is produced by vibrating objects. The speed of sound depends on the properties of the medium through which it travels.

Option 1 is incorrect: Sound moves faster in warm air than the cold air. The speed of sound in a medium depends on the temperature of the medium. **Higher the temperature, faster the speed of sound.**

Option 2 is correct: Sound travels faster in solids than gases. The speed of sound depends on the **density of the medium. Higher the density, faster the sound travels.** The velocity of sound decreases as it moves from solid to gaseous state.

Option 3 is incorrect: Sound travels faster in humid air than dry air as particles are packed more **densely in humid air than the dry air.** Humid air has more water vapour and less air in comparison to dry air.

Option 4 is correct: Sound travels farther in cold weather than in hot weather. It is because sound moves faster in warm air than colder air, which leads to wave bending away from the warm air and back towards the ground. This stops the wave. That's why sound is able to travel farther in chilly weather.

Option 5 is correct: Hitting the source with greater force produces a louder sound. The loudness or softness of a sound is determined basically by its amplitude. The **amplitude** of the sound wave **depends upon the force with which an object is made to vibrate**. Higher the amplitude louder the voice.

Class IX NCERT – Sound

Q.33) Consider the following Assertion and Reason:

Assertion: To get relief from irritation caused by ant bite, we can rub moist baking soda on skin.

Reason: Baking Soda is a mild alkali that neutralizes the acid contained in ant bite.

Which one of the following is correct in respect of the above statements?

- Both Assertion and Reason are correct and Reason is the correct explanation of Assertion
- Both Assertion and Reason are correct and Reason is not the correct explanation of Assertion
- Assertion is correct but Reason is incorrect
- Assertion is not correct but Reason is correct

Ans) a

Exp) Option a is the correct answer.

Both Assertion and Reason are correct and Reason is the correct explanation of Assertion

Assertion is correct: The **sting of an ant contains formic acid**, which is a type of acid found in many ants. When an ant bites, it **injects this acidic liquid into the skin**, which can cause mild to moderate pain, itching, and redness at the site of the bite. The severity of the symptoms depends on the type of ant and the person's sensitivity to the venom.

The effect of the sting can be neutralized by **rubbing moist baking soda** (sodium hydrogen carbonate) or calamine solution, which contains zinc carbonate. Baking soda can be mixed with a small amount of water to create a paste and then applied to the bite. It can help to alleviate symptoms of an ant bite such as itching and pain by **creating a neutral pH environment and reducing the acidity of the venom**.

Reason is correct: Baking soda (sodium bicarbonate) is a **mild alkali that can help to neutralize acids**. It can help to alleviate symptoms of an ant bite such as itching and pain by creating a neutral pH environment and reducing the acidity. Baking soda has mild **anti-inflammatory properties** and can help to reduce the redness, itching, and pain associated with ant bites. However, it is not a substitute for proper medical treatment if the symptoms are severe or if an allergic reaction occurs.

Source: Class 7 NCERT

Q.34) With reference to Thermosetting and Thermoplastics, consider the following statements:

- Thermoplastics are plastics that can only be molded once and cannot be remelted.
- Unlike Thermoplastics, Thermosetting plastics can be melted and reshaped multiple times without losing their properties.

3. Nylon is an example of Thermoplastics, while Bakelite is an example of Thermosetting plastics.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 3 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

Thermosetting and thermoplastics are two different types of polymers and they are mostly separated based on their molecular bond and reaction to heat. They have different properties and are used for different applications.

Statement 1 is incorrect: Thermoplastics are plastics that can be **melted and reshaped multiple times without losing their properties**. Thermoplastic materials typically have low melting points due to which they can further be remoulded or recycled easily.

Statement 2 is incorrect: **Thermosetting plastics** have high melting points and tensile strength due to strong primary bonds between molecular chains and higher molecular weight. Thermosetting plastics are plastics that **can only be moulded once and cannot be remelted**.

Statement 3 is correct: Vulcanized rubber, **Bakelite**, Polyurethane, Epoxy resin, Vinyl ester resin are the examples of **thermosetting polymers** whereas, Polystyrene, Teflon, Acrylic, **Nylon, polyvinyl Chloride are examples of thermoplastics**.

Q.35) Consider the following pairs:

Reports	Released by
1. State of the World's Forest	United Nations Environment Programme
2. Global Annual to Decadal Climate Update	Intergovernmental Panel on Climate Change
3. State of the Global Climate	World Meteorological Organization

Which of the pairs given above is/are correct?

- a) 2 only
- b) 1 and 2 only
- c) 3 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

Pair 1 is incorrect: The **United Nations Food and Agriculture Organization (FAO)** has released the State of the World's Forests 2022 (SOFO 2022) report. It reported that:

- 1) **Forests cover 31% of the Earth's land surface (4.06 billion ha)** but the area is shrinking with 420 million ha of forest lost through deforestation between 1990 and 2020. The rate of deforestation is declining but was still 10 million ha per year in 2015–2020.
- 2) 15% of 250 emerging infectious diseases have been linked to forests.

3) Despite a continued reduction in area, forests absorbed more carbon than they emitted in 2011–2020 due to reforestation, improved forest management and other factors.

Pair 2 is incorrect: The **World Meteorological Organization (WMO)** has released the Global Annual to Decadal Climate Update Report. Highlights of report are:

- 1) Globally, there is a 50:50 chance of the annual average global temperature temporarily reaching 1.5 °C above the pre-industrial level for at least one of the next five years. The probability of breaching 1.5 °C was close to zero back in 2015 when the Paris Agreement was adopted, but it has risen steadily since then to 50% now.
- 2) There is a 93% likelihood of at least one year between 2022–2026 becoming the warmest on record and dislodging 2016 from the top ranking.
- 3) The year 2022 will be cooler (compared to the 1991 – 2020 average) over India, along with Alaska and Canada. One of the primary reasons for the lowering of temperatures over India from next year is the possible increase in rainfall activity in this decade.

Pair 3 is correct: The World Meteorological Organization (WMO) has released the State of the Global Climate in 2021 Report. It reported that the world seems to be on a fast track toward climate catastrophe as **four major climate indicators broke records in 2021**. These indicators are:

- 1) Greenhouse gas concentrations reached a new global high in 2020 when the concentration of carbon dioxide (CO₂) reached 413.2 parts per million (ppm) globally or 149% of the pre-industrial level.
- 2) Ocean heat was a record high. The upper 2000 m depth of the ocean continued to warm in 2021, and it is expected that it will continue to warm in the future.
- 3) Ocean acidification is a phenomenon where due to the direct absorption of CO₂, the chemical composition of oceanic water changes.
- 4) Global mean sea level reached a new record high in 2021 after increasing at an average of 4.5 mm per year from 2013 to 2021. This is mainly due to the accelerated loss of ice mass from the ice sheets.

Q.36) Which of the following are the potential applications of Ultrasound Waves?

1. To detect flaws and cracks in metal blocks.
2. To diagnose heart conditions.
3. To break the stones formed in the kidney.
4. To measure the distance, direction and speed of underwater objects.

Select the correct answer using the code given below:

- a) 1 and 4 only
- b) 1, 2 and 4 only
- c) 2 and 3 only
- d) 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct answer.

Ultrasounds are **high frequency waves** and they are able to travel along well-defined paths even in the presence of obstacles. Ultrasounds are used extensively in industries and for medical purposes.

Option 1 is correct: Ultrasounds can be used to detect cracks and flaws in metal blocks. Metallic components are generally used in construction sectors. The cracks or holes inside the metal blocks are invisible from outside **thus ultrasonic waves are allowed to pass through the metal block** and if there is even a **small defect, the waves get reflected back indicating the presence of the flaw** or defect.

Option 2 is correct: Ultrasonic waves are made to reflect from various parts of the heart and form the image of the heart. This technique is called **echocardiography**, a type of **medical imaging of the heart, using standard ultrasound**. It can be useful in diagnosing heart conditions.

Option 3 is correct: **Ultrasound may be employed to break small stones formed in the kidneys. into fine grains.** These grains later get flushed out with urine.

Option 4 is correct: **SOund Navigation And Ranging (SONAR) is a device that uses ultrasonic waves to measure the distance, direction and speed of underwater objects.** Sonar consists of a **transmitter and a detector** and is installed in a ship. The transmitter produces and transmits ultrasonic waves. The distance of the **object that reflected the sound wave can be calculated by knowing the speed of sound in water and the time interval between transmission and reception of the ultrasound.**

Source: Class IX NCERT - Sound

Q.37) With reference to kinetic energy, consider the following statements:

1. It can be transferred between objects.
2. Hot Springs stores kinetic energy in the form of Thermal energy.
3. It is a vector quantity having both magnitude and direction.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Kinetic energy is the energy an object has because of its motion.

Statement 1 is correct: The Kinetic energy of a moving object can be transferred between objects and transformed into other kinds of energy. The best example is working of Hydro Electric power project, **where the kinetic energy of running water is transferred through movement of water turbine and then transformed into electric energy.**

Statement 2 is correct: Thermal energy, known as heat energy, is a **type of kinetic energy**. It is generated due to the motion of atoms when they collide with each other. **Hot water spring** is example of thermal energy where heat is generated due to the quick motion of atoms and molecules, especially when they collide with each other.

Statement 3 is incorrect: Kinetic energy is a **scalar quantity**, i.e., it has **only magnitude but no direction**. The standard unit of kinetic energy is joule (J).

Source: <https://www.khanacademy.org/science/physics/work-and-energy/work-and-energy-tutorial/a/what-is-kinetic-energy>

NCERT Class IX CH-11

Q.38) Which of the following statements best describes the reason for the absence of any twinkling effect in the planets?

- a) They reflect the light emitted from the Sun.
- b) They are smaller in size than the stars.

- c) They are closer to the Earth compared to stars.
 d) They are revolving around the sun.

Ans) c

Exp) Option c is the correct answer.

Stars emit their own light and they twinkle due to the atmospheric refraction of light. Stars are very far away from the earth.

Option a is incorrect: Planets reflect light emitted from the Sun. This statement does not substantiate the reason that why the planets do not twinkle.

Option b is incorrect: Planets do not twinkle because **they appear larger in size than the stars as they are relatively closer to earth.**

Option c is correct: Planets are closer to the Earth compared to the distant stars. Hence, the shift due to atmospheric refraction is smaller. Thus, **due to the closeness of planets to the earth, planet do not twinkle.**

Option d is incorrect: Though the planets are **revolving around the sun**, but this is **not the right reason** for the absence of any twinkling effect in the planets.

Source: NCERT Class X CH-11

Q.39) With respect to the Friction, consider the following statements:

1. The force of friction allows us to accelerate forward when we run on the ground.
2. Friction between pen and paper enables us to write on the paper.
3. The force of friction can be reduced in machines by using ball bearings.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Friction is defined as the resistance offered by the surfaces that are in contact when they move past each other. Friction is caused by the irregularities on the two surfaces in contact. Even those surfaces which appear very smooth have a large number of minute irregularities on them.

Statement 1 is correct: The force of static friction (F_s) is a force between two surfaces that prevents those surfaces from sliding or slipping across each other. This is the same force that allows you to accelerate forward when you run. Our foot can grip the ground during running and push backward, which causes the ground to push forward on foot. Here, both the surfaces are prevented from slipping across each other, a static frictional force. If there were absolutely no friction between your feet and the ground, you would be unable to propel yourself forward by running.

Statement 2 is correct: Sliding friction between pen and paper enables us to write on the paper. The pencil "lead" slides easily over the paper, but there's just enough friction between the pencil and paper to leave a mark.

Statement 3 is correct: When one body rolls over the surface of another body, the resistance to its motion is called rolling friction. Rolling reduces friction. It is always easier to roll than to slide a body over another. That is the reason it is convenient to pull luggage fitted with rollers. **In many machines, friction is reduced by using ball bearings.** Also, Friction can be reduced by using lubricants.

Source: <https://www.khanacademy.org/science/physics/forces-newtons-laws/inclined-planes-friction/a/what-is-friction>

NCERT Class VIII CH-12

Q.40) Which of the following statements correctly defines the term Wet Bulb Temperature?

- a) It is the lowest temperature to which air can be cooled by the evaporation of water.
- b) It refers to ambient air temperature which is not affected by the moisture of the air.
- c) It is the temperature at which air becomes completely saturated.
- d) It is a measure of the humidity of the air.

Ans) a

Exp) Option a is the correct answer.

Option a is correct: Wet bulb temperature is the **lowest temperature to which air can be cooled** by the evaporation of water into the air at a constant pressure. It is therefore measured by wrapping a wet wick around the bulb of a thermometer and the measured temperature corresponds to the wet bulb temperature. The wet bulb temperature is the **temperature of adiabatic saturation**. The adiabatic evaporation of water from the thermometer and the cooling effect is indicated by a "wet bulb temperature" lower than the "dry bulb temperature" in the air.

Option b is incorrect: The Dry Bulb temperature, usually referred to as air temperature, refers basically to the **ambient air temperature**. When people refer to the temperature of the air, they are normally referring to its dry bulb temperature. It is called "Dry Bulb" because the air temperature is indicated by a thermometer **not affected by the moisture of the air**.

Option c is incorrect: The Dew point is the temperature at which water vapour starts to condense out of the air, **the temperature at which air becomes completely saturated**. Above this temperature the moisture will stay in the air. If the dew-point temperature is close to the air temperature, the relative humidity is high, and if the dew point is well below the air temperature, the relative humidity is low.

Option d is incorrect: The difference between the dry bulb temperature and wet bulb temperature is a **measure of the humidity of the air**. The wet bulb temperature is always lower than the dry bulb temperature but will be identical with 100% relative humidity (the air is at the saturation line).

Source: <https://blog.forumias.com/wet-bulb-temperature-explained-india-heatwaves-and-the-role-humidity-plays-in-making-them-deadly/>

https://www.weather.gov/source/zhu/ZHU_Training_Page/definitions/dry_wet_bulb_definition/dry_wet_bulb.html

Q.41) Which of the following is/are the example/ examples of chemical change?

1. Crystallization of sodium chloride
2. Melting of ice
3. Souring of milk

Select the correct answer using the code given below.

- a) 1 and 2 only
- b) 3 only
- c) 1, 2 and 3
- d) None

Ans) b

Exp) Option b is the correct answer.

Option 3 is correct. Souring of milk is a chemical change as acidification takes place and soured milk is produced. This sour milk has different chemical properties from fresh milk.

Option 1 and 2 are incorrect. Crystallisation of sodium chloride and melting of ice are physical changes.

Source) UPSC 2014

Q.42) With reference to various occurrences in daily life, consider the following pairs:

Optical Phenomenon	Examples
1. Reflection	Stars seen as glowing in the sky
2. Diffraction	Halo around Sun
3. Refraction	Rainbow formation in the sky

Which of the pairs given above is/are matched correctly?

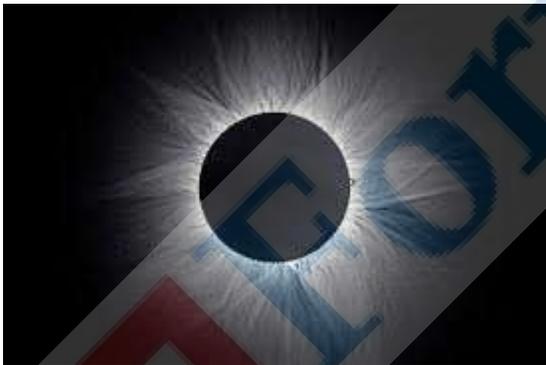

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Pair 1 is correct: The glowing stars are always emitting light waves. The stars generally come under the category of luminous bodies, and they will be generating their light. A certain **amount of reflection that strikes from the stars makes them visible**. These stars emit certain light rays into the space that will gradually come into the earth's atmosphere; it will **act as incident light** that hits the earth's surroundings and **strikes back again to them**, leading to the shining property of stars.

Pair 2 is correct: In meteorological terms, the term corona describes the ring of light around the sun or the moon that is formed when the **sunlight** or moonlight **gets diffracted by small water vapours or ice crystals**. The halo of the moon is known as the lunar corona and that of the sun is known as the solar corona.

Pair 3 is correct: Refraction is the change in the direction of a wave passing from one medium to another. **Common Examples of refraction of light are** Twinkling of stars in a clear sky and **Rainbow formation in the sky**.

In sky light entering a water droplet is refracted. It is then reflected by the back of the droplet. As this reflected light leaves the droplet, it is refracted again, at multiple angles. And thus, rainbow is formed.

Source: NCERT Class X CH-11

<https://www.sciencelaws.in/2021/06/8-most-common-examples-of-reflection-of-light-in-daily-life.html>

<https://www.olympus-lifescience.com/en/microscope-resource/primer/lightandcolor/diffraction/>

Q.43) Consider the following statements regarding the reactivity of elements:

1. A less reactive metal can replace a more reactive metal in a displacement reaction.
2. Gold and Silver are placed at the top of the Reactivity series.
3. The metals at the bottom of the reactivity series are often found in a free state.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 3 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: A displacement reaction is **one wherein the atom or a set of atoms is displaced by another atom in a molecule. In displacement reaction, a more reactive metal can replace a less reactive metal, but a less reactive one cannot replace a more reactive metal.**

Statement 2 is incorrect: The reactivity series of metals, also known as the activity series, refers to the arrangement of metals in the descending order of their reactivities. **The metals high up in the reactivity series are very reactive.** These metals are obtained by electrolytic reduction. The metals at the top of the activity series (K, Na, Ca, Mg and Al) are so reactive that they are never found in nature as free elements. **Gold and Silver are placed at the bottom of the reactivity series,** which means they are highly unreactive in nature when compared to other metals in the reactivity series.

Statement 3 is correct: **The metals at the bottom of the reactivity series are the least reactive. They are often found in a free state.** For example, gold, silver, platinum and copper are found in the free state. Copper and silver are also found in the combined state as their sulphide or oxide ores.

Metals	Reactivity
Potassium	Reacts with water
Sodium	
Lithium	
Barium	
Strontium	
Calcium	Reacts with acids
Magnesium	
Aluminium	
Manganese	
Zinc	
Chromium	
Iron	
Cadmium	
Cobalt	
Nickel	
Tin	Included for comparison
Lead	
Hydrogen	Highly unreactive
Antimony	
Bismuth	
Copper	
Mercury	
Silver	
Gold	
Platinum	

Source: chapter 3 and 4, class 8th NCERT

Q.44) With reference to Plasma, consider the following statements:

1. It is a state of matter that is made up of only neutral atoms and molecules of different elements.
2. It is referred as "super solid particles" as it has definite shape and volume.
3. It has properties of conducting electricity and emitting light.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 3 only
- c) 2 and 3 only
- d) 1 only

Ans) b

Exp) Option b is the correct answer.

The three classical states of matter are solid, liquid and gas. In the 20th century, however, increased understanding of the more exotic properties of matter resulted in the identification of many additional states of matter, none of which are observed in normal conditions. But now scientists are talking of five states of matter: **Solid, Liquid, Gas, Plasma and Bose Einstein Condensate.**

Statement 1 is incorrect: Plasma consists of **super energetic and super excited particles.** These particles are in **the form of ionised gases** (Not a supercooled liquid particles). Plasma is a state of matter that is **similar to a gas, but it is made up of ions and free electrons, instead of neutral atoms or molecules.** It is called the fourth state of matter after solids, liquids and gases. The plasma is a highly ionized gas that is in equilibrium between the positive ions and the negative electrons.

Statement 2 is incorrect: Plasmas are often described as "**super liquid particles**" because they are **composed of charged particles that are in motion and can flow like a liquid.** However, they do **not have the same properties as a liquid, such as a defined shape or volume,** and they are not in thermal equilibrium with the surrounding environment, like liquids.

Statement 3 is correct: Plasmas have their **unique properties, such as they conduct electricity, they emit light, they can be magnetized and they can generate electric and magnetic fields.** They have various applications in industry and research, such as in plasma cutting, welding, and display technology.

Source: Chapter_1 pmd (ncert.nic.in)

The Seven States Of Matter Explained - Wired Cosmos

Q.45) Consider the following statements with respect to the depreciation of the Indian rupee:

1. Outflow of foreign funds from the Indian domestic market can result in depreciation of Indian rupee.
2. Increase in the interest rate by the US Federal Reserve can lead to the depreciation of Indian rupee.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

The value of the Indian rupee to the US Dollar works on a demand and supply basis. If there is a higher demand for the US Dollar, the value of the Indian rupee depreciates and vice-versa. The rupee's fall these days is mainly due to **supply chain disruptions in view of the Russia-Ukraine war, global economic challenges, inflation, high crude oil prices, a strong dollar overseas, and foreign capital outflows.**

Statement 1 is correct: There have been **heavy foreign fund outflows from the domestic markets** as the foreign institutional investors (FIIs) have sold shares worth \$28.4 billion so far this year, outstripping the

\$11.8-billion sell-off seen during the Global Financial Crisis of 2008. As a result, the rupee has depreciated 5.9% versus the dollar so far this calendar year. Such depreciation puts considerable pressure on the already high import prices of crude and raw materials, paving the path for **higher imported inflation and production costs** besides higher retail inflation.

Statement 2 is correct: The US Federal Reserve recently increased the interest rates, and the **return on dollar assets increased** compared with those of emerging markets such as India. This led to dent in the Indian currency causing the recent depreciation.

Knowledge Base:

Impact of weakening Rupee:

- 1) Since India mostly depends on imports, including crude oil, metals, electronics, etc. the country makes payments in US dollars. Now if the rupee is weak, it has to pay more for the same quantity of items. In such cases, the cost of raw materials and production goes up which gets passed on to the consumers.
- 2) On the other hand, a weakening domestic currency boosts exports as shipments get more competitive and foreign buyers gain more purchasing power.
- 3) The falling rupee's biggest impact is on inflation, given India imports over 80% of its crude oil, which is the country's biggest import.

Source: <https://www.outlookindia.com/business/rupee-at-record-low-rupee-vs-dollar-why-is-rupee-falling-and-how-will-it-impact-the-indian-economy-and-people-why-is-indian-rupee-falling-news-205888>

Q.46) The bottom of the steel utensils is sometimes attached with the copper because of which of the following reasons?

- a) Copper has a higher thermal conductivity than steel.
- b) Copper is much less reactive than steel.
- c) Copper has a higher melting point than steel.
- d) Copper is non-magnetic whereas steel is magnetic.

Ans) a

Exp) Option a is the correct answer.

Conduction is the process by which heat is transferred from the hotter end to the colder end of an object. The ability of the object to conduct heat is known as its thermal conductivity.

Option a is correct: Copper has the highest thermal conductivity while steel has the lowest. As copper is an excellent conductor of heat, it is good for heat exchangers also. This is the reason why steel utensils are fixed with copper bottoms.

Option b is incorrect: This is not the reason why steel utensils are attached with copper bottom.

Option c is incorrect: Copper has a lower melting point than steel. The melting point of copper is 1084°C whereas the melting point of steel - Carbon Steel, 1425-1540°C, Stainless Steel, 1375 – 1530°C.

Option d is incorrect: It is true that copper is non-magnetic whereas steel is magnetic, but this is not the reason why steel utensils is attached with copper bottom.

Source: Class VII NCERT - Heat

Q.47) With reference to Newton's laws of motion, consider the following pairs:

Law of Motion	Witnessed in
1. Newton's first law	Weightlifter struggling to stand straight with the increasing amount of weight.
2. Newton's second law	The impact of moving truck on walls is

- bigger than that of cycle moving at the same speed.
3. Newton's third law The initial jerk we get when bus suddenly starts/stops

How many pairs above is/are correctly matched?

- a) None of the pairs
b) Only one pair
c) Only two pairs
d) All the three pairs

Ans) b

Exp) Option b is the correct answer.

Newton's laws of motion are three basic laws that describe the **relationship between the motion of an object and the forces acting on it.**

Pair 1 is incorrect: Same weightlifter struggling to stand straight with increasing load of weight was explained by Newton's third law. The first law of motion is also known as the **law of inertia**. It states that a **body at rest or uniform motion will continue to be at rest or uniform motion** until and unless a **net external force** acts on it. Thus, our body's tendency to resist the change makes it move back when the bus starts suddenly and go forward while the bus stops suddenly.

Pair 2 is correct: The Second law of motion states that the force acting on the body is equal to the product of its mass and acceleration i.e., $F=ma$ where f is force, m is mass and a is acceleration. The impact produced by the objects depends on their mass and velocity (acceleration). Given the same velocity, the **damage caused by the truck is bigger than the cycle because of the higher mass of the truck.**

Pair 3 is incorrect: The initial jerk we get when the bus suddenly starts/stops is because of inertia (resistance to change) i.e., Newton's first law. Newton's **third law** of motion states that to **every action, there is always an equal and opposite reaction.** It refers to the situation when **one body exerts a force on another body.** The force exerted by heavy weight on weightlifters makes it difficult for him/her to stand straight with heavier weight.

Source: <https://ncert.nic.in/textbook/pdf/keph105.pdf>

Q.48) Consider the following pairs:

Synthetic substance	Description
1. Rayon	It can be obtained using a natural source as raw material.
2. Nylon	It was the first fully synthetic fibre
3. Polypropylene	It is a thermosetting plastic

How many of the above given pairs are correctly matched?

- a) Only one pair
b) Only two pairs
c) All the three pairs
d) None of the pairs

Ans) b

Exp) Option b is the correct answer.

Pair 1 is correct: Rayon is a fibre having properties similar to that of silk. Such a fibre was obtained by chemical treatment of wood pulp. This fibre was called rayon or artificial silk. **Although rayon is obtained from a natural source, wood pulp, yet it is a man-made fibre.** It is cheaper than silk and can be woven like silk fibres. Rayon is mixed with cotton to make bed sheets or mixed with wool to make carpets

Pair 2 is correct: Nylon is a man-made fibre. In 1931, it was made without using any natural raw material (from plant or animal). It was prepared from coal, water and air. **It was the first fully synthetic fibre.**

Pair 3 is incorrect: Polypropylene (PP) is one of the most commonly used thermoplastics in the world (Hence, **it is not a thermosetting plastic**). Polypropylene uses range from plastic packaging, plastic parts for machinery and equipment and even fibres and textiles. It is a rigid, semi-crystalline thermoplastic that was first polymerised in 1951. Polypropylene has a slippery, tactile surface and it is highly resistant to chemical corrosion.

Source: page 33, chapter 3, 8th standard NCERT

<https://adrecoplastics.co.uk/polypropylene-uses/>

<https://www.britannica.com/science/polyurethane>

Q.49) When one looks at the inner side of a spoon, the image looks upside down. What is the most probable reason for this upside-down image?

- The inner side of the spoon is like a concave mirror.
- The inner side of the spoon is like a convex mirror.
- The inner side of the spoon is like a concave lens.
- The inner side of the spoon is like a convex lens.

Ans) a

Exp) Option a is the correct answer.

Option a is correct: The curved shining surface of a spoon acts as a mirror. The most common example of a curved mirror is a spherical mirror. If the reflecting surface of a spherical mirror is concave, it is called a concave mirror. If the reflecting surface is convex, then it is a convex mirror. **The inner surface of a spoon acts like a concave mirror**, while its **outer surface acts like a convex mirror**. **In concave mirror, the image formed is inverted**, when the object is placed anywhere between infinity and the focus of the mirror.

Source: Page 179, Chapter 15, class 7 ncert science

Q.50) Sagittarius A*, recently seen in the news, refers to which among the following?

- Mars orbiting satellite
- Potentially hazardous asteroid.
- Supermassive black hole.
- Supernova explosions in space.

Ans) c

Exp) Option c is the correct answer.

Option c is correct: Sagittarius A* (SgrA*) is a **supermassive black hole** at the center of our galaxy i.e., the Milky Way. It is located near the border of the constellations Sagittarius and Scorpius. SgrA* possesses **4 million times the mass of our sun** and is located about 26,000 light-years and 5.9 trillion miles (9.5 trillion km)–from Earth. The diameter of Sagittarius A* is about 17 times that of the sun, meaning it would sit within the innermost planet Mercury’s solar orbit.

Deciphering the image of Sagittarius A*

Knowledge Base:

- 1) Scientists from the Event Horizon Telescope (EHT) facility have revealed the first image of the black hole named Sagittarius A* at the centre of our galaxy i.e., the Milky Way.
- 2) This image of this black hole gave further support to the idea that the compact object at the centre of our galaxy is indeed a black hole. This discovery also **strengthens Einstein’s general theory of relativity**.
- 3) This is **not the first-ever image of a black hole**. In 2019, the Event Horizon Telescope released the first-ever image of a black hole M87* – the black hole at the centre of another galaxy Messier 87 which is a supergiant elliptic galaxy.

Source: [https://blog.forumias.com/astronomers-reveal-first-image-of-black-hole-at-the-heart-of-milky-way-galaxy/#:~:text=Sagittarius%20A*%20is%20a%20supermassive,trillion%20km\)%E2%80%94from%20Earth](https://blog.forumias.com/astronomers-reveal-first-image-of-black-hole-at-the-heart-of-milky-way-galaxy/#:~:text=Sagittarius%20A*%20is%20a%20supermassive,trillion%20km)%E2%80%94from%20Earth)

Q.1) What is the application of Somatic Cell Nuclear Transfer (SCNT) Technology?

- Production of biolarvicides.
- Manufacture of biodegradable plastics.
- Reproductive cloning of animals.
- Production of organisms free of diseases.

Ans) c

Exp) Option c is the correct answer.

Somatic Cell Nuclear Transfer (SCNT) is a laboratory strategy for creating a viable embryo from a body cell and an egg cell. The main areas of application of SCNT are: Reproductive cloning, therapeutic cloning and basic research. A great application potential of SCNT based cloning is the production of genetically modified (transgenic) animals.

Source) UPSC CSE Pre 2017

Q.2) Consider the following statements with reference to the prebiotics:

- They are a source of food for gut bacteria.
- They are a type of live microorganism.
- They are mostly non-digestible in nature.

Which of the above-given statements are correct?

- 1 and 2 only
- 2 and 3 only
- 1 and 3 only
- 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Probiotics are beneficial bacteria, and prebiotics is food for these bacteria. Probiotics are live microorganisms that are intended to have health benefits when consumed or applied to the body.

Statement 1 is correct: Prebiotics are a source of food for the gut's healthy bacteria. They're carbs that the body can't digest. So **they go to the lower digestive tract, where they act like food to help the healthy bacteria grow.**

Statement 2 is incorrect: Prebiotics are a type of dietary fibre from plants, they are not live microorganism. Rather it is probiotics that are made from bacteria and/or yeast which live in our body and are good for our digestive system.

Statement 3 is correct: One of the major food sources for probiotics and other colonic bacteria are dietary complex carbohydrates i.e. Prebiotics, such as oligosaccharides and polysaccharides. They largely escape hydrolysis and digestion in the stomach and small intestine. Thus, **though prebiotics are non-digestible in nature but they aid growth of good bacteria in the gut.**

Source: <https://www.healthline.com/nutrition/probiotics-and-prebiotics#benefits>

<https://www.medicalnewstoday.com/articles/323490#benefits-and-side-effects-of-probiotics>

<https://www.nutritionaloutlook.com/view/prebiotic-ingredients-nondigestible-oligosaccharides>

Q.3) In the context of evolution, which of the following best reflects the meaning of Adaptive Radiation?

- A situation where species that are not closely related have many similar traits.
- A situation where similar traits are shared by many species and also by their respective ancestors.
- A process where a single species diversifies into a number of different species.
- A process where species evolves back to supposedly more primitive forms over time.

Ans) c

Exp) Option c is the correct answer.

Option a and b are incorrect: Both **convergent evolution** and **parallel evolution** are marked by the **development of similar traits between the unrelated species**. However, the difference between parallel and convergent lies in the degree of similarity between new species and their ancestors. **Two species sharing the same traits are considered as parallel evolution** if their **ancestors shared that similarity**; if they did **not**, then the evolution is defined as **convergent evolution**.

Option c is correct: **Adaptive radiation** or Divergent evolution involves **species with a common ancestor (which means closely related species)**. These species change to become **increasingly different over time**. An adaptive radiation occurs when a single or small group of ancestral species rapidly diversifies into a large number of descendant species. It usually happens when a change in the environment makes new resources available, alters biotic interactions or opens new environmental niches.

Option d is incorrect. **Backward evolution** is the notion that species can revert to supposedly more primitive forms over time.

Source: Class XII NCERT - Evolution

Q.4) Consider the following statements about the fats and their impact on the human body:

1. Saturated fats are never harmful for human body.
2. Omega-3 fats are a type of polyunsaturated fat that human body can't manufacture.
3. Saturated fats can improve blood cholesterol levels and ease inflammation.
4. Avocados and olives are good source of monounsaturated fats.

Which of the above given statements are correct?

- a) 1 and 3 only
- b) 1 and 2 only
- c) 3 and 4 only
- d) 2 and 4 only

Ans) d

Exp) Option d is the correct answer.

Fats are a type of nutrient that one gets from his diet. It is essential to eat some fats, though it is also harmful to eat too much. There are **mainly two types of fats - Unsaturated fats, and Saturated fat**.

Statement 1 is incorrect: Our body needs healthy fats for energy and other functions. **But too much saturated fat can cause cholesterol to build up in your arteries (blood vessels)**. Saturated fats raise your LDL (bad) cholesterol. High LDL cholesterol increases your risk for heart disease and stroke.

Statement 2 is correct: There are two types of "good" unsaturated fats i.e. **Monounsaturated fats and Polyunsaturated fats. Omega-3 fats are an important type of polyunsaturated fat**. The human body can't make these, so they must come from food. Fish are considered good source of Omega-3 fats.

Statement 3 is incorrect: **Unsaturated fats (not saturated fats)** are considered beneficial fats because they can **improve blood cholesterol levels, ease inflammation**, stabilize heart rhythms, and play a number of other beneficial roles.

Statement 4 is correct: Unsaturated fats are predominantly found in foods from plants, such as vegetable oils, nuts, and seeds. **Monounsaturated fats are found in high concentrations in Olive, peanut, and canola oils, Avocados, Nuts such as almonds, hazelnuts, and pecans & Seeds such as pumpkin and sesame seeds**. Polyunsaturated fats are found in high concentrations in Sunflower, corn, soybean, and flaxseed oils, Walnuts, Flax seeds and Fish.

Source: <https://www.hsph.harvard.edu/nutritionsource/what-should-you-eat/fats-and-cholesterol/types-of-fat/>

Q.5) Consider the following sites and their locations:

Sites	location
1. Etalin Hydro Power Project	Arunachal Pradesh
2. West Seti Power Project	Tamil Nadu
3. Menar Bird Village	Rajasthan

Which of the pairs given above is/are correctly matched?

- 3 only
- 1 and 3 only
- 1 and 2 only
- 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Pair 1 is correctly matched: Etalin Hydro Power Project is located in **Arunachal Pradesh**. Wildlife scientists and conservationists in Arunachal Pradesh flagged threats to local biodiversity from the proposed **Etalin hydroelectric (3,097 MW) project in Dibang Valley**.

Pair 2 is incorrectly matched: West Seti Power Project is a **proposed 750-megawatt Hydropower Project, which is to be built on the Seti river in far-western Nepal**, which has remained on the drawing board for the last six decades.

Pair 3 is correctly matched: Recognised as the “bird village” following community-driven conservation efforts, **Menar in Udaipur district is set to be notified as Rajasthan's new wetland**. This will pave the way for getting the Ramsar site status for this rural heartland of the Mewar region.

Source: <https://www.downtoearth.org.in/news/wildlife-biodiversity/etalin-hydel-experts-warn-of-biodiversity-loss-in-dibang-valley-in-letter-to-forest-advisory-panel-83087>

Q.6) Consider the following pairs in reference to the human body:

Protein/Enzyme/ hormone	Function
1. Collagen	provides structural support to body
2. Trypsin	helps in digestion of protein
3. Insulin	regulates the body's energy supply

Which of the above given pairs is/are matched correctly?

- 1 only
- 2 and 3 only
- 1 and 2 only
- 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Proteins are complex molecules and do most of the work in cells. They are important to the structure, function, and regulation of the body.

Pair 1 is correct: Collagen is a protein molecule made up of amino acids. It **provides structural support to the extracellular space of connective tissues in body**. Due to its rigidity and resistance to stretching, it is the perfect matrix for skin, tendons, bones, and ligaments.

Pair 2 is correct: Trypsin is an enzyme that **helps us digest protein**. In the small intestine, trypsin breaks down proteins, continuing the process of digestion that began in the stomach. It may also be referred to as a proteolytic enzyme, or proteinase. Trypsin is produced by the pancreas in an inactive form called trypsinogen.

Pair 3 is correct: The major purpose of insulin is to **regulate the body's energy supply by balancing micronutrient levels**. Insulin is critical for transporting intracellular glucose to insulin-dependent cells/tissues, such as liver, muscle, and adipose tissue.

Source: Biology NCERT Class 11th - chapter 9

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC8232639/#>:

Q.7) Consider the following statements with reference to the food production and nutrition in plants:

1. In most of the plants, food production is primarily carried out in roots.
2. During photosynthesis, the plant produces oxygen and glucose.
3. Non-green leaves in some plants may also carry out photosynthesis.

Which of the above given statements is/are correct?

- a) 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1 and 2 only

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: Food production primarily is carried out in leaves (not roots). Water and minerals from the soil are absorbed by the root and transported to the leaves through vessels. Carbon dioxide reaches leaves through stomata – which are small pores on leaves surrounded by guard cells.

Statement 2 is correct: During photosynthesis, plants take in carbon dioxide (CO₂) and water (H₂O) from the air and soil. The green parts of plants use sunlight, water, and the carbon dioxide from the air **to produce glucose and oxygen**.

Statement 3 is correct: Some plants, which have non-green leaves, also engage in photosynthesis. These non-green leaves contain some amount of chlorophyll. Chlorophyll is present in small amounts, and other pigments cover the green of chlorophyll so that they do not appear green yet carry out photosynthesis. In addition to chlorophyll, plants also contain many auxiliary pigments, such as xanthophylls, carotenoids, anthocyanins, etc., which also absorb light at different wavelengths.

Source: <https://ncert.nic.in/textbook/pdf/gesc101.pdf>

<https://courses.lumenlearning.com/suny-wmopen-biology2/chapter/plant-nutrition/>

Q.8) Consider the following statements with reference to the immunity in the human body:

1. When ready-made antibodies are directly injected to protect the body against foreign agents, it is called Active immunity.
2. When the body is exposed to antigens, and antibodies are produced in the body, it is called Passive immunity.
3. Infants getting antibodies from mother's breast milk is an example of Passive immunity.

Which of the above-given statements is/are correct?

- a) 1 only
- b) 3 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) b

Exp) Option b is the correct answer.

Immunity refers to the **body's ability to prevent the invasion of pathogens**. Pathogens are foreign disease-causing substances, such as bacteria and viruses, and people are exposed to them every day.

Statement 1 is incorrect: Injecting the microbes deliberately during immunization or infectious organisms gaining access into body during natural infection induce active immunity. **When ready-made antibodies are directly given to protect the body against foreign agents, it is called passive immunity.**

Statement 2 is incorrect: **When a host is exposed to antigens, which may be in the form of living or dead microbes or other proteins, antibodies are produced in the host body.** This type of immunity is called **active immunity**. Active immunity is slow and takes time to give its full effective response.

Statement 3 is correct: The yellowish fluid **colostrum** secreted by mother during the initial days of lactation has abundant antibodies (IgA) to protect the infant. **The fetus also receives some antibodies from their mother, through the placenta during pregnancy. This is an example of passive immunity.**

Source: Biology Class 12th NCERT- Chapter-8

Q.9) If the blood group of a father is B+ and of mother is AB+ then which one of the following blood groups cannot be the blood group of their offspring?

- a) A+
- b) O+
- c) B+
- d) AB+

Ans) b

Exp) Option b is the correct answer.

If the father's blood group is B+ and the mother's blood group is AB+, **the offspring can have A+, B+, AB+ or AB- blood groups. But the offspring cannot have O+ blood group**, as O blood group is recessive and both B and AB blood groups are dominant. Therefore, O blood group can only appear if both parents have the recessive O allele, which is not the case here as both of the parents have B and AB blood groups, which have B and A or B alleles.

- 1) Blood type **A**: either **AA** or **AO**
- 2) Blood type **B**: either **BB** or **BO**
- 3) Blood type **AB**: alleles **AB**
- 4) Blood type **O**: alleles **OO**

Punnet square for possible blood types

$\sigma \setminus \sigma$	B	O	B	B
A	BA	AO	BA	BA
B	BB	BO	BB	BB

Alleles A and B are **dominant**, and the allele O is **recessive**. It means that only people with OO alleles can have the blood type O. In the punnet square, we can see that no combination of OO is present hence, O+ cannot be the blood group of their offspring.

Source: ch-18.pmd (ncert.nic.in)

Blood Type Calculator (omnicalculator.com)

Q.10) Which among the following can be considered as the most appropriate description of ‘Slow fashion Movement’?

- Using of only traditional looming techniques in the production of clothings.
- Rejection of big label brands in favour of Small Fashion Enterprises.
- Production of fabric from weavers of tribal and underprivileged groups.
- Producing clothing sustainably which takes into consideration all aspects of the supply chain.

Ans) d

Exp) Option d is the correct answer.

Slow Fashion Movement is an approach to **producing clothing which takes into consideration all aspects of the supply chain** and in doing so, **aims to respect people, the environment, and animals**. It also means spending more time on the design process, ensuring that each piece of apparel is quality made. Fast Fashion retailers have taught us that more is better, and thereby have created a huge consumption issue. The fast fashion industry is driving down quality, exploiting the environment and their workers to create cheap garments that do not last. **Slow fashion** is the exact opposite of this. It’s about **creating mindful, curated collections based on quality finishes**, versus pumping out large quantities of seasonal and trendy clothing. Source: <https://www.downtoearth.org.in/blog/agriculture/moving-beyond-organics-understanding-the-place-and-space-of-brown-cotton-83177>

Q.11) When the bark of a tree is removed in a circular fashion all around near its base, it gradually dries up and dies because?

- Water from soil cannot rise to aerial parts.
- Roots are starved of energy.
- Tree is infected by soil microbes.
- Roots do not receive oxygen for respiration.

Ans) b

Exp) Option b is the correct answer.

When the bark of a tree is removed in a circular fashion all around near its base, it gradually dries up and dies because: The phloem layer of tissue just below the bark is responsible for carrying food produced in the leaves by photosynthesis to the roots. Without food, the roots ultimately die and stop sending water

and minerals to the leaves. There is no water supply to the leaves, hence no photosynthesis. Therefore, plant has no energy and it dies.

Source) UPSC CSE Pre 2011

Q.12) Consider the following statements with reference to the Single Cell Protein and its utility:

1. They can be extracted from dried cell biomass.
2. They can be used as a protein supplement for both humans or animals.

Which of the above given statements is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

These **Single Cell Protein (SCPs)** serve as a food or feed supplement and can be an alternative to conventional protein sources.

Statement 1 is correct: Single cell protein (SCP) is extracted from **pure microbial cultures, dead and dry cells of microorganisms like yeast, bacteria, fungi, and algae**. SCP includes a high content of protein with all essential amino acids.

Statement 2 is correct: SCP can be used for human consumption or animal feed. The protein content of SCP is at least 40% crude protein on a dry weight basis. SCP shows advantages in terms of shorter production time, smaller scale of landfill needed, weather conditions independent, and lower production cost.

Source: <https://www.sciencedirect.com/topics/agricultural-and-biological-sciences/single-cell-protein>

Class 12th NCERT Biology- Chapter-8

Q.13) Consider the following pairs:

Chromosomal/ Genetic disorder	Characteristic Feature/Reason
1. Sickle cell anaemia	Abnormal shape of red blood cells.
2. Down's Syndrome	Complete absence of certain chromosomes.
3. Thalassemia	Low amount of haemoglobin.
4. Duchenne Muscular Dystrophy	Mutation in the egg cells or sperm cells.

How many pairs is/are correctly matched?

- a) Only one pair
- b) Only two pairs
- c) Only three pairs
- d) All the four pairs

Ans) b

Exp) Option b is the correct answer.

Genes are located on the DNA present in the chromosome. Thus, DNA is a carrier of genetic information. A number of **genetic/chromosomal disorders in human beings have been traced to the inheritance of changed or altered genes or chromosomes.**

Pair 1 is correct: Sickle cell anaemia is one of a group of inherited disorders and it affects the **shape of red blood cells**, which carry oxygen to all parts of the body. Red blood cells are **usually round and flexible**, so they move easily through blood vessels. These **sickle shaped RBCs become rigid and sticky, which can slow or block blood flow.**

Pair 2 is incorrect: Down syndrome is a condition in which a person has an **extra chromosome**. Chromosomes are **small packages of genes** in the body and they determine how a baby's body forms and functions. People with Down syndrome usually have a **low IQ and are slower to speak** than others.

Pair 3 is correct: Thalassaemia is a genetic disorder due to which a patient **cannot make enough haemoglobin** found in Red Blood Cells (RBC's). It affects the **clotting of blood** and leads to **anaemia** and patients also require blood transfusions every two to three weeks to survive.

Pair 4 is incorrect: Duchenne Muscular Dystrophy (DMD) is not caused due to the mutation in sperm or egg cells. It is marked by **progressive muscle degeneration and weakness** due to **alterations of a protein called dystrophin** that helps keep muscle cells intact. It is the most common and **fatal type** of muscular dystrophy,

Source: Class XII NCERT - Principles of Inheritance and Variation

<https://www.thehindu.com/sci-tech/health/what-is-thalassaemia/article23811040.ece>

<https://www.thehindu.com/sci-tech/science/indian-researchers-developing-treatment-for-rare-genetic-disorder-duchenne-muscular-dystrophy/article66352754.ece>

Q.14) Which of the following statements correctly describes the differences between Deoxyribonucleic acid (DNA) and ribonucleic acid (RNA)?

1. The structure of a DNA is double stranded whereas the structure of RNA is single stranded.
2. As compared to RNA, DNA is more reactive and structurally less stable.
3. Unlike DNA, RNA can produce its own protein.
4. Unlike DNA, RNA can be used for manufacturing vaccines.

Select the correct answer using the code given below:

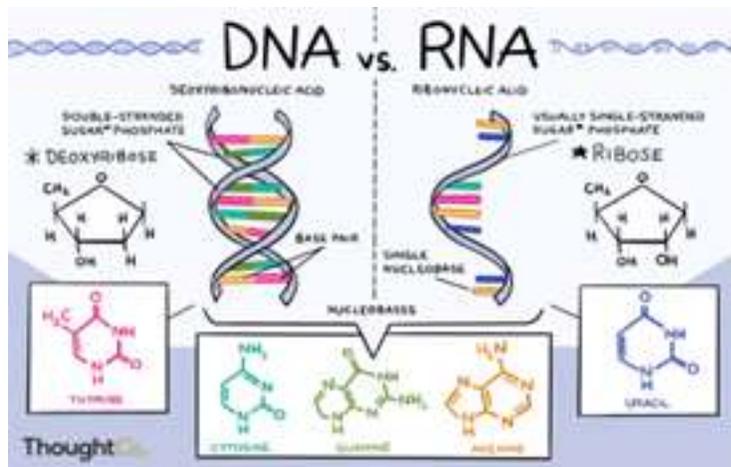

- a) 1 and 3 only
- b) 1, 2 and 4 only
- c) 2 and 3 only
- d) 1, 3 and 4 only

Ans) a

Exp) Option a is the correct answer.

Deoxyribonucleic acid (DNA) and ribonucleic acid (RNA) are the two types of nucleic acids found in living systems.

Statement 1 is correct: DNA is a double-stranded molecule that has a long chain of nucleotides. **RNA is a single-stranded molecule** which has a shorter chain of nucleotides. DNA replicates on its own whereas RNA does not replicate on its own.

Statement 2 is incorrect: RNA is a more reactive group and easily degradable. On the other hand, **DNA is less reactive and structurally more stable.** This property makes DNA a better genetic material than RNA. The presence of **thymine** at the place of uracil confers additional stability to DNA.

Statement 3 is correct: RNA can directly code for the synthesis of proteins, hence can easily express the characters. DNA, however, is dependent on RNA for synthesis of proteins. Hence for the transmission of genetic information, RNA is better.

Statement 4 is incorrect: Both DNA and RNA can be used for manufacturing vaccines. DNA vaccination is a technique involving injecting genetically engineered DNA into living organisms so cells directly produce an antigen against disease and RNA vaccination involves injecting RNA into living organisms to direct the body to produce a certain type of protein which acts as an antigen. **ZyCoV-D is a DNA based COVID Vaccine and Pfizer-BioNTech and the Moderna COVID-19 vaccines use mRNA.**

Source: <https://ncert.nic.in/textbook/pdf/lebo106.pdf>

Q.15) Consider the following statements regarding 'Off Budget Borrowings':

1. It refers to loans taken by Public Sector Units (PSUs) on the directions of the central government.
2. The interest of the loan is to be repaid from the revenues generated by the borrowing entity.
3. State government entities in India are barred from raising capital through off-budget borrowings mechanism.
4. Off Budget Borrowings are not considered as a part of the fiscal deficit.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 4 only
- c) 1, 3 and 4 only
- d) 2 and 4 only

Ans) b

Exp) Option b is the correct answer.

Recently, the Union Government has relaxed norms for **adjusting states off-budget loans** and said such liabilities of last fiscal year can be adjusted against their borrowing ceilings of **next four years till March 2026.**

Statement 1 is correct: Off-budget borrowings are **loans that are taken not by a government directly**, but by another public institution which borrows on the directions of the government. The government can ask any implementing agency to raise the required funds from the market through loans or by issuing bonds.

SFG 2023 | LEVEL 1 | Test #39 – Solutions | ForumIAS

In the Budget 2020-21, the government paid only half the amount budgeted for the food subsidy bill to the Food Corporation of India. The shortfall was met through a **loan from the National Small Savings Fund (NSSF)**. This led to halving of the food subsidy of Union Government.

Statement 2 is incorrect: Off-budget borrowings refer to loans taken by government entities, special purpose vehicles, etc, where **principal and interest would be repaid from government's own budget**, instead of the cash flows or revenues generated by the borrowing entity.

Statement 3 is incorrect: State government entities in India **can raise capital through off-budget borrowings** mechanism.

Statement 4 is correct: “Off-budget borrowings” are not counted in the calculation of the fiscal deficit.

Source: What are off-budget borrowings? (indianexpress.com)

Off-Budget Borrowings: Centre eases norms for adjusting states' off-budget borrowings - The Economic Times (indiatimes.com)

Equating states' off-budget borrowings with their debt will clarify extent of indebtedness -ForumIAS Blog

Q.16) With reference to Stem Cells, consider the following statements:

1. Embryonic stem cells are pluripotent whereas adult stem cells are multipotent.
2. Adult stem cells are found only in bone marrow.
3. A Stem Cell Line is a group of identical stem cells that can be grown in a lab.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Stem cells are undifferentiated biological cells that can differentiate into specialized cells and can divide to produce more stem cells. There are three main types of stem cell:

- 1) Embryonic stem cells supply new cells for an embryo as it grows and develops into a baby.
- 2) Adult stem cells supply new cells as an organism grows and to replace cells that get damaged.
- 3) Induced pluripotent stem cells, or 'iPS cells', are stem cells that scientists make in the laboratory.

Statement 1 is correct: Embryonic stem cells are said to be pluripotent, which means they can change into any cell in the body. **Adult stem cells are said to be multipotent**, which means they can only change into some cells in the body, not any cell, for example:

Blood stem cells can only replace the various types of cells in the blood.

Statement 2 is incorrect: The adult stem cells can be found in various tissues **throughout the body**, e.g., bone marrow, blood vessels, brain, skeletal muscles and liver.

Statement 3 is correct: A stem cell line is a group of identical stem cells that can be grown and nurtured in a lab dish. A stem cell line is a group of cells that all descend from a single original stem cell or group of cells and are grown in a lab. Cells in a stem cell line keep growing but don't differentiate into specialized cells. Ideally, they remain free of genetic defects and continue to create more stem cells.

<https://blog.forumias.com/answerddescribe-briefly-what-stem-cell-therapy-is-and-what-advantages-it-has-over-other-treatments/>

<https://www.yourgenome.org/facts/what-is-a-stem-cell/>

<https://www.mayoclinic.org/tests-procedures/bone-marrow-transplant/in-depth/stem-cells/art-20048117>

Q.17) With reference to the Human Genome Project, consider the following statements:

1. It aims to study both the coded and non-coded sequences of the DNA.
2. Its scope extends to cover non-humans such as plants, bacteria and yeasts.
3. It can help in developing effective treatments for some of the genetic disorders.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Genome is the complete set of DNA (genetic material) in an organism, hence it comprises all the genetic information. Human genome comprises 23 chromosome pairs with a total of **3 billion DNA base pairs**. **Human genome project** aims to study the sequence of all these base pairs in organisms.

Statement 1 is correct: Genome comprises both the genes and the non-coding sequences of the DNA. **The Human Genome project** aims to sequence the **whole set of genomes that contains all the coding and non-coding sequences of the DNA**.

Statement 2 is correct: Apart from humans, **the Human Genome project includes sequencing the genes of many non-human model organisms**, such as **bacteria, yeast, plants** (rice and Arabidopsis), *Caenorhabditis elegans* (a free-living non-pathogenic nematode), *Drosophila* (the fruit fly) etc.

Statement 3 is correct: A genetic disease is caused by a change in the DNA sequence. Some diseases are caused by mutations that are inherited from the parents and are present in an individual at birth. As the human genome project unravels the secrets **of all the human genes and its arrangement** it can help in **developing effective treatment for some of the genetic diseases**.

Source: <https://www.genome.gov/For-Patients-and-Families/Genetic-Disorders>
<https://ncert.nic.in/textbook/pdf/lebo106.pdf>

Q.18) The applications of DNA fingerprinting can be found in which of the following?

1. Identification of a dead body.
2. Matching tissues of organ donors with organ recipient.
3. Diagnosis of diseases.
4. Precisely edit genes at a particular location.

Select the correct answer using the code given below:

- a) 1, 2 and 3 only
- b) 1, 2 and 4 only
- c) 1 and 3 only
- d) 2, 3 and 4 only

Ans) a

Exp) Option a is the correct answer.

DNA fingerprinting involves identifying differences in some specific regions in a DNA sequence called repetitive DNA. In these sequences, a small stretch of DNA is repeated many times. It is these **differences** in sequence of DNA which make **every individual unique** in their phenotypic appearance.

Option 1 is correct: DNA fingerprinting is used to Identify a dead body that's too old or damaged to be recognizable by studying their DNA structure.

Option 2 and 3 is correct: Its medical uses include **matching tissues of organ donors** with those of people who need transplants. It can also be used to **identify diseases** that are passed down from previous generations i.e., hereditary diseases, genetic disorders etc., and to help find cures for those diseases.

Option 4 is incorrect: **CRISPR/Cas9 technology** enables geneticists and medical researchers to **edit parts of the genome by removing, adding or altering genes in a particular location**. DNA fingerprinting is about finding the genetic difference between organisms.

Source: <https://ncert.nic.in/textbook/pdf/lebo106.pdf>

Q.19) Consider the following pairs of micro-nutrients and their unique function for the human body:

Micro-nutrient	Function
1. Vitamin C	Protect cells against the effects of free radicals
2. Vitamin D	Necessary for the healthy mineralization of bone
3. Vitamin A	Necessary for healthy vision
4. Vitamin E	Helps in improving the immune system

Which of the pairs given above are correctly matched?

- a) 1 and 2 only
- b) 1, 3 and 4 only
- c) 2, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct answer.

Micronutrients are nutrients that are required by the body in lesser amounts for its growth and development. They play a major role in the metabolic activities of the body. These **include vitamins and minerals**.

Pair 1 is correct: The various functions of vitamin C, include the antioxidant activity, formation of protein, tendons, ligaments and blood vessels. It is also helpful in healing wounds and aiding in the absorption of iron. **Vitamin C is an antioxidant that helps protect your cells against the effects of free radicals.**

Pair 2 is correct: **Vitamin D** is essential for calcium absorption and **bone mineralization** which is positively associated with bone mineral density [BMD]. It is well-established that prolonged and severe vitamin D deficiency leads to rickets in children and osteomalacia in adults.

Pair 3 is correct: Vitamin A is naturally present in many foods. Vitamin A is important for **normal vision, the immune system, reproduction, and growth and development**. Vitamin A also helps your heart, lungs, and other organs work properly. Vitamin A, also **helps in vision during dim light**.

Pair 4 is correct: **Vitamin E has several functions such as it is an antioxidant** and it helps keep the **immune system strong against viruses and bacteria**. It also helps form red blood cells and widen blood vessels to keep blood from clotting inside them and it helps the body use vitamin K.

Source: https://www.who.int/health-topics/micronutrients#tab=tab_1

Science Class 6th NCERT – Chapter-2

Q.20) Language Models for Dialog Applications (LaMDA), recently mentioned in the news, refers to which of the following?

- It is an AI-driven app which provides information about government schemes in different regional languages.
- It is a conversation agent created by Google which is capable of deep learning.
- It is a platform which provides for the digitization of various Buddhist manuscripts.
- It is a language-based app to provide primary education in various regional languages.

Ans) b

Exp) Option b is the correct answer.

Option b is correct: LaMDA or **Language Models for Dialog Applications** is a machine-learning language model **created by Google as a chatbot** that is supposed to mimic humans in conversation. It is **Google's modern conversational agent** enabled with a neural network **capable of deep learning**. This architecture produces a model that can be trained to read many words while paying attention to how those words relate to one another and then predict what words it will think will come next. Google claims that LaMDA can make sense of nuanced conversation and engage in a fluid and natural conversation. Further, advanced conversational agents like LaMDA could revolutionise customer interaction and help **AI-enabled internet search**.

Source: <https://indianexpress.com/article/technology/tech-news-technology/lamda-the-program-that-a-google-engineer-thinks-has-become-sentient-7967050/>
<https://www.thehindu.com/sci-tech/technology/can-the-new-google-chatbot-be-sentient/article65526400.ece>

Q.21) Fruits stored in a cold chamber exhibit longer storage life because

- exposure to sunlight is prevented
- concentration of carbon dioxide in the environment is increased
- rate of respiration is decreased
- there is an increase in humidity

Ans) c

Exp) Option c is the correct answer.

Fruits are influenced by physiological processes, which are respiration and transpiration. Rate of respiration increases with increase in surrounding temperature – this decreases shelf life of the fruit. Similarly, Fruits stored in a cold chamber exhibit longer storage life because rate of respiration is decreased.

Source) UPSC CSE Pre 2013

Q.22) Which of the following are the likely advantages of genetically modified crops over traditional crops?

- Increase in yields
- Less vulnerable to pests
- Promotes genetic diversity

Select the correct answer using the code given below:

- 1 only
- 2 and 3 only
- 1 and 2 only
- 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

A Genetically Modified Organism (GMO) is an organism whose genetic material has been altered in a way that does not occur naturally through mating or natural recombination. The technology used to create GMOs is called genetic engineering. It allows scientists to add, remove, or change specific genes in an organism's DNA. For ex. Bt cotton, Bt brinjal, Bt corn etc.

Option 1 is correct: GMO crops are engineered to have enhanced growth and development, which can lead to **faster maturity, higher yields and higher levels of essential nutrients, such as vitamins and minerals.** This can improve the nutritional value of the crop and increase the yield.

Option 2 is correct: GMO crops have been altered to be **less vulnerable to insects and other pests.** For example, Bt-corn is a GMO crop that has a gene added from *Bacillus thuringiensis*, a naturally occurring soil bacteria. This gene causes the corn to produce a protein that kills many pests and insects, helping to protect the corn from damage.

Option 3 is incorrect: The production of GM foods imposes **high risks to the disruption of biodiversity.** This is because the “better” traits produced from engineering genes can favour one organism. Furthermore, the introduction of genetically modified organisms can eventually disrupt the natural process of gene flow. Genetic modification can **decrease the genetic diversity** within a species, as it involves the selective breeding of a small number of individuals with desired traits. This can lead to a loss of genetic variation and a decrease in the overall resilience of a population

Source: GMO Pros and Cons, Based on Health and Environment Evidence (insider.com)

GM Crops in India: Issues and challenges - Explained, pointwise -ForumIAS Blog

Biotechnology and its Applications.pmd (ncert.nic.in)

Q.23) With respect to different techniques, consider the following pairs:

Technology	Used for
1. Recombinant DNA technology	Creating Genetically Modified Organism
2. Polymerase Chain Reaction	Prevent the growth of specific antibodies
3. Enzyme Linked Immunosorbent Assay	Amplifying specific DNA sequences for genetic testing

Which of the pairs given above is/are correctly matched?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 3 only

Ans) a

Exp) Option a is the correct answer.

Recombinant DNA technology, Polymerase Chain Reaction (PCR) and Enzyme Linked Immuno-Sorbent Assay (ELISA) are some of the techniques that serve the purpose of early diagnosis. Effective treatment of a disease can only be possible by early diagnosis and understanding its pathophysiology. Using conventional methods of diagnosis (serum and urine analysis, etc.) early detection is not possible.

Pair 1 is correctly matched: Recombinant DNA technology (genetic engineering) is the process of **manipulating and altering the genetic makeup of an organism** by adding, removing or changing specific DNA sequences. Recombinant DNA technology is used to **create genetically modified organisms, to**

produce recombinant proteins, or to study gene function. It is also used to detect specific DNA sequences in a sample by creating recombinant DNA molecules that contain the target sequence.

Pair 2 is incorrectly matched: Polymerase Chain Reaction (PCR) is a laboratory technique used to make **multiple copies of a specific DNA sequence or amplifying specific DNA sequences.** It is widely used in molecular biology and genetics research, as well as in medical diagnostics. The process amplifies small amounts of DNA, allowing scientists **to detect and analyse specific genes** or genetic changes in a sample.

Pair 3 is incorrectly matched: Enzyme Linked Immuno-Sorbent Assay (ELISA) is a laboratory technique used to detect **the presence of specific proteins or antibodies in a sample.** It uses an enzyme-linked antibody to bind to a specific protein or antibody in a sample, which can then be detected by a color change or other signal. ELISA is commonly used in medical diagnostics to detect infections, autoimmune diseases, and allergies, as well as in research to quantify protein levels.

Source: Biotechnology and its Applications.pmd (ncert.nic.in)

Role of Recombinant DNA Technology to Improve Life - PMC (nih.gov)

Application of PCR-ELISA in Molecular Diagnosis - PMC (nih.gov)

Q.24) With reference to 'Human body', consider the following statements:

1. Pituitary gland secretes hormones that stimulates growth and cell reproduction.
2. Pineal gland secretes melatonin that regulate the sleep clock.
3. Parathyroid gland releases thyroxine hormones which regulate body metabolism.
4. Pancreas secretes insulin that helps in balancing the sugar level in the body.

Which of the statements given above are correct?

- a) 1 and 3 only
- b) 2 and 4 only
- c) 1, 2 and 4 only
- d) 2, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: The pituitary gland is a **small, pea-sized gland** located at the base of the brain. It is often referred to as the "master gland" because it controls the function of many other glands in the body. The pituitary gland is divided into two parts: the anterior pituitary and the posterior pituitary. The anterior pituitary produces and releases several hormones, including: **Growth hormone (GH), which stimulates growth and cell reproduction.**

Statement 2 is correct: The pineal gland is located on the dorsal side of forebrain. Pineal secretes a hormone called **melatonin**. Melatonin plays a very important role in the regulation of a 24-hour (diurnal) rhythm of our body. For example, it **helps in maintaining the normal rhythms of sleep-wake cycle, body temperature.** In addition, melatonin also influences metabolism, pigmentation, the menstrual cycle as well as our **defense capability.**

Statement 3 is incorrect: Parathyroid Gland is located near the Thyroid gland in the neck region. The hormone released by this gland is called **Parathyroid hormone**, which regulates calcium and phosphorus level in bones. **Whereas, Thyroid gland**, which is located in the neck region, releases the hormones **triiodothyronine and thyroxine.** These hormones regulate body metabolism. Iodine is vital for thyroxine synthesis. Its deficiency leads to a disease called goitre.

Statement 4 is correct: The pancreas is an organ located in the abdomen behind the stomach. It has both endocrine and exocrine functions. The endocrine function of the pancreas is to produce hormones, such as **insulin and glucagon.** The **insulin** produced by the pancreas helps to **lower the levels of glucose (sugar)** in the blood by facilitating the uptake of glucose into cells, where it can be used for energy. **Glucagon**, on the other hand, **raises blood sugar levels** by stimulating the liver to convert stored glycogen into glucose and release it into the bloodstream.

Source: ch-22.pmd (ncertbooks.solutions)

Q.25) With reference to the advantages of Sodium ion batteries over that of Lithium-ion batteries, consider the following statements:

1. Sodium ion batteries are generally safer as compared to Lithium-ion batteries.
2. Sodium ion batteries can be cheaper than Lithium-ion batteries when produced on scale.
3. Sodium ion batteries have higher energy density than Lithium-ion batteries

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: Lithium-ion batteries have some **safety concerns** as they **tend to catch fire** if operating for prolonged periods in **high temperatures**. Recently there was a spate of news regarding Electric Vehicle (EV) scooters catching fire while being transported or while parked in the sun in May and June in India.

By comparison **Sodium ion batteries** offer **better performance** while **operating in a wider temperature range**. They are **non-flammable** and there is **no thermal runaway**. This means the **risk of catching fire** is **less**. Thus, the safety risk during transit is also nil.

Statement 2 is correct: **Sodium** is an **element found abundantly**. The **content** of sodium in **earth** reserves is around **2.5% to 3%**, or **300 times more** than **lithium**. Other than being readily available, its **extraction and purification** is a **simple process** too. These factors make Sodium ion batteries much **more affordable** compared to Lithium-ion batteries.

Sodium ion batteries can be manufactured with **ample metals** such as **iron and manganese**. While on the other hand, **Lithium-ion** batteries **require cobalt**, which is **limited in reserve** and **distributed** across the world **unevenly**, creating **supply chain issues**. Also, cobalt is highly expensive to obtain.

Also, as Sodium ion batteries can be built using existing battery equipment, production too will not cost a hefty amount, as there won't be a massive redesigning effort. Thus overall, **once** they start being **produced on a mass scale**, **sodium** ion batteries will be much **more affordable than Lithium-ion** batteries.

Statement 3 is incorrect: **Energy density** is one area where **Sodium** ion batteries are at a **disadvantage** compared to **Lithium-ion** batteries. As of yet, technologies to make Sodium ion batteries more energy dense do not exist, but the industry is hopeful that with increasing investment and R&D it will become possible in time.

Knowledge Base:

Other Features of Sodium ion batteries:

- 1) They are more lightweight compared to Lithium-ion batteries. This means they will make EVs more agile and efficient.
- 2) They have a longer lifespan compared to Lithium-ion batteries.

Parameters	Lithium-ion Batteries	Sodium-ion Batteries
Cost	High	Low
Energy Density	High	Moderate/High
Safety	Low	High
Materials	Scarce	Earth-abundant
Cycling Stability	High (negligible self-discharge)	High (negligible self-discharge)
Efficiency	High (> 90%)	High (> 90%)
Temperature Range	-25 °C to 40 °C	-40 °C to 60 °C
Remarks	Transportation restrictions at discharged state	Less mature technology; easy transportation

<https://theprint.in/opinion/why-sodium-ion-battery-could-be-the-next-best-electric-car-battery/732982/>

Q.26) With reference to ‘Neural signals in Human body’, consider the following statements:

1. Sensory receptors initiates the generation of neural signals in the human body.
2. The main function of chemical messengers called hormones, is the transmission of nerve signals.
3. In reflex action, the neural signals are transmitted rapidly through the spinal cord, without involving the brain.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) 1 and 3 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

Neural signals are generated and transmitted in the human body through the nervous system, which is composed of the central nervous system (CNS) and the peripheral nervous system (PNS). The CNS is made up of the brain and spinal cord, while the PNS is made up of all the other nerves in the body.

Statement 1 is correct: The **generation of neural signals begins with sensory receptors**, which are specialized cells that detect changes in the environment, such as light, sound, temperature, pressure, and chemicals. These receptors convert the environmental changes into electrical signals, which are then transmitted to the CNS and PNS through sensory neurons.

Statement 2 is incorrect: The main function of neurotransmitters in neural signal transmission is to **transmit the impulse across the synapse to the next neuron**. At the axon terminal, the impulse triggers the release of neurotransmitters, which are chemicals that transmit the impulse across a small gap called the synapse to the next neuron. On the other hand, **Hormones are chemical messengers that trigger the release of other chemicals in the body**.

Statement 3 is correct: In reflex action, the neural signals are transmitted rapidly through the spinal cord, without involving the brain. This allows for a quick response to a stimulus, such as a reflex withdrawal of a hand from a hot surface. Reflexes are automatic, inborn response to a specific stimulus, such as the knee-jerk reflex.

In the **knee-jerk reflex, for example**, a tap on the knee causes sensory receptors in the knee to send an electrical signal to the spinal cord. The signal then triggers a motor neuron to send an electrical signal back to the muscle in the thigh, causing it to contract and produce the "knee-jerk" movement.

Q.27) With reference to 'human blood', consider the following statements:

1. Plasma plays a role in maintaining the balance of fluids and electrolytes in the body.
2. Haemoglobin is responsible for the transport of oxygen from the lungs to the body's tissues.
3. Lymphocytes is only responsible for cleaning up the dead cells and for protection against bloodborne pathogens.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 only
- d) 2 and 3 only

Ans) b

Exp) Option b is the correct answer.

Blood is a fluid connective tissue that consists of plasma, blood cells and platelets. It circulates throughout our body delivering oxygen and nutrients to various cells and tissues.

Statement 1 is correct: Plasma is the yellowish fluid that makes up about 55% of total blood volume. It is composed mostly of water (about 92% by volume), but also contains dissolved substances such as electrolytes, glucose, hormones, and waste products. It plays an **important role in maintaining the balance of fluids and electrolytes in the body**, as well as transporting nutrients, hormones, and waste products throughout the body.

Statement 2 is correct: Red blood cells contain a protein called haemoglobin, which binds to oxygen and gives the cells their characteristic red colour. Haemoglobin is **responsible for the transport of oxygen from the lungs to the body's tissues**, and for the transport of carbon dioxide from the body's tissues to the lungs. Red blood cells are produced in the bone marrow and have a lifespan of about 120 days.

Statement 3 is incorrect: Lymphocytes play vital role in **producing antibodies**. It is commonly known as natural killer cells. It plays important role in the **immune systems and are responsible for humoral and cell-mediated immunity**.

The **most important functions of monocytes (not lymphocytes)** are to migrate into tissues and clean up dead cells, protect against bloodborne pathogens and move very quickly to the sites of infections in the tissues.

Source: ch-18.pmd (ncertbooks.solutions)

Q.28) Consider the following statements:

1. In plants, bulk flow refers to the transport of water and minerals from the roots to the leaves.
2. The absorption of water and minerals by the plant roots from soil happens due to the process of osmosis.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2

d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: In plants, bulk flow refers to the **movement of water and dissolved minerals (such as nitrates, phosphates, and sulfates) from the roots to the leaves through the xylem vessels**. This movement is driven by **pressure differences**, with water and minerals moving from an area of higher pressure (the roots) to an area of lower pressure (the leaves).

Statement 2 is correct: Osmosis is a specific type of **diffusion that occurs in plants when water molecules move through a selectively permeable membrane**, such as the cell membrane, from an area of higher water concentration to an area of lower water concentration.

Osmosis plays a role in the **absorption of water and minerals by the roots**. When the water potential in the soil is higher than the water potential in the roots, water will move into the roots by osmosis, along with dissolved minerals. This process is essential for the survival of the plant, as it allows the plant to absorb the water and minerals it needs to grow.

Source: NCERT CLASS 11 chapter 11

Q.29) With reference to Respiratory disorders, consider the following pairs:

Disorders	Primary Reason
1. Asthma	Damage of alveolar walls of the lung
2. Emphysema	Airways become narrow and produce extra mucus
3. Pneumonia	Inflammation in lung caused by microorganisms

Which of the pairs given above is/are correctly matched?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

Respiratory disorders refer to a group of conditions that affect the respiratory system, which includes the nose, throat, lungs, and the airways that connect them. These disorders can range from mild to severe, and can affect the ability to breathe properly.

Pair 1 is incorrectly matched: Asthma is a chronic respiratory disorder that affects the airways, making it difficult to breathe. It is characterized by **inflammation and narrowing of the airways**, leading to symptoms such as wheezing, shortness of breath, due to **inflammation of bronchi and bronchioles**. **Emphysema is caused by Damage of alveolar walls of the lungs.**

Pair 2 is incorrectly matched: Asthma is a condition in which your airways get narrow and swell and may produce extra mucus. Whereas, **Emphysema** is a lung condition that is characterized by damage to the air sacs (**alveoli**) in the lungs. This damage causes the air sacs to lose their elasticity, making it difficult to breathe. The primary cause of emphysema is long-term exposure to **cigarette smoke** and other forms of air pollution. It can also be caused by a genetic disorder called alpha-1 antitrypsin deficiency (AATD) which is a rare genetic disorder that causes a deficiency in a protein that helps protect the lungs.

Pair 3 is correctly matched: Pneumonia is an infection of the lungs that causes inflammation and fluid accumulation in the lung tissue, leading to difficulty breathing, chest pain, fever, and other symptoms. Pneumonia can be **caused by a variety of microorganisms, including bacteria, viruses, fungi, and parasites**. It is usually caused by *Streptococcus pneumoniae* (also known as pneumococcus). Viral pneumonia is more common in children and it can be caused by a variety of viruses, including the flu (influenza) and the respiratory syncytial virus (RSV).

Source: ch-17.pmd (ncertbooks.solutions)

Q.30) Consider the following statements:

1. 'Partners in the Blue Pacific' is an initiative of all Pacific Rim countries to enhance maritime security in the region.
2. 'Partnership for Global Infrastructure and Investment' was launched by G20 countries to fund infrastructure projects in developing nations.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) d

Exp) Option d is the correct answer.

Statement 1 is incorrect: The US and its allies – **Australia, New Zealand, Japan and the United Kingdom (and not all Pacific rim countries)** – have launched '**Partners in the Blue Pacific**' initiative for "effective and efficient cooperation" with the region's small island nations. The PBP is a five-nation "**informal mechanism**" to support Pacific islands and to boost **diplomatic, economic ties** in the region. The initiative members have also declared that they will "elevate Pacific regionalism", and forge stronger ties with the Pacific Islands Forum. The areas where PBP aims to enhance cooperation include climate crisis, connectivity and transportation, maritime security and protection, health, prosperity, and education.

Statement 2 is incorrect: The **Partnership for Global Infrastructure and Investment (PGII)**, a joint initiative to fund infrastructure projects in developing countries, was launched by **the G7 countries (and not G20 countries)**. PGII aims to help secure funding for countries to build critical infrastructure such as roads, ports, bridges, communication setups, etc. to enhance global trade and cooperation. In India, the US International Development Finance Corporation, the development bank of the country, will invest up to \$30 million in the Omnivore Agritech and Climate Sustainability Fund 3.

Source: <https://indianexpress.com/article/explained/explained-us-partners-in-the-blue-pacific-initiative-counter-china-7994547/>

<https://indianexpress.com/article/explained/g7-infrastructure-investment-plan-china-belt-and-road-initiative-explained-7996374/>

Q.31) Which of the following statements is/are correct regarding vegetative propagation of plants?

1. Vegetative propagation produces clonal population.
2. Vegetative propagation helps in eliminating the virus.
3. Vegetative propagation can be practiced most of the year.

Select the correct answer using the code given below.

- a) 1 only

- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) option c is the correct answer.

Statement 1 is correct. Vegetative reproduction is a method wherein new plants are produced asexually by vegetative parts of a plant called propagules. The vegetative parts mean the leaf, stem and root. Vegetative propagation produces exact copies of parent cell; thus, **it produces clonal population.**

Statement 2 is incorrect. Vegetative propagation **does not help in eliminating virus**, rather it is a very effective method for perpetuating and spreading viruses.

Statement 3 is correct. It can be practised most of the year.

Source) UPSC CSE Pre 2014

Q.32) With reference to Regeneration, consider the following statements:

1. It refers to the ability of living organisms to repair or replace damaged or lost cells, tissues or organs.
2. In human body, liver is an organ which has the ability to regenerate itself.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Regeneration is repairing or regrowing cells, tissues, or organs in the body after injury or disease. It is very prominent among metazoans. Starfish, crayfish, reptiles, and amphibians also exhibit signs of tissue regeneration. In some animals such as the lizard, the shed limb regrows into the original organ.

Statement 1 is correct: Regeneration refers to the **ability of living organisms to repair or replace damaged or lost cells, tissues, or organs.** This can happen through a variety of mechanisms, such as cell proliferation, cell differentiation, and cell migration.

Different organisms have different abilities to regenerate. Some organisms, such as certain species of fish, salamanders, and starfish, have the ability to regenerate entire limbs or organs. Some plants can also regenerate from just a single cell or small fragments.

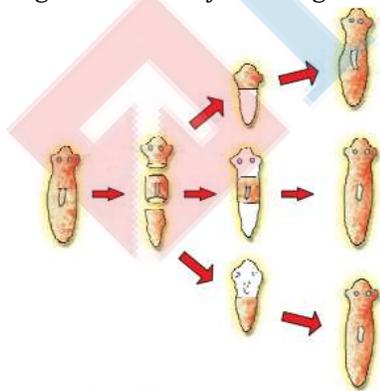

Figure 8.3 Regeneration in Planaria

Statement 2 is correct: Liver regeneration is the ability of the liver to repair and replace damaged or lost tissue. The liver is **one organ in the body that has the ability to regenerate itself.** The liver is made up of

many small units called lobules, which are composed of hepatocytes (liver cells) and other specialized cells. When the liver is damaged, the remaining hepatocytes in the lobules divide and multiply to replace the lost cells and repair the damage.

Source: Cellular communication network factor 2a (Ccn2a): Protein found in Zebrafish can regenerate aged discs in human vertebrae (forumias.com)

CHAP 8.pmd (ncert.nic.in)

Q.33) With reference to the usage/application of micro-organisms, consider the following statements:

1. The lactic acid bacteria, if added to milk, causes the partial digestion of milk.
2. Microbes are used for production of enzymes that are used in detergent formulations.
3. Methanogen bacteria are used in the production of Biogas.
4. An important antibiotic, Penicillin is obtained from bacteria.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 2, 3 and 4 only
- c) 1, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) a

Exp) Option a is the correct answer.

Microbes are diverse protozoa, bacteria, fungi and microscopic animal and plant viruses. Microbes are present in soil, water, air, inside the bodies of humans, animals and plants.

Statement 1 is correct: Lactic acid bacteria (LAB) like lactobacillus are added to milk. It converts lactose sugar of milk into lactic acid. **Lactic acid causes coagulation and partial digestion of milk protein called casein.** Milk is then can be changed into curd, yoghurt, and cheese.

Statement 2 is correct: Microbes are also used for **production of enzymes.** The major classes of detergent enzymes include proteases, lipases, amylases, and cellulases. These enzymes are used in detergent formulations and are helpful in removing oily stains from the laundry.

Statement 3 is correct: Biogas is a renewable fuel produced from the anaerobic digestion of organic feedstocks including municipal waste, farm waste, food waste, and energy crops. Raw biogas consists of methane (50–75%), carbon dioxide (25–50%), and smaller amounts of nitrogen (2–8%). The bacteria used are called **methanogens**. These bacteria are commonly found in the anaerobic sludge during sewage treatment. These bacteria are also present in the rumen (a part of stomach) of cattle.

Statement 4 is incorrect: Penicillium is well known and one of the most common **fungi** occurring in a diverse range of habitats, from soil to vegetation to air, indoor environments and various food products.

Penicillium mold naturally produces the antibiotic penicillin. Scientists learned to grow Penicillium mold in deep fermentation tanks by adding a kind of sugar and other ingredients.

Q.34) Which among the following are the Plant Growth Hormones?

1. Auxin

2. Cytokinins
3. Abscisic acid
4. Gibberellic acid
5. Somatotrophin

Select the correct answer using the code given below:

- a) 2 and 3 only
- b) 1, 2 and 4 only
- c) 1, 2, 4 and 5 only
- d) 1 and 5 only

Ans) b

Exp) Option b is the correct answer.

The Plant Growth Regulators (PGRs) can be broadly divided into growth promoters and growth inhibitors. **PGRs involved in growth promoting activities are called Plant growth hormones.** Their function includes **cell division, cell enlargement, pattern formation, tropic growth, flowering, fruiting and seed formation.** Plant growth inhibitors have important functions in inducing plant responses to wounding, biotic and abiotic stresses, dormancy and abscission. Abscisic acid is known as plant growth inhibitor. Ethylene is largely plant growth inhibitor but is also involved in some growth promotion activities.

Option 1 is correct: Auxins is a plant growth hormone and it is synthesised at the shoot tip, helps the **cells to grow longer.** The **concentration of auxin in the sun shade region** in plants facilitates cell growth in the region which makes **plants bend towards the light.** It promotes flowering e.g., in pineapples.

Option 2 is correct: Cytokinins are plant growth hormones and it is synthesised in regions where rapid cell division occurs, for example seeds, developing shoot buds, young fruits etc. It helps to produce new leaves, chloroplasts in leaves, lateral shoot growth and adventitious shoot formation.

Option 3 is incorrect: Abscisic acid is a general plant growth inhibitor and an inhibitor of plant metabolism. It **inhibits seed germination** and acts as an antagonist to Gibberellic acids.

Option 4 is correct: Gibberellic acids are plant growth hormones and like auxins, help in the growth of the stem. It causes fruits like apples to **elongate and improve their shape.** Spraying **sugarcane** crops with gibberellins increases the **length of the stem** thus increasing its yield and spraying juvenile conifers with this **hastens the maturity period,** thus leading to early seed production.

Option 5 is incorrect: Somatotrophin is not a plant growth hormone, rather it is an animal growth hormone. **Somatotrophin is a hormone produced by the pituitary gland in humans and animals.** It helps control body growth which is why it is also called as called growth hormone. The overproduction of somatotropin can cause **gigantism** while underproduction can result in **dwarfism.**

Source: <https://ncert.nic.in/ncerts/l/kebo115.pdf>

<https://www.cancer.gov/publications/dictionaries/cancer-terms/def/somatotropin>

Q.35) With reference to the Chess Olympiad, consider the following statements:

1. It is an annual chess tournament held at the global level.
2. It is organized by the International Olympic Committee.
3. India has never hosted the Chess Olympiad.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) None of the above

Ans) d

Exp) Option d is the correct answer.

Statement 1 is incorrect: The Chess Olympiad is a **biennial (and not annual) chess tournament** in which teams representing nations of the world compete. The first Official Chess Olympiad was held in 1927 in London, UK.

Statement 2 is incorrect: The International Chess Federation or FIDE (and not the International Olympic Committee) organizes the tournament and selects the host nation.

Statement 3 is incorrect: The 44th Chess Olympiad was held in Chennai, India. India has **hosted the Chess Olympiad for the first time**. Moreover, Asia gets to host the event after a gap of 30 years. The Philippines last hosted it from Asia in 1992.

Knowledge Base:

1) India made its debut at Chess Olympiad in 1956. India has a gold medal (joint winners with Russia in 2020) and two bronze medals (2021, 2014) from the Chess Olympiad.

Source: <https://blog.forumias.com/pm-launches-historic-torch-relay-for-44th-chess-olympiad/>

Q.36) With reference to Animal Cell and Plant Cell, consider the following statements:

1. Plastids are found only in plant cells, and not in animal cells.
2. Cilia is present in plant cells, but absent in animal cells.
3. Vacuoles in animal cells are generally smaller in size as compared to plant cells.
4. Centrioles are present in animal cells, but are absent in plant cell.

Which of the statements given above are correct?

- a) 1 and 3 only
- b) 2, 3 and 4 only
- c) 1, 3 and 4 only
- d) 1 and 4 only

Ans) c

Exp) Option c is the correct answer.

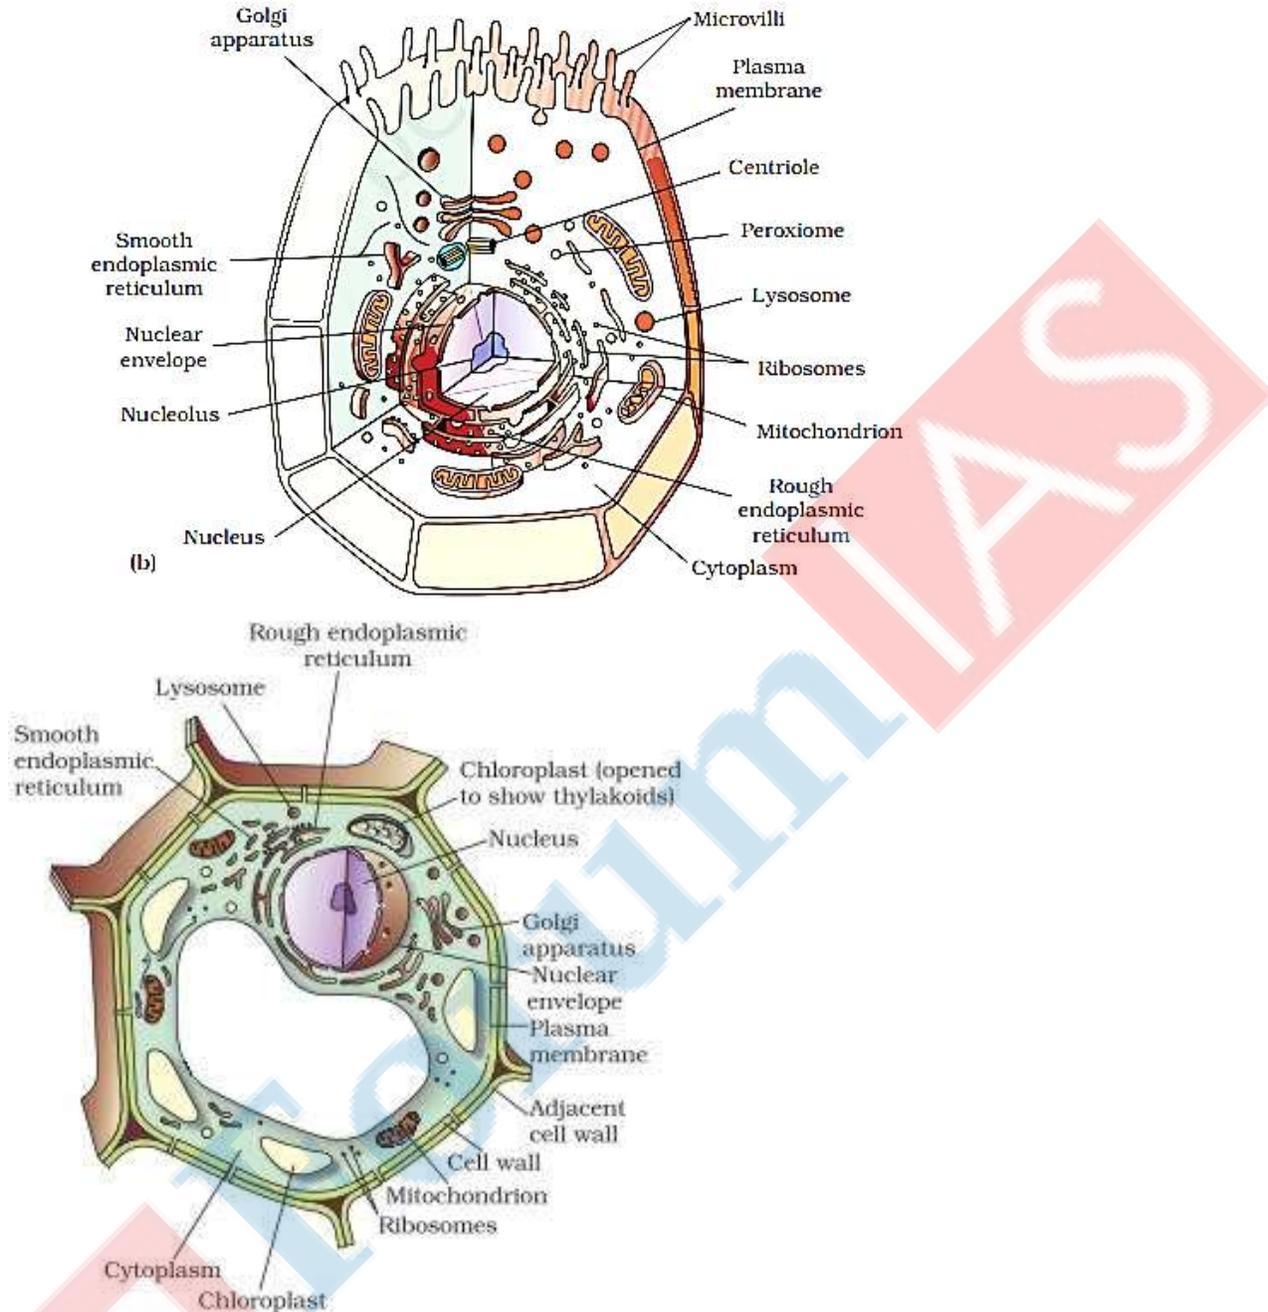

Statement 1 is correct: Plastids are found in plant cells, but not in animal cells. They help in the process of photosynthesis. Since animal cell can fulfil their nutritional requirement by obtaining food from other sources, they do not require plastids. There are three types of plastids, which are the chloroplast, chromoplast and leucoplast. The pigments containing plastids are chloroplast and chromoplast.

Statement 2 is incorrect: Cilia is absent in plant cell but present in animal cell. Cilia are small structures which allows the cells or surrounding fluid to travel. Cilia of human respiratory cells helps in removing microbes and debris up and out of the airways.

Statement 3 is correct: Vacuoles in animal cells have small size as compared to plant cells. The vacuole is the membrane-bound space found in the cytoplasm. It contains water, sap, excretory product and other materials not useful for the cell. In plant cells the vacuoles can occupy up to 90 per cent of the volume of the cell.

Statement 4 is correct: The centrioles form the basal body of cilia and is present only in animal cell.

Knowledge Base:

Source: NCERT, class 11 biology chapter cell: the unit of life

Q.37) With reference to Virus, consider the following statements:

1. All viruses are non-cellular organisms.
2. No virus can replicate outside the body of the host.
3. A fully assembled infectious virus is called a Virion.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

A virus is a sub microscopic infectious agent that replicates only inside the living cells of an organism. Disease caused by viruses are Hepatitis A, B and C, Novel Coronavirus (COVID-19), Influenza (Flu), Measles etc.

Statement 1 is correct: The viruses are non-cellular organisms that are characterised by having an inert crystalline structure outside the living cell.

Statement 2 is correct: Due to their structure, they require the host to reproduce or replicate. They, however, reproduce only inside the cells of the host organism, which may be a bacterium, plant or animal. Hence, **cannot reproduce outside the living cell**. Once they infect a cell, they take over the machinery of the host cell to replicate themselves, killing the host.

Statement 3 is correct: A fully assembled infectious virus is called a virion. The simplest virions consist of two basic components: nucleic acid (single- or double-stranded RNA or DNA) and a protein coat, the capsid.

Source: Biology NCERT, Chapter on Biological classification.

Q.38) With reference to Assisted Reproductive Technologies (ART), consider the following pairs:

Various ARTs	Features
1. In Vitro fertilisation	Fertilisation outside the female body.
2. Artificial Insemination	Fertilisation within the female body
3. Gamete Intra Fallopian Transfer	Transfer of a donated ovum into the fallopian tube of female

How many pairs above is/are correctly matched?

- a) only one pair
- b) only two pairs
- c) All three pairs
- d) None of the pairs

Ans) c

Exp) Option c is the correct answer.

ART includes all fertility treatments in which either eggs or embryos are handled. In general, ART procedures involve **surgically removing eggs from a woman's ovaries, combining them with sperm in the laboratory, and returning them to the woman's body or donating them to another woman.**

Fertilisation is the fusion of sperm from male and egg of female to form zygote (embryo)

Pair 1 is correct: In vitro fertilisation (IVF) is a type of fertility treatment where **fertilisation occurs in a laboratory, instead of within the body**. It involves extracting one or more eggs from an ovary and placing them in a petri dish with donated sperm. **Test tube baby programme** is one of the popular methods of this programme.

Pair 2 is correct: In **artificial insemination, fertilisation takes place within the female body**. It involves **inserting sperm directly into a woman's uterus** to increase the chance of fertilisation. It is used to correct Infertility cases either due to **inability of the male partner to inseminate** the female or due to very low sperm counts in the ejaculates.

Pair 3 is correct: Gamete intra fallopian transfer (GIFT) involves three persons. Transfer of an **ovum collected from a donor** into the fallopian tube of **another female** who cannot produce one, but can provide a suitable environment for fertilisation and further development.

Source: Class XII NCERT-Human reproductive health

Q.39) With reference to Cell division, consider the following statements:

1. It helps in repairing the damaged cells.
2. It helps in maintaining the number of chromosomes from one generation to other.
3. Cell division in some animals helps in regeneration of a body part.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Cell division is a cellular process in which a cell divides into two daughter cells in as little as five minutes. There are two types of cell division: mitosis and meiosis. Meiosis is the type of cell division that creates egg and sperm cells. Mitosis is a fundamental process for life. During mitosis, a cell duplicates all of its contents, including its chromosomes, and splits to form two identical daughter cells.

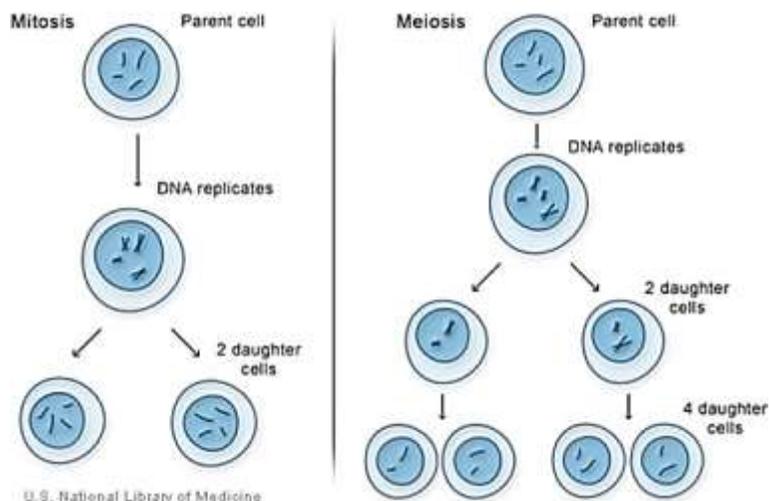

Statement 1 is correct: Cell division helps in repairing the damaged cells. The cells of the upper layer of the epidermis, cells of the lining of the gut, and blood cells are being constantly replaced.

Statement 2 is correct: The cell division process meiosis, ensures that humans have the same number of chromosomes in each generation. It is a two-step process that reduces the chromosome number by half, from 46 to 23, to form sperm and egg cells.

Statement 3 is correct: Cell division in some animals helps in regrowing tissues, organs, and even whole-body parts. For example, animals such as salamanders, newts etc. have remarkable healing abilities. They have been hailed as champions of regeneration.

Knowledge Base:

Source: NCERT biology chapter: cell cycle and cell division

<https://medlineplus.gov/genetics/understanding/howgeneswork/cellsdivide/#:~:text=There%20are%20two%20types%20of,a%20fundamental%20process%20for%20life.https://rsscience.com/why-cell-division-is-important/>

Q.40) Consider the following statements regarding 'Windfall Tax':

1. It is a reduction of taxes on companies that have incurred losses due to global economic disruption.
2. It is aimed to encourage the taxed entities to lower their prices for the benefit of consumers.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: A **windfall tax** is a **higher tax rate** on **sudden big profits** levied on a particular company or industry. When a company benefits from something that they are not responsible for, the financial gain that ensues is called windfall profits.

Governments, typically, **levy a one-time tax over and above the normal rates of tax** on such profits and that is called windfall tax. Since, energy companies are gaining profit not because of any improvement in their processes but because of the geopolitical situation, many governments are considering to impose such tax. This will boost the government's finances, and help fund efforts to protect vulnerable sections from rampant inflation.

Statement 2 is correct: Windfall profits are taxed to **encourage the taxed entities to lower their prices** for the benefit of consumers. For instance, in May 2018, the Indian government was considering imposing a windfall tax on oil producers to **moderate the retail prices of fuel and diesel**. Under the scheme, oil producers, who get paid international rates for the oil they produce from domestic fields, would have to part with any revenue they earn from prices crossing a certain threshold.

Source: Explained: Why India has cut windfall tax on diesel, aviation fuel exports (forumias.com)

Q.41) Consider the following minerals:

1. Calcium
2. Iron
3. Sodium

Which of the minerals given above is/are required by human body for the contraction of muscles?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Option 1 is correct. Calcium and magnesium work together to control muscle contraction. Both minerals interact with the protein actin and myosin -- structural proteins that shorten with each muscle contraction, then lengthen to relax your muscles.

Option 2 is correct. Iron also helps your muscles contract. Each muscle contraction uses up energy as well as oxygen. Iron helps support continued muscle function by supporting energy production in your muscle cells, so that your muscle fibres always have the energy they need to contract properly.

Option 3 is correct. Sodium and potassium play essential roles in muscle contraction because of their importance in nerve function. Nervous system communicates with muscles through structures called neuromuscular junctions, and the activation of a nerve triggers muscle contraction.

Source) UPSC CSE Pre 2013

Q.42) With reference to 'Reverse Zoonotic Diseases', consider the following statements:

1. These are the diseases which are transmitted from humans to animals.
2. Tuberculosis is an example of reverse zoonotic disease.
3. Reverse zoonotic diseases can be caused only by bacteria.

Which of statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 3 only
- d) 2 and 3 only

Ans) b

Exp) Option b is the correct answer.

Zoonotic diseases are caused by harmful germs like viruses, bacterial, parasites, and fungi. These germs can cause many different types of illnesses in people and animals, ranging from mild to serious illness and even death.

Statement 1 is correct: Reverse zoonosis is a process in which a disease transmits from humans to animals. It can also pose threat to animal health as well as public health, due to the potential for animal disease reservoirs to form.

Statement 2 is correct: Tuberculosis can be transmitted from humans to their pet. For example, as per the report of ICMR's Chennai-based National Institute for Research in Tuberculosis (NIRT), TB strains are found in cattle that are usually found in humans, such as mycobacterium tuberculosis. Their handlers were also tested and the same TB strain was found in them.

Statement 3 is incorrect: At present bacteria along with virus are found to be the causes of reverse zoonosis. Methicillin-resistant Staphylococcus aureus (MRSA) caused by bacteria can be spread to animals from people (reverse zoonotic disease) and then possibly back to people from the infected animal. During

the 2009 H1N1 influenza pandemic, there were several confirmed cases of people infecting their pets (ferrets, cats and dogs) with the influenza virus. COVID-19 is also an example of reverse zoonosis caused by virus.

Source: [https://www.news-medical.net/health/What-is-Reverse-](https://www.news-medical.net/health/What-is-Reverse-Zoonosis.aspx#:~:text=Reverse%20zoonosis%2C%20in%20which%20a,animal%20disease%20reservoirs%20to%20form.)

[Zoonosis.aspx#:~:text=Reverse%20zoonosis%2C%20in%20which%20a,animal%20disease%20reservoirs%20to%20form.](https://www.news-medical.net/health/What-is-Reverse-Zoonosis.aspx#:~:text=Reverse%20zoonosis%2C%20in%20which%20a,animal%20disease%20reservoirs%20to%20form.)

Q.43) With reference to Chloroplasts, consider the following statements:

1. They are found only in the green plants.
 2. They are double membrane organelles found in the plant cells.
 3. Although they capture sunlight, the conversion of sunlight into food happens outside chloroplasts.
- Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) b

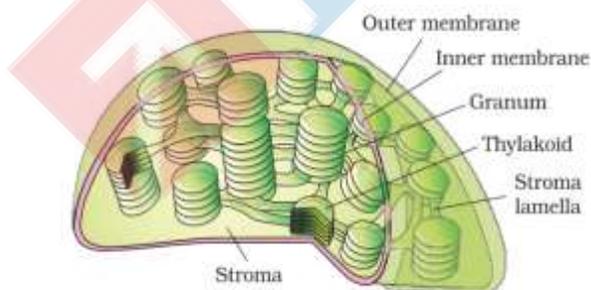

Exp) Option b is the correct answer.

Plastids are found in all plant cells, and they bear some specific pigments, thus imparting specific colours to the plants. Based on the type of **pigments plastids** can be **classified into chloroplasts, chromoplasts and leucoplasts**.

Statement 1 is incorrect: Apart from green plants, Chloroplasts can be found in some Algae too. For instance, **the green algae possess** chlorophyll within a double membrane-bound **chloroplast** and so it can produce its own food through the process of photosynthesis.

Statement 2 is correct: The chloroplasts are double membrane organelles within the plant cells. Of the two, the **inner chloroplast membrane is relatively less permeable**. The space limited by the inner membrane of the chloroplast is called the **stroma**.

Statement 3 is incorrect: Both the capturing of Sunlight and its conversion into chemical energy takes place within the chloroplasts. The chloroplasts contain **chlorophyll pigment** which are responsible for trapping light energy essential for photosynthesis. **Conversion of light into chemical energy occurs in stroma region** that is present **within the chloroplasts**.

Source: <https://ncert.nic.in/ncerts/l/kebo108.pdf> (pg no 135)

<https://www.sciencedirect.com/topics/biochemistry-genetics-and-molecular-biology/green-alga>

SFG 2023 | LEVEL 1 | Test #39 – Solutions | ForumIAS

Q.44) With reference to Free radicals and anti-oxidants, consider the following statements:

1. Exposure to X-rays can generate free- radicals in human body.
2. Anti-oxidants are used to neutralise the free radicals in body.
3. The Cells of our body can naturally produce powerful anti-oxidants.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

A free radical can be defined as any molecular species capable of independent existence that contains an unpaired electron in an atomic orbital. The presence of an unpaired electron results in certain common properties that are shared by most radicals. Many radicals are unstable and highly reactive. Antioxidants are man-made or natural substances that may prevent or delay some types of cell damage. Antioxidants are found in many foods, including fruits and vegetables.

Statement 1 is correct: Free radicals are derived either from normal essential metabolic processes in the human body or from external sources **such as exposure to X-rays, ozone, cigarette smoking, air pollutants, and industrial chemicals.** Free radical formation occurs continuously in the cells because of both enzymatic and nonenzymatic reactions.

Statement 2 is correct: An antioxidant is a molecule stable enough to donate some of their own electrons to a free radical and neutralize it. Hence, it helps in reducing its capacity to damage. These antioxidants delay or inhibit cellular damage mainly through their free radical scavenging property.

Statement 3 is correct: Body's cells naturally produce some powerful antioxidants, such as alpha lipoic acid and glutathione. The foods you eat supply other antioxidants, such as vitamins C and E.

Source: <https://www.health.harvard.edu/staying-healthy/understanding-antioxidants#:~:text=Your%20body's%20cells%20naturally%20produce,have%20antioxidant%20properties%20as%20well.>

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3249911/#:~:text=An%20antioxidant%20is%20a%20molecule,their%20free%20radical%20scavenging%20property.>

Q.45) Consider the following statements regarding Stratospheric Ozone and Tropospheric Ozone:

1. Stratospheric ozone forms naturally in the upper atmosphere, whereas Tropospheric ozone is created by man-made emissions.
2. The chemical composition of ozone in both stratosphere and troposphere are same.
3. Tropospheric ozone concentration is very high as compared to the concentration of stratospheric ozone.
4. Stratospheric ozone shields us from the detrimental impact of solar radiation, whereas tropospheric ozone is characterized as air pollutant.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1, 2 and 4 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

Ozone (O₃) is a reactive gas that exists in **two layers of the atmosphere**: the **stratosphere (upper layer) and the troposphere (at ground level and up to 15km)**. It is both a natural and a man-made product that occurs in the Earth's upper atmosphere (the stratosphere) and lower atmosphere (the troposphere). Depending on where it is in the atmosphere, ozone affects life on Earth in either good or bad ways.

Statement 1 is correct: Stratospheric ozone is formed naturally through the **interaction of solar ultraviolet (UV) radiation** with molecular oxygen (O₂). **Tropospheric or ground-level ozone** – what we breathe – is formed primarily from photochemical reactions between two major classes of air pollutants, volatile organic compounds (VOC) and nitrogen oxides (NO_x).

Statement 2 is correct: Ozone (O₃) is a highly reactive gas composed of three oxygen atoms. **Chemically Ozone in both stratosphere and troposphere are same (O₃)**. However, the formation processes are completely different. In both the cases, the atmosphere has to produce nascent Oxygen, a highly reactive species, which can react with molecular oxygen (O=O). In stratosphere, the high energy UV rays can photolyze (O=O) to form [O], which can combine with another (O=O) to form O₃, whereas in troposphere, the source of [O] is from the photolytic dissociation of NO₂. The NO₂ needs much less energy that can be available in troposphere.

Statement 3 is incorrect: The easiest way to **distinguish between stratospheric ozone and tropospheric ozone** is by looking at the difference in the ozone concentrations in each atmospheric layer. **Stratospheric ozone concentration is very high**, whereas tropospheric ozone concentration is low. **Ozone layer is a region of Earth's stratosphere containing a high concentration of ozone** compared to ozone content in other parts of the atmosphere. Typically, the ozone layer consists of an average of 0.3 ppm ozone gas. About 90% of the total ozone concentration in the atmosphere of Earth occurs in the stratospheric layer.

Statement 4 is correct: Stratospheric ozone is found in the altitude range between approximately 10–50 km above the sea level (depending on geomagnetic latitude: equatorial, mid-latitude, and high latitude region). This atmospheric region **shields us from the detrimental impact of solar UV radiation**. On the other hand, tropospheric ozone **is nothing but air pollutant**. They are found from ground level to about 10 km above the sea level. This type of ozone is concentrated in metropolitan areas as smog.

Source: The Ozone Problem | Ground-level Ozone | New England | US EPA

Tropospheric ozone | Climate & Clean Air Coalition (ccacoalition.org)

What is Ozone? | US EPA

Q.46) With reference to human cells, consider the following pairs:

Cell Organelle	Function they perform
1. Endoplasmic reticulum	It helps in synthesis of lipid in cell.
2. Lysosomes	It helps in removal of dead cell.
3. Mitochondria	It is a site of aerobic respiration in cell.
4. Golgi apparatus	It translates the genetic code into a specified string of amino acids

How many pairs given above are correct?

- One pair only
- Two pairs only
- Three pairs only
- All four pairs

Ans) c

Exp) Option c is the correct answer.

Pair 1 is correct: The Endoplasmic reticulum have ribosomes attached to their outer surface. The endoplasmic reticulum bearing ribosomes on their surface is called rough endoplasmic reticulum (RER). **RER is involved in protein synthesis and secretion.** In the absence of ribosomes, they appear smooth and are called smooth endoplasmic reticulum (SER). The smooth endoplasmic reticulum is the major site for **synthesis of lipid.** In animal cells lipid-like steroidal hormones are synthesised in SER.

Pair 2 is correct: Lysosomes function as the digestive system of the cell. It serves both to degrade material taken up from outside the cell and to digest obsolete components of the cell itself. Hence, **removing the dead cells.** They are also called "**suicide bags**" of the cell because they have hydrolytic enzymes stored in them which can "digest" or destroy the cell itself.

Pair 3 is correct: Mitochondria are the **sites of aerobic respiration.** They produce cellular energy in the form of ATP, hence they are called '**power houses**' of the cell.

Pair 4 is incorrect: Golgi bodies consist of many flat, disc-shaped sacs or cisternae, which are stacked parallel to each other. The golgi apparatus performs the **function of packaging materials, to be delivered either to the intra-cellular targets** or secreted outside the cell. Golgi apparatus is the important site of formation of glycoproteins and glycolipids.

A ribosome is an intercellular structure made of both RNA and protein, and it is the site of protein synthesis in the cell. The ribosome reads the messenger RNA (mRNA) sequence and translates that genetic code into a specified string of amino acids, which grow into long chains that fold to form proteins.

Source: NCERT biology, chapter on cell: the unit of life.

[https://www.genome.gov/genetics-](https://www.genome.gov/genetics-glossary/Ribosome#:~:text=A%20ribosome%20is%20an%20intercellular,that%20fold%20to%20form%20proteins.)

[glossary/Ribosome#:~:text=A%20ribosome%20is%20an%20intercellular,that%20fold%20to%20form%20proteins.](https://www.genome.gov/genetics-glossary/Ribosome#:~:text=A%20ribosome%20is%20an%20intercellular,that%20fold%20to%20form%20proteins.)

Q.47) With reference to Plant tissues, consider the following statements:

1. Meristematic tissues of plants are composed of undifferentiated cells whereas permanent tissues of plants are composed of differentiated cells.
2. In comparison to animal tissues, most of the plant tissues are dead.
3. In plants, xylem transports water vertically whereas phloem transports water horizontally.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 1 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

A tissue is a group of cells with a common origin, structure and function. Tissues are similar in structure and hence perform the same function. **Several types of tissues** organise to form an **organ.** **Parenchyma, collenchyma, xylem and phloem are different tissues present in the plants.**

Statement 1 is correct: The plant tissues are mainly of two categories and they are **Meristematic tissues (dividing or undifferentiated) and Permanent tissues (non-dividing or differentiated).** **Meristematic tissues of plants are composed of undifferentiated cells whereas permanent tissues of plants are composed of differentiated cells.** **Apical, Intercalary and Lateral Meristem are the Meristematic plant tissues.** **Xylem and phloem are permanent plant tissues.**

Statement 2 is correct: As plants and animals have different structures, their composition of cells also varies. **Plants are stationary**, they don't move and most of the tissues they have are supportive, which provides them with structural strength. **Most of these tissues are dead as dead cells can provide mechanical strength** as easily as live ones, and need less maintenance. On the other hand, animals move and it consumes a lot of energy. Thus, **most of the tissues they contain are living**.

Statement 3 is incorrect: Both Xylem and Phloem are conducting tissues. However, **Xylem conducts water and minerals vertically from roots to leaves** and also it **transports waters horizontally across the plants**. **Phloem conducts foods synthesised in the leaves to different parts of the plant**.

Source: NCERT Class IX- Tissues

Q.48) If we soak some moong (green gram) seeds in water and then put the soaked seeds in four different environments, which of the following will observe the germination of seeds first?

- Seeds completely submerged in water and left undisturbed for few days.
- Partly Soaked seeds kept in a sunny room.
- Soaked seeds kept in completely dark room.
- Seeds that are kept in refrigerator with rinsing and replacing water every few days.

Ans) b

Exp) Option b is the correct answer.

When the seed turned into a sprout, it is said to have germinated. This is the beginning of life of a new plant. Abiotic factors like air, water, light and heat are important for the growth of plants. In fact, abiotic factors are important for all living organisms.

Statement a is incorrect: Here seeds are completely submerged under water and it does not result in germination of seeds because only water is not necessary for germination. Proper light and well aeration is very much important for germination. When completely immersed in water, the proper oxygen exchange (aeration) does not take place which prevents the full germination. And some seeds will start rotting.

Statement b is correct: Soaked seeds kept in sunny room will germinate first. Small seeds generally germinate better in light than in darkness. As light, air and water necessary for germination

Statement c is incorrect: Seeds will germinate at slower rate in absence of light.

Statement d is incorrect: Seeds kept in refrigerator will not germinate at all.

Source: NCERT science class 6th, chapter 9, pg 82

Q.49) With reference to White Blood Cells (WBCs), consider the following statements:

- They are colourless due to lack of haemoglobin.
- They do not have nucleus in them.
- Both B and T type of White Blood Cells are responsible for acquired immunity.

Which of the statements given above is/are correct?

- 1 and 2 only
- 3 only
- 1 and 3 only
- 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

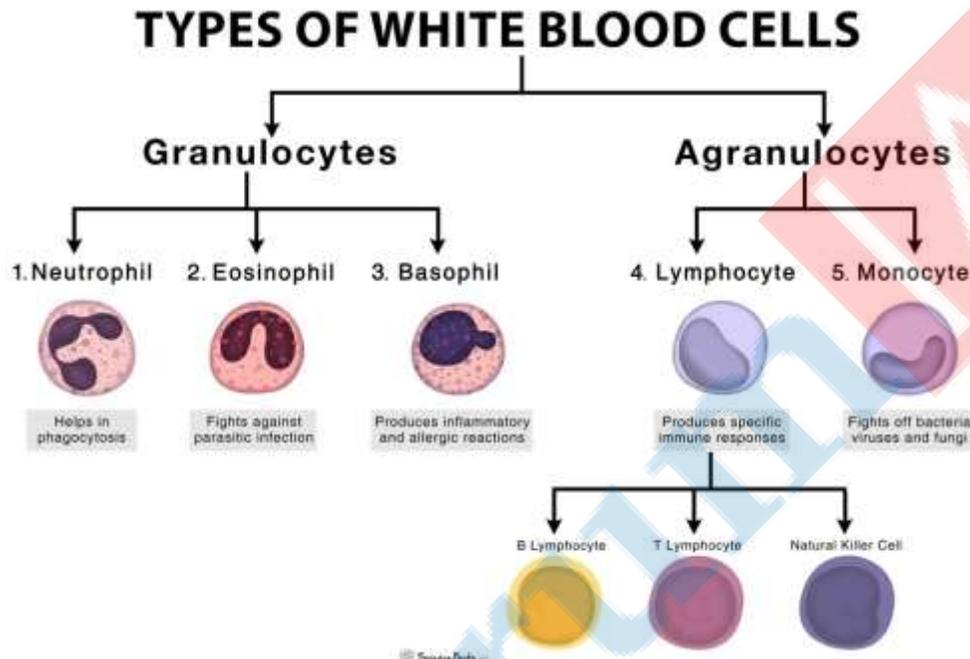

Leucocytes are also known as white blood cells (WBC). As compared to red blood cells or Erythrocytes, WBCs are relatively lesser in number which averages 6000-8000 mm⁻³ of blood. Leucocytes are generally short lived. There are two main categories of WBCs namely, granulocytes and agranulocytes.

Statement 1 is correct: white blood cells (WBC) are colourless due to the lack of haemoglobin. Haemoglobin is a protein which gives the red colour to the blood.

Statement 2 is incorrect: White blood cells have nucleus in them which differentiates them from Red blood cells. As red blood cells and platelets do not have nucleus.

Statement 3 is correct: Lymphocytes are the type of White Blood Cells (WBCs) that create antibodies to fight against bacteria, viruses, and other potentially harmful invaders. Lymphocytes consists of 'B' and 'T' forms. Both B and T lymphocytes are responsible for acquired immune responses or acquired immunity of the body.

Knowledge Base:

Source: biology class 11th, chapter 18

<https://www.sciencefacts.net/types-of-white-blood-cells.html>

Q.50) Consider the following pairs:

- | | | |
|-----------------------|---|-------------------|
| Region in news | - | Location |
| 1. Luhansk | - | Russia |
| 2. Parcel Islands | - | South China sea |
| 3. Donetsk | - | Ukraine |
| 4. Snake Islands | - | Mediterranean Sea |

Which of pairs given above is/are correctly matched?

- 1 and 2 only
- 2 and 3 only
- 2, 3 and 4 only
- 1, 2, 3 and 4

Ans) b

Exp) Option b is the correct answer.

Source: Natural Earth; United Nations Office for the Coordination of Humanitarian Affairs (OCHA)

Donetsk and Luhansk in Ukraine

Pair 1 is incorrectly matched and Pair 3 is correctly matched: Donetsk and Luhansk are two states located in **eastern Ukraine**, which share a border with Russia. This entire region, which includes Donetsk, Luhansk and their respective separatist territories, is generally referred to as the **‘Donbas’ region**.

Pair 2 is correctly matched: The Paracel Islands commonly referred as **Hoang Sa Archipelago** are a disputed archipelago in the **South China Sea**. The archipelago includes about **130 small coral islands and reefs**. China, Vietnam, the Philippines, Taiwan, Malaysia, and Brunei all have competing claims. Recently, US sends destroyer near Paracel Islands angering China.

Paracel Islands

Pair 4 is incorrectly matched: Zmiinyi Island, also known as **Snake Island**, is a **small piece of rock less than 700 meters** from end to end in Black Sea, that has been described as being “X-shaped”. The island, which has been known since ancient times and is marked on the map by the **tiny village of Bile** that is located on it, **belongs to Ukraine**. Recently, Russia had control over this island.

US sends destroyer near Paracel Islands angering China | South China Sea News | Al Jazeera

After losing Luhansk, Ukraine forces regather for defence of Donetsk | World News, The Indian Express.

SFG 2023 | LEVEL 1 | Test #40 – Solutions | 

Q.1) In the context of the developments in Bioinformatics, the term ‘transcriptome’, sometimes seen in the news, refers to

- a range of enzymes used in genome editing
- the full range of mRNA molecules expressed by an organism
- the description of the mechanism of gene expression
- a mechanism of genetic mutations taking place in cells

Ans) b

Exp) Option b is the correct answer.

A transcriptome is the full range of messenger RNA, or mRNA, molecules expressed by an organism.

Transcriptome of a cell or a tissue is the collection of RNAs transcribed in it. In contrast with the genome, which is characterized by its stability, the transcriptome actively changes. Messenger RNA (mRNA) is a single-stranded RNA molecule that is complementary to one of the DNA strands of a gene. Messenger RNA (mRNA) carries the genetic information copied from DNA in the form of a series of three-base code “words,” each of which specifies a particular amino acid.

Transcriptomics is an emerging and continually growing field in biomarker discovery for use in assessing the safety of drugs or chemical risk assessment.

Source: UPSC CSE Pre 2016

Q.2) Recently, Indian Farmers Fertilizer Cooperative (IFFCO) has developed the world’s first Liquid Nano Urea. What are its advantages over conventional Urea?

- It is better absorbed by the plant leaves.
- It has a higher shelf life as compared to conventional urea.
- It will significantly reduce water consumption for irrigation.
- It will help in decreasing the air pollution.

Select the correct answer using the code given below:

- 2 and 3 only
- 1 and 4 only
- 1, 2 and 4 only
- 1, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Nano Urea is essentially urea in the form of a nanoparticle. It has been developed to reduce the burden of urea subsidy, reduce the unbalanced and indiscriminate use of conventional urea, increase crop productivity and reduce soil, water, and air pollution. It has been developed by Indian Farmers Fertilizer Cooperative (IFFCO)’s Nano Biotechnology Research Center (NBRC).

Statement 1 is correct: Liquid nano urea is sprayed directly on the leaves and gets better absorbed by the plant. Conventional urea fails to have the desired impact on crops as it is often applied incorrectly on the plants. This leads to the efficiency of conventional urea of about 25%, whereas efficiency of liquid nano urea to be as high as 85-90%.

Statement 2 is correct: Liquid nano urea has higher shelf life as compared to conventional urea. It has a shelf life of a year and farmers need not be worried about “caking” when it encounters the moisture.

Statement 3 is incorrect: There is no relation between using liquid nano urea and significant water reduction for irrigation use. Liquid nano urea releases nitrogen which is a major component of chlorophyll.

Statement 4 is correct: The imbalance use of conventional urea leads to most of the nitrogen in it is either get vaporized or lost as a gas, which results in air pollution. Nano urea is a revolutionary product which will

help in solving this problem by **reducing the use of urea by up to 50 percent. Hence, Nano Urea is an eco-friendly product.**

Knowledge Base:

Liquid nano urea produced by IFFCO comes in a half-litre bottle priced at Rs 240, and carries no burden of subsidy currently. By contrast, a farmer pays around Rs 300 for a 50-kg bag of heavily subsidized urea.

Source: <https://blog.forumias.com/explained-what-is-liquid-nano-urea-produced-by-iffco-which-can-potentially-revolutionize-the-use-of-nitrogen-fertilizers-in-india/>

Q.3)What are the risks and issues associated with the nuclear energy?

1. Creation of harmful radioactive wastes.
2. Significant release of radioactive substances in air in case of nuclear accidents
3. Used nuclear fuel cannot be processed.
4. Difficulty in storage of used fuel.

Select the correct answer using the code given below:

- a) 1, 2 and 4 only
- b) 2 and 4 only
- c) 1, 2 and 3 only
- d) 1, 2, 3 and 4

Ans) a

Exp) Option a is the correct answer.

Nuclear power is the use of nuclear reactions to produce electricity. Nuclear power is the second-largest source of low-carbon electricity today.

Statement 1 is correct: A major environmental concern related to nuclear power is the creation of radioactive wastes such as uranium mill tailings, spent (used) reactor fuel, and other radioactive wastes. These materials can remain radioactive and dangerous to human health for thousands of years.

Statement 2 is correct: The nuclear accidents does not commonly occur, but when it happens, it can lead to significant consequences to people and the environment. The prime example of a "major nuclear accident" is one in which a reactor core is damaged and **significant amounts of radioactive isotopes are released in air**, such as in the Chernobyl disaster in 1986 and Fukushima nuclear disaster in 2011.

Statement 3 is incorrect: Used nuclear fuel has long been reprocessed to extract fissile materials for recycling and to reduce the volume of high-level wastes. A significant amount of plutonium recovered from used fuel is currently recycled into MOX fuel.

Statement 4 is correct: Storage and disposal of used fuel is a **major hindrance** in nuclear energy. Used nuclear fuel is kept in either wet or dry storage facilities, before being recycled or disposed of. When used fuel is taken out of a reactor, it is both hot and radioactive and requires storage in water to allow the fuel to cool.

Source:

<https://www.iea.org/reports/nuclear-power-in-a-clean-energy-system>

<https://www.nrc.gov/reading-rm/doc-collections/fact-sheets/radwaste.html>

<https://earth.org/the-advantages-and-disadvantages-of-nuclear-energy/>

<https://world-nuclear.org/information-library/nuclear-fuel-cycle/fuel-recycling/processing-of-used-nuclear-fuel.aspx>

Q.4) With reference to Large Hadron Collider (LHC), consider the following statements:

1. It is built to study particles that are the smallest known building blocks of all things.
2. Liquid Argon is used in Large Hadron Collider to keep its components cool.
3. ATLAS is the largest general purpose particle detector experiment at the LHC.

Which of the statements given above is/are correct?

- a) 1 only
- b) 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: The Large Hadron Collider is a giant, complex machine built to **study particles that are the smallest known building blocks of all things**. It was built by European Organization for Nuclear Research (CERN) between 1998 and 2008 in collaboration with over 10,000 scientists from hundreds of universities and laboratories. It is the **world's largest and most powerful particle accelerator**.

Statement 2 is incorrect: The LHC uses a distribution system of **liquid helium** to keep its critical components ultracold at minus 271.3 degrees Celsius, which is colder than interstellar space. Since the LHC's powerful electromagnets carry almost as much current as a bolt of lightning, they must be kept chilled.

Statement 3 is correct: ATLAS is the largest general-purpose particle detector experiment at the LHC. ATLAS is one of two general-purpose detectors at the Large Hadron Collider (LHC). It investigates a wide range of physics, from the search for the Higgs boson to extra dimensions and particles that could make up dark matter.

Knowledge Base: In 2012, scientists at CERN had announced to the world the discovery of the Higgs boson or the 'God Particle' during the LHC's first run.

LHC is a 27-km-long track-loop buried 100 meters underground and located at the Swiss-French border.

Source: <https://indianexpress.com/article/explained/everyday-explainers/explained-what-is-the-large-hadron-collider-answers-fundamental-questions-particle-physics-8008780/>

<https://economictimes.indiatimes.com/topic/High-Luminosity-Large-Hadron-Collider/news>

Q.5) With reference to SMILE-75 initiative, recently seen in news, consider the following statements:

1. It aims to identify and rehabilitate the victims of child trafficking in 75 most vulnerable cities.
2. It is being implemented by the Ministry of Social Justice and Empowerment.

Which of the above statements is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: The Government of India has formulated a comprehensive scheme of SMILE (Support for Marginalised Individuals for Livelihood and Enterprise) **to address the persisting problem of destitution and beggary. Hence, statement 1 is incorrect.**

Under the **"SMILE-75" Initiative**, 75 Municipal Corporations will undertake comprehensive rehabilitation of persons engaged in the act of begging in the spirit of Azadi ka Amrit Mahotsav.

Objectives:

- 1) To make cities/town and municipal areas begging-free.
- 2) To make a strategy for comprehensive rehabilitation of the persons engaged in the act of begging through the coordinated action of various stakeholders.

Statement 2 is correct: Implementing Ministry for the initiative is the Ministry of Social Justice and Empowerment. Hence statement 2 is correct.

Source: <https://www.thehindu.com/news/national/social-justice-ministry-launches-smile-75-initiative/article65762276.ece>.

Q.6) With reference to Tokamak, consider the following statements:

1. It is a machine used to confine plasma using magnetic field.
2. Tokamak like conditions can be found to exist naturally in stars.
3. India had built its indigenous Tokamak reactor in 1980s.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer

A tokamak is a device which uses a powerful magnetic field to confine plasma in the shape of a torus.

Statement 1 is correct: A tokamak is a machine that **confines a plasma using magnetic fields** in a donut shape that scientists call a torus. The tokamak is one of several types of magnetic confinement devices being developed to produce **controlled thermonuclear fusion power**.

Statement 2 is correct: Plasma confinement refers to the containment of a plasma by various forces at the extreme conditions necessary for thermonuclear fusion reactions. These conditions **exist naturally in stars**, where they are sustained by the force of gravity.

Statement 3 is correct: India's first Tokamak reactor, the Aditya, was built in 1980 and completed 30 years of safe operation in January 2020.

Knowledge Base: **Tokamaks were initially conceptualized in the 1950s by Soviet physicists.** 'Tokamak' is an acronym for Russia term which translates into 'toroidal chamber with magnetic coils. The Soviet scientists theorised that if one can create a magnetic field in the shape of a torus (doughnut shape) then the scorching plasma could be contained.

Source:

https://blog.forumias.com/nuclear-fusion-technology-evolution-challenges-and-future-potential/#What_are_Tokamaks

<https://www.energy.gov/science/doe-explainsplasma-confinement>

Q.7) In reference to Cryptocurrency transactions, which of the following is correct regarding 'Proof-of-Stake' mechanism, that was recently seen in news?

- a) Under this mechanism, the miner who solves the mathematical puzzle first, would be chosen as validator.
- b) It is a process, where validators are randomly assigned from a pool of people using an algorithm.
- c) It is a method of dividing transactions along the different chains to decrease the cost and accelerate the transactions.
- d) This mechanism allows the users to become validators without storing large data on their computer.

Ans) b

Exp) Option b is the correct answer.

Ethereum blockchain platform fully transitioned from 'proof of work' to a 'proof-of-stake' consensus mechanism and this revamp is known as the Merge.

Option a is incorrect: This is proof-of-work mechanism. Under the **proof of work'** (PoW) **consensus mechanism**, miners would compete to solve complex mathematical puzzles using a massive infrastructure of cutting-edge computer hardware. The **first one to solve the puzzle would be chosen as the validator**. This method was almost entirely dependent on crypto farms, which are massive warehouses lined with rows of computers which would solve the puzzles.

Option b is correct: Under the Proof-of-Stake consensus mechanism, there is no need of miners and mining farms to authenticate transactions anymore. Instead, a **validator will be randomly assigned using an algorithm from a pool of people** who 'stake' their coins.

Option c is incorrect: Sharding in crypto means dividing transactions across several different chains in a way that will decrease fees and speed up transactions.

Option d is incorrect: The Verge allow users on the network to become validators without having to store extensive amounts of data on their machines.

Source: <https://indianexpress.com/article/explained/explained-sci-tech/ethereum-merge-blockchain-significance-explained-8156794/>

Q.8) Consider the following pairs:

Space Mission	Feature
1. JUICE	It is a European Space Agency's mission to observe Jupiter.
2. Psyche	It is a Chinese space mission to study solar flares.
3. LUNA-25	It is a Russian space mission to study Lunar surface.
4. LUCY	It is NASA's mission to study Jupiter Trojan Asteroid.

How many pairs given above are correctly matched?

- a) Only one pair
- b) Only two pairs
- c) Only three pairs
- d) All four pairs

Ans) c

Exp) Option c is the correct answer.

Pair 1 is correct: The Jupiter Icy Moon Explorer (JUICE) is an interplanetary spacecraft developed by European Space Agency. It will make detailed **observations of the giant gas planet Jupiter and its three large ocean bearing moons Ganymede, Callisto and Europa**. European countries, Japan, and the US will all be part of the mission. The probe aims to explore the possibilities of life in space and the origins of Jupiter.

Pair 2 is incorrect: Psyche is a NASA's mission that will explore a 225 kilometers metallic asteroid called 16 Psyche. Psyche asteroid orbits around the Sun in the main asteroid belt, in between Mars and Jupiter. No spacecraft has ever visited an object like 16 Psyche, which is thought to be the exposed core of a demolished planet. This spacecraft will orbit around the asteroid for two years. The mission is expected to provide important insight into planetary formation.

Pair 3 is correct: The Luna-Glob spacecraft or Luna-25 is to be the first Russian lunar lander since the Luna-24 mission launched in 1976. The probe is targeted for a region of the south pole of the moon, touching down near Boguslavsky Crater. Luna 25 will study the upper surface layer and the lunar atmosphere and help to develop landing and soil sampling technologies. The declared active life of the probe on the surface of the moon is at least one Earth year.

Pair 4 is correct: NASA has launched ‘Lucy Mission’ to explore the Jupiter Trojan Asteroids. It is NASA’s first mission to explore Jupiter Trojan Asteroid. Trojans are small bodies that are remnants of our early solar system. They orbit the Sun in two loose groups: one group leading ahead of Jupiter in its orbit, the other trailing behind. The mission is estimated to be over 12 years long, during which the spacecraft will visit one main belt asteroid, and seven Trojans asteroids covering a distance of about 6.3 billion km to deepen the understanding of the young solar system.

Q.9) Consider the following statements regarding the Solid Fuel Ducted Ramjet (SFDR) technology:

1. It enables the missiles to intercept aerial threats at Subsonic speeds only.
2. SFDR technology is jointly developed by India and France.
3. It uses atmospheric air as an oxidizer.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 3 only
- c) 1 only
- d) 1, 2, and 3

Ans) b

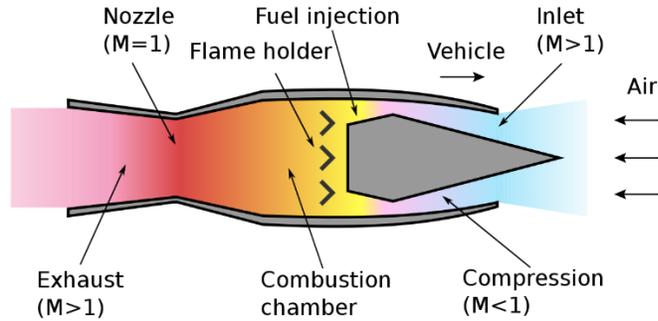

Exp) Option b is the correct answer.

Recently, Defence Research and Development Organisation (DRDO) has tested its **Solid Fuelled Ducted Ramjet (SFDR) technology**, from the Integrated Test Range (ITR) in Chandipur.

Statement 1 is incorrect: SFDR based propulsion enables the missile to intercept aerial threats at very long ranges at supersonic speeds. The development of SFDR technology will enable India to make its own long-range air-to-air missile and surface to air missile.

Statement 2 is incorrect: The Solid Fuel Ducted Ramjet (SFDR) is been developed under a joint Indo-Russian R&D project.

Statement 3 is correct: SFDR system utilises a solid fuelled air-breathing propulsion ramjet engine. Unlike solid-propellant rockets, which carry fuel and oxidiser unit in the rocket itself, **the Ramjet takes up oxygen from the atmosphere during flight.** Thus, it is light in weight and can carry more fuel.

Source: https://defense-update.com/20180603_sfdr.html

<https://www.indiatoday.in/india/story/india-tests-solid-fuel-ducted-ramjet-technology-missile-1935119-2022-04-08>

Q.10) Consider the following statements with reference to the Financial Inclusion Index:

1. It is published by the Reserve Bank of India.
2. The index was developed by taking 2015 as base year for financial inclusion data.
3. It is published annually.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Financial Inclusion Index is a **comprehensive index incorporating details of banking, investments, insurance, postal as well as the pension sector** in consultation with the government and respective sectoral regulators.

Statement 1 and 3 are correct and 2 is incorrect: Financial Inclusion Index was developed by the RBI in 2021, without any 'base year', and is published in July every year. The objective of the index is to capture the extent of Financial Inclusion across the country. The FI-Index is responsive to ease of access, availability and usage of services and quality of services, consisting of 97 indicators.

Source: <https://indianexpress.com/article/business/economy/financial-inclusion-index-inches-up-all-sub-indices-rise-rbi-8067235/>

Q.11) Consider the following phenomena:

1. Size of the sun at dusk.
2. Color of the sun at dawn
3. Moon being visible at dawn
4. Twinkle of stars in the sky
5. Polestar being visible in the sky

Which of the above are optical illusions?

- a) 1, 2 and 3
- b) 3, 4 and 5
- c) 1, 2 and 4
- d) 2, 3 and 5

Ans) c

Exp) Option c is the correct answer.

An optical illusion is a visual stimulus that is perceived by the eyes and then comprehended by the brain in a way that is different from reality. The size of the sun at dusk, the Color of the sun at dawn, and the Twinkle of stars in the sky are optical illusions because of atmospheric conditions.

Statement 1 is correct: Size of the sun at dusk: The size of the sun at different intervals of the day will appear different because of optical illusion caused by atmospheric refraction. It will appear large during the morning time because we see it with other objects in the environment. It will appear smaller in noon time because of the presence of clear sky and appears clearer during evening time.

Statement 2 is correct: The color of the sun resembles optical illusion throughout the day because of scattering of light. Light is composed of many colors and out of all those colors, red color travels farthest in the atmosphere and appears to be seen at last. During noon time, Sun appears whitish and yellowish in color.

Statement 3 is incorrect: Moon being visible at dawn is not an optical illusion because the moon is visible at dawn during the half of the cycle of Full Moon to just before New Moon.

Statement 4 is correct: Most of the stars are shining with a steady light. The movement of air (Sometimes called turbulence) in the atmosphere of Earth causes the starlight to get slightly bent as it travels from the distant star through the atmosphere down to us on the ground. The twinkling of a star is due to atmospheric refraction of starlight. The starlight, on entering the earth's atmosphere undergoes refraction continuously before it reaches the earth. The atmospheric refraction occurs in medium of gradually changing refractive index.

This means that some of the light reaches us directly and some gets bent slightly away. To our eyes, this makes the star seem to twinkle.

Statement 5 is incorrect: Polestar being visible in the sky: It is not an optical illusion as Polestars appears in North or South pole which completely depends on earth rotation.

Source: UPSC PRELIMS 2013

Q.12) Consider the following statements regarding the Thermobaric Weapons:

1. They are a type of nuclear weapons developed by Russia.
2. Thermobaric weapons use oxygen from the air for a blast.
3. Hague Convention completely bans the use, production and transfer of all kinds of Thermobaric weapons.

Which of the statements given above is/are correct?

- a) 2 only
- b) 3 only
- c) 1 and 2 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Statement 1 is incorrect: Thermobaric weapons are also called as fuel-air bombs, aerosol bomb or vacuum bombs. They are considered to be the most devastating non-nuclear weapons developed to date.

Statement 2 is correct: Thermobaric weapons use oxygen from the air for a large, high-temperature blast. They consist of a fuel container and two separate explosive charges. These weapons are typically filled with aerosolized solid fuel or a highly combustible slurry. Once they reach their target an initiating explosion or “scatter charge” spreads a cloud of the fuel across the target, while milliseconds later a secondary combustion causes that cloud of fuel and atmospheric oxygen to detonate. The result is a

massive fireball that produces an especially powerful blast wave as the atmospheric oxygen is consumed by the explosion.

Statement 3 is incorrect: There are no international laws banning the all kind of production, use and transfer of Thermobaric bombs, but if a country uses them to target civilian populations in built-up areas, schools or hospitals, then it could be convicted of a war crime under the Hague Conventions of 1899 and 1907.

Source: <https://lieber.westpoint.edu/are-thermobaric-weapons-lawful/>
<https://armscontrolcenter.org/fact-sheet-russias-use-of-thermobaric-weapons-in-ukraine/>
<https://www.bbc.com/news/business-60571395>

Q.13) Which of the following options best explains the term ‘Kamikaze Drone’, often talked about in news?

- It is the first Artificial intelligence-enabled drone manufactured in India.
- It is a small un-manned aircraft carrying explosives to attack enemy targets.
- It is India's first passenger drone, built by a Pune-based private firm.
- It is a specialized drone that was deployed by China to supply Covid Vaccines.

Ans) b

Exp) Option b is the correct answer.

Recently, the capital of Ukraine came under attack by the Kamikaze Drone, which was used by Russia. Indian army is also in process to acquire 120 Kamikaze drones.

Option b is correct: Kamikaze drones are small unmanned aircraft carrying explosives to attack enemy targets. Kamikaze drones are made in Iran, where they are known as Shahed-136. “kamikaze” or “suicide” drones gets itself destroyed in an attack. They are also called **Switchblade drones** because their bladelikey wings spring out on launch. The term Kamikaze derives from a tactic of attack adopted by the Japanese during World War II. Pilots of fighter planes laden with explosives, in a suicide attack mission, would crash into an enemy target to cause maximum damage. **They are also called "loitering munition,"** as they can hover around the target area for some time (much longer than a cruise missile) and attack only once a target is located.

Source: <https://www.timesnownews.com/india/indian-army-initiates-buying-process-for-120-kamikaze-drones-aerial-targeting-systems-article-95292071>
<https://timesofindia.indiatimes.com/world/rest-of-world/what-are-kamikaze-drones-the-new-worry-for-ukraine-in-defending-against-russia/articleshow/94912735.cms>
<https://www.outlookindia.com/international/iran-s-kamikaze-drones-a-potent-soldier-in-russia-ukraine-warfare-all-you-need-to-know-news-229582>

Q.14) The term 'Iron Dome' is sometimes seen in news. Which of the following statements best describes the 'Iron Dome'?

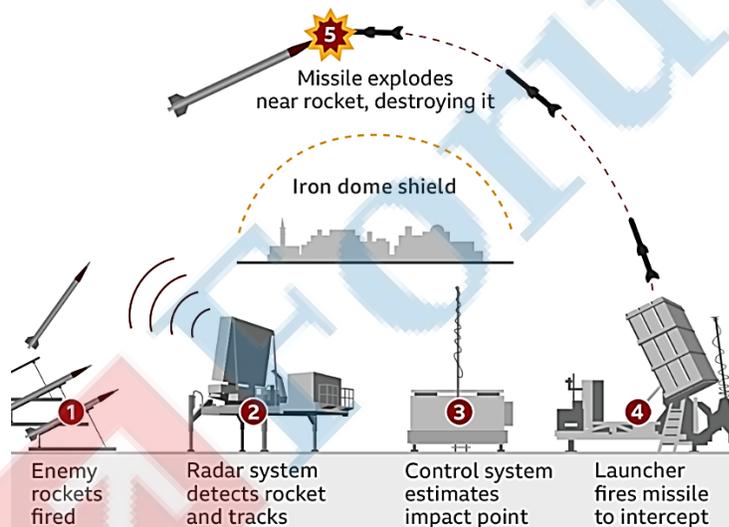

- It is an architecture design to protect the buildings from excessive heat.
- It is an agricultural framework to maintain optimum temperature for plant's health.
- It is an air defense system to counter the adversary's aerial attacks.
- It is a technique for the extraction of iron from its ore.

Ans) c

Exp) Option c is the correct answer.

Option c is correct: Iron Dome system is an all-weather short-range, ground-to-air, air defense system developed by Israel. It was developed by the state-run **Rafael Advanced Defense Systems and Israel Aerospace Industries**. It includes radar and Tamir interceptor missiles that track and neutralise any rockets or missiles. **It can counter rockets, artillery & mortars, aircraft, helicopters and Unmanned Aerial Vehicles (UAV).** The system consists of three main elements: the **Tamir interceptor** and its launcher, the **ELM 2084 Multi-mission Radar (MMR)**, and a **battle management and weapon control system (BMC)**. Iron Dome can detect and engage targets at ranges of up to 70 km.

How Israel's Iron Dome defence system works

Iron Dome system ignores incoming threats it determines will land in uninhabited areas

Source: <https://missilethreat.csis.org/defsys/iron-dome/>
<https://www.rafael.co.il/worlds/air-missile-defense/short-range-air-missile-defense/>

Q.15) Consider the following statements:

- Recently, an Integrated Cryogenic Engine Manufacturing Facility was setup at the Defence Research and Development Organization (DRDO).
- India is the only country in Asia to conduct successful test flight for Cryogenic Engine.

SFG 2023 | LEVEL 1 | Test #40 – Solutions | 

3. Cryogenics is the science that addresses the production and effects of very low temperatures.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: The Hindustan Aeronautics Limited (and not Defence Research and Development Organization) has set up a Rs 208 crore Integrated Cryogenic Engine Manufacturing Facility (ICMF) in Bengaluru that would cater to the entire rocket engine production under one roof for Indian Space Research Organisation.

Statement 2 is incorrect: In January 2014 India successfully flew GSLV-D5 with a cryogenic engine and became the sixth country in developing cryogenic engines. Cryogenic engines are the most widely used engines world over in launch vehicles. **India is not the only country in Asia to conduct successful test flight for Cryogenic Engine.** Due to the complex nature of the cryogenic engine, till date only a few countries like the USA, France, **Japan, China** and Russia have mastered the cryogenic technology.

Statement 3 is correct: Cryogenics is the science that addresses the production and effects of very low temperatures. It could be used to include all temperatures below the freezing point of water (0 C). In particular, efficient heat exchangers are required to reach very low temperatures. Over the years the term cryogenics has generally been used to refer to temperatures below approximately -150 C.

Source: [https://www.business-standard.com/article/companies/hal-sets-up-rs-208-crore-rocket-engine-manufacturing-facility-for-isro-](https://www.business-standard.com/article/companies/hal-sets-up-rs-208-crore-rocket-engine-manufacturing-facility-for-isro-122092600480_1.html#:~:text=On%20January%20five%2C%202014%20India,developing%20cryogenic%20engines%2C%20it%20said.)

Q.16) ‘Non-Fungible Tokens (NFTS)’ are among unique digital assets that is seen in news for quite some time. In this context, which of the following are the possible uses of Non-Fungible Tokens?

1. It can be new medium of investment for various investors.
2. It can enable true ownership of digital art.
3. It can reduce the instances of piracy and fraud in music industry.
4. It can help in storage of medical records and clinical data.

Select the correct answer using the codes given below:

- a) 1, 3 and 4 only
- b) 1 and 4 only
- c) 2 and 3 only
- d) 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct answer.

Non-fungible tokens are unique digital items stored on a blockchain, the same network that runs cryptocurrencies. Anything digital – images, videos, music, online version of various articles – can be

converted into an NFT and monetized. **NFTs are not the digital art but instead certificates of authenticity**, and most use the blockchain of Ethereum, the second-biggest cryptocurrency.

Statement 1 is correct: Non-Fungible Tokens (NFTs) can be a **new medium of investment for various investors**. The **unique and scarce nature of NFTs can make them appealing to investors** who are looking for new and innovative ways to invest their money. People can invest in rare and unique digital assets that can **appreciate in value over time**. This has led to the creation of new investment opportunities in the digital asset space, particularly for investors looking for alternative investments.

Statement 2 is correct: Artists worldwide can **turn their graphical designs, digital artwork, or photographs into a Non-Fungible Token** that can be bought and sold. The blockchain carries records of all transactions without the risk of tampering, and artists can even earn royalties when an image or media file is put to commercial use.

By creating an NFT for a digital artwork, the artist can assign a unique digital signature to the artwork, which can be used to **prove that the artwork is original and that the NFT holder is the true owner of the digital artwork**.

Statement 3 is correct: The music industry has long struggled with piracy and illegal distribution of music, which can negatively impact the revenue and livelihoods of musicians and other industry professionals. NFTs provide a way to prove ownership and authenticity of digital music, allowing **musicians to sell their music directly to buyers** and giving buyers the ability to prove that they own a unique piece of music.

Statement 4 is correct: NFTs can be used to **store medical records and clinical data**, ensuring that the data is secure, private, and accessible only to authorized individuals. This can help to prevent data breaches and unauthorized access to sensitive information, and also provides a way for patients to manage and control their own medical records.

Source: [https://www.spiceworks.com/tech/innovation/articles/what-is-nft-non-fungible-token/#:~:text=Non%2Dfungible%20tokens%20\(NFT\),real%20estate%20or%20digital%20art.](https://www.spiceworks.com/tech/innovation/articles/what-is-nft-non-fungible-token/#:~:text=Non%2Dfungible%20tokens%20(NFT),real%20estate%20or%20digital%20art.)
<https://blog.forumias.com/nft-how-crypto-tech-made-it-possible-to-own-trade-digital-art/>

Q.17) Recently, Defense Research and Development Organization (DRDO) has successfully demonstrated Quantum Key Distribution (QKD) technology. In this regard, consider the following statements:

1. Quantum Key Distribution relies on the principle of superconductivity to provide a secure communication technique.
2. It has the ability to detect any intrusion or eavesdropping on the QKD transmission network.
3. One of the limitations of this technology is its inability to provide long range transmission beyond 100 kilometers.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 3 only

Ans) c

Exp) Option c is the correct answer.

Quantum Key Distribution (QKD) is a **method for securely distributing cryptographic keys using the principles of quantum mechanics**. The process uses a shared quantum channel, such as a fiber optic cable, to transmit keys between two parties. The keys are encoded in the states of individual photons, which are sent through the channel.

Statement 1 is incorrect: Quantum Key Distribution relies on the **properties of quantum mechanics, specifically the Heisenberg Uncertainty Principle and the laws of quantum physics** to provide a secure communication technique, not the principles of superconductivity of source.

Statement 2 is correct: Quantum Key Distribution provide a high level of security and has the **potential to detect any intrusion or eavesdropping on the transmission**. Because of the unique and fragile properties of photons, any third party (or eavesdropper) who tries to read or copy the photons in any way will change the photons' state.

The change will be detected by the endpoints, alerting them that the key has been tampered with and must be discarded. A new key is then transmitted. Moreover, since the keys generated are truly random, they are protected from future hacking attempts.

Statement 3 is correct: One of the challenges for QKD is the **distance over which the photons can travel, which is typically around 100km**. This inability to provide long-range transmission beyond 100 kilometers is due to the **loss of signal strength over long distances**.

Knowledge Base:

Heisenberg's Uncertainty Principle: It was articulated in 1927 by the German physicist Werner Heisenberg. According to this principle, it is **impossible to know the exact velocity of a particle, and its exact position, at the same time**. One can calculate velocity, or position, to precision, but not both at the same time.

Source: <https://quantumxc.com/blog/how-does-quantum-key-distribution-work/>
<https://blog.forumias.com/telecom-secretary-asks-c-dot-to-work-on-6g-launches-quantum-communication-lab-2/>

Q.18) Which of the following are the initiatives by the Government of India to promote the development of Artificial Intelligence in India?

1. FutureSkills PRIME initiative
2. Visvesvaraya PhD Scheme
3. National Mission on Interdisciplinary Cyber-Physical Systems
4. Mission LiFE
5. RAISE scheme

Select the correct answer using the codes given below:

- a) 1, 3 and 4 only
- b) 2, 3 and 5 only
- c) 1, 2, 3 and 5 only
- d) 1, 2, 3, 4 and 5

Ans) c

Exp) Option c is the correct answer.

Artificial Intelligence (AI) is the simulation of human intelligence in machines that are programmed to think and learn like humans. Government of India has taken several steps to promote upskilling or reskilling in the field of Artificial Intelligence.

Option 1 is correct: Ministry of Electronics and IT (MeitY) has initiated a programme titled **FutureSkills PRIME (www.futureskillsprime.in)** in collaboration with NASSCOM, a B2C framework for **re-skilling/ up-skilling of IT professionals in 10 Emerging are as including Artificial Intelligence**.

Option 2 is correct: Government of India has initiated '**Visvesvaraya PhD Scheme**' with an objective to enhance the number of PhDs in Electronics System Design & Manufacturing (ESDM) and IT/IT Enabled Services (IT/ITES) sectors in the country. The **research areas under the scheme include Artificial Intelligence** (covering 82 PhD fellows) and Machine Learning (covering 59 PhD fellows).

Option 3 is correct: Department of Science & Technology is implementing the **National Mission on Interdisciplinary Cyber-Physical Systems (NM-ICPS)** to promote R&D, Human Resource Development (HRD), Technology Development, Entrepreneurship Development, International Collaboration etc. As part of the Mission implementation, 25 Technology Innovation Hubs (this) have been established in **reputed institutes across the country in advanced technologies including Machine Learning and Artificial Intelligence.**

Option 4 is incorrect: **Mission LiFE** was introduced by Prime Minister Modi at the COP26 in Glasgow in November 2021. It is an **India-led global mass movement** that will nudge individual and collective actions towards the **protection and preservation of environment.** As part of Mission LiFE (Lifestyle for Environment), the Indian Government unveiled a list of 75 lifestyle practices that can promote climate-friendly behavior. It is **not among the initiative that aims to promote development of Artificial Intelligence** in the country.

Option 5 is correct: Government of India organized **Responsible AI for Social Empowerment (RAISE) in 2020, a first-of-its-kind global meeting of minds on Artificial Intelligence** to drive India's vision and roadmap for social transformation, inclusion and empowerment through responsible AI. It was attended by 79,000+ stakeholders from academia, research, industry and government representatives from 147 participating countries.

Source:

<https://pib.gov.in/PressReleasePage.aspx?PRID=1811372#:~:text=Ministry%20of%20Electronics%20and%20IT,are%20as%20including%20Artificial%20Intelligence.>

Q.19) Consider the following:

1. Protects consumer's 'freedom of choices' of using internet contents
2. Access to information regardless of location
3. Drastic reduction in the cost of internet services to the consumers
4. Promotes social inclusion of different types of users

Which of the above are the most likely advantages of net neutrality?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1, 2 and 4 only
- d) 2, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Net neutrality is the principle that all internet traffic should be treated equally, without discrimination or preference given to certain types of traffic or websites. This means that internet service providers (ISPs) should not be able to block or slow down access to specific websites or services, or charge higher fees for faster access to certain websites or services.

The concept of net neutrality is based on the idea that the internet is a public utility, like water or electricity, and should be accessible to everyone without discrimination.

Option 1 is correct: Net neutrality ensures that internet service providers (ISPs) cannot block or limit access to certain websites or online services, giving **consumers the freedom to choose what they want to access and use on the internet.** This results in increased consumer choices and the ability to access a wider range of internet content.

Option 2 is correct: Access to information regardless of location is an advantage of net neutrality as it ensures that **all internet users have access to the same information, regardless of their location** or the resources of their ISPs.

Option 3 is incorrect: Reduced cost of internet to consumers **is not necessarily an advantage of net neutrality**, as it is possible that ISPs may charge higher fees for your data connection. With net neutrality, users only pay for the service, not the data they consume. Video streaming services were responsible for 57% of the bandwidth used worldwide in 2018. Thus, the **added cost will be transferred to the consumer in form of higher platform fees.**

Option 4 is correct: Net neutrality helps to **promote social inclusion by ensuring that all users have equal access to the internet, regardless of their ability to pay.** This means that people with **disabilities, low-income families, and people in rural areas can access the same information** and services as those in urban areas, promoting digital equality and social inclusion.

Source: <https://nordvpn.com/blog/net-neutrality-pros-and-cons/>
<https://blog.forumias.com/net-neutrality/>
<https://blog.forumias.com/the-issue-of-net-neutrality-explained-pointwise/>

Q.20) With reference to the Ethanol production, consider the following pairs:

Technological level	Raw material used
1. First Generation ethanol	Edible food crops
2. Second Generation ethanol	Algae grown in wastewater
3. Third Generation ethanol	Genetically engineered feedstock

How many of the pairs given above are correctly matched?

- a) Only One pair
- b) Only Two pairs
- c) All Three pairs
- d) None of the pairs

Ans) a

Exp) Option a is the correct answer.

Ethanol is a renewable fuel made from various plant materials collectively known as "biomass." Bioethanol is an alcohol made by microbial fermentation, mostly from carbohydrates produced in sugar- or starch-bearing plants such as corn, sugarcane, sweet sorghum or lignocellulosic biomass. Cultivated biomass has begun to be used to generate bioethanol. They are categorized as first (1G), second (2G), third-generation (3G) and fourth generation (4G), based on the source of raw material used for bioethanol production.

Pair 1 is correct: Raw materials for 1G bioethanol synthesis are edible crops like corn seeds and sugarcane. There is not enough food for everyone; so, the use of 1G is a major concern.

Pair 2 is incorrect: **2G plants utilize surplus biomass and agricultural waste** to produce bioethanol. 2G bioethanol can be produced using inedible farm waste left over after harvest. Corn cobs, rice husks, wheat straw and sugarcane bagasse can all be transformed into cellulose and fermented into ethanol that can then be mixed with conventional fuels.

Pair 3 is incorrect: **Fourth-generation ethanol** will be the amalgamation of genomically prepared microorganisms and genetically engineered feedstock. Cyanobacteria are engineered to increase the oil yield and are used for the efficient production of bioenergy. These feedstocks can be grown in nonarable land.

Third-generation ethanol uses the algae grown in wastewater, sewage or salt water. Water used for human consumption is not required. The benefit of 3G is that it does not compete with food.

Knowledge Base:

For the first time during ethanol supply year 2018-19, following raw materials apart from C heavy molasses were allowed for ethanol production in India viz. B heavy molasses, sugarcane juice, sugar, sugar syrup, damaged food grains like wheat and rice unfit for human consumption.

Source: <https://www.downtoearth.org.in/blog/energy/second-generation-bioethanol-it-is-time-to-launch-it-headlong-78507>

<https://indianexpress.com/article/explained/1g-2g-bioethanol-plants-blending-petrol-6558162/>

Q.21) 'RNA interference (RNAi)' technology has gained popularity in the last few years. Why?

1. It is used in developing gene silencing therapies.
2. It can be used in developing therapies for the treatment of cancer.
3. It can be used to develop hormone replacement therapies.
4. It can be used to produce crop plants that are resistant to viral pathogens.

Select the correct answer using the code given below.

- a) 1, 2 and 4
- b) 2 and 3
- c) 1 and 3
- d) 1 and 4 only

Ans) a

Exp) Option a is the correct answer.

Statement 1 and 4 are correct: RNA interference (RNAi) or Post-Transcriptional Gene Silencing (PTGS) is a conserved biological response to double-stranded RNA that mediates resistance to both endogenous parasitic and exogenous pathogenic nucleic acids, and regulates the expression of protein-coding genes.

This natural mechanism for sequence-specific gene silencing promises to revolutionize experimental biology and may have important practical applications in functional genomics, therapeutic intervention, **agriculture (to produce crop plants that are resistant to viral pathogens)** and other areas.

Statement 2 is correct: RNAi is used in functional genomics (systematic analysis of loss-of-function phenotypes induced by RNAi triggers) and developing therapies for the treatment of viral infection, dominant disorders, neurological disorders, and **many types of cancers (in vivo inactivation of gene products linked to human disease progression and pathology).**

Statement 3 is incorrect: Hormone replacement therapy (HRT) is a treatment to relieve symptoms of the menopause. It replaces hormones (Oestrogen and Progesterone) that are at a lower level as you approach the menopause.

Source: UPSC PRELIMS 2019

Q.22) Which of the following are the issues associated with the usage of Virtual Private Network?

1. Slowing down of internet connection speeds
2. Not fully protected against online threats
3. Higher cost of doing business
4. Loss of data or connection
5. Inability to bypass geographical restrictions.

Select the correct answer using the codes given below:

- a) 1 and 2 only
- b) 2 and 5 only
- c) 1, 3 and 5 only

d) 1, 2, 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

VPN stands for Virtual Private Network. It is a technology that creates a secure, encrypted connection over a public network such as the internet. This allows users to access a private network remotely as if they were directly connected to it. However, there are a few potential issues associated with using VPNs:

Option 1 is correct: Encryption and decryption of data can **slow down internet connection speeds**, especially on lower-end devices or when the VPN server is located far away. VPNs can slow download speeds and increase latency to an unusable degree. This can be a major issue if your internet connection is already quite slow or if you're doing something speed-sensitive, such as streaming, gaming, or torrenting.

Option 2 is correct: VPNs **do not provide protection against all online threats like malware and phishing**. VPN encrypts your data while in transit, it does not protect it when it reaches its destination. If the VPN server is compromised or the data is stored on an unsecured device, it can still be accessed by unauthorized parties.

Option 3 is correct: Some VPNs can be **expensive, which may not be feasible for some users, especially for businesses**. Some VPN providers offer premium services with additional features, such as dedicated IP addresses, that can be costly. Additionally, some providers offer different pricing plans based on the number of users or devices that will be connected to the VPN.

For businesses, the cost of a VPN can be a significant expense, especially if they have a large number of employees or devices that need to be connected.

Option 4 is correct: VPN connections can be **unstable, and may drop unexpectedly**, which can disrupt ongoing activities and lead to loss of data or connection. This can be especially problematic for businesses, as it can disrupt workflows and lead to lost productivity.

Option 5 is incorrect: VPNs **can be used to bypass geographical restrictions and access content that is not available in a certain location**. This is known as "geo-spoofing" and it is a popular use of VPNs.

Many websites and online services are only available in certain countries, due to licensing agreements or government restrictions. For example, some streaming services like Netflix, Hulu, and Amazon Prime Video, have different content libraries in different regions. Similarly, some social media platforms and messaging apps are blocked in certain countries. By using a VPN, you can connect to a server located in a different country and access content that is not available in your own location.

Q.23) In the current digital era, the reliance on data for day-to-day business activities and financial transactions etc. has increased like never before. In this context, which one of the following statements correctly describe 'Edge Data Centers'?

- They are data centers used to deliver cloud-based services to customers over the internet.
- They are data centers that provide space for multiple organizations to house their own server and networking equipment.
- They are small and decentralized facilities that are located close to the source of the data they process.
- They are owned and operated by a single organization and are used to support the organization's internal operations and services.

Ans) c

Exp) Option c is the correct answer.

Edge data centers are **small, decentralized facilities** that are **located close to the source of the data they process**, rather than in a central location. India is increasingly seeing large opportunities in edge data centers, which are small data centers that are located close to the edge of a network, especially in **tier 2 and tier 3 cities**. They provide the same devices found in traditional data centers, but are contained in a smaller footprint, closer to end users and devices. Edge data centers are often used in applications such as **Internet of Things, 5G, and Virtual Reality/Augmented Reality**, where low latency and high-speed data transfer are crucial.

Advantages of Edge Centers:

- 1) **Low Latency:** By bringing data storage and processing capabilities closer to the end user, edge data centers can significantly reduce the latency of data delivery.
- 2) **Improved User Experience:** Edge data centers can improve the user experience by providing faster access to data and services, resulting in a more responsive and seamless experience.
- 3) **Increased Reliability:** Edge data centres can improve the reliability of data delivery by providing multiple, decentralized points of access to data, which can reduce the risk of data loss or downtime in the event of a failure at a central data center.
- 4) **Cost savings:** Edge data centres can help organizations to save costs by reducing the amount of data that needs to be transmitted over long distances, reducing the need for expensive wide area network (WAN) links.
- 5) **Capacity and Scalability:** Edge data centres can help organizations to increase capacity and scalability by providing additional data storage and processing capabilities closer to the source of the data, enabling the organization to handle more data and more users.

Option a is incorrect: **Cloud data centers** are data centers operated by cloud service providers, and are used to deliver cloud-based services such as storage, computing, and software to customers over the internet.

Option b is incorrect: **Colocation data** centers provide space, power, and cooling for multiple organizations to house their own server and networking equipment.

Option d is incorrect: **Enterprise data centers** are data centers owned and operated by a single organization, and are used to support the organization's internal operations and services. **Edge data centers are deployed as either standalone facilities or in a number of different environments**, such as at telecommunications central offices, cable head ends (i.e., local distribution points), the base of cell towers, or on-premises at a company.

Source: <https://www.thehindu.com/real-estate/edge-data-centres-india-ecommerce-real-estate/article65721057.ece>

<https://timesofindia.indiatimes.com/blogs/voices/the-growing-importance-of-data-centres-in-digitally-connected-world/>

Q.24) Consider the following activities:

1. Tracking the location of goods
2. Analyzing the distribution of mineral resources
3. Referring weather forecasts to particular territories
4. Assessing vegetation on a selected terrain
5. Managing personal finances of an individual

At the present level of technology available, which of the above activities can be successfully carried out by using Geo-Spatial technology?

- a) 1, 2 and 5 only
- b) 2 and 4 only
- c) 1, 2, 3 and 4 only
- d) 2, 3, 4 and 5 only

Ans) c

Exp) Option c is the correct answer.

Geo-spatial technology refers to the **use of technology to collect, analyze, and visualize data that is related to a specific location**. This can include data such as maps, satellite imagery, and geographic information systems (GIS) data. The technology is used in a wide range of fields, including urban planning, environmental management, military operations, and natural resource management. Some examples of geo-spatial technologies include:

Option 1 is correct: Geo-spatial technology can be **used to track the location and movement of goods**, as well as to monitor and analyze data related to the quality of the goods, such as temperature or humidity data. GPS devices can be **attached to vehicles or cargo to track their location in real-time**. This information can be used by logistics companies, manufacturers and retailers to optimize routes, reduce costs, and improve supply chain efficiency. GIS can be used to create maps and visualizations that show the location and movement of goods, as well as to analyze data related to the quality of the goods.

Option 2 is correct: Geo-spatial technology, specifically GIS and remote sensing, can be used to **map and analyze the distribution of mineral resources**. Remote sensing technologies such as satellite imagery and aerial photography can be used to detect and map the surface expression of mineral deposits and to identify areas of mineralization. GIS can then be used to analyze and visualize the data, creating maps that show the distribution and characteristics of mineral resources.

Option 3 is correct: Geo-spatial technology can be used to **visualize and analyze weather data, such as through the use of GIS** or by overlaying weather forecasts onto maps. GIS allows users to **overlay weather forecasts, radar images and other weather data onto maps**. This can be used to create visualizations that show current weather conditions and forecasted weather patterns, such as temperature, precipitation, wind speed and direction.

Option 4 is correct: Geo-spatial technology can be used to **assess the state of vegetation on a selected terrain**, such as through the use of remote sensing or GIS. Remote sensing technologies such as satellite imagery, aerial photography, and LiDAR can be used to map and monitor vegetation cover and structure, such as tree height, canopy cover, and leaf area. This information can be used to monitor changes in vegetation cover and structure over time, such as in response to land use change, natural disturbances, or climate change.

Option 5 is incorrect: Geo-spatial technology is **not typically used for personal finance**, as it is not directly related to managing one's finances.

SFG 2023 | LEVEL 1 | Test #40 – Solutions | ForumIAS

Q.25) Which of the following best describes the term “Forever chemicals”, seen in news recently?

- The Chemicals that help to reduce the negative impacts of climate change.
- The Chemicals that persist in the environment for a longer time periods.
- The Chemicals which can be used as sustainable alternatives to the Chlorofluorocarbons.
- The Chemicals that can react with plant tissues and change their characteristics permanently.

Ans) b

Exp) Option b is the correct answer.

Option b is correct: According to a recent study, scientists have found that rainwater from many places across the globe is contaminated with **Per- and Polyfluoroalkyl Substances (PFAs)**.

Further, **they are called Forever chemicals because of their tendency to stick around in the atmosphere, rainwater, and soil for long periods of time.** PFAs are also listed in the Stockholm Convention.

What are PFAs?

- PFAs are man-made chemicals used to make non-stick cookware, water-repellent clothing, stain-resistant fabrics, cosmetics, fire-fighting forms, and many other products that resist grease, water and oil.
- They refer to a group of over 3,000 widely used human-made chemicals linked to cancer and other health risks.
- They have tendency to stick around in the atmosphere, rainwater, and soil for long periods of time.
- PFAs can migrate to the soil, water and air during their production and use.
- Since most PFAs do not break down, they remain in the environment for long periods of time.
- There is no known method that can extract and remove PFAs from the atmosphere itself.

Source: <https://indianexpress.com/article/explained/explained-health/explained-forever-chemicals-contaminating-rainwater-globally-8102861/>

Q.26) With reference to ‘Additive Manufacturing’, consider the following statements:

- It is a process of creating a physical object by cutting away material from a solid piece of material.
- It requires the creation of a virtual design of the object using a 3D modelling program.
- Compared to the traditional manufacturing processes, additive manufacturing reduces material waste during the manufacturing processes.

Which of the statements given above is/are correct?

- 1 only
- 1 and 3 only
- 2 and 3 only
- 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

The Ministry of Electronics & Information Technology has released a “**National Strategy on Additive Manufacturing**”. It aims to position India as a global hub for Additive Manufacturing development and deployment.

Statement 1 is incorrect: Additive manufacturing, also known as 3D printing, is a process of creating a **physical object by laying down successive layers of material.** The object is built up layer by layer, rather than being cut away from a piece of solid material as in traditional manufacturing methods. 3D printer is **controlled by a computer, which receives the instructions from the CAD software and controls the build process.** The computer ensures that the printer accurately builds the object layer by layer, adding material until the object is complete.

Subtractive manufacturing, also known as traditional machining, is a process of creating a physical object by cutting away material from a solid piece of material.

Statement 2 is correct: Under additive manufacturing technology, a virtual design of the object is created using a **3D modeling program based on Computer Aided Design (CAD)**. The CAD software is used to create a digital 3D model of the object, which can then be converted into a physical object using an additive manufacturing process. The digital 3D model contains detailed information about the **object's shape, size, and internal structures**, which is used to guide the additive manufacturing process.

Statement 3 is correct: In traditional manufacturing methods such as subtractive machining, a large amount of material is cut away or removed to create the desired shape of the object. This results in a significant amount of material waste. In contrast, **additive manufacturing builds up the object layer by layer, using only the material that is needed to create the final shape**. This process results in **minimal material waste**, as only the necessary amount of material is used.

Source: <https://additivemanufacturing.com/basics/>
<https://www.ge.com/additive/additive-manufacturing>
<https://blog.forumias.com/3d-printing/>

Q.27) Consider the following technological innovations:

1. A self-driving car making decisions about when to brake, accelerate, and change lanes.
2. A pacemaker automatically adjusting the pace of the heart to bring it back to the desired rate.
3. A drone using a combination of GPS, cameras and lidar to navigate.

Which of the above technological innovations are the correct applications of 'Cyber-Physical systems'?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Cyber Physical Systems (CPS) are a new class of engineered systems that integrate computation and physical processes in a dynamic environment. It combines **computational elements (cyber) and physical elements (physical) to create a closed-loop system** that can interact with the physical world. Examples of CPS include self-driving cars, industrial control systems, and medical devices. These systems use sensors to gather data from the physical environment, use computational elements to process the data, and use actuators to perform actions in the physical world. The examples of Cyber Physical Systems are:

Option 1 is correct: A self-driving car making decisions about **when to brake, accelerate, and change lanes is a correct example of a Cyber-Physical system**. It uses computational models and sensors to interact with the physical world in a meaningful way, making decisions about the car's movement based on the data it receives from its sensors.

Option 2 is correct: A pacemaker automatically adjusting the pace of the heart to bring it back to the desired rate is also a correct example of a Cyber-Physical system. It uses **computational models and sensors to monitor the heart rate** and adjust the pace accordingly.

Option 3 is correct: A **drone using a combination of GPS, cameras, and lidar to navigate**, while also following a pre-defined flight path is a **correct example of a Cyber-Physical system**. The drone uses computational models and sensors to interact with the physical world, making decisions about its movement based on the data it receives from its sensors. It uses sensor data like GPS and lidar to detect its position, cameras to detect obstacles and computational models to plan its path, its control system uses

the sensor data and the computed path to control the movement of the drone and make adjustments as needed.

Q.28) “India based Neutrino observatory (INO)” is proposed to be built in a deep underground cave in the Bodi West Hills of Tamil Nadu. Which of the following is/are the correct reasons for building the observatory underground?

1. It helps to reduce the background noise from other particles that are present in the atmosphere.
2. The underground observatory preserves the physical properties of neutrinos as they are affected by atmospheric matter.
3. Neutrinos require vacuum-like condition so that they can be effectively detected.

Select the correct answer using the codes given below:

- a) 1 only
- b) 1 and 2 only
- c) 1 and 3 only
- d) 3 only

Ans) a

Exp) Option a is the correct answer.

Indian Neutrino Observatory (INO) is a proposed particle physics research mega project. The objective of the project was to study neutrinos in a 1,200-metre-deep cave. The project is proposed to be set up near Bodi West hills in Pottipuram village in Theni district in Tamil Nadu. The project was initially mooted by the Institute of Mathematical Sciences and then by the Tata Institute of Fundamental Research.

Statement 1 is correct: The India-based Neutrino Observatory (INO) needs to be underground in order to **reduce background noise and increase the sensitivity of the detector**. Neutrinos are subatomic particles that are difficult to detect because they interact very weakly with matter.

Building the detector underground helps to **reduce the background noise from other particles that are present in the atmosphere**. The rock burden of over 1 km in all directions shields the detector from other cosmic rays. Since neutrinos can easily pass through anything, they will reach the detector while the **other particles will be filtered out by the rock in the mountain**.

Thys, by placing the detector underground, scientists can effectively shield it from the unwanted particles and increase the sensitivity of the detector.

Statement 2 is incorrect: The underground observatory **does not preserve the physical properties of neutrinos** as they are not affected by atmospheric matter. Neutrinos are subatomic particles that interact very weakly with matter, so they can pass through large amounts of rock and soil without interacting.

Statement 3 is incorrect: Neutrinos **do not require vacuum-like conditions to react with other atoms and it can be detected in underground as well as in the atmosphere**. However, underground detectors are more advantageous for neutrino detection than atmospheric detectors because the underground location helps to reduce the background noise from other particles and to shield the detector from cosmic rays.

Q.29) With reference to the Chandrayaan-3 mission, consider the following statements:

1. It is a follow-on mission to Chandrayaan-2 to demonstrate India's capability of soft landing.
2. GSLV MkIII will be the launching vehicle for Chandrayaan-3.
3. It comprises of Orbiter, Lander and Rover to explore the unexplored South Pole of the Moon.
4. It is a joint collaboration mission of India and Japan.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 4 only
- c) 1, 2 and 3 only
- d) 3 and 4 only

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: Chandrayaan-3 is a follow-on mission to Chandrayaan-2 to demonstrate India's capability of soft landing. It will be launched by GSLV MkIII from SrihariKota. The propulsion module will carry the lander and rover configuration till 100km lunar orbit. The propulsion module has Spectro-polarimetry of HAbitable Planet Earth (SHAPE) payload to study the spectral and polarimetric measurements of Earth from the lunar orbit.

Statement 2 is correct: The GSLV Mk-III will carry Chandrayaan 3 to its designated orbit. This three-stage vehicle is India's most powerful launcher to date, and is **capable of launching 4-ton class of satellites to the Geosynchronous Transfer Orbit (GTO)**.

Statement 3 is incorrect: Notably, the Chandrayaan-3 mission will **only be carrying a Lunar lander and rover**, unlike its predecessor which carried an orbiter, lander and rover. It will communicate to the earth with help of orbiter of Chandrayaan 2.

Statement 4 is incorrect: Chandrayaan-3 is an indigenous mission. Whereas India and Japan are collaborating to launch **a joint Lunar Polar Exploration Mission around 2024-25**.

Source: <https://www.isro.gov.in/Launcher.html> , https://www.isro.gov.in/chandrayaan3_science.html

Q.30) Consider the following statements about the Small Savings Scheme being implemented by the central government of India:

1. The collections from all small savings instruments are credited to the National Small Savings Fund (NSSF).
2. Both National Small Savings Certificate (NSC) and Kisan Vikas Patra (KVP) are a type of Small Savings instruments.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Recently, the government has kept interest rates unchanged on Small savings Schemes, including NSC (National Savings Certificate) and PPF (Public Provident Fund) for the first quarter of 2022-23 (April-June) due to an elevated level of inflation. Small savings have emerged as a key source of financing the government deficit, especially after the Covid-19 pandemic led to a ballooning of the government deficit, necessitating higher need for borrowings.

SFG 2023 | LEVEL 1 | Test #40 – Solutions | 

Statement 1 is correct: Small Saving Schemes/Instruments are the major source of household savings in India and comprise 12 instruments. The depositors get an assured interest on their money. **Collections from all small savings instruments are credited to the National Small Savings Fund (NSSF).**

Statement 2 is correct: small savings instruments can be classified under three heads:

- 1) Postal Deposits (comprising savings account, recurring deposits, time deposits of varying maturities and monthly income scheme).
- 2) **Savings Certificates: National Small Savings Certificate (NSC) and Kisan Vikas Patra (KVP).**
- 3) Social Security Schemes: Sukanya Samridhi Scheme, Public Provident Fund (PPF) and Senior Citizens 'Savings Scheme (SCSS).

Source: https://indianexpress.com/article/business/banking-and-finance/interest-rates-on-small-savings-schemes-unchanged-for-first-quarter-of-fy23-7846434/#:~:text=The%20interest%20rate%20on%20savings,interest%20of%205.8%20per%20cent.https://www.nsiindia.gov.in/InternalPage.aspx?Id_Pk=157

Q.31) Which of the following is/are cited by the scientists as evidence/evidences for the continued expansion of universe?

1. Detection of microwaves in space
2. Observation of redshift phenomenon in space
3. Movement of asteroids in space
4. Occurrence of supernova explosions in space

Select the correct answer using the codes given below:

- a) 1 and 2 only
- b) 2 only
- c) 1, 3 and 4
- d) None of the above can be cited as evidence.

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: The cosmic microwave background (CMB) is thought to be leftover radiation from the Big Bang, or the time when the universe began. So, the detection of microwaves in space is an evidence for the continued expansion of universe. According to Big Bang theory, when the universe was born it underwent a rapid inflation and expansion, and continues to expand even today.

Statement 2 is correct: A redshift reveals how an object in space (star/planet/galaxy) is moving compared to us. It lets astronomers measure a distance for the most distant (and therefore oldest) objects in our universe. Studying light from galaxies throughout our universe, astronomers have noticed something surprising: almost all of it is redshifted. In fact, not only is it redshifted, galaxies that are farther away are more redshifted than closer ones. So, it seems that not only are all the galaxies in the universe moving away from us, the farther ones are moving away from us the fastest. This is evidence of continued expansion of universe.

Statement 3 and 4 are incorrect: Movement of asteroids in space and occurrence of supernova explosions in space code are not evidences of continued expansion of universe.

Source: UPSC PRELIMS 2012

Q.32) Which of the following statements about Mission Prarambh is/are correct?

1. It marks the launch of India's first privately developed space launch vehicle.
2. The mission was authorized by Antrix, the commercial and marketing arm of the Indian Space Research Organization.
3. Vikram-S, a suborbital launch vehicle, has been launched under this mission.

Choose the correct answer using the code given below:

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Heralding a new age in India's space sector, the Indian National Space Promotion and Authorization Center (IN-SPACe), Department of Space (DOS), recently authorized the first private sector launch of a Launch Vehicle by Skyroot Aerospace – a Hyderabad based space start-up. This will enable the first-ever launch of a privately designed and built rocket from India. The mission carried three customer payloads.

Statement 1 is correct: Under Mission Prarambh, the launch of Vikram-S, a suborbital launch vehicle from M/s Skyroot Aerospace Pvt. Ltd., Hyderabad, was accomplished successfully on November 18, 2022. It marks the first launch of a launch vehicle built by a private company in India.

Statement 2 is incorrect: The mission was authorized by the Indian National Space Promotion and Authorization Center (IN-SPACe), not Antrix.

Statement 3 is correct: The Vikram-S rocket is a single-stage **sub-orbital** launch vehicle which would carry three customer payloads and help test and validate the majority of the technologies in the Vikram series of space launch vehicles has been launched under this mission.

Source: https://www.isro.gov.in/mission_prarambh.html ,

<https://www.isro.gov.in/ANTRIX.html> <https://www.indiatoday.in/india-today-insight/story/why-the-vikram-s-launch-is-a-big-milestone-for-indias-space-sector-2300014-2022-11-21>

Q.33) Which of the following statements about the Coronal Hole is **incorrect?**

- a) These are regions on the Sun's surface from where solar winds flow out into space.
- b) They can be the cause of geomagnetic storms on Earth.
- c) They usually appear darker than their surroundings due to their lower temperatures.
- d) These are easily visible to human eyes, without using any visual aid.

Ans) d

Exp) Option d is the correct answer.

Option a is correct: Coronal holes are regions on the sun's surface from where fast solar wind gushes out into space.

Option b is correct: These fast solar wind streams sometimes interact with earth's magnetic field, creating what's called a **geomagnetic storm**. This can expose satellites to radiation and interfere with communications signals.

Option c is correct: Because they contain little solar material, they have lower temperatures and thus appear much darker than their surroundings. These coronal holes can cause a solar storm on Earth as they release a complex stream of solar winds.

Option d is incorrect: Coronal holes appear as dark areas in the solar corona **in extreme ultraviolet (EUV) and soft x-ray solar images. The phenomenon is typically invisible to the human eyes.**

SFG 2023 | LEVEL 1 | Test #40 – Solutions | ForumIAS

Q.34) With reference to the Technological Achievements of Mars Orbiter Mission (MOM), consider the following statements:

1. The mission gave an opportunity to classify extra-terrestrial landslides using machine learning models.
2. It photographed, for the first time, the far side of the Mars' moon Deimos.
3. The mission is credited with the discovery of 'supra-thermal' Argon-40 atoms in the Martian exosphere.
4. The mission captured the seasonal changes of thickness of Martian polar ice caps.
5. It has helped in understanding of the composition of several gases in the Martian exosphere.

Which of the statements given above are correct?

- a) 1, 2, 3 and 5 only
- b) 1, 3, and 4 only
- c) 2, 4, and 5 only
- d) 1, 2, 3, 4 and 5

Ans) d

Exp) Option d is the correct answer.

Mars Orbiter Mission (MOM) or Mangalyaan is a space probe launched by the ISRO in 2013 and has been in the Martian orbit since 2014. It was launched using a Polar Satellite Launch Vehicle (PSLV) rocket C25.

Statement 1 is correct: The mission gave an opportunity to classify extra-terrestrial landslides using machine learning models.

Statement 2 is correct: The MOM spacecraft photographed, for the first time, the far side of **Deimos**, one of the natural satellites of Mars.

Statement 3 is correct: The mission is also credited with the discovery of 'supra-thermal' Argon-40 atoms in the Martian exosphere. It gave some clue on one of the potential mechanisms for the escape of atmosphere from Mars.

Statement 4 is correct: The mission captured the time-variation of the Martian polar ice caps, i.e., seasonal changes of thickness of polar ice caps-spreading during Martian winter and shrinking during Martian summer. It also measured the Martian apparent albedo that indicated the reflecting power of the Martian surface.

Statement 5 is correct: Mars Orbiter Mission has gifted an understanding of the composition of several gases in the Martian exosphere. It quantified the altitude where the Martian atmosphere has a transition from the CO₂ rich regime to atomic Oxygen-rich regime during the local evening.

Q.35) What are 'Iprodione' and 'Terbufos' that have been recently in the news?

- a) Pesticides
- b) Antiviral Drugs
- c) Artificial Ripening Agents
- d) Ozone Depleting Agents

Ans) a

Exp) Option a is the correct answer.

Recently, the international trade of two new hazardous pesticides – Iprodione and Terbufos – has been recommended for “**prior informed consent**” (PIC) procedure under the Rotterdam Convention.

SFG 2023 | LEVEL 1 | Test #40 – Solutions | ForumIAS

Iprodione and Terbufos are hazardous pesticides that are dangerous for humans and aquatic animals. **Iprodione** is a **fungicide** used on vines, fruits, trees and vegetables, has been classified as carcinogenic and toxic for reproduction. **Terbufos** is a **soil insecticide** used commonly on sorghum, maize, beet and potatoes. They are listed in **Annex III to the Rotterdam Convention** that includes pesticides and industrial chemicals that have been banned or severely restricted for health or environmental reasons by two or more parties. Knowledge Base:

1) The **PIC procedure** is a mechanism for formally obtaining and spreading the decisions of importing parties on their willingness to receive future shipments of hazardous chemicals.

2) **Rotterdam Convention-**

It was adopted in September 1998 and came into force in 2004. The Convention is jointly administered by UNEP and FAO.

The Convention covers pesticides and industrial chemicals that have been banned or severely restricted for health or environmental reasons by parties and which have been notified by parties for inclusion in Annex III for the purpose of PIC procedure.

Source: <https://www.downtoearth.org.in/news/agriculture/rotterdam-convention-international-trade-of-2-hazardous-pesticides-recommended-for-prior-informed-consent--85130>

Q.36) With reference to the Singularity and Event Horizon of a Black hole, consider the following statements:

1. The Singularity is a location in the Centre of a black hole which contains a huge mass in an infinitely small space.
2. The Event Horizon is the boundary defining the region of space around a black hole from which nothing can escape.
3. Within the Event Horizon, the escape velocity is less than the speed of light.

Which of the statements given above are correct

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

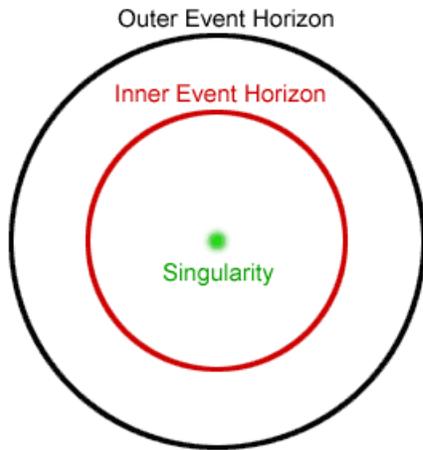

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: Singularity: It is the one-dimensional point or a small ring in the Centre of a black hole which contains a huge mass in an infinitely small space, where density and gravity become infinite and space-time curves infinitely. It is a tiny volume with very high density.

Statement 2 is correct: The event horizon: It is the "point of no return" around the black hole. It is not a physical surface, but a boundary defining the region of space around a black hole from which nothing (not even light) can escape.

Statement 3 is incorrect: Within the event horizon, the escape velocity (v_{escape}) exceeds the speed of the light (c) and an object is trapped forever if it falls within the region defined by event horizon. Outside the event horizon, $v_{\text{escape}} < c$ and the objects are able to escape.

Source: <https://blog.forumias.com/upsc-ias-prelims-2022-material-science-and-tech-current-affairs-space-technology-dec-2021-15th-march-2022/> <https://www.space.com/black-holes-event-horizon-explained.html>

<https://astronomy.swin.edu.au/cosmos/e/Event+Horizon>

<https://www.space.com/black-holes-event-horizon-explained.html>

Q.37) With reference to Zinc-Air batteries, consider the following statements:

1. Zinc air batteries are usually rechargeable and can be used multiple times before being disposed.
2. Continuous supply of oxygen from external sources is necessary to sustain chemical reactions in these batteries.
3. These batteries are used in hearing aids as these batteries can be produced in smaller sizes.
4. Zinc Air batteries are usually cheaper than lithium-ion batteries.

Which of the statements above are correct?

- a) 1 and 3 only
- b) 2 and 4 only
- c) 3 and 4 only
- d) 2, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: Zinc-air batteries are non-rechargeable batteries and they are disposable batteries. They are batteries powered by oxidising zinc with oxygen from the air. These batteries have high energy densities and are relatively inexpensive to produce.

Statement 2 is incorrect: Zinc air batteries do not require supply of oxygen from external sources to sustain chemical reactions within it. Unlike fuel cells, in these batteries the chemical energy usually comes from substances that are already present in the battery. On the other hand, fuel cells require a continuous source of fuel and oxygen to sustain the chemical reaction.

Statement 3 is correct: Size of the zinc batteries range from small to very large sizes. Small size batteries are being used in hearing aids, wrist watches etc. Mercury batteries which are in the shape of buttoned cells was used in the hearing aids but due to some environmental concerns, now zinc batteries are used in place of mercury batteries.

Statement 4 is correct: Zinc Air batteries are cheaper than lithium-ion batteries. While lithium-ion batteries cost \$200 to \$250 a KWh, zinc- air batteries cost around \$150 KWh. With wider usage, the price is expected to come below \$100 KWh.

SFG 2023 | LEVEL 1 | Test #40 - Solutions | ForumIAS

Source: <https://www.sciencenews.org/article/zinc-air-batteries-single-use-new-design-rechargeable>
<https://pib.gov.in/PressReleaseDetail.aspx?PRID=1829379>
<https://www.cambridge.org/core/journals/journal-of-laryngology-and-otology/article/abs/study-of-mercuric-oxide-and-zincair-battery-life-in-hearing-aids/C09D4A31F0EA68A724A4E2F501C9E376>

Q.38) With reference to Click chemistry, consider the following statements:

1. It can produce exact copies of natural chemicals.
2. It can be used to create a plastic that can conduct electricity.
3. It can help in the treatment of cancer in the human body.

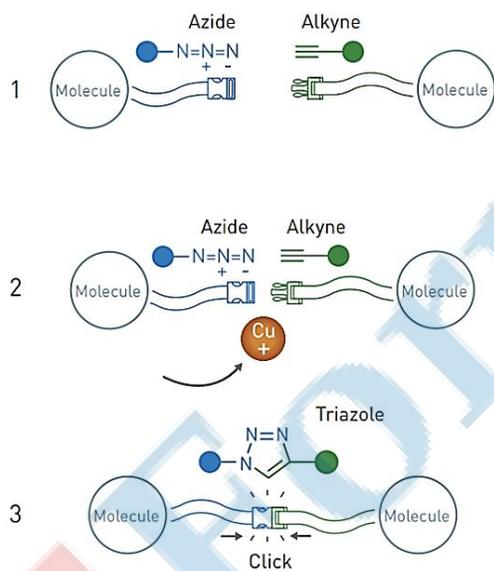

Which of the statements given above is/are correct?

- a) 1, 2 and 3
- b) 1 and 2 only
- c) 2 and 3 only
- d) 3 only

Ans) c

Exp) Option c is the correct answer.

Recently the scientists, Carolyn R Bertozzi, Morten Meldal and K Barry Sharpless, have been awarded the Nobel Prize for Chemistry for their work in **click chemistry**.

Statement 1 is incorrect: Click chemistry cannot provide exact copies of natural molecules. However, by using click chemistry it is possible to produce molecules that fulfil the same functions.

Statement 2 and 3 are correct: Click chemistry reactions are now used to create plastics that can conduct electricity. Manufacturers can now add a clickable chemical azide to a plastic and modify it to be able to conduct electricity or make them waterproof by adding a chemical alkyne.

It can now be used to treat cancer. Bertozzi used click chemistry to make a product that can be used to study glycans attached to the lymph nodes in the human body. The product developed by her using click chemistry are now used by researchers across the world to treat cancers, for instance a company called Shasqi is applying click chemistry to cancer therapeutics.

<https://indianexpress.com/article/explained/explained-sci-tech/nobel-prize-in-chemistry-announced-the-winners-work-its-significance-8191378/>

Q.39) With reference to Flex Fuel Vehicles, consider the following statements:

1. They are capable of running on pure ethanol.
 2. Flex Fuel vehicles running on 20% ethanol blended petrol will be completely free of carbon monoxide emissions.
 3. Increased use of Flex Fuel Vehicles can help to create additional revenue for the farmers.
- How many of the above statements are correct?

- a) Only one statement
- b) Only two statements
- c) All three statements
- d) None of the statements

Ans) b

Exp) Option b is the correct answer.

Statement 1 is correct: Flex engines are capable of running on 100% petrol or 100% bio ethanol as well. A flex fuel, or flexible fuel can run on more than one type of fuel or even a mixture of fuels. The most common versions use a **blend of petrol and ethanol or methanol**.

Statement 2 is incorrect: Flex Fuel vehicles running on 20% ethanol blended petrol **will not eliminate the emission of Carbon Monoxide**. However, they reduce the **carbon monoxide emissions by 50 per cent** in two-wheelers and 30 per cent lower in four-wheelers compared to petrol. Also, **Hydrocarbon emissions will be lowered by 20 per cent**, compared to petrol.

Statement 3 is correct: The increased use of Flex Fuel Vehicles will cause a wide uptake of ethanol or methanol as a fuel. It can help to create an **additional revenue stream for farmers**. This will provide direct benefits to farmers and help in doubling the farmer's income.

Source:

[https://afdc.energy.gov/vehicles/flexible_fuel.html#:~:text=Flexible%20fuel%20vehicles%20\(FFVs\)%20have,depending%20on%20geography%20and%20season.](https://afdc.energy.gov/vehicles/flexible_fuel.html#:~:text=Flexible%20fuel%20vehicles%20(FFVs)%20have,depending%20on%20geography%20and%20season.)

<https://www.livemint.com/news/india/india-gets-its-first-flex-fuel-strong-hybrid-car-that-runs-on-ethanol-11665963843580.html>

Q.40) Arrange the following sectors with respect to their contribution to the global green-house gas emissions in descending order, according to the Breakthrough Agenda Report 2022.

1. Power
2. Road transport
3. Agriculture and related land use
4. Steel sector

Select the correct answer using the codes given below:

- a) 1-2-3-4
- b) 2-3-4-1
- c) 1-3-2-4
- d) 2-4-3-1

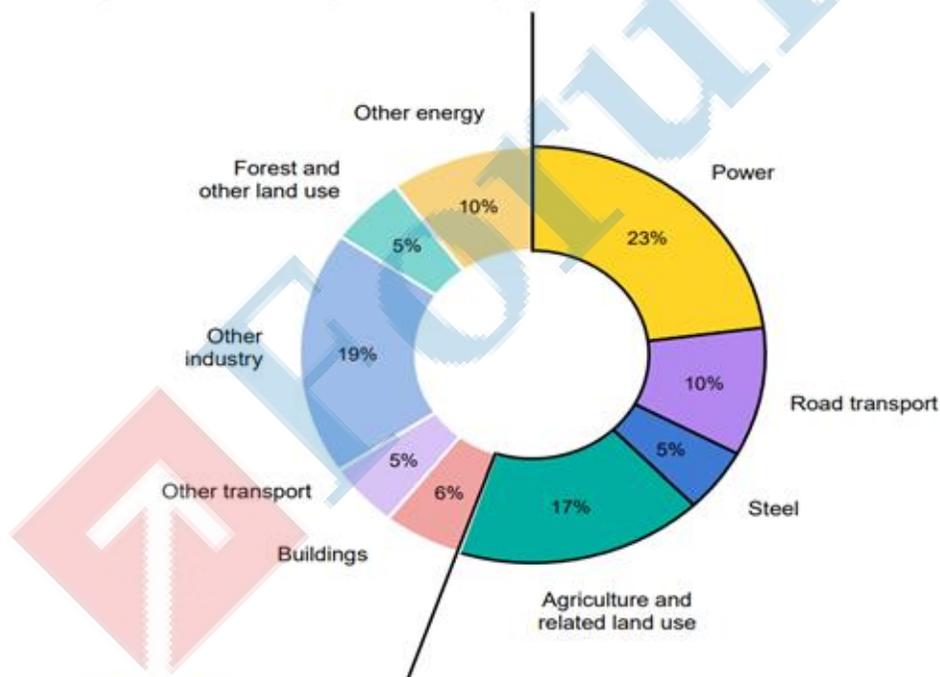

Ans) c

Exp) Option c is the correct answer.

The Breakthrough Agenda Report was prepared by the International Energy Agency (IEA), the International Renewable Energy Agency (IRENA) and the UN Climate Change High-Level Champions (UNCC HLC).

- 1) **The power sector accounts for around 13 GtCO₂e, or 23% of total emissions globally.** This has risen by around 10% since 2010. These need to fall by over 50% by 2030. Emissions from the power sector should fall by around 8% each year to 2030.
- 2) **Agriculture and related land use accounts for around 10GtCO₂e, or 17% of total emissions.** Of those about 7 GtCO₂e come from direct, farm-gate emissions.
- 3) **The road transport sector accounts for around 6 GtCO₂e, or 10% of total emissions.** That's risen by 13% since 2010. These need to fall by nearly a 1/3 by 2030.
- 4) **The steel sector accounts for around 3 GtCO₂e of emissions, or 5% of total emissions.** That's risen by around 15% since 2010. These need to fall by around ¼ by 2030.
- 5) The Breakthrough Agenda is designed to strengthen international collaboration where it is most needed. Leaders of 45 signatories (44 countries plus the European Union), which represent over 70% of global GDP, committed at COP26 to work together to make clean technologies and sustainable solutions the most affordable, accessible and attractive option in each of the emitting sectors before the end of this decade.
- 6) **Action in the five sectors for which the signatories have so far agreed on goals under the Breakthrough Agenda – power, hydrogen, road transport, steel, and agriculture – is essential to achieving international climate goals.** Global greenhouse gas emissions have now reached almost 60 GtCO₂e and these sectors today account for over 50% of that total (IPCC, 2022). Clean technologies and sustainable solutions are not yet the most affordable or accessible options in these sectors except in the power sector; and even in the power sector, this is not yet the case in all countries. Meeting the Breakthrough Agenda goals in these sectors will require concerted action from governments, businesses and civil society.

Figure 3 Greenhouse gas emissions by sector, 2019

Source: IPCC, 2022.

The five sectors for which countries have agreed goals under the Breakthrough Agenda account for over 50% of current global emissions.

Source: <https://climatechampions.unfccc.int/wp-content/uploads/2022/09/THE-BREAKTHROUGH-AGENDA-REPORT-2022.pdf>

SFG 2023 | LEVEL 1 | Test #40 – Solutions | ForumIAS

Q.41) With reference to 'Near Field Communication (NFC) Technology', which of the following statements is/are correct?

1. It is a contactless communication technology that uses electromagnetic radio fields.
2. NFC is designed for use by devices which can be at a distance of even a metre from each other.
3. NFC can use encryption when sending sensitive information.

Select the correct answer using the code given below.

- a) 1 and 2 only
- b) 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct and 2 is incorrect: NFC is the set of protocols that enable electronic devices to establish radio communication with each other by bringing them into **proximity to a distance of typically 10 cm or less (not one metre)**, an antenna can be used to extend the range to 20 cm. NFC transmits data **through electromagnetic radio fields**, to enable communication between two devices. Both devices must contain NFC chips, as transactions take place **within a very short distance**.

Statement 3 is correct: NFC often establish a secure channel and use encryption when sending sensitive information.

Source: UPSC PRELIMS 2015

Q.42) In the context of nuclear reactors, which of the following statements is correct with respect to the Small Modular Reactors (SMR)?

- a) Unlike Standard reactors, SMRs use only heavy water as the coolant.
- b) They are usually cheaper and faster to construct than standard reactors.
- c) Unlike standard reactors, they are immune to damage caused by any seismic activity.
- d) SMRs cannot be used to process Uranium to produce the nuclear weapons.

Ans) b

Exp) Option b is the correct answer.

Option a is incorrect: Pressurised Heavy Water Reactor commonly uses heavy water (Deuterium oxide D₂O) as its coolant and moderator. While some SMRs are essentially **pressurised water reactors** which uses **heavy water** as coolant, **other SMRs uses sodium, lead, gas or salt** as a coolant instead of water.

Option b is correct: **Small Modular Reactors (SMR)** are much **cheaper and quicker to get running** than standard plants. The International Atomic Energy Agency (IAEA) defines **Small Modular Reactors as nuclear power stations producing nuclear energy under 300 megawatts electrical (MWe)**. SMRs are considered as a **more efficient alternative to older model mega-plants** in terms of achieving energy security. Given their smaller footprint, SMRs can be sited on locations not suitable for larger nuclear power plants.

Option c is incorrect: Like every other nuclear reactor, SMRs too can succumb to the seismic activity such as earthquakes and Tsunami.

Option d is incorrect: **Plutonium-239 and uranium-235** are the most common isotopes used in **nuclear weapons**. **SMRs too can be used to enrich the Uranium to produce nuclear weapons**. Activists raised the concern that the **proliferation of SMRs across the world will increase the risk of various countries producing nuclear weapons** or its reactor being captured by terrorists for malicious purpose.

Source: <https://indianexpress.com/article/technology/science/small-nuclear-reactors-emerge-as-energy-option-but-risks-loom-8143584/>

Q.43) Consider the following pairs about various cloning techniques and their applications:

Cloning Techniques	Potential Applications
1. Gene Cloning	Regenerating a whole new organ from embryonic stem cell
2. Reproductive Cloning	Reproducing copy of a whole animal
3. Therapeutic Cloning	Treating the neurodegenerative diseases

How many pairs above are correctly matched?

- a) Only one pair
- b) Only two pairs
- c) All three pairs
- d) None of the pairs

Ans) b

Exp) Option b is the correct answer.

Cloning includes various methods for creating identical copies of a living thing, which are known as clones. Scientists have successfully cloned a variety of materials including genes, cells, tissues, and even entire animals, like sheep. There are three different types of artificial cloning.

Pair 1 is incorrect: Gene cloning produces copies of genes or segments of DNA. It is the replication of certain types of genes from a certain part of the cell/ DNA to propagate a certain desirable genetic trait. Hence, it is also known as DNA cloning, where a fragment of DNA is cloned. It has several applications:

- 1) **Medical application including synthesis of vitamins, hormones, and antibiotics;**
- 2) Agricultural applications including production of nitrogen fixing bacteria;
- 3) Gene therapy, the process in which defective gene is replaced with healthy gene.

Pair 2 is correct: Reproductive cloning produces copies of whole animal. It involves transfer of DNA from the donor animal's somatic cell to an oocyte. Dolly, the sheep was the first successful reproductive cloning experiment. **Samrupa, the world's first cloned buffalo calf, was to be India's answer to Dolly the sheep.** It was cloned at Karnal's National Dairy Research Institute.

Pair 3 is correct: In some of the recent researches held on various animals, it is found that the neurodegenerative diseases like Parkinson's disease and Alzheimer's can be treated with the use of therapeutic cloning. It holds a promise to the humanity for its advantages in curing the Parkinson's disease. Parkinson's disease is characterized by the deterioration of dopaminergic neurons resulting in constant tremor and muscular stiffness impairing motility.

THERAPEUTIC CLONING VERSUS REPRODUCTIVE CLONING

THERAPEUTIC CLONING	REPRODUCTIVE CLONING
The production of embryonic stem cells for the use in replacing or repairing damaged tissues or organs, achieved by transferring a diploid nucleus from a body cell into an egg whose nucleus has been removed	The deliberate production of genetically identical individuals; each newly produced individual is a clone of the original
Creating embryo develops under laboratory conditions	Creating embryo develops under uterine conditions
Responsible for creating embryonic stem cells to treat diseases such as diabetes and Alzheimer's disease	Important for harvesting stem cells that can be used to study embryonic development
	Visit www.PEDIAA.com

Source: <https://biotecharticles.com/Genetics-Article/Gene-Cloning-and-its-Applications-1053.html>
<https://timesofindia.indiatimes.com/india/india-clones-worlds-first-buffalo/articleshow/4120044.cms>
https://www.researchgate.net/publication/346630933_Therapeutic_cloning_and_its_application

Q.44) The term 'Genomic Surveillance' can be best described as a process of constant monitoring of the:

- Harmful mutations that occur due to exposure to mutagens.
- Pathogens and analysing their genetic similarities and differences.
- Gene pool of a human population and assessing genetic diversity.
- Genetic markers to link an inherited disease with the responsible gene.

Ans) b

Exp) Option b is the correct answer.

Genomic surveillance is the process of constantly monitoring pathogens and analysing their genetic similarities and differences. Genomic surveillance works on the basis that everything with a genome (humans, animals, plants, bacteria, viruses etc.) needs to replicate their genetic material in order to reproduce, and this results in changes known as mutations. Various public health programmes – on infection prevention and control of diseases – use genomic surveillance to understand a pathogen at its molecular level, but COVID-19 has highlighted the challenges of bringing genomics to scale. Genomic surveillance is critical for stronger pandemic and epidemic preparedness and response.

SFG 2023 | LEVEL 1 | Test #40 – Solutions | 

Q.45) Which of the following statements is/are correct about ‘Ayushman Bharat Digital Mission’?

1. It is a central sector scheme for integrating digital health infrastructure of the country.
2. It is implemented by the National Health Authority (NHA) under the Ministry of Health and Family Welfare.
3. A major component of the mission is creating a Healthcare Professionals’ Registry (HPR), for easy electronic access to medical professionals.

Select the correct answer using the code given below.

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Statement 1 is correct. The Ayushman Bharat Digital Mission (ABDM) is a **central sector scheme** that aims to develop the **integrated digital health infrastructure** of the country. It creates a **national digital health ecosystem** that supports **universal health coverage** in an efficient, accessible, inclusive, affordable, timely and safe manner. It provides a wide-range of data, information and infrastructure services, duly leveraging open, interoperable, standards-based digital systems, and ensures the security, confidentiality and privacy of health-related personal information.

Statement 2 is correct. The Ayushman Bharat Digital Mission (ABDM) is implemented by **National Health Authority (NHA)** under the **Ministry of Health and Family Welfare**.

Statement 3 is correct. The other major component of the programme is creating a **Healthcare Professionals’ Registry (HPR)** and **Healthcare Facilities Registry (HFR)**, allowing easy electronic access to medical professionals and health infrastructure. The HPR will be a comprehensive repository of all healthcare professionals involved in delivering healthcare services across both modern and traditional systems of medicine. The HFR database will have records of all the country’s health facilities.

Source: <https://vikaspedia.in/health/health-care-innovations/ayushman-bharat-digital-mission-health-care-innovations-1/ayushman-bharat-digital-mission>

<https://abdm.gov.in/abdm>

Q.46) Lumpy Skin Disease (LSD) is caused in cattle and water buffaloes by a poxvirus called Lumpy Skin Disease Virus (LSDV). Consider the following statements about this disease:

1. LSD virus have a single-stranded DNA genome.
2. It is a non-zoonotic disease therefore it is safe to drink milk from the infected cattle.
3. Incubation period of LSD is around 28 days.
4. Due to rapid mutations in LSDV, a vaccine against it cannot be developed.
5. It has a very high mortality of greater than 50%.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 2, 3 and 4 only
- d) 3 and 5 only

Ans) b

Exp) Option b is the correct answer.

Lumpy Skin Disease has recently spread in India, and it has severe implications on the economy of India.

SFG 2023 | LEVEL 1 | Test #40 – Solutions | 

Statement 1 is incorrect: LSD is caused by lumpy skin disease virus (LSDV) which **belongs to the genus capri poxvirus. This virus is a part of the poxviridae family.** All Capri poxviruses have a **double-stranded DNA genome** of approximately 150 to 151 k bp long.

Statement 2 is correct: LSD is a non-zoonotic disease i.e.; the disease is non transmissible from animals to humans. It cannot be transmitted either by direct contact or by consumption of milk. **Therefore, it is safe to drink milk from the infected cattle.** Moreover, a large portion of milk produced is either pasteurized or boiled or dried in order to make milk powder. This process ensures that the virus is inactivated or destroyed.

Statement 3 is correct: Incubation period of LSD disease is around 28 days, but experimentally infected cattle may develop clinical signs as early as 6-9 days. It is characterized by a mild fever, followed by the sudden appearance of skin nodules.

Statement 4 is incorrect: Indian Council of Agricultural Research (ICAR) is aiming to commercially launch the **“Lumpi-ProVacInd” Vaccine.** It is a live attenuated vaccine, similar to those used against tuberculosis, measles, mumps and rubella. This vaccine **provides 100% protection against LSD in cattle.**

Statement 5 is incorrect: According to the Food and Agriculture Organization (FAO), the mortality rate is **less than 10%.**

Source: <https://blog.forumias.com/the-lumpy-skin-disease/>

<https://blog.forumias.com/lumpi-provacind-vaccine-how-icars-new-vaccine-against-lumpy-skin-disease-the-viral-infection-killing-indias-cattle-will-work/>

Q.47) Consider the following statements about Genome Edited Plants (GEPs):

1. All the gene edited crops are developed using insertion of foreign genetic material.
2. It is mandatory for researchers in India to seek approval from the Genetic Engineering Appraisal Committee (GEAC) to modify a genome using gene editing.
3. CRISPR-Cas9 technique is often used for genome editing.
4. Bt-Cotton is India's first non-transgenic Genome Edited Crop.

Which of the statements given above is/are **incorrect**?

- a) 1 and 2 only
- b) 1 only
- c) 1, 2 and 4 only
- d) 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

The Department of Biotechnology (DBT) had issued Guidelines for Safety Assessment of Genome Edited Plants, in 2022 to ease norms for developing GM crops.

Statement 1 is incorrect: The genome edited plants derived from the use of genome editing techniques are generally classified under three categories:

- 1) **Site-Directed Nuclease (SDN)-1,** a site-directed mutagenesis without using a DNA sequence template. **It doesn't involve insertion of a DNA fragment from foreign genome.**
- 2) **SDN-2,** a site-directed mutagenesis using a DNA sequence template. **It also doesn't involve insertion of foreign genetic material.**
- 3) **SDN-3,** site-directed insertion of gene/large DNA sequence using a DNA sequence template, **which involves insertion of DNA fragment of a foreign origin.**

Statement 2 is Incorrect: The **'Guidelines for Safety Assessment of Genome Edited Plants, 2022'** exempt researchers who use **gene-editing technology** to modify the genome of the plant from seeking approvals

from the Genetic Engineering Appraisal Committee (SDN 1 and SDN 2 are exempted from rule 7-11 of the Environment Protection Act).

Statement 3 is correct: CRISPR-Cas9 ('clustered regularly interspaced short palindromic repeats') is the most common and efficient system used for genome editing. It is often known as genetic/molecular scissor. A targeted segment of DNA is located, cut, removed and then replaced with a correct sequence. It does not involve introduction of foreign genetic material.

Statement 4 is incorrect: Bt-cotton is a genetically modified transgenic plant that has been grown in the country for the past two decades. It contains the pesticide gene from the bacteria *Bacillus thuringiensis* (Bt). It has been modified to produce an insecticide to combat the cotton bollworm. On the other hand, **non-transgenic plants** do not involve introduction of genetic material from outside. Rather it involves redesigning (shortening, lengthening, removal) of a gene that is already present in the plant.

Source: https://dbtindia.gov.in/sites/default/files/Final_%2011052022_Annexure-1%2C%20Genome_Edited_Plants_2022_Hyperlink.pdf
<https://blog.forumias.com/illegal-sale-of-ht-bt-cotton-seeds-doubles-in-a-year/>

Q.48) With reference to 'Li-Fi', recently in the news, which of the following statements is/are correct?

1. It uses light as the medium for high-speed data transmission.
2. It is a wireless technology and is several times faster than 'Wi-Fi'.

Select the correct answer using the code given below.

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: Li-Fi, short for Light Fidelity, uses the frequencies generated by LED bulbs, which flicker on and off to beam information through the air. In other words, LiFi (Light Fidelity) is **a wireless communication technology that transmits data using visible light at an extremely high speed.**

Statement 2 is correct: Li-Fi allows speeds that are 100 times faster than Wi-Fi which uses radio waves to transmit data.

Source: UPSC PRELIMS 2016

Q.49) For the measurement/estimation of which of the following are satellite images/remote sensing data used?

1. Chlorophyll content in the vegetation of a specific location
2. Greenhouse gas emissions from rice paddies of a specific location
3. Land surface temperatures of a specific location

Select the correct answer using the code given below.

- a) 1 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Remote sensing data provides essential information that helps in monitoring various applications such as image fusion, change detection and land cover classification. Remote sensing is a key technique used to

obtain information related to the earth's resources and environment. Cartosat-1 & 2, Resourcesat-1 & 2, Oceansat-1 & 2, Risat-1, Megha-Tropiques, SARAL, Scatsat and INSAT series are some of the Indian Remote Sensing Satellites (IRS).

Statement 1 is correct: It is possible to measure chlorophyll content in the vegetation of a specific location as **chlorophyll will reflect more light in the green and near infrared spectrum** compared to other wavelengths. Hence, **statement 1 is correct.**

Statement 2 is correct: Remote sensing from satellites can also deliver **information on greenhouse gas (GHGs) soil emissions by estimating tropospheric, near-surface CO₂ and CH₄ concentrations** based on the measurement of the intensity of the reflected sunlight in small wavelength bands in the visible and short-wavelength IR portion of the spectrum. So, **greenhouse gas emissions from rice paddies of a specific location** can also be estimated by satellite image/remote sensing data.

Statement 3 is correct: With the **development of remote sensing from space**, satellite data offers the possibility for **measuring land surface temperature over the entire globe** with sufficiently high temporal resolution and with complete spatially averaged rather than point values.

Source: UPSC PRELIMS 2019

Q.50) Which of the following can be the applications of ISRO's Inflatable Aerodynamic Decelerator (IAD)?

1. Recovery of spent stages of a rocket.
2. For landing payloads on to Mars or Venus.
3. Making space habitat for human space flight missions

Select the correct answer using the codes given below:

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Statement 1 2 and 3 are correct: An Inflatable Aerodynamic Decelerator (IAD) designed and developed by Vikram Sarabhai Space Center has been successfully test flown in a Rohini sounding rocket from TERLS, Thumba. This is first time that an IAD is designed specifically for spent stage recovery. All the objectives of the mission were successfully demonstrated.

The Inflatable Aerodynamic Decelerator has huge potential in variety of space applications like recovery of spent stages of rocket, for landing payloads on to Mars or Venus and in making space habitat for human space flight missions.

Source: https://www.vssc.gov.in/demonstrate_new_technology.html

<https://newsstation.media/latest-news/isro-successfully-demonstrates-new-technology-with-inflatable-aerodynamic-decelerator-iad/>

Q.1) Consider the following statements:

1. Biodiversity is normally greater in the lower latitudes as compared to the higher latitudes.
2. Along the mountain gradients, biodiversity is normally greater in the lower altitudes as compared to the higher altitudes.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: There is an increase in biodiversity from the poles to the tropics. This is often referred to as latitudinal diversity gradient. Elevational diversity gradient (EDG) is an ecological pattern, where biodiversity changes with elevation.

Statement 2 is correct: In mountains, biodiversity is normally greater in the lower altitudes as compared to the higher altitudes.

Source: UPSC CSE Pre 2011

Q.2) “It is the structural and functional unit of the biosphere. It is defined as the sum total of all biotic factors and abiotic factors in an area and the various interactions amongst them.”

Which term is being defined in the lines above?

- a) Environment
- b) Biome
- c) Community
- d) Ecosystem

Ans) d

Exp) Option d is the correct answer.

Option a is incorrect: Environment is defined as the sum total of living, non-living components; influences and events, surrounding an organism. Hence this option is **incorrect**.

Option b is incorrect: Biome is defined as the terrestrial part of the biosphere. Biomes are characterised by climate, vegetation, animal life and general soil type. It again does not include the various interactions among the biotic and abiotic components. Hence this option is **incorrect**.

Option c is incorrect: A Community refers to the assemblage of populations of different species in a given area at a given point of time. It does not include the abiotic factors, nor does it include the interactions among the biotic and abiotic factors. Hence this option is **incorrect**.

Option d is correct: An Ecosystem is defined as a self-sustaining and self-regulating structural and functional unit of the Biosphere. That means it is the smallest part of the biosphere which can exist and function on its own without any external input. It is the sum total of all the abiotic factors (like temperature, moisture, soil, etc) as well as the biotic (living organisms – like plants, herbivores, carnivores, microorganisms, etc) in that area. It also includes the various interactions between the biotic and abiotic factors, as well as among the abiotic factors as well (such as energy flow, food web, predation, etc) Hence this option is **correct**.

Source: Shankar IAS Environment, 8th edition, Ch-1

Q.3) With reference to Ecotones, consider the following statements:

1. It is a zone of transition between two types of ecosystems.
2. Some species not found in the bordering ecosystems of Ecotone can be found here.
3. The characteristics of one of the bordering ecosystems is dominant throughout the ecotone.
4. It is always sparsely populated as compared to the adjoining ecosystems.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 3 and 4 only
- c) 1, 2 and 4 only
- d) 1, 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

An Ecotone is an area between two different types of ecosystems which allows for a gradual transition between the different types of adjoining ecosystems in terms of their characteristic flora, fauna and physical conditions such as temperature, humidity, soil quality, etc.

Statement 1 is correct: An Ecotone is a zone of transition between two types of ecosystems. This means that the boundary where one type of ecosystem ends and another begins is not abrupt, but rather a zone where the characteristics of one of the bordering ecosystems fade and develop into those of another. Hence this statement is **correct**.

For example

- 1) An Estuary is an Ecotone between the freshwater and marine aquatic ecosystems.
- 2) A Mangrove is an Ecotone between terrestrial and Aquatic ecosystems.
- 3) A Grassland is an Ecotone between Forest and Desert ecosystems.

Statement 2 is correct: In what is one of the most unique features of this zone is that there are some entirely different species present here. These species may not be typically found in either of the bordering ecosystems. However, they are present in the ecotone due to its unique conditions and abiotic factors. For example, a Mangrove which is an ecotone between a terrestrial and aquatic ecosystem contains Halophytic plants such as Avicennia, Rhizophora, etc with many unique adaptations such as pneumatophores and stilt roots to withstand the unique anoxic and highly saline conditions found in this ecotone. These plants are found neither in the adjoining landed area, nor in the adjoining waters. Hence this statement is **correct**.

Statement 3 is incorrect: In an ecotone, the transition of characteristics between the ecosystems progresses linearly. This means that as one moves away from the boundary of one type of ecosystem, its features and effects and characteristic flora/ fauna go on reducing, while the characteristics of the other ecosystem go on becoming more prominent as we start approaching the boundary with it. No one ecosystem is dominant over the other in the ecotone area throughout. Hence this statement is **incorrect**.

Statement 4 is incorrect: Sometimes a greater number of the species of the adjoining ecosystems are more densely populated in the ecotones rather than their primary ecosystems. This is known as the Edge Effect. Hence this statement is incorrect, as the ecotones are not always sparsely populated compared to their adjoining ecosystems.

Source: ForumIAS Red Book on Environment, Ch-1, Pg-6

Q.4) Which one of the following is the correct sequence of ecosystems in the order of decreasing productivity?

- a) Oceans, lakes, grasslands, mangroves
- b) Mangroves, oceans, grasslands, lakes
- c) Mangroves, grasslands, lakes, oceans
- d) Oceans, mangroves, lakes, grasslands

Ans) c

Exp) Option c is the correct answer.

Productivity refers to the rate of generation of biomass in an ecosystem.

The correct order Ecosystems in the order of decreasing productivity would be:

Mangroves > Grasslands > Lakes > Oceans

The average ocean productivity is about 50 grams carbon per square meter per year; while, the average land productivity is 160 grams carbon per square meter per year. Salt marshes and mangroves have one of the highest productivities of 3300- 6000 grams carbon per square meter per year.

Source) <https://nios.ac.in/media/documents/SrSec314NewE/Lesson-25.pdf>

Q.5) With reference to the Indian economy, consider the following statements:

1. The RBI's Department of Currency Management is the highest deciding authority in matters related to the design of currency notes.
2. The Reserve Bank of India Act of 1934 gives RBI, the sole right to issue banknotes in India.
3. The Central Government decides on the quantity of coins to be minted.
4. All the currency note printing presses in India are owned by the Central government.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2, 3 and 4 only
- c) 2 and 3 only
- d) 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Recently Delhi Chief Minister has appealed to the Union government to print images of Goddess Lakshmi and Lord Ganesh on new currency notes for the country's economic prosperity.

Statement 1 is incorrect: The Central Government is the final deciding authority and the said department can **only suggest** the design to RBI's central board. **The RBI's Department of Currency Management** works on the design and submits it to RBI which recommends it to the central government. **The government gives the final approval.**

Statement 2 is correct: The RBI act 1934 gives RBI the sole right in matters of issuance of currency notes. **Section 22** of The Reserve Bank of India Act, 1934, gives RBI the "sole right" to issue banknotes in India. However, in case of design, form and material of currency notes both the RBI and central government have the right. **Section 25 of the RBI act** states that the **design, form and material of banknotes** shall be such as may be approved by the Central Government after consideration of the recommendations made by the RBI's Central Board.

Statement 3 is correct: The Coinage Act, 2011 gives the central government the power to design and mint coins in various denominations. **The government decides on the quantity of coins to be minted** on the basis of indents received from the RBI on a yearly basis. Coins are minted in **four mints owned by the Government of India in Mumbai, Hyderabad, Kolkata and Noida.** The **role of the RBI is limited to the distribution of coins** that are supplied by the central government.

Statement 4 is incorrect: The currency note printing presses are in **Nasik and Dewas** are owned by the Government of India. However, the other **two other printing presses in Mysore and Salboni are owned by the RBI through its wholly owned subsidiary, Bharatiya Reserve Bank Note Mudran Ltd (BRBNML)**

Source: <https://indianexpress.com/article/explained/explained-politics/aap-wants-lakshmi-ganesh-on-currency-who-designs-rupee-notes-and-how-8231728/>

Q.6) In the context of aquatic organisms, consider the following pairs:

Aquatic organisms	Features
1. Neuston	Organisms that live on the surface of the Ocean.
2. Benthos	Organisms that live on the bottom of the Ocean.
3. Nekton	Organisms that cannot swim against the flow of stream.
4. Plankton	Organisms that can swim and move without being affected by streams
5. Periphyton	Organisms living on rock surfaces.

How many pairs given above are correctly matched?

- only two pairs
- only three pairs
- only four pairs
- All the five pairs

Ans) b

Exp) Option b is the correct answer.

Pair 1 is correct: Neuston, also called pleuston, is a group of organisms that live on the surface of the ocean. They live at the air-water interface. E.g., beetles, back-swimmers.

Pair 2 is correct: Benthos are those organisms found at the bottom of the Ocean. Benthos are those organisms that live on, in, or near the bottom of a sea, river, lake etc., The benthic zone includes the **sediment surface and some subsurface layers**, is the ecological region at the lowest level of a body of water such as an ocean, lake, or stream.

Pair 3 is incorrect: Nekton are active swimmers. They are living organisms that can swim and move without being affected by currents. They can be found either in the photic or Aphotic zone and they serve as a vital link between primary consumers and the higher trophic levels.

Pair 4 is incorrect: Planktons are passive swimmers. They are a diverse group of organisms that live in water and are unable to **swim against the stream**. Their distribution varies depending on the availability of light and nutrients, from microscopic bacteria to giant species like jellyfish. **Planktons are a source of food for large aquatic species.**

Pair 5 is correct: Periphyton has evolved to live on hard surfaces hence they can grow on **rock surfaces**. **Periphyton is a complex mixture of algae, cyanobacteria,** and heterotrophic microorganisms. They can play an essential part in the aesthetic and other beneficial uses of the coastline.

Source: <https://ncert.nic.in/ncerts/l/lebo114.pdf>

Q.7) Nitrogen fixation is a process of converting relatively non-reactive atmospheric nitrogen into more reactive compounds like ammonia. Which of the following microorganisms are capable of fixing atmospheric nitrogen?

- Azotobacter
- Nostoc
- Nitrosomonas

4. Anabaena
5. Nitrobacter
6. Beijernickia

Select the correct answer using the code given below:

- a) 1, 3, 4 and 5 only
- b) 2, 3, 5 and 6 only
- c) 1, 2, 4 and 6 only
- d) 1, 2, 3, 4, 5 and 6

Ans) c

Exp) Option c is the correct answer.

Very few living organisms can utilise the nitrogen in the form N_2 , available abundantly in the air. Only certain prokaryotic species are capable of fixing nitrogen. **Reduction of nitrogen to ammonia by living organisms is called biological nitrogen fixation.**

Options 1, 2, 4 and 6 are correct. The nitrogen-fixing microbes could be free-living or symbiotic. Examples of free-living nitrogen-fixing aerobic microbes are **Azotobacter and Beijernickia** while Rhodospirillum is anaerobic and Bacillus free-living. In addition, a number of cyanobacteria such as **Anabaena and Nostoc** are also free-living nitrogen-fixers.

Options 3 and 5 are incorrect. Nitrosomonas and Nitrobacter do not take part in nitrogen fixation, instead in nitrification of ammonia ions.

As a part of nitrogen cycle, decomposition of organic nitrogen of dead plants and animals into ammonia is called ammonification. Some of this ammonia volatilises and re-enters the atmosphere but most of it is converted into nitrate by soil bacteria. Ammonia is first oxidised to nitrite by the bacteria **Nitrosomonas and/or Nitrococcus**. The nitrite is further oxidised to nitrate with the help of the bacterium **Nitrobacter**. These steps are called nitrification. These nitrifying bacteria are chemoautotrophs.

Source: Biology NCERT class 11, chapter 12, Mineral Nutrition. <https://ncert.nic.in/ncerts/l/kebo112.pdf>
Forum IAS Red Book on environment: Chapter 1

Q.8) Consider the following statements about Euphotic Zone:

1. It is the upper layer of the aquatic ecosystems, up to which light penetrates and within which photosynthetic activity is confined.
2. It is also known as hadopelagic zone.
3. The thickness of euphotic zone remains same in all water bodies throughout the Earth.
4. Common species that can be primarily found in euphotic zones are scallops, sea urchins, shrimps, krill, etc.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 1 only
- c) 2 and 3 only
- d) 1, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

Euphotic zone is the uppermost or “well-lit” layer of the ocean in which there is sufficient light energy available to support net photosynthetic growth.

Statement 1 is correct: It is the upper layer of the aquatic ecosystems, up to which light penetrates and within which photosynthetic activity is confined. Both photosynthesis and respiration activity take place in this zone.

Statement 2 is incorrect: Extending from ocean's surface down to about 200 meters, it supports photosynthesis and hence known as epipelagic zone. The hadopelagic zone is found in deep ocean trenches below 6000 m.

Statement 3 is incorrect: The thickness of the euphotic zone varies with the intensity of sunlight as a function of season, latitude and water turbidity. The depth of the epipelagic zone is different in different water bodies.

Statement 4 is incorrect: The photic zone is home to phytoplankton, zooplankton and nekton. Species like diatoms, dinoflagellates, cyanobacteria, coccolithophora, cryptomonads and silicoflagellates, along with zooplankton like copepods and other crustaceans can be found in this zone. Whereas, **scallops, sea urchins, shrimps, krill, etc. can be primarily found in aphotic zone.**

Source: <https://sciencing.com/trophic-levels-coral-reefs-5523723.html>

<https://www.britannica.com/science/photic-zone#ref284749>

<https://www.sciencedirect.com/topics/agricultural-and-biological-sciences/euphotic-zone#:~:text=2%20NH3,-,Euphotic%20zone,m%20to%20%E2%88%BC200%20m.>

Q.9) With reference to the different types of biomes/regions and their characteristic features, consider the following pairs:

Type of Biome	Characteristic
1. Savannah	Grasses only and no trees
2. Boreal Forest	Evergreen coniferous trees
3. Mediterranean	Rainfall in Winter Season
4. Steppe	Deciduous trees with broad trunks

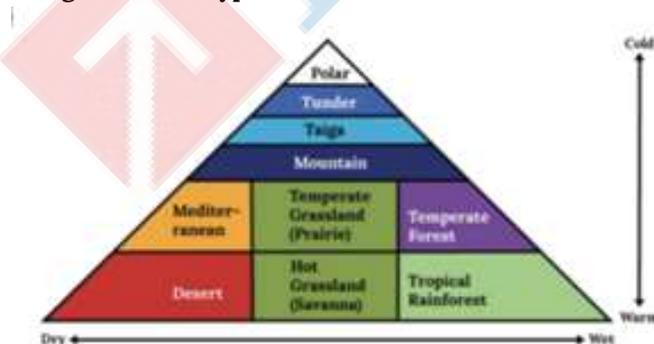

How many of the pairs given above are correct?

- Only one pairs
- Only two pairs
- Only three pairs
- All four pairs

Ans) b

Exp) Option b is the correct answer.

Biome is the terrestrial part of the biosphere. They are characterised by climate, vegetation, animal life and general soil type.

Pair 1 is incorrect: **Savannah** is the name given to a type of Grassland biome. It is however characterised by tall grasses and short trees. Hence this pairing is incorrect.

The type of grassland which only has short grasses and almost no trees is known as **Steppe**.

Pair 2 is correct: **Boreal Forests**, also popularly known as Taiga Forests are the forest biome found in the regions adjoining the Polar regions. They are characterised by very cold temperatures, and a fair bit of precipitation in the form of rain, snow and sleet. The vegetation in this region consists of evergreen (never shedding their leaves) trees with spiny leaves that assume conical shape due to the weight of snow. These trees bear cones as the fruit - like pine, spruce, chir, etc. Hence these forests have evergreen coniferous trees. Hence this pairing is **correct**.

Pair 3 is correct: The Mediterranean region receives most of their rainfall in winter. During the winter period in Mediterranean, there is a reversal of winds, due to which westerlies operate and bring the moisture from the oceans to the landmass. Here it cools, condenses and sinks to form clouds and precipitate. This is why the **winters are wet in the Mediterranean regions**.

Pair 4 is incorrect: The Steppe is a type of Grassland biome. It is found in the regions adjoining the Taiga regions, in the direction of the Equator. It is characterised by short nutritious grasses, but is marked by absence of trees, as the temperature is lower and the precipitation is sparser compared to Savannah type grassland, which does not let the grass grow tall, or trees thrive. Hence this pairing is incorrect as there are no trees in this region.

The grassland with broad trunked deciduous trees is the Savannah type of grassland biome. The trees in this region shed leaves to survive the long, intensely dry period. Also, the trees have broad trunks in order to store water to survive the dry season.

Source: Forum IAS Red Book on Environment, Ch-1, Pg-6;

Shankar IAS book on Environment, Ch-3, Pg-23, 24

Q.10) With reference to 'Purple revolution', consider the following statement:

1. It is launched by Ministry of Agriculture and farmers welfare under National mission of Sustainable agriculture.
2. It is aimed at promoting and increasing the export of the indigenous natural rubber crop.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) d

Exp) Option d is the correct answer.

Recently, the Union Minister of State has said that the government was planning to commence 'Purple Revolution' in Ramban district in Jammu and Kashmir.

Statement 1 is incorrect: **Purple or Lavender Revolution** was not launched by the by Ministry of Agriculture and farmers welfare but was launched by **the Union Ministry of Science & Technology** through the Council of Scientific & Industrial Research (CSIR) Aroma Mission. Under the mission, first-time farmers were given free lavender saplings, while those who had cultivated lavender before were charged Rs. 5-6 per sapling.

Statement 2 is incorrect: Its objective is to **empower domestic farmers** and **support India's aromatic crop-based agro-economy** by **reducing imports of aromatic oils** and **increasing home-grown varieties**. The aim will be to **increase lavender cultivation** in Jammu and Kashmir.

Lavender Cultivation

Knowledge Base: **Aroma Mission:** The Aroma Mission was launched by the **Council of Scientific and Industrial Research (CSIR)**. Its aim to bring **transformative change in the aroma sector** through desired interventions in the areas of agriculture, processing and product development for fuelling the growth of aroma industry and rural employment.

Source: 'Lavender Cultivation' under CSIR-IIIM's Aroma Mission to be started in Ramban as a part of Purple Revolution (forumias.com)

Q.11) Biodiversity forms the basis for human existence in the following ways:

1. Soil formation
2. Prevention of soil erosion
3. Recycling of waste
4. Pollination of crops

Select the correct answer using the codes given below:

- a) 1, 2 and 3 only
- b) 2, 3 and 4 only
- c) 1 and 4 only
- d) 1, 2 3 and 4

Ans) d

Exp) Option d is the correct answer.

Biodiversity is a term used to describe the enormous variety of life on Earth. It can be used more specifically to refer to all of the species in one region or ecosystem. Biodiversity refers to every living thing, including plants, bacteria, animals, and humans.

Option 1 is correct. Biodiversity helps in the formation and maintenance of soil structure and the retention of moisture and nutrient levels.

Option 2 and 3 are correct. Tree and other vegetation help against soil erosion. **Microorganisms (bacteria and fungi) tend to improve soil aggregate stability, therefore reducing both wind and water erosion.** Microbial activity assists in **degradation and recycling of waste.**

Option 4 is correct. **Species like Butterflies help in the pollination of crops.** Pollination is one of the most important mechanisms in the maintenance and promotion of biodiversity and life on Earth.

Source: UPSC CSE Pre 2011

Q.12) With reference to the phenomenon of Ecological Succession, consider the following statements:

1. It is applicable only to terrestrial ecosystems.
2. It is generally considered to be unidirectional in nature.
3. It involves both biotic and abiotic factors of an ecosystem.
4. The final stage of this process is termed as Sere.

Which of the statements given below are correct?

- a) 1 and 4 only
- b) 2 and 3 only
- c) 1, 2 and 4 only
- d) 1, 2, 3 and 4

Ans) b

Exp) Option b is the correct answer.

The process by which communities of plant and animal species in an area are replaced or changed into another over a period of time is known as ecological succession.

Statement 1 is incorrect: It is applicable to both terrestrial as well as aquatic ecosystems. Hence this statement is incorrect.

Succession that occurs on land where moisture content is low for e.g., on bare rock is known as Xerarch. Succession that takes place in a water body, like ponds or lake is called Hydrarch.

Statement 2 is correct: This process is generally unidirectional in nature. It starts with a bare ecosystem almost lacking biotic components like flora and fauna. This is known as Primary Succession. The community in each stage is replaced by another set of flora fauna. It is finally destroyed by natural or artificial cataclysmic events such as fire or submergence/ flood or drying up of the water body.

After this, when the process of Primary Succession starts again, then this is another instance of ecological succession. Hence there is no back and forth between the intermediate stages. This process is unidirectional. Hence this statement is correct.

Statement 3 is correct: The Ecological Succession refers to the various stages in evolution and occupation of an ecosystem by both:

- 1) Biotic factors: such as the vegetation, the types of animals (microbiota, insects, herbivores, tertiary carnivores, etc).
- 2) Abiotic factors: such as the temperature, moisture availability, soil profile, etc

It is not just limited to the stages of occupation by the biotic components. Hence this statement is **correct**.

Statement 4 is incorrect: Sere refers to the entire sequence of communities in a given area, succeeding each other, during the course of succession. It does not refer to any one particular stage, final or otherwise of the process of ecological succession. Hence this statement is **incorrect**.

The final stage of this process is known as the **Climax Community**.

Knowledge Base:

- 1) Change resulting in ecological succession is brought about both by the activities of the communities as well as by the physical environment in that particular area.
- 2) There are 2 types of ecological successions - Primary and Secondary Succession
- 3) Primary Succession:
 - a. takes place over bare or unoccupied areas such as rocks outcrop, newly formed deltas and sand dunes, emerging volcano islands and lava flows as well as glacial moraines where no community has existed previously.
 - b. The plants that invade first bare land, where soil is initially absent are called pioneer species.
 - c. The assemblage of pioneer plants is collectively called pioneer community. A pioneer species generally shows high growth rate but short life span.

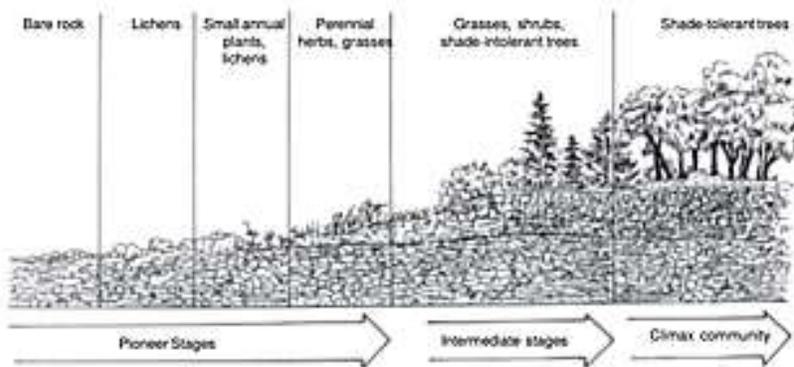

Fig 4.15: The orderly sequence of primary succession

- 4) Secondary Succession: development of a community which forms after the existing natural vegetation that constitutes a community is removed, disturbed.

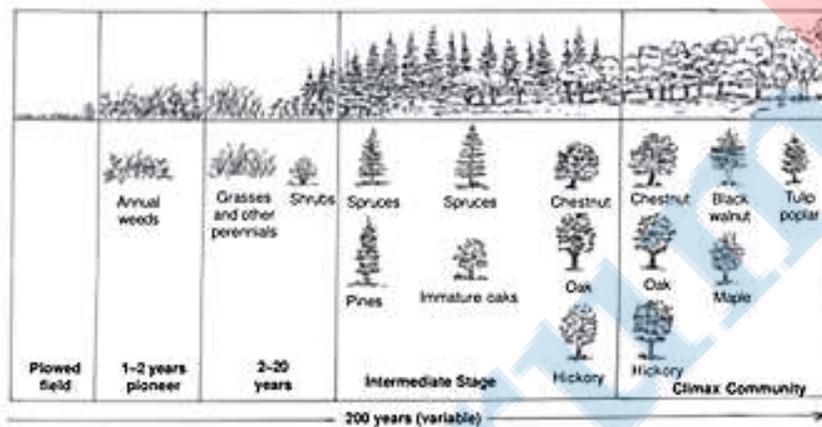

Fig. 4.16: Secondary succession on land

- 5) The difference between primary and secondary succession is that secondary succession is relatively faster than primary succession as it starts on a well-developed site already formed at the site. Also, secondary succession starts on a well-developed soil already formed at the site.
- 6) Some other classifications of ecological successions:
- Autogenic Succession: When living inhabitants of the community itself bring about succession.
 - Allogenic Succession: When outside forces bring about succession.
 - Autotrophic Succession: Succession in which green plants are much more significant in quantity.
 - Heterotrophic Succession: Succession in which heterotrophs are more significant in quantity.

Source: ForumIAS Red Book on Environment, Ch-1, Pg-8,9;

<https://www.nios.ac.in/media/documents/333courseE/4.pdf> Pg 66-68

Q.13) Consider the following pairs regarding the features of mangroves and their corresponding description:

Features of Mangroves	Description
1. Pneumatophores	These are small openings on the leaves that help in respiration.
2. Succulent leaves	They help in excreting excess salts.
3. Viviparity	It is a reproductive adaptation in mangrove trees.

How many pairs given above are correctly matched?

- Only one pair
- Only two pairs
- All three pairs
- None of the pairs

Ans) b

Exp) Option b is the correct answer.

Pair 1 is incorrect: Pneumatophores are the roots (also called as **air roots, blind roots**), that help mangroves to respire in **anaerobic soils**. These roots have numerous pores through which oxygen enters, **unless they are clogged or submerged for too long**.

Pair 2 is correct: Mangroves have salt exclusion and salt excretion adaptations:

- Salt exclusion:** This occurs through filtration of salts at the surface of the roots. Red-mangrove is an example of salt excluding species.
- Salt excretion:** Salt excreters remove salts through glands located on the leaves. Mangroves (especially, white mangroves) develop **thickened succulent leaves**. These thick and waxy leaves are known for hoarding freshwater and excreting salts in the mangrove vegetation.

Pair 3 is correct: Mangroves have **two reproductive adaptations- viviparity and propagule dispersal**. In mangrove trees, once pollination occurs, the seeds remain attached to the parent tree. They germinate into propagules before dropping into the waters below. This is known as ‘viviparity’ mode of reproduction. The propagules either take root in the sediments near the parent tree or are dispersed with the tides and currents to other shorelines.

Source: https://www.mangrovealliance.org/wp-content/uploads/2022/09/The-State-of-the-Worlds-Mangroves-Report_2022.pdf

<https://www.floridamuseum.ufl.edu/southflorida/habitats/mangroves/adaptations/>

Q.14) Consider the following statements with reference to the food chains and concentration of pollutants:

- Bioaccumulation refers to the pollutant’s tendency to concentrate as they move from one trophic level to the next.
- Biomagnification takes place in a single organism over the span of its life, resulting in a higher concentration of the pollutant.

Which of the above-given statements is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) d

Exp) Option d is the correct answer.

Statement 1 is incorrect: Biomagnification (not bioaccumulation) refers to the pollutant's tendency to concentrate as they move from one trophic level to the next. For biomagnification to occur, pollutants must be long-lived, mobile, soluble in fats, biologically active. For e.g., the concentration of DDT moves up the food chain, from one trophic level to another.

Statement 2 is incorrect: Bioaccumulation occurs when an organism absorbs a toxic substance at a rate greater than that at which the substance is eliminated. This results in higher concentration of pollutant in one single organism.

Source: <https://blog.forumias.com/wp-content/uploads/2021/12/FORUM-IAS-RED-BOOK-ENVIRONMENT-2021.pdf>

Q.15) Recently, UNESCO released a list of iconic heritage textile crafts of the country. In this context, consider the following pairs:

Crafts	Associated State/Union Territories
1. Chamba rumals	Ladakh
2. Khes	Haryana
3. Thigma tye	Maharashtra
4. Bandha dye	Odisha

Which of the above given pairs are correctly matched?

- a) 1 and 2 only
- b) 2 and 4 only
- c) 1 and 3 only
- d) 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

UNESCO has released a **list of 50 exclusive and iconic heritage textile crafts of India** under the title "**Handmade for the 21st Century: Safeguarding Traditional Indian Textile**". The UNESCO document lists the histories and legends behind the textiles, describes the complicated and secret processes behind their making, mentions the causes for their dwindling popularity, and provides strategies for their preservation.

Pair 1 is incorrectly matched: The Chamba Rumal gets its name from Chamba, a hill station in **Himachal Pradesh (not from Ladakh)**. In the 17th century, **the Chamba Rumal** embroidery was done by the queens and royal ladies of Chamba for **wedding dowries, important gifts, and ceremonial covering**.

Chamba Rumal

Pair 2 is correctly matched: Panipat (Haryana), a historical town of India, presently known as a **city of Handloom** was once famous for its **khes weaving**. These were woven in a double-cloth weave with cotton yarn in a chequered design. The Khes was thick enough to be used more popularly as a **bedding material**, but also **additionally as a shawl or a wrap**.

Khes Textile

Pair 3 is incorrectly matched: Thigma dye is tie-dye technique on the **wool of Ladakh** (not Maharashtra). This process involves **resist-dyeing on woollen cloth**. Chief centers for practicing this craft are the Nubra valley and Sab in **Ladakh** and also **prevalent in Awadh and Varanasi**.

Thigma dye

Pair 4 is correctly matched: Bandha dye-tie technique is the way of weaving of **Sambhalpur, Odisha**. Bandha of Odisha has gloriously woven, blurred, and gem-coloured motifs in silk and cotton. The dominant motifs in this craft include animals and birds, with the traditional designs being fish. As the design-type is single ikat, the designs on the material are blurred.

Bandha dye-tie

Ikat/Bandha/Yarn Tie-Dye Weaving of Sambalpur across India

Khes of Panipat, Haryana – Asia InCH – Encyclopedia of Intangible Cultural Heritage

Q.16) Consider the following statements regarding threats to the coral reefs:

1. Increasing levels of the 'aragonite' mineral in the sea, slows down the coral growth.
2. Ocean warming is responsible for coral bleaching.
3. Chemicals like oxybenzone damages coral DNA.
4. Using 'mineral accretion technology' results in permanent damage to coral reefs.

Which of the statements given above are correct?

- a) 2 and 3 only
- b) 1, 2 and 3 only
- c) 2, 3 and 4 only
- d) 1 and 4 only

Ans) a

Exp) Option a is the correct answer.

Coral reefs are massive structures made of **limestone deposited by coral polyps**. Often referred to as the “**rainforests of the sea**”, coral reefs support approximately 25 percent of all known marine species. Due to various natural and anthropogenic reasons, they are facing severe threats.

Statement 1 is incorrect: Aragonite is an important mineral which corals need to build their skeletons. Increasing **carbon dioxide in sea water makes water more acidic and decreases the availability of aragonite**. Lack of aragonite slows down coral growth and results in less dense and weaker structures that are prone to erosion and damage. **As per World Resources Institute (WRI), Aragonite saturation levels have consistently decreased in the last century**, and this trend is projected to continue over the next century under current CO₂ emissions.

Statement 2 is correct: Increasing Ocean temperatures cause breakdown in the symbiotic relationship between corals and the zooxanthallae algae. The corals, due to warming, expel zooxanthallae, lose their color and become weak. This phenomenon is known as coral bleaching. Thus, increasing ocean temperatures result in coral bleaching.

Statement 3 is correct: Oxybenzone is often used in sun creams. This disrupts coral reproduction and damages coral DNA. This is also responsible for coral bleaching. Hence, oxybenzone is also called as ‘**reef toxic**’.

Statement 4 is incorrect: Bio-rock technology or mineral accretion technology helps in restoring coral reefs. Under this process, safe and low voltage electric current is applied through seawater, causing

dissolved minerals to crystallize on structures. This leads to **formation of white limestone**, similar to that which makes up coral reefs. Hence, this helps in coral restoration.

Knowledge Base: Other threats to corals include- overfishing, shipping and dredging, solar irradiance, increasing sedimentation in the sea water, coral diseases and so on. The initiatives taken for the conservation of coral reefs are:

- 1) Included in **Schedule-I of the Wildlife Protection Act, 1972**
- 2) Classified as **CRZ-IA under Coastal Regulation Zone Notification**.
- 3) **Coral Bleaching Alert System (CBAS)** has been developed by Indian National Centre for Ocean Information Services (INCOIS).
- 4) **Coral Reef Recovery Project** is a joint venture between Wildlife trust of India and the Gujarat forest department
- 5) **International Coral Reef Initiative (ICRI)** is an informal partnership between nations and organizations that strives to preserve coral reefs (**India is a member**).

Source: <https://www.wri.org/insights/decoding-coral-reefs>

Forum IAS Red Book on Environment.

Q.17) Read the following paragraph carefully and answer the question that follows:

“When Arizona’s Grand Canyon was formed, it acted as a huge physical barrier and resulted in the separation of the species of squirrels into two distinct groups. The barrier made it impossible for the species to breed with one another. Now, each species, equally dominant, develops differently based on the demand of their unique habitat.”

Which of the following type of speciation most appropriately describes the above paragraph?

- a) Allopatric Speciation
- b) Peripatric Speciation
- c) Parapatric Speciation
- d) Artificial Speciation

Ans) a

Exp) Option a is the correct answer.

Speciation is how a new kind of plant or animal species is created. Speciation occurs when a group within a species separates from other members of its species and develops its own unique characteristics.

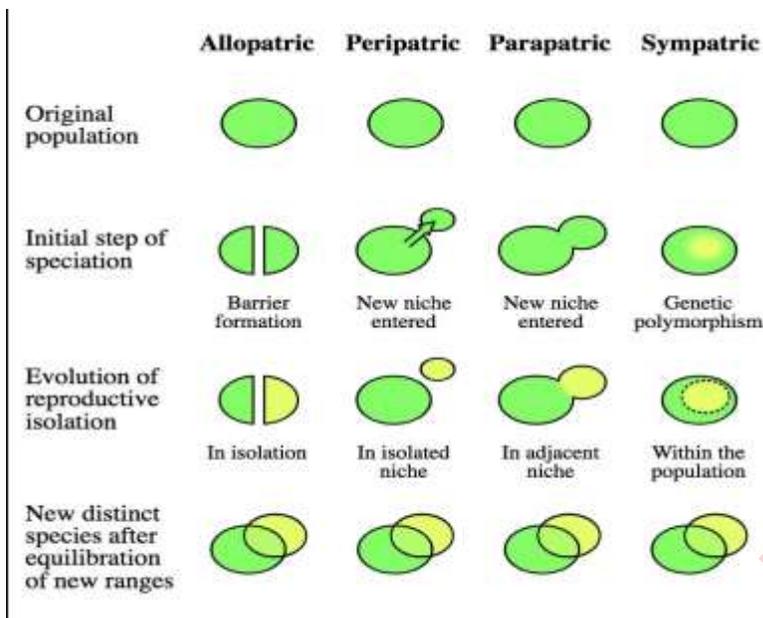

Option a is correct: Allopatric speciation occurs when a **species separates into two separate groups** due to which they get isolated from one another. A physical barrier, such as a mountain range or a waterway, makes it impossible for them to breed with one another. So, the given case, **formation of Grand Canyon created a physical barrier for squirrels and other small mammals to interbreed**. Today, two **separate squirrel species inhabit** the north and south rims of the canyon.

Option b is incorrect: When a **small group** of individuals **break off from the larger group** and form a new species, due to physical barriers, it is called as peripatric speciation. In this type also, interbreeding is not possible. **The main difference between allopatric speciation and peripatric speciation is that in peripatric speciation, one group is much smaller than the other.**

Option c is incorrect: In this case, instead of being separated by a physical barrier, the species are **separated by differences in the same environment**. It is **possible for any member of the species to mate with another** member, but individuals only mate with those in their own geographic region.

Option d is incorrect: It is the creation of new species by the people through laboratory experiments.

Knowledge Base: Different types of speciation:

(Source: National Geographic)

Source: <https://education.nationalgeographic.org/resource/speciation>

Q.18) Consider the following statements with reference to trophic-level interactions:

1. A food web is a network of food chains which are interconnected to each other.
2. If the individuals of the same species start eating themselves, then it will not be considered part of the Food Chain.
3. The pyramid of biomass may assume an inverted form in an aquatic ecosystem.
4. Saprophytes form the base of all the Pyramids of Biomass.

Which of the above-given statements are correct?

- a) 2 and 4 only
- b) 1 and 3 only
- c) 2, 3 and 4 only
- d) 1, 2 and 3 only

Ans) d

Exp) Option d is the correct answer.

The transfer of energy from the bodies of individuals of one species to those of a different species is known as trophic interaction.

Statement 1 is correct: A sequence of organisms that feed on one another form a food chain. **Multiple interlinked food chains make a food web.** A food web denotes the numbers of each organism which are eaten by others. A food web shows many different paths through which plants and animals are connected. For e.g., a hawk might also eat a mouse, a squirrel or some other animal. The snake may eat a beetle or a caterpillar. And the process continues for all the other animals in the food chain.

Statement 2 is correct: Food chains are not found within the populations of a species, because technically, Food chain is the sequence of organisms through which the energy flows. If the species starts eating itself, then flow of energy will not proceed.

Statement 3 is correct: Pyramid of biomass is determined by collecting all organisms at each trophic level and measuring their dry weight. For the majority of ecosystems on land, the pyramid of biomass shows a large base of primary producers and a smaller trophic level perched on top. **In contrast, in many**

aquatic ecosystems, the pyramid of biomass may assume an inverted form. This is because producers are tiny phytoplankton.

Statement 4 is incorrect: Saprophytes are the living organisms that live and feed on dead and decaying organisms. One of the key issues of ecological pyramid is that the Saprophytes are not given a place in ecological pyramids.

Source: <https://blog.forumias.com/wp-content/uploads/2021/12/FORUM-IAS-RED-BOOK-ENVIRONMENT-2021.pdf>

<https://www.nature.com/scitable/knowledge/library/food-web-concept-and-applications-84077181/>

<https://www.khanacademy.org/science/ap-biology/ecology-ap/energy-flow-through-ecosystems/a/food-chains-food-webs>

<https://education.nationalgeographic.org/resource/resource-library-food-chains-and-webs>

Q.19) With reference to the concept of Niche, consider the following:

1. It refers to the functional role of a species in an ecosystem.
2. Generally, the Species that have narrow or limited niches are considered to be specialist species.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: Niche refers to the unique function that a species plays in a particular ecosystem. It refers to the place of that species and its role in sustaining an ecosystem. Hence this statement is **correct**.

Statement 2 is correct: In general, species that have narrow or limited niches are considered to be specialist species. Koalas (*Phascolarctos cinereus*), which feed only on leaves from eucalyptus trees in Australia, are an example of a specialist species. Species with broader niches, like coyotes (*Canis latrans*) or raccoons (*Procyon lotor*), are considered generalists.

Source: Shankar IAS Environment, 8th edition, Ch-1, Pg-53, 54;

<https://nios.ac.in/media/documents/333courseE/5.pdf> Pg 85, 84

Q.20) With reference to 'Telecom Technology Fund Scheme', consider the following statements:

- 1 The Scheme is launched by Ministry of Science and Technology under the 'Fund for Industrial Research Engagement' initiative.
2. The objective of the scheme is to provide exclusive financial support to development of 5G technology in India.
3. An allocation of 5% of annual collections from Universal Service Obligation Fund will be available for funding under the scheme.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 3 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

Recently, Universal Service Obligation Fund (USOF), a body under the Department of Telecommunications, officially launched Telecom Technology Development Fund (TTDF) Scheme.

Statement 1 is incorrect: Telecom Technology Development Fund (TTDF) Scheme is not launched by Ministry of Science and technology but it is launched by **Universal Service Obligation (USOF) Fund department of communication under Ministry of Communication.**

Statement 2 is incorrect: Its objective is to **promote technology ownership and indigenous manufacturing, create a culture of technology co-innovation, reduce imports, boost export opportunities and creation of Intellectual Property.** Whereas The USOF has largely been used to aid rural connectivity. But the objective of TDF is also to boost connectivity in underserved urban areas, R&D, skill development etc. It is not devised to exclusively fund 5G technology in India.

Statement 3 is correct: Apart from the existing R&D funding mechanisms, an **allocation of 5% of annual collections from USOF will be available for funding R&D in the Telecom sector under Telecom Technology Development Fund**, starting with the funds collected in the financial year 2021-22. Telecommunication technology products require significantly large funding and long gestation periods for R&D and commercialization including the additional efforts and resources for the products to move from prototype to commercial grade.

Knowledge Base:

Universal Service Obligation Fund:

(a) The Universal Service Obligation Fund (USOF) was formed by an Act of Parliament, was established in April 2002 under the Indian Telegraph (Amendment) Act 2003.

(b) It aims to provide financial support for the provision of telecom services in commercially unviable rural and remote areas of the country.

(c) The resources for the implementation of USO are raised by way of collecting a Universal Service Levy (USL), which is 5 percent of the Adjusted Gross Revenue (AGR) of Telecom Service Providers.

(d) USOF is a non-lapsable Fund. The Levy amount is credited to the Consolidated Fund of India. The fund is made available to USOF after due appropriation by the Parliament.

Source: <https://usof.gov.in/ttdf>

Universal Service Obligation Fund (USOF) launches Telecom Technology Development Fund scheme (forumias.com)

Q.21) If a tropical rain forest is removed, it does not regenerate quickly as compared to a tropical deciduous forest. This is because:

- The soil of rain forest is deficient in nutrients
- Propagules of the trees in a rain forest have poor viability
- The rain forest species are slow growing
- Exotic species invade the fertile soil of rain forest

Ans) a

Exp) Option a is the correct answer.

Despite the amount of vegetation in the tropical rain forest, the soil contains less organic matter than that of temperate forests, because the warm humid conditions encourage faster decay and recycling of nutrients back into living forest.

One reason the rain forest soil is so poor is that most of the nutrients are stored in the plants themselves. In any forest, dead organic matter falls to the ground, providing valuable nutrients for new growth. In cooler or drier climates, the nutrients build up in the soil. Thus the tropical rain forest does not regenerate quickly as compared to a tropical deciduous forest.

Source) UPSC CSE Pre 2011

Q.22) Consider the following statements with reference to the Biogeochemical Cycle:

1. All chemical elements present in organisms are part of biogeochemical cycles.
2. The reservoir for the sedimentary type of nutrient cycle exists only in the atmosphere.
3. Sulphur cycle and Phosphorous cycle are considered sedimentary biogeochemical cycle.
4. Sedimentary cycles are considered imperfect nutrient cycles.

Which of the above-given statements are correct?

- a) 1 and 4 only
- b) 1, 3 and 4 only
- c) 1, 2 and 3 only
- d) 2, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

Bio-geo-chemical cycle is a pathway by which a chemical substance moves through the biotic and abiotic compartments of the earth.

Statement 1 is correct: All chemical elements occurring in organisms are part of biogeochemical cycles. In addition to being a part of living organisms, these chemical elements also cycle through abiotic factors of ecosystems such as water (hydrosphere), land (lithosphere), and/or the air.

Statement 2 is incorrect: Gaseous cycles are a type of biogeochemical cycle in which the reservoir is the air or the oceans (via evaporation). Such cycles include those of nitrogen, oxygen, carbon, and water. Thus the reservoir for gaseous type of nutrient cycle cannot be located in earth's crust. **It is the sedimentary cycle, of which the reservoir is located in earth's crust.** Sedimentary cycles include those of iron, calcium, phosphorus, sulfur, and other more-earthbound elements.

Statement 3 is correct: Sulphur cycle and Phosphorous cycle are considered sedimentary biogeochemical cycle. The main storage for phosphorus is in the earth's crust. It occurs in large amounts as a mineral in phosphate rocks and enters the cycle from erosion, weathering and mining activities. **Sulphur is locked in organic (coal, oil and peat) and inorganic deposits (pyrite rocks and Sulphur rocks).** It is released by weathering activities. It also enters the atmosphere from sources like volcanic eruptions, fossil fuel combustion, ocean surface and decomposition.

Statement 4 is correct: Sedimentary cycles are considered relatively imperfect, as some nutrients are lost from the cycle and get locked into sediments and so become unavailable for immediate cycling. A perfect nutrient cycle is one in which nutrients are replaced as fast as they are utilized. Most gaseous cycles are generally considered as perfect cycles.

Source: <https://blog.forumias.com/wp-content/uploads/2021/12/FORUM-IAS-RED-BOOK-ENVIRONMENT-2021.pdf>

<https://www.khanacademy.org/science/biology/ecology/biogeochemical-cycles/a/introduction-to-biogeochemical-cycles>

<https://scied.ucar.edu/learning-zone/earth-system/biogeochemical-cycles>

Q.23) Consider the following statements with reference to the keystone species in an ecosystem:

1. They are always the most abundant species in an ecosystem.
2. They have high functional redundancy.
3. They help to maintain the local biodiversity of an ecosystem.

Which of the above-given statements is/are correct?

- a) 2 only
- b) 3 only
- c) 1 and 3 only
- d) 1 and 2 only

Ans) b

Exp) Option b is the correct answer.

A **keystone species** is one whose presence or absence in an ecosystem causes significant changes in the abundance or occurrence of at least one other species.

Statement 1 is incorrect: Keystone species are not always the largest or most abundant species in an ecosystem. Without keystone species, the ecosystem would be dramatically different or cease to exist altogether. For example Bees are considered a keystone species. Bees pollinate plants and help in their reproduction process. The plants provide shelter to these insects which are then eaten by birds.

Statement 2 is incorrect: The concept of functional redundancy implies that species loss is compensated by other species contributing similarly to functioning. **Keystone species have low (not high) functional redundancy. This means that if the species were to disappear from the ecosystem, no other species would be able to fill its ecological niche.**

Statement 3 is correct: Keystone species maintain the local biodiversity of an ecosystem, influencing the abundance and type of other species in a habitat. They are a critical component of the local food web.

Source: <https://blog.forumias.com/wp-content/uploads/2021/12/FORUM-IAS-RED-BOOK-ENVIRONMENT-2021.pdf>

<https://education.nationalgeographic.org/resource/role-keystone-species-ecosystem>

<https://www.nrdc.org/stories/keystone-species-101>

Q.24) With reference to major vegetation found in various Indian Forest type, consider the following pairs:

Indian Forest Type	Predominant Tree
1. Sub-tropical Pine forest	Acacia
2. Tropical Moist deciduous forest	Teak
3. Tropical Wet evergreen forest	Jackfruit
4. Tropical Thorn forest	Rhododendron

Which of the pairs given above are correctly matched?

- 1 and 2 only
- 2 and 3 only
- 3 and 4 only
- 1, 2, 3 and 4

Ans) b

Exp) Option b is the correct answer.

Classification of Natural Vegetation of India is primarily based on spatial and annual variations in rainfall. Temperature, soil and topography are also considered. India's vegetation can be divided into **5 main types** as given below.

- 1) Moist Tropical Forests
- 2) Dry Tropical Forests
- 3) Montane Sub-tropical Forests
- 4) Montane Temperate Forests

5) Alpine Forests

Pair 1 is incorrect: Sub tropical Pine forests are found in the steep dry slopes of the Shivalik Hills, Western and Central Himalayas, Khasi, Naga, and Manipur Hills. The trees predominantly found in these areas are the **chir, oak, rhododendron, and pine as well as sal, amla, and laburnum are found in the lower regions.**

Pair 2 is correct: Tropical Moist deciduous forests are found throughout India except in the western and the north-western regions. The trees are tall, have broad trunks, branching trunks and roots to hold them firmly to the ground. Some of the taller trees shed their leaves in the dry season. There is a layer of shorter trees and evergreen shrubs in the undergrowth. These forests are dominated by **sal and teak, along with mango, bamboo, and rosewood.**

Pair 3 is correct: Tropical Wet evergreen forests are found along the Western Ghats, the Nicobar and Andaman Islands and along the north-eastern region. It is characterized by tall, straight evergreen trees. The more common trees that are found here are **the jackfruit, betel nut palm, jamun, mango, and hollock.** The trees in this forest form a tier pattern: shrubs cover the layer closer to the ground, followed by the short-structured trees and then the tall variety. Beautiful fern of various colours and different varieties of orchids grow on the trunks of the trees

Pair 4 is incorrect: Tropical Thorn forests, this type is found in areas with black soil: North, West, Central, and South India. The trees do not grow beyond 10 metres. **Acacia, Spurge, caper, and cactus are typical of this region**

Source: Ch 3 Shankar IAS Environment

Q.25) With reference to 'Lead poisoning', which one of the following is/are source of it?

1. Sindoor Manufacturing
2. Jewellery Processing
3. Dairy Farming
4. Smelting Industry
5. Car battery Production

Select the correct answer using the code given below:

- a) 1 and 4 only
- b) 1, 2 and 5 only
- c) 1, 2, 4 and 5 only
- d) 1, 2, 3, 4 and 5

Ans) d

Exp) Option d is the correct answer.

Lead is a naturally occurring **toxic metal** found in the Earth's crust. Its widespread use has resulted in **extensive environmental contamination**, human exposure and significant public health problems in many parts of the world. Important sources of environmental contamination come from **mining, smelting, manufacturing and recycling activities** and use in a wide range of products.

Option 1 is correct: Sindoor and Kajal are well known to contain **lead and other heavy metals** with risk of **kidney, hepatic, skin disorders**. Risk of heavy metals on skin leads to DNA damage, Kertaodermas and skin ulceration, nail and teeth changes. There is **no safe level of lead**. That's why it is believed, Sindoor powder shouldn't be sold.

Option 2 is correct: In Jewellery processing, Lead **makes fashion jewellery items heavier** and they thus **appear to be more "precious"**. The use of some lead compounds in coatings gives the jewellery a metallic aspect to the surface and **provides shades of colour**. It is nearly impossible for consumers to identify jewels which contain lead and it impacts vary badly on the health.

Option 3 is correct: Livestock find **lead** palatable and will readily lick and chew on lead material. **Lead poisoning is most common among calves** because they are curious feeders, and both milk and milk substitutes increase the amount of lead absorbed by calves. Sucking animals can also receive lead in their milk. When lead containing milk is consumed by humans, then it results into moderate to severe levels of lead poisoning among humans.

Option 4 is correct: The most common route of lead exposure caused by **lead smelting** is through **inhalation or ingestion of lead dust, particles, or exhaust from the burning process**. Workers in the smelting factories are particularly at risk, as they can be exposed to prolonged and direct inhalation of gaseous emissions and dust.

Option 5 is correct: An automobile battery contains six cells. Each cell of a lead storage battery consists of alternate plates made of a lead alloy grid filled with sponge lead (cathode plates) or coated with lead dioxide (anode). More than three quarters of global lead consumption is for the manufacture of **lead-acid batteries** for motor vehicles.

Knowledge Base:

Impact of the lead poisoning:

- (a) Lead poisoning can cause severe mental and physical impairment.
- (b) Exposure to high levels of lead may cause anemia, weakness, and kidney and brain damage.
- (c) Lead is more harmful to children because their brains and nervous systems are still developing.

Source: Lead poisoning (who.int), Arsenic (who.int)

Q.26) Consider the following statements regarding Steppes and Savannah regions:

1. Compared to Savannah, Steppes typically receives more average annual rainfall.
2. Grasses in Steppes are much longer than the Savannahs.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) d

Exp) option d is the correct answer.

There are two main kinds of grasslands: tropical and temperate. Examples of temperate grasslands include Eurasian steppes, North American prairies, and Argentine pampas. Tropical grasslands include the hot savannas of sub-Saharan Africa and northern Australia.

Statement 1 is incorrect. Savanna receives more rainfall than steppes. The wet summer season typically lasts for 6 to 8 months. The rain in savanna averages around 50-100 cm per year. Whereas in steppes the average rainfall remains around 10 to 30 cm each year.

Statement 2 is incorrect: It is natural to expect the steppes to be grass-covered, differing only in the density and quality of the grass. Their greatest difference from the tropical savanna is that they are practically treeless, and the **grasses are much shorter**.

Source: G C Leong - Chapter 20, <https://education.nationalgeographic.org/resource/grasslands-explained>

Q.27) Which of the options given below best describe the term 'winterkill' ?

- a) Death of polar bears due to lack of food resources
- b) Loss of fish in winter because of lack of oxygen
- c) Excessively low temperature in the Polar Regions Leading to loss of life
- d) Death of plants due extreme low temperatures

Ans) b

Exp) Option b is correct is the answer.

Winterkill is a term used to describe the loss of fish in winter because of lack of oxygen in a water body. Snow cover of ice on water body can effectively cut off light, plunging the waters into darkness. Hence photosynthesis stops but respiration continues. Thus, in shallow lakes, the oxygen gets depleted. Fish die, but we won't know it until the ice melts and we find floating fish. This condition is known as winterkill.

Source: Ch 4 Shankar IAS Environment

Q.28) With reference to Coastal Regulation Zone (CRZ), which of the following statements is/are correct?

1. Coastal Regulation Zone (CRZ) Notification was issued under the Environment Protection Act, 1986.
2. Only projects under CRZ I and CRZ IV would need clearance from Ministry of Environment
3. Temporary tourism facilities are permitted in beaches and in the "No Development Zone" (NDZ) of the CRZ-III areas.
4. Blue Flag certification to beaches is given under New Coastal Regulation Zones (CRZ) Notification 2018

Select the correct answer using the code given below.

- a) 1 and 2 only
- b) 1, 2 and 3 only
- c) 1 and 4 only
- d) 1, 2, 3 and 4

Ans) b

Exp) Option b is the correct answer.

Coastal Regulation Zone: All the coastal stretches of seas, bays, estuaries, creeks, rivers and backwaters which are influenced by tidal action (in the landward side) up to 500 metres from the High Tide Line (HTL) and the land between the Low Tide Line (LTL) and the HTL.

Statement 1 is correct: Coastal Regulation Zone (CRZ) Notification was issued for the first time in 1991 under the Environment Protection Act, 1986. The main aim of the Rules is to protect the coastal environment.

Statement 2 is correct: Under New Coastal Regulation Zones (CRZ) Notification 2018

only projects under CRZ I and CRZ IV would need Environmental clearances from the Ministry of Environment.

Statement 3 is correct: New Coastal Regulation Zones (CRZ) Notification 2018 permits temporary tourism facilities in beaches and in the "No Development Zone" (NDZ) of the CRZ-III areas.

Statement 4 is incorrect: The Blue flag certification is an international recognition conferred on beaches that meet certain criteria of cleanliness and environmental propriety. The certification program is run by the international, non-governmental, non-profit organization **FEE (the Foundation for Environmental Education)**.

Knowledge Base:

Categories of Coastal Regulation Zone:

Category I: areas that are ecologically sensitive and important, such as national parks marine parks, sanctuaries, reserve forests, wildlife habitats, mangroves, corals/coral reefs, etc.

Category II: areas that have already been developed up to or close to the shore-line.

Category III: Areas that are relatively undisturbed and those that do not belong to either Category-I or II. (sub categorization done under **New Coastal Regulation Zones (CRZ) Notification 2018**)

- 1) CRZ III A: Densely populated rural areas with a population density of 2161/sq. Km. Such areas shall have an No Development Zone (NDZ) of 50 meters from the HTL
- 2) CRZ-III B: Rural areas with population density of below 2161/sq. Km. Such areas shall continue to have an NDZ of 200 meters from the HTL

Category IV: Coastlines of Indian islands that do not fall into categories I, II or III

About Blue flag certification:

- 1) The certification is based on 33 stringent criteria in four major heads (i) Environmental Education and Information (ii) Bathing Water Quality, (iii) Environment Management and Conservation and (iv) Safety and Services in the beaches.
- 2) The Union Environment Ministry has selected 13 beaches in India to compete for the 'Blue Flag' certification.
- 3) Further, Spain has the highest number of Blue Flag beaches followed by, Greece and France. Japan and South Korea are the only countries in Asia to have Blue Flag beaches.

Source: <https://blog.forumias.com/what-are-crz-rules-which-the-demolished-maradu-flats-violated/>
<https://blog.forumias.com/centre-eases-crz-rules-of-beaches-aspiring-for-blue-flag-tag-what-is-this-certification/>

Q.29) Consider the following statements regarding functions of an Estuary Ecosystem:

1. It provides freshwater for drinking.
2. It helps in development of ports.
3. It provides coastal buffers from storm surge and flooding.
4. It act as a nursery for both freshwater and ocean dependent animals.
5. It acts as a shelter to sea urchins, horseshoe crabs and otters.

Which of the statements given above is/ are correct?

- a) 2, 3 and 4 only
- b) 1, 2, 3 and 5 only
- c) 1, 4 and 5 only
- d) 1, 2, 3, 4 and 5

Ans) d

Exp) Option d is the correct answer.

An estuary is a place where a **freshwater river or stream meets the ocean**. The mixing of fresh river water and salty ocean water, generally, results in **brackish water**. An estuary is a highly **productive ecosystem**.

Statement 1 is correct: Estuaries are **excellent sites for community living**. They provide **freshwater for drinking and hygiene**. Also, some estuaries are not located near oceans. These freshwater estuaries are created when a **river flows into freshwater lake**. For example, The Great Lakes in United States and Canada have many freshwater estuaries. So, some estuaries may provide freshwater for drinking purposes.

Statement 2 is correct: Estuaries are considered as ideal location for the construction of ports and harbors **because they are deep and also, well protected by marine transgressions**.

Statement 3 is correct: The wetland plants and soils in estuarine ecosystem acts as natural buffers between the land and the ocean, absorbing flood waters and dissipating storm surges. Also, the vast mangrove forests on the seaward side of an estuary help to check the wind speed during cyclones.

Statement 4 is correct: Estuaries **have calm waters** which provide safe havens for **small fish, shell fish, shore animals and migratory species of birds**. Also, estuarine water is highly rich in **nutrients**. Therefore, they act as nursery for both freshwater and ocean-dependent animals.

Statement 5 is correct: **Sea urchins are echinoderms** which feed on algae, kelp and other estuary plants. **Crustaceans like horseshoe crab** thrive in soft sand and estuary mud. **Shellfish (mollusks)** are important estuary animals because they act as a buffer, filtering out pollution and other contaminants. **Oyster** is an important shellfish in estuaries which helps to filter polluted waters. Hence, estuary provides shelter to all the three mentioned invertebrates.

Knowledge Base: In India, **major estuaries occur in Bay of Bengal**, which is also a location of major seaports. Estuaries on the western coast are relatively smaller.

Other functions of estuaries:

- 1) They **are more productive than the wetland ecosystem** due to mixing of freshwater and saline water. Thus, they support marine organisms of both the kinds of ecosystem.
- 2) **Estuaries also act as an ecotone region i.e. a transitional zone.** Such regions are, generally, high in terms of productivity.

Source: <https://education.nationalgeographic.org/resource/estuary>

<https://www.epa.gov/nep/basic-information-about-estuaries>

<https://oceanblueproject.org/what-is-an-estuary/>

<https://sciencing.com/list-animals-found-estuary-8442977.html>

Q.30) Economy and Environment are related through Environmental Kuznets curve in which of the following ways?

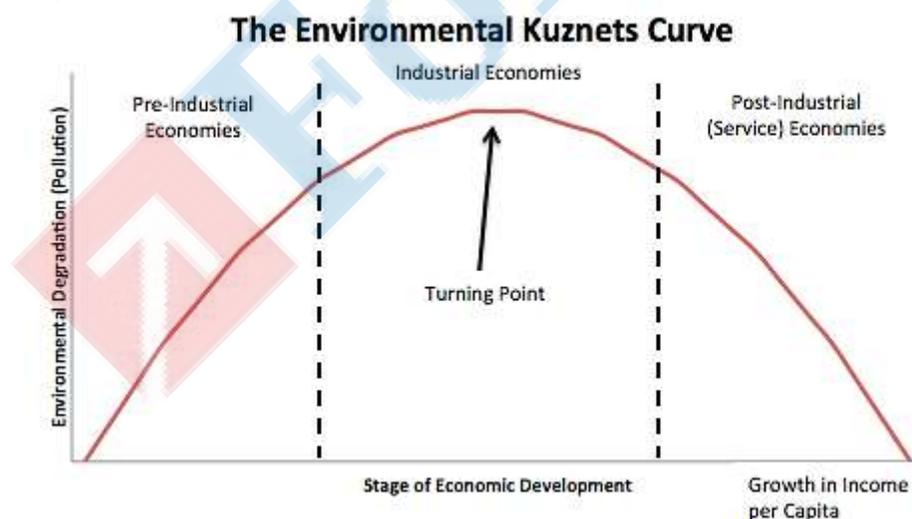

- a) An increase in Environmental pollution rate decreases the National income of an economy.
- b) At higher globalisation of economy happens, environmental pollution lowers.
- c) Environmental degradation increases in the early stages of economic growth, but higher level of economic growth provides reduced environmental degradation.
- d) Higher greenhouse gas emissions and Per Capita income have an inverse relationship

Ans) c

Exp) Option c is the correct answer.

The environmental Kuznets curve (EKC) is a hypothesised relationship between various indicators of environmental degradation and per capita income. In the early stages of economic growth, pollution emissions increase and environmental quality declines, but beyond some level of per capita income (which will vary for different indicators) the trend reverses, so that **at high income levels, economic growth leads to environmental improvement**. This implies that environmental impacts or emissions per capita are an **inverted U-shaped function of per capita income**.

The Environmental Kuznets Curve is used to graph the idea that as an economy develops, market forces begin to increase and economic inequality decreases. More specifically that as the economy grows, initially the environment suffers but eventually the relationship between the environment and the society improves.

Source: <https://www.sciencedirect.com/topics/earth-and-planetary-sciences/environmental-kuznets-curve>

Q.31) Consider the following kinds of organisms:

1. Bacteria
2. Fungi
3. Flowering plants

Some species of which of the above kinds of organisms are employed as bio-pesticides?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

All of the above are employed as biopesticides.

Biopesticides include naturally occurring substances that control pests (biochemical pesticides), microorganisms that control pests (microbial pesticides), and pesticidal substances produced by plants containing added genetic material (plant-incorporated protectants) or PIPs.

Bacteria and Fungi are more targeted in their activity than conventional chemicals. For example, a certain fungus might control certain weeds, and another fungus might control certain insects. The most common microbial biopesticide is *Bacillus thuringiensis*.

Pyrethrum is a naturally occurring pesticide extracted from the chrysanthemum flower.

Source: UPSC CSE Pre 2012

Q.32) In ecological studies, which of the following is an example of Amensalism, a biological interaction?

- a) A large tree having shade upon a small plant.
- b) Two species competing to eat the same food.
- c) Parasites getting nourishment from the host.
- d) Beetles living upon the cow dung.

Ans) a

Exp) Option a is the correct answer.

Amensalism refers to a form of biological interactions in which **one species is harmed**, whereas the **other is unaffected**.

Statement a is correct. A **large tree shades a small plant**, retarding the growth of the small plant, but on opposite side the small plant has no effect on the large tree. This is an example of amensalism.

Statement b is incorrect. **Competition** refers to a form of biological interaction in which **both species are harmed by the interaction**. For example, **if two species eat the same food**, and there isn't enough for both, both may have access to less food than they would if alone. They both suffer a shortage of food.

Statement c is incorrect. **Predation and parasitism** is another form of biological interactions. In this, **one species is benefitted**, whereas the **other is harmed**. For example, **tick gains benefit by sucking blood** whereas the **host is harmed by losing blood**.

Statement d is incorrect. **Commensalism** refers to a biological interaction in which **one species benefit**, the **other is unaffected**. Example: cow dung provides food and shelter to dung beetles. The beetles have no effect on the cows.

Source: Forum IAS Environment Red Book, Chapter 1, Page 11

Environment, Shankar IAS Academy Book, Chapter 1, Page 16

Q.33) Consider the following statements regarding the mangrove forests:

1. India ranks among the top three countries worldwide in terms of area under mangroves.
2. Sunderban is the world's single largest patch of mangroves.
3. Bhitarkanika mangrove area is formed at the confluence of Krishna and Godavari rivers.
4. The Pichavaram mangrove forests is located in Andhra Pradesh.

Which of the statements given above is/ are correct?

- a) 2 only
- b) 1, 2 and 4 only
- c) 2 and 3 only
- d) 1 and 4 only

Ans) a

Exp) Option a is the correct answer.

Statement 1 is incorrect: The top three countries with largest mangrove cover are- **Indonesia (19%), Brazil (9%) and Nigeria (7%)**. These three countries constitute approximately 35% of global area under mangrove. India does not rank in top three in terms of overall mangrove cover.

Statement 2 is correct: Sunderban is the world's single largest patch of mangroves. It is also the only mangrove habitat where Royal Bengal Tiger (*Panthera tigris tigris*) can be found.

Statement 3 is incorrect: Bhitarkanika mangroves site is the second largest mangrove patch in India. It is located at the **confluence of Brahmani and Baitarni rivers**, and not at the confluence of Krishna and Godavari rivers.

Statement 4 is incorrect: Pichavaram mangrove forest is located between two prominent estuaries, the **Vellar estuary in the north and Coleroon estuary** in the south. It is located in the state of **Tamil Nadu**.

Source: <https://fsi.nic.in/isfr-2021/chapter-3.pdf>

Q.34) Environmental Impact Assessment (EIA) is a tool used to identify the environmental, social and economic impacts of a project prior to decision-making. It is promulgated under which of the following Act?

- a) The Wildlife (Protection) Act, 1972
- b) Indian Forest Act, 1927
- c) Forests (Conservation) Act, 1980
- d) The Environment (Protection) Act, 1986

Ans) d

Exp) Option d is the correct answer.

EIA is a formal process to predict the environmental consequences of human development activities and to plan appropriate measures to eliminate or reduce adverse effects and to augment positive effects.

Option a is incorrect: Wildlife Protection Act 1972: This Act provides for the protection of a listed species of animals, birds, and plants, and also for the establishment of a network of ecologically important protected areas in the country.

Option b is incorrect: The purpose of the **Indian Forest Act, 1927** was the protection and conservation of forests and judicial use of forest products. It aimed to regulate the movement of forest produce, and duty leviable forest produce. It also explains the procedure to be followed for declaring an area as Reserved Forest, Protected Forest or a Village Forest.

Option c is incorrect: Forest (Conservation) Act was enacted for providing a higher level of protection to forests and to regulate diversion of forest lands for non-forestry purposes.

Option d is correct: On 27 January 1994, the Union Ministry of Environment and Forests (MEF), Government of India, under the **Environmental (Protection) Act 1986**, promulgated an EIA notification making

Environmental Clearance (EC) mandatory for expansion or modernization of any activity or for setting up new projects listed in Schedule 1 of the notification.

Source: <https://www.cseindia.org/understanding-eia-383#:~:text=On%2027%20January%201994%2C%20the,listed%20in%20Schedule%201%20of>

Ch 25 Shankar IAS Environment

Q.35) Consider the following places seen in news and countries where they are located:

Places in news	Country
1. Groningen	Netherlands
2. Galápagos	Ecuador
3. Zaporizhzhia	Ukraine

Which of the pairs given above is/are correctly matched?

- 1 and 2 only
- 2 and 3 only
- 1 only
- 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Pair 1 is correct: Groningen is a city in the Netherlands.

Groningen is one of the world's largest gas fields in **the Netherlands** and has been described as “the only potential game-changer in Europe” to replace the increasingly disrupted gas supply from Russia.

The giant Dutch gas field once produced more than 40 billion cubic metres (bcm) of gas yearly – equivalent to 10% of the EU's consumption. But its production has now been capped due to earthquakes.

Pair 2 is correct: Galapagos are an archipelago of volcanic islands. They are distributed on each side of the equator in the Pacific Ocean, surrounding the centre of the Western Hemisphere, and are part of the Republic of Ecuador. Situated in the Pacific Ocean some 1,000 km from the South American continent, these 19 islands and the surrounding marine reserve have been called a unique ‘living museum and showcase of evolution’. Located at the confluence of three ocean currents, the Galápagos are a ‘melting pot’ of marine species. Ongoing seismic and volcanic activity reflects the processes that formed the islands.

Pair 3 is correct: Zaporizhzhia is in southern Ukraine. Recently Russian shelling and missile strikes have hit energy infrastructure across Ukraine and knocked out electricity supplies to Europe's largest nuclear plant in Zaporizhzhia.

Q.36) Consider the following statements about Ecological Successions:

- Succession in which initially the green plants are dominant is known as autogenic succession.
- Succession in which consumer species are dominant is known as allogenic succession.

Which of the statement given above is/are correct?

- 1 only
- 2 only
- Both 1 and 2
- Neither 1 nor 2

Ans) d

Exp) Option d is the correct answer.

Ecological succession is the process of change in the species structure of an ecological community over time.

Statement 1 is incorrect: When living inhabitants of the community itself bring about succession, then it is known as Autogenic succession. Whereas, succession in which initially the green plants are dominant is known as **autotrophic succession**.

Statement 2 is incorrect: When outside forces bring about succession, it is known as allogenic succession. On the other hand, succession in which heterotrophs (consumer) species are dominant, it is known as **heterotrophic succession**.

Source: Forum IAS Red Book on environment

Q.37) Kelp are large brown algae that grow in oceans and provide shelter for many marine organisms. Which of the following statements is/are correct with respect to Kelp forests?

1. They can be found only in the deep-sea water.
2. They are immune from climate events such as El Nino.
3. Algin, a product derived from Kelps, can be used as food additive.

Select the correct answer using the code given below:

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 3 only

Ans) d

Exp) Option d is the correct answer.

Kelp are large brown algae seaweeds found in the oceans. **Kelp forests are underwater areas** with a high density of kelp, which covers a large part of the world's coastlines.

Statement 1 is incorrect: Kelps are found largely in shallow ocean water. Kelp are large brown algae that live in **cool, relatively shallow waters and nutrient-rich** waters close to the shore. Because of their dependency upon light for **photosynthesis**, kelp forests form in shallow open waters and are **rarely found deeper than 49-131 feet**.

Statement 2 is incorrect: Storms and large weather events, like **El Nino, can tear and dislodge the kelp**, leaving a tattered winter forest to begin its growth again each spring. Also like a terrestrial forest, kelp forests experience seasonal changes.

Statement 3 is correct: Algin is an emulsifying and bonding agent extracted from kelp. Algin is mainly used as food additive. Also, it finds its use in tire manufacturing, ice-cream industry etc.

Source: <https://oceanservice.noaa.gov/facts/kelp.html>

<https://oceana.org/marine-life/kelp-forest/#:~:text=Generally%20speaking%2C%20kelps%20live%20further,not%20overlap%20with%20the%20systems.>

Forum IAS red book - Pg no 17.

Q.38) Which of the following statement(s) rightly marks the distinction between Oligotrophic Lake and Eutrophic Lake?

1. Oligotrophic lakes are formed only as a result of natural processes whereas Eutrophic lakes are formed only as a result of human activity.
2. Oligotrophic lakes are older lakes as compared to Eutrophic lakes.
3. The rate of decrease of oxygen with increasing depth is higher in Eutrophic lakes as compared to Oligotrophic lakes.
4. The biological productivity of Oligotrophic lakes is generally higher than that of Eutrophic lakes

Select the correct answer using the code given below:

- a) 1,2 and 3 only
- b) 3 and 4 only
- c) 3 only
- d) 2 and 4 only

Ans) c

Exp) option c is the correct answer.

Carlson's index classifies the water body into **oligotrophic, mesotrophic, eutrophic, and hypereutrophic** based on the trophic (nutritional) state of the water body.

Statement 1 is incorrect: Both can be formed as a result of either natural process or human process. For instance Eutrophic lakes can be formed both as a result of natural processes and human processes. **The difference between them lies in their nutritional content,** Oligotrophic lakes have a lower nutritional content than the Eutrophic lakes.

Statement 2 is incorrect: Oligotrophic lakes are young lakes as compared to Eutrophic Lake. As such the shorelines of Oligotrophic Lake have steeper slopes than Eutrophic lakes. Also, waters in the oligotrophic lakes are clear and witness low weed growth as compared to Eutrophic lakes.

Statement 3 is correct: The distribution of oxygen along the depth of **oligotrophic lakes is largely uniform.** On the other hand, in **Eutrophic** lakes, the amount of **dissolved oxygen falls rapidly with increasing depth** as compared to Oligotrophic lakes. In Eutrophic lakes at waters **deeper than 30 feet, there is very little oxygen.**

Oligotrophic lakes have a high amount of dissolved oxygen compared to the Eutrophic lakes.

Statement 4 is incorrect: The biological productivity of Oligotrophic Lake is generally lower than that of Eutrophic lakes. This is the reason why oxygen level in Eutrophic Lake is lower than that of oligotrophic lakes. Higher the growth of organisms, higher the demand for oxygen thus the lower amount of dissolved oxygen in Eutrophic lakes.

Source: <https://www.worldatlas.com/articles/what-are-oligotrophic-mesotrophic-and-eutrophic-lakes.html>

Q.39) Environmental Impact Assessment (EIA) is a tool used to identify the environmental, social and economic impacts of a project prior to decision-making. Consider the following statements about drawbacks of EIA in India.

1. There are numerous instances of fraudulent EIA studies in India.
2. EIA often do not consider alternative sites, technologies, designs and strategies.
3. EIA committee is necessarily comprised of field experts like anthropologists, environmentalists, etc.

4. The projects under EIA assessment have a very high rejection rate.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1, 3 and 4 only
- d) 1, 2 and 4 only

Ans) a

Exp) Option a is the correct answer.

Environmental Impact Assessment (EIA) is a tool used to identify the environmental, social and economic impacts of a project prior to decision-making. It aims to predict environmental impacts at an early stage in project planning and design, find ways and means to reduce adverse impacts, shape projects to suit the local environment and present the predictions and options to decision-makers.

Statement 1 is correct: EIA procedures in India most of the times face issue of credibility. **There are so many instances of fraudulent EIA reports** where erroneous data has been used, same facts used for two totally different places, etc.

Statement 2 is correct: EIA procedures often do not consider alternative sites, technologies, designs and strategies, which could mitigate the environmental impact of the proposed project. Such studies need to be promoted.

Statement 3 is incorrect: Another challenge is with regards to the composition of expert committees and standards. **It has been found that the team formed for conducting EIA studies is lacking the expertise** in various fields such as environmentalists, wildlife experts, Anthropologists and Social Scientists

Statement 4 is incorrect: **The projects are rarely rejected**, between July 2015 and August 2020, of the 3,100 projects submitted, only 3 per cent were not recommended. Even these have the option of coming back with more information and get the clearance.

Source: <https://blog.forumias.com/eia/>

<https://blog.forumias.com/our-broken-system-of-environmental-clearance/>

Q.40) In context of defence of India, what is AD-1, recently seen in news?

- a) It is a third generation, fire and forget anti – tank guided missile.
- b) It is a marine defence system for the detection and countermeasure against the possible torpedo attack.
- c) It is an interceptor missile capable of neutralizing long-range missiles and aircraft.
- d) It is an offshore patrol vessel designed for coastal defence of India.

Ans) c

Exp) Option c is the correct answer.

AD-1 is a Ballistic Missile Defence (BMD) interceptor missile capable of neutralising long-range missiles and aircraft.

Option a is incorrect: **Nag missile** is an Indian third-generation, all-weather, fire-and-forget, anti-tank guided missile with an operational range of 500 m to 20 km depending on variant.

Option b is incorrect: **Maarech Advanced Torpedo Defence System (ATDS)** is used by the Indian Navy. The system helps in detecting and locating an incoming torpedo and to apply countermeasures to protect naval platform against torpedo attack.

Option c is the correct answer: **The Defence Research & Development Organisation (DRDO) has developed the AD-1, a long-range interceptor missile.** It can intercept both low exo-atmospheric and endo-atmospheric long-range ballistic missiles as well as aircraft. It is propelled by a two-stage solid motor. It is equipped with indigenously-developed advanced control system, navigation and guidance algorithm to precisely guide the vehicle to the target.

Option d is incorrect: Sarthak is an Offshore Patrol Vessel (OPV) of the Indian Coast Guard.

Source: <https://www.thehindu.com/news/national/drdo-carries-out-maiden-test-of-phase-ii-of-ballistic-missile-defence/article66087097.ece>

<https://indianexpress.com/article/india/ballistic-missile-test-8245478/>

Q.41) In the grasslands, trees do not replace the grasses as a part of an ecological succession because of

- a) insects and fungi
- b) limited sunlight and paucity of nutrients
- c) water limits and fire
- d) None of the above

Ans) c

Exp) Option c is the correct answer.

Ecological succession is the steady and gradual change in a species of a given area with respect to the changing environment.

Forest fires change the composition of ground which hinders growth of trees.

Grasslands occur where rainfall is usually low and/or the soil depth and quality is poor. Low rainfall prevents the growth of a large number of trees and shrubs in abundance as most of the water is first intercepted by grasses before it reaches the shrubs.

Source: UPSC CSE Pre 2013

Q.42) With reference to the Grassland Ecosystem, consider the following statements:

1. In general, the pyramid of biomass is inverted in a grassland ecosystem.
2. Agriculturalization of grasslands owing to its rich soil fertility is one of the threats faced by the grassland ecosystem.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

Grasslands are found where there is not enough regular rainfall to support the growth of a forest, but enough rainfall to avoid the formation of deserts. In fact, **grasslands often lie between forests and deserts.**

Statement 1 is incorrect: Biomass is the total mass of living organisms in an area at a particular point of time. **Pyramid of biomass is upright in the grassland ecosystem** which means that biomass decrease from lower to higher trophic levels. **Pyramid of Numbers** represents the relationship between **number of individuals of primary producers and consumers** at different trophic levels and it is **upright in grassland ecosystem** as the number of individuals decrease from lower to higher trophic level

Statement 2 is correct: **Grass's root ecosystem and low rainfall in the region results in enhanced soil fertility.** The **roots of grass which can extend 3 - 6 feet deep** into the soil combined with lower rainfall in the region enhances the soil fertility as **higher rainfall leads to higher leaching.** Due to this reason **much of the North American grasslands** have been **converted into agricultural land**, posing threats to the grassland ecosystem and species dependent on them.

Knowledge Base: Grasslands cannot be found in Antarctica. Grasslands account for between 20-40% of the world's land area. They are generally open and flat, and they exist on every continent except Antarctica, which makes them vulnerable to pressure from human populations.

Source: <https://education.nationalgeographic.org/resource/grasslands-explained>

<https://blog.forumias.com/ecological-pyramids/>

Q.43) With reference to the Shola Forest, consider the following statements:

1. Lantana Camara is an endemic plant species of the Shola forests.
2. These are the tropical montane forests found in the high altitude regions of Western Ghats.
3. Bhavani River, a tributary of Cauvery River, traces its origin to the Shola forests.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 and 3 only
- c) 1, 2 and 3
- d) 2 only

Ans) b

Exp) Option b is the correct answer.

Shola forests are stunted **tropical montane forests found at higher** latitudes (above **1500 metres**) of Western Ghats. Shola forests derive their name from the Tamil word solai, which means a 'tropical rainforest.

Statement 1 is incorrect: Lantana camara is an invasive species that endangers the Shola Forest ecosystem. They are native to **South America** and were brought to India by the **British** as ornamental plants some 200 years ago. **Endemic species** are those species that can be **found only in specific regions.**

Statement 2 is correct: The Shola grasslands are tropical montane forests found in the high altitudes of Western Ghats separated by rolling grasslands. These unique ecosystems act as the home for many of the floral and faunal endemic species and also serve as the water reservoir for the Nilgiri Biosphere Reserve.

Statement 3 is correct: The rain received from the Southwest and Northeast monsoons is harvested by the **Shola Forest ecosystem**, leading to the formation of the **Bhavani River** that finally drains into the **Cauvery.**

Source: <https://www.thehindu.com/news/cities/Coimbatore/lantana-camara-a-growing-threat-in-udhagamandalam/article28026123.ece>

<https://www.thehindu.com/sci-tech/energy-and-environment/in-bandipur-the-war-against-lantana/article19566873.ece>

Q.44) Consider the following statements with reference to Environment Impact Assessment (EIA):

1. Category A projects require mandatory environmental clearance.
2. All new National Highways are classified as Category B2.
3. Railway Projects are exempted from seeking Environmental clearance.

Which of the statements given above is/are correct?

- a) 1 Only
- b) 1 and 2 Only
- c) 1 and 3 Only
- d) 1, 2, and 3

Ans) c

Exp) option c is the correct answer.

Environmental Impact Assessment or EIA is the process through which an environmental impact of a proposed development is evaluated. In India, it started in 1976-77. It is undertaken by the Ministry of Environment and forests.

Statement 1 is correct: The EIA Notification broadly categorises all projects and activities as either Category A or Category B. Category A projects undergo EIA process at Central level while Category B

projects are further categorised into B1 and B2. Category B1 projects undergo EIA process at the state level, while category B2 projects don't need EIA. Category A project needs to **mandatorily undergo environmental clearance**.

Statement 2 is incorrect: All new National Highways are classified as Category A. In addition, expansion of National Highways greater than 30 KM, involving additional Right of Way (ROW) greater than 20m, involving land acquisition and passing through more than one State are categorized as Category A.

Statement 3 is correct: All Railway Projects, with no exception, are totally exempted from requirement of Environmental Impact Assessment.

Source: <https://www.pppinindia.gov.in/toolkit/ports/module2-fgost-ooeiaaec.php?links=fgost3>

Q.45) With reference to Glyphosate, consider the following statements:

1. It is a broad-spectrum herbicide that can control a wide range of weeds.
2. Recently, the Indian Government has completely banned the usage of glyphosate by farmers.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

Glyphosate is an herbicide used to kill weeds, especially annual broadleaf weeds and grasses that compete with crops.

Statement 1 is correct: Glyphosate is a broad-spectrum herbicide that can control a wide range of weeds, whether broadleaf or grassy. It is also non-selective, designed to kill all plants encountering it. The chemical cannot ordinarily distinguish between crop and weed. Hence, it can be used in tea or rubber plantations, but not in fields where the crops and weeds are at almost the same level.

Statement 2 is incorrect: The Ministry of Agriculture and Farmers Welfare has **not banned and only restricted its usage**. The spraying of glyphosate and its derivatives shall henceforth only be permitted through pest control operators. The limited usage has been done in normal agricultural crops by virtue of it being a non-selective herbicide.

Source: <https://indianexpress.com/article/explained/why-centre-has-restricted-use-of-a-herbicide-in-demand-among-farmers-8257175/>

Q.46) With reference to the Wetland ecosystem, consider the following statements:

1. As per the Wetlands (Conservation and Management) Rules, 2017, paddy fields are excluded from the ambit of wetlands.
2. When a wetland is identified as a Ramsar site, it is mandatory for the government to notify it as a protected area under the Wildlife Protection Act, 1972.
3. Recently, the United Nations adopted a resolution proclaiming 2nd of February as World Wetlands Day.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

A wetland is an area of land that is either covered with water or saturated with water. **The Ramsar Convention on Wetlands** defines wetlands as “areas of marsh, fen, peat land or water, whether natural or artificial, permanent or temporary, with water that is static or flowing, fresh, brackish or salt, including areas of marine water the depth of which at **low tide does not exceed six metres**.”

Statement 1 is correct: The Wetlands (Conservation and Management) Rules, 2017 notified by the Union Ministry of Environment, Forest and Climate Change **does not include paddy fields, river channels, human-made water bodies/tanks** specifically constructed for **drinking water purposes** and structures specifically constructed for aquaculture, salt production, recreation and irrigation purposes.

Statement 2 is incorrect: It is **not mandatory to notify every Ramsar Site as a protected area under the Wildlife (Protection) Act, 1972**. However, Ramsar tag requires authority to **strengthen the protection regime** there and to prevent encroachment on wetlands.

Statement 3 is correct: In 2021 the UN General Assembly (UNGA) adopted **Resolution 75/317** that established 2 February as **World Wetlands Day**. **World Wetlands Day is celebrated each year on 2 February** to raise awareness about wetlands and this day marks the **anniversary of adoption** of an international treaty on wetland conservation also known as **Ramsar Convention in 1971** at a place called Ramsar in Iran.

Source: <https://indianexpress.com/article/explained/ramsar-sites-significance-wetlands-conservation-explained-8054834/>

<https://www.worldwetlandsday.org/about>

Q.47) Public Hearing Committee in Environmental Impact Assessment, may comprise of which of the following persons?

1. District Collector
2. Official from the district development body
3. Official from State Pollution Control Board
4. Official from Department of Environment and Forest of the State government
5. Taluka and Gram Panchayat representative
6. Senior citizen from the district

Select the correct option using the code given below:

- a) 1, 2, 3, and 4 only
- b) 1, 2, 4, and 5 only
- c) 1, 3, 5, and 6 only
- d) 1, 2, 3, 4, 5, and 6

Ans) d

Exp) option d is the correct answer.

Environmental Impact Assessment or EIA is the process through which an environmental impact of a proposed development is evaluated. It goes through four stages : Screening, Scoping, Public Hearing, Appraisal.

Public Hearing Committee looks after the public hearing process. Its members are :

The **District Collector** is the chairperson of the public hearing committee. Other members of the committee includes the official from the **district development body, SPCB, Department of Environment and Forest, Taluka and Gram Panchayat representative, and senior citizen** of the district, etc.

Hence Options 1, 2, 3, 4, 5, and 6 are correct.

The function of the hearing committee is to hear the objections/suggestions from the public and after inserting certain clauses it is passed on to the next stage of approval (Ministry of Forest and Environment)

Source: [https://www.cseindia.org/environmental-clearance---the-process-](https://www.cseindia.org/environmental-clearance---the-process-403#:~:text=Public%20consultation%20refers%20to%20the,'public%20hearing'%20in%201997.)

[403#:~:text=Public%20consultation%20refers%20to%20the,'public%20hearing'%20in%201997.](https://www.cseindia.org/environmental-clearance---the-process-403#:~:text=Public%20consultation%20refers%20to%20the,'public%20hearing'%20in%201997.)

Q.48) With reference to the process of Eutrophication, consider the following statements:

1. It occurs when minerals and nutrients levels in the water body decline.
2. This process results in the decline of oxygen level in lakes.
3. This process generally results in the depletion of inorganic carbon in the water bodies.
4. Ocean is immune from this process due to the presence of large amount of Sodium and Chloride ions in the oceans.

Which of the statements given above are **incorrect**?

- a) 1, 2 and 4 only
- b) 1 and 3 only
- c) 2, 3 and 4 only
- d) 1 and 4 only

Ans) d

Exp) Option d is the correct answer.

Statement 1 is incorrect: Eutrophication is the process by which the water body becomes overly enriched with minerals and nutrients from activities like agricultural run-off, disposal of industrial wastes and sewage discharge. Usually, the minerals are **Phosphorus and Nitrogen** which fuels the growth of Algae in the water body.

Statement 2 is correct: Eutrophication process results in the decline of oxygen due to the bacterial decomposition of dead algae. In this process, bacteria consume the oxygen in water, thereby creating a state of hypoxia or dead zone.

Statement 3 is correct: Photosynthesis converts inorganic carbon into organic carbon. Thus, higher rates of photosynthesis associated with eutrophication deplete dissolved inorganic carbon as increased photosynthetic demand means increased consumption of dissolved inorganic carbon in water bodies.

Statement 4 is incorrect: Eutrophication process affects Oceans too. Nitrogen and phosphorus discharge into sea water via discharges from sewage treatment plants and septic tanks, estuaries, and stormwater run-off from fertilised lawns and farms. This in turn causes Algal blooms in the oceans, which is a result of the process of Eutrophication.

Source: Forum IAS red book - Pg no 20

https://ec.europa.eu/environment/marine/good-environmental-status/descriptor-5/index_en.htm#:~:text=What%20is%20eutrophication%3F,organisms%3B%20and%20water%20quality%20degradation.

Q.49) Which of the following statements rightly marks the distinction between Biological Oxygen Demand (BOD) and Chemical Oxygen Demand (COD)?

1. BOD is oxygen required to break down biodegradable materials, whereas COD is oxygen required to break down only on-biodegradable material in a water body.
2. While BOD is higher in warm water as compared to cold water, COD is higher in cold water as compared to warm water.
3. For a lake, COD is always higher than the BOD.

Which of the statement/s given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 3 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: Biochemical oxygen demand (BOD) is the amount of oxygen microorganisms required to break down biodegradable materials. In contrast, chemical oxygen demand (COD) is the amount of oxygen required to break down both biodegradable and non-biodegradable materials in the water body.

Statement 2 is incorrect: Warm water increases both BOD and COD level as increased water temperatures will speed up bacterial decomposition and chemical reaction in water bodies. Also polluted waters increase the BOD and COD values, otherwise higher the BOD or COD level means higher pollution.

Statement 3 is correct: Chemical Oxygen Demand (COD) is always greater than Biological Oxygen Demand (BOD) as BOD is the oxygen required by living organism to break down organic matter only. In contrast COD, apart from the oxygen required to break down organic matter, also includes oxygen required by chemical reaction to break down both biodegradable and non-biodegradable materials.

Source: Forum IAS red book - pg no 28

Q.50) The colonial rule of British India had seen some large-scale killing. In this context, which of the following events is also referred to as 'Adivasi Jallianwala'?

- Mangarh Massacre
- Pal-Dadhvav massacre
- Tarapur massacre
- Kuka massacre

Ans) a

Exp) Option a is the correct answer.

PM Modi calls for a roadmap to develop Mangarh Dham as a tribal destination. He observed, given that the place's heritage is shared by the people of Rajasthan, Gujarat, Madhya Pradesh and Maharashtra, the four States should work to develop it.

Option a is correct: Mangarh Massacre is also known as Adivasi Jallianwala. It is a massacre of around 1500 tribals by the British Indian Army in 1913. The Bhil tribes living in these regions gathered under the leadership of Guru Govind to protest the British exorbitant land revenue demand and inhumane labour treatment (bonded labour) they suffered at the hand of the British. The unfortunate event followed this protest, the British indiscriminately fired at the crowd and ended up killing at least 1500 tribals including children and women.

Option b is incorrect: On 7 March 1922, Pal-Dadhvav massacre took place in the Pal-Chitariya and Dadhvaav villages of modern Gujarat. A number of tribal people led by Motilal Tejawat had gathered on the banks of Heir River to protest against the land revenue system by the British rulers. Following this protest The British army opened fire at the crowd and ended up killing at least 1200 tribes.

Option c is incorrect: Tarapore massacre took place in modern Bihar. On 15th February, 1932, a group of young freedom fighters planned to hoist an Indian national flag at Thana Bhawan in Tarapur (in Bihar). Following the tension between British forces (around 4000 policemen) and protestors, it changed into a violent movement. Then the British in response fired at the crowd and killed at least 32 people.

Option d is incorrect: The Kuka Movement marked the first major reaction of the people in the Punjab to the new political order initiated by the British after 1849. It aimed to overthrow British rule and they called for a boycott of educational institutions of British and laws established by them. The British ordered the around 65 Kukas to be executed with cannons, without any trial, 1872 and this event is known as the Kuka Massacre.

Source: <https://www.thehindu.com/news/national/other-states/rajasthan-pm-modi-pays-tributes-to-tribals-killed-by-british-army-in-mangarh/article66080773.ece>

Q.1) Which of the following can be found as pollutants in the drinking water in some parts of India?

1. Arsenic
2. Sorbitol
3. Fluoride
4. Formaldehyde
5. Uranium

Select the correct answer using the codes given below.

- a) 1 and 3 only
- b) 2, 4 and 5 only
- c) 1, 3 and 5 only
- d) 1, 2, 3, 4 and 5

Ans) c

Exp) Option c is the correct answer.

Studies by the Central Water Commission show that rivers (surface drinking water sources) in India are loaded with toxic heavy metals such as lead, arsenic, Fluoride, copper, cadmium, mercury and nickel. In India, drinking water especially in wells is highly contaminated with Uranium. **Thus, Options 1, 3 and 5 are correct.**

Sorbitol and Formaldehyde are not drinking water pollutants. Thus, Options 2 and 4 are incorrect.

Sorbitol is a type of carbohydrate called a sugar alcohol. It contains about one-third fewer calories than sugar and is 60 percent as sweet and occurs naturally in a variety of berries and fruits.

Formaldehyde is a simple chemical compound made of hydrogen, oxygen and carbon. All life forms – bacteria, plants, fish, animals and humans – naturally produce formaldehyde as part of cell metabolism.

Source) UPSC CSE Pre 2013

Q.2) With reference to the Comprehensive Environmental Pollution Index (CEPI), consider the following statements:

1. It is prepared and released by the Commission for Air Quality Management.
2. It is a nationwide survey of Industrial clusters based on their pollution level.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

To assess the environmental quality in the **Polluted Industrial Areas (PIAs)**, the Central Pollution Control Board (CPCB) has developed the Comprehensive Environmental Pollution Index (CEPI).

Statement 1 is incorrect: Comprehensive Environmental Pollution Index (CEPI) was released by the **Central Pollution Control Board (CPCB)**. CPCB is a statutory organisation constituted under the Water (Prevention and Control of Pollution) Act, 1974. CPCB derives its powers and functions under the Air (Prevention and Control of Pollution) Act, 1981.

Statement 2 is correct: CEPI is a nationwide survey of Industrial Clusters based on its pollution level. CEPI was first developed by Central Pollution Control Board in collaboration with IIT Delhi in December 2009. CEPI identified 43 industrial clusters as critically polluted. Critically polluted areas have a CEPI value greater than 70, on a scale of 0 to 100. Further 32 industrial clusters with CEPI scores between 60 & below 70 are categorised as Severely Polluted Areas (SPAs).

Source: <https://cpcb.nic.in/comprehensive-environmental-pollution-index-cepi/>
https://cpcb.nic.in/uploads/CPA/mechanism_cpa_28.01.2020.pdf (First point)

Q.3) The Basel Convention aims to regulate the transboundary movement of hazardous and non-hazardous wastes. Which of the following items are regulated by this Convention?

1. Plastic wastes
2. Radioactive wastes
3. Electronic wastes
4. Waste Tyres
5. Persistent Organic Pollutants (POPs)

Select the correct answer using the code given below:

- a) 1, 3, 4 and 5 only
- b) 1, 3 and 5 only
- c) 3 and 4 only
- d) 2, 4 and 5 only

Ans) a

Exp) Option a is the correct answer.

Basel Convention is the comprehensive global environmental agreement on hazardous wastes and other wastes. It aims to protect human health and the environment against the adverse effects resulting from the **generation, transboundary movements and management of hazardous wastes and other wastes.**

Option 1 is correct: Plastic wastes are added to the list of wastes under the Basel convention. In 2019, the Conference of the Parties to the Basel Convention adopted a resolution to include plastic waste as regulated material by the Basel convention. It made the **Basel Convention as the only global legally binding instrument to specifically address plastic waste.**

Option 2 is incorrect: Basel convention does not include radioactive wastes. Although the convention aims to regulate the transboundary movement of hazardous wastes, it does not regulate Radioactive wastes.

Option 3 is correct: Electronic wastes (e wastes) are included under the Basel Convention. Electronic wastes that have **toxic materials** such as mercury, lead or brominated flame retardants are classified as **hazardous waste** under the Basel Convention.

Option 4 is correct: Waste tyres are classified as hazardous waste under the Basel Convention. Tyres is not biodegradable thus difficult to eliminate. Also tyre wastes can act as homes for **rodents and breeding sites for mosquitoes** that transmit diseases.

Option 5 is correct: Persistent Organic Pollutants (POPs) are included in the Basel convention. Pesticides (such as DDT), industrial chemicals such as polychlorinated biphenyls (PCBs) and unintentional by-products of industrial processes such as dioxins and furans are some of POPs included in the Basel convention.

Source: <http://www.basel.int/Implementation/POPsWastes/Overview/tabid/3908/Default.aspx>
<http://www.basel.int/Implementation/Ewaste/Overview/tabid/4063/Default.aspx#:~:text=E%2Dwaste%20can%20be%20categorized%20as%20hazardous%20or%20non%2Dhazardous%20waste%20under%20the%20Basel%20Convention.>

<http://www.basel.int/Implementation/Wastetyres/Overview/tabid/9420/Default.aspx#:~:text=They%20are%20categorized%20as%20wastes%20containing%20principally%20organic%20constituents%20by%20the%20Basel%20Convention%20on%20the%20Control%20of%20Transboundary%20Movements%20of%20Hazardous%20Wastes%20and%20Their%20Disposal.>

[http://www.basel.int/Implementation/POPsWastes/Overview/tabid/3908/Default.aspx#:~:text=of%20pesticides%20\(such%20as%20DDT\)%2C%20industrial%20chemicals%20\(such%20as%20polychlorinated%20biphenyls%2C%20PCBs\)%20and%20unintentional%20by%2Dproducts%20of%20industrial%20processes%20\(such%20as%20dioxins%20and%20furans\)](http://www.basel.int/Implementation/POPsWastes/Overview/tabid/3908/Default.aspx#:~:text=of%20pesticides%20(such%20as%20DDT)%2C%20industrial%20chemicals%20(such%20as%20polychlorinated%20biphenyls%2C%20PCBs)%20and%20unintentional%20by%2Dproducts%20of%20industrial%20processes%20(such%20as%20dioxins%20and%20furans))

Q.4) With reference to Persistent Organic Pollutants (POPs), consider the following statements:

1. These pollutants can be transported from one place to another by wind and water.
2. Unlike fats, they are easily dissolved in water.
3. They are used as flame retardants in electronic products.
4. They can alter the hormonal system of humans.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 1, 2 and 4 only
- c) 1, 3 and 4 only
- d) 2, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Persistent Organic Pollutants (POPs) are carbon based organic chemical substances. They possess a particular combination of physical and chemical properties such that, once released into the environment they take **an exceptionally longer period to degrade**. This is why it is called persistent organic pollutants.

Statement 1 is correct: Persistent organic pollutants (POPs) are toxic chemicals that adversely affect human health and the environment around the world. Because **they can be transported by wind and water, most POPs generated in one country can and do affect people and wildlife far from where they are used and released**. They persist for long periods of time in the environment and can accumulate and pass from one species to the next through the food chain.

Statement 2 is incorrect: Persistent Organic Pollutants cannot be easily dissolved in water as compared to fats. If it is easily dissolved in water then organisms can easily eject it from their body. This property is one of the main reasons why it can be found at **higher concentration in the higher level of the food chain**.

Statement 3 is correct: POPs are used as flame retardants in electronic products and furniture. Further POPs are used in manufacturing of **detergents, pesticides** etc., Flame retardants are chemicals that are applied to materials to prevent the start or slow the growth of fire.

Statement 4 is correct: Some POPs can alter the hormonal system of humans and affect their offspring too. Some POPs can **disrupt the endocrine system** which produces various hormones in the human body. Thereby POPs can damage the **reproductive and immune systems of exposed individuals as well as their offspring**.

Source: <https://indianexpress.com/article/lifestyle/health/chemical-pollutants-can-trigger-celiac-disease-in-young-people-study-6463663/#:~:text=POPs%20are%20chemical%20pollutants%20that%20people%20have%20historically%20used%20as%20flame%20retardants%20in%20furniture%20and%20electronic%20products%2C%20detergents%2C%20pesticides%2C%20and%20nonstick%20cookware%2C%20said%20a%20report.%20These%20chemicals%20negatively%20affect%20human%20health.>

<http://www.pops.int/TheConvention/ThePOPs/tabid/673/Default.aspx>

<http://www.pic.int/TheConvention/Chemicals/AnnexIIIChemicals/tabid/1132/language/en-US/Default.aspx>

Q.5) Project ELLORA, recently seen in news, is related to which of the following?

- a) Redevelopment of architectural heritage of India
- b) Preserving local languages for future generations
- c) Redesigning cultural education system of the country
- d) Geo-Mapping of major UNESCO World Heritage sites of India

Ans) b

Exp) Option b is the correct answer.

Microsoft Research is helping preserve 'rare' Indian languages with its Project ELLORA in India. Microsoft researchers under this project have been working toward creating digital ecosystems for Indian languages that do not have enough presence online.

The main goal of the Project is to impact underserved communities through enabling language technology by creating economic opportunities, building technological skills, enhancing education and preserving local languages and cultures for future generations. Microsoft Research (MSR) has chosen to focus on three languages namely; **Gondi, Mundari and Idu Mishmi**.

Source: <https://indianexpress.com/article/technology/how-microsofts-project-ellora-is-helping-small-languages-like-gondi-mundari-become-eloquent-for-the-digital-world-8413587/>

Q.6) Iodine-131 is being used in medicines to diagnose and treat cancers of the thyroid gland. In which of the following ways can it be produced/extracted?

- It can be extracted directly from the monazite sand.
- It can be produced majorly by the process of nuclear fusion.
- It can be produced majorly by the process of nuclear fission.
- It can be extracted from the ocean floor using the method of hydraulic fracturing.

Ans) c

Exp) Option c is the correct answer.

Iodine-131 (I-131) is an important radioisotope of iodine and it is a radioactive material. I-131 dissolves easily in water or alcohol. I-131 readily combines with other elements and does not stay in its pure form once released into the environment.

Option a is incorrect: Iodine 131 cannot be extracted directly from Monazite sands. Monazite is a primarily reddish-brown phosphate mineral that contains rare-earth elements. Monazite is an important ore for **thorium, lanthanum, and cerium**.

Option b is incorrect: Iodine 131 cannot be produced by nuclear fusion. In nuclear Fusion two light nuclei merge to form a single heavier nucleus. The process releases energy because the total mass of the resulting single nucleus is less than the mass of the two original nuclei thus the **leftover mass becomes energy**. Fusion reactions are the source of energy for the Sun and other Stars.

Option c is correct: Iodine- 131 can be produced majorly by the process of nuclear fission. Iodine 131 is a major **fission product of uranium and plutonium**. Also, I-131 occurs as a by-product of nuclear fission processes in nuclear reactors and weapons testing.

Option d is incorrect: I-131 cannot be extracted from natural sources. Hydraulic fracturing, or fracking is a drilling method used to **extract petroleum (oil) or natural gas from deep in the Earth**. In this process, cracks in and below the Earth's surface are opened and widened by injecting water, chemicals, and sand at high pressure.

Source:

<https://www.cdc.gov/nceh/radiation/emergencies/isotopes/iodine.htm#:~:text=%2D131%20is%20produced%20commercially%20for%20medical%20and%20industrial%20uses%20through%20nuclear%20fission.%20It%20also%20is%20a%20byproduct%20of%20nuclear%20fission%20processes%20in%20nuclear%20reactors%20and%20weapons%20testing.>

Q.7) Which of the following are the reasons behind high E-waste generation in India?

- Shorter electronic product life cycle
- No rules and regulations regarding E-waste management

3. No producer responsibility of recycling E-waste
4. Not enough awareness regarding disposal of E-waste

Select the correct answer using the codes given below:

- a) 1 and 4 only
- b) 1, 2 and 4 only
- c) 1, 3 and 4 only
- d) 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

Electronic-Waste is the term used to describe old, end-of-life or discarded electronic appliances. The **Global E-Waste Monitor** reports that nearly 3 million tons of electronic waste was generated in India, which is thrice the Centre's estimates. The reasons behind high E-waste generation and less recycling in India are:

Option 1 is correct: Shorter product life cycle: It was found that the **previous electronic gadgets were obsolete as the new upgrades and new models were launched in the market.** The fast pace of technological advancements and the growing use of electronics in India contribute to a growing volume of e-waste.

Option 2 is incorrect: In India, the **management of e-waste is regulated by the Ministry of Environment, Forest, and Climate Change through the E-Waste (Management) Rules, 2016.** The rules outline the responsibilities of various stakeholders, including manufacturers, importers, consumers, and e-waste recyclers.

Option 3 is incorrect: The E-Waste (Management) Rules, 2016 outline the following responsibilities:

- 1) **Extended Producer Responsibility (EPR):** Manufacturers and importers are responsible for collecting and managing their products at the end of their life.
- 2) **Responsibility of Consumers:** Consumers are responsible for disposing of e-waste in an environmentally safe manner. This can include handing over e-waste to authorized collection centers or recycling facilities.
- 3) **Responsibility of Recyclers:** E-waste recyclers are responsible for properly managing e-waste in accordance with the rules and regulations, including the proper handling and disposal of hazardous materials.

Option 4 is correct: There is a **lack of awareness among the public and businesses about the hazards of e-waste** and the importance of proper disposal and recycling. Most consumers are still unaware of how to dispose of their e-waste. Most Indians end up selling their e-waste to the informal sector

Source: <https://www.epa.gov/hwgenerators/international-agreements-transboundary-shipments-hazardous-waste>

<https://www.legalservicesindia.com/article/2252/E-Waste-Management-Rules-2016.html>

Q.8) With reference to 'Photochemical Smog', consider the following statements:

1. It is formed when sunlight reacts with nitrogen oxides and volatile organic compounds.
2. Cities in the plain areas are more prone to formation of photochemical smog than cities located in valleys.
3. It often has an unpleasant odor due to some of its gaseous components.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) d

Exp) Option d is the correct answer.

Statement 1 is correct: Photochemical smog is a type of air pollution caused by the **interaction of sunlight with chemicals in the air, especially nitrogen oxides (NOx) and volatile organic compounds (VOCs).**

Statement 2 is incorrect: The topography of the area surrounding a city can vastly influence the formation of photochemical smog. Cities in valley areas are more prone to formation of photochemical smog due to meteorological conditions such as temperature inversion, limited ventilation, and trapping of pollutants in the valley. In a temperature inversion, a layer of warm air traps cooler air, including pollutants, below it, preventing them from rising and dispersing. This can lead to a buildup of pollutants in the valley and result in higher levels of photochemical smog.

Statement 3 is correct: Photochemical smog often has an **unpleasant odor due to some of its gaseous components**, such as hydrogen sulfide, nitrogen oxides, and volatile organic compounds. These chemicals can produce a strong, pungent smell, particularly on warm, sunny days.

Source: <https://education.nationalgeographic.org/resource/smog>

<https://www.sciencedirect.com/topics/earth-and-planetary-sciences/photochemical-smog>

https://www.epa.sa.gov.au/files/8238_info_photosmog.pdf

Q.9) Consider the following statements regarding the term ‘Bioassay’, often seen in the news:

1. It is the use of a living organism to test for the presence of a substance.
2. Both Plants and animals can be used as Bioassay.
3. It can be used to determine the chemical toxicity in a soil.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 only
- c) 1, 2 and 3
- d) 1 and 2 only

Ans) c

Exp) Option c is the correct answer.

Statements 1 is correct: A bioassay is the use of a living organism to test for the presence of a compound or to determine the amount of the compound that is present in a sample. The organism used is sensitive to the compound for which the test is conducted. Thus, the effect observed is typically the death or deteriorated health of the test organism. Depending on the test organism, soil, air, or liquid samples can be assayed.

Statements 2 is correct: Both plants and animals can be used as bioassay indicators to show the presence of toxic compounds.

Statement 3 is correct: A bioassay involves use of a biological organism to test for chemical toxicity. For environmental testing, bioassays provide an integrated picture of overall toxicity of an effluent or a sample of water, sediment, or **soil from a contaminated site.**

Source: <http://ei.cornell.edu/toxicology/bioassays/Uses.html>

<https://www.encyclopedia.com/medicine/divisions-diagnostics-and-procedures/medicine/bioassay>

Q.10) A Commission headed by Justice G. Rohini was recently heard in news. In relation to this commission, consider the following statements:

1. It was set up by the President under the provisions of Article 340 of the Indian Constitution.
2. The Commission is mandated to examine the issues related to the sub-categorization of Other Backward Classes (OBCs).

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

The Justice G. Rohini-led commission for the sub-categorisation of other backward classes (OBCs) was recently given another extension in its tenure by the President.

Statement 1 is correct: Justice G. Rohini-led commission was set up by the **President under Article 340 of the Indian Constitution on October 2, 2017**. It is headed by former Delhi High Court judge, Justice G. Rohini (retd). The Article 340 reads, "The President may, by order, appoint a Commission consisting of such persons as he thinks fit to investigate the conditions of socially and educationally backward classes within the territory of India."

Statement 2 is correct: The Terms of References of the Commission are:

- 1) to examine the extent of inequitable distribution of benefits of reservation among the castes or communities included in the broad category of Other Backward Classes, with reference to such classes included in the Central List;
- 2) to work out **the mechanism, criteria, norms and parameters in a scientific approach for sub-categorisation within such Other Backward Classes;**
- 3) to take up the exercise of identifying the respective castes or communities or sub-castes or synonyms in the Central List of Other Backward Classes and classifying them into their respective sub-categories.

Source: <https://www.thehindu.com/news/national/obc-sub-categorisation-panel-gets-14th-extension/article66446865.ece>

<https://pib.gov.in/newsite/printrelease.aspx?relid=171331>

Q.11) There is a concern over the increase in harmful algal blooms in the seawaters of India. What could be the causative factors for this phenomenon?

1. Discharge of nutrients from the estuaries.
2. Run-off from the land during the monsoon.
3. Upwelling in the seas.

Select the correct answer from the codes given below:

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

An algal bloom or marine bloom or water bloom is a rapid increase in the population of algae in an aquatic system. Algal blooms may occur in freshwater as well as marine environments.

Statement 1 is correct. Usually algal blooms are the result of an excess of nutrients (particularly phosphorus and nitrogen) into waters and higher concentrations of these nutrients in water cause increased growth of algae and green plants.

Statement 2 is correct. Algal blooms are a result of excess nutrients from fertilizer, wastewater and stormwater runoff, coinciding with lots of sunlight, warm temperatures and shallow, slow-flowing water.

Statement 3 is correct. Upwelling is a process in which deep, cold water rises toward the surface. The upwelling systems of the eastern boundaries of the world's oceans are susceptible to harmful algal blooms (HABs) because they are highly productive, nutrient-rich environments, prone to high-biomass blooms.
Source: UPSC CSE Pre 2011

Q.12) With respect to Bio-Medical Waste Management Rules of 2016, consider the following statements:

1. The rules prohibits the treatment of biomedical waste with municipal solid waste.
2. It provides for establishing barcode system for handling of bio-medical waste.
3. Under the rules, district level monitoring committee will be setup in the districts to monitor the compliance of rules by health care facilities.
4. Under the rules, the Healthcare facilities can store and segregate biomedical waste within their premises.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 4 only
- d) 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct answer.

Biomedical waste comprises human & animal anatomical waste, treatment apparatus like needles, syringes, and other materials used in health care facilities in the process of treatment and research. This waste is generated during diagnosis, treatment, or immunization in hospitals, nursing homes, pathological laboratories, blood bank, etc.

Statements 1 is correct: Bio-Medical Waste Management rules, 2016 calls for phasing out the use of chlorinated plastic bags, gloves within two years from the date of notification of these rules. It also calls for disposal of solid waste other than bio-medical waste in accordance with the provisions of respective waste management rules. It **bars to treat biomedical waste with municipal solid waste.**

Statements 2 is correct: Rules will establish a Bar- Code System for bags or containers containing bio-medical waste to be sent out of the premises or place for any purpose within one year from the date of the notification of these rules.

Statement 3 is correct: Every State Government shall constitute District Level Monitoring Committee in the districts under the chairmanship of District Collector. The committee will monitor the compliance of the provisions of these rules in the health care facilities generating bio-medical waste. The Committee shall submit its report once in six months to the State Advisory Committee and a copy be forwarded to State Pollution Control Board.

Statement 4 is correct: Health care facilities (HCF) shall make a provision within the premises for a safe, ventilated and secured location for storage of segregated biomedical waste. It calls for pre-treatment of the laboratory waste, microbiological waste, blood samples and blood bags through disinfection or sterilization on-site in the manner as prescribed by WHO or NACO.

Knowledge Base:

Salient Features of Bio-Medical Waste Management rules, 2016:

- 1) Bio-medical waste has been classified into **4 categories** instead of the earlier 10 categories to improve the segregation of waste at source.
- 2) The ambit of the rules has been expanded to **include vaccination camps, blood donation camps, surgical camps** or any other healthcare activity.
- 3) It will Provide **training** to all its health care workers and immunise all health workers regularly.

- 4) The new rules prescribe more stringent **standards for incinerator** to reduce the emission of pollutants in environment.
- 5) The **Central Pollution Control Board** shall **monitor** the implementation of these rules in respect of all the Armed Forces health care establishments under the Ministry of Defence.
- 6) **State Government** to **provide land** for setting up common bio-medical waste treatment and disposal facility.
- 7) No occupier shall establish on-site treatment and disposal facility, if a service of common bio-medical waste treatment facility is available at a distance of 75 kilometer.

Source: https://dhr.gov.in/sites/default/files/Bio-medical_Waste_Management_Rules_2016.pdf

Q.13) Which one of the following statements best describes the “Net Present Value of the Forest”?

- It is a tradeable certificate representing the right to emit one tonne of Carbon equivalent.
- It is the rate of the accumulation of energy in the form of biomass.
- It is a payment that a user has to make for diverting forestland for non-forest use.
- It is the fund used for the treatment of catchment areas of the forest.

Ans) c

Exp) Option c is the correct answer.

Statement c is correct. Net Present Value is a mandatory one-time payment that a user has to make for diverting forestland for non-forest use, under the Forest (Conservation) Act, 1980. This is calculated on the basis of the services and ecological value of the forests. It depends on the location and nature of the forest and the type of industrial enterprise that will replace a particular parcel of forest.

Statement a is incorrect. A Carbon Credit (and not Net Present Value) is a tradeable certificate or permit representing the right to emit one tonne of Carbon or Carbon Dioxide equivalent (tCO₂e). The value of Carbon Credit varies according to market conditions. One Carbon Credit is equal to one tonne of Carbon Dioxide. The concept of Carbon Credit originated in the Kyoto Protocol of UNFCCC.

Statement b is incorrect. Net primary productivity (and not Net Present Value) refers to the rate of the accumulation of energy in the form of biomass. It excludes energy lost in the metabolic processes.

Statement d is incorrect. Compensatory Afforestation Fund (and not Net Present Value) can be used for treatment of catchment areas, assisted natural generation, forest management, wildlife protection and management, relocation of villages from protected areas, managing human-wildlife conflicts, training and awareness generation, supply of wood saving devices and allied activities.

<https://www.downtoearth.org.in/news/pricing-forests-net-present-value-assessed-7982>

Q.14) With reference to the Rotterdam Convention, consider the following statements:

- The convention aims to completely eliminate the international trade of hazardous chemicals.
- India has not yet signed the convention as it opposes the listing of Asbestos under Rotterdam Convention.

Which of the statements given above is/are correct?

- 1 only
- 2 only
- Both 1 and 2
- Neither 1 nor 2

Ans) d

Exp) Option d is the correct answer.

The **Rotterdam Convention** aims to promote shared responsibility and **cooperative efforts among Parties** in the international trade of certain **hazardous chemicals** in order to protect human health and the environment from potential harm.

Statement 1 is incorrect: The convention aims to contribute to the **environmentally sound use of hazardous chemicals**, by **facilitating information exchange** about their characteristics. Hence it does **not aim to ban international trade of hazardous chemicals but aims to promote responsible trade**.

Statement 2 is incorrect: India is a **member of the Rotterdam Convention**. India's acceded to Rotterdam Convention in May 2005. However, India has opposed the listing of Asbestos under Rotterdam Convention's PIC procedure. India though has banned asbestos mining in India.

Knowledge Base: Countries **must disseminate information about chemicals listed in Annex III of the convention, before trade**. The **Prior Information Consent (PIC) procedure** is a mechanism for formally obtaining and disseminating the decisions of **importing Parties** as to whether they **wish to receive future shipments of those chemicals listed in Annex III** of the Convention and for **ensuring compliance** with these decisions by **exporting Parties**.

Source: <http://www.pic.int/TheConvention/Overview/tabid/1044/language/en-US/Default.aspx>

Q.15) NASA's Lucy mission is the first spacecraft launched to explore the Trojan asteroids. In this context, which of the following is/are the features of "Trojan Asteroids"?

1. They are the group of asteroids that do not share their orbit with any other celestial body.
2. They can provide valuable information regarding the formation of our solar system.

Select the correct answer using the codes given below:

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

NASA's Lucy mission is the first **spacecraft launched to explore the Trojan asteroids**, a population of primitive asteroids orbiting in tandem with Jupiter. Lucy was successfully launched Oct. 16, 2021, and will visit eight asteroids over 12 years – one asteroid in the main belt between Mars and Jupiter, and seven Trojan asteroids leading and trailing Jupiter in its orbit.

Statement 1 is incorrect: Trojan asteroids share their orbit **with a larger planet**. The term "Trojan" comes from the fact that many of the first discovered objects in these positions were named after characters from the Trojan War in Greek mythology.

Statement 2 is correct: Trojan asteroids are believed to be **some of the oldest remnants from the formation of our Solar System**, and their study **can provide important information about the early stages of planetary formation**. These objects may have formed in the same region as their associated planet, or they may have been captured by the planet's gravity later on. By studying the composition, geology, and other properties of Trojan asteroids, scientists can learn more about the conditions and processes that took place during the early stages of the Solar System, including the formation of the planets.

Source: <https://indianexpress.com/article/technology/nasa-lucy-mission-new-asteroid-target-8408132/>

Q.16) Consider the following statements regarding the Solid Waste Management Rules, 2016:

1. Households are not considered as the waste generators under the rules.
2. All the waste generators need to pay a user fee for solid waste management.

3. The Ministry of Environment, Forest and Climate Change shall be responsible for overall monitoring of the implementation of these rules.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 2 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

The Union Ministry of Environment, Forests and Climate Change has notified the Solid Waste Management Rules (SWM), 2016. These rules have replaced the Municipal Solid Wastes (Management and Handling) Rules, 2000.

Statement 1 is incorrect: The Waste Generators covered under the solid waste management rules are as follows: Every household, Event organizers, Street Vendors, RWAs & Market Associations, Gated Community having more than area 5000 sq.m, Hotels & restaurants, etc.

Statement 2 is correct: All waste generators shall pay user fee for solid waste management, as specified in the bye-laws of the local bodies.

Statement 3 is correct: The Ministry of Environment, Forest and Climate Change (MoEFCC) shall be responsible for overall monitoring the implementation of these rules in the country. It shall constitute a Central Monitoring Committee under the Chairmanship of Secretary, MoEFCC. This Central Monitoring Committee shall meet at least once in a year to monitor and review the implementation of these rules. The Committee shall be renewed every three years.

Knowledge Base:

Salient features of Solid Waste Management Rules, 2016:

- 1) **Institutional generators**, market associations, event organizers and hotels and restaurants have been **directly made responsible for segregation** and sorting the waste and manage in partnership with local bodies.
- 2) All **hotels** and restaurants will also be **required to segregate biodegradable waste** and set up a system of collection to ensure that such food waste is utilized for composting /bio-methanation.
- 3) The **manufacturers** or brand owners of sanitary napkins are **responsible for awareness** for proper disposal of such waste by the generator and shall provide a pouch or wrapper for disposal of each napkin or diapers along with the packet of their sanitary products.
- 4) Brand owners who sale or market their products in packaging material which are non-biodegradable, should put in place a **system to collect back the packaging waste generated** due to their production.
- 5) The **construction of landfills on hills shall be avoided**. Land for construction of sanitary landfills in hilly areas will be identified in the plain areas, within 25 kilometers.

<https://swachhindia.ndtv.com/understanding-solid-waste-management-rules-2016-69817/>

Q.17) Consider the following statements regarding the Vulnerability Profile of India:

1. More than 50% of India's Landmass is prone to earthquakes.
2. More than 50% of India's landmass is prone to floods and river erosion.
3. Around 75% of India's coastline is prone to Cyclone and Tsunami.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only

d) 1, 2, and 3

Ans) b

Exp) Option b is the correct answer.

India has been vulnerable to a large number of natural, as well as, human-made disasters on account of its unique geo-climatic and socioeconomic conditions.

Statements 1 and 3 are correct: India is highly vulnerable to floods, droughts, cyclones, earthquakes, landslides, avalanches and forest fires. **Almost 58.6 per cent of India's landmass is prone to earthquakes of moderate to very high intensity.** Of the 7,516 km long coastline, close to 5,700 km is prone to cyclones and tsunamis. **Thus, around 75% of India's coastline is prone to Cyclone and Tsunami.**

Statement 2 is incorrect: The natural geological setting of India is the primary basic reason for its increased vulnerability. **About 12% (over 40 million hectares) of India's landmass is prone to floods and river erosion.** Around 68 per cent of the cultivable area is vulnerable to drought and hilly areas are at risk from landslides and avalanches.

Source: https://nidm.gov.in/easindia2014/err/pdf/country_profile/India.pdf

Q.18) Which of the following pollutants are usually categorized as 'Indoor Air Pollutants'?

1. Volatile Organic Compounds
2. Argon gas
3. Carbon Monoxide
4. Asbestos fibers
5. Formaldehyde
6. Distilled Water Vapour

Select the correct answer using the codes given below:

- a) 1, 2 and 4 only
- b) 1, 3, 4 and 5 only
- c) 2, 3, 4 and 6 only
- d) 1, 2, 3, 4, 5 and 6

Ans) b

Exp) Option b is the correct answer.

Indoor air pollutants are substances or particles that are present in the air inside homes, buildings, or other enclosed spaces and may have negative effects on human health or the environment. Indoor pollution sources that release gases or particles into the air are the primary cause of indoor air quality problems.

Option 1 is correct: Volatile Organic Compounds (VOCs) are organic chemicals that have a high vapor pressure at room temperature. They can be found in **many household products such as paints, varnishes, cleaning supplies, and air fresheners**, and can contribute to indoor air pollution.

Option 2 is incorrect: Argon is not considered an indoor air pollutant because it is an **inert, non-toxic gas that makes up a small fraction of the Earth's atmosphere.** Argon is used in various applications, including in light bulbs, as a filler gas in insulated glass units, and as a protective atmosphere in certain welding and metal fabrication processes. While it is not considered harmful to human health, it does not contribute to indoor air pollution.

Option 3 is correct: Carbon Monoxide (CO) is a **colourless, odourless** gas that is produced by **incomplete combustion of fossil fuels** such as natural gas, propane, and oil. Exposure to high levels of CO can cause headaches, nausea, dizziness, and in severe cases, death. In poorly ventilated indoor spaces, CO can build up to dangerous levels.

Option 4 is correct: Asbestos fibres is a naturally occurring mineral that was widely used in **building materials** until the late 1970s. When asbestos fibers are inhaled, they can become lodged in the lungs and **increase the risk of lung cancer and mesothelioma**. Buildings constructed before the 1980s may still contain asbestos, and special care should be taken during renovations or demolition to avoid releasing asbestos fibers into the air.

Option 5 is correct: Formaldehyde is a **colourless, flammable gas** used in the manufacture of resins, adhesives, and other building materials. It is also a **by-product of combustion processes such as cooking and smoking**. Formaldehyde can be found in many household products, including some furniture, flooring, and cabinetry.

Option 6 is incorrect: Distilled water vapor is not considered an indoor air pollutant because it is a **pure form of water that has been purified through distillation**, a process that removes all impurities, including minerals, salts, and other contaminants.

Source: <https://blog.forumias.com/indoor-air-pollution/>

<https://www.cdc.gov/nceh/publications/books/housing/cha05.htm#:~:text=Indoor%20pollutants%20can%20be%20placed%20into%20two%20groups%2C%20biologic%20and%20chemical.&text=Biologic%20pollutants%20include%20bacteria%2C%20molds,to%20some%20serious%20health%20effects.>

<https://www.epa.gov/indoor-air-quality-iaq/introduction-indoor-air-quality>

Q.19) National Disaster Management Authority is the apex body to lay down policies and guidelines for the disaster management. In this context, for which of the below mentioned disasters the authority has released national guidelines?

1. Cold Waves
2. Landslides
3. Glacial Lake Outburst Floods (GLOFs)
4. Nuclear and Radiological Emergencies
5. Heat Waves
6. Chemical Disasters

Select the correct answer using the code given below:

- a) 2, 3 and 5 only
- b) 1, 2, 3 and 5 only
- c) 1, 3, 4 and 6 only
- d) 1, 2, 3, 4, 5 and 6

Ans) d

Exp) Option d is the correct answer.

NDMA lays down the policies on disaster management, approve national plans, plans prepared by Ministries etc. and provide guidelines for the preparation and implementation of the plans to the states. From time-to-time NDMA issues guidelines for the effective and efficient management of disasters. These guidelines are issued for:

Cold Wave and Frost, **Glacial Lake Outburst Floods (GLOFs)**, **Heat waves**, **Landslides**, Thunderstorm, Lightning, Hailstorm, Cyclone, Tsunami, Earthquake, Drought, Urban Flooding, Floods, **Chemical Disasters**, Biological Disasters, **Nuclear and Radiological Emergencies**, Mass Casualty Management and so on.

According to the **National Disaster Management Policy, 2009**, the NDMA is mandated to deal with all **types of disasters; natural or man-made**. Whereas, such other emergencies including those **requiring close involvement of the security forces and/or intelligence agencies** such as **terrorism (counter-insurgency)**, **law and order situations**, **serial bomb blasts**, **hijacking**, **air accidents**, **CBRN weapon**

systems, mine disasters, port and harbor emergencies, forest fires, oilfield fires and oil spills will continue to be handled by the extant mechanism i.e., National Crisis Management Committee (NCMC).

Knowledge Base: Important points about NDMA:

- 1) The **Prime Minister of India** is the Chairperson, ex officio.
- 2) Overall membership must not exceed **10 members**.
- 3) The NDMA can also constitute an **advisory committee consisting of experts** in disaster management.
- 4) **National Executive Committee** is constituted by the Central Government to assist NDMA. The **Secretary** to the Government of India is the chairperson, ex-officio.

(Note: The Cabinet Secretary is the Chairperson of the National Crisis Management Committee).

Source: <https://ndma.gov.in/Governance/Guidelines>

Q.20) With reference to human body, which one of the following statements correctly explains the term 'Immune Imprinting'?

- a) It is the process of artificially increasing the strength of the immune system by repeated exposure to pathogens.
- b) It is the process by which the immune system loses its ability to recognize and respond to antigens over time.
- c) It is a tendency of the body to repeat its immune response based on the first variant it encountered through infection or vaccination.
- d) It is a mechanism of selectively removing specific immune cells from the body to reduce the risk of disease.

Ans) c

Exp) Option c is the correct answer.

Recent studies came out with the fact that Immune imprinting in the bodies, might be making new boosters' dose of COVID-19 far less effective than expected.

Option c is correct. Immune imprinting is a tendency of the body to **repeat its immune response based on the first variant it encountered – through infection or vaccination** – when it comes across a newer or slightly different variant of the same pathogen.

Imprinting acts as a database for the immune system, helping it put up a better response to repeat infections. After the body is exposed to a virus for the first time, it produces memory B cells that circulate in the bloodstream and quickly produce antibodies whenever the same strain of the virus infects again.

The problem occurs when a similar, not identical, variant of the virus is encountered by the body. In such cases, the immune system, rather than generating new B cells, activates memory B cells, which produce cross-reactive antibodies that bind to features found in both the old and new strains. These cross-reactive antibodies offer some protection but are not as effective as the ones produced by B cells when the body first encountered the original virus.

Source: <https://indianexpress.com/article/explained/explained-health/immune-imprinting-boosters-effective-explained-8397721/>

Q.21) There is some concern regarding the nanoparticles of some chemical elements that are used by the industry in the manufacture of various products. Why?

1. They can accumulate in the environment and contaminate water and soil.
2. They can enter the food chains.
3. They can trigger the production of free radicals.

Select the correct answer using the code given below.

- a) 1 and 2 only
- b) 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Nano-particles are tiny materials having size ranges **from 1 to 100 nm**. They can be classified into different classes based on their properties, shapes or sizes.

Statement 1 is correct: Nanomaterials are **able to cross biological membranes and access cells, tissues and organs** that larger-sized particles normally cannot. Although numerous benefits, the **unsafe discharge of nanoparticles** in the environment is an issue. The unregulated exposure to the soil and water is expected to impair plant and fish growth and accumulate into edible tissues.

Statement 2 is correct: The **accumulation in tissues of animals** allow nano-particles to **enter the food chains** as well.

Statement 3 is correct: **Free radicals** are atoms or molecules that **contain one or more unpaired electrons** and are, in this sense, “free”. Various in-vitro and in-vivo studies show that **free radical formation can be triggered by nanoparticles** (fullerenes, carbon nanotubes, quantum dots, emission particles) The chronic release of such reactive molecules in the body **can lead to tissue degeneration**.

Source: UPSC CSE Pre 2014

Q.22) Consider the following statements regarding the Kigali Agreement:

1. It is an amendment to the Nagoya Protocol.
 2. The agreement calls for phasing down climate-damaging refrigerant Hydrofluorocarbons (HFCs).
- Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

Ozone-depleting substances are considered harmful for the Earth’s ozone layer. The Kigali Amendment was signed in October 2016 in Kigali, the capital of Rwanda.

Statement 1 is incorrect: The Montreal Protocol led to the replacement of CFCs with Hydrofluorocarbons (HFCs) which do not destroy the Ozone layer. But they were later found to be extremely potent in causing Global Warming. **Kigali Agreement** is an **amendment to the Montreal Protocol**.

Statements 2 is correct: **The agreement calls for phasing down climate-damaging refrigerant Hydrofluorocarbons (HFCs)**. The Kigali Agreement entered into force on 1st January 2019. Like the Montreal Protocol, the targets in the Kigali Agreement have been staggered for high and low-income countries. Countries like the US must meet this target by 2036, while India has until 2047 and China until 2045.

DEAL TO CURB USE OF HFCs

WHY IT WAS NEEDED

- HFCs, climate-damaging refrigerants, are used in air-conditioning, refrigeration, foams and aerosols as replacement for many ozone-depleting substances (ODS)
- ODS are being phased out under the Montreal Protocol (MP) of 1987
- Phasing out ODS is important to protect the stratospheric ozone layer
- Stratospheric ozone layer filters out harmful ultraviolet radiation, which is associated with increased prevalence of skin cancer and cataracts
- HFC is not ODS, but its global warming potential is thousands of times that of carbon dioxide
- So, the global community wanted the use of HFCs also to be curbed under MP
- Agreement in Kigali is meant to amend the MP to bring the HFCs' phase-down within its ambit

197 Parties (196 countries plus EU) agreed to the deal in Kigali, Rwanda

WHAT IS AGREED

- Agreed to an amendment to include HFCs' phase-down under MP (Unlike Paris Agreement, MP is legally binding)
- It entered into force from Jan 1, 2019
- Creates three categories of countries with different schedules and timetables for reduction

1 Developed countries led by the US, Japan and West European nations.

2 Developing countries like China, South Africa, Brazil among others.

3 Developing countries like India, Iran, Iraq, Pakistan among others.

HFCs' PHASE DOWN SCHEDULES

Category	Baseline	Freezing	Max % reduction
1	2011-13	2019	85% by 2036
2	2020-22	2024	80% by 2045
3	2024-26	2028	85% by 2047

- Freezing year is the year when use of HFCs will peak before being rapidly scaled down and finally phased out altogether
- Baseline years are the years for which the average production/consumption quantity of HFCs is taken as the upper limit—so it serves as a level

Knowledge Base:

Montreal Protocol: The Montreal Protocol was designed to reduce the production and consumption of ozone depleting substances (ODS). It is aimed at protecting the earth from ODSs like the Chlorofluorocarbons (CFCs), that were earlier used in the air-conditioning and refrigerant industry. The protocol entered into force on January 1st in 1989.

<https://theprint.in/theprint-essential/kigali-amendment-global-pact-just-ratified-by-india-targets-greenhouse-gases-used-in-your-ac/743754/>

<https://pib.gov.in/PressReleasePage.aspx?PRID=1746946>

Q.23) Why is there a great concern about the 'microbeads' that are released into environment?

- a) They are considered harmful to marine ecosystems.
- b) They are considered to cause skin cancer in children.
- c) They are small enough to be absorbed by crop plants in irrigated fields.
- d) They are often found to be used as food adulterants.

Ans) a

Exp) Option a is the correct answer.

Microbeads are plastic particles of less than one millimetre in their largest dimension. Microbeads typically serve as cleansers and exfoliants in personal care products, such as soaps, facial scrubs and toothpastes. They are considered harmful to marine life.

Source) UPSC CSE Pre 2019

Q.24) Consider the following statements regarding the provisions of the Disaster Management Act, 2005:

1. The Act covers disasters arising from both natural as well as manmade causes.
2. The National Disaster Response Fund (NDRF) is constituted under the provisions of this act.
3. Any individual person can make contribution to the National Disaster Response Fund.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

The Disaster Management Act, 2005 aims to manage disasters and to implement the strategies related to mitigation, relief and rehabilitation. It has a multi-tier framework including authorities at- national, state, district and local levels.

Statement 1 is correct: Section 2(d) of the Act contains the definition of ‘disaster’ as:

- 1) A catastrophe, mishap, calamity or grave occurrence in any area,
- 2) arising from natural or man-made causes, or by accident or negligence**
- 3) which results in substantial loss of life or human suffering or damage to, and destruction of, property, or damage to, or degradation of, environment
- 4) And is of such a nature or magnitude as to be beyond the coping capacity of the community of the affected area.

Hence, both natural and man-made disasters are covered under this Act.

Statement 2 is correct: The National Disaster Response Fund (NDRF), constituted under Section 46 of the Disaster Management Act, 2005. It supplements State Disaster Response Fund (SDRF) of a State, in case of a disaster of severe nature, provided adequate funds are not available in SDRF.

Statement 3 is correct: Contribution to the NDRF can be made by Central Government or any person or institute. For example, during COVID-19 pandemic, Central Government allowed contributions from individuals and private institutions also.

Source: https://www.indiacode.nic.in/bitstream/123456789/2045/1/AAA2005____53.pdf

Q.25) With reference to ‘Kelp forests’, consider the following statements:

1. They are underwater ecosystems found in shallow water.
2. They are only found in warm and nutrient-deficient waters near equatorial region.
3. They are characterized by the dense growth of brown algae.
4. They provide shelter and food for many marine species.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 3 and 4 only
- c) 1, 3 and 4 only
- d) 2, 3 and 4 only

Ans) c

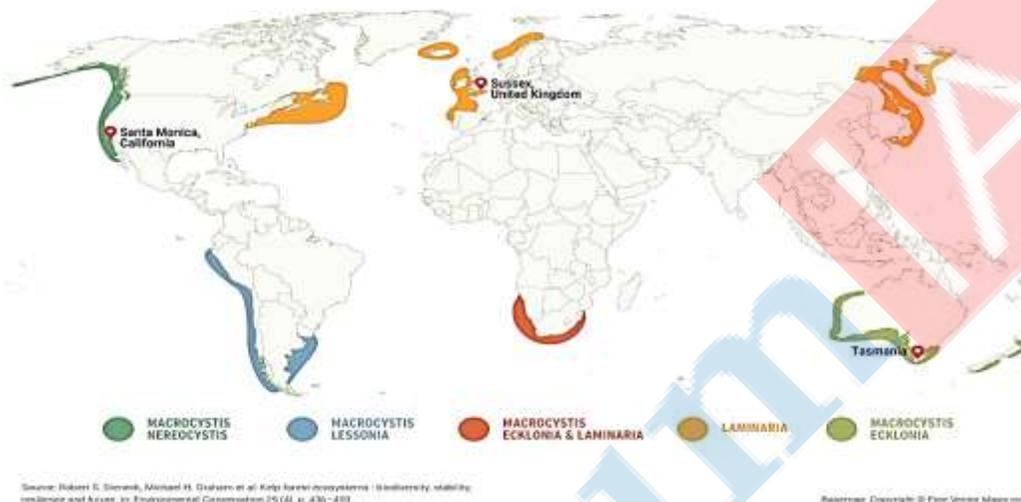

Exp) Option c is the correct answer.

A recent study published in the journal Nature revealed that Kelp forests are declining because of climate change.

Statement 1 is correct: Kelp Forests are **underwater ecosystems formed in shallow water** by the dense growth of several different species known as kelps. Though they look very much like plants, kelps are actually extremely large brown algae.

Statement 2 is incorrect: Kelps are not typically found in warm, nutrient-rich waters near the equatorial region. They are found along the **coasts of temperate and polar regions. Kelp thrives in cold, nutrient-rich waters.** They attach to the seafloor and eventually grow to the water's surface and rely on sunlight to generate food and energy, kelp forests are always coastal and require shallow, relatively clear water.

KELP FOREST DISTRIBUTION

Statement 3 is correct: They are characterized by the **dense growth of large brown algae.** These dense canopies of **algae generally occur in cold, nutrient-rich waters.** Because of their dependency upon light for photosynthesis, kelp forests form in shallow open waters and are rarely found deeper than 49-131 feet.

Statement 4 is correct: Kelp provides shelter and food for many species of fish and invertebrates and also provides a habitat for marine mammals. Kelps provide critical habitat and are an important food source for a wide range of coastal organisms, including many fish and invertebrates. Kelps provide critical habitat and are an important food source for a wide range of coastal organisms, including many fish and invertebrates.

Source: <https://www.downtoearth.org.in/news/climate-change/kelp-forests-losing-unique-traits-due-to-climate-change-says-study-87331>

<https://oceana.org/marine-life/kelp-forest/>

<https://oceanservice.noaa.gov/facts/kelp.html>

Q.26) Consider the following pairs with reference to the sources of air pollutants:

Major Air Pollutants	Their Main sources
1. Nitric Oxide	Motor Vehicular Emissions
2. Ammonia	Thermal Power Generation
3. Ozone	Battery Manufacturing
4. Particulate Matter	Construction sites

How many pairs given above are correctly matched?

- a) Only one pair
- b) Only two pairs
- c) Only three pairs
- d) All four pairs

Ans) b

Exp) Option b is the correct answer.

Air pollutants are substances in the air that can cause harm to human health and the environment. They can come from various sources such as industrial processes, transportation, and power generation. Common air pollutants include **particulate matter, nitrogen oxides, sulfur dioxide, carbon monoxide, volatile organic compounds, lead, and ozone.**

Pair 1 is correctly matched: Nitric oxide, also called **nitrogen monoxide, is a colorless, toxic gas formed through the combustion processes of coal and petroleum.** Main sources include **motor vehicles and thermal power plants.** Nitric oxide dissolves in atmospheric water vapour to form acid that damages vegetation, buildings and materials, which contributes to the acidification of terrestrial and aquatic ecosystems. It also combines with VOCs to create ground-level ozone (O₃).

Pair 2 is incorrectly matched: Ammonia is a colorless gas with a pungent odor. Its main source are **agricultural processes, particularly in fertilizer production and livestock waste management.** Indoor causes include cigarette smoke and cleaning solutions. Ammonia is not primarily associated with thermal power generation.

Pair 3 is incorrectly matched: Ground-level ozone is a pale blue gas with a pungent smell. It is mainly formed through the **photochemical reactions of other pollutants such as nitrogen oxides, carbon monoxide, and volatile organic compounds from strong sunlight and UV radiation.** Indoor sources stem from electric motors in household appliances including copiers and laser printers. Ozone pollution is not associated with battery manufacturing.

Pair 4 is correctly matched: Particulate matter consists of airborne liquid and solid particles. Primary particulate matter is **emitted from a direct source, including power plants, vehicle traffic, construction sites, and indoor stoves and heaters.** On the other hand, secondary particulate matter is formed as a result of chemical and physical reactions with various compounds, including Sulphur dioxide (SO₂), nitrogen dioxide (NO₂), and ammonia (NH₃).

Source: <https://www.breeze-technologies.de/blog/major-air-pollutants-their-impact-and-sources/>

Q.27) With reference to District Disaster Management Authority (DDMA), consider the following statements:

1. It is a statutory body established under the Disaster Management Act, 2005.
2. The Superintendent of Police in a district can be a member of the DDMA.
3. It is mandatory for DDMA to prepare district disaster management plan for prevention and mitigation of disaster.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 1 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

The Disaster Management Act of 2005 is an act passed by the Government of India for the efficient management of disasters and other matters related to it.

Statement 1 is correct: District Disaster Management Authority (DDMA) was established by the Disaster Management Act, 2005. District collector will be the Chairperson of DDMA. Additionally, the act establishes the National Disaster Management Authority (NDMA) and the State Disaster Management Authority (SDMA).

Statement 2 is correct: According to Section 25 of the Disaster Management Act, 2005:

The District Disaster Management Authority shall consist of the Chairperson and such number of other members, not exceeding seven, as may be prescribed by the State Government, and unless the rules otherwise provide, it shall consist of the following namely: –

- (a) the Collector or District Magistrate or Deputy Commissioner, as the case may be, of the district who shall be Chairperson, ex officio;
- (b) the elected representative of the local authority who shall be the Co-Chairperson, ex officio;
- (c) the Chief Executive Officer of the District Authority, ex officio;
- (d) the Superintendent of Police, ex officio;**
- (e) the Chief Medical Officer of the district, ex officio;
- (f) not exceeding two other district level officers, to be appointed by the State Government.

Statement 3 is correct: It is mandatory for DDMA to prepare disaster management plan for prevention and mitigation of disasters. Section 31 of Disaster Management Act 2005 (DM Act) makes it mandatory to have a disaster management plan for every district. District Disaster Management Plan (DDMP) shall include Hazard Vulnerability Capacity and Risk Assessment (HVCRA), prevention, mitigation, preparedness measures, response plan and procedures.

Q.28) Which of the following statements are correct with respect to the Dvorak Technique?

- a) It is an Artificial Intelligence (AI) algorithm developed specifically to predict landslides.
- b) It is a technique used to manufacture communication satellites that are immune from extreme weather conditions.
- c) It is a technique mainly used to predict monsoon rainfall by measuring the surface temperature of Oceans.
- d) It is a technique used to predict the intensity of tropical cyclones.

Ans) d

Exp) Option d is the correct answer.

Dvorak technique was first developed in 1969 by US Meteorologist **Vernon Dvorak** and tested for observing storms in the northwest Pacific Ocean. Using this technique scientists are able to measure the **cyclone's convective cloud pattern**- curved bands, eye and central dense or cold region and shear.

DEVELOPMENTAL PATTERN TYPES	PRE STORM	TROPICAL STORM		HURRICANE PATTERN TYPES		
		(Minimal)	(Strong)	(Minimal)	(Strong)	(Super)
	T1.5 - 2.5	T2.5	T3.5	T4.5	T5.5	T6.5 - T8
CURVED BAND PRIMARY PATTERN TYPE						
CURVED BAND EIR ONLY						
CDO PATTERN TYPE VIS ONLY						
SHEAR PATTERN TYPE				EYE TYPES		

Option a is incorrect: Dvorak technique is not related to Artificial intelligence. In fact even in the era of Artificial Intelligence and Machine Learning (ML), **weather forecasters rely upon Dvorak technique to predict intensity of tropical cyclones.**

Option b is incorrect: Dvorak technique is not being used in manufacturing satellites, instead the technique **uses satellite images to predict** the intensity of tropical cyclones. From the observed satellite, Dvorak technique helps forecasters to do a **pattern recognition of the tropical cyclones** and helps in estimating the **intensity of tropical cyclones.**

Option c is incorrect: Dvorak technique is not being employed to measure the surface temperature of the ocean. Dvorak technique involves studying the pattern of tropical cyclone images observed using satellites and predicting the intensity of the cyclones.

Option d is correct: The Dvorak technique was a cloud pattern recognition technique based on a concept model of the development and decay of the tropical cyclone. The structure and organization of the tropical cyclone are tracked over a period of time **to determine if the storm has weakened,** maintained its intensity, or strengthened. Dvorak technique uses the visible **spectrum in the daytime and infrared rays in the night time to observe the Ocean** in order to recognise the pattern of cyclones.

Source: <https://indianexpress.com/article/explained/explained-climate/dvorak-cyclone-intensity-estimation-technique-explained-8165811/>

Q.29) With reference to 'Fly Ash', consider the following statements:

1. It is a byproduct from burning of coal in power generating plants.
2. It can be used as building material in the construction industry.
3. In India, it is mandatory for thermal power plants to ensure full utilization of fly ash in an eco-friendly manner.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 2 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Recently, National Thermal Power Corporation (NTPC) has developed an infrastructure to transport fly ash from power plants in bulk to cement plants, at a cheaper cost. It will pave the way for efficient and environment friendly transportation.

Statement 1 is correct: Fly Ash is a **byproduct from burning of coal in electric power generating** plants. It is called fly ash because it is transported from the combustion chamber by exhaust gases. It is collected from the exhaust gases by electrostatic precipitators or bag filters.

Composition: Fly ash includes substantial amounts of silicon dioxide (SiO₂), aluminum oxide (Al₂O₃), ferric oxide (Fe₂O₃) and calcium oxide (CaO).

Statement 2 is correct: Fly ash exhibits **cementitious properties, meaning it can react with water and some other substances to form a hardened mass**, similar to Portland cement. This property makes fly ash useful as a partial replacement for Portland cement in concrete and other building materials. Cement can be replaced by fly ash upto 35%, thus reducing the cost of construction, making roads, etc. Fly ash bricks are light in weight and offer high strength and durability. Fly ash is a better fill material for road embankments and in concrete roads.

Statement 3 is correct: Fly Ash Notification 2021 was issued under the Environment (Protection) Act 1986. It **prohibits dumping and disposal of fly ash discharged from coal or lignite based thermal power plants on land or into water bodies**. The Centre has made it mandatory for such **plants to ensure 100% utilization of ash in an eco-friendly manner**, and introduced for the first time a penalty regime for non-compliance based on 'polluter pays' principle.

[https://scialert.net/fulltext/?doi=ajar.2010.1.14#:~:text=Fly%20Dash%20has%20been%20shown,Matsi%20and%20Keramidas%2C%201999\).](https://scialert.net/fulltext/?doi=ajar.2010.1.14#:~:text=Fly%20Dash%20has%20been%20shown,Matsi%20and%20Keramidas%2C%201999).)

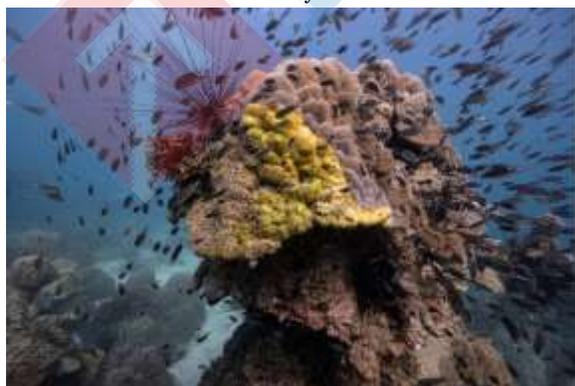

Q.30) Recently seen in news, the 'Yellow Band Disease' usually affects which one of the following?

- Wheat crop
- Coral reefs
- Silkworms
- Teak trees

Ans) b

Exp) Option b is the correct answer.

Yellow Band Disease is a common and damaging condition that affects **coral reefs, causing them to become diseased and often leading to the death of affected corals**. This disease is caused by a variety of different factors, including environmental stress, bacterial infections, and other diseases. The yellow band in the name refers to the yellow or brown discoloration that appears on affected corals.

Yellow-band disease—named for the colour it turns corals before destroying them—was first spotted decades ago and has caused widespread damage to reefs. There is **no known cure for this disease** and unlike coral, bleaching corals will not be restored once they get infected by this disease. Scientists believe overfishing, pollution and rising water temperatures because of climate change may be making the reefs more vulnerable to yellow-band disease.

Source: <https://www.thehindu.com/sci-tech/energy-and-environment/watch-why-are-corals-in-thailand-getting-destroyed/article66396891.ece>

Q.31) In the context of solving pollution problems, what is/are the advantage/advantages of bioremediation technique?

1. It is a technique for cleaning up pollution by enhancing the same biodegradation process that occurs in nature.
2. Any contaminant with heavy metals such as cadmium and lead can be readily and completely treated by bioremediation using microorganisms.
3. Genetic engineering can be used to create microorganisms specifically designed for bioremediation.

Select the correct answer using the code given below:

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Bioremediation is a process that uses mainly microorganisms, plants, or microbial or plant enzymes to detoxify contaminants in the soil and other environments.

Heavy metals such as cadmium and lead are not readily absorbed or captured by microorganisms.

Some highly chlorinated contaminants and high molecular weight Polycyclic aromatic hydrocarbons (PAHs) present in coal, crude oil and gasoline are also not readily amenable to microbial degradation. There are also increasing concerns that the bioremediation products may be more persistent or hazardous than the parent compounds.

Source: UPSC CSE Pre 2017

Q.32) Consider the following statements regarding the Plastic Waste Management Rules, 2016:

1. The Rural areas are excluded from the applicability of the rules.
2. The rules provide for phasing out of non-recyclable multilayered plastic.
3. Rules aims to decrease the thickness of plastic carry bags from 50 to 40 microns.
4. The shopkeepers willing to use plastic bags shall register with the local body.

Which of the statements given above are correct?

- a) 2 and 4 only
- b) 2, 3 and 4 only
- c) 1, 2 and 4 only
- d) 1 and 3 only

Ans) a

Exp) Option a is the correct answer.

Statement 1 is incorrect: The jurisdiction of Plastic Waste Management Rules has been expanded to include the rural areas because plastic has reached rural areas also. Every **gram panchayat** either on its

own or by engaging an agency shall **set up, operationalize and co-ordinate for waste management in the rural area** under their control.

Statement 2 is correct: A gradual phase-out of non-recyclable Multi-Layered Plastics was advocated through the Plastic Waste Management Rules, 2016, wherein clause 9(3) advocated phasing out all multi-layered plastics used for packaging in two years.

Statement 3 is incorrect: These rules aim to **increase in the thickness** of carry bags and plastic sheets **from 40 to 50 micron**. Further the stipulation of 50-micron thickness for plastic sheets is likely to increase the cost by about 20 %. Hence, the tendency to provide free carry bags will come down.

Statement 4 is correct: The local bodies shall be responsible for setting up, operationalization, and coordination of the waste management system and for performing associated functions. **The shopkeepers and street vendors willing to provide plastic carry bags for dispensing any commodity shall register with the local body.**

Source: <https://pib.gov.in/newsite/printrelease.aspx?relid=138144>

Q.33) Consider the following statements:

1. Reduced capacity of soil to act as filter
2. Inhibition in the growth of microorganisms
3. Contamination of the subsurface water table
4. Health problems among wildlife
5. Increased soil carbon sequestration

Which of the above are the consequences of soil pollution?

- a) 1, 2 and 3 only
- b) 2, 4 and 5 only
- c) 1, 2, 3 and 4 only
- d) 1, 2, 3, 4 and 5

Ans) c

Exp) Option c is the correct answer.

Soil pollution refers to the presence of **hazardous substances in the soil that can have negative impacts on human health, ecosystems, and the environment**. Common sources of soil pollution include industrial activities, improper disposal of waste, and pesticide use. Contaminants that can lead to soil pollution include heavy metals, polycyclic aromatic hydrocarbons, polychlorinated biphenyls, and persistent organic pollutants. The consequences of soil pollution are:

Option 1 is correct: Soil pollution can reduce the **capacity of soil to act as a filter**, which can lead to the spread of contaminants into groundwater and other water sources, leading to widespread water pollution.

Option 2 is correct: Soil pollution can **harm (inhibit) the growth of microorganisms** that play a crucial role in the soil's ecosystem. These microorganisms help to decompose organic matter, regulate nutrient cycling, and contribute to soil fertility.

Option 3 is correct: Soil pollution can **contaminate the subsurface water table**, leading to widespread water pollution and posing a threat to human health and the environment.

Option 4 is correct: Soil pollution can **harm wildlife by contaminating their food and water sources**, leading to disease, reduced reproductive success, and population declines. These health problems can also have cascading impacts on the wider ecosystem.

Option 5 is incorrect: Increased soil carbon sequestration is not a consequence of soil pollution but a process by which carbon dioxide is taken up by plants and stored in the soil. On the contrary, **soil pollution can decrease soil carbon sequestration** by reducing the growth and activity of microorganisms that help

to decompose organic matter and contribute to soil fertility, and by altering the balance of soil nutrients, leading to reduced plant growth.

Q.34) With reference to the Central Pollution Control Board (CPCB), consider the following statements:

1. It is under the administrative control of Ministry of Environment, Forests and Climate Change.
2. It was established under the Environment (Protection) Act, 1986.
3. It is responsible for improving the quality of air and prevention of air pollution in the country.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Central Pollution Control Board as a regulatory authority to environmental protection and regulations in India. The enactment of the Environment (Protection) Act, 1986, widened the scope of activities of the CPCB

Statement 1 is correct.

It is under the administrative control of Ministry of Forest, Ministry of Environment, Forests and Climate Change.

Statement 2 is incorrect.

The Central Pollution Control Board (CPCB), statutory organisation, was constituted in September, 1974 **under the Water (Prevention and Control of Pollution) Act, 1974.**

Statement 3 is correct.

Further, CPCB was entrusted with the powers and functions under the Air (Prevention and Control of Pollution) Act, 1981.

Principal Functions of the CPCB, as spelt out in the Water (Prevention and Control of Pollution) Act, 1974, and the Air (Prevention and Control of Pollution) Act, 1981, (i) to promote cleanliness of streams and wells in different areas of the States by prevention, control and abatement of water pollution, and (ii) to improve the quality of air and to prevent, control or abate air pollution in the country. It also provides background air quality data needed for industrial siting and towns planning.

Source) <https://cpcb.nic.in/Introduction/>

Q.35) With reference to 'Financial Services Institutions Bureau (FSIB)', consider the following statements:

1. It was established by replacing the Bank Board's Bureau of India.
2. It will be headed by the secretary of the Department of Financial Services.
3. The chairperson of FSIB will be the de facto member of Monetary Policy Committee under Reserve Bank of India.
4. It will ensure proper selection of talent for senior positions at financial institutions in the country.

Which of the statements given above is/are correct?

- a) 1 and 4 only
- b) 4 only
- c) 2 and 3 only
- d) 1, 2 and 4 only

Ans) a

Exp) Option a is the correct answer.

The **Financial Services Institutions Bureau (FSIB)**, the headhunter for directors of state-owned banks and financial institutions, recently recommended names for the posts of managing directors of Bank of Baroda and Bank of India.

Statement 1 is correct: Financial Services Institutions Bureau (FSIB) is a government body set up under the Department of Financial Services. It **replaced the Bank Board's Bureau (BBB)** in 2022.

Statement 2 is incorrect: FSIB would be headed by a **chairman, a central government nominee**.

The board would comprise the Secretaries of the Department of Financial Services, the chairman of IRDAI, and a deputy governor of the RBI. Additionally, it will have three part-time members who are experts in banking and three more from the insurance sector.

Statement 3 is incorrect: The chairperson of FSIB is **not the member of Monetary Policy Committee**. MPC comprises six members - three officials of the Reserve Bank of India and three external members nominated by the government of India. The role of FSIB is to recommend names for the posts of for directors of state-owned banks and financial institutions.

Statement 4 is correct: The Primary role of FSIB:

- 1) To **identify manpower capabilities and ensure proper selection of talent for senior positions at financial institutions owned by the government.**
- 2) It is entrusted with making recommendations for the appointment of full-time directors and non-executive chairman of state-run financial services institutions.
- 3) The final decision on the FSIB recommendation would be taken by the Appointments Committee of the Cabinet headed by the Prime Minister.

Source: <https://www.thehindu.com/business/fsib-recommends-names-for-md-posts-of-bank-of-baroda-bank-of-india/article66378959.ece>

Q.36) “National Ambient Air Quality Standards” are standards for air quality that are set by the Central Pollution Control Board in India. In this context, which of the following pollutants are notified under these standards?

1. Benzopyrene
2. Carbon Dioxide
3. Arsenic
4. Nickle
5. Sulphur Dioxide

Select the correct answer using the codes given below:

- a) 1, 2 and 5 only
- b) 1, 3, 4 and 5 only
- c) 2 and 5 only
- d) 2, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

The National Ambient Air Quality Standards (NAAQS) in India are standards set by the **Central Pollution Control Board (CPCB)** for the quality of air outside of industrial and residential areas. The first ambient air quality standards were developed in 1982 pursuant to the Air Act. Later, in 1994 and 1998, these standards were revised. The latest revision to the NAAQS was done in 2009 and this is the latest version being followed.

Option 1, 3, 4 and 5 are correct: The compliance of the NAAQS is monitored under the National Air Quality Monitoring Programme (NAMP). NAMP is implemented by the Central Pollution Control Board. The current standards (2009) **comprise 12 pollutants as follows:** Particulate Matter 10 (PM10); Particulate Matter 2.5 (PM2.5); Nitrogen Dioxide (NO₂); **Sulphur Dioxide (SO₂)**; Carbon Monoxide (CO); Ozone (O₃); Ammonia (NH₃); Lead (Pb); Benzene; **Benzopyrene; Arsenic; Nickel**

Option 2 is incorrect: Carbon Dioxide is not considered as a pollutant under the National Ambient Air Quality Standards (NAAQS) in India, as it is a naturally occurring gas and a necessary component of the atmosphere. It is mainly recognized as a greenhouse gas that contributes to global warming and climate change, rather than being an air pollutant.

Source: https://cpcb.nic.in/upload/NAAQS_2019.pdf

<https://pib.gov.in/PressReleaseDetail.aspx?PRID=1795074>

Q.37) Consider the following statements regarding the 'Aapada Mitra Scheme':

1. The scheme mainly focuses on training of community volunteers for preventing COVID-19 like outbreaks.
2. It is a joint initiative of the Government of India, the World Health Organization (WHO) and the World Bank.
3. To create a community emergency stockpile at district and block level is one of the stated objectives of the scheme.

Which of the statements given above is/ are correct?

- a) 1 only
- b) 2 and 3 only
- c) 3 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: The scheme was launched in 2016 as a central sector scheme with a focus on training and requisite skill development of 6000 community volunteers in 30 most **flood prone districts**. Volunteers undertake relief and rescue tasks during emergency situations such as **floods, flash-floods and urban flooding. It is not related to the COVID-19 management.**

NDMA is also planning to upscale the scheme in Pan India to train 100,000 Volunteers in 350 selected highly vulnerable districts prone to flood, cyclone, landslide and earthquake in across the country.

Statement 2 is incorrect: This is an initiative of National Disaster Management Authority. There are **no stated roles of WHO or World Bank under this scheme.**

Statement 3 is correct: To create a Community Emergency Stockpile at district and block levels containing **search and rescue equipment, medical first aid kits** etc. is one of the objectives. Other objectives are:

- 1) Development and Standardization of training modules at National Level
- 2) Development of Information Knowledge Management System at National level linked to States/UTs;
- 3) Training institutions to be empaneled by respective States/UTs at the State/UT level

Knowledge Base: Another important initiative of NDMA is- **Common Alerting Protocol** to integrate the functioning of the Alert Generating Agencies (eg. Indian Meteorological Department), Alert Disseminating Agencies (eg. TV, Radio, social media etc.) and Disaster Management Authorities.

Source: https://www.google.com/search?q=Aapada+mitra+scheme+pib&rlz=1C1GIGM_enIN750IN750&oq=Aapada+mitra+scheme+pib&aqs=chrome..69i57.7450j0j7&sourceid=chrome&ie=UTF-8
<https://pib.gov.in/PressReleasePage.aspx?PRID=1759022>

Q.38) Consider the following statements regarding the State Disaster Management Authority (SDMA):

1. In case of all the States and Union Territories having Legislatures, the Chief Ministers are the ex-officio Chairpersons of their respective SDMA.
2. It shall comprise of not more than 10 members.
2. The plans made by District Disaster Management Authority require approval from SDMA.

Which of the statements given above is/ are correct?

- a) 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

State Disaster Management Authorities (SDMAs) are constituted under the Disaster Management Act, 2005 to lay down the state disaster management policy, approve the state plan, review the measures taken for mitigation, etc.

Statement 1 is incorrect: Chief Ministers of all the states and Union Territories having legislatures (**except Delhi**) are the ex-officio Chairpersons of the SDMA. In case of Delhi, **Lt. Governor** is the Chairperson and the Chief Minister of Delhi acts as Vice-Chairperson.

Statement 2 is correct: The SDMA shall comprise of not more than 10 members, which includes:

- 1) Chief Minister as the Chairperson, ex-officio. (except for Delhi where Lt. Governor is the chairperson and Chief minister of Delhi is vice-chairperson)
- 2) Chairperson of the State Executive Committee, ex-officio.
- 3) Other members not exceeding 8. These are nominated by the Chairperson.

Statement 3 is correct: The Collector or District Magistrate or Deputy Commissioner, as the case may be, of the district who shall be Chairperson, ex officio of the District Disaster Management Authority (DDMA). DDMA shall make plans for the management of disasters at district level. **These plans require approval of the SDMA for implementation.**

Source: https://www.indiacode.nic.in/bitstream/123456789/2045/1/AAA2005___53.pdf

Q.39) With reference to 'National Air Quality Index', consider the following statements:

1. It is a colour coded air pollution monitoring index launched in 2014.
2. All the pollutants under the index are monitored in real time at all the locations in India.
3. It is calculated only if data are available for minimum three pollutants out of which one should be either PM2.5 or PM10.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 1 and 3 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

National Air Quality Index (AQI) was launched by the **central government in 2014** as part of the Swachh Bharat campaign. According to the Central Pollution Control Board, part of the Ministry of Environment, Forests and Climate Change, the AQI transforms complex air quality data of various pollutants into a single number (index value), nomenclature and colour. The pollutants measured include PM 10, PM 2.5, Nitrogen Dioxide, Ozone, Carbon, etc.

Statement 1 is correct: The National Air Quality Index (NAQI) was launched in India in 2014. Under the index, there are **six or eight pollutants in the affected air and each of these pollutants is given a weight based on a formula**. That weight depends on the kind of impact it has on human health. The worst of these weights is given as composite air quality, so instead of giving you six different numbers, and six different colors, it **throws up one single colour, one single number to denote the overall impact**. Monitoring stations across the country assess these levels.

Statement 2 is incorrect: Under the index, all the **eight pollutants may not be monitored** at all the locations. **Not all pollutants are monitored in real-time at all locations**, only selected ones are. Some locations may have more advanced monitoring systems that can measure more pollutants, while others may have limited capacity to measure only a few pollutants. The NAQI provides a standardized framework for air quality monitoring and reporting, but the actual implementation may vary depending on local circumstances.

Statement 3 is correct: The index is calculated based on the levels of **eight pollutants: PM2.5, PM10, NO2, SO2, CO, O3, NH3 and Pb**. The NAQI **ranges from 0 to 500, with higher values indicating higher levels of air pollution**. Each of the eight pollutants is assigned a weight based on its potential impact on human health, and the NAQI is calculated as the average of the weighted pollutant concentrations. The index is calculated **only if data are available for minimum three pollutants** out of which one should be either PM2.5 or PM10. Else, data are considered insufficient for calculating AQI. Similarly, a minimum of 16 hours' data is considered necessary for calculating sub-index.

Q.40) With reference to 'Online Gaming in India', consider the following statements:

1. Presently, there is no specific central monitoring or regulatory body in India to control online gaming.
2. In India, 100 percent foreign direct investment (FDI) is allowed under the automatic route for online gaming.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

The Covid Pandemic gave a boost to the **online gaming market in India** and people are now more willing to pay to play. According to analysts, over 24 million Indians are added to the payment-linked gaming market. Recently, Union government has proposed measures for regulating online gaming in a draft amendment to the Information Technology (Intermediary Liability and Digital Media Ethics Code) Rules, 2021.

Statement 1 is correct: The regulation of the **online gaming industry** in India is a complex issue and has been the subject of much debate in recent years. There are **currently no specific laws or regulations in place that govern the industry**, and the industry is largely self-regulated. However, certain laws such as the Information Technology Act, the Indian Contract Act, and the Public Gambling Act have been used to regulate the industry.

Statement 2 is correct: In India, 100% **foreign direct investment is allowed under the automatic route for online gaming** which falls under electronic system, IT and BPM sectors. This means that approval from the appropriate ministries is not required for such investments.

Source: <https://www.indiatimes.com/explainers/news/how-rapidly-is-the-gaming-industry-growing-in-india-589059.html>

Q.41) Which of the following is/are the possible consequence/s of heavy sand mining in river beds?

1. Decreased salinity in the river
2. Pollution of groundwater
3. Lowering of the water table

Select the correct answer using the code given below:

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Option 1 is incorrect. There is no direct link between salinity and heavy sand mining.

However, depletion of sand in the streambed causes the deepening of rivers and estuaries, and the enlargement of river mouths and coastal inlets. This can lead to saline-water intrusion into the river, thus increasing its salinity. This threat is imminent in coastal areas.

Option 2 and 3 are correct. Heavy sand mining in river beds can lead to the pollution of groundwater and lowering of the water table.

Source: UPSC CSE Pre 2018

Q.42) Which of the following statements with reference to the phenomenon of cloudburst is/are correct?

1. According to Indian Meteorological Department (IMD), it is a cloudburst only when the amount of rainfall in a particular region exceeds 100 cm per hour.
2. Most cloudbursts occur in connection with thunderstorms.
3. They do not occur in plains.
4. They are fairly easy to predict.

Select the correct answer using the code given below:

- a) 1, 2 and 3 only
- b) 2 only
- c) 1 and 4 only
- d) 1, 2 and 4 only

Ans) b

Exp) Option b is the correct answer.

Increasing incidents of cloudbursts in Jammu and Kashmir, Himachal Pradesh and Uttarakhand are a clear evidence of climate change, experts have pointed out.

Statement 1 is incorrect. Cloudburst is a sudden, very heavy rainfall, usually local in nature and of brief duration. According to Indian Meteorological Department (IMD), it is a cloudburst when the amount of rainfall in a particular region exceeds 10 cm per hour.

Statement 2 is correct. Most cloudbursts occur in connection with thunderstorms. In these storms there are violent uprushes of air, which at times prevent the condensing raindrops from falling to the ground. A large amount of water may thus accumulate at high levels, and if the upward currents are weakened (e.g., if they are trapped over a region or there is a no air movement for them to disperse, they discharge over a specific area) the whole of this water falls at one time. Cloudbursts are especially common in mountainous areas (in the Himalayas or in the western ghats). This is probably because the warm air currents of a thunderstorm tend to follow the upward slope of a mountain.

Statement 3 is incorrect. Cloud bursts do occur at plains; however, mountainous regions are more prone to cloud bursts due to orography.

Cloudbursts in the Himalayan region usually happen in July and August.

Statement 4 is incorrect.

Although, it is difficult to forecast cloudbursts, doppler radars can be very helpful in predicting them. Nowcasts can be given three hours prior to the event. It is very difficult to predict the cloud bursts due to its very small scale in space and time. To monitor or nowcast (forecasting few hours lead time) the cloud burst, we need to have dense radar network over the cloud burst prone areas or one need to have a very high-resolution weather forecasting models to resolve the scale of cloud burst.

Q.43) With reference to the United Nations Office for Disaster Risk Reduction (UNDRR), consider the following statements:

1. It is a specialised agency of the United Nations.
2. It oversees the implementation of the Sendai Framework for Disaster Risk Reduction 2015-2030.
3. Its initiative 'Global Compact on Refugees' provides blueprints for the government to protect the livelihood of Climate refugees.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

The United Nations Office for Disaster Risk Reduction (**UNDRR**) was created in December 1999 to ensure the implementation of the International Strategy for Disaster Reduction. Its headquarters is located in Geneva, Switzerland.

Statement 1 is incorrect: The United Nations Office for Disaster Risk Reduction (**UNDRR**) is not a specialised agency of the United Nations. UNDRR is part of the United Nations Secretariat and it is led by a UN Special Representative of the Secretary-General for Disaster Risk Reduction (SRSG). The UN specialized agencies are autonomous international organizations working with the United Nations and these were brought into relationship with the UN through negotiated agreements.

Statement 2 is correct: UNDRR oversees the implementation of the Sendai Framework for Disaster Risk Reduction 2015-2030 and it also supports countries in implementation of sendai framework. It helps countries to reduce existing risk and prevent the creation of new risk.

Statement 3 is incorrect: The Global Compact on Refugees is an initiative of The United Nations High Commissioner for Refugees. Global compact on Refugees is based on the idea that a sustainable solution to refugee situations cannot be achieved without international cooperation. It provides a blueprint for governments to ensure that refugees can lead productive lives in their new place.

Source: <https://www.un.org/en/about-us/specialized-agencies>

<https://www.unhcr.org/en-in/the-global-compact-on-refugees.html>

Q.44) With reference to Acid rain, consider the following statements:

1. The presence of Ozone gas in the atmosphere hinders the formation of acid rain.
2. It is the process of deposition of acidic particles from atmosphere to earth solely through rainfall.
3. Higher the wind speed, higher the geographical spread of acid rain.
4. The formation of acid rain at higher latitudes can be facilitated by lightning.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1, 3 and 4 only
- c) 3 and 4 only
- d) 2, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

When the pH of the rain water drops below 5.6, it is called acid rain. Acid rain occurs when **Oxides of Sulphur and Nitrogen** in the atmosphere undergo chemical transformations in the presence of water and oxygen.

Statement 1 is incorrect: The presence of ozone facilitates the formation of acid rain. Usually, the oxidation of sulphur dioxide is slow. However, the presence of **ozone (O₃)** in polluted air **catalyses the oxidation of sulphur dioxide to sulphur trioxide.**

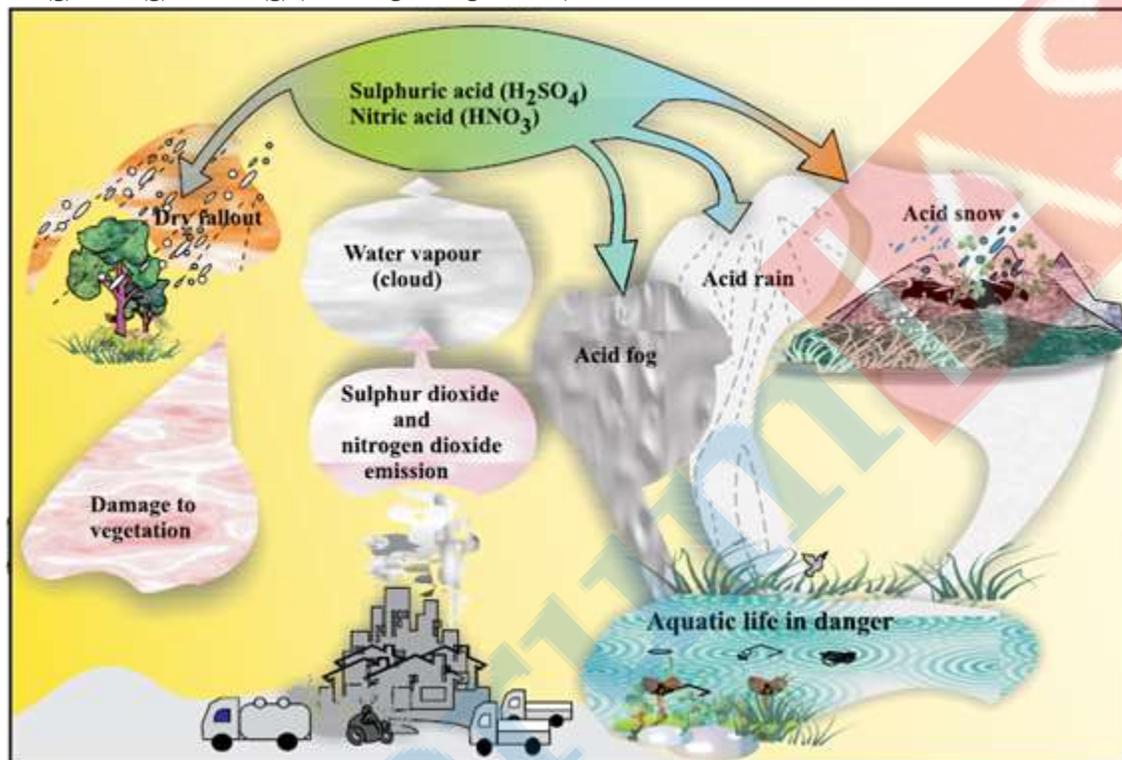

Also, the presence of particulate matter and Hydrogen Peroxide (H₂O₂) catalyses the oxidation process and so acid rain.

Statement 2 is incorrect: Acid rain refers to the ways in which **acid** from the atmosphere is **deposited on the earth's surface**. Deposition of acid particles in the surface can happen **either through wet or dry forms**. **Wet Deposition** happens when the **sulfuric and nitric acids** formed in the atmosphere fall to the ground mixed **not only through rain but also through** other forms of precipitation such as **snow, fog, or hail**. **Dry Deposition** happens when acidic particles and gases deposit from the atmosphere to the **surface** in the **absence of moisture**.

Statement 3 is correct: Winds can blow Sulphur oxides and Nitrogen Oxides present in the atmosphere over long distances, thus increasing the geographical spread of acid rain. Thus, higher the wind speed, higher the spread of acid rain.

Statement 4 is correct: Dinitrogen (N₂) and dioxygen (O₂) are the main constituents of air. These gases do not react with each other at a normal temperature. At high altitudes when lightning strikes, they combine (under the increased temperature due to lightning) to form oxides of nitrogen, thus facilitating the formation of acid rain at higher latitudes.

<https://www.epa.gov/acidrain/what-acid-rain>

Q.45) Vultures which used to be very common in Indian countryside some years ago are rarely seen nowadays. This is attributed to

- The destruction of their nesting sites by new invasive species.
- A drug used by cattle owners for treating their diseased cattle.
- Scarcity of food available to them.
- A widespread, persistent and fatal disease among them.

Ans) b

Exp) Option b is the correct answer.

Vultures are on the verge of extinction in India because a banned drug being used illegally to treat suffering cattle. Diclofenac, an anti-inflammatory drug used by farmers to ease pain in cattle, is deadly to vultures. The endangered birds eat the remains of the drugged animals and suffer kidney failure and visceral gout, which is usually fatal.

Source: UPSC CSE 2012

Q.46) Which one of the following statements best describes the idea behind the “Hyogo Framework for Action”?

- It aimed at building the resilience of nations and communities to disasters.
- It aimed at curbing the global emissions of methane.
- It aimed at bringing uniformity in the data localization norms.
- It aimed at regulating marine plastic waste at global level.

Ans) a

Exp) Option a is the correct answer.

Statement a is correct: Hyogo Framework for Action **2005-15** was adopted by the **World Conference on Disaster Reduction**. It aims to build resilience of the Nations and communities to disasters. Important aspects include:

- To review the progress made in implementing **Yokohama Strategy**. This strategy contains Guidelines for Natural Disaster Prevention, Preparedness and Mitigation and its Plan of Action.
- The framework identifies **3 strategic goals**:
 - The more effective integration of disaster risk considerations into sustainable development policies
 - The development and strengthening of institutions, mechanisms and capacities at all levels, in particular at the community level
 - The systematic incorporation of risk reduction approaches into the design and implementation of emergency preparedness, response and recovery programmes.
- The framework also identifies **5 priority areas** for overall disaster risk management.
- The **Sendai Framework (2015-30) is the successor** of the Hyogo Framework, aiming at disaster risk reduction and building resilience.

Source: <https://sdgs.un.org/publications/sendai-framework-disaster-risk-reduction-2015-2030-17988#:~:text=The%20Sendai%20Framework%20is%20the,Nations%20and%20Communities%20to%20Disasters.>

Q.47) With reference to the National Disaster Response Force (NDRF), consider the following statements:

- Their function is restricted within the territory of India.
- It functions under the Ministry of Environment, Forest and Climate Change.

Which of the statements given above is/are correct?

- 1 only
- 2 only
- Both 1 and 2
- Neither 1 nor 2

Ans) d

Exp) Option d is the correct answer.

The Disaster Management Act, 2005 has made the statutory provisions for constitution of National Disaster Response Force (NDRF) for the purpose of specialised response to natural and man-made disasters.

Statement 1 is incorrect: NDRF engages in disaster relief activities in foreign countries too. For instance, NDRF performed a major role in relief activities during **Nepal Earthquake, 2015 and Japan Tsunami, 2011**.

Statement 2 is incorrect: NDRF functions under the Ministry of Home Affairs, Government of India. The **Nodal Ministry** in the central government for management of natural disasters is the Ministry of Home Affairs (MHA).

Source: <https://ndrf.gov.in/about-us>

Q.48) In this method of waste disposal, a huge pit is made in an open area and the waste including both organic and non-organic waste are dumped into this pit. Once the pits are filled with wastes, they will be covered with soils and left for decomposition. Which of the following methods best reflects this type of waste disposal?

- a) Open dumping
- b) Bioremediation
- c) Landfilling
- d) Composting

Ans) c

Exp) Option c is the correct answer.

Managing waste properly is essential for building sustainable and liveable cities and following are some of the methods to dispose wastes.

Option a is incorrect: In Open dumping, both the organic and non-organic waste is **unloaded at any convenient open space**. The waste disposed here isn't processed or segregated. It's a breeding place for disease-carrying flies, rodents, and other insects. The people residing nearby may **light fire to reduce the amount of waste** which causes health hazards to people living nearby.

Option b is incorrect: Bioremediation process uses **live organisms (usually bacteria)** to remove or neutralise pollutants in contaminated areas. It can be divided in two categories i.e **In-situ bioremediation and ex-situ bioremediation**. In situ bioremediation provides the **treatment at contaminated sites** and avoids excavation and transport of contaminants In contrast ex situ bioremediation involves **treating the waste away from contaminant site** thus it involves excavation and transportation of contaminant source.

Option c is correct: In Landfilling, **both organic and non organic wastes are dumped into a large pit** and at the end of each day, these wastes are **covered with a layer of soil** and left for decomposition. This covering of waste with soil is necessary to prevent landfills to act as a breeding ground for insects and to prevent runoffs due to rain.

Option d is incorrect: Unlike Landfilling, in composting only organic wastes can be disposed of. Composting is a process by which **organic wastes are broken down by microorganisms**, generally bacteria and fungi, into simpler forms. The microorganisms use the carbon in the waste as an energy source and the end product of this process can be added to soil to improve its fertility.

Source: https://www.nhp.gov.in/solid-waste_pg

<https://ag.umass.edu/crops-dairy-livestock-equine/fact-sheets/waste-management-composting>

Q.49) With reference to the existing strategies of Bioremediation to remove pollutants from contaminated source, consider the following statements:

1. Mycoremediation uses mycobacterium to remove pollutants.
2. Bio Leaching uses plants to filter out pollutants from contaminated groundwater.
3. Land Farming is performed in the upper soil zone to treat contaminated soils.

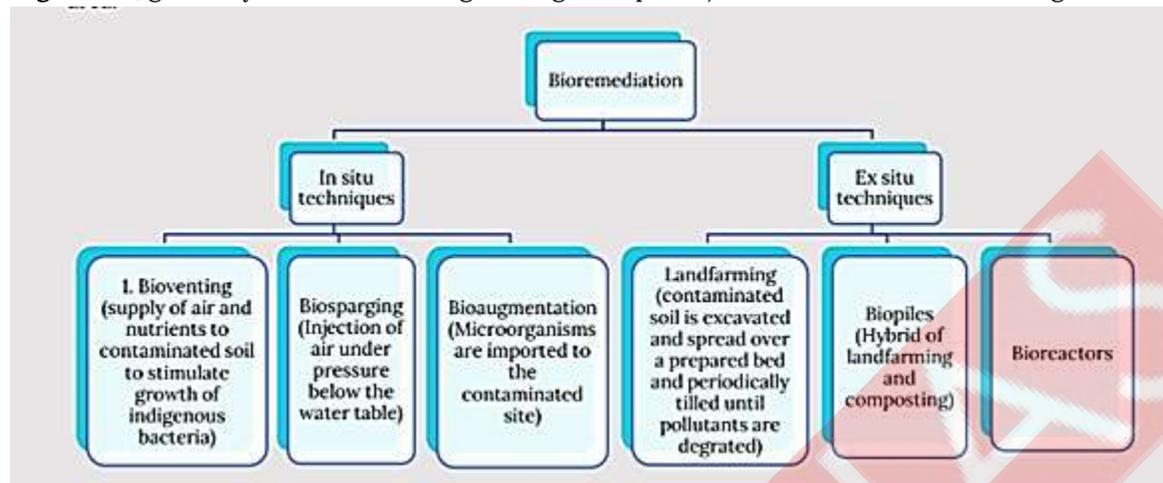

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 2 only
- d) 3 only

Ans) d

Exp) Option d is the correct answer.

Bioremediation involves the process of **removing pollutants** from air, water, soil etc., **using any living organisms**, generally bacteria, microalgae, fungi, and plants), in natural or artificial settings.

Statement 1 is incorrect: Mycoremediation is a form of bioremediation which **uses fungi** to decontaminate the area. **Mycobacterium is a bacterium** that causes tuberculosis and leprosy in humans. Hence the 1st statement is incorrect.

Statement 2 is incorrect: **Bioleaching is the extraction of metals from their ores** through the use of **living organisms**. It comes under the bioremediation process as it involves using living organisms. The metal extracted using bioleaching is cleaner than conventional methods. **Rhizofiltration** is a form of **phytoremediation (use of plants to remove pollutants)** that involves **filtering contaminated groundwater** through a mass of **plant roots to remove toxic substances** or excess nutrients.

Statement 3 is correct: **Land farming is a bioremediation treatment process** that is performed in the **upper soil zone**. Landfarming is an **ex situ bioremediation** technique in which contaminated soils are transported to the landfarming site, mixed into the soil surface and periodically turned over **i.e tilled to aerate the mixture**. **Tilling helps in cultivating and enhancing microbial degradation** of hazardous compounds. This technique is used to treat soil contaminated **oily sludge and other petroleum refinery wastes**.

http://www.nbrienvs.nic.in/Database/1_2047.aspx

Q.50) Recently, 'MAARG Platform' was launched by the Department for Promotion of Industry and Internal Trade under the Ministry of Commerce and Industry. The objective of this platform is to-

- promote the manufacture and export of high-quality capital goods from India.
- develop industrialization in the remote, hilly and inaccessible areas of the country.
- provide sector-focused guidance and support to start-ups throughout their lifecycle.
- strengthen the capabilities of the Intellectual Property Offices in India.

Ans) c

Exp) Option c is the correct answer.

The Union Commerce and industry minister has launched the mentorship, advisory, assistance, resilience and growth (MAARG) platform on 16th January 2023 in New Delhi.

MAARG Platform is the National Mentorship Platform by Start-up India to help and guide new start-ups to grow and flourish. It is a one-stop platform to **facilitate mentorship for start-ups across diverse sectors, functions, stages, geographies, and backgrounds**.

It is launched by the Department for Promotion of Industry and Internal Trade (DPIIT) under the Ministry of Commerce and Industry. The objectives are

- 1) To **provide sector-focused guidance, handholding, and support to start-ups throughout their lifecycle.**
- 2) To establish a formalized and structured platform that facilitates intelligent matchmaking between the mentors and their respective mentees.
- 3) To facilitate efficient and expert mentorship for start-ups and build an outcome-oriented mechanism that allows timely tracking of mentor-mentee engagements.

Source: <https://economictimes.indiatimes.com/tech/startups/piyush-goyal-to-launch-maarg-platform-to-aid-startup-entrepreneur-mentorship/articleshow/96971383.cms>

Q.1) The increasing amount of carbon dioxide in the air is slowly raising the temperature of the atmosphere, because it absorbs:

- The water vapour of the air and retains its heat.
- The ultraviolet part of the solar radiation.
- All the solar radiations.
- The infrared part of the solar radiation.

Ans) d

Exp) Option d is the correct answer.

Option d is correct: Molecules of carbon dioxide (CO₂) can absorb energy from infrared part of solar radiations i.e., the long wave radiations emitted by earth and re-emits it. The re-emitted energy travels out in all directions and heats up the atmosphere. In addition, Carbon dioxide can stay in atmosphere for centuries.

Source: UPSC CSE Pre 2012

Q.2) With reference to climate change convention of the United Nations Framework Convention on Climate Change (UNFCCC), consider the following pairs:

Climate change convention	Major outcomes
1. Sharm el-Sheikh Summit	Food and Agriculture for Sustainable Transformation initiative
2. Glasgow Summit	Green Climate Fund.
3. Paris Summit	Sustainable Development Mechanism (SDM)
4. Madrid Summit	Climate Ambition Alliance

How many pair/s is/are correctly matched?

- Only one pair
- Only two pairs
- Only three pairs
- All the four pairs

Ans) c

Exp) Option c is the correct answer.

The UNFCCC was formed in 1994 to stabilize the greenhouse gas emissions and to protect the earth from the threat of climate change. The Conference of Parties (COP) is the apex decision-making body of UNFCCC and so far, 27 COPs were held.

Pair 1 is correct: The **Food and Agriculture for Sustainable Transformation initiative** was the outcome of **Sharm el-Sheikh Climate Change Conference (COP27) of UNFCCC**. The initiative aims to improve the **quantity and quality of climate finance contributions** to transform agriculture and food systems by 2030.

Pair 2 is incorrect: The Green Climate Fund (GCF) was established during the **2010 Climate Change Conference in Cancun** as a fund within the UNFCCC framework to **assist developing countries in adaptation and mitigation practices** to counter climate change. **Glasgow** climate change conference

(COP26) asked the developed countries to at least **double the money** being provided for adaptation by 2025 from the 2029 levels.

Pair 3 is correct: Sustainable Development Mechanism (SDM) was the outcome of the Paris Climate Change conference (COP21) of UNFCCC. SDM replaced the Clean Development Mechanism (CDM) of Kyoto Protocol and SDM is the carbon market for the **trading of emissions reduction** created anywhere in the world by the **public or the private sector**.

Pair 4 is correct: The Climate Ambition Alliance is an outcome of a **climate change conference (COP 25) in Madrid, Spain**. COP25 under the **Presidency of the Government of Chile** and was held with logistical support from the Government of Spain. Climate Ambition Alliance aims to bring **together countries, businesses, investors, cities and regions who are working towards achieving net-zero CO2 emissions by 2050**.

Q.3) With reference to Leadership Group for Industry Transition (LeadIT) Group, consider the following statements:

1. It is a global initiative launched by the World bank.
2. It aims for companies to come out with roadmaps for deep reductions in emissions across all heavy industries and value chains.
3. Currently no Indian company is member of LeadIT group.

Which of the statement/s given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 3 only
- d) 2 and 3 only

Ans) b

Exp) Option b is the correct answer.

LeadIT brings together countries, companies and industry experts to achieve net-zero emissions from heavy industries by 2050.

Statement 1 is incorrect: LeadIT was launched by the **Prime Ministers of Sweden and India with support from the World Economic Forum (WEF)** during the UN Secretary-General's Climate Action Summit in 2019, in New York. It is not an initiative of World bank.

Statement 2 is correct: LeadIT calls for **countries and companies to come out with roadmaps** for deep **reductions in emissions** across all heavy industries and value chains in the coming decade. It aims to boost climate ambitions and actions to implement the Paris Agreement.

Statement 3 is incorrect: **Some Indian companies are members of LeadIT group**. Currently, the Group has a membership of 16 countries and 19 companies including **Dalmia Cement, Mahindra Group and**

SpiceJet from India. Emission reduction by industries is crucial for achieving the climate change targets as industry sectors together contribute about **30% of the total CO2 emissions**.

Source: Economic Survey 2021-22- pg no 232

<https://blog.forumias.com/exhorts-more-companies-from-the-heavy-industries-sector-to-join-the-global-lead-it-leadership-group-for-industry-transition-initiative/>

Q.4) With reference to Lifestyle for Environment (LiFE) movement, consider the following statements:

1. It was announced by India during the United Nations Climate Change conference (UNFCCC) at Glasgow.
2. Under LiFE, Pro Planet People (P3) is a technical assistance platform to promote sustainable development.
3. In India, NITI Aayog in partnership with the World Resource Institute acts as a nodal agency for inviting ideas related to the LiFE movement.

Which of the statement/s given above is/are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

The Lifestyle for Environment (LiFE) movement aims at replacing the prevalent '**use-and-dispose**' economy which is governed by mindless and destructive consumption with a **circular economy**, which would be defined by mindful and deliberate utilisation.

Statement 1 is correct: LiFE movement was **announced by the Indian Prime Minister** during the 26th United Nations Climate Change Conference of the Parties (**COP26**) in **Glasgow in 2021**. The Mission intends to nudge individuals to undertake simple acts in their daily lives that can contribute significantly to climate change when embraced across the world.

Statement 2 is incorrect: The Mission plans to create and nurture a **global network of individuals, namely Pro-Planet People (P3)**, who will have a shared commitment to adopt and promote environmentally friendly lifestyles. Statement is incorrect because **P3 is not a technical assistance platform under LiFE mission rather it acknowledges the people who adopt environment friendly practices.**

Statement 3 is correct: Behavioural Insights Unit of **NITI Aayog** and the Ministry of Environment, Forest and Climate Change (MOEFCC), **in partnership with World Resources Institute**, the United Nations, Centre for Social and Behaviour Change (CSBC) and Bill and Melinda Gates Foundation (BMGF), are inviting ideas from across the world related to LiFE mission. **Apart from other sectors, NITI Aayog is inviting ideas** from around the world to bring behavioural change among people in **sectors** such as **Water, Transport Food, Electricity and Waste Management** etc.,

Source: <https://www.niti.gov.in/life>

Q.5) India has signed 'Comprehensive Migration and Mobility Partnership' Agreement with which of the following countries?

1. Austria
2. Germany
3. Sri Lanka
4. France
5. Bangladesh

Select the correct answer using the codes given below:

- a) 2, 3, 4 and 5 only
- b) 1, 2 and 4 only
- c) 2 and 4 only
- d) 1, 3, 4 and 5

Ans) b

Exp) Option b is the correct answer.

India has recently signed **Comprehensive Migration and Mobility Partnership Agreement (MMPA)** with Austria during the Indian External Affairs Minister's visit to Vienna.

Option 1, 2 and 4 are correct: India and Austria have signed **Comprehensive Migration and Mobility Partnership Agreement in January 2023**. It will regulate illegal migration, as it enables the swift return of illegal migrants and Multiple entry visas for professionals and student exchange programme, which will be reviewed regularly by a Joint Working Group (JWG). This follows similar agreements signed with other European countries such as **France, the United Kingdom, Germany, and Finland**.

Option 3 and 5 are incorrect: India has **not signed Comprehensive Migration and Mobility Partnership Agreement with Bangladesh and Sri Lanka**. The migration issues between India and Sri Lanka and Bangladesh are much complex in nature. Any agreement on this issue will require comprehensive dialogue and consensus between various stakeholders.

Source: <https://www.thehindu.com/news/national/jaishankar-meets-austrian-counterpart-schallenberg/article66327012.ece>

Q.6) In the context of India's effort to enhance the financial support for sustainable development, consider the following statements:

1. India is one of the founding members of International Platform for Sustainable Finance (IPSF) that aims to mobilise private capital towards sustainable development.
2. Reserve Bank of India launched the Network for Greening the Financial System (NGFS) to mobilise finance for sustainable development in India.
3. Securities and Exchange Board of India (SEBI) made it mandatory for the top thousand companies to disclose their performance related to Environment, Social and Governance (ESG) factors.
4. Small Industries Development Bank of India (SIDBI) launched the Green Finance scheme to offer financial assistance to MSMEs engaged in the sustainable development practices.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 2 and 3 only
- c) 1 and 4 only
- d) 1, 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

Sustainable finance is defined as investment decisions that take into account the environmental, social, and governance (ESG) factors of an economic activity. **Environmental factors** include mitigation of the climate crisis or use of sustainable resources. **Social factors** include human rights and consumer protection. **Governance factors** refer to the management, employee relations, and compensation practices of both public and private organisations.

Statement 1 is correct: India is a founding member of the International Platform for Sustainable Finance (IPSF). IPSF was launched in 2019 by the European Union and the other founding members were Argentina,

Canada, Chile, China, Kenya and Morocco. The **objective** of the IPSF is to scale up the **mobilisation of private capital towards environmentally sustainable investments**.

Statement 2 is incorrect: The Network for Greening the Financial System (NGFS) is a global initiative launched at **Pairs One Planet summit in 2017**. NGFS was **not launched by RBI and RBI became a member of NGFS in 2021**. It is not launched by RBI. **NGFS is a group of central banks and supervisors** committed to sharing best practices, contributing to the **development of climate and environment related risk management in the financial sector** and mobilising mainstream finance to support the transition toward a sustainable economy.

Statement 3 is correct: **SEBI made it mandatory for the top 1000 companies** to include their performance related to Environment, Social and Governance (**ESG**) in the **Business Responsibility and Sustainability Report (BRSR)**. BRSR will be submitted by the companies to SEBI. This measure will make companies accountable to their business practices' impact on the environment and society.

Statement 4 is correct: Small Industries Development Bank of India (**SIDBI**) **launched the Green Finance Scheme** to improve the **resilience of the MSME sector** by offering **financial assistance** to MSMEs engaged in the sustainable development practices. **Activities** covered under this scheme are Energy Efficiency Models, Water & Waste Management, Carbon capture and storage, green buildings, green products, and materials.

Source: <https://www.ngfs.net/en>

Economic Survey 2021-22 Pg no 230

Q.7) With reference to 'Mapping India's Climate Vulnerability-A District-Level Assessment' report, consider the following statements:

1. It is released by Indian Meteorological Department (IMD).
2. The 'Climate vulnerability Index' in the report classifies Kerala and West Bengal as the most vulnerable to extreme weather events as compared to other States in India.
3. The report recommends establishing a high-resolution Climate Risk Atlas (CRA) to map critical vulnerabilities at the district level in India.

Which of the statement/s given above is/are correct?

- a) 1 and 3 only
- b) 2 and 3 only
- c) 3 only
- d) 1 and 2 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: Climate Vulnerability Index was released by the **Council on Energy, Environment and Water (CEEW)**, a **non-profit, non-governmental organisation**. It is a **district-level climate vulnerability assessment**. The index has analysed **640 districts in India** and found that **463** of these are **vulnerable to extreme floods**, droughts and cyclones etc.

Statement 2 is incorrect: The Climate Vulnerability Index (**CVI**) **has ranked 20 states** out of which **Kerala, West Bengal and Tripura are the least vulnerable and Assam and Andhra Pradesh are the most vulnerable** to extreme weather events. The report noted that Kerala and West Bengal have performed well because they have stepped up their climate action plans and preparedness to handle extreme weather events.

Statement 3 is correct: The index/report recommended to **develop a high-resolution Climate Risk Atlas (CRA)** to map critical vulnerabilities at the **district level**. Further it recommended establishing a **centralised climate-risk commission** to **coordinate** the environmental de-risking mission in the country.

Source: <https://indianexpress.com/article/explained/climate-vulnerability-index-ceew-explained-7593385/>

[https://www.ceew.in/our-](https://www.ceew.in/our-story#:~:text=The%20Council%20on%20Energy%2C%20Environment%20and%20Water%20is%20one%20of%20Asia%E2%80%99s%20leading%20not%2Dfor%2Dprofit)

[story#:~:text=The%20Council%20on%20Energy%2C%20Environment%20and%20Water%20is%20one%20of%20Asia%E2%80%99s%20leading%20not%2Dfor%2Dprofit](https://www.ceew.in/sites/default/files/ceew-study-on-climate-change-vulnerability-index-and-district-level-risk-assessment.pdf)

<https://www.ceew.in/sites/default/files/ceew-study-on-climate-change-vulnerability-index-and-district-level-risk-assessment.pdf>

Q.8) Which of the following best describes the term “Ocean acidification”?

- Decreased concentration of hydrogen ions in the Ocean due to high rate of evaporation.
- Decrease in the pH level of the ocean due to the increased concentration of sulphur dioxide in the Ocean.
- Decrease in the pH level of the ocean due to the increased concentration of Carbon Dioxide in the Ocean.
- Increased concentration of carbonate ions in the Ocean due to the death of calcifying organisms like corals in the Ocean.

Ans) c

Exp) Option c is the correct answer.

Ocean acidification refers to the process of **decrease in pH level** of the oceans due to the **increased uptake of Carbon Dioxide (CO₂) gases** from the atmosphere. When CO₂ is absorbed by seawater, a series of chemical reactions occur resulting in the **increased concentration of hydrogen ions**. This process has far reached implications for the ocean and the creatures that live there.

Option a is incorrect: Hydrogen ions and pH level of the ocean are inversely proportional to each other. **Higher the concentration of hydrogen ions, lower the pH level** which means there is an increased acidity. Further the rate of evaporation is not related to the concept of ocean acidification.

Option b is incorrect: Acid rain results when **sulphur dioxide (SO₂) and nitrogen oxides (NO_x)** in the atmosphere are deposited on the surface of earth through wind or precipitation. Although it can lower the pH level of the oceans, **it is not as strongly related to Ocean Acidification as increased concentration of CO₂ in the ocean.**

Option c is correct: **Ocean Acidification refers to the decreased pH level of Ocean** (or increased concentration of hydrogen ions) due to the **increased deposition of CO₂ in the Ocean**. CO₂ when dissolved into seawater, **water and carbon dioxide combine to form carbonic acid (H₂CO₃)**. Carbonic acid in turn breaks into **hydrogen ions (H⁺)** and bicarbonate ions (HCO₃⁻). This increased concentration of H⁺ ions lead to the reduced pH level of the ocean and **causes ocean acidification.**

Option d is incorrect: **Death of calcifying organisms does not cause ocean acidification rather it is one of the impacts of Ocean acidification.** As ocean acidification increases, **available carbonate ions (CO₃²⁻) bond with excess hydrogen ions**, resulting in **fewer carbonate ions available for calcifying organisms** like **Corals** to build and maintain their shells, skeletons, and other calcium carbonate structures

Source: Forum IAS red book - pg. no 81

Q.9) Consider the following statement with reference to GRIHA initiative:

- It was launched by Central Government to provide affordable housing for all.
- It is recognized by United Nations as a Sustainable development tool.
- It also attempts to minimize a building’s resource consumption, waste generation, and overall ecological impact.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

GRIHA is an acronym for Green Rating for Integrated Habitat Assessment. GRIHA is a Sanskrit word meaning – ‘Abode’.

Statement 1 is incorrect: GRIHA is a rating tool that helps people assesses the performance of their building against certain nationally acceptable benchmarks. It evaluates the environmental performance of a building holistically over its entire life cycle, thereby providing a definitive standard for what constitutes a ‘green building’. It is not an initiative of central government to provide affordable housing for all.

Statement 2 is correct: Internationally, GRIHA has been recognized as an innovative tool for sustainable development by the United Nations. Along with this, UNEP-SBCI has developed the “Common Carbon Metric”, for international building energy data collection –based on inputs from GRIHA (among others).

Statement 3 is correct: GRIHA attempts to minimize a building’s resource consumption, waste generation, and overall ecological impact to within certain nationally acceptable limits / benchmarks. GRIHA attempts to quantify aspects such as energy consumption, waste generation, renewable energy adoption, etc. so as to manage, control and reduce the same to the best possible extent.

Source: <https://www.grihaindia.org/about-griha>

Q.10) With reference to ‘First Information Report (FIR) and Chargesheet’, consider the following statements:

1. While the chargesheet is the final report filed towards the end of an investigation, an FIR is filed when police are informed of a cognizable offense.
2. The purpose of FIR is investigation of the offense committed, whereas chargesheet is used to provide evidence during the trial.
3. Both FIR and Chargesheet can be withdrawn by filing an affidavit in the court.
4. Chargesheet is a public document whereas FIR cannot be treated as a public document.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1, 2 and 3 only
- c) 1, 3 and 4 only
- d) 2 and 4 only

Ans) a

Exp) Option a is the correct answer.

Recently, Supreme Court held that the public cannot be given free access to a charge sheet or a final investigation report as it is not a public document.

Statement 1 is correct: An FIR is the **first document that is filed when police are informed of a cognizable offense**. It sets the process of investigation in motion. On the other hand, the chargesheet is the **final report that is filed after the investigation is complete** and the evidence has been collected.

Statement 2 is correct: The purpose of an FIR is to **initiate the investigation into the commission of an offense**, while the purpose of a chargesheet is to **provide evidence to support the allegations against the accused** and to prosecute the accused in a court of law.

Statement 3 is incorrect: FIR and Chargesheet **cannot be withdrawn**. There is no such provision to withdraw FIR or chargesheet under The Code of Criminal Procedure, 1973. However, Delhi High Court has observed that the **FIR and chargesheet can be quashed** if the allegations made in the FIR or complaint or the evidence collected, though remaining uncontroverted, do not disclose the commission of an offence.

Statement 4 is incorrect: FIR is a **public document** prepared u/s-154 of Cr. P.C. A certified copy of an FIR can be given in evidence. A copy of the FIR can be given to the accused only under the order of the court after the court has taken cognizance of the case and not before. However, Supreme Court (SC) recently, has ruled that **chargesheets are not 'public documents'** and enabling their free public access violates the provisions of the Criminal Code of Procedure (CrPC) as it compromises the rights of the accused, victim, and the investigation agencies.

<https://tripakshalitigation.com/difference-between-fir-and-charge-sheet/>

<https://www.legalserviceindia.com/legal/article-1338-what-is-fir-and-chargesheet-.html>

Q.11) In the context of which of the following, do some scientists suggest the use of cirrus cloud thinning technique and the injection of sulphate aerosol into stratosphere?

- Creating the artificial rains in some regions
- Reducing the frequency and intensity of tropical cyclones
- Reducing the adverse effects of solar wind on the Earth
- Reducing the global warming

Ans) d

Exp) Option d is the correct answer.

Cirrus clouds are formed at high altitudes and trap the long wave radiation and reflect sun light. Thinning cirrus clouds reduces their heat trapping capacity.

In Stratospheric Aerosol Injection (SAI) technique, reflective sulphate aerosols particles are injected into the stratosphere which aids in reflecting most of the sunlight back into space and creating a dimming effect and cooling the planet. Both of these techniques thus help in reducing the global warming.

Source: UPSC CSE Pre 2019

Q.12) Which of the following are the likely impacts of presence of the tropospheric ozone?

- It can reduce productivity of plants.
- It can cause quick fading of fabric dyes and paints.
- It can lead to increased number of cataract cases in humans.

Select the correct answer using the code given below:

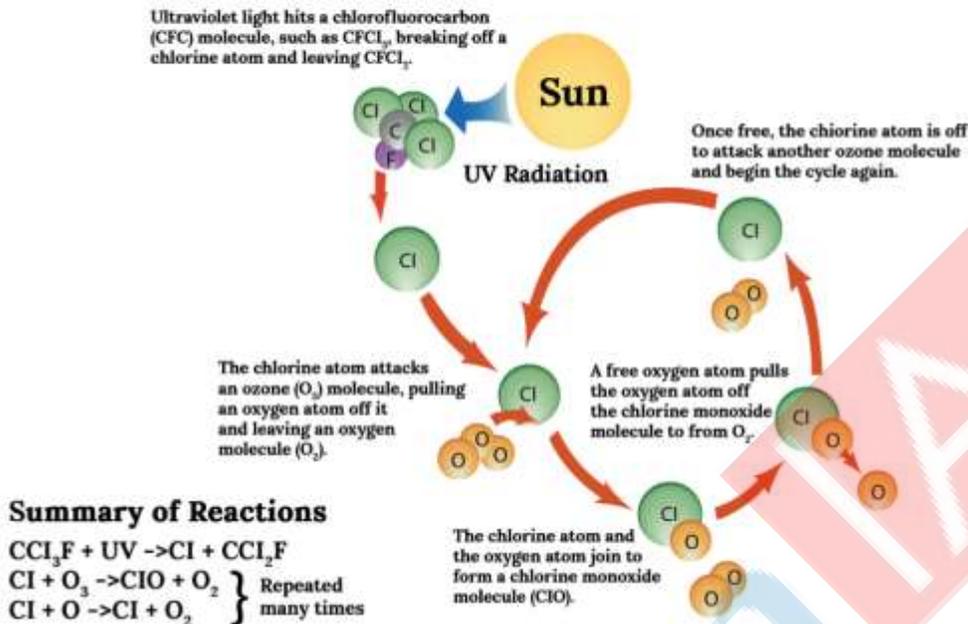

- 1 and 3 only
- 1 and 2 only
- 2 and 3 only
- 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Ozone (O₃) is a natural gas and it is a combination of three oxygen atoms. Presence of Ozone in the **stratosphere is good** because it protects life on earth from the harmful UV rays of the sun while its presence in **troposphere is bad** as it leads to smog formation. Most of the ozone that is found near the ground comes from vehicle exhaust and emissions from factories, power plants, and refineries. Since 1900, the amount of ozone near the Earth's surface has more than doubled due to more automobiles and industry.

Ozone Layer Depletion by CFCs

Statement 1 is correct: Tropospheric ozone (O_3) is a global air pollutant that causes billions of dollars in lost plant productivity annually. It is an important anthropogenic greenhouse gas, and as a secondary air pollutant, it is present at high concentrations in rural areas far from industrial sources. It also reduces plant productivity by entering leaves through the stomata, generating other reactive oxygen species and causing oxidative stress, which in turn decreases photosynthesis and plant growth.

Statement 2 is correct: Ozone also damages materials like rubber, textile dyes, fibers, and certain paints. These materials can be weakened or degraded by exposure to ozone. Some elastic materials can become brittle and crack, **while paints and fabric dyes may fade more quickly because of its high oxidizing potential.**

Statement 3 is correct: Ozone which forms at the troposphere adversely affects both the visibility of sky and **human eye health**. UV radiation that reaches the Earth can lead to more cases of **cataracts**. Cataracts are **clouding of the normally clear lens of the eye** and its main symptom is **blurry vision**.

Source: <https://www.tn.gov/health/cedep/environmental/environmental-health-topics/eht/ozone.html#:~:text=Ozone%20depletion%20can%20cause%20increased,fatal%20of%20all%20skin%20cancers>.

Q.13) Which of the following can be considered as a climate geo-engineering technology for reversing the effects of climate change?

1. Dumping of iron or urea in the ocean to stimulate phytoplankton growth to absorb more carbon.
2. Spraying saltwater to make clouds more reflective.
3. Adopting Land farming.
4. Simulating a process of volcanic eruption.

Select the correct answer using the code given below:

- a) 2, 3 and 4 only
- b) 1, 2 and 3 only
- c) 1,2 and 4 only
- d) 1,2,3 and 4

Ans) c

Exp) Option c is the correct answer.

Geoengineering is a deliberate, large-scale intervention carried out in the **Earth's natural systems to reverse the impacts of climate change**. This involves techniques to physically manipulate the global climate to cool the planet. It falls primarily under **three categories: Solar radiation management (SRM), carbon dioxide removal (CDR) and weather modification**.

Statement 1 is correct: Ocean fertilisation involves the process of **dumping of iron or urea to stimulate phytoplankton growth to absorb more carbon**.

Statement 2 is correct: Cloud brightening is a climate engineering technique which involves **spraying saltwater to make clouds more reflective**.

Statement 3 is incorrect: Land farming is ex-situ bioremediation technology which utilises microorganism to treat contaminated soils. Land farming does not come under geoengineering or climate engineering as **land farming can emits carbon dioxide into the atmosphere**. Land farming uses microbes to digest contaminants such as oil and the **by-products** of this process are non-toxic products such as water and **carbon dioxide**.

Statement 4 is correct: A volcanic eruption releases sulphur into the atmosphere, which in turn could block the sun's radiation and cool the earth. **Stratospheric aerosol injection (SAI)** method involves simulating the process of volcanic eruption; in this method **sulphates were sprayed into the air to reflect sunlight back into space**.

Source: <http://www.geoengineering.ox.ac.uk/www.geoengineering.ox.ac.uk/what-is-geoengineering/what-is-geoengineering/>

<https://www.downtoearth.org.in/blog/climate-change/why-geoengineering-is-still-a-dangerous-techno-utopian-dream-74828#:~:text=cloud%20brightening%20or>

<https://www.scientificamerican.com/article/uk-researchers-to-test-artificial-volcano-for-geoengineering-the-climate/>

Q.14) Carbon Sinks lower the concentration of CO₂ in the atmosphere. In this context, which of the following are an example of artificial carbon sinks?

1. Forests
2. Depleted oil and gas reservoir
3. Peat Bogs
4. underground mines
5. Ocean fertilization

Select the correct answer using the code given below:

- a) 2 and 5 only
- b) 2, 4, and 5 only
- c) 3 and 4 only
- d) 1, 2, 3, 4, and 5

Ans) b

Exp) Option b is the correct answer.

A Carbon Sink is any natural or artificial reservoir that absorbs and stores some carbon-containing chemical compound for an indefinite period, thus lowering the concentration of CO₂ in the atmosphere.

Options 1 and 3 are incorrect: A **natural carbon sink** is a process or a system that removes carbon dioxide (CO₂) from the atmosphere and stores it in a stable form for extended periods of time. Examples of natural carbon sinks include: **Forests**, where trees absorb CO₂ from the atmosphere through photosynthesis and store it as biomass and soil organic matter. **Oceans**, where **CO₂ dissolves in seawater and is used by phytoplankton and other marine organisms in photosynthesis**. Some of this CO₂ is then stored in the deep ocean. Soils, where CO₂ is taken up by microorganisms and stored as soil organic matter. **Peatlands or Peat bogs, where partially decayed plant material accumulates and forms peat, which stores large amounts of carbon.**

Option 2 is correct: An **artificial carbon sink** is a man-made system or technology designed to remove carbon dioxide (CO₂) from the atmosphere and store it in a stable form for extended periods of time. The examples of artificial carbon sink are as follows: **Ocean fertilization**, where **nutrients are added to the ocean to promote the growth of phytoplankton, which absorb CO₂ through photosynthesis**.

Options 4 and 5 are correct. Carbon capture and storage (CCS) is also example of artificial carbon sink. Here carbon dioxide (CO₂) is captured from industrial processes or directly from the air and then transported to underground storage sites, such as depleted oil and gas reservoirs, deep saline aquifers, underground mines, etc. The CO₂ is injected into these subsurface formations and trapped there, preventing it from entering the atmosphere and contributing to climate change.

Source: Page 83, chapter 8, ForumIAS, Redbook Environment.

<https://millenniumprize.org/news-articles/news/artificial-carbon-sinks-explained/>

Q.15) "Momentum for Change: Climate Neutral Now" is an initiative launched by:

- The Intergovernmental Panel on Climate Change
- The UNEP Secretariat
- The UNFCCC Secretariat
- The World Meteorological Organization

Ans) c

Exp) Option c is the correct answer.

The UNFCCC secretariat launched its 'Momentum for Change: Climate Neutral Now' initiative in 2015.

According to this initiative, Climate neutrality is a three-step process, which requires individuals, companies and governments to:

- Measure their climate footprint;
- Reduce their emissions as much as possible; and
- Offset what they cannot reduce with UN certified emission reductions.

Source: UPSC CSE Pre 2018

<https://unfccc.int/news/momentum-for-change-climate-neutral-now>

Q.16) Consider the following statements regarding the types of Carbon Sequestration:

- In Ocean Sequestration, Carbon is stored in oceans through direct injection or fertilization.
- In Terrestrial carbon sequestration, the carbon is captured by methods of Hydrodynamic Trapping and Solubility Trapping.
- Soil carbon sequestration is an example of Geologic Carbon Sequestration.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2, and 3

Ans) a

Exp) Option a is the correct answer.

Carbon sequestration is the process of capturing and storing carbon dioxide (CO₂) in a stable form so that it is removed from the atmosphere and does not contribute to climate change. Carbon sequestration describes long-term storage of carbon dioxide or other forms of carbon to either mitigate or defer global warming.

Statement 1 is correct: Ocean sequestration refers to the process of capturing and storing carbon dioxide (CO₂) in the ocean. This can be achieved through methods like:

1) **Ocean fertilization in which nutrients are added to the ocean to promote the growth of phytoplankton, which absorb CO₂ through photosynthesis.** The CO₂ is then stored in the deep ocean when the phytoplankton die and sink to the ocean floor.

2) **Direct Ocean injection: injecting CO₂ directly into the deep ocean, where it can dissolve in seawater and be used by marine organisms in photosynthesis.**

Statement 2 is incorrect: Natural pore spaces in geologic formations serve as reservoirs for long-term carbon in Geologic Sequestration. In Geologic Sequestration, the carbon is stored by various methods like:

1) **In Hydrodynamic Trapping, Carbon dioxide can be trapped as a gas under low-permeability cap rock.**

2) **In Solubility Trapping, Carbon dioxide can be dissolved into a liquid, such as water or oil.**

3) **Mineral Carbonation:** Carbon dioxide can react with the minerals, fluids, and organic matter in a geologic formation to form stable compounds/minerals like magnesium carbonates, calcium carbonates, etc.

Statement 3 is incorrect: Terrestrial sequestration refers to the process of capturing and storing carbon dioxide (CO₂) in terrestrial ecosystems, such as forests, soils, and croplands. This can be achieved through a variety of methods, including:

1) Afforestation and Reforestation.

2) **Soil carbon sequestration improves the amount of carbon stored in soils, it includes practices such as conservation tillage, agroforestry, and the use of cover crops.**

3) Agricultural carbon sequestration uses sustainable agricultural practices to increase the amount of carbon stored in crops and soils.

Source: Page 227, Chapter 21-mitigation Strategies, ShankarIAS Environment book.

<https://www.ecowatch.com/carbon-sequestration-2461971411.html>

<https://www.nationalgrid.com/stories/energy-explained/what-carbon-sequestration>

Q.17) Which of the following options best describe the term 'Carbon Rainbow', that was in news recently?

- a) It is a rainbow formed by the emissions from fossil fuels and carbon-based substances.
- b) It is a method of carbon sequestration.
- c) It is an initiative of World Bank to reduce the carbon foot print.
- d) It denotes the types of carbon stored in or released by different sources based on different colors.

Ans) d

Exp) Option d is the correct answer.

Option d is correct: As all Carbon are not the same or produced/emitted from the same source, the 'Carbon Rainbow' denotes the various types of carbon based on different colors. Scientists use color to classify

carbon at different points in the carbon cycle based on carbon function, characteristics, and location. This creates a **more descriptive framework** than traditional "organic" and "inorganic" labels.

Purple - Carbon captured through the air or industrial emissions.

Blue - Carbon stored in ocean plants and sediments.

Teal - Carbon stored in freshwater and wetland environments.

Green - Carbon stored in terrestrial plants.

Black - Carbon released through the burning of fossil fuels.

Gray - Carbon released through industrial emissions.

Brown - Carbon released by incomplete combustion of organic matter.

Red - Carbon released through biological particles on snow and ice that reduce albedo.

Source: <https://www.usgs.gov/media/images/carbon-rainbow>
<https://sustainableandsocial.com/carbon-rainbow/>

Q.18) Consider the following statements regarding the term 'Carbon offsetting':

1. It allows individuals and companies to invest in environmental projects around the world to balance their carbon footprints.
2. Clean Development Mechanism and Joint implementation programmes under Kyoto Protocol are examples of Carbon Offsetting.
3. Carbon offsets are measured and sold in metric Tonnes of CO₂ equivalent (CO₂e).

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2, and 3

Ans) d

Exp) Option d is the correct answer.

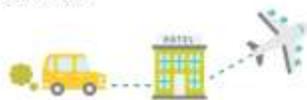

Statement 1 is correct: Carbon offsets are credits for reductions in greenhouse gas emissions made at another location, such as wind farms which create renewable energy and reduce the need for fossil-fuel powered energy. Carbon offset **allow individuals and companies to invest in environmental projects around the world** in order to balance out their own carbon footprints. The projects are usually based in developing countries and most commonly are designed to reduce future emissions.

Statement 2 is correct: Clean Development Mechanism (CDM) and Joint implementation under the Kyoto protocol of UNFCCC are examples of carbon Offsetting. The **Clean Development Mechanism (CDM)**, allows a country with an emission-reduction commitment under the Kyoto Protocol (Annex B Party or developed country) to implement an emission-reduction project in developing countries. **The Joint Implementation programme** allows a country with an emission reduction or limitation commitment under the Kyoto Protocol (Annex B Party) to earn emission reduction units (ERUs) from an emission-reduction project in another Annex B Party.

HOW CARBON OFFSETTING WORKS

Carbon offsetting allows you to balance out your climate impact and compensate for the emissions you produce by reducing CO₂ elsewhere:

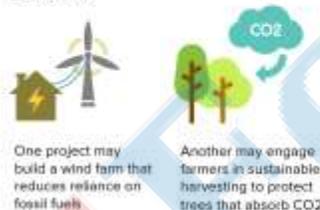

Carbon emissions are **generated** by air travel, lodging, transportation, dining, and other trip activities.

You purchase carbon **offsets** from Sustainable Travel International equivalent to the amount of CO₂ you produced.

These projects reduce CO₂ and other greenhouse gases by removing existing CO₂ from the atmosphere or preventing new emissions.

Your contribution funds **certified projects** that conserve and restore forests, generate clean and renewable energy, or increase energy efficiency.

 SUSTAINABLE TRAVEL INTERNATIONAL

Statement 3 is correct: Carbon offsets are quantified and sold in metric tonnes of carbon dioxide equivalent (CO₂e). Buying one tonne of carbon offsets means there will be one less tonne of carbon dioxide in the atmosphere than there would otherwise have been.

Source: Page 229, Chapter 21-mitigation Strategies, ShankarIAS Environment book.

<https://www.offsetguide.org/understanding-carbon-offsets/what-is-a-carbon-offset/>

<https://unfccc.int/process/the-kyoto-protocol/mechanisms/joint-implementation>

<https://unfccc.int/process-and-meetings/the-kyoto-protocol/mechanisms-under-the-kyoto-protocol/the-clean-development-mechanism>

<https://www.theguardian.com/environment/2011/sep/16/carbon-offset-projects-carbon-emissions>

Q.19) With reference to the Intergovernmental Panel on Climate Change (IPCC), consider the following statements:

1. It was created under the joint collaboration of World Meteorological Organization (WMO) and United Nations Environment Programme (UNEP).
2. It prepares Assessment Reports (ARs) on state of earth's climate which are published every year.
3. It conducts detailed and original research before publishing its reports and also monitors climate change.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

The Intergovernmental Panel on Climate Change (IPCC) is an intergovernmental body of the United Nations responsible for advancing knowledge on human-induced climate change.

Statement 1 is correct: It was created in 1988 under the joint collaboration of **World Meteorological Organization (WMO) and the United Nation Environment Programme (UNEP)**, and later endorsed by United Nations General Assembly.

Statement 2 is incorrect: The IPCC's Assessment Reports (ARs), are not produced **every year but occasionally**. They are the most comprehensive and widely accepted scientific evaluations of the state of the Earth's climate.

Statement 3 is incorrect: **It does not conduct original research nor monitor climate change, but rather undertakes a periodic, systematic review of all relevant published literature.** Thousands of scientists and other experts volunteer to review the data and compile key findings into "Assessment Reports" for policymakers and the general public.

Source: <https://www.ipcc.ch/about/>

Q.20) Which one of the following organizations has launched 'Green Urban Oases (GUO) Programme' that aims to turn dryland cities into green urban oases?

- a) World Economic Forum
- b) International Union for Conservation of Nature
- c) Food and Agriculture Organization
- d) United Nations Human Settlements Programme

Ans) c

Exp) Option c is the correct answer.

Recently, **Food and Agriculture Organization (FAO) of the United Nations** launched report on Urban forestry and urban greening in drylands under the framework of **FAO's Green Urban Oases Programme**.

Green Urban Oases (GUO) Programme was launched in 2021 by FAO. It contributes to the FAO Green Cities initiative, which was launched in 2020. It aims to improve the resilience of dryland cities by tackling climate, health, food and economic challenges.

The objectives of the program are:

- 1) To transform **dryland cities into 'green urban oases'** by strengthening their overall resilience to climatic, health, food and economic crises for the improved health and well-being of urban communities.
- 2) It focuses on developing policy, technical capacity and outlines several pathways for transforming urban spaces by planting trees.

Source: <https://www.fao.org/documents/card/en/c/cb5783en/>

Q.21) Consider the following statements regarding 'Earth Hour':

1. It is an initiative of UNEP and UNESCO.
2. It is a movement in which the participants switch off the lights for one hour on a certain day every year.
3. It is a movement to raise the awareness about the climate change and the need to save the planet.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: Launched in 2007, Earth Hour is organized by the World-Wide Fund for Nature. It is not an initiative of UNEP and UNESCO.

Statement 2 and 3 are correct: It is held every year on the last Saturday of March in which the participants switch off the lights for one hour on a certain day every year to call attention to climate change and the need to save the planet.

Source: UPSC CSE Pre 2014

Q.22) Human-induced activities have brought changes in environment all around the globe resulting in climate change. Which of the following are the major impacts of climate change?

1. Loss of plankton in oceans.
2. Longer Forest fire season.
3. Extended growing season for plants
4. New fungal disease can emerge
5. Intense events of drought and hurricane

Which of the statements given above is/are correct?

- a) 1, 2, 3 and 5 only
- b) 2, 3, 4 and 5 only
- c) 1, 2 and 5 only
- d) 1, 2, 3, 4 and 5

Ans) d

Exp) Option d is the correct answer.

Global change in earth's climate is driven by increased human emissions of greenhouse gases causing global warming. As a result, glaciers and ice sheets are shrinking, river and lake ice is breaking up earlier, plant and animal geographic ranges are shifting, and plants and trees are blooming sooner.

Option 1 is correct: Climate change is responsible for the drop in plankton. Marine plankton, found in all ocean ecosystems, play a critical role in maintaining the health and balance of the ocean and its complex food webs. Loss of Plankton is observed due to warming of seas.

Option 2 is correct: Warming temperatures have made the wildfire season longer and more severe.

Option 3 is correct: Climate warming is leading to early springs and delayed autumns in colder environments, allowing plants to grow for a longer period during each growing season. Plants are absorbing more carbon dioxide as a result of this longer growing season. Longer growing season can have both positive as well as negative impact. A longer growing season could allow farmers to diversify crops or have multiple harvests from the same plot. However, it could also limit the types of crops grown, encourage invasive species or weed growth, or increase demand for irrigation. A longer growing season could also

disrupt the function and structure of a region's ecosystems and could, for example, alter the range and types of animal species in the area.

Option 4 is correct: Rising temperatures have allowed certain disease-causing fungi to spread into new areas that previously were too cold for them to survive. For example, Valley fever caused by a fungus that lives in the soil in hot and dry areas – has already spread into the Pacific Northwest

Option 5 is correct: Rising global average temperature is associated with widespread changes in weather patterns. Scientific studies indicate that extreme weather events such as heat waves, large storms and hurricanes are likely to become more frequent or more intense with human-induced climate change

Source: <https://climate.nasa.gov/effects/>

<https://climate.nasa.gov/faq/14/is-the-sun-causing-global-warming/#:~:text=No.,goings%20of%20the%20ice%20ages.>

Q.23) Consider the following statements regarding 'The Energy Conservation Building Code (ECBC):

1. It is a flagship programme of The Energy and Resources Institute (TERI) for energy efficient design of buildings.
2. In India, ECBC is designed for both commercial and residential buildings.
3. Under this code, it is mandatory for certain category of buildings to install and use LED lights in their premises.
4. For a commercial building to be ECBC compliant, it needs to have around 25% energy savings.

Which of the statements given above are correct?

- a) 2 and 4 only
- b) 1 and 2 only
- c) 1 and 3 only
- d) 3 and 4 only

Ans) a

Exp) Option a is the correct answer.

The objective of Energy Conservation Building Code (ECBC) is to ensure efficient utilization of the power resources so as to meet the increasing energy demand in an effective and sustainable manner.

Statement 1 is incorrect: The ECBC is a flagship programme of **the Bureau of Energy Efficiency (BEE)**, and **not** of The Energy and Resource Institute (TERI). BEE comes under the administrative control of the **Ministry of Power**. Key flagship programmes of BEE are:

- 1) **Energy Conservation Building Code**
- 2) **Star Label Programme** for standards and labeling on high-energy end-use equipment and appliances.
- 3) **Perform, Achieve and Trade (PAT)-** for energy efficiency in large industry by encouraging emission reductions.

Statement 2 is correct: In India, the ECBC have been formulated for both- the commercial as well as residential buildings.

1) **For commercial buildings:** It was launched in 2017 titled as the 'Energy Conservation Building Code' This sets minimum energy standards for new commercial buildings.

2) **For residential buildings:** BEE also launched an Energy Conservation Building Code for residential buildings. It is known as, '**Eco Niwas Samhita 2018**'

Statement 3 is incorrect: It is **not mandatory to install LED lights** for interiors. **Any type of light fixture can be installed which follows the prescribed norms in the code.**

Statement 4 is correct: The ECBC (2017) requires **approximately 25% of energy savings by a commercial building**. ECBC+ building 35% savings and Super ECBC building will show 50% or more energy savings as compared to conventional building.

Knowledge Base: **The Energy and Resource Institute (TERI) is a research institute** that specializes in energy, environment and sustainable development. Important initiatives of TERI are:

- 1) **Lighting a Billion Lives:** TERI aims to replace kerosene-based lighting with a cleaner and more efficient technology like solar lighting devices
- 2) **Green Rating for Integrated Habitat Assessment (GRIHA):** GRIHA is a national rating tool. Builders use the tool for rating their buildings for sustainability.
- 3) **GREEN Olympiad:** The GREEN olympiad inspires and raises awareness among children and youth to instill sustainable living

Source: <https://beeindia.gov.in/sites/default/files/ECBC%20book%20final%20one%20%202017.pdf>

<https://pib.gov.in/PressReleasePage.aspx?PRID=1555981>

https://beeindia.gov.in/sites/default/files/ECBC_FAQs_0.pdf

Q.24) Consider the following statements regarding the Indian Green Building Council (IGBC):

1. It is an autonomous body under the Ministry of Power for promoting sustainable construction.
2. It is voluntary for the projects related to construction to obtain ratings from IGBC.
3. Projects certified by IGBC are eligible for various government incentives.
4. Membership of the Council is open to all the stakeholders engaged in construction activities.

Which of the options given above is/ are correct?

- a) 1, 2 and 3 only
- b) 2, 3 and 4 only
- c) 2 only
- d) 1, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

Statement 1 is incorrect: The Indian Green Building Council (IGBC) is a part of **Confederation of Indian Industry (CII)**. It was formed in the year 2001 to “enable a **sustainable built environment** for all and facilitate **India to be one of the global leaders in sustainable built environment by 2025**”.

Statement 2 is correct: IGBC has launched its Green Building Rating Systems for green new **buildings, residential societies, schools, resorts, healthcare, township, data center** and so on. All the IGBC rating systems are **voluntary, consensus based, market-driven building programmes**.

Statement 3 is correct: Indian Green Building Council works closely with several Central and the State agencies to promote the green building movement in the country. The MoEFCC offers fast track clearance to the projects certified by the Council. Similarly, various state governments also provide benefits or concessions to the projects certified by the Council. **Thus, projects certified by IGBC are eligible for various government incentives.**

Statement 4 is correct: Membership is **open to all the stakeholders engaged in construction** activities. This includes **corporates, developers, government bodies or nodal agencies, architectural and planning firms etc.** Membership provides certain unique reach and access to resources, thereby provides a competitive edge.

Q.25) With reference to 'Monument Mitra Scheme', consider the following statements:

1. Ministry of Tourism is the nodal ministry to manage and coordinate the scheme.
2. It aims to ensure quality & inclusive provision of amenities and facilities across heritage and tourist sites in India.
3. The scheme applies to all the centrally protected heritage properties of the country.
4. Only Public Sector Units (PSUs) are eligible to adopt the monuments as part of their Corporate Social Responsibility under this scheme.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1, 2 and 4 only
- d) 2, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

Monument Mitra scheme that entails adopting a heritage site and maintaining it, will be revamped for private firms to partner for the upkeep of 1,000 ASI monuments.

Statement 1 is incorrect: Monument Mitra scheme was launched under the Ministry of Tourism earlier and then **transferred to the Ministry of Culture**. At present, Ministry of Culture is the nodal ministry to manage and coordinates the scheme.

Statement 2 is correct: The objective of the scheme is to ensure **quality & inclusive provision of amenities and facilities across heritage, natural, & tourist sites** through the active participation of private and public sector organizations and individuals.

Statement 3 is correct: Monument Mitra Scheme applies to **all centrally protected heritage properties**. The government has set the target to hand over 500 sites under the revamped Monument Mitra Scheme by the end of Azadi ka Amrit Mahotsav on 15 August 2023.

Statement 4 is incorrect: Corporate entities including **both private and public units will adopt these monuments as part of their Corporate Social Responsibility**. These organizations would be known as "Monument Mitras" for their collaboration initiative.

Source: <https://www.thehindu.com/news/national/monument-mitra-scheme-to-be-revamped/article66432240.ece>

<https://www.newindianexpress.com/nation/2023/jan/26/revise-version-of-monument-mitra-scheme-to-be-launched-by-culture-min-next-month-2541577.html>

Q.26) Consider the following pairs:

Climate Change Initiatives	Established/ Managed by
1. BioCarbon Fund Initiative for Sustainable Forest Landscapes	United Nations Environment Programme (UNEP)
2. Clean Technology Fund	G20 Nations

3. Special Climate Global
 Change Fund Environment
 Facility (GEF)
4. Global Climate World Economic
 Change Alliance Forum (WEF)

How many pairs given above is/ are correctly matched?

- a) Only one pair
 b) Only two pairs
 c) Only three pairs
 d) All four pairs

Ans) a

Exp) Option a is the correct answer.

Pair 1 is incorrect: The BioCarbon Fund Initiative for Sustainable Forest Landscapes (ISFL) **is a multilateral fund, supported by donor governments and managed by the World Bank.** It promotes reducing greenhouse gas emissions from the land sector, including efforts to reduce deforestation and forest degradation in developing countries (REDD+), sustainable agriculture, as well as smarter land-use planning, policies and practices.

Pair 2 is incorrect: The Clean Technology Fund (CTF), one of two multi-donor trust funds under the Climate Investment Funds (CIF) framework, promotes scaled-up financing for demonstration, deployment and transfer of low-carbon technologies with significant potential for long-term greenhouse gas emissions savings implementation in renewable energy, energy efficiency, and clean transport in emerging market middle-income and developing economies. The CTF is at the forefront of financing promising renewable energy technologies, such as concentrated solar power (CSP). **Channelled through the African Development Bank, Asian Development Bank, European Bank for Reconstruction and Development, Inter-American Development Bank, and World Bank Group, the CTF finances 19 country programmes and one regional programme with over 90 individual projects.**

Pair 3 is correct: **Special Climate Change Fund (SCCF)** is one of the world's first climate adaptation finance instruments, created by the Conference of Parties (COP) to the United Nations Framework Convention on Climate Change (UNFCCC). The SCCF is **managed by Global Environment Facility (GEF).** During 2022-2026, the SCCF will focus on supporting the adaptation needs of Small Islands Developing States (SIDS), as well as technology transfer, innovation, and private sector engagement for adaptation in all developing countries.

Pair 4 is incorrect: The Global Climate Change Alliance (GCCA) is an initiative of **the European Union.** Its objective is to **build an alliance on climate change between European Union and poor developing countries.** These developing countries are the most affected, but have least capacity to deal with the climate change.

Source: <https://www.cif.org/content/governance-structure-ctf>

[https://climatefundsupdates.org/the-funds/global-climate-change-](https://climatefundsupdates.org/the-funds/global-climate-change-alliance/#:~:text=The%20Global%20Climate%20Change%20Alliance,to%20deal%20with%20climate%20change.)

[alliance/#:~:text=The%20Global%20Climate%20Change%20Alliance,to%20deal%20with%20climate%20change.](https://climatefundsupdates.org/the-funds/global-climate-change-alliance/#:~:text=The%20Global%20Climate%20Change%20Alliance,to%20deal%20with%20climate%20change.)

Q.27) Consider the following statements regarding the National Adaptation Fund for Climate Change (NAFCC):

1. It is a central sector scheme under the Ministry of Environment, Forest and Climate Change (MoEFCC).
2. National Bank for Agriculture and Rural Development (NABARD) is responsible for the implementation of this scheme.

3. It provides subsidy to the eligible start-ups engaged in developing adaptation technology for climate change.

Which of the statements given above is/ are correct?

- a) 2 only
- b) 1 and 2 only
- c) 1 and 3 only
- d) 2 and 3 only

Ans) b

Exp) Option b is the correct answer.

Statement 1 is correct: National Adaptation Fund for Climate Change (NAFCC) comes under the overall administration of **Ministry of Environment Forest and Climate Change. It is a central sector scheme.**

Statement 2 is correct: NABARD is the **National Implementation Entity of this scheme.** The States and UTs are required to **prepare proposals in consultation with NABARD.** NABARD performs roles in facilitating identification of project ideas/concepts **from State Action Plan for Climate Change (SAPCC), project formulation, appraisal, sanction, disbursement of fund, monitoring & evaluation and capacity building** of stakeholders including State Governments.

Statement 3 incorrect: There is **no provision pertaining to subsidy to eligible start-ups** under this scheme for start-ups engaged in developing adaptation technology for climate change. The activities under this scheme are implemented in the **project mode.** The projects are in consonance with the **State and National Action Plans for Climate Change.** The state projects are **required to be approved their respective steering committees on the climate change.**

Source: <https://www.nabard.org/content.aspx?id=585>

<https://www.nabard.org/auth/writereaddata/File/FinalImplementationNAdaptFund.pdf>

Q.28) Which of the following are focal areas of Global Environment Facility (GEF) financing purpose?

- 1. Biodiversity
- 2. Land Degradation
- 3. Chemicals & Waste
- 4. Sustainable Forest Management
- 5. International Waters

Select the correct answer using the code given below:

- a) 1, 2, 3 and 5 only
- b) 1, 3, and 4 only
- c) 2, 4, and 5 only
- d) 1, 2, 3, 4 and 5

Ans) d

Exp) Option d is the correct answer.

Options 1, 2, 3, 4 and 5 are correct: The **Global Environment Facility (GEF)**, established on the eve of the 1992 Rio Earth Summit, is a catalyst for action on the environment – and much more. Through its strategic investments, the GEF works with partners to tackle the planet's biggest environmental issues. It is a **FINANCIAL MECHANISM** for five major international environmental conventions: the **Minamata Convention on Mercury, the Stockholm Convention on Persistent Organic Pollutants (POPs), the United Nations Convention on Biological Diversity (UNCBD), the United Nations Convention to Combat Desertification (UNCCD) and the United Nations Framework Convention on Climate Change (UNFCCC).**

GEF supports developing countries' work to address the world's most pressing environmental issues. It organizes work around five focal areas – **biodiversity loss, chemicals and waste, climate change, international waters, and land degradation** – and take an integrated approach to support more sustainable food systems, forest management, and cities.

Source: <https://www.unep.org/gef/focal-areas> <https://www.unep.org/about-un-environment/funding-and-partnerships/global-environment-facility>

Q.29) National Greenhouse Gas Inventories Programme (NGGIP) was established by which of the following body?

- United Nations Framework Convention on Climate Change (UNFCCC)
- Inter Governmental Panel on Climate Change (IPCC)
- UN Environment Programme (UNEP)
- Greening the Blue

Ans) b

Exp) Option b is the correct answer.

Option a is incorrect: United Nations Framework Convention on Climate Change (UNFCCC) has near universal membership and is the parent treaty of the 2015 Paris Climate Change Agreement. The main aim of the Paris Agreement is to keep a global average temperature rise this century well below 2 degrees Celsius and to drive efforts to limit the temperature increase even further to 1.5 degrees Celsius above pre-industrial levels.

Option b is correct: The IPCC established the National Greenhouse Gas Inventories Programme (NGGIP) to provide methods for estimating national inventories of greenhouse gas emissions to, and removals from, the atmosphere. The NGGIP also exists to encourage the use of the IPCC's methodological guidance.

Option c is incorrect: UN Environment is the leading global voice on the environment. It provides leadership and encourages partnership in caring for the environment by inspiring, informing, and enabling nations and peoples to improve their quality of life without compromising that of future generations. UN Environment works with governments, the private sector, civil society and with other UN entities and international organizations across the world.

Option d is incorrect: Greening the Blue is an UN-wide campaign designed to support the move towards environmental sustainability. Working with all UN organizations, Greening the Blue seeks to engage staff across the UN and share best practice internally and externally. It also publishes the annual Greening the Blue report, which details the UN System's environmental footprint and efforts being taken to reduce it.

Source: https://www.ipcc-nggip.iges.or.jp/support/NGGIP_Brochure.pdf

<https://www.unep.org/news-and-stories/press-release/leading-international-organizations-commit-climate-action>

Q.30) With reference to 'Ottam Thullal', consider the following statements:

- It is a famous 'recite and dance-drama' art form.
- It was introduced by the famous Malayali poet V. N. Menon.
- It is famous for its humour and social satire.

Which of the statements given above is/are correct?

- 1 only
- 1 and 2 only
- 2 and 3 only
- 1 and 3 only

Ans) d

Exp) Option d is the correct answer.

Recently, a traditional art Ottan thullal of Kerala which has a history of over 300 years was performed in Kerala School Kalolsavam 2023.

Statement 1 is correct: Thullal is a **recite-and-dance art form of Kerala**. The distinguishing factor of Ottan thullal is the **performer (dancer) himself singing (reciting) and playing the story**, which is a tedious task. Another person will recite the same verses. The accompanying instruments for Ottan thullal are Mridangam and Idakka.

Statement 2 is incorrect: Ottan thullal was introduced in the 18th century by the **famous Malayalam poet Kunchan Nambiar (1705 - 1770)**. **Kathakali was revived in the 1930s by the famous Malayali poet V. N. Menon** under the patronage of Mukunda Raja.

Statement 3 is correct: Thullal is famous for its **humor and social satire** and is marked by its simplicity. Kunchan Nambiar used it as a **medium to protest against the prevalent socio-political structure and prejudices** of the society in his time. It went on to become the most popular folk art presented in Kerala temples.

Source: <https://www.thehindu.com/news/national/kerala/kerala-school-kalolsavam-2023-the-need-to-take-ottanthullal-forward/article66343344.ece>

Q.31) Which one of the following is associated with the issue of control and phasing out of the use of ozone-depleting substances?

- a) Bretton Woods Conference
- b) Montreal Protocol
- c) Kyoto Protocol
- d) Nagoya Protocol

Ans) b

Exp) Option b is the correct answer.

Option b is correct: The **Montreal Protocol on Substances that Deplete the Ozone Layer regulates the production and consumption of nearly 100 man-made chemicals referred to as ozone depleting substances (ODS)**.

When released to the atmosphere, those chemicals damage the stratospheric ozone layer, Earth's protective shield that protects humans and the environment from harmful levels of ultraviolet radiation from the sun. Adopted on 15 September 1987, the Protocol is to date the only UN treaty ever that has been ratified every country on Earth - all 198 UN Member States.

Source: UPSC CSE Pre 2015

Q.32) Methane is one of the major greenhouse gases causing global warming effect. Which of the following are the sources of methane emission in the environment?

1. Digestion process by ruminant animals.
2. Coal mining
3. Composting of organic waste
4. Cigarette smoking
5. Vehicular emission

Select the correct answer using the code given below:

- a) 1, 2 and 3 only
- b) 4 and 5 only
- c) 1, 2 4 and 5 only
- d) 1, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Methane (CH₄) is a hydrocarbon that is a primary component of natural gas and a greenhouse gas (GHG). So, its presence in the atmosphere affects the earth's temperature and climate system. Methane is emitted from a variety of anthropogenic (human-influenced) and natural sources.

Option 1 is correct: Methane is the main greenhouse gas produced in grazing systems. Ruminant livestock (cattle, sheep, and goats) have microbes in their rumen called methanogens. These microbes produce methane from the fermentation of feed.

Option 2 is correct: Emissions of methane from coal mining are from the release of gas trapped inside coal and strata surrounding mined coal seams.

Option 3 is incorrect: Methane is released from **anaerobic decay** of organic matter. Composting is an aerobic process; hence it does not produce methane because methane-producing microbes are not active in the presence of oxygen.

Option 4 is correct: The most abundant hydrocarbons in cigarette smoke are **methane, ethane, and propane.**

Option 5 is correct: Small quantity of methane is released from vehicles as compared to carbon dioxide. However, the impact of this emission can be important because it has a higher global warming potential (GWP) than CO₂. The global warming potential (GWP) of methane is 23.

Source: <https://agriculture.vic.gov.au/climate-and-weather/understanding-carbon-and-emissions/livestock-methane-and-nitrogen-emissions>

<https://www.agric.wa.gov.au/climate-change/composting-avoid-methane-production-%E2%80%93-western->

<https://www.ncbi.nlm.nih.gov/books/NBK53014/>

Q.33) Consider the following pairs with reference to ozone depleting substances (ODS):

Ozone depleting substances (ODS) **Application/Uses**

- | | |
|-------------------------|--|
| 1. Carbon tetrachloride | used as a remedy for intestinal parasitic disease |
| 2. Methyl bromide | controls wide range of pests and pathogens in soil |
| 3. CFC-11 | used as foam blowing agent |
| 4. Methyl chloroform | Used as an Industrial Solvent |

How many pairs given above is/are correctly matched?

- a) One pair only
- b) Two pairs only
- c) Three pairs only
- d) All four pairs

Ans) d

Exp) Option d is the correct answer.

Ozone depleting substances are man-made gases that destroy ozone once they reach the ozone layer. It includes chlorofluorocarbons (CFCs), hydrochlorofluorocarbons (HCFCs), halons, methyl bromide, carbon tetrachloride etc.

Pair 1 is correct: Carbon tetrachloride is a long-lived greenhouse gas and an ozone-depleting substance. It has been given as a remedy in hookworm and other **intestinal parasitic diseases**. It is at the present day used by the veterinary profession in treatment of canines.

Pair 2 is correct: Methyl bromide, an ozone depleting substance, was used extensively in the past as a fumigant for **controlling a wide range of pests and pathogens present in soils** as well as in post-harvest storage of commodities. It is now banned and phosphine is used in its place as a fumigant.

Pair 3 is correct: CFC-11 was used as Aerosol spray can, solvent and **foam blowing agent**. CFCs are degraded in the stratosphere by photo dissociation. The resulting chlorine radicals contribute to the destruction of the ozone layer and led to the ban of CFC production (Montreal Protocol).

Pair 4 is correct: Methyl chloroform is used as an **industrial solvent** is an ozone depletion substance. It is popular because of its versatility and efficiency as a solvent in cleaners, degreasers and adhesives.

Source: [https://environment.govt.nz/acts-and-regulations/acts/ozone-layer-protection-act-1996/ozone-depleting-substances/#:~:text=Ozone%20depleting%20substances%20include%3A,hydrobromofluorocarbons%20\(HBFCs\)](https://environment.govt.nz/acts-and-regulations/acts/ozone-layer-protection-act-1996/ozone-depleting-substances/#:~:text=Ozone%20depleting%20substances%20include%3A,hydrobromofluorocarbons%20(HBFCs))

<https://www.ldeo.columbia.edu/~martins/isohydro/cfcs.html#:~:text=CFC%20production%20and%20use&text=All%20compounds%20have%20no%20known,is%20summarized%20in%20Table%201>

<https://jamanetwork.com/journals/jama/article-abstract/253783>

Q.34) With reference to Ozone layer depletion in the upper atmosphere, consider the following statements:

1. The thinning of ozone layer takes place when fluorine atoms in the atmosphere comes in contact with ozone and destroy the ozone molecules.
2. Polar stratospheric clouds (PSCs) formed mainly in summer season catalyses the ozone depleting reaction.
3. It is more pronounced in antarctica as compared to arctic region.

Which of the statements given above is/are correct?

- a) 3 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1 and 2 only

Ans) a

Exp) Option a is the correct answer.

Ozone is a natural gas and an allotrope of oxygen consisting of three atoms of oxygen bound together. Ozone is found in two different layers of atmosphere; Ozone in the troposphere is bad as it leads to smog formation while stratospheric ozone is good because it protects the life on earth from the harmful UV rays of the sun. Ozone depletion refers to the thinning of ozone layer in upper atmosphere.

Statement 1 is incorrect: When chlorine and bromine atoms meet ozone in the stratosphere, they destroy ozone molecules. Chlorine and bromine have been proven to be main responsible for the destruction of the ozone layer in the polar regions, **fluorine by itself does not contribute to ozone depletion.**

Statement 2 is incorrect: Polar Stratospheric Clouds (PSCs) are nacreous clouds containing water, nitric acid and/or sulphuric acid. They are formed mainly during the **event of polar vortex in winter** and are more intense at the South Pole/Antarctica. PSCs are a source of Ozone depletion because they support chemical reactions that produce active Chlorine which catalyses Ozone depletion.

Statement 3 is correct: **Ozone depletion is more over Antarctica than Arctic** because the very low winter temperatures in the Antarctica Stratosphere cause Polar Stratospheric Clouds (PSCs) to form.

Source: [https://www.ucsusa.org/resources/ozone-hole-and-global-warming#:~:text=Ozone%20\(O3\)%20depletion%20does,into%20the%20atmosphere%20altering%20it.](https://www.ucsusa.org/resources/ozone-hole-and-global-warming#:~:text=Ozone%20(O3)%20depletion%20does,into%20the%20atmosphere%20altering%20it.)

[https://hal.science/hal-](https://hal.science/hal-00256296/document#:~:text=Although%20chlorine%20and%20bromine%20have,not%20contribute%20to%20ozone%20depletion.)

[00256296/document#:~:text=Although%20chlorine%20and%20bromine%20have,not%20contribute%20to%20ozone%20depletion.](https://hal.science/hal-00256296/document#:~:text=Although%20chlorine%20and%20bromine%20have,not%20contribute%20to%20ozone%20depletion.)

[,Ozone%20Depletion,than%20it%20is%20naturally%20created.](https://www.epa.gov/ozone-layer-protection/basic-ozone-layer-science#:~:text=II.-,Ozone%20Depletion,than%20it%20is%20naturally%20created.)

Q.35) Regarding “carbon credits”, which one of the following statements is **not** correct?

- The carbon credit system was ratified in conjunction with the Kyoto Protocol.
- Carbon credits are awarded to countries or groups that have reduced greenhouse gases below their emission quota.
- The goal of the carbon credit system is to limit the increase of carbon dioxide emission.
- Carbon credits are traded at a price fixed from time to time of the United Nation Environment Programme.

Ans) d

Exp) Option d is the correct answer.

Statement a, b and c are correct: The mechanism of Carbon Credits was ratified in conjunction with the Kyoto Protocol, and the market mechanism was agreed through the subsequent Marrakesh Accords. These credits are awarded to countries or groups that have reduced greenhouse gases below their emission quota. Thus, they incentivize the companies/countries to limit the increase of carbon dioxide emission.

Statement d is incorrect: One carbon credit is equal to one metric ton of carbon dioxide, or in some markets, carbon dioxide equivalent gases (CO₂-eq), and are bought and sold through international brokers, online retailers, and trading platforms. Businesses that find it difficult to comply with the carbon emission requirements can purchase carbon credits to offset their emissions by making finance readily available to renewable energy projects, forest protection, and reforestation projects around the world. Hence the price of the carbon credits is not fixed by United Nations Environment Programme but the prices depend upon the demand and supply of carbon credits in the market.

Source: UPSC CSE Pre 2011

Q.36) With reference to forest cover in India according to India State of Forest Report 2021, consider the following statements:

- Bamboo and palm plantations are excluded in the calculation of Forest cover in India.
- According to the report, India is ranked third globally in terms of percentage of forest cover to the total area of the country.
- India has added more than two lakh hectares of forest area every year between 2010 and 2020.
- In India, Madhya Pradesh ranks first in terms of percentage of forest cover in the total forest area in the country.

Which of the statements given above are correct?

- a) 1,3 and 4 only
- b) 2 and 4 only
- c) 3 and 4 only
- d) 1 and 2 only

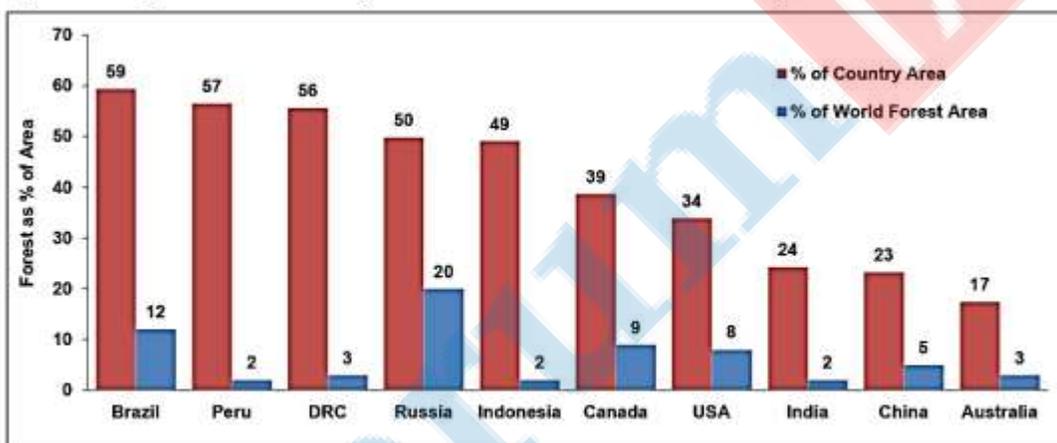

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: Forest cover comprises all lands, more than one hectare in area, with a tree canopy density of more than 10 per cent, **irrespective of ownership** and legal status. **Such lands may not necessarily be a recorded forest area, and also include orchards, bamboo and palm plantations.**

Statement 2 is incorrect: India ranks **8th with 24%** in terms of percentage of forest cover to the total area of the country. In terms of percentage of forest cover to the total area of the country, the top countries are **Brazil, Congo, Peru and Russia**. 59% of the total landmass of Brazil is covered with forest and it is 57% in Peru, 56% in Congo, 50% in Russia.

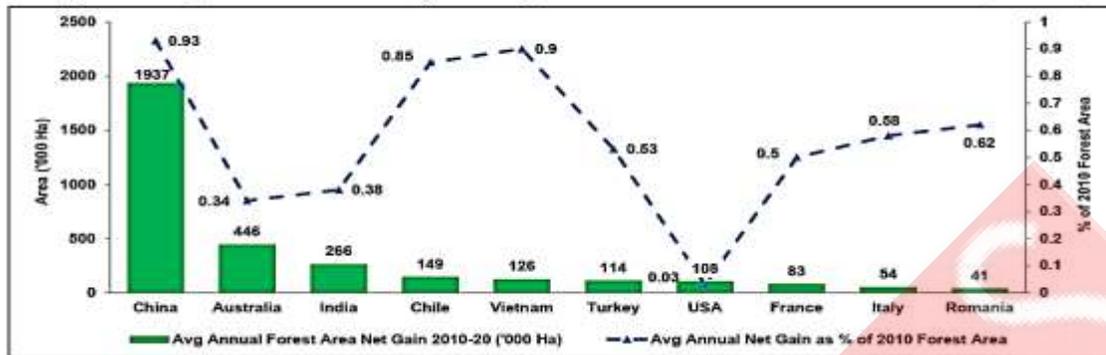

Figure 7: Top Ten Countries by Forest Area in 2020 w.r.t Country and World Forest Area

Source: India State of Forest Report 2021

Note: DRC: Democratic Republic of the Congo

Statement 3 is correct: It is true that India has added more than two lakh hectares of forest area every year between 2010 and 2020. Economic survey 2021-22 states that India has added **2,66,000 hectares of forest area every year between 2010 and 2020**. **India ranks third** globally in average annual net gain in forest area between 2010 to 2020.

Figure 8: Top Ten Countries by Average Annual Net Gain in Forest Area (2010-20)

Source: India State of Forest Report 2021

Statement 4 is correct: Area wise, Madhya Pradesh (11 per cent of India's total forest cover) had the largest forest cover in India in 2021, followed by Arunachal Pradesh (9 per cent), Chhattisgarh (8 per cent), Odisha (7 per cent) and Maharashtra (7 per cent).

Proportion wise, Mizoram (85 per cent), Arunachal Pradesh (79 per cent), Meghalaya (76 per cent), were the top three states in terms of highest percent of forest cover with respect to total geographical area of the state in 2021.

Source: Economic survey 2021-22: pg. no 203

[https://www.thehindu.com/news/national/india-ranks-third-globally-in-forest-area-gain-survey/article38355310.ece#:~:text=Among%20Indian%20States%2C%20Madhya%20Pradesh,%25\)%20and%20Maharashtra%20\(7%25\).](https://www.thehindu.com/news/national/india-ranks-third-globally-in-forest-area-gain-survey/article38355310.ece#:~:text=Among%20Indian%20States%2C%20Madhya%20Pradesh,%25)%20and%20Maharashtra%20(7%25).)

Q.37) Consider the following statements about India's 'Updated Nationally Determined Contribution' (NDC):

1. Target to reduce the Emission Intensity of its GDP was increased in the updated NDC.
2. Target for cumulative electric power installed capacity from non-fossil fuel-based energy resources has been doubled.
3. It takes forward the vision of sustainable lifestyles and climate justice to protect the poor and vulnerable from adverse impacts of climate change.
4. Target to create an additional carbon sink through additional forest and tree cover has remained unchanged.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 2, 3 and 4 only
- c) 1, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) c

Exp) Option c is the correct answer.

India submitted its first NDC to UNFCCC in October 2015. This was updated in August 2022. The 2015 NDC comprised eight goals, three of which were quantitative targets to be achieved up to 2030. Article 4 of the Paris Agreement provides that each Party shall communicate or update its NDC every five years. Therefore, in accordance with the aforesaid provision of the Paris Agreement, India submitted the following updates to its first NDC of 2015.

Statement 1 is correct: India have determined to reduce the Emissions Intensity of its GDP by 45 per cent from the 2005 levels, by 2030. The previous NDC had a target to reduce intensity by 30 to 35%, which has now been updated to 45%.

Statement 2 is incorrect: India have determined to achieve about 50 per cent cumulative electric power installed capacity from non-fossil fuel-based energy resources by 2030, with the help of the transfer of technology and low-cost international finance, including from the Green Climate Fund (GCF). Earlier the target was 40 % (NDC 2015). **Thus, it was not doubled.**

Statement 3 is correct: It also takes forward the Hon'ble Prime Minister's vision of sustainable lifestyles and climate justice to protect the poor and vulnerable from adverse impacts of climate change. It puts forward and further propagate a healthy and sustainable way of living based on traditions and values of conservation and moderation, including through a mass movement called 'LIFE'– 'Lifestyle for Environment' as a key to combating climate change.

Statement 4 is correct: To create an additional carbon sink of 2.5 to 3 billion tonnes of CO2 equivalent through additional forest and tree cover by 2030. This target remains unchanged in the updated NDCs.

Knowledge Base:

Other Targets:

- 1) To adopt a climate-friendly and cleaner path than the one followed hitherto by others at the corresponding level of economic development.
- 2) To better adapt to climate change by enhancing investments in development programmes in sectors vulnerable to climate change, particularly agriculture, water resources, the Himalayan region, coastal regions, and health and disaster management.
- 3) To mobilise domestic and new & additional funds from developed countries to implement the above mitigation and adaptation actions in view of the resource required and the resource gap.
- 4) To build capacities and create a domestic framework and international architecture for quick diffusion of cutting-edge climate technology in India and for joint collaborative R&D for such future technologies.

Source: Economic Survey 2022-23 Chapter 6 (Vol 2)

Q.38) With reference to Green Economy Initiative, consider the following statements:

1. World Resources Institute designed the 'Green Economy Initiative'.
2. One of its objectives is to inform the governments about the potential of green investments, to contribute to poverty reduction.
3. Advisory services under this initiative are provided by United Nations Environment Programme (UNEP).

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

GEI is a collaborative effort, launched by the **United Nations Environment Programme (UNEP)** in October 2008 and endorsed by the UN System Chief Executives Board in April 2009 as one of the **nine UN system-wide Joint Crisis Initiatives** in response to the global financial and economic crisis.

GEI provides evidence of the contributions green investments can make to economic performance, social development and environmental improvement, including climate mitigation and adaptation.

Statement 1 incorrect: **United Nations Environment Programme** launched the Green Economy Initiative (GEI) in 2008, which consisted of global research and country-level assistance encouraging policymakers to support environmental investments within the context of sustainable development.

Statement 2 is correct: **GEI has two objectives**

- 1) Provide guidance on coherent sets of policies and policy instruments that will enable green investments. These policy options are integrated with related initiatives such as the Nationally Appropriate Mitigation Actions (NAMAs) and the Reduction of Emissions from Deforestation and Degradation (REDD), infrastructure development, as well as policies and programmes for employment and social security.
- 2) **Inform governments of the potential for green investments to contribute to economic recovery, the creation of decent jobs, poverty reduction, and reduced carbon dependency and ecosystem degradation.**

Statement 3 is correct: Under the initiative **UNEP also Provides advisory services** on ways to move towards a green economy in specific countries and engaged in a wide range of research, non-governmental organizations, business, and UN partners in implementing the Green Economy Initiative.

Knowledge Base:

World Resources Institute:

WRI is a global nonprofit organization that works with leaders in government, business and civil society to research, design, and carry out practical solutions that simultaneously improve people's lives and ensure nature can thrive.

Mission: To move human society to live in ways that protect Earth's environment and its capacity to provide for the needs and aspirations of current and future generations.

Source: <https://www.unep.org/explore-topics/green-economy/why-does-green-economy-matter/what-inclusive-green-economy> <https://www.wri.org/about>
<https://www.uncclearn.org/wp-content/uploads/library/ceb08.pdf>

Q.39) Consider the following statements about recently concluded UNFCCC COP 27:

1. Members have agreed to set up a Loss and Damage fund to provide financial assistance to developing countries that are vulnerable to adverse effects of climate change.
2. The COP 27 concluded with Sharm el-Sheikh Implementation Plan.
3. Countries have reaffirmed to double the finance for Climate Adaptation.
4. 'FAST initiative' has been launched to Fastrack the mitigation and adaptation measures for disaster resilience in island nations.

Which of the above statements are correct?

- a) 1 and 2 only
- b) 3 and 4 only
- c) 1, 2 and 3 only
- d) 1, 2 and 4 only

Ans) c

Exp) Option c is the correct answer.

The COP 27 to the UNFCCC was held from 6 to 20 November 2022 in Sharm el-Sheikh, Egypt.

Statement 1 is correct: During COP 27, developing nations strongly voiced setting up a separate fund for loss and damage. After negotiations, it was decided to establish new funding arrangements for assisting developing countries that are particularly vulnerable to the adverse effects of climate change in responding to loss and damage, with a focus on addressing loss and damage. A transitional committee has been established to work out the modalities.

Statement 2 is correct: The COP 27 concluded with Sharm el-Sheikh Implementation Plan. It notes the 'importance of the transition to sustainable lifestyles and sustainable patterns of consumption and production for efforts to address climate change'. It highlights that a global transformation to a low-carbon economy is expected to require investments of at least US\$ 4-6 trillion a year.

Statement 3 is correct: Of the US\$ 100 billion a year promised to poor countries, only about US\$ 20 billion goes to adaptation measures (like Building flood defences, preserving wetlands, restoring mangrove

swamps and regrowing forests). **In Glasgow, countries had agreed to double that proportion**, but at COP27 some countries sought to remove that commitment. However, after some differences it was reaffirmed to double the adaptation fund.

Statement 4 is incorrect: The Food and Agriculture for Sustainable Transformation initiative (FAST) has been launched to increase the amount and quality of climate financing contributions to change agriculture and food systems by 2030 under COP 27.

Economic Survey 2022-23-Chapter 7

Q.40) With reference to Indian export policies, which one of the following statements best describes the “Advance Authorisation Scheme”?

- It allows duty free import of inputs that are physically incorporated in an export product.
- It provides a framework for reducing the high cost of credit incurred by Indian exporters.
- It allows exporters to apply for export licenses, quotas and other registrations which are issued to them.
- It aims to promote brand recognition for Indian agricultural products in the specified overseas markets.

Ans) a

Exp) Option a is the correct answer.

Option a is correct: Recently, the **Directorate General of Foreign Trade (DGFT)** simplified the composition fee for export obligation extension under the advance authorisation scheme.

An **Advance Authorisation scheme allows duty-free import of inputs, which have to be mandatorily used in products that are required to be exported within a specified time.** They are not allowed to sell the products in the domestic market. Advance Authorization is valid for 12 months from the date of issue of such Authorization. **In addition to any inputs, packaging material, fuel, oil, and catalyst which is consumed / utilized in the process of production of export products, is also allowed. The quantity of inputs allowed for a given product is based on specific norms defined for that export product, which considers the waste generated in the manufacturing process.**

Advance Authorization can be issued either to a manufacturer exporter or merchant exporter tied to supporting manufacturer(s) for:

- Physical exports (including exports to SEZ); and / or
- Intermediate supplies; and /or
- supply of ‘stores’ on board of foreign going vessel / aircraft subject to condition that there is specific SION in respect of item(s) supplied.

Source: <https://economictimes.indiatimes.com/news/economy/foreign-trade/dgft-simplifies-composition-fee-for-export-obligation-extension-under-advance-authorisation-scheme/articleshow/97094374.cms>

<https://www.dgft.gov.in/CP/?opt=export-management-system>

Q.41) What is ‘Greenhouse Gas Protocol’?

- It is an international accounting tool for government and business leaders to understand, quantify and manage greenhouse gas emissions.
- It is an initiative of the United Nations to offer financial incentives to developing countries to reduce greenhouse gas emissions and to adopt eco-friendly technologies.
- It is an intergovernmental agreement ratified by all the member countries of the United Nations to reduce greenhouse gas emissions to specified levels by the year 2022.
- It is one of the multilateral REDD+ initiatives hosted by the World Bank.

Ans) a

Exp) Option a is the correct answer.

Option a is correct: Greenhouse Gas (GHG) Protocol is developed by World Resources Institute (WRI) and World Business Council on Sustainable Development (WBCSD).

GHG Protocol establishes comprehensive global standardized frameworks to measure (quantify) and manage greenhouse gas (GHG) emissions from private and public sector operations, value chains and suggests mitigation actions. Building on a 20-year partnership between World Resources Institute (WRI) and the World Business Council for Sustainable Development (WBCSD), GHG Protocol works with governments, industry associations, NGOs, businesses and other organizations.

Source: UPSC CSE Pre 2016

Q.42) In the context of impacts of Ocean Acidification, consider the following statements:

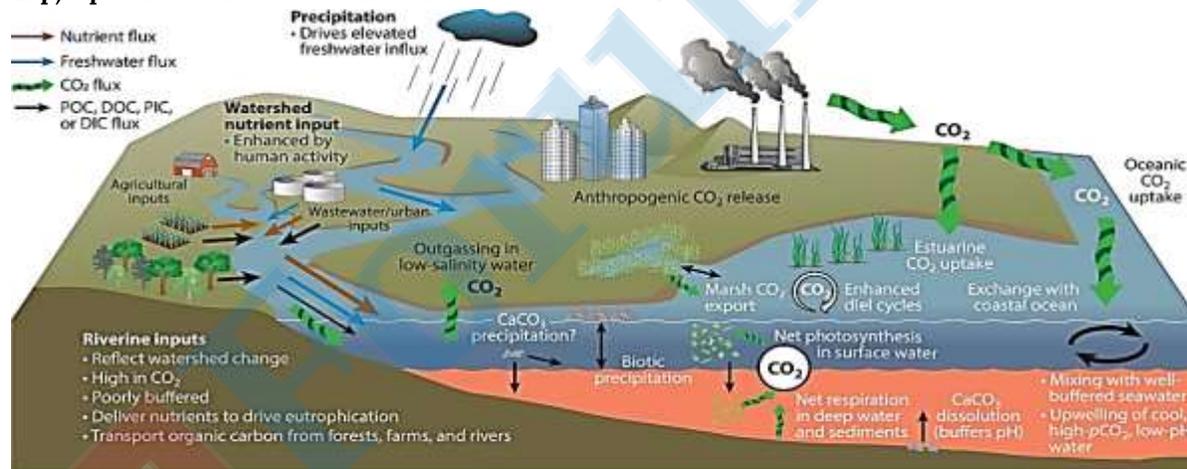

1. It results in the increased emission of sulphur from the Ocean.
2. Higher ocean acidification may benefit Algae and Sea Grasses in oceans.
3. River Estuaries are less vulnerable to impacts of Ocean acidification as compared to Oceans.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Cal W.J. et al. 2021
Annu. Rev. Mar. Sci. 13:23–55

Statement 1 is incorrect: The majority of atmospheric sulphur is emitted from the ocean in the form of **dimethyl sulphide produced by phytoplankton**. But the increase in **ocean acidification led to an adverse impact** on the development of **phytoplankton**, which led to a **low amount of sulphur emission**.

Statement 2 is correct: **Algae and seagrasses may benefit from higher CO₂ conditions** as a result of Ocean acidification. Primary producers **require CO₂ for photosynthesis** just like plants on land. This is why **growing seaweed is being considered as a step to help slow ocean acidification**.

Statement 3 is incorrect: **River estuaries are more vulnerable to ocean acidification than Oceans**. River estuaries receive more **fresh water runoff that contributes to higher levels of dissolved carbon dioxide**. **This is because of the reason that river water contains a higher carbon load than that of seawater**.

Source: Forum IAS red book - pg no 81

<https://www.noaa.gov/education/resource-collections/ocean-coasts/ocean-acidification#:~:text=algae%20and%20seagrasses>

Q.43) With reference to 'Greenhouse Gases and Greenhouse effect', consider the following statements:

1. Greenhouse gases in the atmosphere absorb the long-wave energy emitted from the Earth's surface.
2. Majority of the atmospheric gases has the ability to absorb heat and contribute to the greenhouse effect.
3. Greenhouse effect occurs in the troposphere and stratosphere layers of earth's atmosphere.
4. The warming impact of greenhouse gases is one of the factors responsible for earth being called the Goldilocks planet.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2, 3 and 4 only
- c) 1 and 4 only
- d) 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

The **greenhouse effect** is a natural process that occurs when certain gases in the Earth's atmosphere, referred to as greenhouse gases, trap heat from the sun and warm the planet. These gases include carbon dioxide (CO₂), methane, nitrous oxide, and fluorinated gases. The greenhouse effect is essential for life on Earth, as it helps to maintain the planet's temperature within a range that is suitable for human habitation and other forms of life.

Statement 1 is correct: The greenhouse gases in the Earth's atmosphere, such as carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), and fluorinated gases, **trap long-wave energy, also known as infrared radiation, emitted from the Earth's surface.** This is what is known as the greenhouse effect, and it helps to regulate the temperature on Earth by trapping some of the heat that would otherwise escape into space.

Statement 2 is incorrect: While some gases in the atmosphere do contribute to the greenhouse effect, not all gases can absorb heat and contribute to the warming of the planet. The majority of the **Earth's atmosphere is composed of nitrogen (78%) and oxygen (21%).** They **do not contribute to the greenhouse effect and warming of the Earth's atmosphere.**

Statement 3 is incorrect: The greenhouse effect **occurs in the troposphere**, which is the lower part of the Earth's atmosphere where most of the weather occurs. The greenhouse effect is the process by which greenhouse gases, such as carbon dioxide, methane, and nitrous oxide, trap heat in the atmosphere and warm the planet. The **greenhouse effect does not occur in the stratosphere, but rather occurs in the lower part of the atmosphere, the troposphere.** The stratosphere is the layer of the Earth's atmosphere above the troposphere, and it contains the ozone layer, which protects the planet from harmful ultraviolet radiation.

Statement 4 is correct: The term "**Goldilocks planet**" refers to the idea that the **Earth's temperature is just right - not too hot, not too cold** - for life to exist. The cumulative impact of greenhouse gases does play a role in regulating the temperature on Earth, which is why the Earth is sometimes referred to as the "Goldilocks planet".

Source: <https://scied.ucar.edu/learning-zone/how-climate-works/greenhouse-effect>

<https://climate.nasa.gov/faq/19/what-is-the-greenhouse-effect/>
shankar Ias chapter 17

Frontiers | Climate Change and the Impact of Greenhouse Gasses: CO₂ and NO, Friends and Foes of Plant Oxidative Stress (frontiersin.org)

Q.44) Consider the following statements regarding the National Water Mission (NWM):

1. The Mission aims to increase overall water use efficiency by at least 20%.
2. The Bureau of Water Use Efficiency (BWUE) has been set up under this Mission to achieve its objectives.
3. 'Catch the Rain' and 'Sahi Fasal' are the two important campaigns launched under this Mission.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

National Water Mission (NWM) has been launched **to address the reducing per-capita availability** of water resources. The Mission is **a sub-scheme under the National Action Plan on Climate Change (NAPCC)**. The Mission is implemented by the **Department of Water Resources, River Development and Ganga Rejuvenation, Ministry of Jal Shakti**.

Statement 1 is correct: It is one of the stated objectives of the Mission to **increase water use efficiency by at least 20%**. Other important objectives include:

- 1) **Recycling** of urban waste water
- 2) Water requirements of **coastal cities with inadequate alternative sources** of water are met through adoption of new and appropriate technologies.
- 3) **Enhanced storage** both above and below ground, rainwater harvesting
- 4) To develop new **regulatory structures**, combined with appropriate entitlements and pricing
- 5) To optimize the efficiency of existing **irrigation systems**

Statement 2 is correct: Recently, **the Bureau of Water Use Efficiency has been established under this Mission**. The Bureau will ensure the promotion, regulation and control of efficient water use in irrigation, industrial and domestic sectors. It also aims **at developing standards through engagement with various stakeholders**.

Statement 3 is correct: To fulfill its objectives, following initiatives have been taken under this Mission:

- 1) **Catch the Rain Campaign:** To nudge states and stakeholders to create appropriate rainwater harvesting structures. Drives are conducted to make **check dams, water harvesting pits, rooftop rainwater harvesting systems** etc. States are encouraged to open **Rain Centers** in each district.
- 2) **Sahi Fasal:** To nudge farmers in water stressed areas to grow crops which are not water intensive.

Source: http://nwm.gov.in/sites/default/files/Notification_BWUE-20.10.2022.pdf

<http://nwm.gov.in/objective-national-water-mission>

Q.45) With reference to 'Additional Tier-1 (AT-1) Bonds', consider the following statements:

1. They are unsecured bonds issued by the banks.
2. The maturity of these bonds is fixed by the investors of the bond.
3. They were introduced by the Basel accord after the global financial crisis of 2008.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) d

Exp) Option d is the correct answer.

Recently, the Bombay High Court quashed the write-off of Additional Tier-1 (AT1) bonds worth Rs 8,400 crore issued by Yes Bank Ltd, bringing relief to investors.

Statement 1 is correct and statement 2 is incorrect: AT1 bonds are **unsecured bonds that have perpetual tenor**. In other words, these bonds, issued by banks, **have no maturity date**. They have a call option, which can be used by the banks to buy these bonds back from investors. But banks are not obliged to use this call option and can opt to pay only interest on these bonds for eternity.

Statement 3 is correct: AT1 bonds were introduced by **the Basel accord after the global financial crisis to protect depositors**. These bonds are typically used by banks to bolster their core or tier-1 capital **to meet the Basel-III norms**. The Reserve Bank of India (RBI) is the regulator of AT-1 bonds.

If the RBI feels that a bank is tottering on the brink and needs a rescue, it can simply ask the bank to cancel its outstanding AT-1 bonds without consulting its investors.

Source: <https://indianexpress.com/article/explained/explained-economics/yes-bank-at1-bonds-bombay-high-court-8395311/>

<https://www.outlookindia.com/business/explainer-what-are-at1-bonds-what-investors-must-know-about-bombay-hc-order-on-yes-bank-at1-bond-case-news-255539>

Q.46) Consider the following statements:

Statement 1: Water Vapour is the only greenhouse gas whose concentration increases with warming of atmosphere.

Statement 2: Water vapour can be changed from a gas into a liquid due to its condensable properties.

Which one of the following is correct with respect to the above statements?

- a) Both Statement 1 and Statement 2 are correct and Statement 2 is the correct explanation of Statement 1.
- b) Both Statement 1 and Statement 2 are correct and Statement 2 is not the correct explanation of Statement 1.
- c) Statement 1 is correct but Statement 2 is not correct.
- d) Statement 1 is not correct but Statement 2 is correct.

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct and statement 2 is the correct explanation of statement 1: Water vapor is the **only greenhouse gas whose concentration increases with the warming of the atmosphere**. Water vapor is a **condensable gas – it can be changed from a gas into a liquid**. Its concentration depends on the temperature of the atmosphere. This makes water vapor the only greenhouse gas whose concentration increases because the atmosphere is warming, and causes it to warm even more. Other greenhouse gases **like Carbon dioxide, Nitrogen oxide etc. are non-condensable**. Non-condensable gases can't be changed into liquid at the very cold temperatures present at the top of Earth's troposphere, where it meets the stratosphere. As atmospheric temperatures change, the concentration of non-condensable gases remains stable.

Therefore, as the temperature of the Earth's surface and atmosphere increases, more water evaporates from the surface, leading to an increase in the concentration of water vapor in the atmosphere. This increase in water vapor amplifies the warming effect, creating a positive feedback loop.

Source: <https://climate.nasa.gov/ask-nasa-climate/3143/steamy-relationships-how-atmospheric-water-vapor-amplifies-earths-greenhouse-effect/#:~:text=Water%20vapor%20is%20Earth's%20most,gases%20keep%20our%20planet%20livable.>

Q.47) Which one of the following statements best describe the term 'carbon fertilization'?

- It refers to the process of adding fertilizer to soil to increase carbon content for higher yield of the crops.
- It is the process of removing carbon from the atmosphere and storing it in plants or soil.
- It is the phenomenon whereby increasing atmospheric carbon dioxide (CO₂) levels stimulate plant growth.
- It refers to the use of carbon-based fuels to increase energy production in power plants.

Ans) c

Exp) Option c is the correct answer.

Option c is correct: Carbon fertilization is the artificial enrichment of the **atmosphere of greenhouses with carbon dioxide, an essential nutrient for plants and vegetables**. It is also known as Carbon Dioxide Fertilization.

- It is the phenomenon whereby **increasing atmospheric carbon dioxide (CO₂) levels stimulate plant growth**. This occurs because plants use CO₂ during photosynthesis to produce energy and growth, so an increase in atmospheric CO₂ can enhance plant productivity.
- It is used to improve production levels, both from a qualitative and from a quantitative point of view. It is particularly suitable for cold climates and can be used for growing practically all types of vegetables (asparagus, celery, lettuce, tomatoes etc.), greenhouse fruit (strawberries) and ornamental plants.

Source: <https://climataalk.org/2021/10/18/the-co2-fertilisation-effect-what-is-it/>

Q.48) Arrange the following gases in increasing order of their Global Warming Potential (GWP)?

- Hydrofluorocarbons
- Methane
- Sulphur Hexafluoride
- Nitrous oxide
- Perfluorocarbons

Select the correct answer using the codes given below:

- 4-2-1-3-5
- 2-4-1-5-3
- 4-1-2-5-3
- 2-4-1-3-5

Ans) b

Exp) Option b is the correct answer.

Global Warming Potential (GWP) is a metric used to compare the **relative warming impact of different greenhouse gases over a specific time horizon**. It measures the cumulative amount of heat trapped by a certain mass of a greenhouse gas in the atmosphere, relative to carbon dioxide (CO₂), which is assigned a GWP of 1. **Atmospheric lifetime refers to the amount of time that a greenhouse gas remains in the atmosphere after it has been emitted**. Some greenhouse gases, such as carbon dioxide, can persist in the atmosphere for hundreds of years, while others, such as some hydrofluorocarbons (HFCs), have much

shorter atmospheric lifetimes of a few years to several decades. **Greenhouse gases in increasing order of their Global Warming Potential (GWP) are Methane (CH₄) <Nitrous Oxide (N₂O) <Hydrofluorocarbons (HFCs)<Perfluorocarbon (PFCs)< Sulfur hexafluoride (SF₆):**

- 1) **Methane (CH₄):** Methane has a GWP of **28-36 times higher than carbon dioxide (CO₂)** over a 100-year time horizon, making it a highly potent greenhouse gas. It has an atmospheric lifetime of approximately 12 years, meaning that it doesn't persist in the atmosphere as long as other gases like CO₂. However, it is much more efficient at trapping heat, so even small emissions of methane can have a significant impact on the climate.
- 2) **Nitrous oxide (N₂O):** Nitrous oxide has a GWP of **265-298 times higher than CO₂** over a 100-year time horizon, making it an extremely potent greenhouse gas. It has an atmospheric lifetime of approximately 114 years, meaning that it remains in the atmosphere for a much longer time than methane. This contributes to its significant impact on the climate.
- 3) **Hydrofluorocarbons (HFCs):** Hydrofluorocarbons have a GWP that can range **from 140 to 11,700 times higher than CO₂ over a 100-year time horizon**, making them highly potent greenhouse gases. They have a relatively short atmospheric lifetime, ranging from a few years to several decades, depending on the specific HFC in question.
- 4) **Perfluorocarbons (PFCs):** Perfluorocarbons have a GWP that can **range from 6,500 to 9,200 times higher than CO₂ over a 100-year time horizon**, making them extremely potent greenhouse gases. They have an atmospheric lifetime ranging from several decades to thousands of years, meaning that they persist in the atmosphere for a much longer time than HFCs.
- 5) **Sulfur hexafluoride (SF₆):** Sulfur hexafluoride has a GWP of **23,500-29,200 times higher than CO₂ over a 100-year time horizon**, making it the most potent greenhouse gas listed. It has an atmospheric lifetime of approximately 3,200 years, meaning that it remains in the atmosphere for a much longer time than any of the other gases listed.

GWP & Lifetime of Green House Gases:

S. No	GAS	GWP (100-year)	LIFETIME (years)
1	Carbon di oxide	1	100
2	Methane	21	12
3	Nitrous oxide	310	120
4	Hydro fluoro carbons (HFCs)	140-11,700	1-270
5	Perfluoro carbons (PFCs)	6,500-9,200	800-50,000
6	Sulfur hexafluoride (SF ₆)	23,900	3,200

Source: <https://www.epa.gov/ghgemissions/understanding-global-warming-potentials>
FORUM IAS REDBOOK CHAPTER 8

Q.49) With reference to climate forcings, consider the following statements:

1. It refers to the physical process of affecting the climate on the Earth.
2. They are totally human-induced process which have intensified after the industrial revolution.
3. Global warming caused due to greenhouse effect is an example of negative climate forcing.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Climate forcing is the physical process of affecting the climate on the Earth through a number of forcing factors. These factors are specifically known as forcings because they drive the climate to change. The changes are measured by the amount of warming or cooling they can produce. Changes that have a warming effect are called “positive” forcing, while changes that have a cooling effect are called “negative” forcing. Positive forcings such as excess greenhouse gases warm the earth while negative forcings, such as the effects of most aerosols and volcanic eruptions, cool the earth.

Statement 1 is correct: Climate forcing is the physical process of affecting the climate on the Earth through a number of forcing factors. These factors are specifically known as forcings because they drive the climate to change. climate forcings refers to factors/drivers in the climate system that either increase or decrease any climatic effect in the atmosphere. Example: Increased emission from the sun leads to an increase of the temperature.

Statement 2 is incorrect: Climate forcings can be natural as well as human generated. Natural forcings include changes in the amount of energy emitted by the Sun, very slow variations in Earth’s orbit, and volcanic eruptions. Climate forcing can also be caused by human activities. These activities include greenhouse gas and aerosol emissions from burning fossil fuels.

Statement 3 is incorrect: Excess greenhouse gases warming the earth is an example of **positive forcings**. Whereas negative forcings, such as the effects of most aerosols and volcanic eruptions, actually cool the earth.

<https://www.climate.gov/maps-data/climate-data-primer/predicting-climate/climate-forcing>

Q.50) Which one of the following statements is **incorrect** regarding “Etikoppaka toys”?

- a) They are traditional toys from the Visakhapatnam district of Andhra Pradesh.
- b) They are made out of wood and are colored with natural dyes.
- c) They are known for presence of sharp-edged features in their structure.
- d) They have received Geographical Indication (GI) tag.

Ans) c

Exp) Option c is the correct answer.

Shri C V Raju from Etikoppaka village, Visakhapatnam, Andhra Pradesh has been conferred with Padma Shri for preserving the traditional method of making Etikoppaka toys.

Option a is correct: Etikoppaka toys are **traditional toys made by artisans of Etikoppaka village** located on the banks of Varaha River in **Visakhapatnam district of Andhra Pradesh**.

Option b is correct: Etikoppaka toys are made out of **wood and are colored with natural dyes** derived from seeds, lacquer, bark, roots and leaves. The artisans mainly use the wood from trees known as 'ankudu' (Wrightia Tinctoria) that is **soft in nature**.

Option c is incorrect: Etikoppaka toys have **no sharp edges**. They are rounded on all sides and hence present little chance of injury to children.

Etikoppaka toys

Option d is correct: Etikoppaka Toys have **obtained their GI tag under Handicrafts category** in the state of Andhra Pradesh in 2017.

Source: <https://www.thehindu.com/news/national/andhra-pradesh/padma-award-is-an-honour-for-the-etikoppaka-toy-craft-says-cv-rajju/article66436816.ece>

Q.1) A sandy and saline area is the natural habitat of an Indian animal species. The animal has no predators in that area but its existence is threatened due to the destruction of its habitat. Which one of the following could be that animal?

- a) Indian wild buffalo
- b) Indian wild ass
- c) Indian wild boar
- d) Indian gazelle

Ans) b

Exp) Option b is the correct answer.

Indian Wild Ass is only found in the Little Rann of Kutch in Gujarat. Thus, sandy and saline area is the natural habitat of Indian Wild Ass. The animal has no predators in this area but its existence is threatened due to the destruction of its habitat. It is protected under Schedule I of the Wildlife (Protection) Act 1972, India and included on Appendix I of the Convention on International Trade in Endangered Species (CITES), making international trade in this species illegal.

Source: UPSC CSE Pre 2011

Q.2) Consider the following statements regarding 'Seagrasses':

1. They provide food and shelter to many marine species.
2. They are only found in deep ocean waters, and relatively absent in shallow depths.
3. They are completely absent in both Arctic and Antarctic regions.
4. They reproduce through both sexual and asexual methods.

Which of the statements given above is/are **incorrect**?

- a) 2 and 4 only
- b) 3 only
- c) 1, 2 and 3 only
- d) 2 and 3 only

Ans) d

Exp) Option d is the correct answer.

Seagrasses belong to a group of plants called **monocotyledons** that include grasses, lilies and palms. Seagrasses are known as the "**lungs of the sea**" because one square meter of seagrass can generate 10 liters of oxygen every day through photosynthesis.

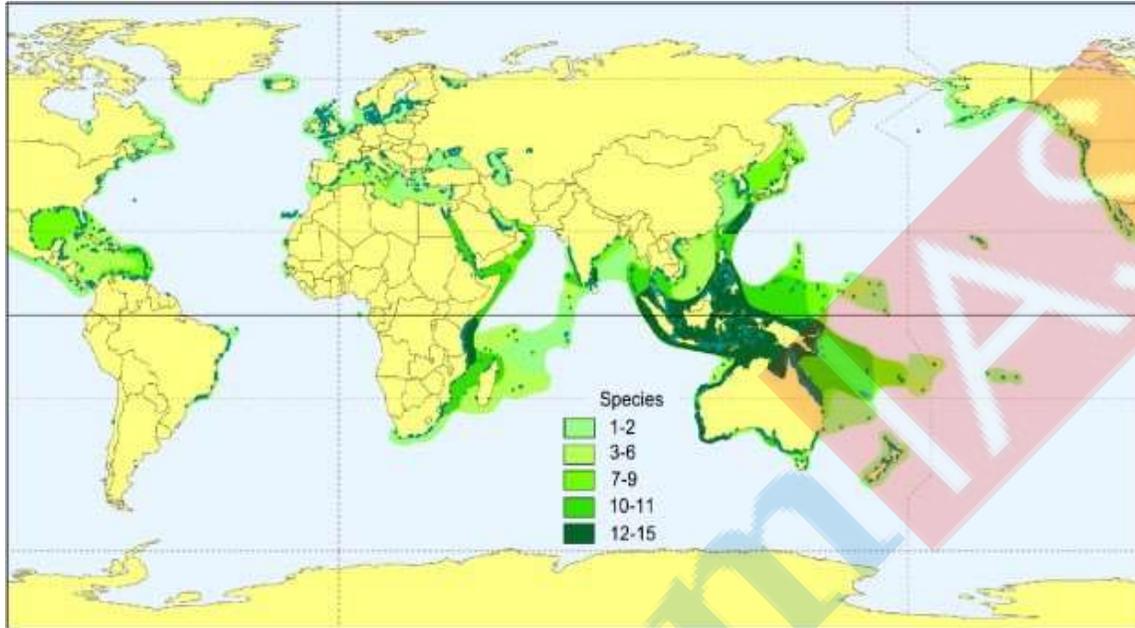

Statement 1 is correct: Seagrasses provide shelter and food to an incredibly diverse community of animals, from tiny invertebrates to large fish, crabs, turtles, marine mammals and birds. Seagrasses provide many important services to people as well, but many seagrasses' meadows have been lost because of human activities. Work is ongoing around the world to restore these important ecosystems.

Statement 2 is incorrect: Seagrasses are **found in shallow salty and brackish waters**, generally on the gently sloping and protected coastlines. Since they are dependent on photosynthesis, they are most commonly found at **shallow depths where light levels are high**. The deepest growing seagrass has been found at depths of 190 feet (58 meters). *Halophila decipiens*) has been found at depths of 190 feet (58 meters).

Statement 3 is incorrect: Seagrasses are found from **Tropics to the Arctic**. Most coastal regions are dominated by one or few seagrass species, but tropical regions in Indian and Western Pacific Ocean shows highest seagrass diversity. They are **not found in the Antarctic region**.

Statement 4 is correct: Seagrasses reproduces by both the sexual and the asexual methods:

- 1) **Asexual Clonal Growth:** Similar to grasses on land, seagrass shoots are connected underground by a network of large root-like structures called rhizomes. The rhizomes can spread under the sediment and send up new shoots. This is called as asexual clonal growth.
- 2) **Sexual Reproduction:** They also reproduce sexually. Pollination is generally completed with the aid of water.

(Source: ScienceDirect.com)

Source: <https://ocean.si.edu/ocean-life/plants-algae/seagrass-and-seagrass-beds>

Q.3) Several Indian states and Union Territories in India have their own state seals and symbols which includes state animals, birds, trees etc. In this context which of the following animals match with the corresponding state as their state animals?

Animal	States of India
1. Nilgiri tahr	Tamil Nadu
2. Swamp Deer	Jharkhand
3. Asiatic Lion	Gujarat
4. Bengal Tiger	West Bengal

Select the correct answer using the code given below:

- a) 1 and 3 only
- b) 1, 2 and 4 only
- c) 1, 3 and 4 only
- d) 2, 3 and 4 only

Ans) a

Exp) Option a is the correct answer.

India has rich and varied wildlife and is home to many big and small animals. The state animals are primarily chosen based on their abundance, endangered status, or whether they are native to the region.

Pair 1 is correctly matched: The Nilgiri tahr is the state animal of Tamil Nadu. The **Nilgiri Tahr is a species of wild goat that is native to the Western Ghats of South India.** It has been listed as an endangered

species in list of IUCN and is protected under Schedule-I of the Wildlife (Protection) Act of India, 197. These goats are agile climbers and are well adapted to life in the high altitudes of the Western Ghats.

Nilgiri Tahr

Pair 2 is incorrectly matched: The **state animal of Jharkhand is the Indian elephant (*Elephas maximus indicus*)**. The Indian elephant is a social animal and occurs in groups of related females, led by the oldest female. The Indian elephant (*Elephas maximus indicus*) is one of three currently recognized subspecies of the Asian elephant and is native to mainland Asia. The Asian elephant is listed as Endangered in the IUCN Red List.

Indian Elephant

Pair 3 is correctly matched: **Asiatic Lion is the state animal of Gujarat.** Lion has been classified as endangered by the IUCN. Lions are the only cats that live in groups, called prides. Asiatic Lions are found inhabiting open grasslands and forests of India, including scrub jungles. Asian lions have powerful retractable claws and long sharp canine teeth that are used in dragging their prey to the ground. The males are orange-yellow to dark brown in color, while the females have a sandy or tawny color.

Asiatic Lion

Pair 4 is incorrectly matched: The **fishing cat is the state animal of West Bengal.** It is about twice the size of a typical house cat. It is nocturnal and apart from fish also preys on frogs, crustaceans, snakes, birds, and scavenges on carcasses of larger animals. It is listed as Endangered in the IUCN red list and in Appendix II of Cites. It is protected in the Schedule I of the Wildlife Protection Act, 1972. In India, it is mainly found in the mangrove forests of the Sundarbans, on the foothills of the Himalayas along the Ganga and Brahmaputra River valleys and in the Western Ghats.

Fishing Cat

<https://www.thehindu.com/sci-tech/energy-and-environment/endangered-asian-elephant-has-lost-most-of-its-optimal-habitat-in-nilgiri-reserve-study/article66343549.ece>
<https://indianexpress.com/article/cities/chennai/tamil-nadu-undertakes-project-to-serve-nilgiri-tahr-8349173/>

Q.4) With reference to ‘Convention on International Trade in Endangered Species (CITES)’, consider the following statements:

1. It also regulates the international trade of dead animals.
2. The CITES Secretariat is administered by the United Nations Environment Programme.
3. It is legally binding convention that provides a framework to be adopted by the member parties.
4. Its members list includes corporates and nonprofit organization as well.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1, 2 and 3 only
- c) 2, 3 and 4 only
- d) 1, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

The **Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES)** is an international agreement between governments that aims to ensure that international trade in specimens of wild animals and plants does not threaten their survival.

Statement 1 is correct: Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) is an international agreement between governments. **CITES regulates international trade in specimens of species of wild fauna and flora.** It covers export, re-export, import and landing from the high seas of **live and dead animals** and plants and their parts and derivatives.

Statement 2 is correct: The CITES Secretariat is administered by the United Nations Environment Programme and is located at Geneva, Switzerland.

Statement 3 is correct: Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) is **legally binding on the Parties.** They have to implement the Convention. It does not take the place of national laws. Rather it **provides a framework to be adopted by parties** in its own domestic legislation to ensure that CITES is implemented at the national level.

Statement 4 is incorrect: CITES is an international agreement between governments. NGO and corporates are not the member party of CITES. Currently, there are 184 member countries of CITES.

Source: <https://blog.forumias.com/convention-on-international-trade-in-endangered-speciescites/>
<https://blog.forumias.com/cites-database-reveals-red-sanders-smuggling/>
<https://cites.org/eng/disc/what.php>

Q.5) With reference to ‘Norovirus’, consider the following statements:

1. It causes inflammation of the lining of the stomach and intestines among humans.
2. It can be transferred from an infected to a healthy individual through contaminated food.
3. The practice of steaming food and chlorinating water can completely kill the virus.
4. There is no specific treatment available to cure the individuals affected by the virus.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1, 2 and 4 only
- c) 2 and 3 only
- d) 1, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

Recently, the Kerala Health Department confirmed two cases of norovirus.

Statement 1 is correct: Norovirus is a group of viruses that leads to gastrointestinal illness. It causes **inflammation of the lining of the stomach and intestines**, in addition to severe vomiting and diarrhea.

Statement 2 is correct: Norovirus is **highly contagious and can be transferred from an infected person to a healthy individual through contaminated food**, water, or surfaces, as well as by direct contact with infected feces or vomit.

Statement 3 is incorrect: Norovirus is resistant to many disinfectants and can heat up to 60°C. Therefore, **merely steaming food or chlorinating water does not kill the virus**. The virus can also survive many common hand sanitizers.

Statement 4 is correct: There is **no specific treatment for norovirus infection**, but the symptoms can be managed with adequate hydration, rest, and over-the-counter remedies for pain and discomfort.

Source: <https://blog.forumias.com/norovirus-confirmed-in-keralas-wayanad-heres-what-you-need-to-know/>

Q.6) Consider the following features:

1. Generally found in rivers and estuaries.
2. Listed as ‘endangered’ in IUCN Red list.
3. Inhabits the Hooghly and Brahmaputra River.
4. Essentially blind.

Which of the above are the features of Ganges Shark?

- a) 1 and 2 only
- b) 3 and 4 only
- c) 1 and 3 only
- d) 1, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Sharks are the most important predators found in oceans across the world. There are six species of river sharks found in the world, out of which the Ganges shark (*Glyphis gangeticus*) is endemic to India.

Ganges Shark

Option 1 is correct: Ganges shark is **only found in rivers and estuaries**, with no confirmed records from oceans or seas.

Option 2 is incorrect: The **Ganges Shark is listed as a Critically Endangered species** in the IUCN Red list. Its population has been steadily decreasing due to over fishing, habitat degradation, increasing river utilization, and building of dams. Its fin and jaws are in high demand in the international trade, and is also fished by locals for its meat and oil. Recognizing the dangers faced by this species, it is protected under Schedule I, Part II of the Wildlife (Protection) Act of India, 1972.

Option 3 is correct: The Ganges shark is a species of shark that is found exclusively in India. It lives in the rivers **Ganges, Brahmaputra, Mahanadi, and the river Hooghly** in the states of Bihar, Assam, West Bengal, and Orissa. While some of the other river sharks are also known to inhabit saltwater, the Ganges shark is only found in rivers and possibly estuaries, with no confirmed records from oceans or seas.

Option 4 is incorrect: Ganges shark has a stocky greyish brown body, with a broadly rounded snout and **small eyes**. Unlike other members of this family, the **eyes of the Ganges shark are tilted dorsally**, instead of laterally or ventrally, indicating that it may swim along the river bed scanning the waters above for prey.

It is Gangetic Dolphins which are generally blind.

Source:

https://www.wwfindia.org/about_wwf/priority_species/lesser_known_species/ganges_shark/

<https://blog.forumias.com/the-gangetic-river-dolphin/>

<https://www.worldwildlife.org/species/ganges-river-dolphin#:~:text=The%20Ganges%20river%20dolphin%20can,an%20image%20in%20their%20mind.>

Q.7) With reference to plant type and their features, consider the following pairs:

Types of Plant	Features
1. Herbs	plant stem is always hard and woody
2. Shrubs	Starts branching from the base
3. Epiphyte	Gets nourishment from other plants
4. Climbers	Woody plant that requires support as they cannot stand erect.

How many pairs given above is/are correctly matched?

- Only one pair
- Only two pairs
- Only three pairs
- All the pairs

Ans) b

Exp) Option b is the correct answer.

The plants growth and development depend on the plant's height, shape and the kind of growth it undergoes. There are genetic factors as well as environmental factors which play an important role in their growth habit.

Pair 1 is incorrectly matched: Herb is defined as a **plant whose stem is always green and tender with height of not more than 1 meter**. Generally, they have few branches or are branchless.

These can be easily uprooted from the soil. Herbs contain enough nutritional benefits, including vitamins and minerals, to make them a part of a healthy balanced diet. Tomato, wheat, paddy, grass and bananas are a few examples of herbs.

Pair 2 is correctly matched: Shrub is defined as a woody perennial plant differing from a perennial herb in its persistent and woody stem. It **differs from a tree in its low stature and its habit of branching from the base**. Not more than 6 meters in height. Their features include bushy, hard, and woody stems with many branches. Although stems are hard, they are flexible but not fragile.

Pair 3 is incorrectly matched: Epiphytes are the plant **growing on the host plant but not nourished by the host plant. They do not draw food from the host plant**. They only take the help of the host plant in getting access to light. Their roots perform two functions. While changing roots establish the plant on the branches of the host plant, aerial roots draw moisture from the air.

Pair 4 is correctly matched: Climbers are **woody plant that climbs up trees** or other support by twining round them or by holding on to them by tendrils, hooks, aerial roots or other attachments. These plants show long, **thin and weak stems which again cannot stand erect**. It requires external assistance to vertically climb and carry its weight also they also absorb sunlight through vertical structures.

Source: Shanker IAS (Ch 13- Plant Diversity)

<https://blog.forumias.com/wp-content/uploads/2021/12/FORUM-IAS-RED-BOOK-ENVIRONMENT-2021.pdf>

Q.8) With reference to Ecological Biodiversity, Drosera, Bladderworts, Butterwort, Aldrovanda are:

- commonly found Butterflies in Western Ghats.
- new species of turtle found in Indian ocean.
- type of carnivorous plants which can digest insects.
- type of snakes found in the Himalayan region.

Ans) c

Exp) Option c is the correct answer.

The plants **Drosera, Bladderworts, Butterwort, and Aldrovanda** are all commonly known as **carnivorous plants**. They have evolved unique mechanisms to trap and digest insects and other small prey to obtain essential nutrients that are lacking in their environment.

- Drosera, also known as sundews, have sticky hairs on their leaves that trap insects.
- Bladderworts have bladder-like structures that use suction to quickly trap small aquatic prey.
- Butterworts have sticky leaves that trap insects, and
- Aldrovanda is a carnivorous plant that is similar to Venus's flytraps, using rapid leaf movements to trap small aquatic animals.

Source: <https://sciencenotes.org/carnivorous-plants/>

Q.9) Consider the following statements about Biosphere reserves (BR) and National Parks (NP):

1. Existing National Parks can be made part of Biosphere Reserves.
2. Biosphere reserves focus on conservation of some specific flagship species while National Parks put emphasis on conservation of overall biodiversity.
3. Unlike Biosphere Reserves, National parks also focus on local people's participation in conservation of species.

Which of the statements above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Biosphere reserves are sites established by countries and recognized under UNESCO's Man and the Biosphere (MAB) Programme to promote sustainable development based on local community efforts and sound science.

Statement 1 is correct: Existing legally protected areas (National Parks, Wildlife Sanctuary, Tiger Reserve and reserve/protected forests) may become part of the BR **without any change in their legal status.**

Statement 2 is incorrect: BRs put emphasis on conservation of overall biodiversity and landscape, rather than some specific flagship species, to allow natural and evolutionary processes to continue without any hindrance. Protected areas on the other hand focus on conservation and management of biodiversity, focussing on certain flagship species or a group.

Statement 3 is incorrect: In case of Biosphere Reserves there is an **increase in broad-basing of stakeholders, especially local people's participation and their Training**, compared to the features of scheme on Wildlife Sanctuaries and National Parks.

Source: Forum IAS Red Book
Shankar IAS Environment

Q.10) ‘Senna spectabilis’, often seen in news, may lead to-

- a) death of coral reefs due to their bleaching
- b) habitat loss of mangroves species
- c) food shortage for the wildlife population
- d) declining population of marine fishery

Ans) c

Exp) Option c is the correct answer.

The Nodal Centre for Biological Invasions (NCBI) at the Kerala Forest Research Institute (KFRI) has come out with a management plan to eradicate *Senna spectabilis*.

Senna spectabilis is a plant species of the legume family (Fabaceae) native to South and Central America. The plant has **become an invasive alien species in parts of Africa, India and other countries**. The thick foliage of the tree arrests the growth of other indigenous tree and grass species. Hence, it **causes food shortage for the wildlife population** especially herbivores.

It also adversely affects the germination and growth of the native species. It is categorized as ‘Least Concern’ under IUCN Red List.

Senna spectabilis

Source: <https://www.thehindu.com/news/national/kerala/plan-in-place-to-eradicate-invasive-plant-species-from-keralas-wildlife-habitat/article66450185.ece>

Q.11) Consider the following statements:

1. As per law, the Compensatory Afforestation Fund Management and Planning Authority exists at both National and State levels.
2. People’s participation is mandatory in the compensatory afforestation programmes carried out under the Compensatory Afforestation Fund Act, 2016.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct. The Compensatory Afforestation Fund Management and Planning Authority exists at both National and State levels.

Statement 2 is incorrect. There is no provision mandating people participation in the compensatory afforestation programmes carried out under the Compensatory Afforestation Fund Act, 2016. The act encourages people's participation but does not make it mandatory.

Source) UPSC CSE Pre 2019

Q.12) With reference to different biodiversity protection institutional measures, consider the following pairs:

Institutions	Functions
1. Animal Welfare Board	may inspect any slaughter house without notice
2. Central Zoo Authority	has powers to both recognize and derecognize zoos.
3. National Biodiversity Authority	combating organized wildlife crime.

Which of the pairs given above is/are correctly matched?

- 1 only
- 1 and 3 only
- 1 and 2 only
- 2 and 3 only

Ans) c

Exp) Option c is the correct answer.

Pair 1 is correctly matched: The Animal Welfare Board of India was established in 1962 under The Prevention of Cruelty to Animals Act. It is a statutory advisory body on animal welfare laws which **promote animal welfare in the country**. It provides grants to Animal Welfare Organizations. The Animal Welfare Board of India **may inspect any slaughter house without notice to its owner**.

Pair 2 is correctly matched: Central Zoo Authority has been constituted under the Wildlife Protection Act and is responsible for the oversight of zoos. Every zoo in the country is required to obtain the recognition from the authority for its operation. It **has powers to recognize and derecognize zoos of the country**. It also provides permission for acquisition of wild animals and grant for licenses, certificate of ownership, recognition etc.

Pair 3 is incorrectly matched: National Biodiversity Authority performs regulatory and advisory functions for the Government of India on issues of conservation, sustainable use of biological resources and fair and equitable sharing of benefits arising out of the use of biological resources. It was **established in 2003 to implement India's Biological Diversity Act (BDA)**. It also approves any kind of Intellectual property rights on a research based upon biological resource. **Wildlife Crime Control Bureau functions to combat organized wildlife crime in the country** and assist the governments in wildlife policy making.

Source: ForumIAS red book on environment

Q.13) Phytoplankton are known as the base of several aquatic food webs. In this context, which of the following factors have major impact on the growth of Phytoplankton?

- Salinity of the water
- Availability of Sunlight
- Grazing by Zooplankton
- Availability of Carbon dioxide

Select the correct answer using the code given below:

- a) 1, 2, 3 and 4
- b) 1, 2 and 3 only
- c) 2 and 4 only
- d) 1, 2 and 4 only

Ans) a

Exp) Option a is the correct answer.

Phytoplankton, also known as microalgae, are **similar to terrestrial plants** in that they contain chlorophyll and require sunlight in order to live and grow. The **two main classes of phytoplankton are dinoflagellates and diatoms**. Dinoflagellates use a whip-like tail, or flagella, to move through the water and their bodies are covered with complex shells. Diatoms also have shells, but they are made of a different substance and their structure is rigid and made of interlocking parts. There are several factors that can impact the growth of phytoplankton:

Option 1 is correct: The **salinity of water can impact phytoplankton growth**, as some species are adapted to specific salinity levels. High salinity levels can be harmful to phytoplankton and limit their growth, while low salinity levels can be beneficial and promote their growth.

Option 2 is correct: Adequate light is necessary for **phytoplankton to carry out photosynthesis**, which is the process by which they produce energy. Without enough light, phytoplankton growth can be limited.

Option 3 is correct: **Predation by zooplankton and other consumers can limit phytoplankton growth by reducing their population**. Phytoplankton are the base of the food chain and are essential for the survival of other aquatic organisms. The grazing of zooplankton on phytoplankton can impact the overall balance of the aquatic ecosystem.

Option 4 is correct: Phytoplankton growth depends on the **availability of carbon dioxide**, sunlight, and nutrients. Phytoplankton, like land plants, require nutrients such as nitrate, phosphate, silicate, and calcium at various levels depending on the species.

Source: <https://oceanservice.noaa.gov/facts/phyto.html>

<https://earthobservatory.nasa.gov/features/Phytoplankton#:~:text=Phytoplankton%20growth%20depends%20on%20the,levels%20depending%20on%20the%20species.>

Q.14) With reference to 'National Tiger Conservation Authority (NTCA)', consider the following statements:

1. It is a statutory authority.
2. It is responsible for country level assessment of the status of tiger and its habitat.
3. M-STriPES is one of the initiatives under the NTCA.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 2 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Project Tiger was launched by the Indira Gandhi government in 1973 from the Jim Corbett National Park in Uttarakhand. The chief objectives of the project were to reduce factors that cause the diminishing of tiger habitats and to ensure a viable tiger population for scientific, ecological, economic, aesthetic and cultural values.

Statement 1 correct: The National Tiger Conservation Authority (NTCA) is a **statutory body under the Ministry of Environment, Forests and Climate Change** constituted under enabling provisions of the Wildlife (Protection) Act, 1972, as amended in 2006, for strengthening tiger conservation.

Statement 2 is correct: The NTCA conducts a **country-level assessment of the status of tigers**, co-predators, prey, and **habitat once every four years**, using the Tiger Task Force-approved methodology. The four-year tiger census is led by **NTCA and the Wildlife Institute of India (WII)**, in collaboration with state forest departments. Some of the technologies used in estimating the number of tigers include:

- 1) M-STriPES (a software-based tiger monitoring system launched by NTCA).
- 2) CaTRAT (Camera Trap Data Repository and Analysis Tool).
- 3) ExtractCompare.
- 4) Spatially explicit capture-recapture (SECR) method.
- 5) Cytochrome-b marker.
- 6) Maximum-Entropy Models (MaxEnt).

Statement 3 is correct: M-STriPES is one of the initiatives under the NTCA. M-STriPES (**Monitoring System for Tigers: Intensive Protection and Ecological Status**) is a **platform where modern technology is used to assist effective patrolling, assess ecological status and mitigate human-wildlife conflict in and around tiger reserves**. It uses Global Positioning System (GPS), General Packet Radio Services (GPRS), and remote sensing, to collect information from the field, create a database using modern Information Technology (IT) based tools, analyses the information using GIS and statistical tools to provide inferences that allow tiger reserve managers to better manage their wildlife resources.

Source: <https://ntca.gov.in/about-us/#our-work>

<https://www.tigernet.nic.in/aboutntca.html>

ForumIAS red book on environment

Q.15) With reference to ‘Natural Rubber’, consider the following statements:

1. It is a native cash crop of the South East Asian countries of Malaysia and Indonesia.
2. It requires dry climate with well-drained and weathered soils for its optimal growth.
3. Natural rubber is preferred over synthetic rubber due to its high tensile strength.
4. Rubber Board is the statutory organization in India that promotes development of rubber industry.
5. Most of the rubber consumption in India come from the transportation sector.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 1, 2, 4 and 5 only
- c) 3, 4 and 5 only
- d) 1, 2, 3 and 5 only

Ans) c

Exp) Option c is the correct answer.

A recent study said that turning the tropical forests into natural rubber plantations in Tripura is negatively impacting non-human primate species and vegetation in the region. The report highlighted that culturing natural rubber in the last century has brought significant economic benefits for growers. But excessive rubber plantations are adversely affecting various wildlife and plant species.

Statement 1 is incorrect: Natural rubber is a polymer made up of a chemical molecule called isoprene. It is a **native of the Amazon basin which was introduced to countries in the tropical belts of Asia and Africa in the late nineteenth century**.

Statement 2 is incorrect: Rubber trees require **moist and humid climates** with heavy rainfall of more than 200 cm. It grows well in equatorial climates and temperatures above 25 degrees Celsius.

Rubber trees **require well-drained, weathered soils**.

Statement 3 is correct: Rubber is used for a variety of purposes from erasing pencil marks to manufacturing tyres, tubes and a large number of industrial products. Natural rubber is **preferred over synthetic rubber due to its high tensile strength and vibration dampening properties**, along with tear resistance. This makes it important for the construction and automobile industries.

Statement 4 is correct: The **Rubber Board is a statutory organization constituted under Section (4) of the Rubber Act, 1947 and functions under the administrative control of Ministry of Commerce and Industry**. It is responsible for promotion and development of Rubber Industry in India.

Statement 5 is correct: The **transportation sector consumed the most rubber**, followed by the footwear industry. The amount of natural rubber exported from India for the fiscal year 2020 totalled above 12 thousand metric tonnes. Germany, Brazil, the United States, and Italy were the top importers of natural rubber from India. Automobile tyres and tubes, footwear, medicinal goods and hoses, coats and aprons were among the export items.

Knowledge Base:

Rubber Board:

- 1) The Rubber Board is a **statutory organization constituted under Section (4) of the Rubber Act, 1947** and functions under the administrative control of Ministry of Commerce and Industry.
- 2) The **Board is headed by a chairman appointed by the Central Government** and has 28 members representing various interests of natural rubber industry.
- 3) The Board's headquarters is located at **Kottayam in Kerala**.
- 4) The Board is responsible for the **development of the rubber industry in the country** by way of assisting and encouraging research, development, extension, and training activities related to rubber.
- 5) It also **maintains statistical data of rubber**, takes steps to promote marketing of rubber and undertake labour welfare activities.
- 6) The activities of the Board are **exercised through Five Departments** General Services, Extension & Advisory Services, Research Services (rubber Research Institute of India), Training (Rubber Training Institute) & Finance.
- 7) There are 5 independent divisions viz., Internal audit, Planning, Market Promotion, Publicity & Public Relations, Vigilance.

Source: <https://www.downtoearth.org.in/news/wildlife-biodiversity/rubber-plantations-in-tripura-affecting-monkeys-vegetation-suggests-paper-86942>

<https://www.thehindu.com/news/national/explained-the-fall-in-natural-rubber-prices-in-india/article65885937.ece>

Q.16) With reference to 'Vulture Conservation in India', consider the following statements:

1. Vulture Safety Zones has been created with a goal that no veterinary toxic drugs to be found in cattle carcasses in these zones.
2. SAVE initiative is launched by Meghalaya government to build restaurants for the unique and rare vultures.
3. Action Plan for Vulture Conservation 2020-2025 by Government of India has proposed to establish Vulture Conservation Breeding Centers in various states.
4. Recently, Animal Welfare Board of India has banned drug named 'meloxicam' because it was causing widespread vulture deaths.

Which of the statements given above are correct?

- a) 1 and 3 only
- b) 1, 2 and 4 only
- c) 2, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) a

Exp) Option a is the correct answer.

India has nine species of vultures in the wild. However, there has been a constant decline in their population pushing them to the brink of extinction. Diclofenac Sodium, a non-steroidal anti-inflammatory drug administered to reduce inflammation and to reduce pain in certain conditions, is a probable cause for the decline.

Statement 1 is correct: Vulture Safety Zones aims to **establish targeted awareness activities surrounding 150 km radius of vultures' colonies so that no diclofenac or the veterinary toxic drugs are found in cattle carcasses.** The VSZ is spread around in several hundred kilometres covering the Jim Corbett in Uttarakhand, Dudhwa and Kartamiaghat forest reserves in UP which is adjoining the Indo-Nepal border.

Statement 2 is incorrect: Saving Asia's Vultures from Extinction (**SAVE**) is a consortium of like-minded, regional and international organizations, created to oversee and coordinate conservation, campaigning and fundraising activities to **help the plight of South Asia's vultures.** Partners involved in this consortium are **Bird Conservation Nepal, Bombay Natural History Society, International Centre for Birds of Prey (UK), National Trust for Nature Conservation (Nepal), Royal Society for the Protection of Birds (UK).**

Statement 3 is correct: Recently, the Ministry for Environment, Forests and Climate Change launched a **Vulture Action Plan 2020-25** for the conservation of vultures in the country. It proposes to **establish Vulture Conservation Breeding Centres in Uttar Pradesh, Tripura, Maharashtra, Karnataka and Tamil Nadu.** There would also be a conservation breeding programme for the Red Headed vulture and Egyptian vulture, and at least one "Vulture Safe Zone" in every State for the conservation of the remnant populations.

Statement 4 is incorrect: Diclofenac was banned in 2006 for animal use because it caused widespread vulture deaths. A replacement drug was quickly developed and proposed after tests on vultures in captivity: meloxicam. **Meloxicam affects cattle the same way as diclofenac but is harmless for vultures.**

Source: ForumIAS red book on environment

<https://www.downtoearth.org.in/news/wildlife-biodiversity/conservation-plan-chalked-out-after-150-vultures-spotted-in-bihar-s-valmiki-tiger-reserve-77758>

Q.17) Which of the following statements are correct with reference to the Wild Life (Protection) Amendment Act, 2022?

1. The amendment has increased the number of schedules in the act to ten from previously six.
2. The act prohibited the commercial transfer of captive elephants for any purpose in India.
3. It empowers the Central government to regulate and stop the import and possession of invasive animal alien species.
4. Under the act, Gram Sabha has been given the powers to declare any animal as vermin.

Select the correct answer using the code given below:

- a) 1, 2 and 3 only
- b) 2 and 4 only
- c) 1, 3 and 4 only
- d) 3 only

Ans) d

Exp) Option d is the correct answer.

Recently, Parliament of India passed the **Wild Life (Protection) Amendment Bill, 2022** which seeks to give effect to India's obligations under the Convention on International Trade on Endangered Species of Wild Fauna and Flora ('CITES').

Statement 1 is incorrect: Previously, there were six schedules under wildlife act: protected plants (one), specially protected animals (four), and vermin species (one).

The new act **reduces the total number of schedules to four** by: (i) reducing the number of schedules for specially protected animals to two (one for greater protection level), (ii) removes the schedule for vermin species, and (iii) **inserts a new schedule for specimens listed in the Appendices under CITES (scheduled specimens).**

Statement 2 is incorrect: In 2003, Wild Life (Protection) Act was **amended to prohibit trade in all captive wildlife and any (non-commercial)** transfer across state boundaries without permission from the concerned chief wildlife warden. Now, the **Wildlife Protection Act, 2022 permits the transfer or transport of a captive elephant for a religious or any other purpose by a person having a valid certificate of ownership.**

Statement 3 is correct: The act empowers the **central government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species.** Invasive alien species refers to plant or animal species native to India and whose introduction may adversely impact wildlife or its habitat. The central government may authorize an officer to seize and dispose the invasive species.

Statement 4 is incorrect: The Wild Life (Protection) Amendment Act, 2022 makes a significant amendment as it reduces the number of schedules from six to four. The Act seeks to do away with Schedule V for vermin species entirely. This gives the **Centre direct power to declare any species to be 'vermin'** and make way for them to be freely hunted. Thus, declaring any species as vermin becomes easier.

Source: <https://prsindia.org/billtrack/the-wild-life-protection-amendment-bill-2021>

<https://blog.forumias.com/parliament-passes-wildlife-bill-questions-remain-on-elephants-vermin/>

Q.18) With reference to 'National Board for Wildlife', consider the following statements:

1. It is a statutory board constituted under the Wild Life (Protection) Act, 1972.
2. The Minister in charge of the Ministry of Environment, Forest and Climate Change acts as a chairperson of the board.
3. The board's approval is necessary for any changes in the boundaries of the protected areas in India.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Statement 1 is correct: The National Board for Wildlife (NBWL) is a **"statutory board" constituted under the Wild Life (Protection) Act, 1972.** However, it is important to point out that the wildlife act, as originally enacted in 1972, did not provide for the NBWL. It was only through an amendment of the wildlife act in 2002 that the NBWL was constituted.

Statement 2 is incorrect: The board is a 47-member committee, **headed by the Prime Minister and the minister of environment, forest and climate change (environment minister) as vice chairperson.** In addition to offices and institutions directly involved in conservation and protection of wildlife, the NBWL also has the chief of army staff, defense secretary, expenditure secretary to Government of India as members.

Statement 3 is correct: Any changes to the boundaries of national parks, wildlife sanctuaries, and other protected areas **must be approved by the board.** This is to ensure that wildlife habitats are protected and preserved for future generations. No alteration of boundaries of the protected areas in India is possible without the approval of the National Board of Wildlife.

Source: <https://www.downtoearth.org.in/news/wildlife-biodiversity/national-board-for-wildlife-hasn-t-met-even-once-since-2014-70374>

<https://www.epw.in/journal/2021/3/insight/national-board-wildlife-and-illusion-wildlife.html>

Q.19) With reference to 'Coastal Regulation Zones in India', consider the following statements:

1. The rules of coastal regulation zones in India are issued under the Environment Protection Act, 1986.
2. State governments in India are responsible for preparing Coastal Zone Management Plans.
3. Coastal Regulation Zone (CRZ) norms 2019 provides for No Development Zone (NDZ) of 20 meters for all Islands close to the mainland coast.

Which of the statements given above is/are correctly matched?

- a) 1 only
- b) 2 and 3 only
- c) 2 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Coastal Regulation Zone (CRZ) in India is a coastal area demarcated with an aim to regulate coastal development activities in order to balance development and environmental concerns, particularly in areas close to the coast and in ecologically sensitive areas. CRZ is divided into **four categories, CRZ I, CRZ II, CRZ III and CRZ IV**, based on population density and ecological sensitivity.

Statement 1 is correct: In 1991, the Government of India issued a **notification under the Environment Protection Act, 1986 administered by the Ministry of Environment and Forests (MoEF)** to protect and conserve the environment and ecosystem on the coastline of the country.

Accordingly, to the notification, the coastal land up to 500m from the High Tide Line (HTL) and a stage of 100m along banks of creeks, estuaries, backwaters and rivers subject to tidal fluctuations, is called the Coastal Regulation Zone (CRZ).

Statement 2 is correct: State governments are responsible for **preparing Coastal Zone Management Plans (CZMP) and implementing the CRZ rules** through their respective Coastal Zone Management Authorities.

Statement 3 is correct: According to the Coastal Regulation Zone (CRZ) norms 2019 there is **no Development Zone (NDZ) of 20 meters** for all Islands. It has been stipulated in wake of space limitations and unique geography of such regions.

Q.20) With reference to 'Indian star tortoise', consider the following statements:

1. They are endemic to the wetland and surrounding regions of Western Ghats of India.
2. Their typical habitat includes scrub forests and rocky outcroppings.
3. They are categorized as 'Critically Endangered' in IUCN Red list.
4. They are losing genetic diversity due to subsequent hybridization over the years.

Which of the statements given above are correct?

- a) 1 and 3 only
- b) 2 and 4 only
- c) 3 and 4 only
- d) 1, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

A new study on the Indian Star Tortoise (*Geochelone elegans*) has found that illegal trade and unscientific translocations are causing major losses to the species' genetic diversity and habitat.

Statement 1 is incorrect: Indian star tortoises are found across the Indian subcontinent, more specifically, in the Central and Southern parts of India, in West Pakistan and in Sri Lanka.

Statement 2 is correct: Indian star tortoises is typically found in dry, open habitats such as scrub forests, grasslands, and rocky outcroppings.

Statement 3 is incorrect: They are categorized as 'Vulnerable' in IUCN Red list. Convention on International Trade in Species (CITES): Appendix I

Statement 4 is correct: The species is facing twin challenges of a threat to its habitat at one level and loss of its genetic diversity at the other. Their highly fragmented habitat of the species is greatly influenced by an increased level of urbanization and agricultural practices. Due to subsequent hybridization of these species over the years, Indian star tortoises have lost genetic diversity. Also, according to the Wildlife Crime Control Bureau, 90% of the trade of Star Tortoise occurs as part of the international pet market. Source: <https://www.thehindu.com/sci-tech/energy-and-environment/indian-star-tortoise-faces-twin-challenges-of-habitat-loss-and-genetic-diversity-finds-study/article66397486.ece>

Q.21) Which of the following can be threats to the biodiversity of a geographical area?

- 1. Global warming
- 2. Fragmentation of habitat
- 3. Invasion of alien species
- 4. Promotion of vegetarianism

Select the correct answer using the codes given below:

- a) 1, 2 and 3 only
- b) 2 and 3 only
- c) 1 and 4 only
- d) 1, 2, 3 and 4

Ans) a

Exp) Option a is the correct answer.

Promotion of vegetarianism is not a threat to the biodiversity of a geographical area.

Statement 1 is correct. Global warming can lead to loss of biodiversity. A 3.2-degree Celsius increase in the Earth's temperature could see 47 per cent of insect species, 26 per cent of vertebrate and 16 per cent of plant species lose at least half of their geographic ranges.

Statement 2 is correct. Fragmentation is often defined as a decrease in some or all types of natural habitats in a landscape, and the dividing of the landscape into smaller and more isolated pieces. As the fragmentation process develops, the ecological effects will change. Fragmentation can be caused by natural processes such as fires, floods, and volcanic activity, but is more commonly caused by human impacts. Fragmentation of habitat reduces species diversity, simply by shrinking the contiguous areas in which species using that habitat can live.

Statement 3 is correct. Invasive alien species are animals, plants, fungi and microorganisms entered and established in the environment from outside of their natural habitat. They reproduce rapidly, out-compete native species for food, water and space, and are one of the main causes of global biodiversity loss.

Statement 4 is incorrect. Promotion of vegetarianism is not a threat to the biodiversity of a geographical area. Promotion of vegetarianism has the potential to lower greenhouse gas emissions, reduce environmental degradation, and thus prevent biodiversity loss.

Source) UPSC CSE Pre 2012

Q.22) With reference to 'Forest Rights Act, 2006', consider the following statements:

1. The Act derecognized any ownership of forest land.
2. The act defined the criteria for the person to be categorized as a "forest dweller" in India.
3. Traditional nomadic or pastoralist communities are excluded from the purview of the act.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 2 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

The Forest Rights Act, 2006 is a legislation passed by the government of India in 2006 to recognize and vest the forest dwelling Scheduled Tribes and Other Traditional Forest Dwellers with individual and community forest rights.

Statement 1 is incorrect: The Forest Rights Act (FRA), 2006 recognised rights of Forest land in forest Dwelling Scheduled Tribes (FDST) and Other Traditional Forest Dwellers (OTFD). It gives them the right to ownership to land farmed by tribals or forest dwellers **subject to a maximum of 4 hectares**.

Statement 2 is correct: The Forest Rights Act defines the criteria for a person to be categorized as a "forest dweller" in India, which includes **Scheduled Tribes and other traditional forest dwellers** who have been residing in forests for generations.

Statement 3 is incorrect: The act **applies to traditional nomadic or pastoralist communities**, and they are not excluded from its purview. Special provision has been laid down in the act for the lands of traditionally nomadic or pastoralist communities which do not follow a culture of settled agriculture and move to different places along with their herds.

Source:

<https://tribal.nic.in/FRA.aspx#:~:text=The%20Act%20encompasses%20Rights%20of,Pastoral%20community%2C%20access%20to%20biodiversity%2C>

Q.23) The Foreign Trade Policy brought out under the provisions of the Foreign Trade (Development & Regulation) Act 1992, regulates the import and export of all goods including Wild Life. In this context which of the following items are completely prohibited from exports from India?

1. Handicrafts and articles of peacock tail feathers
2. Manufactured Articles of shavings of shed antlers of chital
3. Sea shells, including polished sea shells
4. Sandalwood oil
5. Red Sanders wood

Select the correct answer from the code given below:

- a) 1, 3 and 5 only
- b) 2, 3 and 4 only
- c) 1, 2, 3 and 5 only
- d) 1, 2, 3, 4 and 5

Ans) c

Exp) Option c is the correct answer.

Foreign Trade Policy announced periodically by the Ministry of Commerce contains, inter alia, information regarding the Wildlife and Wildlife products which are either prohibited or permitted for the purpose of import or export. It also contains the conditions (which include compliance with CITES) governing import and export of permissible species of Wildlife and Wildlife products. The policy is decided in consultation with the Management Authority for CITES in India as far as matter relating to wild fauna and flora are concerned and is enforced through the Customs Act, 1962. The Foreign Trade Policy is brought out under the provisions of the Foreign Trade (Development & Regulation) Act 1992, and it regulates the import and export of all goods including Wild Life.

Following items are prohibited in the flora and fauna category:

- 1) Human skeletons
- 2) **Peacock Tail Feathers**
- 3) **Handicrafts and articles of peacock tail feathers**
- 4) **Shavings and Manufactured Articles of shavings of shed antlers of chital and sambhar**
- 5) **Sea shells, including polished sea shells** and handicrafts made out of those species included in the Schedules of the Wild Life (Protection) Act, 1972.
- 6) Sandalwood in any form, but **excluding finished handicraft products of sandalwood, machine finished sandalwood products, sandalwood oil (Thus Option 4 is incorrect)**
- 7) **Red Sanders wood in any form**, whether raw, processed or unprocessed
- 8) Wood and wood products in the form of logs, timber, stumps, roots, bark, chips, powder, flakes, dust, and charcoal.

Hence, Options 1, 2, 3 and 5 only are correct.

Source: <https://customsandforeigntrade.com/Find%20Export%20Policy.pdf>

Q.24) Consider the following statements regarding Elvira Rat (*Cremnomys Elvira*):

- 1. This species is endemic to the Western Ghats of India.
- 2. It is listed as 'Vulnerable' in the IUCN Red List.
- 3. Agricultural activities are among the major threats to this species.

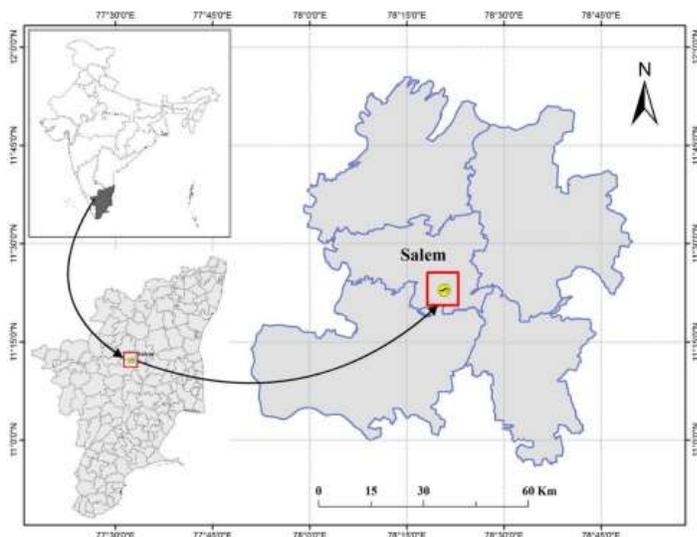

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: Elvira Rat is **endemic to the eastern ghats** (and not western ghats). It is found only **in the Eastern Ghats of Tamil Nadu**. These rats live **within rocks or rocky crevices** in few isolated areas of Shervaroys. They are also called as **rock rats**.

Statement 2 is incorrect: The species is listed as '**critically endangered**' because its **extent of occurrence is less than 100 sq. km**. All individuals are in a single location and there is a continuing decline. Further, as per IUCN, the population of Elvira rat is showing declining trend due to insufficient measures taken for their protection.

Statement 3 is correct: The natural habitats of Elvira rats are modified in most of the areas and are used for **coffee plantations and estates**. There is also **intensive grazing**, which alters the natural vegetation. This threatens the survival of these rats. Other threats include- **forest fires, roadkill, rodent diseases, chemical pollution, logging, climate change etc.**

Source: <https://www.iucnredlist.org/species/5514/22417451>

https://www.edgeofexistence.org/wp-content/uploads/2019/04/Survival_Blueprint_2021_ElviraRat_India.pdf

Q.25) With reference to 'Securities Market', which one of the following statements correctly explains the term 'Short Selling'?

- It is a strategy of buying stocks and holding them for long-term growth for profit maximization.
- It is a technique of borrowing shares and selling them in the hope of buying them back at a lower price.
- It is a trading mechanism that aims to invest in commodities and currencies when they are at lower value.
- It is a practice of buying stocks at a higher price and selling them at a lower price.

Ans) b

Exp) Option b is the correct answer.

Recently, Hindenburg Research has accused the Adani Group of fraud of short selling.

Short selling is a trading strategy where an **investor borrows shares of a stock they believe will decline in value, sells the stock, and then buys the stock back at a lower price to make a profit**. In other words, the investor is "betting against" the stock, as they are making money when the price of the stock goes down. While fundamentally it is based on the "**buy low, sell high**" approach, the sequence of transactions is reversed in short selling – to sell high first and buy low later. Also, in short selling, the trader usually does not own the securities he sells, but merely borrows them.

- To engage in short selling, an investor must first find a lender that is willing to lend the shares. The lender will usually require collateral from the investor to cover any potential losses if the price of the stock goes up instead of down.

2) If the price of the stock does decline as the investor expects, they can buy the shares back at the lower price, return the borrowed shares to the lender, and pocket the difference as profit.

Source: <https://indianexpress.com/article/explained/everyday-explainers/hindenburg-research-accused-the-adani-fraud-short-seller-8406285/>

Q.26) With reference to the Biosphere reserves (BR), consider the following statements:

1. Nilgiri was the first Biosphere Reserve notified in India.
2. A site to be recognised as BR must contain a protected and minimally disturbed core area.
3. Limited recreation, fishing and grazing activities are allowed in core zone of BR.
4. The management of BRs is the responsibility of the concerned State/UT.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 2, 3 and 4 only
- c) 1, 2 and 4 only
- d) 1, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Biosphere reserves are sites established by countries and recognized under UNESCO's Man and the Biosphere (MAB) Programme to promote sustainable development based on local community efforts and sound science.

Statement 1 is correct: Nilgiri is the first Biosphere Reserve in India which was notified in 1986. It contains part of Wayanad, Nagarhole, Bandipur and Madumalai, Nilambur, Silent Valley and Siruvani hills (Tamil Nadu, Kerala and Karnataka).

Statement 2 is correct: The criteria for selection of sites for BRs as laid down by the Core Group of Experts in 1979:

A site that must contain an effectively protected and minimally disturbed core area of value of nature conservation.

The core area should be typical of a biogeographical unit and large enough to sustain viable populations representing all tropic levels in the ecosystem.

Statement 3 is incorrect: The core zone should be kept absolutely undisturbed. **The core zone is to be kept free from all human pressures external to the system.** Strict nature reserves and wilderness portions of the area are designated as core areas of BR.

Statement 4 is correct: The Management of Biosphere Reserves is the responsibility of the concerned State/UT with necessary financial assistance, guidelines for management and Technical expertise provided by the Central Government. The **State Government** prepares the Management Action Plan which is approved and monitored by **Central MAB Committee**".

Shankar IAS Environment

http://www.wiienviis.nic.in/Database/BiosphereReserves_8225.aspx

Q.27) Consider the following statements regarding the uses of Seaweeds:

1. They can be used in the production of biofuels.
2. They can be used as a source of food for humans.
3. They can be used as building materials in the construction industry.
4. They can be used as fertilizers in agriculture.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 4 only
- c) 1, 3 and 4 only
- d) 1, 2, 3 and 4

Ans) d

Exp) Option d is the correct statement.

Seaweed is the common name for countless species of marine plants and algae that grow in the ocean as well as in rivers, lakes, and other water bodies.

Statement 1 is correct: Seaweeds being non-lignocellulosic, are considered as **3rd generation of biofuel feedstock** along with microalgae. Red marine seaweed is gaining popularity as a viable and promising renewable source for biofuels production.

Statement 2 is correct: Seaweeds can be used as a source of food for humans. Seaweeds have been used in human diet since ancient times. Seaweeds are a good source of nutrients such as proteins, vitamins, minerals, and dietary fiber.

Statement 3 is correct: Seaweeds have been traditionally used in the **vernacular architecture** (eg. Danish Islands). For example, **eelgrass was used mainly for house cladding**. Seaweed has some important advantages: it is non-toxic and fireproof, provides good insulation, reduces CO₂ emission, has a life expectancy of more than 150 years and the structures can be visually attractive. Thus, this forgotten building material which is not commonly used these days can promote sustainable construction.

Option 4 is correct: Seaweed fertilizer is organic fertilizer made from seaweed that is used in agriculture to increase soil fertility and plant growth. The high fibre content of the seaweed acts as a soil conditioner and assists moisture retention, while the mineral content is a useful fertilizer and source of trace elements. With the rising popularity of organic farming, there has been increase in the demand for seaweed for the fertilizer industry.

Source:

<https://www.sciencedirect.com/science/article/pii/B978032388427300012X#:~:text=Seaweeds%20being%20non%2Dlignocellulosic%2C%20are,for%20other%20forms%20of%20biofuels.>

https://www.researchgate.net/publication/276936165_Possible_Application_of_Seaweed_as_Building_Material_in_the_Modern_Seaweed_House_on_Laeso

<https://www.fao.org/3/y4765e/y4765e04.htm>

Q.28) How does a National Park different from a Wildlife Sanctuary?

1. Only State Governments can declare an area as a 'Wildlife Sanctuary', whereas only Central government can declare an area as a 'National Park'.
 2. Grazing of livestock may be permitted in the Wildlife Sanctuary, but it is prohibited in the National Park.
- Select the correct answer using the code given below:

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

The provisions relating to the declaration and governance of the National Parks and Wildlife sanctuaries are contained in the **Wildlife Protect Act, 1972**. Apart from these protected areas, the Act also deals with the declaration and management of the conservation reserves and community reserves.

Statement 1 incorrect: Both National Parks and Wildlife Sanctuaries can be declared by the **state governments** through an official notification. **Section 38 also gives powers to central government** to declare areas as Sanctuaries or National Parks in certain circumstances. Hence, generally state government declares an area as National Park or sanctuary, but central government can also declare.

Statement 2 is correct: The Chief Wildlife Warden may regulate, control or prohibit grazing activities in a wildlife sanctuary (Section 33), whereas **grazing of livestock is strictly prohibited in a National Park (Section 35(7))**.

Source: https://legislative.gov.in/sites/default/files/A1972-53_0.pdf

Q.29) In relation to environment and ecology, which of the following statements are correct regarding the Equatorial Region?

- The region did not witness any of the five mass extinctions that occurred on Earth so far.
- The higher rainfall in this region makes the soil very fertile.
- There is a presence of warm climate and high primary productivity in the region.
- Humus is rich in this region because of the slower rate of decomposition.

Ans) c

Exp) Option c is the correct answer.

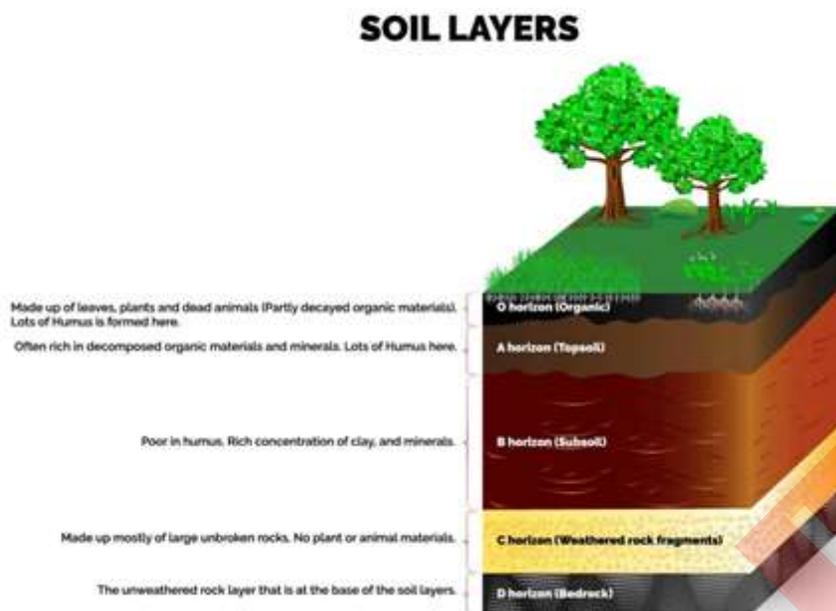

Equatorial regions are located in a band around the Equator and cover about 6% of the Earth's surface.

Option a is incorrect: Mass extinctions were part of the regions near the equator too, for instance during the **Carboniferous period, rainforest collapse led to a great loss of plant and animal life**. Rapid environmental changes typically cause mass extinctions. Since life began on Earth, five major mass extinctions and several minor events have led to large and sudden drops in biodiversity.

Option b is incorrect: **The high rainfall in the equatorial region leads to high leaching of minerals and nutrients from the soil**. This causes soil in the region to be less fertile compared to areas with lower rainfalls such as the Grassland ecosystem.

Option c is correct: Biodiversity is usually greater near the equators because of **warm climate and high primary productivity** in the region. **Net primary production is higher at the equator** because this area is **warmer**, which allows **photosynthesis** to occur year-round. This region of the planet **receives more of the sun's energy per square metre** than other higher latitude regions of the planet

Option d is incorrect: Regions near the equator are **marked with absence of soil surface** because of the higher rate of decomposition. The activity of microorganisms enhanced by the favourable warm and humid climate leads to faster decomposition of any organic matter which results in **the absence of a humus**. **Humus is an organic component of soil, formed by the decomposition of leaves and other plant material by soil microorganisms.**

Source: <https://sites.lsa.umich.edu/twentytwenty-one/research/biodiversity/#:~:text=Biodiversity%20is%20a%20measure%20of,climate%20and%20high%20primary%20productivity.>

<https://education.nationalgeographic.org/resource/grasslands-explained#:~:text=with%20moderate%20rainfall%E2%80%94,heavy%20rain,-can%20wash%20away>

<https://education.nationalgeographic.org/resource/humus>

Q.30) Consider the following statements:

Statement 1:

The night-time production of nitrate radicals is considered to be harmful for human health.

Statement 2:

Nitrate radical oxidizes gas pollutants such as volatile organic compounds which then generate ozone

Which one of the following is correct in respect of the above statements?

- Both Statement 1 and Statement 2 are correct and Statement 2 is the correct explanation of Statement 1
- Both Statement 1 and Statement 2 are correct and Statement 2 is not the correct explanation of Statement 1
- Statement 1 is correct but Statement 2 is not correct
- Statement 1 is not correct but Statement 2 is correct

Ans) a

Exp) Option a is the correct answer.

According to a new study published in Nature Geosciences, the nighttime production of nitrate radicals could make it difficult to improve India's air quality. A new study has found that parts of India and China are hotspots for the night-time production of nitrate radicals that can increase the amount of deadly ozone and PM2.5 particulate matter in the atmosphere.

Both Statement 1 and Statement 2 are correct and Statement 2 is the correct explanation of Statement 1:

Nitrate radical is an **oxide of nitrogen that consists of three oxygen atoms** bound to a nitrogen atom. Nitrogen oxides are reactive gases that regulate the formation of air pollutants, including ozone and PM2.5

particles. Nitrate **radicals will oxidize gas pollutants such as volatile organic compounds (VOCs), which will then generate ozone and secondary organic aerosol.** Ozone is an air pollutant that affects human health and crop yield. Secondary organic aerosol is an important component of PM2.5

Source: <https://indianexpress.com/article/technology/nitrate-radical-production-pollution-india-china-8406729/>

Q.31) The Himalayan Range is very rich in species diversity. Which one among the following is the most appropriate reason for this phenomenon?

- It has high rainfall that supports luxuriant vegetative growth
- It is a confluence of different bio-geographical zones
- Exotic and invasive species have not been introduced in this region
- It has less human interference

Ans) b

Exp) Option b is the correct answer.

Himalayan forests nurture staggering diversity of life forms. It has biodiversity richness across longitudinal and altitudinal gradients, and are therefore classified as one of the 36 global biodiversity hotspots. One of the most important reasons for this species diversity is that the Himalayas is a confluence point for different bio-geographical zones. In addition, it is at confluence of the two of the world's main bio-geographical regions, the palearctic and oriental realms.

Nearly 50 per cent of India's total flowering plants grow in the Himalayas, of which 30 per cent are endemic to the region.

Source) UPSC CSE Pre 2011

Q.32) With reference to the parameters used for measuring Biodiversity, consider the following pairs:

Parameters	Description
1. Alpha diversity	It is a measure of the genetic diversity within a particular species.
2. Beta diversity	It is a measure of species diversity within a particular ecosystem.
3. Gamma diversity	It is a measure of overall diversity for the different ecosystems within a region.

How many pairs above are correctly matched?

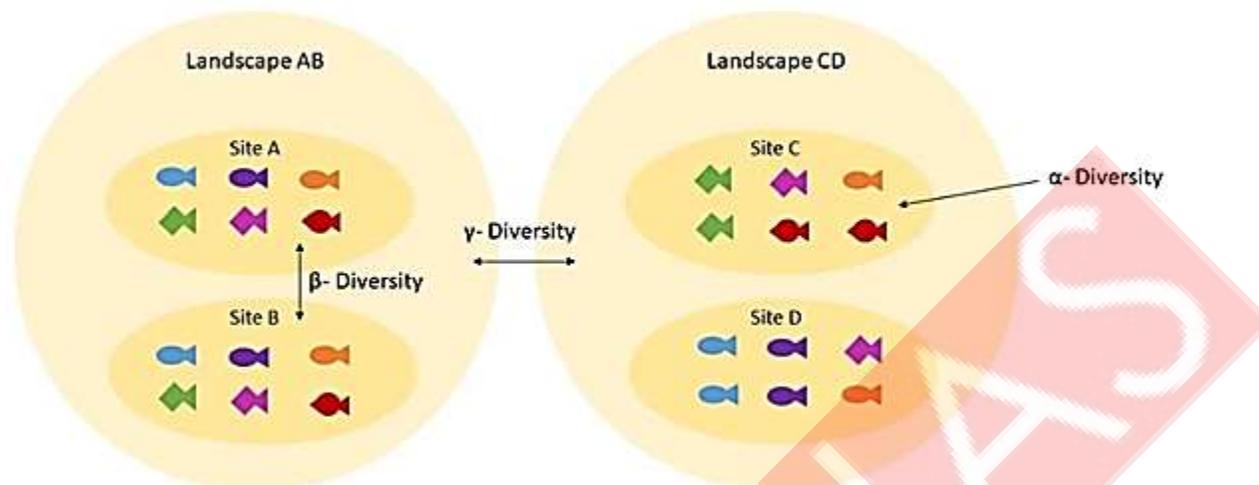

- Only one pair
- Only two pairs
- Only three pairs
- None of the pairs

Ans) a

Exp) Option a is the correct answer.

Biodiversity is measured using **species richness**. Species richness is the number of different species

represented in an ecological community, landscape or region.

Pair 1 is incorrect: Alpha diversity refers to the **species diversity within a particular ecosystem** whereas **Genetic diversity is a variability of genes within a particular species**. It is usually expressed by the number of species i.e., species richness in that ecosystem. For instance if **Corbett National Park has only tiger and deer species then the Alpha diversity is 2**.

Pair 2 is incorrect: Beta diversity refers to the **species diversity between the ecosystems**. In beta diversity we are counting the total number of species that are **unique** to each of the ecosystems being compared.

Pair 3 is correct: Gamma diversity is a **measure of the overall diversity for the different ecosystems within a region**.

Source: Forum IAS red book- Pg no 41

Q.33) With reference to Biogeographic Realm, consider the following statements:

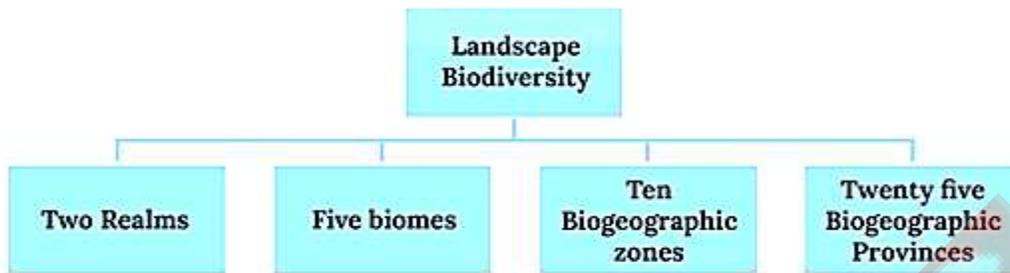

1. It is a large spatial region within which ecosystems share a broadly similar biological evolutionary history.
2. India is represented by two realms i.e., Palearctic Realm and Malayan Realm.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: Biogeographic realms are large spatial regions within which ecosystems share a broadly similar biota. Realm is a continent or sub-continent sized area with unifying features of geography and fauna & flora. Biogeographic realms are large spatial regions within which ecosystems share a broadly similar biological evolutionary history.

Statement 2 is correct. The Indian region is composed of two realms. They are:

- 1) the Himalayan region represented by **Palaearctic Realm** and
- 2) the rest of the sub-continent represented by **Malayan Realm**.

Source: Forum IAS red book - Pg no

Q.34) “These are a result of symbiotic association between fungi and plant roots. They are even considered as means for restoration and remediation of polluted environments because of its ability to accumulate heavy metals and radionuclide. Further they serve as an important source of food for certain invertebrate and vertebrate animals.”

The above paragraph best indicates which of the following organisms?

- a) Lichens
- b) Mycorrhizae
- c) Pneumatophores
- d) Ulva fasciata

Ans) b

Exp) Option b is the correct answer.

Option a is incorrect: Lichens are a result of **symbiotic association between algae and fungi**. Lichens serve as a good indicator of air pollution as they are **sensitive to Sulphur Dioxide**.

Option b is correct: **Mycorrhizae are a symbiotic association between plant roots and fungi**. The fungi colonise the root system of a host plant, providing increased water and nutrient absorption capabilities while the plant provides the fungus with carbohydrates formed from photosynthesis.

It is believed as a means for restoration and remediation of polluted environments because of its ability to **accumulate heavy metals and radionuclide**. Further they serve as an **important source of food for both invertebrate and vertebrate animals**.

Option c is incorrect: **Mangroves produce pneumatophores** (blind roots/aerial roots) to overcome respiration problems in anaerobic soil conditions or adventitious roots i.e, roots emerging from main trunk of the tree. Thus, **Pneumatophores are not a result of symbiotic association between plant and fungi**.

Option d is incorrect: Ulva fasciata, also known as sea lettuce, is a **common green alga** that is used for consumption in many parts of the world. Ulva fasciata has been **directly employed for adsorbing copper and zinc ions from water** but the uptake capacities are relatively low. This problem has been overcome by synthesising graphene-iron sulphide nanocomposite from this seaweed using **pyrolysis technique**.

Source: <https://www.sciencedirect.com/topics/agricultural-and-biological-sciences/mycorrhizae#:~:text=Mycorrhizae%20are%20a%20symbiotic%20association,host%20plant%20and%20fungal%20taxonomy.>

Q.35) Which one of the following statements most appropriately describe the term ‘Doxxing’, recently seen in news?

- It is the practice of publicly identifying and sharing private information about an individual or organization.
- It is a platform build by Google Inc that aims to protect personal information online using quantum sensing technologies.
- It is a type of online scam with the goal of obtaining money or personal information from victims.
- It is a newly developed system language that can be used for higher memory Artificial Intelligence operations.

Ans) a

Exp) Option a is the correct answer.

Doxxing, also known as "doxing," is the **practice of publicly identifying and sharing private or identifying information** about an individual or organization, typically with **malicious intent**. This can include things like a **person's full name, home address, phone number, email address, and other personal details**. Doxxing can be very harmful, as it can lead to harassment, stalking, and even physical harm. It is important to be careful about what personal information you share online, and to be mindful of who you share it with. Doxxing is not illegal, because there are **no specific anti-doxxing laws** in most jurisdictions. Instead, the legality of doxxing is determined on a case-by-case basis. While compiling or publishing publicly available information is rarely illegal, there are other crimes that doxxers can be charged for. Those crimes include stalking, harassment, identity theft, or incitement to violence.

Source: <https://indianexpress.com/article/explained/explained-sci-tech/doxxing-why-twitter-suspended-accounts-of-several-journalists-8329004/>

<https://www.avast.com/c-what-is-doxxing>

Q.36) Consider the following statements regarding the ‘Marine Protected Areas (MPAs)’:

- The Wildlife (Protection) Act, 1972 defines MPAs as “areas declared by the appropriate government and extends up to 24 nautical miles.”
- MPAs can be declared both as National Park or as Wildlife Sanctuary.
- Mahatma Gandhi Marine National Park is located on the Andaman Islands.

Which of the statements given above are correct?

- 1 and 2 only
- 2 and 3 only
- 1 and 3 only
- 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

India has a large coastline of more than 7500 km. Various measures have been taken to preserve coastal biodiversity, including declaration of certain areas as Marine Protected Areas (MPAs)

Statement 1 is incorrect: The Wildlife Protection Act, though provide regulations pertaining to the territorial waters, but it **does not explicitly define a marine protected area**. Generally, A Marine Protected Area is a zone in the ocean or littoral area where anthropogenic activities are regulated more strictly than the surrounding waters. These places are given special protections for marine wildlife by the national, regional, state, and local authorities.

Statement 2 is correct: India has MPAs declared both as national parks and sanctuaries. Some examples are:

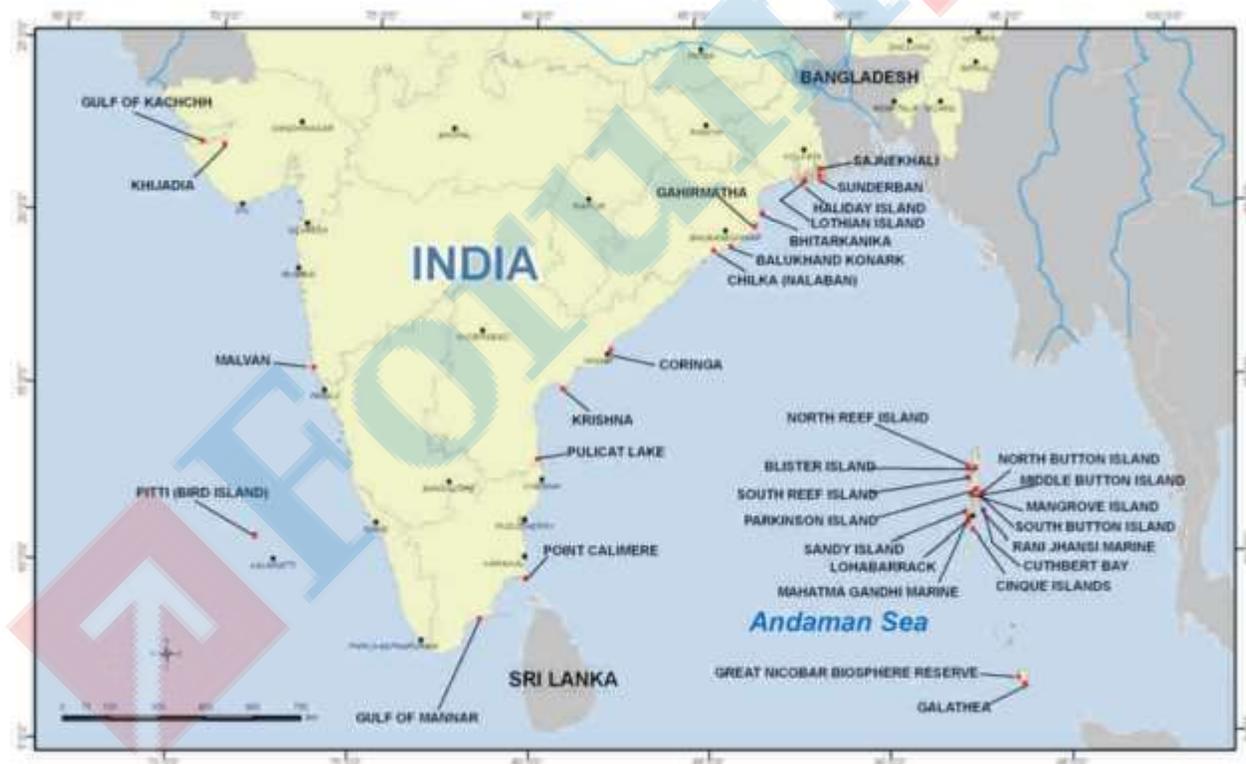

Marine National Parks

Marine Sanctuaries

- 1) Bhitarkanika (Odisha)
- 2) Gulf of Kutch (Gujarat)
- 3) Sunderbans (West Bengal)
- 4) Gulf of Mannar (Tamil Nadu)
- 5) Thane Creek Flamingo Sanctuary (Maharashtra)
- 6) Gahirmatha (Odisha)
- 7) Fudam (Daman and Diu)
- 8) Coringa (Andhra Pradesh)

Statement 3 is correct: Mahatma Gandhi Marine National Park is located **on the Andaman Islands**. The park was created **to protect corals and nesting sea turtles** prevalent in this area.

Knowledge Base: Important Marine Protected Areas:

(Source: <https://wii.gov.in/images/images/documents/GIZ/Reference.pdf>)

Forumias Red Book

Q.37) With reference to the effect of intensity of light on growth of plants, consider the following statements:

1. Blue spectrum of the light always reduces the water retention capacity of the leaves.
2. The combination of red and blue light in the equal ratio can promote the light absorbing capacity of the plants.
3. Generally, plants grown in violet light are dwarf.

Which of the statements given above is/are correct?

- a) 1 and 3 only
- b) 2 and 3 only
- c) 3 only
- d) 1 and 2 only

Ans) b

Exp) Option b is the correct answer.

As a primary source of energy, light is one of the most important environmental factors for plant growth. The intensity and quality of light are essential for the growth and other physiological responses of plants.

Statement 1 is incorrect: Blue spectrum of the light will likely result in the **increased water retention capacity of the leaves**. Blue spectrum will increase the **thickness of the epidermis** in plants. The epidermis provides a **protective barrier against water loss and also it acts as a barrier against mechanical injury, and infection**.

Statement 2 is correct: The **combination of red and blue in 1:1** ratio might **promote specific leaf area of a plant which in turn will increase the light absorbing capacity of the plants**. The percentage absorption of blue or red light by plant leaves is about 90%. Thus, the combination of red and blue light was considered as an effective lighting source to plant development.

Statement 3 is correct: It is true that generally **plants grown in violet light and UltraViolet (UV) lights are dwarf**.

Source: <https://www.sciencedirect.com/science/article/abs/pii/S0304423813000332>

Q.38) Consider the following statements with reference to the Biodiversity Hotspots:

1. To be declared as biodiversity hotspot, a region must show no species endemism.
2. All the Hotspot regions of the world are confined within the tropics.
3. The list of biodiversity hotspot is prepared by IUCN.
4. The Critical Ecosystem Partnership Fund (CEPF) provides grants to protect the biodiversity hotspots.

Which of the statements given above is/are correct:

- a) 1 and 4 only
- b) 4 only
- c) 2 and 3 only
- d) 1, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

Biodiversity hot spot concept was put forth by Norman Myers in 1988. A Biodiversity Hotspot is a biogeographic region with significant levels of biodiversity (with relatively high species richness) that is threatened by human habitation.

Statement 1 is incorrect: As per Conservation International, to qualify as a Biodiversity Hotspot, a region must qualify two strict criteria:

- 1) **Species Endemism:** It must contain at least **1500 species of vascular plants as endemics**.

2) Degree of threat: It must have **30% or less of its original natural vegetation**. In other words, it must be threatened.

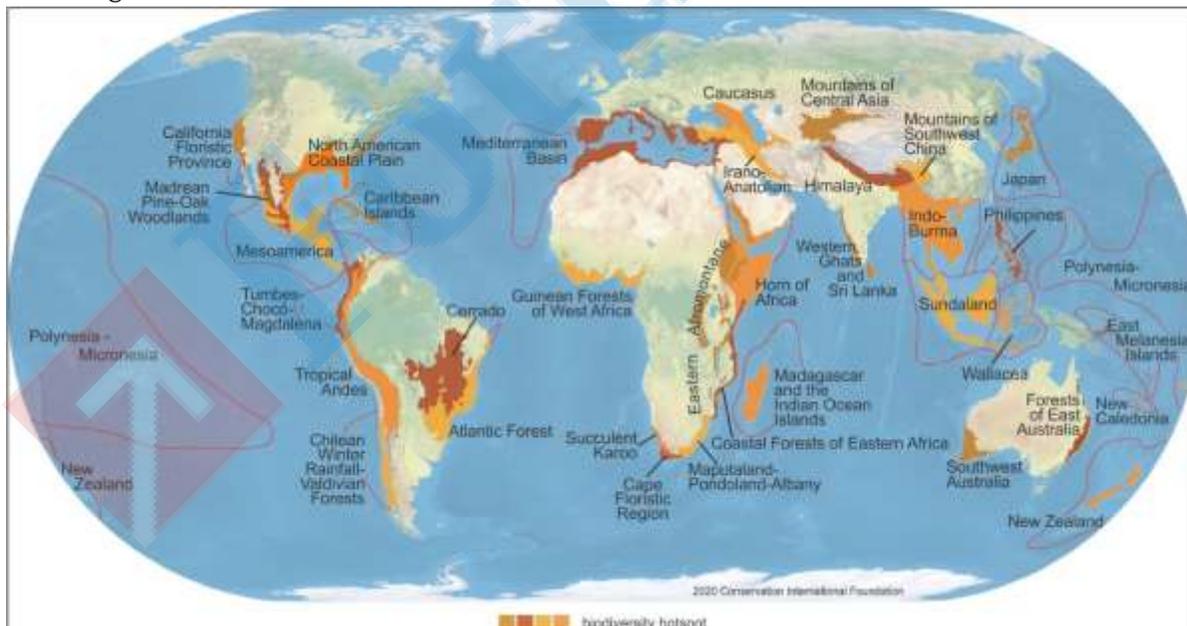

Statement 2 is incorrect: A Biodiversity Hotspot is a biogeographic region with significant levels of biodiversity that is threatened by human habitation. These are found **throughout the world** and not just confined to _____ to _____.

Statement 3 is incorrect: The list of Biodiversity hotspots is prepared by Conservation International (a non-profit environmental organisation). After adopting and reassessing Myer's concept of Biodiversity hotspots, it began preparation of a list of Biodiversity Hotspots, since 1989.

Statement 4 is correct: The Critical Ecosystem Partnership Fund (CEPF) is an alliance of leading conservation donors that provides grants to non-profit and private-sector organizations that are working to protect the biodiversity hotspots and improve human well-being.

Q.39) Consider the following statements about the Project Snow Leopard:

1. It is a global initiative for protection of Snow Leopard in the Himalayan region.
2. It will also restore degraded landscape in the high-altitude Himalayan region.
3. High altitude regions of Jammu and Kashmir, Himachal Pradesh, Uttarakhand, Sikkim and Arunachal Pradesh are included in the Project Snow Leopard.

Which of the statement given above is/ are correct?

- a) 1 and 2 only
- b) 3 only
- c) 1 and 3 only
- d) 2 and 3 only

Ans) d

Exp) Option d is the correct answer.

Snow leopards act as an indicator of the health of the mountain ecosystem in which they live, due to their position as the top predator in the food web. Hence, Project Snow Leopard had been launched for their conservation in 2009.

Statement 1 is incorrect: Project Snow Leopard is a Centrally Sponsored Scheme launched for protection and preservation of snow leopards. **It is an Indian initiative for strengthening wildlife conservation of the species in the Himalayan high altitudes.**

Statement 2 is correct: Project Snow Leopard will support efforts to design and implement restoration programmes in degraded areas that have restoration potential. Restoration projects whose need is adequately justified, and which are designed based on rigorous scientific research, would be supported.

Statement 3 is correct: It is operational in five Himalayan states and UTs- **Jammu & Kashmir (Including Ladakh), Himachal Pradesh, Uttarakhand, Sikkim and Arunachal Pradesh.**

Knowledge Base:

Along with these India also launched the project ‘Secure Himalayas’ in collaboration with UNDP to promote sustainable management of alpine pastures and forests in the high range Himalayan ecosystems to secure conservation of globally significant wildlife, including endangered snow leopard and their habitats.

Q.40) With reference to Indian Polity, ‘Rule 267 of the Rajya Sabha’, recently seen in news, deals with-

- a) suspension of the pre-decided agenda of the Rajya Sabha.
- b) reduction in the limit of the number of questions for oral answers in Rajya Sabha.
- c) suspension of the member who willfully abuses the rules of the Rajya Sabha.
- d) power of Chairman to adjourn the Rajya Sabha if he thinks it necessary to do so.

Ans) a

Exp) Option a is the correct answer.

Rules of Procedure and Conduct of Business in the Council of States (Rajya Sabha) have been formulated under Article 118 of the Constitution wherein each House of Parliament is required to make rules for regulating its procedure and conduct of business.

Statement a is correct: Under the Rule 267, **the Rule gives special power to a Rajya Sabha member to suspend the pre-decided agenda of the House**, with the approval of the Chairman. It says, “Any member, may, with the consent of the Chairman, move that any rule may be suspended in its application to a motion related to the business listed before the Council of that day and if the motion is carried, the rule in question shall be suspended for the time being.”

Statement b is incorrect: Rule 51A of the Rules of Procedure and Conduct of Business in the Rajya Sabha states regarding reduction in the limit of number of questions for oral answers to 15 from existing 20. Whereas, Rule 267 says about the suspension of the pre-decided agenda in the council of the states.

Statement c is incorrect: Rule 256 of the rules of Procedure and Conduct of Business provides suspension of member (1) The Chairman may, if he deems it necessary, name a member who **disregards the authority of the Chair or abuses the rules of the Council** by persistently and willfully obstructing the business thereof. (2) If a member is so named by the Chairman, he shall forthwith put the question on a motion being made, no amendment, adjournment or debate being allowed, that the member (naming him) be **suspended from the service of the Council for a period not exceeding the remainder of the Session**: Provided that the Council may, at any time, on a motion being made, resolve that such suspension be terminated.

Statement d is incorrect: Rule 257 of the rules of Procedure and Conduct of Business in the Rajya Sabha provides **power of Chairman to adjourn Council** or suspend sitting in the case of grave disorder arising in the Council. Whereas, Whereas, Rule 267 says about the suspension of the pre-decided agenda in the council of the states.

Source: 2510RS (Pre).p65 (rajyasabha.nic.in)

Q.41) Consider the following statements:

1. The definition of "Critical Wildlife Habitat" is incorporated in the Forest Rights Act, 2006.
2. For the first time in India, Baigas have been given Habitat Rights.
3. Union Ministry of Environment, Forest and Climate Change officially decides and declares Habitat Rights for Primitive and Vulnerable Tribal Groups in any part of India.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: The definition of "Critical Wildlife Habitat" is incorporated in the Forest Rights Act, 2006. Section 2(b) of the Act defines Critical Wildlife Habitats as follows: "Critical Wildlife Habitat".

Statement 2 is correct: The Baigas were discriminated against and often evicted from forest areas by government agencies. They became India's first community to get habitat rights. This tribe is found in Madhya Pradesh and Chhattisgarh.

Statement 3 is incorrect: The Ministry of Tribal Affairs is implementing the Scheme for Development of Particularly Vulnerable Tribal Groups (PVTGs), Under the Scheduled Tribes and Other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006 the District Level Committee shall ensure that all Particularly Vulnerable Tribal Groups receive habitat rights, in consultation with the concerned traditional institutions of Particularly Vulnerable Tribal Groups and their claims for habitat rights are filed before the concerned Gram Sabhas.

Source) UPSC CSE Pre 2018

Q.42) With reference to Forest Dieback Phenomenon, consider the following statements:

1. It refers to the phenomenon in which the crowns of trees in a region do not touch each other.
2. It is the natural mechanism of trees to defend themselves from pest attack and death.
3. It can adversely affect the symbiotic association of trees with other organisms.
4. Falling off of leaves and discoloration of leaves are the likely indicators of forest dieback phenomenon.

Which of the statements given above are correct?

- a) 1 and 3 only
- b) 2 and 4 only
- c) 3 and 4 only
- d) 1, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Forest dieback

Crown Shyness

Statement 1 is incorrect: Forest dieback is a condition in trees or woody plants in which peripheral parts are killed. In forest dieback there is a progressive dieback usually backwards from the tip of any portion of the trees. On the other hand, Crown shyness is a phenomenon observed in some tree species, in which the crowns of trees do not touch each other, forming a canopy with channel-like gaps.

Statement 2 is incorrect: Forest dieback is a death of trees due to various reasons such as frost, drought, grazing, dense overhead canopy etc. In contrast Crown shyness is an adaptive behaviour of trees to protect itself from pest attacks. This will inhibit the spread of leaf-eating insect larvae to spread from one leaf to other leaves.

Statement 3 is correct: Forest dieback can adversely affect the symbiotic association of trees. For instance, the symbiotic association established between trees and fungi- as the reduced photosynthesis of trees due to loss of leaves, will affect the fungi hosted by roots of trees. Without getting enough carbohydrates from the tree, fungi will eventually start dying.

Statement 4 is correct: Falling off of leaves and discoloration of leaves and needles are some of the indicators of forest dieback phenomenon. Others include the dead stands of trees of a certain age, and changes in the roots of the trees.

Source: <https://www.sciencedirect.com/science/article/abs/pii/S0378112718311034>

<https://www.nationalgeographic.com/science/article/tree-crown-shyness-forest-canopy>

Q.43) With reference to the various medicinal plants, consider the following pairs:

Medicinal Plants	Uses
1. Kuth	To improve digestion
2. Ladies Slipper Orchid	To treat insomnia
3. Sarpagandha	To treat hypertension

4. Himalayan Fritillary To treat pneumonia

5. Salamanja To treat chronic fever

How many pairs above are correctly matched?

- Only two pairs
- Only three pairs
- Only four pairs
- All the five pairs

Ans) d

Exp) Option d is the correct answer.

Medicinal plants refer to a variety of plants used for medicinal purposes and also it may be used as a component for producing modern drugs.

Pair 1 is correct: Kuths are found mainly in the region of Kashmir and Himachal Pradesh. Kuths are used as an **anti-inflammatory medication** and it is a component of traditional Tibetan medicine. The plant's roots are also used in **perfumery**. **Kuth helps to improve digestion** by preventing the growth of bacteria in the large intestine due to its antimicrobial and antibacterial properties.

Pair 2 is correct: Ladies Slipper Orchids are used either alone or as a component of formulas **intended to treat anxiety and insomnia**. This is also used as a plaster to **relieve muscular pain**.

Pair 3 is correct: Sarpagandha is being used to treat a variety of central nervous system disorders. The medicinal property of this plant is due to the presence of **reserpine**, which is used for its sedative action. The plant is used in the treatment of **hypertension, anxiety, and insomnia**. **Reserpine has a depressant effect on the central nervous system, causing sedation and lowering blood pressure.**

Pair 4 is correct: Himalayan fritillary is an herb and is used for the **treatment of pneumonia**. The plant is also a strong cough suppressant and a source of **expectorant drugs (used to lubricate human's airway)** in traditional Chinese medicine.

Pair 5 is correct: Salamanja is endemic to the Hindu Kush and Himalayan ranges of Afghanistan, Bhutan, China, **India**, Nepal, and Pakistan. It is used to **cure dysentery, gastritis, chronic fever, cough and stomach aches**.

Q.44) With reference to the species of Hornbill found in India, consider the following statements:

- Hornbills are found only within the North-East Region of India.
- Hornbills play an important role in biodiversity maintenance by acting as dispersers of plant seeds.
- All the species of Hornbill found in India have been designated as "Endangered" by the IUCN Red List.
- The Great Indian Hornbill is the state bird of Arunachal Pradesh.

Which of the statements given above are correct?

- 1 and 3 only
- 1, 2 and 4 only
- 2, 3 and 4 only
- 2 and 4 only

Ans) d

Exp) Option d is the correct answer.

Hornbills (Bucerotidae) are a family of bird found in tropical and subtropical Africa, Asia and Melanesia. They get their name from the horn-like structure on the top of their beak—the casque.

Statement 1 is incorrect: India has nine hornbill species, of which four are found in the Western Ghats: **Indian Grey Hornbill** (endemic to India), the **Malabar Grey Hornbill** (endemic to the Western Ghats), **Malabar Pied Hornbill** (endemic to India and Sri Lanka) and the widely distributed but endangered **Great Hornbill**. Five of the species are found in in eastern Arunachal Pradesh.

Statement 2 is correct: **Hornbills** play an essential role in biodiversity as dispersers of seeds of forest plants. They mostly eat fruits and thus act as an effective pollinator agent in the ecosystem.

Statement 3 is incorrect: Not all the species of Hornbill found in India have been designated as “Endangered” by the IUCN Red List. For instance, the Great Indian Hornbill is listed as ‘Vulnerable’ on the IUCN Red List of Threatened Species. The Indian Grey Hornbill is listed as ‘Least Concern’.

Statement 4 is correct: The Great Indian Hornbill is the state bird of Arunachal Pradesh and Kerala.

Source: <https://www.ncf-india.org/western-ghats/hornbill-hotspots>

<https://www.tourmyindia.com/states/nagaland/hornbill-festival.html#:~:text=HISTORY%20OF%20THE%20FESTIVAL>

Q.45) With reference to Autonomous District Councils (ADC’s) constituted under the 6th Schedule of the Indian Constitution, consider the following:

1. They are empowered to try both civil and criminal cases.
2. They can make rules for the control of trading by non-tribals in the autonomous area.
3. They can prescribe the language for primary schools with prior approval of the President.
4. They have the power to levy taxes on professions and employments.

Which of the statements given above are correct?

- a) 2, 3 and 4 only
- b) 1, 2 and 4 only
- c) 1, 3 and 4 only
- d) 1, 2 and 3 only

Ans) b

Exp) Option b is the correct answer.

The Sixth Schedule consists of provisions for the administration of tribal areas in Assam, Meghalaya, Tripura and Mizoram, according to Article 244 of the Indian Constitution. The tribal areas in the four states of Assam, Meghalaya, Tripura and Mizoram have been constituted as autonomous districts. The district and regional councils administer the areas under their jurisdiction.

Statement 1 is correct: Autonomous District Councils (ADC’s) can try both civil and criminal cases. District Council or the Regional Council of autonomous areas are being conferred with powers under the Code of Civil Procedure, 1908, and the Code of Criminal Procedure, 1898.

Statement 2 is correct: Autonomous District Councils are empowered to make regulations for the **control of money-lending and trading by non-tribals**. i.e. they may make rules for the regulation and control of money-lending or trading within the district by persons other than Scheduled Tribes resident in the district.

Statement 3 is incorrect: District Council for an autonomous district can construct, or manage primary schools, dispensaries, markets, ferries, fisheries, roads, road transport and waterways in the district. **And with the previous approval of the Governor (not President) may prescribe the language** and the way primary education shall be imparted in the primary schools in the district.

Statement 4 is correct: Autonomous District Councils have the power to levy and collect all the taxes on professions, trades, callings and employments.

Source: <https://www.mea.gov.in/Images/pdf1/S6.pdf>

Q.46) Consider the following statements regarding the Red Data Book of the International Union for Conservation of Nature (IUCN):

1. It shows the conservation status of animal, fungi and plant species.
2. Both the Bengal Florican and the Great Indian Bustard are listed on the 'pink pages' of the Red Data Book.
3. Species listed on the 'green pages' are no longer threatened.
4. The species listed as 'extinct' is known to only survive in captivity.

Which of the statements given above is/ are correct?

- a) 3 only
- b) 1, 2 and 3 only
- c) 1, 3 and 4 only
- d) 2 and 4 only

Ans) b

Exp) Option b is the correct answer.

The International Union for Conservation of Nature (IUCN) was established in 1948. The **Red Data Book was established in 1964** and is a critical indicator of the health of the world's biodiversity. It is a powerful tool to catalyze action for biodiversity conservation and policy change.

Statement 1 is correct: The Red Data book shows conservation status of- **the animals, fungi and the plants.** Hence, statement 1 is correct.

Statement 2 is correct: The **pink pages** contain list of **critically endangered species.** Both, the Bengal Florican and the Great Indian Bustard are critically endangered.

- 1) **Bengal Florican:** They are mainly found in grasslands. Their present population can be found in India, Nepal and Cambodia. In India, it is found in Uttar Pradesh, Assam and Arunachal Pradesh.

Bengal Florican

Great Indian Bustard

(Source: IUCN)

2) **Great Indian Bustard:** It is also a **grassland** species. The species is now principally found in **Rajasthan**. It is listed as 'Critically Endangered' on the IUCN Red List.

Statement 3 is correct: **Green pages** are used for those species that were **formerly endangered but have now recovered to a point where they are no longer threatened**. This is an indicator of recovery of the species' biodiversity.

Statement 4 is incorrect: A species is listed as '**extinct**' (**EX**) when **no individuals** of that species are known to survive. However, when a species is known **only to survive in captivity or in cultivation or as a naturalized population outside its historical range, it is classified as 'extinct in wild'** (EW).

Source: <https://www.iucnredlist.org/about/background-history>

Q.47) Consider the following conditions used for classification of a species by the International Union for Conservation of Nature (IUCN):

1. A 70% reduction in population size over the last 10 years, where the causes of reduction are reversible.
2. Extent of occurrence is not more than 20,000 square kilometers.
3. Population size estimated to be less than 250 mature individuals.
4. Probability of extinction in wild is at least 50% within 10 years.

Which of the condition(s) mentioned above can lead to the classification of a species under the '**endangered**' category of the IUCN Red List?

- a) 1 and 3 only
- b) 1 and 4 only
- c) 2 and 3 only
- d) 2 and 4 only

Ans) a

Exp) Option a is the correct answer.

IUCN uses complex, but well-defined criteria to classify the species under various categories like critically endangered, endangered, vulnerable etc. These are generally based on 5 parameters- population size reduction, geographic range, small population size and decline, very small or restricted populations and the quantitative analysis.

Statement 1 is correct: A species can be classified as endangered if it is **facing at least 70% population decline over the past 10 years of 3 generations**, and the causes of reduction are **reversible**. However, when the causes of reduction are **not reversible, even a 50% (or more) reduction can also put them in the endangered category**.

Statement 2 is incorrect: Geographic range of a species is also used for determining their status:

- 1) **Extent of occurrence:** A species can be given status of 'endangered' with their area of occurrence **falls below 5000 sq. km.** (If area of occurrence is **less than 20,000 sq. km**, a species can be classified as '**vulnerable**').
- 2) **Area of occupancy:** If a species occupies less than 500 sq. km., then also it qualifies as an 'endangered' category. But this is subject to other conditions also.

Statement 3 is correct: In cases where the population of **mature individuals falls below 250**, the species can be considered as endangered. (Note: In certain cases, if the population falls below 2,500 mature cases, then also it can be classified as an endangered species. But this is subject to other conditions).

Statement 4 is incorrect: If the quantitative analysis indicates that the probability of extinction in wild is **at least 20% in 20 years or 5 generations**, then the species is considered as the endangered species. In cases where **probability of extinction is at least 50% in 10 years or 3 generations, the species is classified as critically endangered**. Hence, the given statement is incorrect.

Knowledge Base: For other conditions for classification, refer the image below:

SUMMARY OF THE FIVE CRITERIA (A-E) USED TO EVALUATE IF A TAXON BELONGS IN AN IUCN RED LIST THREATENED CATEGORY (CRITICALLY ENDANGERED, ENDANGERED OR VULNERABLE).¹

A. Population size reduction. Population reduction (measured over the longer of 10 years or 3 generations) based on any of A1 to A4			
	Critically Endangered	Endangered	Vulnerable
A1	≥ 90%	≥ 70%	≥ 50%
A2, A3 & A4	≥ 80%	≥ 50%	≥ 30%
A1 Population reduction observed, estimated, inferred, or suspected in the past where the causes of the reduction are clearly reversible AND understood AND have ceased.	based on any of the following:		(a) direct observation (except A3)
A2 Population reduction observed, estimated, inferred, or suspected in the past where the causes of reduction may not have ceased OR may not be understood OR may not be reversible.			(b) an index of abundance appropriate to the taxon
A3 Population reduction projected, inferred or suspected to be met in the future (up to a maximum of 100 years) [(a) cannot be used for A3].			(c) a decline in area of occupancy (AOO), extent of occurrence (EOO) and/or habitat quality
A4 An observed, estimated, inferred, projected or suspected population reduction where the time period must include both the past and the future (up to a max. of 100 years in future), and where the causes of reduction may not have ceased OR may not be understood OR may not be reversible.			(d) actual or potential levels of exploitation
			(e) effects of introduced taxa, hybridization, pathogens, pollutants, competitors or parasites.
B. Geographic range in the form of either B1 (extent of occurrence) AND/OR B2 (area of occupancy)			
	Critically Endangered	Endangered	Vulnerable
B1. Extent of occurrence (EOO)	< 100 km ²	< 5,000 km ²	< 20,000 km ²
B2. Area of occupancy (AOO)	< 10 km ²	< 500 km ²	< 2,000 km ²
AND at least 2 of the following 3 conditions:			
(a) Severely fragmented OR Number of locations	= 1	≤ 5	≤ 10
(b) Continuing decline observed, estimated, inferred or projected in any of: (i) extent of occurrence; (ii) area of occupancy; (iii) area, extent and/or quality of habitat; (iv) number of locations or subpopulations; (v) number of mature individuals			
(c) Extreme fluctuations in any of: (i) extent of occurrence; (ii) area of occupancy; (iii) number of locations or subpopulations; (iv) number of mature individuals			
C. Small population size and decline			
	Critically Endangered	Endangered	Vulnerable
Number of mature individuals	< 250	< 2,500	< 10,000
AND at least one of C1 or C2			
C1. An observed, estimated or projected continuing decline of at least (up to a max. of 100 years in future):	25% in 3 years or 1 generation (whichever is longer)	20% in 5 years or 2 generations (whichever is longer)	10% in 10 years or 3 generations (whichever is longer)
C2. An observed, estimated, projected or inferred continuing decline AND at least 1 of the following 3 conditions:			
(a) (i) Number of mature individuals in each subpopulation	≤ 50	≤ 250	≤ 1,000
(ii) % of mature individuals in one subpopulation =	90–100%	95–100%	100%
(b) Extreme fluctuations in the number of mature individuals			
D. Very small or restricted population			
	Critically Endangered	Endangered	Vulnerable
D. Number of mature individuals	< 50	< 250	D1. < 1,000
D2. Only applies to the VU category Restricted area of occupancy or number of locations with a plausible future threat that could drive the taxon to CR or EX in a very short time.			D2. typically: AOO < 20 km ² or number of locations ≤ 5
E. Quantitative Analysis			
	Critically Endangered	Endangered	Vulnerable
Indicating the probability of extinction in the wild to be:	≥ 50% in 10 years or 3 generations, whichever is longer (100 years max.)	≥ 20% in 20 years or 5 generations, whichever is longer (100 years max.)	≥ 10% in 100 years

¹ Use of this summary sheet requires full understanding of the IUCN Red List Categories and Criteria and Guidelines for Using the IUCN Red List Categories and Criteria. Please refer to both documents for explanations of terms and concepts used here.

(Picture source: IUCN)

Source: <https://portals.iucn.org/library/sites/library/files/documents/RL-2001-001-2nd.pdf>

Q.48) Consider the following statements regarding Hangul, also known as Kashmir Stag:

1. Its population is mostly found in the Dachigam National Park of Jammu and Kashmir.
2. It is a sub-species of the Central Asian Red Deer.
3. Only female Hangul, and not male, have antlers.
4. It is listed as 'Critically Endangered' in the IUCN Red List of Threatened Species.

Which of the statements given above is/are correct?

- a) 1, 2 and 4 only
- b) 1, 2 and 3 only
- c) 2, 3 and 4 only
- d) 4 only

Ans) a

Exp) Option a is the correct answer.

Statement 1 is correct: The Hangul was once widely distributed in the mountains of Kashmir Himalaya, the Chenab Valley in Jammu and parts of the Chamba district in Himachal Pradesh. However, **the Hangul is now largely restricted to the Dachigam National Park.** Dachigam National Park is located 22 km from Srinagar in Jammu and Kashmir. It covers an area of 141 sq km.

Statement 2 is correct: The Hangul is critically endangered, and the only surviving sub-species of the red-deer in Asia. **Hangul is a sub-species of the Central Asian Red Deer.**

Statement 3 is incorrect: The **female hangul is known as a hind. It does not have antlers or horns, whereas male hangul (i.e., stag) has antlers.** Males can have up to 16-point antlers. The number of points **determines how dominating** alpha male will be. They shed antlers in March-April, and grow them back a few months later. The antlers **are crucial for fighting off competitors** while vying for female attention.

Statement 4 is correct: It is listed as critically endangered in the IUCN red-list of threatened species. Hangul is also the state animal of Jammu and Kashmir. Project Hangul is a joint initiative of Jammu and Kashmir and World Wildlife Fund (WWF).

Knowledge Base:

Source: <https://www.iucnredlist.org/species/113259123/113281791>

<https://roundglassustain.com/photostories/hangul>

https://www.researchgate.net/publication/322103444_A_review_of_population_ecology_of_Hangul_deer_Cervus_elaphus_hanglu_WagnerCervus_canadensis_hanglu_in_Dachigam_National_Park_Kashmir_India

<https://www.greaterkashmir.com/todays-paper/front-page/sighting-of-hangul-herd-in-dachigam-brings-cheer-to-conservationists#:~:text=The%20female%20Hangul%20do%20not,a%20decline%20over%20the%20years.>

Q.49) Sangai or the Brow-Antlered Deer is known for their uniquely distinct antlers. The species has adapted itself to a unique habitat of the floating meadows. Which of the following places in India is the natural habitat for this species?

- a) Jhilmil Jheel
- b) Lakes of Ranthambhore
- c) Loktak Lake
- d) Sambhar Lake

Ans) c

Exp) Option c is the correct answer.

Option a is incorrect: Swamp deer or barasingha has been recently discovered at **Jhilmil Jheel in Uttarakhand**. It is also found in **The Hastinapur Wildlife Sanctuary**. They hardly come out of the water. The hard ground barasingha is found in the open grasslands of **Kanha National Park**.

Option b is incorrect: The Sambar deer can be seen in the **lakes of Ranthambhore**. They are also very good swimmers. Sambhar prefers to live in the denser parts of the forest and likes to feed on leaves, wild fruits and grass.

Option c is correct: The **Thamin or Brow-antlered deer** is popularly known as **sangai deer**. It is also called as the '**dancing deer**' due to its delicate style of walking. The sangai is restricted to an isolated population in Keibul Lamjao National Park, comprising of **floating meadows (i.e. phumdis)** and water body in the southern part of the **Loktak Lake in Manipur**. Rainfall in the monsoon months is a driving factor in determining the habitat suitability of the sangai deer.

Option d is incorrect: Though, some deer species can be seen around **Sambhar Lake (Rajasthan)**, but the brow-antlered or sangai deer cannot be found here. Hence, option d is incorrect.

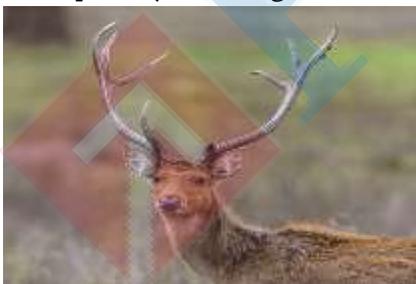

Sangai Deer/ Brow-Antlered Deer

Sambar Deer

Swamp Deer/ Barasingha

Q.50) With reference to Tripura's Unakoti Temple, consider the following statements:

1. It is mainly a Vaishnavite pilgrimage site.
2. The rock-cut sculptures in temple represents the distinct mongoloid features.
3. The temple is famous for its mural paintings.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

Tripura's Unakoti temple famously known as Angkor Wat of the North-East. It is a sculptural emblem and ancient Shaivite place that hosts rock carvings figures and images of gods and goddesses. Unakoti literally means "one less one crore". The images found at Unakoti are of two types, namely rock-carved figures and stone images.

Statement 1 is incorrect: It is 'Shaiba' or Saivite pilgrimage site. It has been built around 7th - 9th centuries. It is a place of worship with huge rock reliefs celebrating Shiva. The central Shiva head known as 'Unakotiswara Kal Bhairava' is about 30 feet high including an embroidered head-dress which itself is 10 feet high. On each side of the head-dress of the central Shiva, there are two full size female figures one of Durga standing on a lion and another female figure on the other side.

Statement 2 is correct: The structures of the rock-cut sculptures in Unakoti temple are gigantic and **have distinct mongoloid features**. That's why it is also called as the Angkor Wat of North-East.

Statement 3 is correct: The marvelous rock carvings in Unakoti temple has murals with their primitive beauty. The place is famous for not just stunningly picturesque but also great mythological significance.

Source: <https://indianexpress.com/article/lifestyle/destination-of-the-week/tripura-unakoti-angkor-wat-north-east-unesco-world-heritage-tag-8319590/>

<https://unakoti.nic.in/tourist-place/unakoti-heritage-site/>

Q.1) With reference to micro-irrigation, which of the following statements is/are correct?

1. Fertilizer/nutrient loss can be reduced.
2. It is the only means of irrigation in dry land farming.
3. In some areas of farming, receding of ground water table can be checked.

Select the correct answer using the codes given below:

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Statement 1 is correct: Micro irrigation is a modern method of irrigation; by this method surface of land is irrigated through drippers, sprinklers, foggers and by other emitters. In this system water is applied drop by drop nearer the root zone area of the crop. The drippers are fixed based on the spacing of crop. This helps in avoiding the loss of fertilizers and soil nutrients by reducing or stopping water run-off.

Statement 2 is incorrect: Dryland agriculture refers to the region or the type of farming which is operated in sub humid to arid conditions with inefficient hydrology, lack of irrigation facilities, complete dependency on monsoon rainfall and reflecting a typical cropping pattern of coarse grains millets and oilseeds, pulses, cotton etc.

Micro-irrigation is not the 'only' means of irrigation in dry land farming.

Statement 3 is correct: This method has a fair number of advantages, namely lesser amount of water used in comparison of traditional irrigation methods (Hence it may check the receding of ground water table by reducing the exploitation of ground water for agriculture purpose), increased tillering, profused root growth, reduced seeding, and fertilizer requirement.

Source: UPSC PRELIMS 2011

Q.2) Which one of the following statements is correct regarding 'Trifood Project'?

- a) It is intended to increase the nutritive value of average daily consumption of Indian citizens through addition of Eggs, Pulses and Milk to diet.
- b) It aims to enhance the income of tribals through better utilization of Minor Forest Produce collected by the tribal forest gatherers.
- c) It involves creating a thoughtful and productive community of youth and adults from diverse backgrounds who work together to build a sustainable food system.
- d) It is an online platform to link agricultural production to the market by bringing together farmers, processors and retailers.

Ans) b

Exp) Option b is the correct answer.

Option b is correct: Union Tribal Affairs Minister has e-launched the tertiary processing Centre of "Trifood Project".

Trifood Project is an initiative of the Ministry of Tribal Affairs in association with the Ministry of Food Processing (MoFPI). It aims to **enhance the income of tribals through better utilization of and value addition to the Minor Forest Produce (MFP) collected by the tribal forest gatherers.** The units are envisaged to be professionally operated by reputed food processors who will operate the facilities for a designated period of time under the overall administrative control of Tribal Cooperative Marketing Development Federation of India (TRIFED).

Under this scheme a tertiary value addition center will be set up in Jagdalpur in Chhattisgarh and Raigad in Maharashtra at a cost of approximately Rs.11 crores.

Knowledge Base:

- 1) **Minor Forest Produce (MFP):** The Scheduled Tribes and Other Traditional Forest Dwellers Act, 2006 defines minor forest produce as all non-timber forest produce of plant origin. It includes bamboo, brushwood, stumps, canes, cocoon, honey, waxes, Lac, tendu leaves, medicinal plants, roots among others.
- 2) **TRIFED:** It was established in 1987 to provide a good price to the products made or collected from the forest by the tribal people. It functions under the administrative control of the Ministry of Tribal affairs.

Source: <https://trifed.tribal.gov.in/trifood>

<https://blog.forumias.com/union-minister-e-launches-tertiary-processing-centres-of-trifood-project/>

Q.3) With reference to 'Prime Minister Formalization of Micro food processing Enterprises (PM-FME) Scheme', consider the following statements:

1. It is a centrally sponsored scheme launched by the Ministry of Food Processing Industries.
2. The expenditure under the scheme would be in form of flexible loans offered by World Bank.
3. 'One District One Product' (ODOP) is one of the components adopted under the scheme.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) d

Exp) Option d is the correct answer.

Recently, **Pradhan Mantri Formalization of Micro Food Processing Enterprises (PMFME)** Scheme of Ministry of Food Processing Industries, under Aatmanirbhar Bharat Abhiyan, completed two Years. PMFME Scheme is **currently being implemented in 35 States and Union Territories in the country**. The Scheme envisages **financial support of Rs. 40,000 for working capital** and purchase of small tools for each member of the Self-Help Group (SHG) engaged in food processing activities.

Statement 1 is correct: PM-FME Scheme is a **centrally sponsored scheme** launched by the Ministry of Food Processing Industries (MOFPI). The PM-FME scheme will be implemented over a period of five years from 2020-21 to 2024-25 with an outlay of Rs 10,000 crore.

Statement 2 is incorrect: The expenditure under the PM-FME scheme would be **shared in 60:40 ratio between Central and State Governments**, in 90:10 ratio with North Eastern and Himalayan States, 60:40 ratio with UTs with legislature and 100% by Centre for other UTs. The support would be provided through **credit linked grants at 35% for development of common infrastructure** including common processing facility, lab, warehouse through FPOs/SHGs/cooperatives or state-owned agencies or private enterprise. The world bank is not involved in providing loans under the scheme.

Statement 3 is correct: The PM-FME Scheme adopts **One District One Product (ODOP) approach** to reap the benefit of scale in terms of procurement of inputs, availing common services and marketing of products. The **States would identify food products for a district keeping in view the existing clusters and availability of raw material**. The ODOP product could be a perishable produce-based product or cereal based products or a food product widely produced in a district and their allied sectors.

Source: <https://blog.forumias.com/prime-minister-formalisation-of-micro-food-processing-enterprises-pm-fme-scheme/>

<https://pib.gov.in/PressReleaseIframePage.aspx?PRID=1838462#:~:text=The%20PMFME%20Scheme%20also%20envisages,has%20been%20released%20so%20far.>

Q.4) With reference to ‘Food Fortification’, consider the following statements:

1. Fortification is the addition of key vitamins and minerals to staple foods for improvement of their nutritional content.
2. If consumed on a regular basis, fortified foods help in maintaining body nutrients more effectively than intermittent supplements.
3. Bureau of Indian Standards (BIS) has launched ‘F+’ logo for easy identification of various fortified products.
4. In India sale of common salt is not permitted for direct human consumption unless it is fortified with iodine.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 1, 2 and 4 only
- c) 2 and 3 only
- d) 1, 2, 3 and 4

Ans) b

Exp) Option b is the correct answer.

Food Fortification is a **scientifically proven, cost-effective, scalable and sustainable global intervention that addresses the issue of micronutrient deficiencies**. In October 2016, FSSAI operationalized the Food Safety and Standards (Fortification of Foods) Regulations, 2016 for fortifying staples namely Wheat Flour and Rice (with Iron, Vitamin B12 and Folic Acid), Milk and Edible Oil (with Vitamins A and D) and Double Fortified Salt (with Iodine and Iron) to reduce the high burden of micronutrient malnutrition in India.

Statement 1 is correct: Food fortification is the process of **adding essential vitamins and minerals to food products to improve their nutritional value**. This is done to help prevent or treat deficiencies in specific nutrients that are common in certain populations or groups of people. Currently, Indian government is promoting fortification in following 5 food items: Rice, salt, edible oil, milk and wheat.

Statement 2 is correct: According to the ‘Guidelines on food fortification with micronutrients’ issued by the WHO and Food and Agricultural Organization of the United Nations, if consumed on a regular and frequent basis, **fortified foods will maintain body stores of nutrients more efficiently and more effectively than will intermittently supplements**. For example, fortified cereals can be a good source of B vitamins, iron, and other essential nutrients.

Statement 3 is incorrect: **Food Safety and Standards Authority of India (FSSAI)** has launched various logos like ‘**Ayurveda Aahar**’ logo, ‘**Vegan food**’ logo and ‘**F+**’ logo. The logo, just like any other standard logo on food products, would allow for “easy identification” of various products and will empower the people to make informed food choices.”

Statement 4 is correct: As per Food Safety and Standards (Prohibition and Restriction on Sales), Regulation, 2011, the **sale of common salt for direct human consumption is not permitted unless the same is iodized**. As per the Regulation, ‘no person shall sell or offer or expose for sale or have in his premises for the purpose of sale, the common salt, for direct human consumption unless the same is iodized.’

Q.5) The report 'Global status of black soils' is the first such report, released on the occasion of World Soil Day. In this context, select the organization which releases the report?

- International Food Policy Research Institute (IFPRI)
- United Nations Environment Programme (UNEP)
- World Economic Forum (WEF)
- Food and Agriculture Organization (FAO)

Ans) d

Exp) Option d is the correct answer.

Black soils are carbon-rich and highly fertile soils known as the world's food basket due to the variability of crops they sustain.

Option d is correct: The report 'Global status of black soils' is the first such report, released on the occasion of World Soil Day (5th December). It was released by Food and Agriculture Organization (FAO).

The findings of the report are as follows:

- Black soils are under threat, with most losing at least half of their soil organic carbon (SOC) stocks. Black soils are quickly losing their SOC stocks. They have lost 20 to 50 per cent of their original SOC stock, with the carbon being released into the atmosphere mostly as carbon dioxide, exacerbating global warming.
- Land-use change, unsustainable management practices and excessive use of agrochemicals are the main causes for their degradation.
- Most of the black soils suffered from moderate to severe erosion processes, as well as nutrient imbalances, acidification and biodiversity loss.
- Preserving natural vegetation on black soils such as grasslands, forests and wetlands and adopting sustainable soil management approaches on cropped black soils were the two main goals highlighted by the report.

Source:

<https://www.fao.org/documents/card/en/c/cc3124en#:~:text=Black%20soils%20are%20carbon%20rich,%2C%20pastures%2C%20and%20forage%20systems.>

Q.6) Consider the following pairs:

Food Processing	Associated Activities
1. Primary food processing	Canning fruits and vegetables
2. Secondary food processing	Ready-to-eat breakfast cereals
3. Tertiary food processing	Making pickles and brewing coffee

How many pairs given above are correctly matched?

- None of the pairs
- Only one pair
- Only two pairs
- All three pairs

Ans) a

Exp) Option a is the correct answer.

Food processing is the set of methods and techniques used to **transform raw ingredients into food products** that are safe, convenient, and appealing to consumers. Food processing encompasses all the steps that food goes through from the time it is harvested to the time it arrives on consumer's plate. According to FAO (Food and Agriculture Organization), processed foods can be classified into three types viz. Primary, Secondary and Tertiary.

Pair 1 is incorrectly matched: Primary food processing refers to the **initial stages of food preparation that involve cleaning, cutting, and other basic activities** that are performed to make food ready for consumption or further processing. Examples of primary food processing include washing and peeling fruits and vegetables, boning meat, and filleting fish.

Canning fruits and vegetables are an examples of secondary food processing.

Pair 2 is incorrectly matched: Secondary food processing **involves further refining and enhancing the flavor, texture, and appearance of foods through techniques** such as cooking, canning, freezing, and fermenting. Examples of secondary food processing include making jams and jellies, canning fruits and vegetables, making pickles, and brewing beer.

Secondary food processing involves further refining and enhancing the flavor, texture, and appearance of foods through techniques such as cooking, canning, freezing, and fermenting. **Ready-to-eat breakfast cereals are an example of tertiary food processing.**

Pair 3 is incorrectly matched: Tertiary food processing involves the **final stages of food preparation that are performed to create ready-to-eat and convenient food products.** This type of processing often involves the addition of preservatives, flavorings, and other ingredients to extend the shelf life of the food and make it more appealing to consumers. Examples of tertiary food processing include making pre-packaged meals, snack bars, and ready-to-eat breakfast cereals. **Making pickles is an example of secondary food processing.**

Source: <https://bulksinside.com/food-processing/#:~:text=Primary%20processing%20is%20the%20conversion,an%20example%20of%20primary%20processing.&text=Secondary%20processing%20is%20the%20conversion,an%20example%20of%20secondary%20processing>.

<https://bizfluent.com/info-8111635-methods-food-processing.html>

Q.7) Which of the following are the components of Pradhan Mantri Kisan SAMPADA Yojana (PMKSY)?

1. Integrated Cold Chain and Value Addition Infrastructure
2. Development of Food Fortification Resource Centre
3. Creation of Backward and Forward Linkages
4. Infrastructure for Agro-Processing Clusters
5. Mega Food Parks
6. Targeted Public Distribution System

Select the correct answer using the codes given below:

- a) 1, 2 and 4 only
- b) 1, 3, 4 and 5 only
- c) 2, 3, 4 and 6 only
- d) 1, 2, 3, 4 and 5 only

Ans) b

Exp) Option b is the correct answer.

The **Central Sector Scheme - SAMPADA (Scheme for Agro-Marine Processing and Development of Agro-Processing Clusters)** was approved by the cabinet in May 2017 for the period of 2016-20 coterminous with the 14th Finance Commission cycle. The scheme has now been renamed as the "**Pradhan Mantri Kisan**

Sampada Yojana (PMKSY)". The objective of PMKSY is to supplement agriculture, modernize processing and decrease Agri-Waste. There are **seven components under the scheme Mega Food Parks; Integrated Cold Chain and Value Addition Infrastructure; Infrastructure for Agro-Processing Clusters; Creation of Backward and Forward Linkages; Creation/Expansion of Food Processing & Preservation Capacities; Food Safety and Quality Assurance Infrastructure; Human Resources and Institutions.**

Option 1 is correct: Integrated Cold Chain and Value Addition Infrastructure component aims to create a **cold chain infrastructure to transport perishable food items such as fruits, vegetables, dairy, and meat products from the farm to the market.** The goal is to reduce post-harvest losses, increase the shelf life of the products, and improve their quality.

Option 2 is incorrect: The Food Fortification Resource Centre is a **Resource and Support Centre to promote large-scale fortification of food across India.** It is a resource hub which provides information and inputs on standards and food safety, technology and processes, premix and equipment procurement and manufacture, quality assurance and quality control for fortification of foods. It is launched by FSSAI. It is **not the component of Pradhan Mantri Kisan Sampada Yojana.**

Option 3 is correct: **Creation of Backward and Forward Linkages** component aims to create backward and forward linkages between the farm and the market, to ensure a smooth flow of products from the farm to the market and to reduce post-harvest losses. The backward linkages will help farmers access inputs and services, while the forward linkages will help them access markets.

Option 4 is correct: Infrastructure for Agro-Processing Clusters component aims to **create Agro-processing clusters that will provide infrastructure facilities and support services to food processing units.** The goal is to encourage entrepreneurship in the food processing sector and promote small and medium-sized enterprises (SMEs) in this field.

Option 5 is correct: Mega Food Parks component aims to **create mega food parks that will provide facilities for food processing and packaging,** as well as cold storage, logistics, and marketing. The goal is to promote integrated and efficient food processing, reduce post-harvest losses, and increase the value of agricultural products.

Option 6 is incorrect: The Targeted Public Distribution System **is not one of the components of the PMKSY.** In June, 1997, the Government of India launched the Targeted Public Distribution System (TPDS) with a focus on the poor.

Source: <https://vikaspedia.in/agriculture/policies-and-schemes/crops-related/pradhan-mantri-kisan-sampada-yojana>

<https://www.mofpi.gov.in/Schemes/about-mega-food-park-scheme>

<https://www.fssai.gov.in/cms/food-fortification-resource-centre-tata-trusts.php>

Q.8) Arrange the following options in the increasing order of their percentage share of Gross Value Added (GVA) in total agricultural GVA as per Economic Survey 2021-22:

1. Livestock
2. Forestry and Logging
3. Crops
4. Fishing and Aquaculture

Which of the option given below is correct?

- a) 1-2-4-3
- b) 4-2-1-3
- c) 1-4-3-2
- d) 2-4-1-3

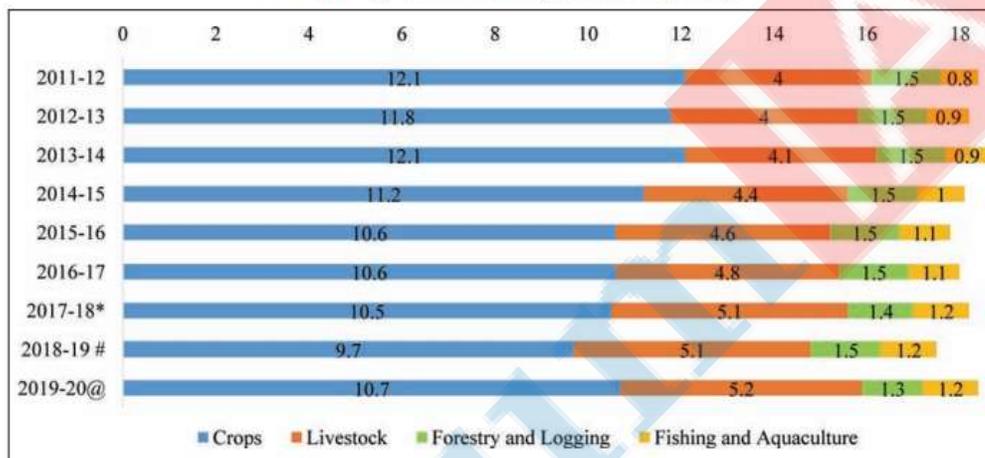

Ans) b

Exp) Option b is the correct answer.

A trend in the percentage share of agriculture and allied sectors to total Gross Value Added of the economy is an important indicator of the growth and development of agricultural sector in India. The share of the sector in total GVA of the economy has a long-term trend of around 18 per cent. The share of the agriculture & allied sector in total GVA, however, improved to 20.2 per cent in the year 2020-21 and 18.8 per cent in 2021-22.

As per Economic survey 2021-22, the increasing order of the percentage share of Gross Value Added (GVA) of different sectors of Agriculture & Allied Sector is **Fishing and Aquaculture < Forestry and Logging < Livestock < Crops** (4-2-1-3)

Figure 4: Percentage Share of GVA of Crop & Allied Sectors in Total Agriculture GVA (at current prices)

- 1) **Fishing and Aquaculture:** Fishing and aquaculture contribute the smallest share to the Gross Value Added (GVA) of Agriculture & Allied Sector in India. This sector involves the breeding and harvesting of fish, crustaceans, mollusks, and other aquatic animals and plants.
- 2) **Forestry and Logging:** Forestry and logging refer to the collection and management of forest resources such as timber, fuelwood, and non-timber forest products. This sector also includes activities such as afforestation, reforestation, and conservation of forest lands.
- 3) **Livestock:** Livestock sector includes the rearing and breeding of domestic animals such as cattle, sheep, goats, pigs, horses, and poultry for the production of food, clothing, and other related products. Livestock contributes a higher share of the Gross Value Added (GVA) of Agriculture & Allied Sector in India as compared to fishing and aquaculture and forestry and logging.
- 4) **Crops:** Crops sector involves the cultivation of crops such as cereals, pulses, oilseeds, sugarcane, fruits, and vegetables. This sector contributes the largest share to the Gross Value Added (GVA) of Agriculture & Allied Sector in India.

Source: ECONOMIC SURVEY 2021-22 CHAPTER 7

Q.9) With reference to trends in agriculture and allied sectors of Indian Economy in recent years, consider the following statements:

1. The production of rice and coarse cereals has increased for the period between 2016-2021.
2. The total production of wheat has always been higher than the total production of rice between 2016-2021.
3. The share of marine products in total agricultural export value has remained the largest for the last 5 years.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1 and 3 only

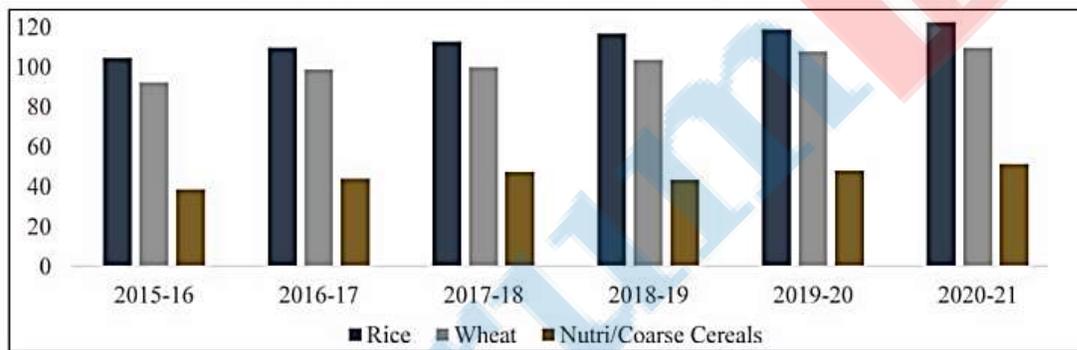

Ans) d

Exp) Option d is the correct answer.

Statement 1 is correct: As per Fourth Advance Estimates for 2020-21, total foodgrain production in the country is estimated at a record 308.65 million tonnes which is 11.15 million tonnes higher than that during 2019-20. The production of **rice, wheat and coarse cereals has increased at compound annual growth rates (CAGR) of 2.7, 2.9 and 4.8 per cent** respectively during last six years i.e., 2015-16 to 2020-21.

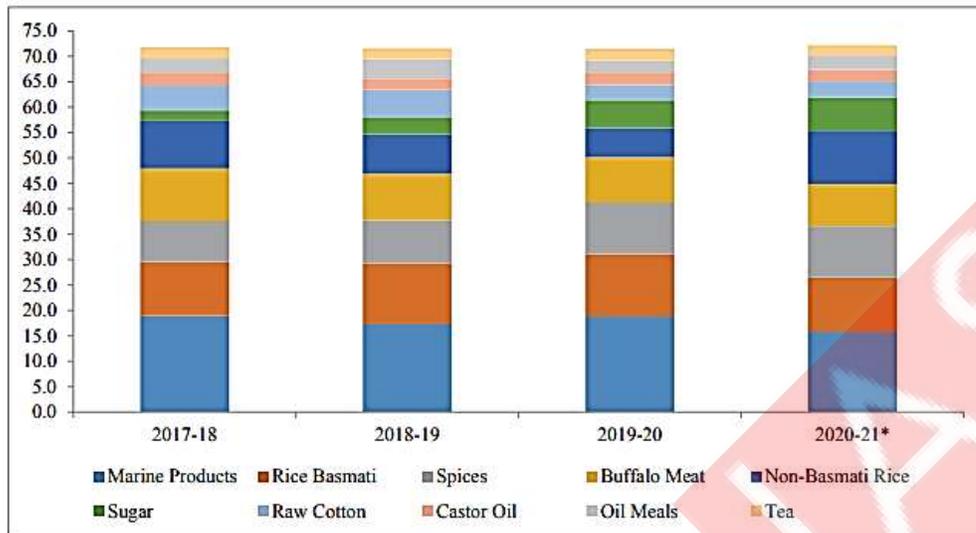

Statement 2 is incorrect: The **total production of rice is always higher than the total production of wheat during the last five years.** The total production of major crops during 2021-22 is as under: foodgrains 315.72 million tonnes, **rice 130.29 million tonnes (record)**, **wheat 106.84 million tonnes**, nutri/coarse cereals 50.90 million tonnes.

Figure 6: Trend in Agricultural Production (Million Tonnes)

Statement 3 is correct: An analysis of last six years of the share of top ten agricultural commodities in total value of agricultural export shows that there have been significant changes in the composition of Agri-exports. The **share of marine products in total agricultural export value has remained the largest over the period.** Its share in total agricultural export value increased from 14.5 percent in 2015-16 to close to 19 per cent in 2019-20.

Figure 7: Trend in the Share of Agricultural Commodities in Total Value of Agri-export (per cent)

Source: <https://pib.gov.in/PressReleaseDetailm.aspx?PRID=1896062>
ECONOMIC SURVEY 2021-22 CHAPTER 7

Q.10) Consider the following statements regarding the Koronivia Joint Work on Agriculture (KJWA):

1. Livestock sector is one among the focus areas of KJWA.
2. It was established under United Nations Framework Convention on Climate Change (UNFCCC).
3. India has adopted the Koronivia Joint Work on Agriculture (KJWA).

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2, and 3

Ans) a

Exp) Option a is the correct answer.

Statements 1 and 2 are correct: The Koronivia Joint Work on Agriculture (KJWA) is a landmark decision under the United Nations Framework Convention on Climate Change (UNFCCC) that recognizes the unique potential of agriculture in tackling climate change. The KJWA was established at the 23rd Conference of the Parties (COP) in Fiji in 2017 as a new process to advance discussions on agriculture in the United Nations Framework Convention on Climate Change (UNFCCC). The Koronivia decision addresses six interrelated topics on soils, nutrient use, water, livestock, methods for assessing adaptation, and the socio-economic and food security dimensions of climate change across the agricultural sectors. It has sought to expand efforts to reduce emissions of greenhouse gases from the agriculture sector.

Statement 3 is incorrect: India has opposed the Koronivia Joint Work on Agriculture. It held that the emissions from the agricultural sectors are not “luxury” emissions but “survival emissions” of the poor. It blamed the developed countries’ historic emissions for the current climate crisis.

Source: <https://www.fao.org/koronivia/about/en/>

<https://www.hindustantimes.com/india-news/india-objects-to-attempt-to-link-farming-and-emissions-101668711731429.html>

Q.11) Consider the following agricultural practices:

1. Contour bunding
2. Relay cropping
3. Zero tillage

In the context of global climate change, which of the above helps/help in carbon sequestration/storage in the soil?

- a) 1 and 2 only
- b) 3 only
- c) 1, 2 and 3
- d) None of them

Ans) b

Exp) Option b is the correct answer.

Option 3 is correct: Carbon sequestration is the process of capturing and storing atmospheric carbon dioxide. It is one method of reducing the amount of carbon dioxide in the atmosphere with the goal of reducing global climate change. No-till, as the name implies, is the practice of direct-seeding of crops in a field without ploughing. This stops the release of carbon stored in soil in the atmosphere. Hence helps in carbon sequestration/storage in the soil.

Statement 1 and 2 are incorrect: In Relay cropping second crop is planted even before the first crop is harvested. Thus, both crops share some part of the season. In India, Rice –cauliflower – onion-summer gourd is one example of relay cropping. Its advantages are: Less risk since yields do not depend on one crop alone, some diseases and insects appear to spread less rapidly under intercropping. Better erosion control due to better ground cover, any legumes involved may add some nitrogen to the soil etc.

Similarly, Contour bunding is **a land management practice for marginal, sloping, and hilly land where the soil productivity is very low**. It involves the placement of lines of stones along the natural rises of a landscape. This technique helps to capture and hold rainfall before it can become runoff. **Hence both relay farming and contour bunding have different applications/advantages but are not useful for carbon sequestration/storage in soil.**

Source: UPSC PRELIMS 2012

Q.12) Which of the following is the correct reason for low disbursement of the agricultural credit in North Eastern Region as compare to other parts of India?

1. The total cultivable area in North Eastern States is less than three percent of the total gross cultivable area of the country.
2. The credit lending institution have very poor penetration in the rural areas of North Eastern States.
3. The system of community ownership of land is prevalent in most of the North Eastern States which negatively affects disbursement of agricultural credit.

Select the correct answer using the codes given below:

- a) 1 and 3 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

In 2019-20, the share of agricultural credit in the Southern Region had the largest share (43.95%) followed by the Northern Region (20.39%), Central Region (14.15%), Western Region (11.21%), Eastern Region (9.45%) and Northeast Region (0.85%). Further also, during the year 2020-21, **the share of southern region in**

agricultural credit was more than 40 per cent while it was less than 2 per cent for the north-eastern region (NER).

Statement 1 and 3 are correct: The low coverage of the agricultural credit in North Eastern Region is because the **total cultivable area in North Eastern States is only about 2.74 per cent of the total GCA** of the country. Moreover, **community ownership of land is prevalent in most of the NE States**. These two factors affected the intake of Kisan Credit Card (KCC) loans in North Eastern Region as these loans are given against land documents.

Statement 2 is incorrect: Poor penetration of credit in the rural areas of North Eastern States is **not among the reason for low coverage of the agricultural credit in North Eastern Region** as compare to other parts of India. In fact, the penetration of formal credit to the agriculture sector in North Eastern region is increased in the last decade due to various initiatives like financial inclusion, PSL limits etc.

<https://www.nabard.org/auth/writereaddata/tender/2501235626trends-and-patterns-in-agriculture-credit-in-india.pdf>

Q.13) With reference to ‘Agriculture Infrastructure fund’, consider the following statements:

1. It aims to provide short term- three months credit for post-harvest management Infrastructure.
2. Under the scheme, banks and financial institutions will provide loans featuring interest subvention to eligible beneficiaries.
3. Credit Guarantee Fund Trust for Micro and Small Enterprises scheme will provide guarantee coverage for loans provided to the eligible borrowers.

Which of the statements given above is/are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

Agriculture Infrastructure Fund (AIF) is a Central Sector Scheme launched by the Department of Agriculture Cooperation and Farmers Welfare (DAC&FW). The Union Cabinet in July 2020 has approved a new pan India Central Sector Scheme called Agriculture Infrastructure Fund (National Agriculture Infra Financing Facility).

Statement 1 is incorrect: The scheme provides a **medium - long term debt financing facility for investment in viable projects for post-harvest management**, Infrastructure and community farming assets through interest subvention and financial support. Moratorium for repayment under this financing facility may vary subject to minimum of 6 months and maximum of 2 years.

Statement 2 is correct: Under the scheme, banks and financial institutions will **provide Rs. 1 Lakh Crore as loans to eligible beneficiaries**. The Eligible Beneficiaries includes Farmers, FPOs, PACS, Marketing Cooperative Societies, SHGs, Joint Liability Groups (JLG). The beneficiaries also include Agri-entrepreneurs, startups and Central/State agency or Local Body sponsored Public-Private Partnership Projects. Loans will have an **interest subvention of 3% per annum up to a limit of Rs. 2 crores**. This subvention will be available for a maximum period of seven years.

Statement 3 is correct: A **credit guarantee coverage will be available for eligible borrowers from the scheme**. This coverage is provided under **Credit Guarantee Fund Trust for Micro and Small Enterprises (CGTMSE) scheme** for a loan up to Rs. 2 crores. The **government will pay fee for this credit coverage**.

<https://vikaspedia.in/schemesall/schemes-for-farmers/agriculture-infrastructure-fund#:~:text=The%20scheme%20shall%20provide%20a,interest%20subvention%20and%20financial%20support.>

Q.14) With reference to Aeroponics, consider the following statements:

1. It is a soil-less gardening method where roots of plants are exposed in air.
2. One of the advantages of using aeroponics, is involvement of low-cost at the initial stage.
3. Pesticides is generally not used in aeroponic growing system.

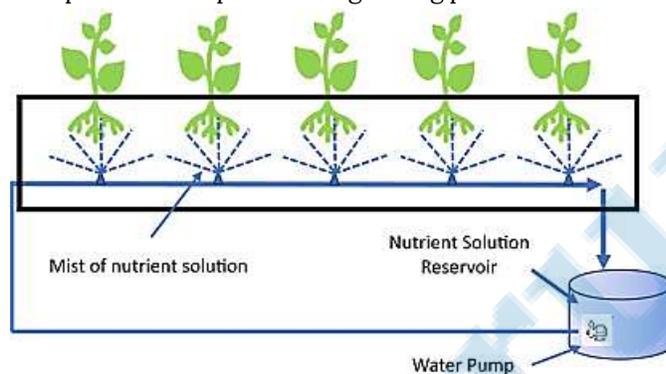

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Aeroponics is the practice of growing plants in an air or mist environment without the use of any substrate.

Statement 1 is correct: Aeroponics is soil-less gardening method of growing crops. The biggest advantage of aeroponics is that roots are exposed to air, thus there is never an issue of insufficient oxygen.

Statement 2 is incorrect: The disadvantage of aeroponics include high initial construction costs, high maintenance of the system, and high level of technical knowledge required.

Statement 3 is correct: Generally, aeroponic growing system do not use pesticides. Hence, aeroponics systems can reduce water usage by 98 percent, fertilizer usage by 60 percent, **and pesticide usage by 100 percent**, all while maximizing crop yields. Plants grown in the aeroponic systems have also been shown to uptake more minerals and vitamins, making the plants healthier and potentially more nutritious.

Source: https://www.nasa.gov/vision/earth/technologies/aeroponic_plants.html

<https://www.sciencedirect.com/topics/agricultural-and-biological-sciences/aeroponics>

Q.15) Consider the following statements regarding the World Food Prize:

1. It is awarded by Food and Agriculture Organization.
2. It is also called as Noble Prize for Food and Agriculture.
3. In 1987, the first recipient of this award was Dr. M.S. Swaminathan.
4. It is awarded to the multiple organizations or countries for their significant and collective interventions for the betterment of food systems.

Which of the statements given above are correct?

- a) 1, 3 and 4 only
- b) 1, 2 and 4 only
- c) 2 and 3 only
- d) 2, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

The World Food Prize (2022) was given to Dr. Cynthia Rosenzweig of the United States for her research to understand the relationship between climate and food systems.

Statement 1 is incorrect: World food price is an international award given to the individuals who have contributed to human development by improving the quantity availability and quality of food in the world.

It is awarded by World Food Prize foundation. This award was conceived by Norman Borlaug, a recipient of the Nobel Peace Prize. It was created in 1986 with sponsorship by General Foods Corporation.

Statements 2 and 3 are correct: World food price is also known as the "Nobel Prize for Food and Agriculture". In 1987, the first world food prize was given to M.S. Swaminathan for his contribution to the introduction of high-yield wheat and rice varieties in India and for starting India's green revolution in 1987.

Statement 4 is incorrect: The World Food Prize is awarded for a specific, exceptionally significant, individual achievement that advances human development with a demonstrable increase in the quantity, quality, availability of, or access to food through creative interventions at any point within the full scope of the food system. The Prize is intended to be awarded to one person (and not the organizations and governments). In exceptional circumstances where an additional person (or persons) has collaborated in an indispensable way, more than one person may be included in the nomination. However, it must be demonstrated conclusively that each person contributed in an essential way, and that without each individual's contribution, no achievement would have been possible. The World Food Prize Selection Committee will determine whether a joint nomination meets these criteria, and in cases where it judges this standard has not been met, to limit the number of persons being considered.

Source: https://www.worldfoodprize.org/en/about_the_foundation/

Q.16) Consider the following statements regarding the Land Reforms in India:

1. It helped in the consolidation of land holdings.
2. It also involved reforms of the revenue administration.
3. The tenancy reform under the Land reforms was uniformly implemented all over India.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2, and 3

Ans) a

Exp) Option a is the correct answer.

Land Reforms encompass mainly five components: i) Abolition of intermediaries; ii) Tenancy reforms; iii) Ceiling of land holdings and distribution of surplus land to landless; iv) Consolidation of holdings; and v) Compilation and updating of land records.

Statement 1 is correct: The land reforms provided for consolidation of land holdings. Land consolidation is the reallocation of land parcels with the aim the landowners to obtain larger parcels at one or more places in exchange of their former smaller and fragmented land plots.

Statement 2 is correct: Land reforms in India also involved reforms of the revenue administration, including the introduction of more equitable land revenue systems and the improvement of land records.

Statement 3 is incorrect: Land reforms in India aimed to improve the rights of tenants and secure their tenure on the land they worked. This was done by providing tenants with more secure rights to the land they worked, and by limiting the rent they could be charged. **The tenancy reform under the Land reform was not uniformly implemented all over India, because land is subject to state control in India and the relationship between production and land tenure varies from state to state. This political resistance, particularly in states where landlords held significant power, hindered the implementation of tenancy reforms. Among the various exceptions given under the tenancy acts, provisions allowing the landlords to remove tenants in order to resume personal cultivation assumed greater importance as the dominant landlords took advantage of this clause.** Punjab and Haryana did not prohibit tenancy whereas Karnataka has a near complete ban on tenancy. Some states have conferred ownership rights on tenant cultivators except for sharecroppers, whereas West Bengal chose to provide owner-like rights only to the sharecroppers.

<https://egyankosh.ac.in/bitstream/123456789/31754/1/Unit-2.pdf>

Q.17) Consider the following statements regarding the scheme, 'Bringing Green Revolution to Eastern India (BGREI)':

1. It is a sub scheme under the Rashtriya Krishi Vikas Yojana (RKVY).
2. Under the programme, the assistance is being provided to the farmers for asset-building such as for buying farm machineries.
3. The programme is intended to address the constraints which limit the productivity of rice based cropping systems.

Which of the statements given above are correct?

- a) 1 and 3 only
- b) 2 and 3 only
- c) 2 only
- d) 1, 2, and 3

Ans) d

Exp) Option d is the correct answer.

Statements 1 and 3 are correct: **Bringing Green Revolution to Eastern India (BGREI) is a sub scheme of Rashtriya Krishi Vikas Yojana (RKVY). It was launched in 2010-11.** It is being implemented in **seven eastern states** namely Assam, Bihar, Chhattisgarh, Jharkhand, Odisha, Eastern Uttar Pradesh and West Bengal. **BGREI programme is intended to address the constraints limiting the productivity of "rice based cropping systems" in eastern India.** Under these systems, the other crops like wheat, coarse-cum-nutri cereals, pulses & oilseeds are already covered.

Statement 2 is correct: In BGREI, assistance is being provided to the farmers for organizing cluster demonstrations on rice and wheat, seed production and distribution, nutrient management and soil ameliorants, integrated pest management, cropping system-based training, **asset-building such as farm**

machineries & implements, irrigation devices, site specific activities and post-harvest & marketing support, etc.

Source: <https://pib.gov.in/PressReleaseIframePage.aspx?PRID=1707025>

Q.18) Consider the following statements regarding the impacts of green revolution in India:

1. It widened the economic inequalities in the rural sector.
2. It aggravated the improper utilization of land.
3. It helped India in becoming self-sufficient in food crops.

Which of the statements given above are correct?

- a) 2 and 3 only
- b) 1 and 3 only
- c) 1 and 2 only
- d) 1, 2 and 3

Ans) b

Exp) Option b is the correct answer.

The Green Revolution was a period of increased agricultural productivity that began in the mid-20th century and led to significant increases in crop yields. The Green Revolution had both positive and negative impacts on various aspects of agriculture and the environment. Some of the key impacts include:

Statements 1 is correct: The green revolution promoted inequalities, widening the already existing gap between the rich and the poor in the rural sector. The labourers and landowners both were benefited from agricultural development, but the latter cornered most of the benefits giving rise to disparity between the landowners and the labourers.

Statement 2 is incorrect: The use of modern agricultural techniques, such as improved seeds, irrigation, and fertilizers, allowed farmers to make better use of their land and increased the productivity. So, the statement is incorrect.

Statement 3 is correct: The Green Revolution resulted in significant increases in crop yields, particularly for staple crops/food crops such as rice and wheat. **This helped India in becoming self-sufficient in production of food crops and to increase food security and reduce hunger in India.** Increased crop yields helped to reduce food prices and make staple foods more affordable for consumers.

Source: <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7611098/>

<https://egyankosh.ac.in/bitstream/123456789/18751/3/Unit-14.pdf>

<https://egyankosh.ac.in/bitstream/123456789/18783/3/Unit-11.pdf>

Q.19) Consider the following statements regarding the characteristics and benefits of High Yield Variety (HYV) of seeds:

1. HYV seeds require low levels of inputs like fertilizers, pesticide, etc. which decreases the cost of agricultural production.
2. They generally have shorter crop life cycle compared to traditional varieties of seeds.

Which of the statements given above are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) b

Exp) Option b is the correct answer.

The core of the green revolution was the development and propagation of High Yielding Varieties (HYV) of seeds, particularly rice and wheat, adaptable to local ecologies.

Statements 1 is incorrect: HYV seeds often require high levels of inputs, such as fertilizer, water, and pesticides, which can increase production costs and create dependency on external inputs.

Statement 2 is correct: High Yielding Variety Seeds (HYV) have shorter crop lifecycle and thereby enables the farmers to go for multiple cropping. For example, HYV seeds of rice and wheat complete their lifecycles in 110 and 120 days respectively. The traditional varieties of rice and wheat, on the other hand, take about 130 and 150 days respectively to harvest. The HYV seeds thus enable the farmers to economize on land.

Source: <https://egyankosh.ac.in/bitstream/123456789/62780/1/Block-4.pdf>

Q.20) Consider the following statements regarding the concept of 'Urban Farming':

1. Urban farming involves growing of food and horticulture crops but avoids livestock rearing.
2. Hydroponics, Aquaponics and Aeroponics are some of the methods used in Urban farming.
3. Urban farming will may help in decarbonization of food production and its supply chain.

Which of the statements given above are correct?

- a) 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: Urban Farming is the practice of farming in urban and peri-urban areas. Farming connotes a wide range of food and non-food products that can be cultivated or grown, including rearing livestock, aquaculture and bee-keeping. The goal of urban farming is to provide fresh and locally grown food to city dwellers, while also promoting environmental sustainability and community development.

Statement 2 is correct: Urban farming can employ a variety of methods, including community gardens, rooftop and vertical farming, hydroponics, aeroponics, aquaponics, raised beds and containers, Permaculture, etc.

Statement 3 is correct: Urban farming can reduce the environmental impact of food production by using sustainable growing methods, such as composting and rainwater harvesting, and reducing transportation emissions. Urban agriculture will play an important role in the decarbonization of food production and food supply chain. Urban agriculture increases the amount of vegetation in cities, which increases rates of carbon sequestration as plants take in CO₂ during photosynthesis. Increasing green space has the additional benefits of increasing biodiversity, which can reduce the urban heat island affect by as much as 0.5-4 °C³, and improves human health by acting as a buffer to pollution.

Knowledge Base:

Advantages of Urban Farming:

- 1) Urban farming can create jobs and stimulate economic growth in urban areas.
- 2) Urban farming can bring people together, promoting social interaction, community development, and a sense of belonging.
- 3) Urban farming provides access to fresh and locally-grown food, reducing dependence on imports 4. It increases food security in urban areas.

Source: <https://zerocarbonhubs.co.uk/how-can-urban-agriculture-help-us-achieve-net-zero.html>

<https://www.sciencedirect.com/science/article/abs/pii/S0169204612003209>

<https://www.orfonline.org/research/optimising-urban-agriculture/>

Q.21) With reference to the circumstances in Indian agriculture, the concept of "Conservation Agriculture" assumes significance. Which of the following fall under the Conservation Agriculture?

1. Avoiding the monoculture practices
2. Adopting minimum tillage
3. Avoiding the cultivation of plantation crops
4. Using crop residues to cover soil surface
5. Adopting spatial and temporal crop sequencing/crop rotations

Select the correct answer using the code given below:

- a) 1, 3 and 4
- b) 2, 3, 4 and 5
- c) 2, 4 and 5
- d) 1, 2, 3 and 5

Ans) c

Exp) Option c is the correct answer.

Conservation Agriculture (CA) is a farming system that can prevent losses of arable land while regenerating degraded lands.

Statement 2, 4 and 5 are correct: Conservation Agriculture (CA) is a farming system that can prevent losses of arable land while regenerating degraded lands. It **promotes maintenance of a permanent soil cover, minimum soil disturbance, and diversification of plant species**. It includes the practice related to **Species diversification through varied crop sequences and associations involving at least three different crops i.e., avoiding adopting crop sequencing or crop rotation with respect to time and space**.

It enhances biodiversity and natural biological processes above and below the ground surface, which contribute to increased water and nutrient use efficiency and to improved and sustained crop production.

Statement 1 and 3 are incorrect: Conservation Agriculture is simply based on three core principles: minimum soil disturbance, maintenance of permanent soil cover and use of crop rotations with a diversity of crop species. It does not avoid the monoculture practices and cultivation of plantation crops.

Source: UPSC PRELIMS 2018

<https://www.fao.org/conservation-agriculture/en/>

<https://www.agricology.co.uk/resources/what-conservation-agriculture>

Q.22) Consider the following statements regarding the problems caused by Irrigation:

1. Irrigation causes soil compaction, which degrades soil structure and reduces root growth.
2. Irrigation contribute to leaching of pesticides into surface water, which harms aquatic life.
3. Excess Irrigation releases greenhouse gases like methane and carbon dioxide into the atmosphere.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 1 and 3 only
- c) 2 and 3 only
- d) 1, 2, and 3

Ans) d

Exp) Option d is the correct answer.

Irrigation is the process of artificially supplying water to crops in order to support agriculture and ensure food security in areas with limited rainfall or scarce water resources. Irrigation can cause several problems related to soil health and the environment:

Statement 1 is correct: Irrigation can cause soil compaction, which can lead to poor soil structure, reduced water infiltration, and reduced root growth. soil compaction is the process in which stress applied to a soil causes densification as air is displaced from the pores between the soil grains.

Statement 2 is correct: Irrigation can contribute to the leaching of pesticides and fertilizers into groundwater and surface water, which can harm aquatic life and impact drinking water quality.

Statement 3 is correct: Irrigation can lead to waterlogging, where excess water accumulates in the soil and oxygen is depleted, leading to reduced plant growth and anaerobic decomposition of Source:

Q.23) Consider the following statements with reference to the irrigation statistics in India:

1. Of the total available agricultural land in India, less than half is irrigated.
2. In terms of percentage of total agricultural land, Punjab has the largest extent of area under irrigation.
3. Irrigation projects with Command Area of more than 10 thousand hectare are called as Major Irrigation Projects.

Which of the above given statements is/are correct?

- a) 3 only
- b) 2 and 3 only
- c) 1 and 2 only
- d) 1, 2 and 3

Ans) d

Exp) option d is the correct answer.

Irrigation is the process of applying water to the crops artificially to fulfill their water requirements. Nutrients may also be provided to the crops through irrigation.

Statement 1 is correct: As per the latest data available with the Union government, against the total agricultural land of 1,80,888 thousand hectares, the cultivated land in the country is 1,53,888 thousand hectares. **Of the total available agricultural land 71,554 thousand hectares or only 40 per cent is irrigated.**

Statement 2 is correct: At the state level, **Punjab is the highest state in terms of irrigation coverage. In terms of area, 98 percent of the state's farming is irrigated.** However, in terms of total irrigated area, Uttar Pradesh is at the top with highest irrigated Area in country. It accounts for 21.73% of India's total irrigated area.

Statement 3 is correct: **Major Irrigation Projects in India's irrigation system, envisage the area to be covered under irrigation project to be of the order of 10000 hectares or more (Command Area>10,000 ha).** This type of project consists huge storage reservoirs, flow diversion structures and a large network of canals. These are often multi-purpose projects serving other aspects like flood control and hydro power.

Source: <https://www.thehindubusinessline.com/data-stories/data-focus/data-focus-why-india-is-not-able-to-irrigate-all-available-agricultural-land/article65779169.ece>

<https://pib.gov.in/newsite/PrintRelease.aspx?relid=199881>

<https://m.rbi.org.in/scripts/PublicationsView.aspx?id=20708>

Q.24) With reference to Irrigation system in India, arrange the following irrigation methods in descending order of percentage use:

1. Canals
2. Tanks
3. Wells other than tube wells
4. Tube wells

Select the correct answer using the code given below:

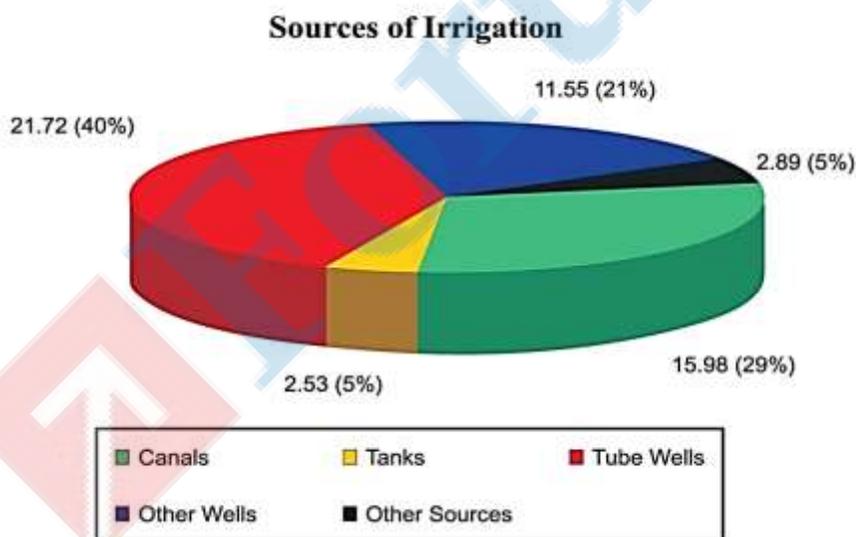

- a) 4-1-3-2
- b) 2-3-4-1
- c) 4-1-2-3
- d) 2-3-1-4

Ans) a

Exp) Option a is the correct answer.

In India, different sources of irrigation are used depending upon the topography, soils, rainfall, availability of surface or groundwater, nature of rivers (whether perennial or non-perennial), requirements of crops etc. The main sources of irrigation used in different parts of the country are Canal irrigation, well irrigation and Tank irrigation. **The decreasing order of percentage use of different irrigation methods is: Tube wells > Canals > Wells other than tube wells > Tanks.**

The **highest percentage as a source of irrigation is covered by Tube Wells (around 40%) (OPTION 4)**. It is followed by **Canals (around 29%) (OPTION 1)**. It is the second most important source of irrigation in our country. Canals are the effective source of irrigation in areas of low-level relief, deep, fertile soils, perennial source of water and extensive command area. Afterwards, **Wells (such as traditional Johad etc.) other than tube-wells cover an area around 21% (OPTION 3)**. **Tanks (OPTION 2) roughly cover the 5%** of irrigated area.

Source: <https://blog.forumias.com/wp-content/uploads/2021/09/Agriculture-Red-Book-V4-Final.pdf>

Q.25) Consider the following statements regarding the 'Agriculture Orientation Index (AOI)':

1. It measures the ratio between government spending in agricultural sector and the contribution of the agricultural sector in a country's GDP.
2. In case of India, the value of AOI is greater than 1.

3. Government spending on agriculture also includes expenditure on animal husbandry and forestry projects.

Which of the statements given above is/ are correct?

- a) 1 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

The Agriculture Orientation Index (AOI) is developed as a part of the Goal 2 (Zero Hunger) of 2030 agenda for sustainable development. The report containing this index is the joint efforts of The Food and Agriculture Organization (FAO) of the United Nations (UN).

Statement 1 is correct: The Agriculture Orientation Index (AOI) for Government Expenditures is defined as the **Agriculture Share of Government Expenditures, divided by the Agriculture Share of GDP**, where Agriculture refers to the agriculture, forestry, fishing and hunting sector. In other words, it measures the **ratio between government spending towards the agricultural sector and the sector's contribution to GDP.**

Statement 2 is incorrect: An Agriculture Orientation Index (AOI) **greater than 1 reflects a higher orientation towards the agriculture sector**, which receives a higher share of government spending relative to its contribution to economic value-added. On the other hand, **an AOI less than 1 reflects a lower orientation to agriculture**, while an AOI equal to 1 reflects neutrality in a government's orientation to the agriculture sector.

However, **in India, the government expenditure on agriculture sector is quite less and its AOI is approximately 0.3.** Although the AOI has shown an improvement since the mid-2000s, India's AOI is one of the lowest in Asia. India holds only the **38th rank** in the world, despite being an agrarian economy wherein a huge population is dependent on the agricultural sector for its livelihood.

Hence, the statement is incorrect.

Statement 3 is correct: Government spending includes spending on animal husbandry and forestry projects. It also includes expenditure on **soil improvement, irrigation facilities, marine/ freshwater biological research, afforestation etc.**

Source: <https://sdg.tracking-progress.org/indicator/2-a-1-agriculture-orientation-index-for-government-expenditures-2/>

<https://unstats.un.org/sdgs/metadata/files/metadata-02-0a-01.pdf>

Q.26) Consider the following types of micro-irrigation and their description:

Type of Micro-irrigation	Description
--------------------------	-------------

- | | |
|---------------|--|
| 1. Surge Flow | Application of water through small trenches |
| 2. Furrow | Application of water in the field in an intermittent series of on and off. |
| 3. Subsurface | Application of water through buried drip tubes |

4. Bubbler Application of water in
 a small stream or
 fountain

Which of the above given pairs is/are matched correctly?

- a) 2 and 3 only
b) 1 and 2 only
c) 1 and 4 only
d) 3 and 4 only

Ans) d

Exp) Option d is the correct answer.

Micro-Irrigation refers to application of water at low volume and frequent intervals under low pressure to plant root zone. There are various types of micro-irrigation methods.

Pair 1 and 2 are incorrect: In **Surge flow irrigation (not furrow)**, there is an **intermittent application of water in a series of on and off modes of constant or variable time** spans has the potential of reducing intake and percolation losses, increasing the irrigation efficiencies and conserving irrigation water. **Furrow irrigation (not surge flow) is a method where water is applied to furrows (small trenches) using small discharges** to favour water infiltration while advancing down the field.

Pair 3 is correct: **Subsurface Drip Irrigation (SDI)** is a low-pressure, low volume irrigation system that **uses buried tubes or emitters to apply water**. The applied water moves out of the tubes by soil matrix suction. Wetting occurs around the tube and water moves out in the soil in all directions.

Pair 4 is correct: In **Bubbler system of micro-irrigation**, the **water is applied to the soil surface in a small stream or fountain**. The discharge rate for point source bubbler emitters is greater than the drip or subsurface emitters. Bubbler systems do not require elaborate filtration systems. **These are suitable in situations where large amount of water needs to be applied in a short period of time and suitable for irrigating trees with wide root zones and high-water requirements.**

Source: <https://blog.forumias.com/wp-content/uploads/2021/09/Agriculture-Red-Book-V4-Final.pdf>

Q.27) Consider the following statements with reference to programs associated with agriculture and irrigation in India.

1. The Drought Prone Areas Programme (DPAP) provides the crop and livestock insurance to the farmers in drought affected areas.
2. Rainfed Area Development Programme (RADP) focuses on Integrated Farming System (IFS) for enhancing agricultural productivity.
3. Atal Bhujal Scheme aims to demonstrate community-led sustainable ground water management.
4. Integrated Watershed Management Programme (IWMP) aims at regeneration of natural vegetation.

Which of the above given statements is/are correct?

- a) 2 and 3 only
b) 2, 3 and 4 only
c) 1, and 4 only
d) 1, 2, 3 and 4

Ans) b

Exp) Option b is the correct answer.

The Government of India has launched several schemes for effective water management, irrigation and agriculture.

Statement 1 is incorrect: Drought Prone Areas Programme (DPAP) is the “**earliest area development programme**” launched by the Central Government in 1973-74 to tackle the special problems faced by those fragile areas which are constantly affected by severe drought conditions. The basic objective of the programme is to minimize the adverse effects of drought on production of crops and livestock and productivity of land, water and human resources ultimately **leading to drought proofing of the affected areas**. There is **no provision of crop and livestock insurance** in the scheme.

Statement 2 is correct: **Rainfed Area Development Programme (RADP)** was launched in the year 2011-12 as a sub-scheme under Rashtriya Krishi Vikas Yojana (RKVY). It **aims at improving quality of life of farmers’ especially, small and marginal farmers by offering a complete package of activities to maximize farm returns**. RADP focuses on Integrated Farming System (IFS) for enhancing agricultural productivity and minimizing risks associated with climatic variabilities.

Statement 3 is correct: The **goal of Atal Bhujal Yojana (Atal Jal) is to demonstrate community-led sustainable ground water management which can be taken to scale**. The major objective of the Scheme is to improve the management of groundwater resources in select water stressed areas in identified states viz. Gujarat, Haryana, Karnataka, Madhya Pradesh, Maharashtra, Rajasthan and Uttar Pradesh.

Statement 4 is correct: **The Integrated Watershed Management Programme (IWMP)** is the new and unified approach of the government **for treatment and development of the new generation watersheds in a realistic and holistic manner**. The main aims of this programme are as follows:

- 1) To restore the ecological balance by harnessing, conserving and developing degraded natural resources such as soil, vegetative cover and water.
- 2) The outcomes are prevention of soil run-off, soil loss.
- 3) **Regeneration of natural vegetation.**
- 4) Rain water harvesting and recharging of the ground Water table.
- 5) Enabling multi-cropping and the introduction of diverse agro-based activities, which help to provide sustainable livelihoods to the people residing in the watershed area.

[dpap#:~:text=The%20basic%20objective%20of%20the,proofing%20of%20the%20affected%20areas](https://dolr.gov.in/en/drought-prone-areas-programme-dpap#:~:text=The%20basic%20objective%20of%20the,proofing%20of%20the%20affected%20areas)

Q.28) Which among the following are the components of the PM Krishi Sinchayee Yojna:

1. Accelerated Irrigation Benefits Programme
2. Pradhan Mantri Kisan Urja Suraksha Evam Utthaan Mahabhiyan (PM-KUSUM)
3. Watershed Development
4. Soil Health Card Scheme
5. Command Area Development (CAD)
6. Ground Water Development

Select the correct answer using the code given below:

- a) 2, 3, 4 and 6 only
- b) 1, 3, 5 and 6 only
- c) 1, 2, 4 and 5 only
- d) 1, 2, 3, 4, 5 and 6

Ans) b

Exp) Option b is the correct answer.

Launched in 2015, the overreaching vision of Pradhan Mantri Krishi Sinchayee Yojana (PMKSY) is to ensure access to some means of protective irrigation to all agricultural farms in the country, to produce 'per drop more crop'.

Option 1 is correct: Accelerated Irrigation Benefits Programme (AIBP) is a part of PMKSY. Government of India launched Accelerated Irrigation Benefits Programme (AIBP) in the year 1996-97 to provide Central Assistance to States for the major/medium irrigation projects in the Country, with the objective to accelerate implementation of advanced stage irrigation projects held up due to financial constraint.

Option 2 is incorrect: PM-KUSUM is a scheme, which is aimed at ensuring energy security for farmers in India, along with honoring India's commitment to increase the share of installed capacity of electric power from non-fossil-fuel sources to 40% by 2030 as part of Intended Nationally Determined Contributions (INDCs). **PM-KUSUM is not a part of PMKSY.** This scheme is for installation of Solar Pumps and Grid connected solar and other Renewable Energy Power Plants.

Option 3 is correct: Prime Minister Krishi Sinchayee Yojna has Watershed Development Component. The main objectives of the WDC-PMKSY are to restore the ecological balance by harnessing, conserving and developing degraded natural resources such as soil, vegetative cover and water.

Option 4 is incorrect: On 19th February 2015, the Ministry of Agriculture and Farmers' Welfare introduced the Soil Health Card (SHC) scheme. A soil health card provides information on the nutrient status of soil, along with recommendations on the dosage of nutrients to be utilized for improving its fertility and health. **This scheme is not a part of PMKSY.**

Option 5 is correct: In 1974-75, the Government of India launched the Command Area Development programme to bridge / narrow the gap between irrigation potential created and actually utilized in major and medium irrigation schemes. **This scheme was supposed to develop adequate delivery of the irrigation water up to the fields. This is also a component under the PMKSY.**

Option 6 is correct: Ground Water Development is a component under the PMKSY. It comes under the program of Har Khet ko Paani. The scheme of PMKSY was approved in 2015-16 has, inter-alia, a component of Ground Water for creating additional irrigation from ground water resources. Ground water component aims utilizing ground water for irrigation purpose in areas, where ground water is sufficiently available.

Knowledge Base:

PMKSY consists of three major components implemented by various ministries. They are as follows.

Department of Water Resources, River Development and Ganga Rejuvenation, Ministry of Jal Shakti

- 1) **Component:** Accelerated Irrigation Benefits Programme (AIBP)
- 2) **Component:** Har Khet Ko Pani (HKKP)
 - a. **Sub component:** Command Area Development (CAD)
 - b. **Sub component:** Surface Minor Irrigation (SMI)
 - c. **Sub component:** Repair, Renovation and Restoration (RRR) of Water Bodies
 - d. **Sub component:** Ground Water Development

Department of Land Resources, Ministry of Rural Development

- 1) **Component:** Watershed Development

Department of Agriculture and Farmers Welfare, Ministry of Agriculture & Farmers Welfare

- 1) **Component:** Per Drop More Crop

Source: <https://pmksy.gov.in/>

<https://vikaspedia.in/agriculture/policies-and-schemes/crops-related/pradhan-mantri-krishi-sinchai-yojana#section2>

Q.29) With reference to Minimum Support Price (MSP), Consider the following statements:

1. The MSP for the crops is approved by the Commission on Agricultural Costs and Prices (CACP).
2. The MSP provided currently is at least 1.5 times the cost of production incurred by the farmers.
3. Government increases the MSP of some crops on account of nutritional requirements and changing dietary patterns.
4. MSP in India is presently restricted to edible food crops only.

Which of the statements given above are correct?

- a) 2 and 3 only
- b) 2, 3 and 4 only
- c) 1 and 4 only
- d) 1, 2 and 3 only

Ans) a

Exp) Option a is the correct answer.

The Minimum Support Price (MSP) for a crop is the price at which the government is supposed to procure/buy that crop from farmers if the market price falls below it. MSPs create the benchmark for farm prices not just in those commodities for which they are announced, but also in crops that are substitutes.

Statement 1 is incorrect: Minimum Support Prices (MSP) **is approved by Cabinet Committee on Economic Affairs** based on the **recommendation of the Commission for Agricultural Costs and Prices (CACP)**.

Statement 2 is correct: The Union Budget for 2018-19 announced that farmers in India would be given an MSP of at least **one and a half times the cost of production**.

Statement 3 is correct: Given nutritional requirements and changing dietary patterns and to achieve self-sufficiency in pulses and oilseeds production, the Government fixes relatively higher MSP for pulses and oilseeds. For example, highest increase in MSP has been approved for lentil (Masur) at Rs.500/- per quintal followed by rapeseed and mustard at Rs.400/- per quintal. For safflower, an increase of Rs.209/- per quintal has been approved for marketing for season 2023-24.

Statement 4 is incorrect: MSP is given for 23 crops which includes food items as well as non-food items like raw jute. Crops covered by MSPs include:

- 1) 7 types of cereals (paddy, wheat, maize, bajra, jowar, ragi and barley),
- 2) 5 types of pulses (chana, arhar/tur, urad, moong and masur),
- 3) 7 oilseeds (rapeseed-mustard, groundnut, soyabean, sunflower, sesamum, safflower, Niger seed),
- 4) 4 commercial crops (cotton, sugarcane, copra, raw jute)

Knowledge Base:

While recommending MSPs, the CACP looks at the following factors:

- 1) The demand and supply of a commodity
- 2) Its cost of production
- 3) The market price trends (both domestic and international)
- 4) inter-crop price parity
- 5) The terms of trade between agriculture and non-agriculture (that is, the ratio of prices of farm inputs and farm outputs)
- 6) A minimum of 50 per cent as the margin over the cost of production
- 7) The likely implications of an MSP on consumers of that product

Source: https://www.indiabudget.gov.in/economicsurvey/ebook_es2022/index.html

<https://indianexpress.com/article/explained/everyday-explainers/farmers-crops-price-msp-explained-7789563/>

Q.30) Dhara Mustard Hybrid (DMH-11) has recently been approved by the GEAC for cultivation in farmer fields as a precursor to commercial cultivation. In this context, which of the following are the organizations/institutions/mechanisms which regulate Genetically modified crops in India?

1. Department of Biotechnology (DBT)
2. Food Safety and Standards Authority of India (FSSAI)
3. The Protection of Plant Varieties and Farmers' Rights Act, 2001
4. Foreign Trade Policy (FTP)
5. Central Board of Direct Taxes (CBDT)
6. Indian Council for Agricultural Research (ICAR)

Choose the correct answer using the code given below:

- a) 1, 2 and 3 only
- b) 3, 4, 5 and 6 only
- c) 1, 2, 4 and 6 only
- d) 1, 2, 3, 4, 5 and 6

Ans) c

Exp) Option c is the correct answer.

A genetically modified organism (GMO) is any living organism whose genetic material has been modified to include certain desirable techniques. Due to potential threats to biodiversity and human health, GMOs are strictly regulated in India.

Option 1 is correct: Department of Biotechnology (DBT), under the Ministry of Science and Technology is responsible to provide **scientific support in implementation of biosafety regulations** pertaining to the GMOs.

Option 2 is correct: FSSAI, under the Ministry of Health and Family Welfare, is responsible for **regulating genetically engineered food products**. According to the regulations, no person shall manufacture, pack, store, sell, market or otherwise distribute or import any food or food ingredient produced from GMOs, except with the prior approval of the Food Authority.

Option 3 is incorrect: The Protection of Plant Varieties and Farmers' Rights Act, 2001 aims to protect the rights of the farmers in respect of their contribution made at any time in conserving, improving and making available plant genetic resources for the development of new plant varieties. **The Act does not regulate the release/ non-release of genetically modified crops in the environment per se. It primarily deals with the sharing of the genetic resources.**

Option 4 is correct: DGFT is the nodal body to **monitor import or export policy of the GMOs.**

Option 5 is incorrect: Central Board of Direct Taxes has no explicit mandate for dealing with GMOs. It is the **Central Board of Excise and Customs, under the Department of Revenue (Ministry of Finance), which enforces regulations pertaining to the transboundary movement of GMOs** at the point of entry.

Option 6 is correct: Indian Council of Agricultural Research (ICAR) is responsible for **monitoring post-release performance of GM crops**. It is, thus, responsible of monitoring agro-economic benefits of GM technology.

Knowledge Base:

About Genetic Engineering and Appraisal Committee (GEAC)

- 1) This committee is responsible for the assessment of the proposals related to the release of genetically modified organisms into environment.
- 2) This also monitors experimental field trials
- 3) It is constituted under the Environment Protection Act and chaired by Special Secretary or Additional Secretary of MoEF&CC.

Other Important Acts and Rules that regulate GM crops in India:

- 1) Environment Protection Act, 1986
- 2) Biological Diversity Act, 2002
- 3) Plant Quarantine Order, 2003
- 4) Food Safety and Standards Act, 2006
- 5) Drugs and Cosmetics Rules, 1988

Cartagena Protocol on Biosafety is an international treaty concerning the movement of Living Modified Organisms (LMOs) from one nation to another. MoEF&CC is the nodal agency to ensure compliance with this treaty.

Source: <https://www.thehindu.com/news/national/explained-genetically-modified-crops-and-their-regulation-in-india/article66071153.ece>

Q.31) In India, the use of carbofuran, methyl parathion, phorate and triazophos is viewed with apprehension.

These chemicals are used as:

- a) pesticides in agriculture
- b) preservatives in processed foods
- c) fruit-ripening agents
- d) moisturizing agents in cosmetics

Ans) a

Exp) Option a is the correct answer.

Option a is correct: Carbofuran, phorate, methyl parathion, monocrotophos, methyl demethon, prophenophos and triazophos used as pesticides in India to control insects in a wide variety of field crops. These pesticides are banned in many countries and some states like Kerla in India. Carbofuran is one of the most toxic carbamates (derived from carbamic acid) pesticides. Parathion or methyl parathion has been banned in various countries due to its high toxicity to humans. Triazophos is a chemically toxic insecticide which could lead to headaches, blurred vision, dizziness etc., in humans. Phorate is also a highly toxic chemical compound, used as an insecticide

Source: UPSC PRELIMS 2019

<https://www.downtoearth.org.in/news/pesticide-ban-lands-kerala-in-court-33657>

Q.32) With reference to crop insurance under Pradhan Mantri Fasal Bima Yojana (PMFBY), Consider the following statements:

1. Enrolment under PMFBY is mandatory for loanee farmers of banks.
2. Damage to crops due to wildlife attack is also covered under PMFBY.
3. post-Harvest loss coverage is provided only up to a maximum period of two weeks from harvesting.

Which of the statements given above are correct?

- a) 2 and 3 only
- b) 1 and 3 only
- c) 1 and 2 only
- d) 1, 2, and 3

Ans) a

Exp) Option a is the correct answer.

Pradhan Mantri Fasal Bima Yojana (PMFBY) provides comprehensive insurance coverage to farmers in case of crop failure, helping stabilise their incomes. The scheme is implemented through empanelled general insurance companies.

Statement 1 is incorrect: The scheme was revamped in 2020, which made participation for all farmers **voluntary** under PMFBY. Earlier, crop insurance was mandatory for loanee [borrower] farmers and

voluntary for non-loanee farmers. All farmers availing Seasonal Agricultural Operations (SAO) loans from Financial Institutions in the notified area who possess a Crop Loan account/KCC account are called as Loanee Farmers.

Statement 2 is correct: loss to crops arising out of wildlife attack is also covered under PMFBY crop insurance scheme. It is included as add-on coverage under the Pradhan Mantri Fasal Bima yojana. The crop risk covered under scheme includes:

- 1) Prevented Sowing/Planting/Germination Risk
- 2) Standing Crop (Sowing to Harvesting): Comprehensive risk insurance is provided to cover yield losses due to non-preventable risks, viz. Drought, Dry spell, Flood, Inundation, widespread Pests and Disease attack, Landslides, Fire due to natural causes, Lightening, Storm, Hailstorm and Cyclone.
- 3) Post-Harvest Losses.
- 4) Localized Calamities: Loss/damage to notified insured crops resulting from occurrence of identified localized risks of Hailstorm, Landslide, Inundation, Cloud burst and Natural fire due to lightening affecting isolated farms in the notified area

Statement 3 is correct: Insurance coverage is available only up to a **maximum period of two weeks from harvesting**. It is for those crops which are required to be dried in cut and spread / small bundled condition in the field after harvesting against specific perils of Hailstorm, Cyclone, Cyclonic rains and Unseasonal rains.

Source: <https://indianexpress.com/article/india/govt-makes-crop-insurance-schemes-voluntary-6276602/>

Economic survey 2022-2023

<https://agricoop.nic.in/Documents/DocCredit/PMFBY-Draft-Guidelines-V-1.1.pdf>

Q.33) With reference to different measures taken in fields of research and education in agriculture, Consider the following statements:

1. Kalanamak is a biofortified rice which has been enriched with zinc.
2. In Neem coated urea, neem oil acts as nitrification accelerator for the release of nitrogen in soil.
3. Soil Health card measures electrical conductivity and organic carbon in soil.
4. Effective recycling of farm products and waste material is the main purpose behind Integrated Farming System.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 2, 3 and 4 only
- c) 3 and 4 only
- d) 1, 2 and 4 only

Ans) c

Exp) Option c is the correct answer.

Government has undertaken different measures taken in fields of research and education in agriculture like natural resource management and integrated farming, climate resilient technologies, biofortified crops etc. It plays a key role in development of environmentally sustainable global food system, ensuring food and nutritional security and increasing farm income by cost minimization and yield maximization.

Statement 1 is incorrect: Kalanamak, a traditional variety of paddy with a black husk and a strong fragrance, grown in Terai region of north-eastern Uttar Pradesh and in Nepal. However, a biofortified rice has been developed named as DRR Dhan 45. It is high in zinc content (22.6 ppm) in polished grains in comparison to 12.0-16.0 ppm in popular varieties.

Statement 2 is incorrect: In Neem-coated urea, Neem oil acts as a '**nitrification inhibitor**' when coated on urea. By slowing down urea hydrolysis and nitrification, it allows a more gradual release of nitrogen in irrigation water and thus is crops, which can be used by the plant and prevents leaching of urea.

Statement 3 is correct: Soil Health Card is a printed report that a farmer will be handed over for each of his holdings. It contains the status of his soil with respect to 12 parameters, namely.

- 1) N, P, K (Macro-nutrients)
- 2) S (Secondary- nutrient)
- 3) Zn, Fe, Cu, Mn, Bo (Micro - nutrients)
- 4) pH, **Electrical conductivity, Organic Carbon** (Physical parameters).

Based on this, the SHC will also indicate fertilizer recommendations and soil amendment required for the farm.

Statement 4 is correct: Integrated farming system is a sustainable agricultural system that integrates livestock, crop production, fish, poultry, tree crops, plantation crops and other systems that benefit each other. It is based on the concept that '**there is no waste**' meaning **waste from one component becomes an input for another part of the system**. For example, Pig dung acts as excellent pond fertilizer and some fish feeds directly on the pig excreta.

Source: <https://indianexpress.com/article/india/india-fertiliser-sales-foodgrain-output-narendra-modi-neem-urea-4581174/>

<https://www.india.gov.in/spotlight/soil-health-card#tab=tab-1>

<https://www.manage.gov.in/NaturalFarming/Files/PPTPDFs/GRAM%20PRADHAN%20Meren.pdf>https://icar.org.in/files/BiofortifiedEnglish_.pdf

Q.34) With reference to initiatives in livestock and fisheries sector, Consider the following statements:

1. Kisan Credit Card extends credit support to fisheries as well as livestock farmers.
2. Rashtriya Gokul mission includes 'genomic selection' for the availability of high genetic quality bulls.
3. Pradhan Mantri Matsya Sampada Yojana is being implemented exclusively in coastal states for the development of fisheries sector.
4. Central poultry development organization undertakes development of Japanese quail and Guinea fowl under poultry diversification programme.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 1, 2 and 4 only
- c) 1, 3 and 4 only
- d) 1 and 4 only

Ans) b

Exp) Option b is the correct answer.

Government has undertaken various initiatives for the development of livestock and fisheries sector.

Statement 1 is correct: To address the needs of fish farmers, government in the year 2018-19 has extended the credit facility to fisheries in addition to livestock farmers. It was done to help them meet their working capital needs.

Statement 2 is correct: The Rashtriya Gokul Mission (RGM) is being implemented for development and conservation of indigenous bovine breed. Components of RGM includes availability of High genetic Merit Germplasm through:

- 1) Progeny Testing
- 2) Pedigree Selection
- 3) Genomic Selection
- 4) Import of Germplasm

Statement 3 is incorrect: Pradhan Mantri Matsya Sampada Yojana (PMMSY) is a scheme to bring about Blue Revolution through sustainable and responsible development of fisheries sector in India. PMMSY is **being implemented in all the States and Union Territories for a period of 5 years from FY 2020-21 to FY 2024-25.**

Statement 4 is correct: Central Poultry Development Organization make available low input technology poultry stocks to states. It also includes development of **duck, Turkey, Japanese quail and Guinea fowl under poultry diversification programme.**

Source: Economic survey 2021-2022

<https://www.dahd.nic.in/related-links/central-poultry-development-organization>

https://dahd.nic.in/schemes/programmes/rashtriya_gokul_mission

[kcc#:~:text=For%20the%20existing%20KCC%20holders,capital%20requirements%20for%20fisheries%20activities.](https://dof.gov.in/related-links/fisheries-kcc#:~:text=For%20the%20existing%20KCC%20holders,capital%20requirements%20for%20fisheries%20activities.)

Q.35) Consider the following pairs:

Type of Farming	Description
1. Organic Farming	This method strictly prohibits the use of fertilizers, including bio-fertilizers
2. Regenerative Farming	This method promotes silvopasture for improving soil health.
3. Natural Farming	This method integrated crops, trees and livestock with functional biodiversity.
4. Integrated Farming	This method essentially involves growing two different crops on the same land to maximize land use.

How many pairs mentioned above is/ are correctly matched?

- Only one pair
- Only two pairs
- Only three pairs
- All the four pairs

Ans) b

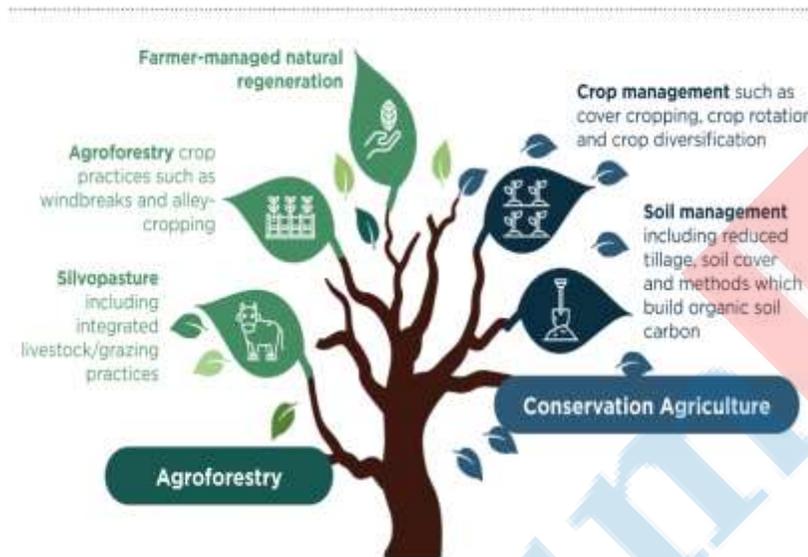

Exp) Option b is the correct answer.

Pair 1 is incorrect: Organic farming strictly **prohibits the use of synthetic fertilizers**, but it **promotes the use of bio-fertilizers**. Apart from organic wastes, this method uses beneficial **microbes as bio-fertilizers** to release nutrients to the crops. The commonly used bio-fertilizers include **Rhizobium, Azotobacter, Pseudomonas, Azospirillum** etc. These have been found very effective in fertility management. Other aspects of organic farming:

- Nature is the best role model for farming, and it does not demand unreasonable inputs or waters.
- Soil is considered as a living entity** and the system does not believe in mining the soil.

3) It uses soil enrichment techniques like **sanjivak, jivamrut, amritpani, panchgavya**. Other techniques peculiar to this method includes **beejamrita, whapasa and achadana**

Pair 2 is correct: Regenerative agriculture aims to improve soil health. For this purpose, the method promotes silvopasture. **Silvopasture is the practice of integrating trees, forage, and the grazing of domesticated animals in a mutually beneficial way.** This method also advocates **minimize ploughing** of the land, crop rotation and moving grazing cattle to different pastures (continuously grazing animals on the same piece of land can also degrade soil).

(Source: IUCN)

Pair 3 is correct: Natural farming is a method of agriculture that is based on the principles of **spiritual ecology**. It is a holistic approach to farming that seeks to **mimic the patterns and relationships found in nature**, without the use of external inputs such as synthetic fertilizers or pesticides. The focus is on creating a self-sustaining ecosystem that promotes healthy soil and strong, nutritious crops. This is achieved through techniques such as **composting, crop rotation, and the use of cover crops, as well as by encouraging natural pest predators and companion planting.**

It **emphasizes on interconnectedness of all living things** and **thus, promotes integrated management of crops, trees, livestock etc. with the other aspects of the functional diversity.**

Pair 4 is incorrect: Simultaneous growing of two or more crops is an essential requirement of the **inter-cropping and not of the integrated farming.** Integrated farming promotes crop production with livestock management. This method gives income security to the farmers through diversification and is also environmentally sustainable. Thus, growing two or more crops may or may not be there in this method.

Source: https://midh.gov.in/technology/Organic_Management_NHM.pdf

<https://www.weforum.org/agenda/2022/10/what-is-regenerative-agriculture/>

<https://www.agrifarming.in/integrated-farming-system-types-advantages-example-and-pdf>

Q.36) With reference to organic farming, consider the following statements:

1. Organic farming generally excludes the use of genetically modified organism (GMOs) crops.
2. Sikkim became the first state worldwide to become fully organic.
3. The organic food production in India is restricted to edible food crops only.
4. Raw Cereals and millets constitute the top organic products exported from India.

Which of the statements given above are correct?

- a) 1, 2 and 4 only
- b) 2 and 3 only
- c) 1 and 2 only
- d) 1, 3 and 4 only

Ans) c

Exp) Option c is the correct answer.

Organic products are grown under a system of agriculture without the use of chemical fertilizers and pesticides with an environmentally and socially responsible approach. This is a method of farming that works at grass root level preserving the reproductive and regenerative capacity of the soil, good plant nutrition, and sound soil management, produces nutritious food rich in vitality which has resistance to diseases.

Statement 1 is correct: The use of genetically modified organisms (GMOs) is generally prohibited in organic product cultivation.

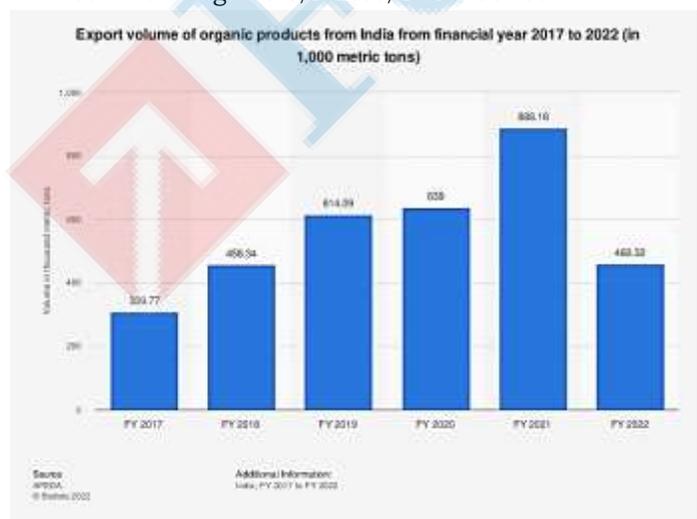

Statement 2 is correct: In 2016, Sikkim became first state in the world to become fully organic with its policies and efforts. It has converted its entire cultivable land (more than 75000 ha) under organic cultivation.

Statement 3 is incorrect: India produced around 3430735.65 MT (2021-22) of certified organic products which includes all varieties of food products namely Oil Seeds, fibre, Sugar cane, Cereals & Millets, Cotton, Pulses, Aromatic & Medicinal Plants, Tea, Coffee, Fruits, Spices, Dry Fruits, Vegetables, Processed foods etc. The production is not limited to the edible sector but also **produces organic cotton fiber, functional food products** etc.

Statement 4 is incorrect: India exported 888,179 metric tonnes (MT) of organic food in FY 2020-2021. **Processed food topped organic exports from India (56%)** followed by Oilseeds (12.85%), Cereals and millets (12.71%), Sugar (4.77%), Plantation crop products such as Tea & Coffee (2.16 %), Spices and condiments (1.72%), Pulses (1.1%) and others.

Knowledge Base:

- India's rank 5th in terms of World's Organic Agricultural land and 1st in terms of total number of producers as per 2021 data (Source: FIBL & IFOAM Year Book, 2020).
- In terms of organic commodities cultivated, Fiber crops are the single largest category followed by Oil Seeds, Sugar crops, Cereals and Millets, Medicinal/ Herbal and Aromatic plants, Spices & Condiments, Fresh Fruit Vegetable, Pulses, Tea & Coffee.

Q.37) Consider the following crops:

1. Wheat
2. Barley
3. Bajra
4. Mustard
5. Chickpea

Which of the crops given above are majorly grown in Rabi season in India?

- a) 1, 2 and 4 only
- b) 1, 3 and 5 only
- c) 1, 2 and 5 only
- d) 1, 2, 4 and 5 only

Ans) d

Exp) Option d is the correct answer.

There are three distinct **Crop Seasons** in the northern and interior parts of the country, namely **Kharif, Rabi and Zaid**. The **Rabi** season begins with the onset of winter in October–November and ends in March–April. The low temperature conditions during this season facilitate the cultivation of temperate and subtropical crops such as wheat, gram and mustard.

Cropping Season	Major Crops Cultivated	
	Northern States	Southern States
Kharif June–September	Rice, Cotton, Bajra, Maize, Jowar, Tur	Rice, Maize, Ragl, Jowar, Groundnut
Rabi October – March	Wheat, Gram, Rapeseeds and Mustard, Barley	Rice, Maize, Ragl, Groundnut, Jowar
Zaid April–June	Vegetables, Fruits, Fodder	Rice, Vegetables, Fodder

Option 1 is correct: **Wheat** is the second most important cereal crop after rice, and one of the most prominent Rabi crops of India. It is primarily a crop of temperate zone. Wheat needs a cool temperature during the growing season in the range of 14 degrees Celsius to 18 degrees Celsius. The rainfall requirement is 50 cm to 90 cm. However, for harvesting, wheat requires bright sunshine and little warm weather. Hence, its cultivation in India is done during winter i.e. rabi season. Being a rabi crop, it is mostly grown under irrigated conditions. Thus, this option is correct as wheat is a Rabi crop in India.

Option 2 is correct: **Barley** may be grown in subtropical climatic condition. The crop requires around 12–15 degrees Celsius during growing period and around 30 degrees Celsius at maturity. Therefore in India, it is grown during the winter months in the North, when the temperatures roughly correspond to this range. Thus this option is correct, as Barley too is a Rabi crop in India.

Option 3 is incorrect: Bajra is a type of millet crop indigenous to India. Bajra is sown in hot and dry climatic conditions in northwestern and western parts of the country. It is a hardy crop which resists frequent dry spells and drought in this region. Since it needs hot conditions to grow and mature, it along with other Millets like Ragi, Jowar, etc is a Kharif crop (grown in summer months). Thus, this option is incorrect, as this crop is not a Rabi crop.

Option 4 is correct: Mustard, also known as Sarso in Hindi, is an oilseed. It is a subtropical crop requiring cool and dry weather and a fair supply of soil moisture during the growing period and dry clear weather at the time of maturity. So, in India it is grown in Rabi season from September-October to February-March. It is cultivated in north-western and central parts of India. It is a frost sensitive crop. Thus, this option too is correct as Mustard is a Rabi crop.

Option 5 is correct: Chickpea is popularly known as “Bengal Gram” or Chana in India. It is consumed as a vegetable, and can also be made into split pulse (Chana dal) and flour (Besan). It is also used as fodder for livestock. It grows well under good moisture conditions with ideal temperatures between 24 and 30 degrees Celsius. So basically, it's a winter season crop in India. Hence this option is correct as Chickpea too is a Rabi crop in India.

Knowledge Base: The kharif season largely coincides with Southwest Monsoon under which the cultivation of tropical crops, such as rice, cotton, jute, jowar, bajra and tur is possible. Zaid is a short duration summer cropping season beginning after harvesting of rabi crops. The cultivation of watermelons, cucumbers, vegetables and fodder crops during this season is done on irrigated lands. However, this type of distinction in the cropping season does not exist in southern parts of the country.

Mustard: The seed and oil of Mustard are used as condiments in the preparation of pickles, curries, vegetables, hair oils, medicines and manufacture of greases. The oil cake is used as feed and manure. The leaves of young plants are used as green vegetables and green stem and leaves are a good source of green fodder for cattle. In the tanning industry, mustard oil is used for softening leather.

Q.38) Which of the following are among the agro-climatic zones into which India has been divided?

1. Trans Gangetic Plain
2. Nilgiri Hills
3. Central Plateaus and Hills
4. Island region
5. Gujarat Plain and Hills
6. Purvanchal Himalayas

Choose the correct answer using the code given below:

- a) 1 and 5 only
- b) 2, 3, 5 and 6 only
- c) 1, 3, 4 and 5 only
- d) 1, 2, 5 and 6 only

Ans) c

Exp) Option c is the correct answer.

The Planning Commission after examining the earlier studies on the regionalisation of the agricultural economy has recommended that agricultural planning be done on the basis of agroclimatic regions. For

resource development, the country has been broadly divided into fifteen agricultural regions based on agro climatic features, particularly soil type, climate including temperature and rainfall and its variation and water resources availability, etc.

Option 1 is correct: The **Trans Gangetic Plain Region** encompasses areas included in the States of Punjab, Haryana, Plain region of Rajasthan as well as the Union Territories of Chandigarh and Delhi. The sub-zones cut across State boundaries. The climate is arid, semi-arid and sub-humid in different districts. In summer months temperatures rise up to 43°C radiating heat waves with occasional dust storms. Rainfall varies from 190 mm to 1,150 mm. The river Beas, Ravi, Sutlej, Yamuna and Ghaggar are important sources for irrigation in the zone.

Option 2 is incorrect: The **Nilgiri Hills** are the southernmost part of the Western edge of the Peninsular Plateau Region of India. These are a physiographic division of India, not an agro climatic zone in itself. Therefore, this option is **incorrect**.

Option 3 is correct: The **Central Plateau and Hills region** is another agro climatic subdivision of India. It is a large region comprising 46 districts of Madhya Pradesh, Uttar Pradesh, and Rajasthan. It is sub-divided into 14 sub-regions having varied topography of low hills, mounds, valleys, and ravines, etc. It is interspersed with plateau and hill areas. There are vast areas of barren and uncultivable land. Water run-off is excessive. Nearly 15% of the land is not available for cultivation. Thus, this option is **correct**.

Option 4 is correct: The **Island region** is another agro climatic subdivision of India. It includes Andaman-Nicobar and Lakshadweep which have typically equatorial climate (annual rainfall less than 300 cm; the mean July and January temperature of Port Blair being 30 °C and 25 °C respectively). The soils vary from sandy along the coast to clayey loam in valleys and lower slopes.

The main crops are rice, maize, millets, pulses, arecanut, turmeric and cassava. Nearly half of the cropped area is under coconut. The area is covered with thick forests and agriculture is in backward stage. Thus, this option is **correct**.

Option 5 is correct: **Gujarat Plain and Hills** is another one of the agro climatic subdivisions of India. This zone covers the entire State of Gujarat. It can be broadly divided into South, Middle, North and Saurashtra-Kachchh regions. Large parts of the State are plains, mountainous parts lie on the eastern border with States of Maharashtra, Madhya Pradesh and Rajasthan. Nearly 20% of the area is considered drought prone. The southern parts of the State have a good canal network. Thus, this option is **correct**.

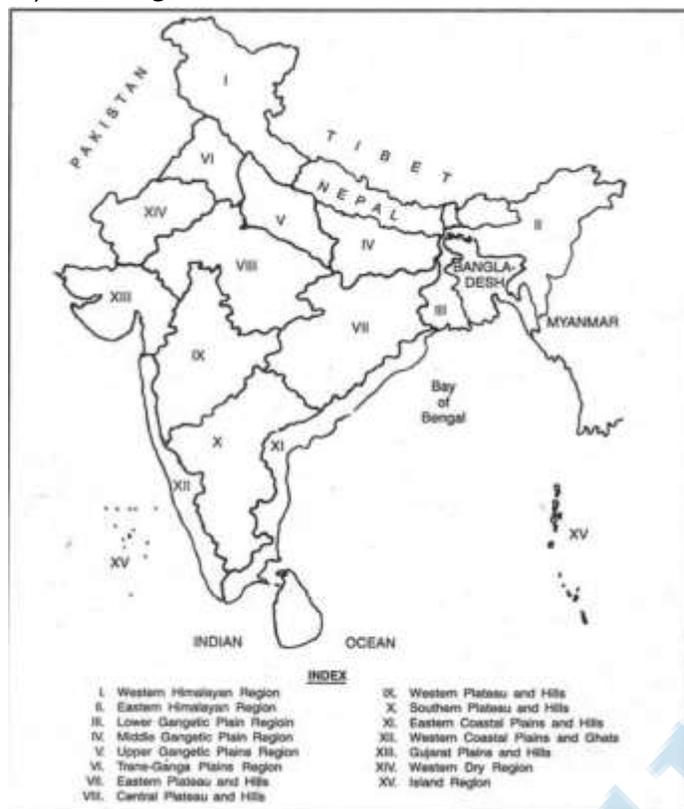

Option 6 is incorrect: The **Purvanchal Hills** refers to the mountain chain present in North eastern India. It is a sub-mountain range of the Himalayas in northeast India. It is spread throughout the states of Arunachal Pradesh, Assam, Nagaland, and Manipur. It includes the Patkai Hills, Naga Hills, Mizo Hills, etc. This is again a physiographic subdivision of India and not one of its agro climatic zones. Thus, this option is **incorrect**.

Knowledge Base:

Complete list of all Agro-Climatic zones of India:

- 1) Western Himalayan division
- 2) Eastern Himalayan division
- 3) Lower Gangetic plain region
- 4) Middle Gangetic plain region
- 5) Upper Gangetic plain region
- 6) Trans-Gangetic plain region**
- 7) Eastern plateau and hill region**
- 8) Central plateau and hill region**
- 9) Western plateau and hill region
- 10) Southern plateau and hill region
- 11) East coast plain and hill region
- 12) West coast plain and hill region
- 13) Gujarat plain and hill region**
- 14) Western plain and hill region

15) Island region

Map showing Agro-Climatic Regions.

Q.39) With reference to the practice of Crop Rotation, consider the following statements:

1. Growing of cereal and leguminous crops together is an example of crop rotation.
2. It does not have any bearing on the soil structure.
3. It leads to improved pest resilience of crops.

Which of the statements given above is/ are correct?

- a) 1 only
- b) 2 only
- c) 3 only
- d) 1 and 3 only

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: **Crop Rotation** refers to the agronomic practice of planting different varieties of crops in the same field in a pre-planned succession throughout the year. It is not merely limited to alternating between cereal and leguminous crops (in crop rotation it is not grown together but one after the another), although it is one of the most popular combinations under the system. Hence this statement is **incorrect**.

There are many other ways in which the crops to be alternated may be chosen. For example, after growing a crop with a tap root (goes deep, exhausts nutrients) system, a crop with a short fibrous root system may be grown.

Statement 2 is incorrect: The benefits of the practice of crop rotation are not simply limited to replenishing and improving the nutrient profile of the soil of the field where it is practised. It also has the effect of improving the soil structure of the field:

- 1) It improves the moisture retention capacity as well as soil aeration due to different types of roots systems involved.
- 2) It improves the soil organic content as the remains of the last crop act as green mulch.
- 3) There is reduced soil erosion as previous crop remains act like a green cover.

All these factors help improve the structure of the soil in addition to the main objective of improving soil fertility by cycling the nutrients demanded by the crops. Hence this statement is **incorrect**, as the practice of crop rotation has effects on soil structure too, apart from soil fertility/ nutrients.

Statement 3 is correct: One of the other advantages of the crop rotation system is ensuring better pest control. Since different crops attract and fall prey to different types of pests, this system ensures that if a pest manages to invade a field, it is not able to cause much damage.

For example, if a farmer grows a crop A which gets infested with pest B. Then in the next season, if the farmer grows A again, it may get destroyed due to any lingering population of B which may have survived pesticides and feeds on the crop A. However, if using the principle of crop rotation, the farmer grows an entirely different type of crop C, which the pest B cannot eat, then surely the entire population of the pest B dies by the next season without causing any crop failure in the current or the next crop cycle when the farmer returns to planting the crop A. Hence this statement is **correct**.

Knowledge Base:

Other Advantages of Crop Rotation:

- 1) Improves soil fertility by cycling the primary nutrients being used by the crop grown. While the second variety is being grown, the soil gets the opportunity to replenish the nutrients that had been used and depleted by the first crop.
- 2) It helps in suppressing weeds as the crops grown normally keep competing for nutrients and other resources, leaving less opportunity for weeds to grow.
- 3) It helps to reduce greenhouse emissions and climate warming as it helps reduce the need to apply large quantities of “n” fertilisers.
- 4) It helps to diversify sources of income for farmers and protect them better against seasonal fluctuations. It also helps improve the yield of crops as it improves the soil of the field.
- 5) Reduces the toxic build-up on soil created when the same crop is grown and the same fertilisers are applied. Since different crops are grown, the same fertilisers need not be applied, thus reducing the load and build-up.

Q.40) SEBI has recently extended the ban on trading of agricultural commodity derivatives. Which of the following best describes the purpose behind such ban?

- a) To protect the traders from volatility in the market.
- b) To protect the interest of importers by hedging risk.
- c) To control the rising inflation in economy.
- d) To gradually remove the agricultural derivatives from market to protect the interest of farmers.

Ans) c

Exp) Option c is the correct answer.

Recently, the Securities and Exchange Board of India (SEBI) has banned the derivative trade of seven agricultural commodities on the future's platform of National Commodities and Derivatives Exchange (NCDEX) for a year. **The centre, in particular SEBI have extended the ban on agricultural commodities on concerns over rising inflation**, and insulate future price shocks to the market. In a circular, the SEBI had directed stock exchanges having commodity derivatives segment to suspend derivative contracts trading in paddy (non-basmati), wheat, chana, mustard seeds, soya bean, crude palm oil and moong. Since past one year and half, spot market prices of these commodities were ruling very high. It led to further speculations, especially in mustard and its derivatives, which resulted in high open market price. Though last year the ban was imposed due to rising edible oil prices, but this year **it was imposed due to high rice and wheat prices**.

However, there have been past studies and panels which had contrasting views to this. In 2008, a high-powered panel constituted under the chairmanship of the Planning Commission member Abhijit Sen did not find any clear evidence of either increased or reduced volatility of spot prices due to futures trading.

Source: https://www.business-standard.com/article/markets/sebi-extends-suspension-of-agri-commodity-derivatives-trading-for-more-yr-122122100254_1.html

<https://www.thehindubusinessline.com/blexplainer/why-was-the-ban-on-agri-commodities-trading-extended/article66291933.ece>

Q.41) What is the use of biochar in farming?

1. Biochar can be used as a part of the growing medium in vertical farming.
2. When biochar is a part of the growing medium, it promotes the growth of nitrogen-fixing microorganisms.
3. When biochar is a part of the growing medium, it enables the growing medium to retain water for longer time.

Which of the statements given above is/are correct?

- a) 1 and 2 only
- b) 2 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Biochar is a charcoal-like substance that's made by burning organic material from agricultural and forestry wastes (also called biomass) in a controlled process called pyrolysis.

Statement 1 is correct: The term 'growing medium' is used to describe the material used in a container to grow a plant. Growing media are often formulated from a blend of different raw materials in order to achieve the correct balance of air and water holding capacity for the plants to be grown. **The use of biochar in the growing medium has been successfully used in vertical farming.**

Statement 2 and 3 are correct: Biochar holds potential for long-term carbon sequestration, improving soil health and **water-holding capacity**, and further reducing emissions of greenhouse gases associated with fertiliser application. **Biochar also has the potential to boost the natural ability of legumes to fix nitrogen to the soil.**

Source: UPSC PRELIMS 2020

Q.42) With reference to crops in India and the climatic conditions required for their growth, consider the following:

“It is a crop of tropical and subtropical regions that needs a hot and humid climate with plenty of sunshine to grow. It grows best in temperature ranges between 25 to 30 degrees Celsius with an abundant rainfall of about 160-200 cm per year. Level or slightly undulating river basins with alluvial or loamy soils are best suited to grow them.”

Which of the following crops are grown in the conditions mentioned above?

- a) Tea
- b) Jute
- c) Coffee
- d) Sorghum

Ans) b

Exp) Option b is the correct answer.

Option a is incorrect: Tea requires cool to warm temperatures with at least 5 hours of sunlight per day. **Too high temperatures, like those around 30 degrees Celsius will ruin the Tannin content of the leaves. Hence this option is incorrect.** Also, tea is grown on hill slopes so that the soils are well drained and there is no water logging as that is harmful for the crop too.

Option b is correct: Jute is an important natural fibre crop in India next to cotton. It is used as raw material for packaging industries and many other diverse applications, such as, textile industries, paper industries, building and automotive industries, use as soil saver, etc.

It grows well in hot and moist climates. In India, Ganga delta region is excellent for jute cultivation as this region has fertile alluvium soil & favourable temperature along with sufficient rainfall. **A temperature range of 25 to 30 degrees Celsius combined with rainfall of about 160 – 200 cm is ideal for jute growth. Humid weather results in good yield. It grows best on plain or gently rolling landscapes and does not require slopes for growth. Hence this option is correct.**

Option c is incorrect: Coffee is a tropical plant which is also grown in a semi-tropical climate. The coffee tree requires heat, humidity and abundant rainfall. Coffee requires an average temperature between 20°-27°C (not 30 degrees Celsius which is too high).

Coffee needs abundant rainfall, i.e., 100 to 200 cm annually. Coffee does need well drained soils as water stagnation is harmful for the crop. Generally, coffee is grown on slopes having height between 600 to 1,800 metres. **So, it is not grown river basins, rather it is grown on hill slopes. Hence this option is incorrect.**

Option d is incorrect: The crop of Jowar, also called Sorghum, grows in a temperature range of 15-40 degrees Celsius and rainfall range of 400-1000 mm. **It is a hardy crop that does not require much moisture and can withstand spells of drought as well. Hence this option is incorrect.** It can be grown in a variety of soils other than the generally fertile alluvial/ loamy soil. A good sorghum soil does need to have efficient drainage facilities though it may withstand some amounts of water logging.

Source: <https://vihaba.global/2022/02/17/what-is-the-ideal-climate-condition-for-tea-cultivation/>
<https://indiaagronet.com/indiaagronet/crop%20info/jower.htm>

<https://www.yourarticlelibrary.com/essay/cultivation-of-coffee-5-growth-conditions-required-for-the-cultivation-of-coffee/25568>

<https://www.agrifarming.in/jute-cultivation>

<https://ncert.nic.in/textbook.php?legy2=5-12>

Q.43) With reference to various cropping patterns and their features, consider the following statements:

1. Mixed Cropping is a system of growing multiple crops as well as rearing of livestock on the same farm.
2. Intercropping involves growing multiple crops simultaneously in a distinct row arrangement.

3. There is generally no competition among crop varieties in intercropping.

Which of the statements given above is/ are correct?

- a) 1 only
- b) 1 and 2 only
- c) 2 and 3 only
- d) 1, 2 and 3

Ans) c

Exp) Option c is the correct answer.

Statement 1 is incorrect: Mixed Cropping is a system of cropping in which multiple varieties of crops are grown in the same field without any distinct arrangement. There is no rearing of poultry or livestock of any kind in this system. Hence this statement is **incorrect**.

It is in **Mixed FARMING (not cropping)** that multiple activities such as livestock/ poultry rearing, agroforestry, pisciculture, apiculture, etc are undertaken on the same farm to diversify income streams as well as make best use of inputs and by products and waste products among all the various activities being undertaken.

Statement 2 is correct: Intercropping is a system of cropping in which multiple crops (2 or more) are grown in the same field, at the same time, but in a distinct row arrangement (unlike in mixed cropping). Hence this statement is **correct**.

It is not to be confused with **Crop Rotation**, which is a farming system which involves growing different crops on a piece of land one after the other (not simultaneously) in a pre-planned succession.

Statement 3 is correct: The main aim of Intercropping is to utilise the maximum space on a field and maximising the output per unit area. For these different types of complementary crops are sown together. For example, a nutrient depleting cereal crop is grown with a nutrient enhancing leguminous crop. Hence generally there is no competition between the various crops. Hence this statement is **correct**. On the other hand, in Mixed Cropping, the crops are not arranged specifically or chosen specifically, as a result all the crops compete for resources like space, soil nutrients, moisture, sunlight, etc.

Source: Shankar Environment, Ch-24, Pg-281-283

Q.44) Consider the following statements with reference to types of farming:

1. Zero budget natural farming (ZBNF) is a method of chemical-free agriculture following the traditional Indian practices.
2. Permaculture is a farming method which involves practices like mulching and trellising.

Which of the statements given above is/are correct?

- a) 1 only
- b) 2 only
- c) Both 1 and 2
- d) Neither 1 nor 2

Ans) c

Exp) Option c is the correct answer.

A farming system is defined as a population of individual farm systems that have broadly similar resource bases, enterprise patterns, household livelihoods and constraints, and for which similar development strategies and interventions would be appropriate.

Statement 1 is correct: Zero Budget Natural Farming was promoted by agriculturist Subhash Palekar, in the mid-1990s as an alternative to the Green Revolution's methods driven by chemical fertilizers and pesticides and intensive irrigation. Zero budget natural farming is a method of **chemical-free agriculture** drawing from traditional Indian practices.

Statement 2 is correct: Permaculture is the method of designing ecological landscapes that produce food. Emphasis is placed on multi-use plants, cultural practices such as **mulching and trellising (support a plant with the help of a trellis)** and the integration of animals to recycle nutrients and graze weeds.

Source: Shankar IAS

<https://www.thehindu.com/sci-tech/agriculture/what-is-zero-budget-natural-farming/article61590716.ece>

<https://krishijagran.com/agripedia/natural-farming-and-organic-farming-know-the-difference-similarities/>

Q.45) Consider the following statements about Bioenergy crops:

1. Large-scale bioenergy crop cultivation with carbon capture and storage (BECCS) may be used as technology for removing CO₂ from the atmosphere.
2. Bioenergy crops of the third generation include boreal trees.
3. Due to their existence in marshy wetlands, halophytes cannot be used as bioenergy crops.
4. These crops can induce a biophysical cooling effect at the area where they are cultivated.

Which of the statements given above is/are correct?

- a) 1, 3 and 4 only
- b) 2, 3 and 4 only
- c) 1, 2 and 3 only
- d) 1, 2 and 4 only

Ans) d

Exp) Option d is the correct answer.

Bioenergy crops are defined as any plant material used to produce bioenergy. These crops are used to produce biofuel/bioenergy. These crops have the capacity to produce large volumes of biomass, high energy potential and can be grown in marginal soils.

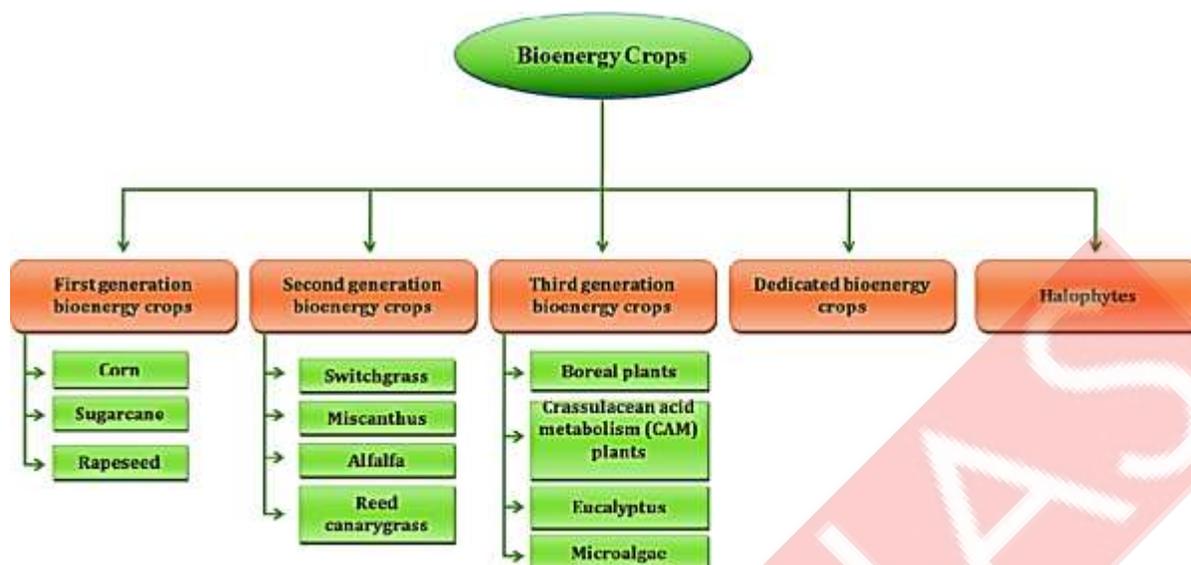

Statement 1 is correct: Large-scale bioenergy crop cultivation with carbon capture and storage (BECCS) has been identified as a major negative emission technology (NET) for removing CO₂ from the atmosphere.

Statement 2 is correct: The bioenergy crops are categorized into five groups, namely bioenergy crops of the first, second, and third generations, dedicated energy crops, and halophytes. First-generation bioenergy crops include corn, sorghum, rapeseed, and sugarcane, while second-generation bioenergy crops include switchgrass, Miscanthus, Alfalfa, canary reed grass, napier grass, and other crops. **Bioenergy crops of the third generation include boreal trees, trees with Crassulacean acid metabolism (CAM), Eucalyptus, and microalgae.** Halophytes for bioenergy consist of the genera Acacia, Eucalyptus, Casuarina, Melaleuca, Prosopis, Rhizophora and Tamarix.

Statement 3 is incorrect: The plants specific to saline environments that can survive and complete their life cycles in such saline environment are called halophytes. **Halophytes have been recognised as a sustainable source of bioethanol production in many studies.** Their survival in marshy conditions have nothing to do with their utility as a biofuel crop (bioenergy crop). Rather, they have been recognised as an alternative fuel source in case of inconsistent supply of traditional feedstock.

Statement 4 is correct: **As per a new study it has been found that, perennial bioenergy crops can induce a cooling effect on the areas where they are cultivated.** Currently, cultivation area under bioenergy crops occupies 3.8% ± 0.5% of the global total land area. These crops exert strong regional biophysical effects, leading to a global net change in air temperature of -0.08 °C ~ +0.05 °C.

Knowledge Base:

Source: <https://blog.forumias.com/bioenergy-crops-create-cooling-effect-on-cultivated-areas-study/>
https://www.researchgate.net/publication/332194564_Bioenergy_Crops_Recent_Advances_and_Future_Outlook

Q.46) With reference to oilseed production in India, consider the following statements:

1. More than 60% of oil seed production in India is restricted to rainfed farming.
2. India meets more than half of its domestic demand of oil consumption through imports.
3. Mustard seeds constitutes the highest percentage of total oilseed exports from India.
4. India's oilseeds production has increased steadily in the years 2016-2021.

Which of the statements given above are correct?

- a) 1, 2 and 4 only
- b) 2, 3 and 4 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) a

Exp) Option a is the correct answer.

India is the 4th largest oilseeds producer in the world. It has 20.8% of the total area under cultivation globally, accounting for 10% of global production. The country produces groundnut, soybean, sunflower, sesamum, niger seed, mustard, and safflower oilseeds.

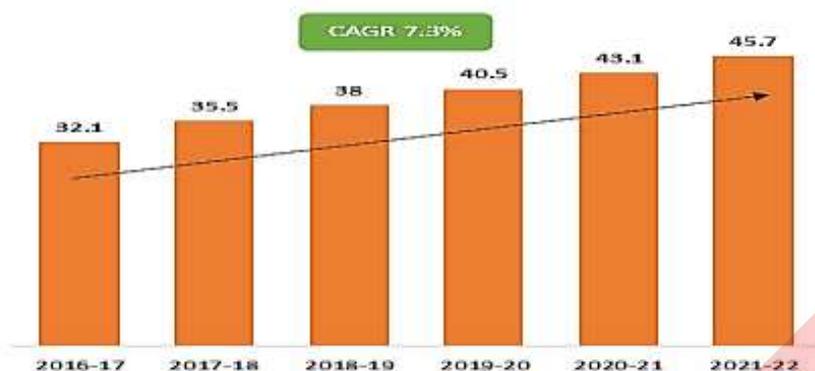

Statement 1 is correct: Around 72% of the oilseeds area is restricted to rainfed farming done by small farmers. The largest oilseed-producing states in India include Andhra Pradesh, Gujarat, Haryana, Karnataka, Madhya Pradesh, Maharashtra, Rajasthan, Tamil Nadu, Uttar Pradesh, West Bengal.

Statement 2 is correct: The country meets around 60 per cent of its domestic demand through imports. India imports palm oil from Indonesia, Malaysia and Thailand. Soyabean oil comes from Argentina and Brazil, while sunflower oil comes from Ukraine and Russia.

Statement 3 is incorrect: India is the largest exporter of Sesame seeds and Groundnuts in world markets. While the Sesame seeds constitute about 31% of the total oilseeds exports, Groundnuts constitute about 61% of the total oilseeds exports from India.

Statement 4 is correct: The production of oilseeds in India has grown steadily in the years 2016-2021. From the years 2016-17 to 2020-21, the compound annual growth rate (CAGR) of production was 7.3%

India's oilseeds production trend (million tonnes)

Source: National Food Securities Mission

Source: <https://economictimes.indiatimes.com/news/economy/foreign-trade/edible-oils-import-up-34pc-to-15-29-lakh-tonne-in-nov-crude-palm-oil-shipment-at-record-high/articleshow/96226808.cms>

Q.47) Some crops can fix nitrogen from the atmosphere, and flourish on nitrogen- deficient soils. which of the following crops/legumes are known to be good in Nitrogen-fixation from the atmosphere?

1. Alfa-alfa
2. Pigeon pea
3. Red clover
4. Black Gram
5. Maize
6. Potato

Select the correct answer using the code below:

- a) 2 and 4 only
- b) 2, 3, 4 and 5 only
- c) 1, 2, 3 and 4 only
- d) 2, 3, 4 and 6 only

Ans) c

Exp) Option c is the correct answer.

Nitrogen fixation is a process of transformation of the relatively non-reactive atmospheric Nitrogen into its more reactive compounds (nitrates, nitrites, or ammonia). Such reactive forms are suitable for crops and support their growth. Nitrogen-fixing plants are those whose roots are colonized by certain bacteria that extract nitrogen from the air and fixes it into a form required for their growth. When the bacteria are done with this nitrogen, it becomes available to the plants.

Option 1 is correct: Alfalfa fixes most (70-90%) of its Nitrogen needs from the air through Rhizobium bacteria residing in alfalfa root nodules. **Alfalfa fixes more nitrogen than any legume crop.**

Option 2 is correct: Pigeon pea is widely adapted and drought-tolerant and as a leguminous crop. It can fix a remarkable amount of atmospheric nitrogen.

Option 3 is correct: The Red clover serves as an excellent green manure that fixes nitrogen and suppresses weeds.

Option 4 is correct: Black gram is one of the important pulses crops, grown throughout the country. The crop is resistant to adverse climatic conditions and improve the soil fertility by fixing atmospheric nitrogen in the soil.

Option 5 and 6 are incorrect: Nitrogen-fixing microbial association is **poor in cereals**, including maize and crops like potato. So, these are not the nitrogen fixing crops.

Source: <https://eos.com/blog/nitrogen-fixation/#:~:text=The%20list%20of%20nitrogen%2Dfixing,%2C%20lentils%2C%20cowpeas%2C%20chickpeas.>

Q.48) With reference to latest available data regarding changing pattern of land use in India, consider the following statements:

1. Area under non-agricultural use has increased in the period 1950-2015.
2. Net sown area has increased since independence.
3. Land under permanent pasture has decreased in the years 1960-2010.

Which of the statements given above are correct?

- a) 1 and 2 only
- b) 2 and 3 only
- c) 1 and 3 only
- d) 1, 2 and 3

Ans) d

Exp) Option d is the correct answer.

Land revenue records mention different land-use categories- forests, land put to non-agricultural uses, barren and wastelands, area under permanent pastures and grazing lands, area under miscellaneous tree crops and groves (not included in net sown area), culturable wasteland, current fallow, fallow other than current fallow and net sown area.

Statement 1 is correct: The rate of increase is high in case of area under non-agricultural uses. The areas under non-agricultural uses are increasing at the expense of wasteland and agricultural land. It increases from 9.36 million hectare in 1950-51 to 26.88 million hectares in 2014-2015.

Statement 2 is correct: After independence there has been increase in net sown area. It increased from 118.75 million hectares in 1950-51 to about 140 million hectares in 2020-2021. It is due to the use of culturable waste land for agricultural purposes.

Statement 3 is correct: Land under permanent pastured decreased from 13.97 million hectares in 1960-1961 to 10.30 million hectares in 2010-2011

Source: <https://agricoop.nic.in/Documents/agristatglance2018.pdf>

<https://pib.gov.in/PressReleseDetailm.aspx?PRID=1614994>

Q.49) With reference to steps for modernization of land records undertaken by the government, consider the following statements:

1. Digital India Land Record Modernisation Programme has been launched as sub-scheme under Computerisation of Land Records (CLR).
2. A 14-digit identification number will be provided to all land parcels for proper land statistics.
3. Bhū-Naksha has been rolled out to serve necessities of Patwari in land parcel map management.

SFG 2023 | LEVEL 1 | Test #45 – Solutions | ForumIAS

4. Government has decided to publish the records of land rights in all schedule 8 languages of the Constitution.

Which of the statements given above are correct?

- a) 1, 2 and 3 only
- b) 2, 3 and 4 only
- c) 1, 2 and 4 only
- d) 1, 3 and 4 only

Ans) b

Exp) Option b is the correct answer.

Modernization of land records helps in minimizing scope of land/property disputes, keep track of land ceilings, enhance transparency in the land records maintenance system and facilitate moving eventually towards guaranteed conclusive titles to immovable properties in the country.

Statement 1 is incorrect: Digital India Land Record Modernisation Programme (DILRMP) is a Central Sector Scheme launched in 2008. The programme was previously known as the National Land Record Modernization Programme (NLRMP). Two Centrally sponsored schemes namely **Computerisation of Land Records (CLR) and Strengthening of Revenue Administration and updating of Land Records (SRA&ULR) were merged under DILRMP**. The scheme aims to digitize and modernize land records and develop a centralised land record management system

Statement 2 is correct: Under the Unique Land Parcel Identification Number (ULPIN), authorities issue a 14-digit identification number to every plot of land in the country. It is also called the “the Aadhaar for land”, a unique number to identify every surveyed parcel of land. It will prevent land fraud, especially in rural India where proper land records are not available.

Statement 3 is correct: Bhū Naksha, are a digital form of land records that show all the boundaries of different parts of land pieces based on their length, area, and direction. The National Informatics Centre has come up with this comprehensive tool **to cater to all necessities of Patwari regarding parcel map management**. With these maps, you can view the ownership status of land pieces in different regions based on your requirements.

Statement 4 is correct: In order to address the problem of linguistic barriers in land governance of the country, the Government, with the technical support of Centre for Development of Advanced Computing (C-DAC), Pune, has undertaken initiative to **transliterate the Records of Rights, which are available in local language to any of the 22 languages recognized by the Constitution**. At present, the Records of Rights in each State and Union Territory are maintained in local languages. The linguistic barriers pose serious challenges for access of information and usage in understandable form.

Q.50) Which of the following statements best describe the purpose behind launch of the scheme ‘PM-PRANAM’?

- a) To promote innovation and research in pharmaceuticals.
- b) To promote the conservation values of local towards wetland.
- c) To provide a one-time small saving scheme for women.
- d) To reduce the use of chemical fertilizers in agriculture.

Ans) d

Exp) Option d is the correct answer.

The finance minister announced in the budget 2023 that the government will launch its long-awaited scheme called **PM PRANAM (Promotion of Alternate Nutrients for Agriculture Management Yojana)**. **It has been launched to reduce the use of chemical fertilizers in agriculture.**

It envisages to bring down the subsidy burden on chemical fertilisers, which is estimated to reach Rs 2.25 lakh crore in 2022-23 – 39% higher than 2021 figure of Rs 1.62 lakh crore.

Knowledge Base:

Features:

- 1) Around 50% of subsidy savings will be passed on as a grant to the state that saves the money.
- 2) Under this grant, 70% of the grant provided under the scheme can be used for asset creation related to the technological adoption of alternate fertilizers and alternate fertilizer production units at village, block and district levels.
- 3) The remaining 30% of grant money can be used for rewarding and encouraging farmers, panchayats, farmer producer organizations and self-help groups that are involved in the reduction of fertilizer use and awareness generation.
- 4) The government will compare the state's increase or decrease in the use of chemical fertilizer in a year to its average consumption in the last three years.
